

## Subspecialty-Specific Program Requirements: Independent Practice

Effective as of October 18, 2023

Common Program Requirements are in bold

The Common Program Requirements (Fellowship and One-Year Fellowship) allow Review Committees the option of permitting independent practice as referenced in Common Program Requirements IV.E.-IV.E.1.

**IV.E. Fellowship programs may assign fellows to engage in the independent practice of their core specialty during their fellowship program.**

**IV.E.1. If programs permit their fellows to utilize the independent practice option, it must not exceed 20 percent of their time per week or 10 weeks of an academic year. <sup>(Core)</sup>**

[This section will be deleted for those Review Committees that choose not to permit the independent practice option. For those that choose to permit this option, the Review Committee may further specify.]

**Background and Intent: Fellows who have previously completed residency programs have demonstrated sufficient competence to enter autonomous practice within their core specialty. This option is designed to enhance fellows' maturation and competence in their core specialty. This enables fellows to occupy a dual role in the health system: as learners in their subspecialty, and as credentialed practitioners in their core specialty. Hours worked in independent practice during fellowship still fall under the clinical and educational work hour limits. See Program Director Guide for more details.**

Additionally, as stated in the Common Program Requirements, Review Committees may further define expectations related to independent practice. The table below lists the subspecialties that permit independent practice as of October 18, 2023 and, where applicable, additional specialty-specific program requirements and background and intent.
