RESOURCES	58

Milestones Supplemental Guide

This document provides additional guidance and examples for the Pediatric Surgery Milestones. This is not designed to indicate any specific requirements for each level, but to provide insight into the thinking of the Milestone Work Group.

Included in this document is the intent of each Milestone and examples of what a Clinical Competency Committee (CCC) might expect to be observed/assessed at each level. Also included are suggested assessment models and tools for each subcompetency, references, and other useful information.

Review this guide with the CCC and faculty members. As the program develops a shared mental model of the Milestones, consider creating an individualized guide (Supplemental Guide Template available) with institution/program-specific examples, assessment tools used by the program, and curricular components.

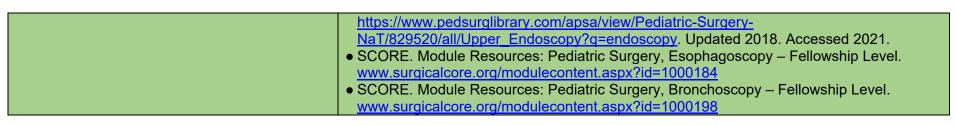

Additional tools and references, including the Milestones Guidebook, Clinical Competency Committee Guidebook, and Milestones Guidebook for Residents and Fellows, are available on the Resources page of the Milestones section of the ACGME website.

Patient Care 1: Patient Evaluation and Clinical Decision Making Overall Intent: To progressively demonstrate skill acquisition in clinical assessment and develop multidisciplinary treatment plan for pediatric	
surgery patients Milestones	Examples
Level 1 With assistance, integrates information with patient-specific factors to design a succinct diagnostic, work-up, and management plan of a medically uncomplicated neonatal or pediatric surgical patient Level 2 With assistance, integrates information with patient-specific factors to design a succinct diagnostic, work-up, and management plan of a medically complicated neonatal or pediatric	 When a patient presents with abdominal pain, elicits a focused history, performs a physical exam, reviews diagnostic reports, and comes up with a differential diagnosis that includes both medical and surgical problems, with assistance Creates a diagnostic and treatment plan for an otherwise healthy patient with abdominal pain When a patient presents with an abdominal tumor, elicits a focused history, performs a physical exam, and reviews diagnostic reports and determines need for additional imaging, with assistance With assistance, creates a diagnostic and treatment plan for a patient with abdominal
surgical patient Level 3 Independently integrates information with patient-specific factors to design a succinct diagnostic, work-up, and management plan of a medically uncomplicated neonatal or pediatric surgical patient	 tumor For a newborn with vomiting, independently elicits a focused history, performs a physical exam, reviews diagnostic reports, and comes up with a differential diagnosis that includes both medical and surgical problems Creates a diagnostic and treatment plan for a newborn with vomiting
Level 4 Independently integrates information with patient-specific factors to design a succinct diagnostic, work-up, and management plan of a medically complicated neonatal or pediatric surgical patient Level 5 Appraises gaps in literature and proposes research related to diagnostic work-up and multidisciplinary treatment	 When a patient presents with a renal mass involving tumor thrombus extending into the inferior vena cava and right atrium, independently elicits a focused history, performs a physical exam, and interprets diagnostic images, reviews reports, and determines need for additional imaging Creates a diagnostic and treatment plan for a patient who presents with septic shock Identifies potential for expanded role of minimally invasive biopsy techniques or chemotherapy reductions strategies in the management of Wilms tumor
Assessment Models or Tools	 Assessment of case-based discussion Case-based discussion assessment Direct observation Medical record (chart) audit Mock oral examinations Multisource feedback

Patient Care 2: Intra-Operative Patient Care - Endoscopy Procedural Skills Overall Intent: To progressively demonstrate skill acquisition in endoscopic procedures and recognize, manage, and prevent complications **Milestones Examples** Level 1 Requires active direction to choose and • Inconsistently recognizes the instrument components of diagnostic rigid bronchoscopy and flexible bronchoscopy based on patient age and indication for procedure assemble instruments Moves forward in diagnostic bronchoscopy and Requires active direction for diagnostic bronchoscopy and gastrointestinal endoscopy in endoscopy only with active direction all ages • Recognizes potential for airway compromise after endoscopy Recognizes intra-operative complications for common procedures Level 2 Is mostly proficient in choosing and • Requires help in selecting and assembling instrumentation for diagnostic and therapeutic bronchoscopy and gastrointestinal endoscopy (removal of foreign bodies) assembling instruments Moves forward in therapeutic or interventional Performs therapeutic endoscopic procedures including aerodigestive foreign body removal and esophageal dilation with active direction procedures with active direction • With assistance, manages complications of bronchoscopy for foreign body removal or With active assistance, manages intra-operative complications for therapeutic and interventional esophagoscopy for foreign body removal procedures • Independently assembles instrument components, based on patient age and indication for Level 3 Is consistent able to choose and diagnostic rigid bronchoscopy and rigid esophagoscopy assemble instruments for diagnostic bronchoscopy and endoscopy Independently moves forward in diagnostic Safely and independently performs diagnostic bronchoscopy and gastrointestinal bronchoscopy and endoscopy and refines endoscopy in children younger than three years of age, including neonates operative plans as needed Independently recognizes, manages, • Independently manages airway edema after diagnostic bronchoscopy anticipates, and prevents straightforward intraoperative complications Level 4 Independently chooses and assembles Independently assembles instrument components for removal of an airway foreign body instruments

Independently moves fluidly through therapeutic or interventional procedures and refines operative plans as needed	 Safely and independently performs removal of airway or esophageal foreign bodies, and esophageal dilation, including management of complications such as perforation Recognizes need for multidisciplinary input in complex patients who need bronchoscopy and endoscopy (e.g., patient with recurrent esophageal stenosis)
Independently recognizes, manages, anticipates, and prevents complex intra- operative complications	Independently manages esophageal perforation during endoscopic esophageal dilation
Level 5 Independently troubleshoots instrument malfunction and failure	 Performs rare therapeutic endoscopic procedures including peroral endoscopic myotomy (POEM) for achalasia, management of gastrointestinal bleeding such as variceal bleeding or bleeding ulcer
Independently moves fluidly through the course of rare operations and refines operative plans as needed	
Anticipates and prevents intra-operative complications for rare procedures	Anticipates complications from esophageal stent placement
Assessment Models or Tools	Case-based discussion assessment
	CCC evaluation
	Direct observation Mock oral examinations
	Video based assessment
	Zwisch or SiMPL operative evaluations (written or electronic)

anticipates, and prevents intra-operative complications for common procedures

Patient Care 3: Intra-Operative Patient Care - Procedural Skills for Minimally Invasive Surgical (MIS) Procedures Overall Intent: To progressively demonstrate skill acquisition MIS procedures and recognize, manage, and prevent complications **Milestones Examples Level 1** Requires active direction to identify • Needs instruction on port placement for video-assisted thoracoscopic surgery (VATS) trocar placement and appropriate lobectomy instrumentation for minimally invasive surgery (MIS) Moves forward in common operations with • With active help performs laparoscopic appendectomy in a small child, laparoscopic pyloromyotomy, or laparoscopic gastronomy tube (G-tube) placement active direction only Recognizes intra-operative complications for • Identifies inadequate closure of appendiceal base at appendectomy common procedures Level 2 Is mostly proficient in ability to identify • Chooses adequate port placement for neonatal Nissen but unable to choose adequate trocar placement and appropriate MIS port placement for VATS procedure instrumentation • With active help, performs laparoscopic colon resection or pull-through for Hirschsprung Moves forward through the course of defined category operations with active direction disease With assistance, manages intra-operative • With assistance, identifies and manages an ischemic or twisted anastomosis created complications for defined category procedures during a laparoscopic case • Independently performs laparoscopic intussusception reduction and determines when **Level 3** Is consistently able to identify trocar placement and appropriate MIS instrumentation bowel resection is needed for common and defined category procedures • Independently performs laparoscopic appendectomy in perforated appendicitis using appropriate techniques to secure a difficult base Independently (passive help or supervision only) • In a patient with spontaneous pneumothorax, independently identifies blebs, and perform moves forward in common operations and blebectomy refines operative plans as needed Independently recognizes, manages, • Identifies and manages misplaced gastrostomy tube that obstructs the pylorus

Level 4 Independently identifies trocar placement in patients with abnormal	Safely enters a body cavity for re-operative surgery by appropriate modification of trocar sites
anatomy/re-operative cases	Performs intracorporeal suturing
Independently (passive help or supervision only) moves forward in defined category operations and refines operative plans as needed	Independently progresses on laparoscopic duodenal atresia or choledochal cyst Independently progresses on thoracoscopic procedures including lung lobectomy and congenital diaphragmatic hernia (CDH)
Independently recognizes, manages, anticipates, and prevents intra-operative complications for defined category procedures	Identifies and preserves blood supply to adjacent lobe during thoracoscopic lobectomy
Level 5 Independently troubleshoots instrument, camera, robotic failure, and modified operative approach	Troubleshoots a stapler misfire during a thoracoscopic lobectomy
Independently (passive help or supervision only) moves forward in rare operations and refines operative plans as needed	Performs a laparoscopic Whipple procedure in a child
Anticipates and prevents intra-operative complications for rare procedures	Avoids tracheobronchial injury during a thoracoscopic repair of esophageal atresia
Assessment Models or Tools	Case-based discussion assessment
	• CCC evaluation
	Direct observation Mock oral examinations
	Video based assessment
	Zwisch or SiMPL operative evaluations (written or electronic)
Curriculum Mapping	•

Patient Care 4: Intra-Operative Patient Care - Procedural Skills for Thoracic Cases Overall Intent: To progressively demonstrate skill acquisition in thoracic procedures and recognize, manage, and prevent complications **Milestones Examples** Level 1 Moves forward in common operations • Safely performs lung wedge biopsy, empyema drainage with active direction with active direction for critical portions of the procedure Serves as first assistant for critical portions of Assists with patch placement in a straightforward CDH repair defined category operations Recognizes intra-operative complications for Recognizes air leak after lung biopsy common operations Level 2 Moves fluidly through the entire course • Safely performs wedge biopsy with minimal direction for attending of common operations with minimal prompting Requires active direction for defined category • Requires assistance when dissecting/controlling vessels during lobectomy operations With assistance, manages air leak during lung biopsy With assistance, manages, anticipates, and prevents intra-operative complications for common procedures Level 3 Independently (passive help or • Independently performs lung biopsy for interstitial lung disease supervision only) moves fluidly through the course of common operations and refines operative plans as needed Moves fluidly through the entire course of Performs straightforward CDH repair with no patch, with minimal assistance defined category operations with minimal prompting • Independently manages air leak during lung biopsy Independently manages, anticipates, and prevents intra-operative complications for common procedures Level 4 Independently (passive help or • Identifies when the gap is too long to complete an anastomosis on a distal supervision only) moves fluidly through the tracheoesophageal fistula (TEF) and modifies the operative plan appropriately without prompting

course of defined category operations and refines operative plans as needed	
Requires active direction for critical portions of rare operations	Requires active direction during critical portion of colon interposition for esophageal replacement
Independently recognizes, manages,	Prevents compromise of the right middle lobe bronchus while performing a right lower lobectomy
anticipates, and prevents intra-operative complications for defined category procedures	Recognizes need for a second bar during pectus repair
Level 5 Independently (passive help or supervision only) moves fluidly through the course of rare operations and refines operative plans as needed	Properly controls bleeding when pulmonary vein is torn during VATS lobectomy Independently plans and performs an esophageal replacement procedure
Independently recognizes, manages, anticipates, and prevents intra-operative complications for rare procedures	Ensures blood vessels are not twisted when performing an esophageal replacement
Assessment Models or Tools	Case-based discussion assessment CCC evaluation
	Direct observation
	Mock oral examinations Nides besides a second and the sec
	 Video based assessment Zwisch or SiMPL operative evaluations (written or electronic)

supervision only) moves fluidly through the

Patient Care 5: Intra-Operative Patient Care - Procedural Skills for Abdominal Procedures Overall Intent: To progressively demonstrate skill acquisition in abdominal procedures and recognize, manage, and prevent complications **Milestones** Examples **Level 1** Moves forward in common operations • With active help, performs ileocecectomy for Crohn's disease with active direction for critical portions of the procedure Serves as first assistant for critical portions of • First assists for porta hepatis dissection during hepatic lobectomy defined category operations Recognizes intra-operative complications for • Recognizes ureteral injury during ileocecectomy for Crohn's disease common operations Level 2 Moves fluidly through the entire course • Performs a routine pediatric inquinal hernia repair with minimal assistance of common operations with minimal prompting • Performs choledochal cyst resection with active direction Requires active direction for defined category operations • With assistance, anticipates and prevents injury to vas deferens during inquinal hernia repair in a premature infant, and manages tear of inguinal hernia sac With assistance, manages, anticipates, and prevents intra-operative complications for common procedures Level 3 Independently (passive help or • Independently performs ileocectomy for Crohn's disease, and recognizes and manages supervision only) moves fluidly through the unanticipated strictures or fistula course of common operations and refines operative plans as needed • Performs duodenal atresia repair or a Ladd's procedure with minimal prompting Moves fluidly through the entire course of defined category operations with minimal prompting • Independently manages necrotic bowel during intussusception reduction Independently manages, anticipates, and prevents intra-operative complications for common procedures Level 4 Independently (passive help or • Independently performs abdominal exploration for neonatal intestinal obstruction

course of defined category operations and refines operative plans as needed	
Requires active direction for critical portions of rare operations	Performs cloacal exstrophy repair with active direction
Independently recognizes, manages, anticipates, and prevents intra-operative complications for defined category procedures	Recognizes preduodenal portal vein during Kasai procedure
Level 5 Independently (passive help or supervision only) moves fluidly through the course of rare operations and refines operative plans as needed	Independently moves through a cloacal exstrophy repair
Independently recognizes, manages, anticipates, and prevents intra-operative complications for rare procedures	Identifies, repairs, and manages a rectal injury during a sacrococcygeal teratoma (SCT) resection
Assessment Models or Tools	 Case-based discussion assessment CCC evaluation Direct observation Mock oral examinations Video based assessment Zwisch or SiMPL operative evaluations (written or electronic)
Curriculum Mapping	•
Notes or Resources	 APSA. Pediatric Surgery NaT: Disorders. https://www.pedsurglibrary.com/apsa/index/Pediatric-Surgery-NaT/Disorders. Accessed 2021. Review of operative video Surgical Council on Resident Education (SCORE). The SCORE Portal. https://www.surgicalcore.org/. Accessed 2021.

common procedures

Patient Care 6: Intra-Operative Patient Care - Procedural Skills for Oncology Cases Overall Intent: To progressively demonstrate skill acquisition in oncologic procedures and recognize, manage, and prevent complications **Milestones Examples** • Performs open biopsy of abdominal neuroblastoma or hepatoblastoma with active **Level 1** Moves forward in common operations with active direction for critical portions of the direction Is aware of the optimal incision location and size for abdominal tumor biopsy procedure Serves as first assistant for critical portions of Able to first assist for nephrectomy for Wilms tumor such as incision, exposure of the defined category operations kidney, lateral dissection • With assistance, performs pulmonary resection for osteosarcoma metastasis • Recognizes potential and prepares for significant bleeding during biopsy for Recognizes intra-operative complications for neuroblastoma or hepatoblastoma common operations Level 2 Moves fluidly through the entire course • Performs open biopsy of large intraabdominal tumor with passive help of common operations with minimal prompting • Performs straightforward Stage I adrenal neuroblastoma or Stage I Wilms tumor Requires active direction for defined category resections as primary surgeon with active help operations • Uses knowledge of anatomy to recognize potential complications such as renal vein or With assistance, manages, anticipates, and contralateral renal artery injury during Wilms tumor resection prevents intra-operative complications for • Anticipates the need and plans for proximal and distal vascular control in resection of common procedures complex neuroblastoma • Independently performs biopsy of large abdominal or thoracic tumors Level 3 Independently (passive help or supervision only) moves fluidly through the • Independently performs laparoscopic or open ovarian teratoma removal course of common operations and refines operative plans as needed Moves fluidly through the entire course of Plans and executes a complex operation such as nephrectomy for Stage I and II Wilms defined category operations with minimal tumor with minimal prompting including dissection of vessels and lymph node sampling prompting • Evaluates a patient with an anterior mediastinal mass and airway compression and develop a plan for a safe biopsy with appropriate anesthesia Independently manages, anticipates, and prevents intra-operative complications for

Level 4 Independently (passive help or supervision only) moves fluidly through the course of defined category operations and refines operative plans as needed	Performs thoracic neuroblastoma resections independently Performs removal of thoracic chest wall tumors with reconstruction independently
Requires active direction for critical portions of rare operations	Obtains vascular control of the inferior vena cava and resection of intracaval and renal vein tumor extension with active direction
Independently recognizes, manages, anticipates, and prevents intra-operative complications for defined category procedures	Pivots the operative course for Wilms tumor based on unanticipated findings
Level 5 Independently (passive help or supervision only) moves fluidly through the course of rare operations and refines operative plans as needed	 Plans and obtains vascular control of inferior vena cava tumor extension during a resection of a Wilms tumor independently Plans and performs bilateral nephron sparing Wilms tumor resection
Independently recognizes, manages, anticipates, and prevents intra-operative complications for rare procedures	 Independently performs neuroblastoma resection for a retroperitoneal tumor encasing in the celiac artery and/or superior mesenteric artery Creates a plan (for abdominal and perineal portions), executes the plan, and independently performs a type III sacrococcygeal tumor resection in a newborn
Assessment Models or Tools	 Case-based discussion assessment CCC evaluation Direct observation Mock oral examinations Video based assessment Zwisch or SiMPL operative evaluations (written or electronic)
Curriculum Mapping

<u>+Fellowship+Level</u> . Accessed 2021.
 Includes modules on neuroblastoma, Wilms tumor, rhabdomyosarcoma, and
sacrococcygeal teratoma

Patient Care 7: Intra-Operative Patient Care – Procedural Skills for Other Operations	
Overall Intent: To progressively demonstrate skill acquisition in head, neck, gentitourinary, and anorectal procedures and recognize, manage, and prevent complications	
Milestones	Examples
Level 1 Moves forward in common operations with active direction for critical portions of the procedure	Performs circumcision on a six-month old male
Serves as first assistant for critical portions of defined category operations	First assists attending performing cloacal extrophy repair
Recognizes intra-operative complications for common operations	Recognizes a recurrent laryngeal nerve injury during a thyroidectomy
Level 2 Moves fluidly through the entire course of common operations with minimal prompting	Performs urachal resection with passive help
Requires active direction for defined category operations	 Performs posterior sagittal anorectoplasty (PSARP) for ARM and recto-urethral fistula with active direction Manages recurrent laryngeal nerve injury during a thyroidectomy
With assistance, manages, anticipates, and prevents intra-operative complications for common procedures	Manages bleeding after rectal biopsy
Level 3 Independently (passive help or supervision only) moves fluidly through the course of common operations and refines operative plans as needed	Performs an orchiopexy procedure independently
Moves fluidly through the entire course of defined category operations with minimal prompting	Performs total thyroidectomy and central neck dissection in three-year-old male with medullary thyroid cancer metastatic to the central neck with passive help
Independently manages, anticipates, and prevents intra-operative complications for common procedures	Recognizes that the parathyroid gland has become ischemic after thyroidectomy and performs parathyroid autotransplant

Level 4 Independently (passive help or supervision only) moves fluidly through the course of defined category operations and refines operative plans as needed	Performs PSARP for rectovesical fistula independently
Requires active direction for critical portions of rare operations	Performs cloacal exstrophy repair with active direction
Independently recognizes, manages, anticipates, and prevents intra-operative complications for defined category procedures	Operatively manages urethral injury during PSARP
Level 5 Independently (passive help or supervision only) moves fluidly through the course of rare operations and refines operative plans as needed	Independently performs a cloacal exstrophy repair
Independently recognizes, manages, anticipates, and prevents intra-operative complications for rare procedures	Recognizing the high risk of hypoparathyroidism in an infant undergoing a total thyroidectomy for multiple endocrine neoplasia and initiates appropriate pharmacotherapy pre-operatively, intra-operatively, and post-operatively
Assessment Models or Tools	 Case-based discussion assessment CCC evaluation Direct observation Mock oral examinations Video based assessment
Curriculum Mapping	Zwisch or SiMPL operative evaluations (written or electronic)
Notes or Resources	 APSA. Pediatric Surgery NaT: Disorders. https://www.pedsurglibrary.com/apsa/index/Pediatric-Surgery-NaT/Disorders. Accessed 2021. Spitz L, Coran A. Operative Pediatric Surgery. 7th ed. Boca Raton, FL: CRC Press; 2013.
	ISBN:978-1444117158. ■ SCORE. The SCORE Portal. https://www.surgicalcore.org/ . Accessed 2021.

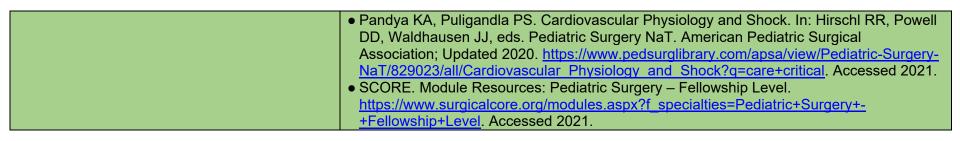

Patient Care 8: Tissue Handling of Delicate (Oncologic, Inflamed, and Scarred) and Neonatal Tissue Overall Intent: To progressively demonstrate skill acquisition in procedures involving very delicate tissue handing and recognize, manage,	
and prevent complications Milestones	Examples
Level 1 Demonstrates limited skill in handling delicate and neonatal tissue	Has difficulty managing the sac in a premature infant hernia repair
Requires prompting to identify appropriate tissue planes	Requires substantial guidance to develop the extrapleural plane during esophageal atresia/TEF repair
Level 2 Demonstrates adequate but inconsistent handling of delicate and neonatal	Performs an extrapleural dissection but cannot safely dissect the distal fistula during an esophageal atresia repair
tissue	 In a stage IV neuroblastoma, needs active direction to start the dissection of the tumor off the vessels
Identifies appropriate plane but requires redirection to maintain dissection in the optimal tissue plane	Requires guidance to safely dissect extrapleural plane during an esophageal atresia repair
Level 3 Consistently demonstrates careful handling of delicate and neonatal tissue	 Has difficulty dissecting the tracheoesophageal plane of the upper pouch during an esophageal atresia repair Consistently dissects a neuroblastoma off involved vessels
Visualizes tissue plane, and identifies and dissects relevant normal anatomy	Safely identifies and dissects the distal pouch during an esophageal atresia repair
Level 4 Adapts tissue handling based on tissue quality	 Constructs an esophageal anastomosis under tension Adapts dissection technique and identify the appropriate plane when bleeding occurs during a neuroblastoma resection
Visualizes tissue planes and identifies and dissects relevant abnormal anatomy	• Identifies and mobilizes upper esophageal pouch when it is adherent to the trachea
Level 5 Demonstrates efficiency and instructs other learners in techniques to identify and manipulate delicate and neonatal tissue in rare procedures	Provides feedback on duodenal handling to junior resident/fellow during a laparoscopic pyloromyotomy
Develops new instrumentation and techniques for delicate and neonatal tissue	Develops new instrumentation for thoracoscopic esophageal atresia repair
Assessment Models or Tools	Case-based discussion assessment

	CCC evaluation
	Direct observation
	Mock oral examinations
	Simulation
	Video based assessment
	 Zwisch or SiMPL operative evaluations (written or electronic)
Curriculum Mapping	
Notes or Resources	APSA. Pediatric Surgery NaT: Disorders.

	• SCORE. The SCORE Portal. https://www.surgicalcore.org/. Accessed 2021.

Patient Care 9: Post-Operative Care (Short and Long Term) Overall Intent: To progressively demonstrate skill acquisition in the management of pediatric patients after surgery and recognize, manage,	
and prevent short-and long-term complications Milestones	Examples
Level 1 With assistance, manages the post- operative course of an uncomplicated neonatal or pediatric surgical patient	With guidance, manages the post-operative course following a PSARP for perineal fistula
Identifies the rationale for a long-term management	Identifies rationale for long-term multidisciplinary management for Hirschsprung patients
Level 2 Independently manages the post- operative course of an uncomplicated neonatal or pediatric surgical patient	Independently manages the post-operative course following an uncomplicated intestinal atresia repair
Describes a general long-term management plan	Describes the general long-term management plan for Hirschsprung patients following a pull-through procedure, including bowel management, and prevention of enterocolitis
Level 3 With minimal assistance, manages the post-operative course of a complicated neonatal or pediatric surgical patient	With minimal assistance, manages the post-operative course of a patient with complicated surgical necrotizing enterocolitis
Follows an evidence based long-term management plan	Follows an evidence based long-term management plan for pancreatic fluid collection or CDH
Level 4 Independently manages the post- operative course of a complicated neonatal or pediatric surgical patient	Independently manages post-operative course of CDH baby on extracorporeal membrane oxygenation (ECMO) or TEF patient
Integrates patient- and patient family-specific factors in the construction of an evidence-based long- term management plan	Determines if home parenteral nutrition is appropriate for the patient and family or if continued in-patient hospitalization at a rehab facility is more appropriate
Level 5 Identifies gaps in post-operative management, and creates pathways to address these through quality improvement/research initiatives	Creates pathways for feeding, ventilator care and long-term pulmonary hypertension management for CDH
Identifies knowledge gaps in long-term management plans, and creates pathways to	Creates comprehensive outpatient bowel management plan for patients with ARM

address these through quality improvement/research initiatives	
Assessment Models or Tools	 Case-based discussion assessment Direct observation Medical record (chart) review Mock orals Multisource feedback

Patient Care 10: Critical Care		
Overall Intent: To progressively demonstrate skill acquisition in the clinical care of critical ill infants and children and recognize, manage,		
	and prevent complications	
Milestones	Examples	
Level 1 With assistance, recognizes a critically ill neonate or child and begins resuscitation	 With assistance, initiates ventilation strategies for newborn with CDH With help from staff members, recognizes critically ill infant with necrotizing enterocolitis (NEC) and initiates initial medical management Recognizes signs and symptoms of sepsis from a necrotizing soft tissue infection 	
Level 2 Independently recognizes a critically ill neonate or child and begins resuscitation and initial management	 Identifies that newborn CDH has failure conventional ventilation and seeks assistance with escalating ventilation strategy Starts therapies in a septic patient according to Surviving Sepsis Guidelines 	
Level 3 With minimal assistance, individualizes ongoing critical care management and assesses the response to therapy	 Identifies when newborn CDH needs advanced strategies for pulmonary hypertension management Independently recognizes findings in a premature neonate with NEC that indicate failure of medical management 	
Level 4 Independently individualizes ongoing critical care management and assesses the response to therapy	 Identifies failure of high-frequency oscillatory ventilation in CDH and need for ECMO Understands the risks of reintubation and positive pressure ventilation in a newborn status TEF repair 	
Level 5 Implements novel treatments and care pathways for critically ill children	 Creates/modifies multidisciplinary acute respiratory distress syndrome pathway based on recent data Creates/modifies multidisciplinary sepsis pathway based on recent data 	
Assessment Models or Tools	 Case-based discussion assessment Direct observation Medical record (chart) review Mock orals Multisource feedback Simulation

	Patient Care 11: Trauma Management
Overall Intent: To progressively demonstrate skill acquisition in the clinical care of traumatically injured infant and children and recognize, manage, and prevent complications	
Milestones	Examples
Level 1 With active direction, provides non- operative management of severely injured infants and children	With active direction, runs a Level I trauma resuscitation in a six-month-old infant Recognizes common signs of non-accidental trauma
Recognizes injuries in infants and children and provides initial operative management	 Differentiates which solid organ injuries require non-operative or immediate operative management Recognizes normal and abnormal hemodynamic ranges in trauma patients of all ages
Level 2 With minimal prompting, provides non- operative management of severely injured infants and children	With minimal prompting, makes an initial plan for non-operative management of a patient with multisystem injury after injuries have been identified, creating appropriate prioritization of care
With active direction, provides operative management of severely injured infants and children	Performs a trauma laparotomy for in a pediatric patient with active direction
Level 3 Independently provides non-operative management of severely injured infants and children	 Independently runs a Level I trauma activation in an infant or pediatric patient younger than five years old, prioritizing imaging and consultation for life-threatening injuries Independently makes decisions regarding admitting to floor versus intensive care unit (ICU) based on the patient's status Independently presents a comprehensive plan for the entire admission of a multiple-system injured patient who requires no surgery including admission status, lab frequency, and activity restrictions
With minimal prompting, provides operative management of severely injured infants and children	Performs a trauma laparotomy on a stable pediatric patient with bowel and liver injury
Level 4 Leads a multidisciplinary team in the ongoing management of severely injured infants and children	Leads multidisciplinary trauma rounds in the ICU Manages trauma patient in hemorrhagic shock, increased intracranial pressure
Independently provides operative management of severely injured infants and children	Independently performs an exploratory laparotomy for trauma in a child with a major vascular injury
Level 5 Implements novel treatments and care pathways for injured children	Leads efforts on public health campaigns such as gun control measures or "Stop the Bleed"

	Leads a revision of institutional guidelines for admission duration or lab frequency for blunt solid organ injury in children
Assessment Models or Tools	 Case-based discussion assessment Direct observation Mock orals Simulation Video performance in trauma bay 360-degree monitoring of emergency department, operating room, and/or pediatric ICU staff members (multisource feedback)

Medical Knowledge 1: Anatomy Overall Intent: To acquire knowledge in surgical anatomy and implications of anatomic variations	
Milestones	Examples
Level 1 Demonstrates knowledge of surgically relevant normal anatomy	 Describes normal liver anatomy associated with a liver resection Describes vascular anatomy of the lungs associated with pulmonary lobe resection
Level 2 Demonstrates knowledge of surgically relevant anatomic variations	 Describes potential aberrant anatomy encountered during liver resection Describes vascular anatomy of the chest and neck associated with neuroblastoma resection Describes various types of anatomic aberrations associated with intestinal resection
Level 3 With assistance, identifies surgically relevant anatomic variations and alters patient management accordingly	 With attending guidance, recognizes aberrant right hepatic artery based on pre-operative imaging and alters procedure accordingly With prompting, develops a plan for biopsy in a teenager with a mediastinal mass and airway compression Identifies relevant surgical anatomy of the neck while treating a brachial cleft sinus with assistance
Level 4 Independently identifies surgically relevant anatomic variations and alters patient management accordingly	 Independently recognizes aberrant right hepatic artery based on pre-operative imaging and articulates alteration in procedure accordingly Independently recognizes thoracic neuroblastoma involves artery of Adamkiewicz and adjusts operative procedure accordingly
Level 5 Leads advanced anatomy discussion at a multidisciplinary conference and/or in operating room	 Leads a multidisciplinary tumor board discussion about the relevant anatomy associated with a liver resection Leads surgery/radiology conference discussion about the relevant anatomy associated with complex central abdominal neuroblastoma
Assessment Models or Tools	 Case-based discussion assessment Direct observation Literature reviews Mock oral examination Multisource feedback Pediatric Surgery In-Training Examination (PSITE)

<u>+Fellowship+Level</u> . Accessed 2021.
Note: This resource requires a username and password.

Medical Knowledge 2: Developmental Biology and Neonatal Physiology Overall Intent: To incorporate developmental biology and neonatal physiology into multidisciplinary management of pediatric surgery	
patients	
Milestones	Examples
Level 1 Demonstrates basic knowledge of developmental biology and normal neonatal physiology	 Demonstrates knowledge of fluid and nutritional requirements in premature infant versus term newborn Demonstrates knowledge of embryologic events leading to normal intestinal rotation
Level 2 Demonstrates comprehensive knowledge of developmental biology and neonatal physiology and relevant clinical implications	 Explains the timing and physiologic changes associated with transition from fetal to neonatal circulation and its implication for management of pulmonary hypertension in CDH Explains the renal physiologic changes that occur after birth and limits of renal function in premature infants
	Directs the workup and physiologic management of neonate with TEF and vertebral defects, anal atresia, cardiac defects, tracheo-esophageal fistula, renal anomalies, and limb abnormalities
Level 3 With assistance, applies knowledge of developmental biology and neonatal physiology into medical decision making	With assistance, manages fluid requirements in premature infant with gastroschisis
Level 4 Independently incorporates knowledge of developmental biology and neonatal physiology into medical decision making	Independently uses the results of prenatal testing to guide decision making and prenatal counseling in a patient
Level 5 Recommends novel investigations based on knowledge of developmental biology, neonatal physiology, and new and existing therapies	 Suggests or champions new treatments or trials for treatment of NEC Coordinates a multidisciplinary plan for an ex-utero intrapartum treatment (EXIT) procedure
Assessment Models or Tools	 Case-based discussion assessment Direct observation Mock oral examinations Multisource feedback PSITE examination
Curriculum Mapping	
Notes or Resources	 APSA. ExPERT. https://www.pedsurglibrary.com/apsa/cme/ExPERT. Accessed 2021. SCORE. Module Resources: Pediatric Surgery – Fellowship Level. https://www.surgicalcore.org/modules.aspx?f specialties=Pediatric+Surgery+-+Fellowship+Level. Accessed 2021.

Medical Knowledge 3: Pediatrics and Pediatric Surgery Overall Intent: To understand the development and physiology of children and its implications for pediatric surgery	
Milestones	Examples
Level 1 Demonstrates knowledge of development and physiology of children	 Understands the physiologic changes that occur during growth including normal vital signs appropriate for a newborn, toddler, and child Describes the growth and developmental milestones in infancy and childhood Articulates the different nutritional and metabolic requirements of children at different ages
Level 2 Demonstrates knowledge of pathophysiology and treatments of patients with common pediatric conditions	Demonstrates working knowledge of pathophysiology of patients with asthma, gastroesophageal reflux, constipation, sickle cell disease, immune thrombocytopenia (ITP), and Henoch-Schönlein purpura (HSP)
Demonstrates knowledge of pathophysiology and treatments of patients with common pediatric surgical conditions	 Understands the differential diagnosis and diagnostic/therapeutic options for gastrointestinal bleeding in children of different ages Explains the pathophysiology behind the electrolyte derangements commonly seen in pyloric stenosis Discusses the risks and benefits of non-operative and operative management of appendicitis in children with different presentations
Level 3 Demonstrates basic knowledge of pathophysiology and treatments of patients with defined category pediatric conditions	Demonstrates working knowledge of pathophysiology and treatment of patients with pulmonary hypertension, neutropenia due to chemotherapy, and multiple endocrine neoplasia
Demonstrates basic knowledge of pathophysiology and treatments of patients with defined category pediatric surgical conditions	 Describes the associated conditions and management in a child with complex congenital cardiac disease including malrotation and mesenteric ischemia Describes the different medical and surgical treatment options for children with different types of anorectal malformation and ongoing incontinence Describes the management of a patient with Hirschsprung disease presenting with a range of symptoms from abdominal distention to septic shock
Level 4 Demonstrates advanced knowledge of the varying patterns of disease presentation and treatment at different ages for patients with pediatric conditions	Articulates the different presentations of inflammatory bowel disease at different ages and the different medical and surgical treatment options
Demonstrates comprehensive knowledge of the varying patterns of disease presentation and	Articulates the differences in prognosis of different malignancies in the infant, toddler, and older age groups

treatment at different ages for patients with pediatric surgical conditions	Discusses treatment options used for intestinal rehabilitation in a patient with short gut syndrome, including intestinal transplantation
Level 5 Contributes to peer-reviewed literature on the varying patterns of disease presentation, and age-appropriate treatments of patients with pediatric conditions	Publishes paper on long-term outcomes of children with anorectal malformations
Contributes to peer-reviewed literature on the varying patterns of disease presentation, and age-appropriate treatments of patients with pediatric surgical conditions	Publishes paper on pediatric empyema presentation and treatment in the pediatric patient
Assessment Models or Tools	 Case-based discussion assessment Didactic lectures Direct supervision Mock oral exams Multisource feedback PSITE
Curriculum Mapping

Module Resources: Pediatric Surgery – Fellowship Level. https://www.surgicalcore.org/modules.aspx?f specialties=Pediatric+Surgery+-

Systems-Based Practice 1: Patient Safety and Quality Improvement (QI) Overall Intent: To engage in the analysis and management of patient safety events, including relevant communication with patients, families, and health care professionals; to conduct a QI project	
Milestones	Examples
Level 1 Demonstrates knowledge of how to report patient safety events	 Lists patient misidentification, wrong-site surgery, or medication errors as common patient safety events Describes how to report errors in your environment
Demonstrates knowledge of and describes institutional quality improvement initiatives	Describes fishbone tool (or other QI tools)
Level 2 Reports patient safety events through institutional reporting systems (simulated or actual)	 Reports lack of hand sanitizer dispenser at clinical exam room to the medical director Files formal safety event in the hospital reporting system for a near miss event in the operating room
Participates in institutional quality improvement initiatives	Participate in an institutional QI initiative to decrease spread of hospital acquired C. diff
Level 3 Participates in disclosure of patient safety events to patients and patients' families (simulated or actual)	Participates in communication with patients/families about a lost pathology specimen
Demonstrates the skills required to identify, develop, implement, and analyze an institutional quality improvement project	Participates in project identifying root cause of surgical site infection
Level 4 Independently (supervision only) discloses patient safety events to patients	Collaborates with a team to conduct the analysis of surgical error and effectively communicates with patients/families about those events
and patients' families (simulated or actual)	Discloses an inappropriate medication dosing error to the family with attending observation only
Creates, implements, and assesses quality improvement initiatives at the institutional level	Leads a QI project to standardize discharge instructions within the practice
Level 5 Role models or mentors others in the disclosure of patient safety events	 Assumes a leadership role at the national level for patient safety Conducts a simulation for disclosing patient safety events
Creates, implements, and assesses national quality improvement initiatives	 Initiates and completes a QI project to improve surgical site infection rates in neonates and publishes the results

Assessment Models or Tools	Development, implementation, and outcomes of QI projects
	Direct observation from surgical and pediatric faculty members and nurses
	Medical record (chart) audit
	Multisource feedback
	Online training modules
	Simulation

Systems-Based Practice 2: System Navigation for Patient-Centered Care		
	Overall Intent: To effectively navigate the health care system, including the interdisciplinary team and other care providers, to adapt care to	
a specific patient population to ensure high-quality patient outcomes		
Milestones	Examples	
Level 1 Demonstrates knowledge of care coordination, including transitions of care	 Identifies all involved health care providers throughout the spectrum of the patient's care as members of the team Lists the essential components of a sign-out and transitions of care 	
Demonstrates knowledge of the pediatric surgical population health needs and disparities	Identifies outpatient needs of the family as well as the patient	
Level 2 Coordinates care of patients in routine clinical situations effectively using the roles of	Coordinates care with the medical oncologist for consideration of adjuvant care after Wilms resection	
the interprofessional teams, including transitions of care	Routinely uses formal transition-of-care process for a stable patient during sign-out with resident and advanced practitioners team	
Identifies specific population health needs and inequities for their local pediatric surgical population	Identifies that geographic remoteness may be a factor in where and how patients receive their follow up visits, including telehealth	
Level 3 Coordinates care of patients in complex clinical situations effectively using the roles of their interprofessional teams, including transitions of care	 Coordinates multidisciplinary care with gastroenterology, nutrition, social work, and wound care nurse after bowel resection with ileostomy for Crohn's disease Routinely utilizes formal transition of care process when transferring a patient to the pediatric or neonatal intensive care unit (PICU or NICU) 	
Coordinates with local resources to effectively meet the needs of a pediatric surgical patient population	Develops a diagnostic and management plan in anticipation of dehydration from high ostomy output in a geographically remote patient	
Level 4 Role models effective coordination of patient-centered care among different	Leads multidisciplinary team members in developing and executing a plan of care for a multiply injured child	
disciplines, including transitions of care	Lead tumor board discussion of cases	
Participates in changing and adapting individual practice to provide for the needs of specific pediatric surgical populations	Leads team in implementing established enhanced recovery plans after surgery	
Level 5 Analyzes the process of care coordination and leads in the design and implementation of improvements, including transitions of care	 Assists in designing an app to remotely monitor ostomy output Assists in designing outreach program for post-discharge recovery 	

Leads innovations and advocates for pediatric surgical populations with health care inequities	 Leads development of telehealth services for geographically remote pediatric surgical patients Starts a Saturday clinic for working parents
Assessment Models or Tools	 Direct observation Medical record (chart) audit Multisource feedback Outcomes of QI projects Quality metrics and goals mined from electronic health records (EHR) Review of sign-out tools, use and review of checklists

Systems-Based Practice 3: Physician Role in Health Care Systems		
Overall Intent: To understand the fellow's role in the complex health care system and how to optimize the system to improve patient care		
and the health system's performance		
Milestones	Examples	
Level 1 Identifies key components of the complex health care system (e.g., hospital, pediatric rehabilitation facility, finance, personnel, technology, payment systems)	 Understands the impact of access to outpatient occupational therapy options for a child with feeding difficulties Identifies when patient notes do not meet coding and compliance requirements 	
Level 2 Describes how components of a complex health care system are interrelated, and how this impacts pediatric surgical patient care	 Explains that improving patient satisfaction impacts patient compliance Takes into consideration a patient's prescription drug coverage when choosing discharge medications Recognizes that appropriate documentation can influence the severity of illness determination upon discharge 	
Level 3 Discusses how individual practice affects the broader system (e.g., length of stay, readmission rates, clinical efficiency)	 Ensures that a patient, after proximal ostomy, has an early scheduled follow-up appointment at discharge to evaluate for proper hydration Discusses risks and benefits of various surveillance strategies for a 10-year-old boy with FAP when the family has a high out of pocket deductible Discusses how enhanced recovery after surgery protocols can decrease length of stay and improve clinical efficiency 	
Level 4 Manages various components of the complex health care system to provide efficient and effective patient care and transition of care	 Leads efforts to provide home care services for patients after discharge Works collaboratively to make sure the patient assistance resources are available for a patient with a recent ostomy and limited resources 	
Level 5 Advocates for or leads systems change that enhances high-value, efficient, and effective patient care and transition of care for the pediatric surgical population	 Works with community or professional organizations on programs aimed at identifying and decreasing non-accidental trauma Works with community or professional organizations on Child Injury Prevention programs Improves informed consent process for non-English-speaking patients requiring interpreter services 	
Assessment Models or Tools	 Development, implementation, and outcomes of QI projects Direct observation Implemented programs Medical record (chart) audit Multisource feedback

Practice-Based Learning and Improvement 1: Evidence-Based and Informed Practice Overall Intent: To incorporate evidence and patient values into clinical practice	
Milestones	Examples
Level 1 Demonstrates how to access and use the available evidence and how to incorporate the patient's and patient's family's preferences and values into the care of patients Level 2 Articulates clinical questions and elicits the patient's and patient's family's preferences	 Identifies evidence-based guidelines in the treatment of appendicitis, parapneumonic effusion, and other common pediatric surgical diseases Demonstrates knowledge of and uses APSA guidelines, Not A Textbook, and the Pediatric Surgery Library (pedsurglibrary.com/apsa) In a patient with acute appendicitis, understands and discusses the roles of appendectomy and non-operative management as evidence-based treatment alternatives,
and values to guide evidence-based care Level 3 Locates and applies the best available evidence, integrated with the patient's and patient's family's preferences, to the care of patients	and solicits the family perspective In a patient with gastroesophageal reflux and need of feeding access, uses best available evidence to determine the optimal surgical approach while integrating the patient's medical status, parental preferences, and family resources
Level 4 Critically appraises and applies evidence, even in the face of uncertain and/or conflicting evidence, to guide care, tailored to the individual patient and the patient's family	Critically reviews the literature to determine the optimal treatment algorithms of laparotomy versus drain for necrotizing enterocolitis
Level 5 Coaches others to critically appraise and apply evidence for patients and patients' families; and/or participates in the development of guidelines	 Leads clinical teaching on application of best practices such as at tumor board, journal clubs, or morbidity and mortality rounds Identifies unnecessary variability in care and leads an initiative to address it in a Plan-Do-Study-Act (PDSA) cycle
Assessment Models or Tools	 Direct observation National Surgical Quality Improvement Program (NSQIP) pediactrics data review Outcomes research Presentation evaluation Program creation
Curriculum Mapping	
Notes or Resources	 Institutional Review Board (IRB) guidelines National Guidelines (e.g., National Comprehensive Cancer Network (NCCN), American Society of Clinical Oncology (ASCO)) National Institutes of Health: US National Library of Medicine. Practice-Based Learning and Improvement 2: Reflective Practice and Commitment to Personal Growth Overall Intent: To seek clinical performance information with the intent to improve care; reflect on all domains of practice, personal	
interactions, and behaviors, and their impact on colleagues and patients (i.e., reflective mindfulness)	
Milestones	Examples
Level 1 Accepts responsibility for personal and professional development by establishing goals	Sets personal goals for fellowship education and training with program director
Identifies the factors that contribute to gap(s) between expectations and actual performance	Understands that a personal study program is necessary to avoid gaps in knowledge
Level 2 Demonstrates openness to performance data (feedback and other input) to inform goals	Respectfully receives and integrates feedback from the program director and adjusts clinical practice and technique on an ongoing basis
Analyzes and reflects on the factors that contribute to gap(s) between expectations and actual performance	When prompted, develops an individual education plan to address their gaps in knowledge based on clinical performance and in-service exams
Level 3 Seeks performance data episodically with adaptability and humility	 Occasionally asks for feedback from patients, families, faculty members, and clinical team members Uses online evaluation app after a procedure (e.g., Zwisch, SIMPL)
Analyzes, reflects on, and institutes behavioral change(s) to narrow the gap(s) between expectations and actual performance	Using educational resources, creates a personal curriculum to reduce gaps in knowledge
Level 4 Consistently seeks performance data with adaptability and humility	Consistently solicits and incorporates feedback from patients, families, and faculty and team members to continuously improve clinical practice and techniques
Challenges assumptions and considers alternatives in narrowing the gap(s) between expectations and actual performance	Using educational resources that include self-assessment to identify and minimize personal gaps in knowledge
Level 5 Role models consistently seeking performance data with adaptability and humility	Models practice improvement and adaptability
Coaches others on reflective practice	Mentors more junior learners in developing their individualized learning plans
Assessment Models or Tools	Direct observation Multisource feedback
Curriculum Mapping	Multisource reedback
Cumculum wapping

Professionalism 1: Professional Behavior and Ethical Principles		
Overall Intent: To model ethical and professional behavior, identify lapses, and use appropriate resources for managing ethical and professional dilemmas		
Milestones	Examples	
Level 1 Identifies and describes potential triggers for professionalism lapses and how to report them	 Understands that being fatigued may increase vulnerability to lapses in professionalism, and that working long hours may blur appropriate personal /professional boundaries with coworkers 	
Demonstrates knowledge of the ethical principles underlying the care of cancer patients	Articulates how the principle of "do no harm" applies to a patient who may not benefit from a laparotomy in the setting of widely metastatic rhabdomyosarcoma	
Level 2 Demonstrates professional behavior in routine situations and takes responsibility for own professionalism lapses	Respectfully approaches a nurse who did not see an order written on morning rounds about the importance of the nasogastric tube for decompression and risk for aspiration	
Analyzes straightforward situations using ethical principles	Identifies and applies ethical principles involved in informed consent	
Level 3 Demonstrates professional behavior in complex or stressful situations	 Appropriately responds to a distraught family member, following an unsuccessful resuscitation attempt of a child Facilitates the resolution of professional difference of opinion when treating a complicated patient After noticing a colleague's patient-related social media post, reviews policies related to posting of content and seeks guidance for resolution 	
Analyzes complex situations using ethical principles and recognizes need to seek help in managing and resolving complex ethical situations	Discusses risks and benefits of treatment options for a Jehovah's Witness patient who needs major surgery	
Level 4 Recognizes situations that may trigger professionalism lapses and intervenes to prevent lapses in oneself and others	 Models respect for patients and promotes the same from colleagues, when a patient has been waiting for an excessively long time to be seen When feeling fatigued, the fellow asks for a colleague to take over to prevent a lapse in professionalism 	
Recognizes and uses appropriate resources for managing and resolving ethical dilemmas as needed	Understands the differing concepts of patient/family autonomy and futility when determining treatment for a patient with NEC totalis	
Level 5 Coaches others when their behavior fails to meet professional expectations	Counsels a resident observed being demeaning to another health care professional	

Identifies and seeks to address system-level factors that induce or exacerbate ethical problems or impede their resolution	Creates a system to improve language translation availability to decrease patient and provider frustrations that lead to unprofessional behavior
Assessment Models or Tools	Direct observation Global evaluation Multipayroo foodback
	Multisource feedback Oral or written self-reflection
Curriculum Mapping	•

Levinson W", Ginsburg S, Hafferty FW, Lucey CR. Understanding Medical Professionalism. Astocial Professionalism.

Professionalism 2: Accountability/Conscientiousness Overall Intent: To take responsibility for one's own actions and the impact on patients and other members of the health care team	
Milestones	Examples
Level 1 Takes responsibility for failure to complete tasks and responsibilities, identifies potential contributing factors, and describes strategies for ensuring timely task completion in the future	After multiple reminders to complete case logs, acknowledges and describes mitigation strategies for the future
Responds promptly to requests or reminders to complete tasks and responsibilities	Responds to request to work hours logs within a reasonable timeframe
Level 2 Performs tasks and responsibilities in a timely manner with appropriate attention to detail in routine situations	 Consistently completes clinical and administrative tasks in a timely manner such as: Documents completion of safety modules Completion of medical records Case preparation Case logs
Recognizes situations that may impact one's own ability to complete tasks and responsibilities in a timely manner	Before going out of town, completes tasks in anticipation of absence
Level 3 Performs tasks and responsibilities in a timely manner with appropriate attention to detail in complex or stressful situations	 Appropriately triages tasks to other members of the clinical team when there are multiple competing needs Asks for assistance from other fellows or faculty members, as needed Appropriately delegates and follows up on tasks
Proactively implements strategies to ensure that the needs of patients, teams, and systems are met	In preparation for being out of the office, arranges coverage for assigned clinical tasks on patients and ensures appropriate continuity of care
Level 4 Recognizes situations that may impact others' ability to complete tasks and	Recognizes that when the intern omits key patient information during sign-out it can harm care
responsibilities in a timely manner Level 5 Takes ownership of system outcomes	 Recognizes when the intern is overwhelmed and needs assistance Recognizes that information is being lost in hand offs and establishes a new hand-off process
Assessment Models or Tools	 Compliance with completion of case and duty hour logs, deadlines, and timelines Direct observation Global evaluations

	Multisource feedback Self-evaluations and reflective tools
Curriculum Mapping	
Notes or Resources	 AMA. Ethics. https://www.ama-assn.org/delivering-care/ama-code-medical-ethics. Accessed 2021. Code of conduct from fellow/resident institutional manual Expectations of fellowship program regarding accountability and professionalism

Professionalism 3: Well-Being	
Overall Intent: To identify, manage, and seek help for personal and professional well-being for self and others	
Milestones	Examples
Level 1 Recognizes status of personal and professional well-being, with assistance	After discussion with the attending, acknowledges own emotional response to neonate's terminal diagnosis
Recognizes limits of the team, with assistance	 Requests feedback on missed emotional cues after a family meeting With prompting, can identify when the team is short-handed to cover the day's clinical responsibilities
Level 2 Independently recognizes status of personal and professional well-being	Independently identifies and communicates impact of own personal family tragedy
Independently recognizes status of personal and professional well-being of the team	 Recognizes a pattern of missing emotional cues during family meetings and asks for feedback Independently recognizes when team is overwhelmed and needs additional clinical resources
Level 3 With assistance, proposes a plan to optimize personal and professional well-being	With a multidisciplinary team, develops a reflective response to deal with personal impact of difficult patient encounters and disclosures
With assistance, proposes a plan to optimize personal and professional well-being of the team	 Integrates feedback from the multidisciplinary team to develop a plan for identifying and responding to emotional cues during the next family meeting Works with an attending surgeon to create a new call schedule that improves work-life balance for the resident members of the team
Level 4 Independently develops a plan to optimize personal and professional well-being	Independently identifies ways to manage personal stress (e.g., physical activity, seeks counseling)
Independently develops a plan to optimize personal and professional well-being of the team	 Leads a post-cardiac arrest debrief with the team Recognizes that team member needs time away to deal with a personal tragedy and proactively coordinates coverage
Level 5 Coaches others when emotional responses or limitations in knowledge/ skills do not meet professional expectations	 Assists in organizational efforts to address clinician well-being after patient diagnosis/prognosis/death Works with multidisciplinary team to develop a feedback framework for learners around difficult conversations with parents regarding a neonate's terminal diagnosis
Assessment Models or Tools	 Direct observation Group interview or discussions for team activities Institutional online training modules

	Self-assessment, reflection, and personal learning plan
Curriculum Mapping	
Notes or Resources	 This subcompetency is not intended to evaluate a fellow's well-being, but to ensure each fellow has the fundamental knowledge of factors that impact well-being, the mechanisms by which those factors impact well-being, and available resources and tools to improve well-being. ACGME. "Well-Being Tools and Resources." https://dl.acgme.org/pages/well-being-tools-resources. Accessed 2022. Local resources, including Employee Assistance Programs (EAPs) SCORE. Professionalism: Delivering Bad News. https://www.surgicalcore.org/index. Accessed 2021.

Interpersonal and Communication Skills 1: Patient- and Family-Centered Communication		
Overall Intent: To develop language and behaviors to form constructive relationships with patients, identify and minimize communication barriers; organize and lead communication around shared decision making		
Milestones	Examples	
Level 1 Establishes a professional rapport with patients and patients' families and communicates in a clear and understandable manner	Introduces self and faculty member, identifies patient and others in the room, and engages all parties in health care discussion	
Identifies common barriers to effective communication (e.g., language, disability)	Identifies need for trained interpreter with non-English-speaking patients	
Level 2 Establishes a therapeutic relationship in straightforward patient and patient family encounters and compassionately delivers medical information	Avoids medical jargon and restates patient/family perspective when discussing surgical procedures and diagnoses	
Identifies complex barriers to effective communication (e.g., health literacy, cultural differences)	Recognizes the need for handouts with diagrams and pictures to communicate information to a patient who is unable to read	
Level 3 Establishes a therapeutic relationship in challenging patient and patient family encounters and acknowledges uncertainty in alignment of goals	Continues to engage patient and representative family members with disparate goals in the care of a complicated pediatric surgical patient	
When prompted, reflects on personal biases while attempting to minimize communication barriers	After discussion with attending, realizes that she/he has been avoiding family discussion of withdrawal of care given the fellow's recent experience of a death of a child in the family	
Level 4 Uses shared decision making to align patients'/patients' families' values, goals, and preferences with treatment options to make a personalized care plan	 Conducts a family meeting regarding withdrawal of care for a terminally ill child Uses patient and parents input to engage palliative care and develop a plan for home hospice in the terminally ill child, aligned with the family's values 	
Independently recognizes personal biases while attempting to proactively minimize communication barriers	Recognizes when personal treatment preferences diverge from those of the child and/or family	

Level 5 Mentors others in situational awareness and critical self-reflection to consistently develop positive therapeutic relationships	Leads a discussion group on personal experience of moral distress
Role models self-awareness while identifying a contextual approach to minimize communication barriers	Develops a curriculum on social justice which addresses unconscious bias Serves on a hospital bioethics committee
Assessment Models or Tools	 Direct observation Mock oral examination Multisource feedback Self-assessment including self-reflection exercises

Interpersonal and Communication Skills 3: Communication within Health Care Systems Overall Intent: To demonstrate effective communication skills within the context of the health care system		
Milestones Examples		
Level 1 Accurately records information in the	Examples Documentation is timely and accurate	
patient record		
Communicates through appropriate channels as required by institutional policy (e.g., patient safety reports, cell phone/pager usage)	Identifies institutional and departmental communication hierarchy for concerns and safety issues	
Level 2 Demonstrates organized diagnostic and therapeutic reasoning through notes in the patient record	Organized and accurate documentation includes clinical reasoning that supports the treatment plan	
Demonstrates efficient use of appropriate channels to communicate	Develops documentation templates for the NICU rotation that allows for appropriate signout	
with the health care team	 When seeing a new consult, efficiently and completely reviews the HER to understand the patient's problem list and past medical and surgical visits in both the inpatient and outpatient setting 	
Level 3 Concisely integrates all relevant data from outside systems and prior encounters and reports diagnostic and therapeutic reasoning in the patient record	In clinic, sees and evaluates a patient referred with an abdominal mass from a pediatrician, reviews all records from outside hospital, and succinctly documents synthesis of the information in the medical record	
Maintains effective and respectful communication during emergent and stressful situations	Promptly calls the family about an unplanned reintubation	
Level 4 Communicates clearly, concisely, timely, and in an organized written form, including anticipatory guidance	Documents complex surgical options, including alternatives, for a patient requiring staged repair of long gap esophageal atresia and anticipates potential complications and/or events based on complex anatomy.	
Role model for individual communication across the system	Consultation notes are exemplary and used by the service to teach others	
Level 5 Coaches others to improve written communication	 Provides constructive criticism to a senior resident on the NICU note Identifies inaccuracies in clinical documentation and works with resident to correct 	

Guides departmental or institutional communication around policies and procedures	 Leads a task force established by the hospital QI committee to develop a plan to improve hand-offs Meaningfully participates in a committee to examine communication between the surgical teams and ICU
Assessment Models or Tools	Direct observation
	Medical record (chart) audit
	Multisource feedback

To help programs transition to the new version of the Milestones, the ACGME has mapped the original Milestones 1.0 to the new Milestones 2.0. Indicated below are where the subcompetencies are similar between versions. These are not exact matches but are areas that include similar elements. Not all subcompetencies map between versions. Inclusion or exclusion of any subcompetency does not change the educational value or impact on curriculum or assessment.

Milestones 2.0
PC7: Intra-Operative Patient Care – Procedural Skills for Other Operations
PC1: Patient Evaluation and Clinical Decision Making
PC2: Intra-Operative Patient Care – Endoscopy Procedural Skills PC3: Intra-Operative Patient Care – Procedural Skills for Minimally Invasive Surgical Procedures PC4: Intra-Operative Patient Care – Procedural Skills for Thoracic Cases PC5: Intra-Operative Patient Care – Procedural Skills for Abdominal Procedures PC6: Intra-Operative Patient Care – Procedural Skills for Oncology Cases PC8: Tissue Handling of Delicate (Oncologic, Inflamed and/or Scarred Tissue) and Neonatal Tissues PC9: Post-Operative Care (Short and Long Term) PC10: Critical Care PC11: Trauma Management
MK1: Anatomy MK2: Developmental Biology and Neonatal Physiology MK3: Pediatrics and Pediatric Surgery SBP3: Physician Role in Health Care Systems

SBP2: Patient Safety	SBP1: Patient Safety and Quality Improvement
SBP3: Systems-based Documentation	ICS3: Communication within Health Care Systems
	SBP2: System Navigation for Patient-Centered Care
PBLI1: Evidence-based Medicine	PBLI1: Evidence-Based and Informed Practice
PBLI2: Self-directed Learning	PBLI2: Reflective Practice and Commitment to Personal Growth
PROF1: Integrity	PROF1: Professional Behavior and Ethical Principles
PROF2: Recognition of Limits	PROF3: Well-Being
PROF3: Behavior and Respect	PROF1: Professional Behavior and Ethical Principles
PROF4: Leadership	
	PROF2: Accountability/Conscientiousness
ICS1: Collaborator	ICS2: Interprofessional and Team Communication
ICS2: Patient- and Family-centered Care	ICS1: Patient- and Family-Centered Communication
