#### **Milestones Supplemental Guide**

This document provides additional guidance and examples for the Pulmonary Critical Care Milestones. This is not designed to indicate any specific requirements for each level, but to provide insight into the thinking of the Milestone Work Group.

Included in this document is the intent of each Milestone and examples of what a Clinical Competency Committee (CCC) might expect to be observed/assessed at each level. Also included are suggested assessment models and tools for each subcompetency, references, and other useful information.

Review this guide with the CCC and faculty members. As the program develops a shared mental model of the Milestones, consider creating an individualized guide (Supplemental Guide Template available) with institution/program-specific examples, assessment tools used by the program, and curricular components.

Additional tools and references, including the Milestones Guidebook, Clinical Competency Committee Guidebook, and Milestones Guidebook for Residents and Fellows, are available on the <u>Resources</u> page of the Milestones section of the ACGME website.

Milestone Levels:

Milestones are arranged into levels. Tracking from Level 1 to Level 5 is synonymous with moving from novice to expert in the subspecialty. For each reporting period, the Clinical Competency Committee will review the completed evaluations to select the milestone levels that best describe each learner's current performance, abilities, and attributes for each subcompetency.

These levels *do not* correspond with post-graduate year of education. Depending on previous experience, a junior fellow may achieve higher levels early in his/her educational program just as a senior fellow may be at a lower level later in his/her educational program. There is no predetermined timing for a fellow to attain any particular level. Fellows may also regress in achievement of their milestones. This may happen for many reasons, such as over scoring in a previous review, a disjointed experience in a particular procedure, or a significant act by the fellow.

Supervision requirements:

Direct Supervision: the supervising physician is physically present with the fellow and patient.

**Indirect Supervision with Direct Supervision Immediately Available:** the supervising physician is physically within the hospital or other site of patient care, and is immediately available to provide Direct Supervision.

**Indirect Supervision with Direct Supervision Available:** the supervising physician is not physically present within the hospital or other site of patient care but is immediately available to provide Direct Supervision by means of telephonic and/or electronic modalities.

Pulmonary Critical Care Supplemental Guide

Glossary of Terms

**Oversight:** the supervising physician is available to provide review of procedures/encounters with feedback provided after care is delivered.

**Substantial Guidance:** the supervising physician must provide extensive corrective suggestions, elaboration, or, for procedures, step in to assist or demonstrates some or all of the steps.

**Independently:** the supervising physician may have a few additional suggestions, but the interaction is more like a peer-to-peer discussion about a patient.

Levels between "substantial guidance" and "independently" assume graduated levels of independence and sophistication of the learner, with guidance and supervision appropriate to the skill of the learner.

| Patient Care 1: History and Physical Examination<br>Overall Intent: To perform a comprehensive, specialty-specific history and physical exam                        |                                                                                                                                                                                                                                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

#### Systems-Based Practice 1: Patient Safety and Quality Improvement (QI)

 Overall Intent: To analyze patient safety events, including relevant communication with patients, families, and health care professionals; to participate in a QI project

 Milestones
 Examples

 Level 1 Demonstrates knowledge of common

 Lists patient misidentification or medication errors as common patient safety events

| patient safety events                                                                                                        | • Lists patient misidentification or medication errors as common patient safety events                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Demonstrates knowledge of how to report patient safety events                                                                | <ul> <li>Describes how to report errors in the environment</li> </ul>                                                                                                                                  |
| Demonstrates knowledge of basic quality improvement methodologies and metrics                                                | Describes fishbone tool                                                                                                                                                                                |
| <b>Level 2</b> Identifies system factors that lead to patient safety events                                                  | <ul> <li>Identifies that lack of hand sanitizer dispensers in exam rooms may lead to increased<br/>infection rates</li> </ul>                                                                          |
| Reports patient safety events through institutional reporting systems (simulated or actual)                                  | • Reports lack of hand sanitizer dispenser in an exam room to the clinic director                                                                                                                      |
| Describes local quality improvement initiatives<br>(e.g., community vaccination rate, infection rate,<br>smoking cessation)  | • Summarizes protocols resulting in decreased spread of hospital acquired <i>C. diff</i>                                                                                                               |
| <b>Level 3</b> Participates in analysis of patient safety events (simulated or actual)                                       | <ul> <li>Prepares and presents a morbidity and mortality presentation</li> </ul>                                                                                                                       |
| Participates in disclosure of patient safety<br>events to patients and families (simulated or<br>actual)                     | <ul> <li>Through simulation, communicates with patients/families about an anticoagulation dose<br/>administration error</li> </ul>                                                                     |
| Participates in local quality improvement initiatives                                                                        | <ul> <li>Participates in QI project identifying root causes of COPD readmissions</li> <li>Participates in QI project identifying root causes of unplanned extubations</li> </ul>                       |
| <b>Level 4</b> Conducts analysis of patient safety<br>events and offers error prevention strategies<br>(simulated or actual) | <ul> <li>Collaborates with a team to conduct the analysis of an anticoagulation dose<br/>administration error and can effectively communicate with patients/families about those<br/>events</li> </ul> |
| Discloses patient safety events to patients and families (simulated or actual)                                               | • Participates in the completion of a QI project to reduce COPD readmission rates within the practice, including assessing the problem, articulating broad goals, developing a                         |

|                                                                                                                   | SMART (Specific, Measurable, Attainable, Relevant, and Time-bound) objective plan, and monitoring progress and challenges                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Demonstrates the skills required to identify,<br>develop, implement, and analyze a quality<br>improvement project | • Participates in the completion of a QI project to reduce unplanned extubations rates within the practice, including assessing the problem, articulating a broad goal, developing a SMART objective plan, and monitoring progress and challenges                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Level 5</b> Actively engages teams and processes<br>to modify systems to prevent patient safety<br>events      | <ul> <li>Assumes a leadership role at the departmental or institutional level for patient safety</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Role models or mentors others in the disclosure of patient safety events                                          | <ul> <li>Conducts a simulation for disclosing patient safety events</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Creates, implements, and assesses quality<br>improvement initiatives at the institutional or<br>community level   | <ul> <li>Initiates and completes a QI project to reduce county COPD readmission rates in collaboration with the county health department and shares results with stakeholders</li> <li>Initiates a multi-center consortium QI project to reduce the number of unplanned extubations and shares results with stakeholders</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                          |
| Assessment Models or Tools                                                                                        | <ul> <li>Direct observation</li> <li>E-module multiple choice tests</li> <li>Medical record (chart) audit</li> <li>Multisource feedback</li> <li>Portfolio</li> <li>QI project</li> <li>Reflection</li> <li>Simulation</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Curriculum Mapping                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

### Systems-Based Practice 2: Coordination and Transitions of Care

**Overall Intent:** To effectively navigate the health care system, including the interdisciplinary team and other care providers to ensure highquality patient outcomes

| Milestones                                                                                                                                    | Examples                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Level 1 Demonstrates knowledge of care coordination                                                                                           | • For a patient with end-stage COPD in the ICU, identifies the outpatient pulmonologist, palliative care team, home health nurse, respiratory care practitioners, and social workers as members of the team                                            |
| Identifies key elements for safe and effective transitions of care and hand-offs                                                              | <ul> <li>Lists the essential components of a structured sign-out tool and care transition and hand-<br/>offs</li> </ul>                                                                                                                                |
| <b>Level 2</b> Coordinates care of patients in routine<br>clinical situations effectively using the members<br>of the interprofessional teams | <ul> <li>Coordinates care with the outpatient pulmonary clinic at the time of discharge from the<br/>hospital</li> </ul>                                                                                                                               |
| Performs safe and effective transitions of<br>care/hand-offs in routine clinical situations                                                   | <ul> <li>Routinely uses a structured sign-out tool for a stable patient during night float sign-out</li> </ul>                                                                                                                                         |
| <b>Level 3</b> Coordinates care of patients in complex<br>clinical situations effectively using the members<br>of the interprofessional teams | <ul> <li>Works with the social worker to coordinate care for a complex chronically ventilated<br/>patient that will ensure transfer to a long-term acute care facility safely after discharge<br/>from the hospital</li> </ul>                         |
| Performs safe and effective transitions of<br>care/hand-offs in complex clinical situations                                                   | <ul> <li>Routinely uses a structured sign-out tool when transferring a patient to the ICU</li> </ul>                                                                                                                                                   |
| <b>Level 4</b> Coordinates care of patients in complex<br>clinical situations among different disciplines<br>and specialties                  | <ul> <li>During inpatient rotations, leads team members in approaching consultants to review<br/>cases/recommendations and arranges radiology rounds for the team</li> </ul>                                                                           |
| Advocates for safe and effective transitions of<br>care/hand-offs within and across health care<br>delivery systems                           | <ul> <li>Prior to going on vacation, proactively informs the incoming fellow about a plan of care for<br/>a complex lung cancer patient with numerous prior intubations who will likely require<br/>airway stenting and ICU care afterwards</li> </ul> |
| <b>Level 5</b> Analyzes the process of care coordination and leads in the design and                                                          | <ul> <li>Leads a program to arrange for team home visits to end-stage COPD at high risk for ICU<br/>admissions</li> </ul>                                                                                                                              |
| implementation of improvements                                                                                                                | <ul> <li>Leads a program evaluating local implementation of the ABCDEF bundle</li> </ul>                                                                                                                                                               |

|                                                                                                                                                          | Local resources, including Employee Assistance                                                                                                                                                                                                                                                                                                                                                               |  |

## Interpersonal and Communication Skills 1: Patient- and Family-Centered Communication

Overall Intent: To deliberately use language and behaviors to form constructive relationships with patients and families

| Milestones                                                                                                                                                                    | Examples                                                                                                                                                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Level 1</b> Uses language and nonverbal behavior<br>to demonstrate respect and establish rapport                                                                           | • Establishes eye contact with the patient when introducing team and calls patients by Mr./Mrs./Ms. and their last name                                                                                                                             |
| Identifies common barriers to effective<br>communication (e.g., language, disability,<br>personal bias)                                                                       | <ul> <li>Identifies need for trained interpreter with non-English-speaking patients</li> </ul>                                                                                                                                                      |
| <b>Level 2</b> Establishes a therapeutic relationship<br>using effective communication behaviors in<br>straightforward encounters                                             | <ul> <li>Avoids medical jargon and restates patient perspective when discussing tobacco cessation</li> </ul>                                                                                                                                        |
| Identifies complex barriers to effective<br>communication (e.g. health literacy, cultural),<br>including personal bias                                                        | <ul> <li>Recognizes the need for handouts with diagrams and pictures to communicate<br/>information to a patient who is unable to read or speak</li> </ul>                                                                                          |
| <b>Level 3</b> Establishes a therapeutic relationship<br>using effective communication behaviors in<br>challenging patient encounters                                         | • Goes to the level of the patient in bed, maintains eye contact, and holds hand to convey empathy when discussing palliative care approach and do not resuscitate/do not intubate (DNR/DNI) in a patient with end-stage disease who is a full code |
| Mitigates communication barriers, including personal bias                                                                                                                     | Conducts a family meeting to identify personal/family/cultural beliefs and concerns                                                                                                                                                                 |
| <b>Level 4</b> Establishes therapeutic relationships<br>using shared decision making (e.g., attention to<br>patient/family concerns and context), regardless<br>of complexity | <ul> <li>Continues to engage representative family members with disparate goals in the care of a<br/>patient with end-stage disease</li> </ul>                                                                                                      |
| Role models the mitigation of communication barriers                                                                                                                          | <ul> <li>Reflects on personal bias related to lung cancer death of resident's father and solicits<br/>input from faculty members about mitigation of communication barriers when counseling<br/>patients around smoking cessation</li> </ul>        |
| <b>Level 5</b> Coaches others in developing<br>therapeutic relationships and mitigating<br>communication barriers                                                             | <ul> <li>Leads a discussion group on personal experience of moral distress</li> <li>Develops a resident/fellowship curriculum on social justice which addresses unconscious bias</li> <li>Serves on a hospital bioethics committee</li> </ul>       |
| Assessment Models or Tools                                                                                                                                                    | Direct observation     Global evaluations                                                                                                                                                                                                           |
