PREFACE

The Directory of Residency Training Programs is now called the Directory of Graduate Medical Education Programs. The title has been changed to reflect the addition of subspecialty training programs in the specialties of internal medicine, pathology, pediatrics, and surgery. The 1987-1988 Directory of Graduate Medical Education Programs is the 73rd edition published by the American Medical Association of a list of graduate medical education opportunities in the United States. The original purpose of this publication (popularly known as the "The Green Book") is still an important one: to provide medical students with an official list of programs accredited to offer graduate medical training. The Accreditation Council for Graduate Medical Education (ACGME), composed of representatives of five national associations interested in medical education, and the Residency Review Committees accredit graduate education programs which meet the General and Special Requirements of the Essentials for Accredited Residencies.

The DIRECTORY now serves another important purpose. It is recognized as the official list of accredited graduate programs. State licensing boards and specialty societies refer to this DIRECTORY to verify the authenticity of programs presented by physicians who wish to qualify for licensure and certification. The DIRECTORY is also the historical record of graduate medical education in the United States and a source for national statistics on medical manpower in training.

Current DIRECTORY

The 1987-1988 Directory of Graduate Medical Education Programs contains five sections and five appendices.

Section I contains important information about the accreditation process, information about regulations for entry of foreign medical graduates to the U.S. and admission to U.S. residency programs, and a brief description of the National Resident Matching Program. This section also includes the addresses for obtaining more detailed information on these subjects.

Section II contains the "General Requirements for Accredited Residencies," which became effective July 1, 1982, together with the Special Requirements for training programs in each specialty. Residency programs reviewed after June 30, 1982 have been judged on the basis of the new General Requirements. The Special Requirements for each specialty are current as of January 1987.

Section III contains statistical data on the 1986-1987 academic year with some comparative data of previous years. Information on the number of accredited programs, the number of positions, and the number and selected characteristics of trainees is provided. Information on institutions and agencies participating in residency programs is also included.

Section IV is the list of accredited programs for each specialty. (Programs which will be discontinued June 30, 1987 are not listed.) The programs within each discipline are listed by state and city. Persons wishing detailed information about a residency program should write to the program director at the address listed. A list of Transitional Year Programs offered by hospitals or groups of hospitals is included in this section. This year training programs in nine internal medicine subspecialties have been added to the list. Subspecialty programs in pathology, pediatrics, and surgery have been previously listed in the DIRECTORY, with the exception of two new pathology subspecialties.

Section V is a "Directory of Institutions and Agencies" participating to a significant extent in residency training. The institutions are listed alphabetically by state and city. In addition to the name and address of the institution, the type of administrative control of the institution, medical school affiliations of the institution as provided by the deans of accredited U.S. medical schools, the total number of medical staff, the number of beds, the average daily census, the percentage of necropsies, and a list of the specialties in which this institution provides training is given.

Appendix A contains a list of programs which offer a combined medicine/pediatrics training, that is, two years of medicine and two years of pediatrics. Both the American Board of Internal Medicine and the American Board of Pediatrics accept this combined training for certification. Neither the ACGME nor the Residency Review Committees have reviewed these combined programs. This list has been provided by the staffs of the American Board of Internal Medicine and the American Board of Pediatrics and is printed in this DIRECTORY as a service to the reader.

Appendix B contains the "Requirements for Certification" in each specialty. These documents have been provided by the specialty boards and are published as information. A specialty board may have changed its requirements after this DIRECTORY went to press. Questions concerning certification requirements should be directed to the particular board office.

Appendix C contains a summary of licensure requirements for each state. Inquiries concerning licensure should be directed to the individual state offices.

Appendix D contains a list of U.S. medical schools accredited by the Liaison Committee on Medical Education. Appendix E provides the key to abbreviations used in the DIRECTORY.

Statistical Highlights of Graduate Medical Education in the U.S.

There were 6,332 accredited graduate programs in medical education as of December 1986. This number includes recently accredited programs in the internal medicine subspecialties. Over one-fifth of all training
programs were located in the Middle Atlantic region.

The projection of positions for July 1987 was 79,854. Of the total positions, 20,522 were projected for postgraduate year-one candidates. This does not include positions in 586 programs accredited too late to be included in the survey.

Approximately eight percent of the programs have available shared-schedule positions. Most of these programs are in internal medicine, pediatrics, and psychiatry.

The number of residents on duty September 1, 1986 was 76,815 (as reported by 91 percent of the programs surveyed). This is an increase of 2,301 residents from the 1985 count. This increase is due mainly to the number of residents in the new internal medicine and pediatrics subspecialty programs.

The number and percent of women in residency programs continues to increase. In 1986, more than one-fourth of the residents were women. Approximately two-fifths (38 percent) of the women residents were training in internal medicine or pediatrics.

The majority of residents (82 percent) were graduates of U.S. or Canadian medical schools. The number of graduates of foreign medical schools equals 15.7 percent of all residents. Almost one-half of these foreign medical graduates were reported to be U.S. citizens. The number of Black non-Hispanic residents has increased slightly. The percentage of all residents who are Black has remained at 4.5 percent.

There were 1,343 hospitals offering a significant portion of training in graduate medical education programs. In addition, there were 227 ambulatory care clinics, mental health agencies, blood banks, and medical examiners offices which provided residency training.

Acknowledgements

Many people have made possible the publication of the 1987-1988 edition of the DIRECTORY. Program directors and the staffs of offices of medical education and of house staff affairs have been most cooperative in providing updated information on the training programs they administer. Information on institutions and agencies participating in the training programs was provided by the chief executive officers and their staffs. A response to the Annual Survey has been received from more than 90 percent of the programs each of the past four years, and from approximately 80 percent of the institutions.

The work of the Residency Review Committees which review and evaluate programs provides the basis for this DIRECTORY. Particular mention should be made of the contributions of the Committee Secretaries who have provided corrected copy of revised Special Requirements and notification of the most recent actions of the Residency Review Committees and ACGME.

The individuals who staff the specialty boards have provided current documents on the Requirements for Certification in each of the specialties. Information on licensure was provided by the state medical boards and the Department of Data Planning and Evaluation of the American Medical Association.

The AMA Division of Computer and Information Services provided electronic data processing services. The AMA Division of Printing Services and the Department of Creative Services provided other technical support. Particular commendation is due for Herb Hinkelmann who executed the cover design.

A very special acknowledgement and thank you is extended by the editors to a few persons who have labored daily to bring this DIRECTORY to the public in the most accurate form possible.

Helen Shaw has given detailed attention to the listing of each program. Ms. Shaw also provided assistance with the preparation of statistical tables found in Section III and with proofreading.

Brigitte Love kept an accurate record of returns throughout the survey process, and provided telephone assistance to respondents.

Clintonia McNeal assisted in clarifying information with program directors and in verifying certain program listings.

The cooperation, dedication to the task, and critical inquiry by these excellent staff people have produced an accurate DIRECTORY. The editors are most grateful to each one of them.

Communications concerning the content of this DIRECTORY should be addressed to Anne E. Crowley, Ph.D., Editor, Directory of Graduate Medical Education Programs, Office of Medical Education Information Analysis, 535 North Dearborn Street, Chicago, IL 60610.

**National Resident Matching Program**

**PROCESS OF REVIEW AND ACCREDITATION OF EDUCATIONAL PROGRAMS IN GRADUATE MEDICAL EDUCATION**

**INTRODUCTION**

Note: The following informal summary of the process of review and accreditation is designed as an aid to persons desiring ready access to general information about the process. Official policies of the Accreditation Council for Graduate Medical Education (ACGME) governing accreditation are contained in the Manual of Structures and Functions for Review Committees. This document is available from the office of the Executive Secretary of the ACGME.

The Accreditation Council for Graduate Medical Education is composed of representatives of the American Board of Medical Specialties, the American Hospital Association, the American Medical Association, the Association of American Medical Colleges, and the Council of Medical Specialty Societies. The Federal Government names a representative to serve as a nonvoting member of the Council and the Council chooses one public member. A Residency Review Committee (RRC) consists of representatives appointed by the American Medical Association, the appropriate specialty board, and, in some cases, a national specialty society. Residency training programs are accredited in one of the following ways: by the ACGME upon recommendation of the appropriate RRC, or by the RRC itself if accreditation authority has been delegated by the ACGME. Accreditation of a residency program indicates that it is judged to be in substantial compliance with the Essentials of Accredited Residencies. (Note: The jurisdiction of ACGME is limited to programs in the United States, its territories, and possessions.)

**APPLICATION AND SURVEY**

The accreditation review process is set in motion in one of two ways, depending upon whether the program under consideration is a new or an ongoing program.

**Application.** In the case of a new program, the process begins when the program director sends an application to the Executive Secretary of the RRC. The entire processing of an application involves several steps and usually requires 8 to 12 months from the time the application is received by the Executive Secretary until accreditation action is taken. The Executive Secretary checks the application for completeness and forwards the document to the Director of Field Staff, who schedules the survey of the program. The scheduling and completion of the survey take approximately six months. In some specialties, the application will receive a pre-review by a member of the RRC or a specialist before the survey is scheduled.

A reapplication involves the same process described above. A program cannot initiate reapplication while engaged in either stage of the appeals process.

**Resurvey of Accredited Programs.** Existing programs are surveyed and reviewed on cycles determined by the RRC, as described below in the section on categories of accreditation. Programs will be notified approximately two months before the resurvey, at which time the program director will receive the appropriate forms for completion prior to the survey. Program directors may request forms earlier, if they desire.

A RRC may, in special circumstances, require a resurvey of a program outside the usual cycle. A program director may also request an early resurvey. However, a program will not be resurveyed while it is in either stage of the appeals process.

**Function of Surveyor.** There are two types of surveys, those conducted by ACGME field staff and those done by specialist site visitors. In either case, it should be emphasized that the surveyor does not participate in the final accreditation decision or recommendation of the RRC. It is the surveyor's primary responsibility to verify the information that has been provided by the program director. The surveyor also conducts interviews with administrators, faculty, and residents in order to report accurately on the various aspects of the educational program.

After the survey has been completed, the surveyor's report is submitted to the Executive Secretary who prepares the program file for evaluation by the RRC.

**REVIEW AND ACCREDITATION**

The RRC reviews the program information in detail, evaluates the program and determines the degree to which it meets the published educational standards (Essentials of Accredited Residencies). It decides upon an accreditation status for the program and identifies areas of non-compliance with the standards.

**The Accreditation Categories.** The accreditation status of a program will be one of the following:

- **Withhold Accreditation:** An RRC may withhold accreditation when it determines that the proposal for a new program does not substantially comply with the Essentials of Accredited Residencies. The RRC will cite those standards with which the proposed program does not comply.

- **Provisional Accreditation:** Provisional accreditation is granted for initial accreditation of a program, or for a previously accredited program which had its accreditation withdrawn and has subsequently reapplied for accreditation. Provisional accreditation may also be used in the unusual circumstance in which a program holding full accreditation has been so altered that in the judgment of the RRC it is the equivalent of a new program. In each case, the effective date of provisional accreditation will be stipulated.

Following initial accreditation on a provisional basis, programs should be reviewed by the RRC following a standard interval of two years. The interval between initial accreditation and the next review should not exceed three years. Under special circumstances, an RRC may extend provisional accreditation, but the period of provisional accreditation should not exceed four years, or in the case of programs of four years duration or longer, the length of the program plus one year. If full accreditation is not granted within this time, accreditation of the program should be withdrawn. However, accreditation should not be withdrawn until the program has had notice of deficiencies and has had an opportunity to correct them. Normally, the warning procedure should be used in such cases.

**Full Accreditation:** An RRC may grant full accreditation in three circumstances:

a) For programs holding provisional accreditation which upon review are considered to be in substantial compli-
ance with the Essentials of Accredited Residencies;
b) For programs holding full accreditation which upon review continue to be in substantial compliance with the Essentials of Accredited Residencies;
c) For programs holding probationary accreditation which upon review are considered to be in substantial compliance with the Essentials of Accredited Residencies.

The maximum interval between reviews of a program holding full accreditation is five years; however, an RRC may specify a shorter cycle.

**Probationary Accreditation:** This category is used for programs holding a full accreditation which, upon survey and review, are no longer considered to be in substantial compliance with the Essentials of Accredited Residencies. The normal interval for review of programs holding probationary accreditation is six years; however, the RRC may specify a shorter cycle. In reviewing a program holding probationary accreditation, the RRC may exercise the following options: grant full accreditation, withdraw probationary accreditation, or, in special circumstances, continue probationary accreditation. Programs may not hold probationary accreditation for more than four consecutive years. The “Procedures for Reconsideration and for Appeal of Adverse Actions” provide further details on adverse actions (see below).

**Withdrawal of Accreditation:** Accreditation may be withdrawn from a residency program under the following conditions:

a) **Noncompliance with Essentials.** Accreditation may be withdrawn from programs holding either provisional accreditation or probationary accreditation which upon review are not considered to be in substantial compliance with the Essentials of Accredited Residencies.

b) **Voluntary Withdrawal of Accreditation.** Voluntary withdrawal of accreditation may occur under the following circumstances:
   1. A program director may request voluntary withdrawal of accreditation of a program, without prejudice. It is expected that if a program is inactive for two years, the director will seek voluntary withdrawal of accreditation.
   2. Two or more programs may be merged into a single new program. If the RRC accredits the program, it will take concurrent action for withdrawal of accreditation, without prejudice, of the previously separate programs. The RRC will consider the expressed preference of the program director in establishing the effective date of withdrawal of accreditation of the program(s).

c) **Delinquency of Payment.** Programs which are judged to be delinquent in payment of fees are not eligible for review and shall be notified by certified mail, return receipt requested, of the effective date of withdrawal of accreditation. On that date, the program will be removed from the list of AME accredited programs.

d) **Noncompliance with Accreditation Actions and Procedures.** A program director may be deemed to have withdrawn from the voluntary process of accreditation and an RRC may take appropriate action to withdraw accreditation if a director refuses to comply with the following actions and procedures:
   1. To undergo a site visit and program review;
   2. To follow directives associated with an accreditation action;
   3. To supply an RRC with requested information.

The following policies apply when action is taken to withdraw accreditation (except for establishment of an effective date in the case of voluntary withdrawal of accreditation or withdrawal of accreditation because of inactivity):

a) The effective date of withdrawal of accreditation shall not be less than one year from the date of the final action taken in the procedures to withdraw accreditation.

b) The effective date of withdrawal of accreditation shall permit the completion of the training year in which the action becomes effective.

c) Once notification has been made of the effective date of withdrawal of accreditation, no residents may be appointed to the program.

d) When action has been taken by an RRC to withdraw accreditation of a resident program, and the program has entered into appeal procedures, an application for accreditation of a new program will not be considered until the appeal action is concluded.

The “Procedures for Reconsideration and for Appeal of Adverse Actions” contain further details (see below).

**Warning Notices.** The RRC may use a special procedure to advise a program director that it has serious concerns about the quality of the program and that the program’s future accreditation status may be in jeopardy. In keeping with the flexibility inherent in the accreditation process, each RRC may use this procedure in accordance with its own interpretation of program quality and the use of the different accreditation categories. This procedure is not considered an adverse action and, therefore, is not subject to the appeals procedures.

a) **For a program with provisional accreditation,** the RRC may elect to continue provisional accreditation, but include in the letter of notification a statement that the program will be reviewed in approximately one year, including a survey, at which time withdrawal of accreditation will be considered if the cited deficiencies have not been addressed satisfactorily.

b) **For a program with full accreditation,** the RRC may determine that a fully accredited residency program has deficiencies which, however, do not warrant probationary accreditation at the time. It may elect to continue full accreditation but include in the letter of notification a statement that the program will be reviewed in approximately one year, including a survey, at which time probationary accreditation will be considered if the cited deficiencies have not been addressed satisfactorily.

**Deferral of Accreditation Action:** An RRC may defer a decision on the accreditation status of a residency program. The primary reason for deferral of accreditation action is lack of sufficient information about specific issues, which precludes an informed and reasonable decision. When an RRC defers accreditation action, the residency program retains its current accreditation status until a final decision is made.

**Size of Residency Complement:** The complement of residents in a program must be consistent with the hospital’s capacity of the program to offer an acceptable educational experience for each resident. Thus, an RRC may indicate that a residency program is accredited to train a specific number of residents as a maximum at any one time. In addition, an RRC may indicate the number of residents to be trained in each year of the program. An RRC may also indicate that a minimum number of residents is considered necessary in each program to provide an effective learning environment.

**Participating Institutions:** A residency program may utilize two or more participating institutions to provide necessary educational resources. In such cases, an RRC may evaluate whether a participating institution satisfactorily contributes to the educational program.

**Progress Reports:** An RRC may request a progress report from a program director. The RRC should specify the exact information to be provided. When a progress report is requested, a specific due date should be included in the request.

**NOTIFICATION OF ACCREDITATION STATUS**

**Letters of Notification.** Following the meeting of the RRC, letters of notification are sent to program directors informing them of the RRC’s decision. Although the duration of accreditation is not specified, the notification letters usually contain reference to the approximate time of the next survey and
review of the program. The accreditation status of any program will change only by subsequent action of the RRC. An adverse action concerning accreditation status can take place only after a survey of the program.

Notifying Residents. Each time an action is taken regarding the accreditation status of a program, the residents must be notified. When an adverse action is taken, program directors must notify all residents and applicants to the program IN WRITING, unless reconsiderations are requested. If an adverse action is sustained upon reconsideration, the residents and applicants must be notified whether or not the action is appealed further. Copies of the letters to residents and applicants must be kept on file by the program director and a copy shall be sent to the Executive Secretary of the RRC within fifty (50) days of receipt of the notification of the adverse action. (Additional information regarding notification letters is contained in the “Procedures for Reconsideration and for Appeal of Adverse Actions.” See below.)

PROCEDURES FOR RECONSIDERATION AND FOR APPEAL OF ADVERSE ACTIONS
Approved September 9, 1985
by
ACGME

NOTE: The procedures below were adopted by the ACGME on September 9, 1985. They are effective for programs surveyed after January 1, 1986.

The Accreditation Council for Graduate Medical Education procedures for reconsideration and for appeal of adverse actions regarding the accreditation status of programs in graduate medical education provide for two steps of review. 1

I. Reconsideration

A. A letter of notification of the action 2 of a Residency Review Committee to deny or withdraw accreditation or to place or continue a program on probation or to deny an increase or to recommend a reduction in resident complement shall be mailed to the program as soon as possible following the Residency Review Committee meeting. The letter shall include the basis for the decision. The program will be informed of its right to request reconsideration. In cases of withdrawing or withdrawing accreditation or of placing a program on probation, a copy of the letter will also be sent to the chief administrative officer of the parent institution.

B. A program may request the RRC to reconsider the intended adverse action by submitting such request to the Executive Secretary of the RRC, by certified mail, return receipt requested, within thirty days of receipt of the letter of notice. While reconsideration is pending, the program will retain its accreditation status prior to the adverse action being reconsidered.

C. If reconsideration is not requested within thirty days of receipt of the letter of notification, the action of the RRC shall become final and all rights to reconsideration or appeal shall be waived. When the action becomes final, a copy of the letter of notification shall be sent to hospital administrators of participating institutions, the medical school and sponsoring organizations affiliated with the medical school and the sponsoring organizations of the RRC.

D. If reconsideration is not requested and the action becomes final, the program must give written notice of the adverse action to all residents and applicants. A copy of such notice must be sent to the Executive Secretary of the RRC.

E. If reconsideration is requested, the Executive Secretary of the appropriate Residency Review Committee will acknowledge the request for reconsideration and provide the program with the documents pertinent to the evaluation of the program not previously submitted by the program. Additionally, the Executive Secretary shall indicate a time by which additional information is to be received in order to be considered at the next regular meeting of the Residency Review Committee.

F. The program may provide to the RRC any written information revising or expanding factual information previously submitted; challenging the findings of the on-site inspector; attempting to rebut the interpretation and conclusions of the Residency Review Committee; attempting to show that deficiencies cited did not exist at the time of the initial RRC action, and/or otherwise attempting to show that the program was in substantial compliance with the “Essentials” at the time of the initial RRC action.

The Residency Review Committee will complete reconsideration at the regularly scheduled meeting indicated to the program. The Residency Review Committee may sustain or modify its previous recommendation or may choose to initiate a new survey and evaluation of the program.

G. If reconsideration of an adverse action is sustained, the residents and applicants must then be notified in writing that an adverse action as to accreditation status has been taken whether or not the action is appealed further. A copy of the notification must be sent to the Executive Secretary of the RRC.

H. Where substantial changes have occurred subsequent to the initial action of the RRC, the information should be delineated and submitted by the program as part of a request for re-evaluation and accreditation of the program. Such a re-evaluation includes a new on-site survey of the program.

I. When the RRC sustains its initial action, it will notify the program of its decision and indicate the further right to appeal an adverse decision. The reconsideration phase is completed when the RRC sustains its initial action, modifies it, or orders a new survey of the program.

J. When the RRC sustains its initial action, official letters of notification shall be sent as outlined in I.C. above.

II. Appeal Hearing

A. If upon reconsideration the Residency Review Committee sustains its initial action, the program may request a hearing before an appeals panel. If a written request for such a hearing is not received by the Executive Secretary of the ACGME within thirty (30) days of the following receipt of the official letter of notification, the action of the RRC will be deemed not subject to further appeal. 3

If a hearing is requested, the panel will be appointed according to the following procedures:

1. The ACGME shall maintain a list of qualified persons in each specialty as potential appeals panel members such lists of persons should come from professional backgrounds and settings representative of those in which residency training programs are conducted.

2. For a given hearing, the program shall receive a copy of the list of potential appeals panel members and shall have an opportunity to delete a maximum of one third of the names from the list of potential appeals panel members. The program shall submit the revised list to the Executive Secretary of the ACGME within fifteen (15) days.

3. A three member appeals panel will be constituted by the ACGME from among the remaining names on the list.

4. When a program receives an appeals panel, the program reverts to its status prior to the appealed adverse action until the ACGME makes a final determination on the status of the program. Nonetheless, at this time residents must be notified as to the adverse action of the RRC on the accreditation status.

5. Letters should be sent certified mail, return receipt requested, in care of the Executive Secretary, Accreditation Council for Graduate Medical Education, 535 North Dearborn Street, Chicago, Illinois 60610.
C. Hearings conducted in conformity with these procedures will be held at a time and place to be determined by the ACGM. At least twenty-five (25) days prior to the hearing the program shall be notified of the time and place of the hearing.

D. The program will be given the documentation of the Residency Review Committee action in sustaining its initial action upon reconsideration.

E. The documents comprising the program file, the record of the RRC’s action, together with oral and written presentations to the appeals panel, shall be the basis for the recommendation of the appeals panel.

F. The appeals panel shall meet and review the written record, and receive the presentations. The appropriate RRC shall be notified of the hearing and a representative of the RRC may attend the hearing to be available to the appeals panel to provide clarification of the record.

Proceedings before an appeals panel are not of an adversary nature as typical in a court of law, but rather, provide an administrative mechanism for peer review of an accreditation decision about an educational program. The appeals panel shall not be bound by technical rules of evidence usually employed in legal proceedings.

The program may not amend the statistical or narrative descriptions of the program on which the decision of the Residency Review Committee was based. Furthermore, the appeals panel shall not consider any changes in the program or descriptions of the program which were not in the record reviewed by the Residency Review Committee. Presentations shall be limited to clarifications of the record and arguments to show the degree to which the program meets the published standards for accreditation and the degree to which it has been reviewed in accordance with the administrative procedures governing accreditation of programs.

The appellant shall communicate with the appeals panel only at the hearing or in writing through the Executive Secretary of the ACGM.

The appeals panel shall make recommendation to the ACGM whether there is substantial, credible and relevant evidence to support the action taken by the Residency Review Committee in the matter that is being appealed. The appeals panel, in addition, will make recommendations as to whether there has been substantial compliance with the administrative procedures governing the process of accreditation of graduate medical education programs.

G. At the option of the appeals panel, the program may submit additional written material within fifteen (15) days after the hearing. The intention to submit such material must be made known to the appeals panel at the hearing.

H. Following the hearing or submission of additional written material, the appeals panel shall submit its recommendation to the ACGM within twenty (20) days. The ACGM shall act on the appeal at its next regularly scheduled meeting.

I. The decision of the ACGM in this matter shall be final. There is no provision for further appeal.

J. The Executive Secretary of the ACGM shall, within fifteen (15) days following the final ACGM decision, notify the program under appeal of the decision of the ACGM by means of certified mail.

K. Expenses of the appeals panel members and the associated administrative costs shall be shared equally by the appellant and the ACGM.

**PROCEDURES FOR APPEAL OF ADVERSE ACTIONS FOR TRANSITIONAL YEAR PROGRAMS**

Approved September 1985

by

ACGM

The Transitional Year Review Committee (TYRC) procedures for appeal of adverse actions regarding the accreditation status of Transitional Year Programs provide for the following steps.

A. A letter containing the recommendation of the Transitional Year Review Committee to withhold or withdraw accreditation or to decrease in resident complement or to recommend a reduction in the number of residents in a program shall be mailed to a program director whose program has received such adverse recommendation as soon as possible following the Transitional Year Review Committee meeting. The letter, when transmitted to the program involved, shall include the basis for the decision and inform the program director of his right to request an appeals hearing before the TYRC. In cases of withholding or withdrawing accreditation, a copy of the notification letter will also be sent to the chief administrative officer of the sponsoring institution and the RRCs of the sponsoring programs after the action becomes final. The action of the TYRC becomes final upon concurrence by the ACGM.

B. If an appeal is not requested, the residents and applicants must be notified of the adverse action in writing.

C. Written requests for a hearing must be submitted to the Executive Secretary of the TYRC be certified mail, return receipt requested, within thirty (30) days following receipt of the letter. If the program does not request a hearing within thirty (30) days after receipt of the letter, all rights to an appeal are waived.

D. When a written request for an appeals hearing is received, the program shall revert to its status prior to the adverse action or recommendation of an adverse action by the TYRC.

E. The Executive Secretary of the TYRC will place the request for the hearing in the program file and will schedule the hearing for the next meeting of the TYRC.

F. Once a hearing date has been set, the program director and institution have the right to request and obtain all the information in the program file on which the TYRC’s recommendations and actions were taken, including reports of field staff and specialist site visitors, progress reports and any additional clarifying information which was not available to the program director.

G. The program director, in accordance with the established guidelines of the TYRC, will have the option to either make a presentation before the TYRC or submit documentation to the TYRC regarding cited deficiencies.

H. Appeal proceedings before the TYRC are not of an adversary nature as is typical in court of law, but rather, provide an administrative mechanism for peer review of an accreditation decision about an educational program.

I. At the option of the appeals panel, the program may submit additional written material within fifteen (15) days after the hearing. The intention to submit such material must be made known to the appeals panel at the hearing.

J. Following the hearing or submission of additional written material, the appeals panel shall submit its recommendation to the TYRC within twenty (20) days. The TYRC shall act on the appeal at its next regularly scheduled meeting.

K. The decision of the TYRC in this matter shall be final. There is no provision for further appeal.

L. The TYRC shall submit a recommendation for sustaining or rescinding the original decision to the ACGM. The action of the ACGM will be final.

**PROGRAM ORGANIZATION**

The organization of a program may involve any of several administrative forms.

For example:
A program may be conducted within a single institution, that is, the assignment of residents is limited to that institution; or
A program may involve more than one institution, that is, the resident assignments are not limited to the sponsoring institution.

Some RRCs have specific requirements relating to program organization. These may be found in the appropriate Special Requirements.

It is the editorial policy of the Directory of Residency Training Programs that the program listings shall include, in addition to the parent institution, only institutions to which rotations are for a minimum of six months for programs of three or more years duration, a minimum of four months for programs of two years duration, and a minimum of two months for programs of one year duration.

**CHARGES FOR EVALUATION AND ACCREDITATION OF PROGRAMS**

Fees charged for the accreditation of programs are determined annually by the Accreditation Council for Graduate Medical Education. As of January 1, 1987, the following fee structure is in effect:

**Administrative Review**

A fee is charged for the following:

a) New applications, including subspecialty programs.

b) Request for an increase or decrease in the resident complement in those cases in which Residency Review Committee action is required; request for the increase and decrease in the number of hospitals in a program under those circumstances when Residency Review Committee action is required.

The charge for these administrative reviews is $400.00. It is normally billed at the time the applications or requests are received.

**Program Survey**

Fees charged for the following on-site inspections of programs:

a) Survey by an ACGME Field Surveys: $1,600.00.

b) Survey by a Specialist in the appropriate discipline: $1,600.00.

c) Survey of a subspecialty program in certain disciplines in which such programs are surveyed in conjunction with a core program: $800.00.

**Annual Per Resident Fee**

An annual fee for each resident position filled in an accredited residency training program will be charged. The fee will be calculated on the number of residents in a program as of September 1, of a given academic year. Programs will be billed sometime after December 1, of that academic year. The fee charged in December, 1986 was $30.00 per resident.

**WHERE TO OBTAIN INFORMATION**

Inquiries regarding any aspect of the accreditation process should be directed to the Executive Secretary of the appropriate Residency Review Committee at the following address:

535 North Dearborn Street, Chicago, Illinois 60610.

For inquiries by telephone, please use the following numbers:

Executive Secretary, ACGME (312) 645-4920

Executive Secretary, RRCs for: (312) 645-4692

Dermatology

Orthopaedic Surgery

Pathology

Thoracic Surgery

Executive Secretary, RRCs for: (312) 645-4642

Anesthesiology

Nuclear Medicine

Preventive Medicine

Radiology

Executive Secretary, RRCs for: (312) 645-4687

Neurological Surgery

Ophthalmology

Surgery

Executive Secretary, RRCs for: (312) 645-4947

Allergy and Immunology

Family Practice

Pediatrics

Executive Secretary, RRCs for: (312) 645-4683

Colon and Rectal Surgery

Neurology

Obstetrics/Gynecology

Physical Medicine and Rehabilitation

Psychiatry

Executive Secretary, RRCs for: (312) 645-5366

Emergency Medicine

Otolaryngology

Plastic Surgery

Urology

Associate Executive Secretary, RRC for: Internal Medicine (312) 645-4953

Transitional Year (312) 645-4685

Director of Field Staff (312) 645-4948

(Surveys)

Administrative Assistant (312) 645-4939

(Invoices, vouchers)

Inquiries regarding fees should be directed to: Executive Secretary of ACGME, 535 North Dearborn Street, Chicago, Illinois 60610.

A list of programs which offer shared-schedule positions may be obtained upon request by writing to: Office of Medical Education Information Analysis, American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610.

Inquiries regarding listing of programs should be directed to: Director, Office of Medical Education Information Analysis, American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610.

Any inquiries regarding certification of individual candidates in any specialty should be directed to the appropriate board in that specialty. (See Appendix B, Table 2 for address.)

Inquiries regarding the Match Program should be directed to the National Resident Matching Program, One American Plaza, Evanston, Illinois 60201 (Phone: (312) 328-3440).

**ENTRY OF FOREIGN-BORN MEDICAL GRADUATES TO THE UNITED STATES**

The entry of foreign-born graduates of foreign medical schools to the United States is governed by the U.S. Immigration and Nationality Act, which is administered by the Immigration and Naturalization Service. It is a violation of federal law to provide employment to a non-U.S. citizen who does not hold a visa permitting him to earn a salary. Thus, residency program directors considering foreign-born foreign medical graduates should appoint only those who hold an exchange visitor (J-1) visa, an immigrant visa or federal work permit. These foreign-born foreign medical graduates should also hold the standard Educational Commission for Foreign Medical Graduates (ECFMG) certificate, earned through passing the Foreign Medical Graduate Examination in the Medical Sciences (FMGEMS) and meeting the other requirements of the ECFMG.

Foreign medical graduates who hold exchange visitor visas can be appointed only to residency programs in a medical school hospital, or in a hospital affiliated with a medical school; and the medical school must agree in writing to provide the training for which the medical graduate is coming to the United States. Recent amendments to the Immigration and Nationality Act permit a foreign medical graduate to remain in the United States long enough to complete training in a specialty or for seven years, whichever is shorter; a graduate may change his designation of specialty once during that period.

**Exchange Visitor FMs**

Exchange visitor foreign medical graduates are at present required to have passed the FMGEMS in order to obtain a
visa, and they must have demonstrated competency in oral and written English. They must have undertaken their medical studies at a medical school listed in the World Directory of Medical Schools and must have completed all of the medical education requirements for admission to practice in the country where they attended medical school before coming to the United States. They must, in addition, have permitted themselves to return to their home country, or country of last residence, after they complete their training in the United States, and their country must provide written assurance that there is need in that country for services in the specialty of the graduate’s training. A graduate who holds an exchange visitor visa and a standard ECFMG certificate has met the above requirements.

Immigrant Foreign Medical Graduates

Foreign-born foreign medical graduates who immigrate to the United States similarly are subject to regulations. Program directors should determine that such individuals have an immigrant’s visa and an ECFMG certificate, or a full and unrestricted state license to practice medicine. Foreign-born foreign medical graduates may immigrate to the U.S. in a number of different ways. One way is to enter on a third-preference visa, that is, as a professionally trained physician or surgeon coming to the United States to practice medicine. Those physicians who apply for a third preference visa must take the FMGES and satisfy other immigration rules, which include obtaining a U.S. Department of Labor certificate indicating that they are not being appointed to a position that an equally qualified U.S. citizen or permanent resident has sought. A foreign medical graduate may immigrate to the U.S. without having taken the FMGES, as a political or religious refugee or as the first-degree relative of a U.S. citizen or a U.S. permanent resident. However, such individuals must meet the requirements for appointment to a residency program as described in the General Essentials (see Section II). Program directors who are contacted by foreign-born foreign medical graduates with questions about immigration should refer the inquirer to a U.S. Consul General (if the inquiry comes from abroad) or to the Immigration and Naturalization Service (if the inquiry comes from within the U.S.). Only a U.S. Consul or the Immigration and Naturalization Service can rule whether or not a foreign-born foreign medical graduate must pass the FMGES in order to be eligible to immigrate. The residency program director is to determine that the foreign graduate has met the requirements for appointment to a program and is permitted to work in the U.S. ECFMG information booklets, containing information about the FMGES examination and about the procedure for obtaining an ECFMG certificate, are available from ECFMG, 3624 Market Street, Philadelphia, PA 19104.

Rules and Regulations for Public Law 94-484, published in the Federal Register, Volume 43, Number 63 on Friday, March 31, 1978, pages 13,504 and following, indicate that a foreign-born foreign medical graduate can be admitted to the United States for the purpose of “observation, consultation, teaching, or research,” not involving responsibility for patient care, without having passed the FMGES. A U.S. university or academic medical center which has been designated as a site for an Exchange Visitor Program is authorized to issue Form IAP-66 (formerly DSP-66) in such circumstances.

The Fifth Pathway

The “Fifth Pathway,” is available to persons who meet all of the following conditions:

a. have completed, in an accredited U.S. college or university, undergraduate premedical work of the quality acceptable for matriculation in an accredited U.S. medical school;

b. have studied medicine in a medical school located outside the United States, Puerto Rico, and Canada, which is listed in the World Directory of Medical Schools, published by the World Health Organization;

c. have completed all of the formal requirements of the foreign medical school except internship and/or social service. (Those who have completed all of these requirements including internship and/or social service are not eligible for a Fifth Pathway program.)

Students who have completed the academic curriculum in residence at a foreign medical school and who meet the above conditions may be offered the opportunity for an internship and/or social service required by a foreign medical school, an academic year of supervised clinical training prior to entrance into the first year of an approved U.S. graduate medical education program. The supervised clinical training must be provided by faculty of an undergraduate program in medical education accredited by the Liaison Committee on Medical Education, and should be conducted in closely affiliated hospitals to assure that those who complete such programs have received training which is reasonably comparable to that of the school’s regularly graduated students. The medical school should insulate that the constellation of resources is adequate for the conduct of its Fifth Pathway Program without jeopardizing its other academic programs.

Before the beginning of the supervised clinical training, said students must attain a score satisfactory to the sponsoring medical school on a screening examination, preferably nationally administered and have their academic records and skills evaluated by the faculty to identify individual academic deficiencies to be remedied by completion of the supervised clinical program. Fifth Pathway graduates must pass the FMGES before they can be admitted to residency training.

Physicians who have a Fifth Pathway certificate and have passed FMGES are eligible for appointment to residency training. They must also meet requirements established by the state medical board in the state where the residency program is located and must be accepted for appointment by the director of the residency program.

Appointment to Armed Services Residency Training Programs

The Armed Services four-year graduate medical education (FYGME) training programs are filled by graduates of accredited schools of medicine and osteopathic medicine. The majority of the Armed Services FYGME positions are filled by individuals with existing active duty service obligations. Graduates of foreign medical schools, other than Canadian, must have a standard ECFMG certificate to be eligible to apply. To be trained in an Armed Services medical treatment facility, an individual must be qualified for appointment as a commissioned officer in the Armed Services. Selection priorities for Armed Services postgraduate year two and beyond training is given to officers on active duty. Acceptance of applications from civilian applicants may vary among the three services. Interested individuals should contact their local Armed Services recruiting office for further information.

The National Resident Matching Program

The Directory of Residency Training Programs lists all ACGME accredited residency training programs. The National Resident Matching Program (NRMP) lists those hospitals which have signed an agreement to participate in the Match for the coming year. The NRMP Directory is published annually in October.

The Army, Navy, Air Force do not participate in the Matching Program. Following the listing of the federal services, all participating hospitals are listed alphabetically by state, within each state by city, within the city or vicinity by the name of the hospital. A six-digit number designates the specific hospital and type of program, or track within a program, at each hospital. This number is to be used by the
applicants on the confidential rank order list they send to NRMP to indicate their choice among the programs for which they have applied. Several special tracks may be offered within some types of residency programs for the Matching Program. These may include tracks that designate particular kinds or locations of training within the accredited program. It is essential that applicants use the specific, six-digit code number for each of their selections on their rank order lists.

If applicants are applying to a hospital which offers several different types of programs or tracks, they must indicate on their confidential rank order lists their preference for the specific type of program track in that hospital for which they have applied. For example, if applicants apply for a residency in surgery and also a transitional program at the same hospital, they must rank these just as if they were in separate hospitals.

In writing to a hospital, applicants should address the Program Director. The Directory of Residency Training Programs lists the name and address of the program director.

Because of the intense desire of some hospitals to secure candidates, and because of an equally strong desire of some applicants to serve at a particular hospital, pressure may be brought by either party on the other to force an early commitment. Such demands are contrary to the NRMP Agreements that are signed by applicants, program directors, and hospitals. In the matching plan only the confidential rank order lists submitted by hospitals and applicants should determine the placement of applicants in programs.

The algorithm of the matching plan does not penalize either group from taking "flyers." Should applicants apply to a hospital in which they think their chances of acceptance are poor, their chances at their second choice hospitals are just as good as if they had rated them first. Similarly, if hospitals rank applicants they believe they have little chance of matching, and do not match them, such hospitals will have just as good a chance to match their lower ranked applicants as if they had ranked them first.

Application materials are sent to all U.S. medical students via the dean's office. Students should enroll early in the summer. Other individuals who wish to participate in the Matching Program may obtain application materials and more detailed information by writing to the National Resident Matching Program, One American Plaza, Evanston, Illinois 60201. Applications for such applicants are accepted between June 1st and the last Friday in September for the following year's Match.
Section II

REQUIREMENTS FOR ACCREDITATION OF PROGRAMS

This Section contains documents which describe the General Requirements for all residency training programs, and the Special Requirements for training in the various branches of medicine. The document, "Essentials of Accredited Residencies in Graduate Medical Education" was adopted by the Accreditation Council for Graduate Medical Education (ACGME) and became effective July 1, 1982.

The twenty-four sections of the document which give the Special Requirements for training programs in the various branches of medicine have been approved by the appropriate Residency Review Committee, the parent bodies of the Residency Review Committee, and the ACGME. The Special Requirements documents specify in general terms the curriculum content for an acceptable training program. These documents may also address the general characteristics of the resources and personnel necessary for the program, as well as the duration of training and other specifications for a program.

The distinction between "accreditation of a training program" and "certification of an individual physician is an important one. Accreditation is the process whereby the Accreditation Council for Graduate Medical Education grants public recognition to a specialized program which meets certain established educational standards as determined through initial and subsequent periodic evaluations by the Residency Review Committee. The primary purpose of the accreditation process is to provide a professional judgment as to the quality of the educational program. By this process the potential candidate to the program is assured that the program meets the standards set by professionals in that specialty.

Certification is the process by which a specialty board grants recognition to an individual physician who has met certain predetermined qualifications, as specified by the board. The certification requirements for each American Specialty Board will be found in Appendix B of this DIRECTORY.

Neither of the above should be confused with licensure, which is the process by which an agency of state government grants permission to an individual physician to practice medicine within the jurisdiction of that state. A summary of medical licensure requirements of the fifty states is given in Appendix C of this DIRECTORY.

THE ESSENTIALS OF ACCREDITED RESIDENCIES IN GRADUATE MEDICAL EDUCATION
(Effective: July 1, 1982)

PREFACE

Graduate medical education in the United States is an integral component in the continuum of medical education. Physicians enroll in programs in graduate medical education to develop expertise in some special branch of medicine, as undergraduate medical education does not prepare a student for independent medical practice without supplementation by graduate training. The graduate phase is essential as indicated in this statement in the Liaison Committee on Medical Education’s (LCME) "Structure and Function of a Medical School":

"The undergraduate period of medical education leading to the M.D. degree is no longer sufficient to prepare a student for independent medical practice without supplementation by a graduate training period which will vary in length depending upon the type of practice the student selects."

During the undergraduate phase, students gain knowledge of the sciences basic to medicine and learn to apply that knowledge to clinical problems. Skills in collecting data are developed by interviewing and examining patients and selecting and applying laboratory procedures under the guidance and supervision of the faculty and residents. Students learn to utilize these data to arrive at diagnostic hypotheses and make therapeutic decisions. These basic skills are learned by rotations through a variety of clinical disciplines in both inpatient and outpatient settings. Undergraduate medical students have limited opportunities to assume personal responsibility for patient care, and generally do not participate in the care of individual patients for an extended period of time.

Physicians in graduate medical education are, by convention, called resident physicians or residents. During the graduate phase, the knowledge and skills acquired in medical school are expanded through the progressive assumption of personal responsibility for patient care in supervised, clinical, educational environments which provide opportunities to learn about the variability of human beings in health and
disease and about their biological, emotional, and social problems. As residents progressively gain more knowledge and skill, they are provided greater latitude to make decisions and treat patients, but always under supervision.

Graduate medical education is organized by specialty. Some institutions (hospitals, medical schools, medical centers or other sponsoring organizations) may offer programs in many specialties, while others sponsor only a few, consistent with their clinical resources and capabilities. Each residency training program is organized and directed by a program director who has a staff responsible for the education, training, and supervision of the residents. Each institution is responsible for providing sufficient resources and assuring supervision for the proper conduct of its programs.

During the graduate phase of their education most residents, in addition to attaining the knowledge and skills needed to be practitioners, seek to complete training requirements for certification by a specialty board. Each board generally requires that graduate medical education be obtained in a program reviewed and approved by the Residency Review Committee (RRC) for that specialty under the authority of the Accreditation Council for Graduate Medical Education (ACGME).

**APPROVAL AND ACCREDITATION**

Approval and accreditation of training programs are voluntary efforts of all parties involved in graduate medical education. The process of accreditation assures medical students, residents, specialty boards, and the public that training programs are in essential compliance with published standards.

To be approved and accredited, graduate medical education programs must meet the General Requirements for graduate medical education and the Special Requirements for a specialty and be sponsored by an institution. The Special and General Requirements are the standards against which programs are judged by Residency Review Committees (RRCs) and the Accreditation Council for Graduate Medical Education (ACGME) in the process of review, approval and accreditation.

There is an established Residency Review Committee for each of the specialties in medicine for which certification is provided by a specialty board.

AMA Council on Medical Education

Thoracic Surgery
American Board of Thoracic Surgery
AMA Council on Medical Education

Urology
American College of Surgeons
AMA Council on Medical Education
American Board of Urology

The Accreditation Council for Graduate Medical Education is composed of representatives of the following national professional organizations which are concerned with and involved in graduate medical education:
American Board of Medical Specialties
American Hospital Association
American Medical Association
Association of American Medical Colleges
Council of Medical Specialty Societies

In addition, there is a resident representative, there is a federal representative, and there is a public representative.

Each RRC develops Special Requirements for training programs in its specialty. These Special Requirements, after review and recommendation by the RRC’s sponsoring organizations and subsequent approval by the ACGME, set forth the requirements for the essential educational content, instructional activities, patient care responsibilities, supervision, and facilities that should be provided by the programs in the particular specialty.

The General Requirements delineate training program requirements and responsibilities which are common to all RRCs, institutions, and programs regardless of specialty. The General Requirements have been established by the ACGME in collaboration with the RRCs and their sponsoring organizations and approved by each of its five sponsoring organizations. An assessment of whether institutions fulfill the General Requirements is made in the process of review of their graduate programs.

Actions by the RRCs are based upon information gained through written submissions by program directors and evaluations made on site by assigned visitors. Actions of the RRCs, under the authority of the ACGME, determine the accreditation status of programs. The ACGME is also responsible for adjudication of appeals of adverse decisions and has established policies and procedures for appeal. Current operating policies and procedures for review, approval, accreditation and appeal are contained in the Manual of Structure and Functions for Residency Review Committees, which is revised and updated annually.

Information concerning the accreditation status of any program may be obtained by communication with the Secretary of the ACGME.

PART I. GENERAL REQUIREMENTS

Programs in graduate medical education are sponsored by institutions engaged in providing medical care and health services. The principal institutions for graduate medical education are hospitals. In order to provide the complete education and training experience established by the Special Requirements of a specialty, programs may involve more than one institution and various types of settings, which can include settings for ambulatory care, medical schools and various health agencies. Whatever the form, providing education, training and health services of the highest quality must be a major mission. Graduate medical education requires that residents be directly involved in providing patient care under supervision in an institution that accepts responsibility for the quality of its educational programs. The educational mission of a general residency program is not compromised by excessive reliance on residents to fulfill institutional service obligations. Excellence in patient care must not be compromised or jeopardized by needs and prerogatives of educational programs or of research. The need for an institutional commitment to education is expressed in this policy statement which was promulgated by the Coordinating Council on Medical Education and approved by its sponsoring organizations in 1974.

Institutions, organizations and agencies offering programs in graduate medical education must assume responsibility for the educational validity of all such programs. This responsibility includes ensuring on an administrative system which provides for management of resources dedicated to education and providing for involvement of teaching staff in selection of candidates, program planning, program review and evaluation of participation.

While educational programs in several fields of medicine properly differ from one another, as do they from one institution to another, institutions and their teaching staffs must ensure that all programs offered are consistent with their goals and meet the standards set forth by them and by voluntary accrediting agencies.

The governing boards, the administration, and the teaching staff must recognize that engagement with graduate medical education creates obligations beyond the provision of safe and timely medical care. Resources and time must be provided for the proper discharge of these obligations.

The teaching staff and administration, with review by the governing board, must (a) establish the general objectives of graduate medical education; (b) apportion residency and fellowship positions among the several programs offered; (c) develop curricular and instructional plans for each specific program; (d) develop criteria for selection of candidates; (e) develop methods for evaluating, on a regular basis, the effectiveness of the programs and the competency of persons who are in the programs. Evaluation should include input from those in training. Facilities and teaching staff shall be appropriate and efficient for effective accomplishment of the educational mission of each program. If outside facilities or staff are needed to fulfill program needs, the primary sponsor must maintain full responsibility for the quality of education provided.

Implementation of these General Requirements requires that the program directors and teaching staffs of sponsored programs work with each other, and the institutional administration and the governing authorities to provide an operating system for educational resource allocation and quality control to ensure that sponsored programs can fully meet the Special Requirements set forth in Part II of these Essentials. In order to determine the adequacy of the resources provided by institutions for their training programs, they are not specifically mentioned in this document.

1. Responsibility of Institutions

Ensuring that each specialty program fully meets the Special Requirements for approval by its RRC is an institutional responsibility. The specifications set forth in this section make necessary an institutional system involving the teaching staff for the allocation of educational resources and maintenance of the quality of all sponsored programs.

1.1 The ACGME expects institutions sponsoring programs...
in graduate medical education to provide documentary evidence of a commitment to medical education by:

a) The administration,
b) The teaching staff.

This evidence should consist of:

1.1.1 A written statement setting forth the reasons why the institution sponsors graduate medical education:

There should be evidence of agreement to this statement by the teaching staff and the administration.

1.1.2 A description of the process by which institutional resources are distributed for educational purposes:

There should be clear evidence that the process is agreed to within the institution. Those responsible for administration of the process should be identified by name and title in the institution's table of organization.

An operational system involving the program directors, based on institutional policies, establishing how the sponsored programs provide for:

a) The appointment of teaching staff,
b) The selection of residents,
c) The apportionment of resident positions among programs, consonant with the Residency Review Committee policies,
d) The supervision of residents,
e) The evaluation and advancement of residents,
f) The dismissal of residents whose performance is unsatisfactory, and
g) The assurance of due process for residents and teaching staff.

These policies should be developed after widespread consultation among the concerned parties, and should have institutional approval.

1.1.4 A periodic analysis of each program by representatives of the concerned departments, the residents, and the administration should be developed.

These analyses should include the appraisal of:

a) The goals and objectives of each program,
b) The instructional plans formulated to achieve these goals,
c) The effectiveness of each program in meeting its goals, and
d) The effectiveness of utilization of the resources provided.

There should be documentation of these analyses and of the mechanisms to correct identified deficiencies.

Implementation of General Requirements may be delegated to a committee of program directors or their designees and others responsible for the institution’s educational program. Once a system is in place, each program must comply with these policies and procedures.

1.2 Interinstitutional Agreements: When the resources of two or more institutions are utilized for the conduct of one or more programs, each participating institution or organizational unit is expected to demonstrate a commitment to graduate medical education as set forth in 1.1.1 through 1.1.4. Documentary evidence of agreements, approved by the institutions, should be available for inspection by assigned site visitors. The following items should be covered in such interinstitutional agreements.

1.2.1 Items of Agreement:

a) Designation of program director: A single direc-

rector for each specialty program should be designated. The scope of the director's authority to direct and coordinate the program’s activities and to assure that the program is in conformity with the general requirements set forth in the Special Requirements for the specialty programs.

b) Teaching staff: The teaching staff responsible for providing the educational program and supervising the residents should be identified by name and title in the institution’s table of organization.

c) Educational contribution: The expected contribution to the educational objectives to be provided by each institution should be delineated.

d) Assignment of residents: The period of assignment of residents to the segment of a program provided by each institution should be identified.

e) Financial commitment: Each institution’s financial commitment to the direct support of each program should be specifically identified.

1.2.2 When several institutions or organizational units participate in sponsoring multiple programs, mechanisms should be developed to coordinate the overall educational mission and facilitate the accomplishment of the policies and procedures set forth in subsections 1.1 and 1.2.

1.3 Facilities and Resources: Institutional facilities and resources should be adequate to provide the educational experiences and opportunities for each program. These include, but are not limited to, adequate library facilities, access to standard texts and journals, space for instruction, adequate facilities for residents to carry out their clinical care and personal education responsibilities, a medical record system which facilitates both quality patient care and education, and clinical support services such as pathology and radiology.

1.4 Hospital Accreditation: Hospitals sponsoring or participating in programs of graduate medical education should be accredited by the Joint Commission on Accreditation of Hospitals. If a hospital is not so accredited, the reasons why accreditation was not sought or was denied should be explained.

2. Program Organization and Responsibilities

The director and the teaching staff of a program in graduate medical education are responsible for defining and implementing the goals and objectives of the program.

All training programs should foster the development of residents' teaching abilities, interpersonal relationships, and understanding of medical ethics. Instruction in ethical issues, in the economics of health care, and in the importance of cost-effective medical practice should be part of all programs.

The educational effectiveness of a residency training program depends largely on the quality of its supervision and organization. The responsibility for these important functions lies with the director of the department or the residency training program director. In most cases, the director is also the program director. The program directors should have qualifications and breadth of experience which will enable them to carry out an effective training program. Each program director accepts the responsibility of resident selection, evaluation, and promotion within the framework of the policies and the sponsoring institution. Additional responsibilities of the program director are the development of other members of the health care team; and the selection of the various evaluation techniques employed.

The sponsoring institution is expected to assist program directors in carrying out their responsibilities through the
development of appropriate institutional policies to assure excellence in resident physician education. When a Residency Review Committee reviews a program, the extent to which the sponsoring institution is supporting the efforts of the program director through its institutional policies will be taken into consideration.

2.1 Qualifications of Program Staff: The individuals who have responsibility for the conduct of graduate medical education programs should be specifically identified.

2.1.1 The program director should be certified by the specialty board in the discipline of the program or should possess suitable equivalent qualifications as a teacher, clinician, and administrator. Each director should have the authority and time needed to fulfill administrative and teaching responsibilities in order to achieve the educational goals of the program and to participate with other program directors in maintaining the quality of all institutional programs.

2.1.2 The teaching staff should have a strong interest in teaching, and be willing to contribute the necessary time and effort to the educational program. The key professional personal, as teachers, clinicians, and/or administrators, should:
   a) have adequate special training and experience,
   b) actively participate in appropriate national scientific societies,
   c) participate in their own continuing medical education,
   d) engage in specific presentations as appropriate, and
   e) exhibit active interest in medical research related to their specialties.

2.2 Relationships between Medical Staff and Graduate Programs: In some institutions a distinction is made between the teaching staff and the non-teaching staff of a department. Where this is the case, the institutional educational plan (1.1.2) should clearly delineate the agreements reached regarding the utilization of institutional resources for education. This should include agreement as to whether residents and teaching staff may have contact with the patients of members of the medical staff not involved in the teaching programs and what responsibilities residents have for such patients.

3. Eligibility and Selection of Residents

Physicians with the following qualifications are eligible to enter graduate medical education programs accredited by the ACGME:

3.1 Unrestricted Eligibility: Unrestricted eligibility is accorded to those with the following qualifications:

3.1.1 Graduates from the institutions in the U.S. and Canada whose programs are accredited by the Liaison Committee on Medical Education.

3.1.2 Graduates from institutions in the U.S. accredited by the American Osteopathic Association.

3.1.3 Graduates of medical schools whose programs are not accredited by the LCME who meet the following additional qualifications:
   a) Have fulfilled the educational requirements to practice in the country in which they have had their medical education, or, if a national of the country concerned, have obtained an unrestricted license or certificate of full registration to practice in that country, have passed examinations designated as acceptable by the ACGME for determination of professional preparedness and capability to comprehend and communicate in both spoken and written English, and have had their credentials validated by an organization or agency acceptable to the ACGME; or
   b) Have a full and unrestricted license to practice medicine in the U.S. jurisdiction providing such license.

3.1.4 U.S. citizen graduates from institutions whose programs are not accredited by the LCME who cannot qualify under Section 3.1.3, but who have successfully completed the licensure examination in a U.S. jurisdiction in which the law or regulations provide that a full and unrestricted license to practice will be granted without further examination after successful completion of a specified period of graduate medical education; or

3.1.5 In the case of students who have completed, in an accredited college or university in the U.S., undergraduate premedical education of the quality acceptable for matriculation in an accredited U.S. medical school, have studied at a medical school whose program is not accredited by the Liaison Committee on Medical Education, but which is listed by the World Health Organization, have completed all of the formal requirements of the foreign medical school except internship and/or medical service, such students may substitute for an internship or other service required by the foreign medical school an academic year of supervised clinical training (such as a clinical clerkship) or on or after July 1, 1971, prior to entrance into the first year of ACGME-approved graduate medical education. The supervised clinical training must be under the direction of a medical school whose program is accredited by the Liaison Committee on Medical Education. Before beginning the supervised clinical training, students must have their academic records and other credentials reviewed and approved by the medical school supervising their training and must attain a score satisfactory to the sponsoring medical school on a screening examination. Effective July 1, 1985, candidates must have passed examinations designated as acceptable by the LCME/CIM to obtain the certification of professional preparedness prior to entrance into the first year of ACGME-accredited graduate medical education.

3.2 Restricted Eligibility: Restricted eligibility for foreign nationals to enroll in ACGME programs is accorded under the following circumstances:

a) When a U.S. medical school and one or more of its affiliated hospitals have a documented bilateral agreement, approved by an agency recognized for that purpose by the ACGME, with an official agency or recognized institution in the physician's country of origin to provide an educational program designed to prepare the physician to make specific contributions in a health field upon return to the country in which the sponsoring agency or institution is located; and
4.2 Transitional Programs (Previously termed Flexible Programs): Transitional programs are provided for physicians who desire in their first or later graduate year an experience in several specialties prior to embarking on further training in a single specialty. Institutions or consortia of institutions may offer a transitional year provided the following conditions are met:

4.2.1 A special committee, composed of representatives of the specialty services on which residents are being trained during this graduate year and of representatives of two or more specialties in which there are accredited residencies, should be responsible for the development and evaluation of the program.

4.2.2 A qualified director must be appointed to assume responsibility for the operation of the program, counseling the residents, and coordinating their evaluation.

4.2.3 The year should be spent in an educational setting selected by the special committee for the transitional program, in cooperation with two or more accredited programs sponsored by the institution.

4.2.4 The residents in most of their assignments are associated with more senior residents in the participating specialties.

4.2.5 The impact of the training in the transitional year should not be deleterious to the quality of training of the residents in the provider disciplines.

4.3 Completion of Training: The total objectives of graduate medical education are met only when residents complete the full program for training in a specialty. Transitional year residents are expected to continue their graduate medical education in a categorical specialty and completion of their categorical programs is expected of all residents. The failure of a significant number of transitional year residents to transfer to a categorical program or of categorical residents to complete their program will be considered as evidence that a program is ineffective in achieving its essential objectives and may be cause for adverse accreditation action.7

5. Relationships between Institutions, Programs and Residents

5.1 Responsibilities of Institutions and Programs

5.1.1 Teaching and Learning: An environment wherein both the teaching staff and the residents are seeking to improve their knowledge and skills is essential. Insofar as possible, residents should be incorporated into medical staff programs of medical education and patient care in a true collegial relationship. Residents may be assigned by program directors to assume responsibility for teaching more junior residents and students. Special attention should be given to assisting residents to acquire skills in teaching and evaluating those for whom they are responsible. The number of students for whom residents have educational responsibility should be sufficiently balanced so that the institution can ensure that the education of both students and residents is augmented and not diluted. The clinical departments are expected to organize formal teaching sessions tailored to meet the Special Requirements of their

6 The NRMP is an agency sponsored by: American Hospital Association, American Medical Association, American Protestant Hospital Association, American Medical Student Association, American Board of Medical Specialties and Council of Medical Specialty Societies.

7 This merges what have been termed Categorical and Categorical* designations.

8 An exception to this requirement is granted in the case of military medical officers who are required to serve as general medical officers of flight/undersea medicine physicians after completion of the first postgraduate year of any accredited program, providing that upon completion of such a year they are encouraged to continue their graduate medical education in a Categorical program.
programs. Participation in these sessions by teaching staff from the basic science disciplines is encouraged. Adequate records should be kept of all those trained, including residents and medical students.

5.1.2 Participation in Policy Development and Review: Residents should be involved by institutions and programs in the development of recommendations on policy issues. Their day-to-day involvement with institutional and departmental activities may provide unique perspectives which can be of significant value to improving education and patient care.

5.1.3 Supervision: There must be Institutional and program policies and procedures that ensure that all residents are supervised in carrying out their patient care responsibilities. The level and method of supervision must be consistent with the Special Requirements for each program.

5.1.4 Counseling: Graduate medical education places increasing responsibilities on residents and requires sustained intellectual and physical effort. For some, these demands will, at times, cause physical or emotional stress. Institutional awareness, empathy, and responsiveness towards these problems are vital to the educational process. Program directors and teaching staff should be sensitive to the need for the timely provision of counseling and psychological support services to residents.

5.1.5 Evaluation and Advancement: There must be a clearly-stated basis for annual evaluation and advancement. This must be based on evidence of satisfactory progressive scholarship and professional growth of the trainee including demonstrated ability to assume graded and increasing responsibility for patient care. This determination is the responsibility of the program director with advice from members of the teaching staff. The institutional system should assure that through the director and staff each program:

a) At least annually, but preferably semi-annually, evaluates the knowledge, skills and professional growth of its residents, using appropriate criteria and procedures.

b) Provides to residents an assessment of their performance, at least annually, and preferably semi-annually.

c) Advances residents to positions of higher responsibility only on the basis of an evaluation of their readiness for advancement.

d) Maintains a personal record of evaluation for each resident which is accessible to the resident.

5.1.6 Due Process: There must be institutional procedures which provide for due process for all parties potentially involved when actions are contemplated which could result in dismissal or could significantly threaten a resident's intended career development. If there are grievances against a program or institution. Residents, program directors, teaching staff and administration should be involved in the development of these policies and procedures which are to be approved by the governing board. The details must be written and made known to the residents, program directors, and adhered to by all programs sponsored by the institution. There must be an equitable and satisfactory mechanism, involving the participation of the medical staff, for the redress of grievances. Although final responsibility rests with the institution's governing body, the latter should rely upon the determinations of the medical staff in professional and educational matters.

5.2 Resident Physician Responsibilities: Resident physicians are expected to:

5.2.1 Develop a personal program of self study and professional growth with guidance from the teaching staff.

5.2.2 Participate in safe, effective and compassionate patient care under supervision, commensurate with their level of advancement and responsibility.

5.2.3 Participate fully in the educational activities of their program and, as required, assume responsibility for teaching and supervising other residents and students.

5.2.4 Participate in institutional programs and activities involving the medical staff and adhere to established practices, procedures, and policies of the institutions.

5.2.5 Participate in institutional committees and councils, especially those that relate to patient care review activities, and

5.2.6 Apply cost containment measures in the provision of patient care.

5.3 Resident Agreement: The ACGME urges that programs provide residents with a written description of the educational experience to be provided including the nature of assignments to other programs or institutions. In addition, ACGME urges that each resident be offered for acceptance a written agreement encompassing the following:

5.3.1 Residents' responsibilities as set forth in Section 5.2.

5.3.2 Benefits including financial support, vacations, professional leave, sick leave, liability insurance, hospital and health insurance and other insurance benefits for the resident and his family, and the conditions under which living quarters, meals and laundry or their equivalent are to be provided.

5.3.3 The term of residency.

5.3.4 Practice privileges and other activities outside the educational program.

5.3.5 The usual call schedule and schedule of assignments.

5.3.6 Guarantee of Due Process.

The Special Requirements, which follow, apply to programs in each specialty and set forth the standards which must be met in order to gain approval by the Residency Review Committees and the accreditation by the ACGME.

Adopted by ACGME: Feb. 24, 1981

PART II: SPECIAL REQUIREMENTS
(Revised to December 1, 1986)

1. Special Requirements for Residency Training in Allergy and Immunology

1. INTRODUCTION
Graduate medical education in allergy and immunology should be designed to train specialists in the delivery of skilled medical care of patients suffering from allergic, asthmatic and immunologic diseases. A graduate program in allergy and immunology must offer a minimum of two years of full-time training and must demonstrate compliance with these requirements. The provisions of the General Requirements must also be met. Candidates for positions in these programs should have successfully completed a program in internal
medicine or pediatrics which is accredited by the Accreditation Council for Graduate Medical Education. 4

II. SCOPE OF TRAINING

A. General
Certain basic requirements must be met by all programs. Since this specialty involves an increasingly wide variety of clinical problems, programs emphasizing different disciplines may be acceptable. All programs, regardless of their special interests, must include a core curriculum in allergy and immunology.

B. Cross Training in Pediatrics and Internal Medicine
Residents must receive training in both pediatric and adult allergy and immunology. This requirement is based on the recognition that specialties in allergy and immunology, regardless of their primary specialty, are called upon to diagnose and treat individuals of all ages. It is required that, in institutions where separate programs exist, at least six months of cross training be provided, preferably within exposure to both inpatients and outpatients. The minimal requirement for cross training is weekly attendance, one day per week for a period totaling six months, at an ambulatory care clinic or equivalent. If block-time rotations are employed to satisfy this requirement, a longitudinal follow-up clinic should be incorporated as well. Responsibility for inpatient consultation in the cross-over specialty is highly desirable.

C. Duration of Clinical Training
It is required that at least 25% of the resident’s time in a two-year training program will be devoted to clinical training.

D. Patient Population
The program should provide an adequate number of patients in the pediatric and adult age groups to provide education in the varying manifestations of allergic and immunologic diseases and asthma in the different age groups. The residents should be under the supervision of faculty and should have ample opportunity to observe interactions between attending faculty and patients. Patients worked up and followed by the residents should be reviewed by the attendings, with adequate time for discussion and constructive criticism. The residency experience should occur in an environment which fosters progressive experience and allows each resident to develop diagnostic impressions, consult appropriate literature and other source material, develop plans for diagnostic studies, recommend therapeutic approaches, and perform therapeutic procedures, all under the practiced supervision of attendings.

E. Graded Responsibility
The educational atmosphere should encourage creative independence and progressively increasing responsibility. As residents progress through their training, they should be encouraged to teach their junior residents, residents in internal medicine and pediatrics, medical students, nurses and allied health personnel.

F. Resident Research
It is essential that each program contain an active research program in allergy and immunology. Residents are required to conduct clinical or basic research under the supervision of an experienced investigator. It is required that at least 25% of the resident’s time in a two-year program be devoted to research.

III. EDUCATIONAL PROGRAM
The emphasis in the training program must be placed on a core curriculum of allergic, immunologic and related diseases and all forms of asthma. All residents must be thoroughly grounded in these disorders and must be trained to apply immunologic theories, principles and techniques to the investigation, diagnosis, and treatment of a broad spec-

4At the current time the American Board of Allergy and Immunology (ABAII), a Joint Board of the American Board of Internal Medicine and the American Board of Pediatrics accredits fellowship programs in allergy only to those trainees already certified in internal medicine or pediatrics. Program directors may accept residents from other disciplines for training in allergy and immunology; however, the training must be considered as a credential towards certification in other disciplines will be determined by the Boards in those disciplines.

trum of immunologic diseases. The required training in the various aspects of the clinical program may involve supervised patient care; rotations through cooperating services; attendance at conferences, lectures, demonstrations or seminars; reading; and preparation and responsibilities for teaching assignments. The educational content of the program in clinical allergy and immunology should include, but not be limited to, the following:

A. Clinical Program
A primary patient base for the specialty should include patients with rhinitis, asthma and reactive airways diseases, urticaria, angioedema, anaphylactic and anaphylactoid reactions, atopic and contact dermatitis, stinging insect hypersensitivity, drug reactions, and hypersensitivity diseases of the lung, gastrointestinal tract and other organs. Residents should become familiar with the common and rare manifestations, methods of evaluation and diagnosis, as well as the etiology and immunopathogenesis, differential diagnosis, therapy and complications of these disorders. Training in aerobiology and in the dermatologic, gastroenterologic, ophthalmologic, otolaryngologic, psychiatric and radiologic aspects of allergic and immunologic diseases should be part of the program. It is also expected that training will include acute, emergent care of inpatient and outpatient allergic, asthmatic and immunologic disorders.

The following outline summarizes the scope of knowledge and/or skills which must be included in a training program:

1. Hypersensitivity diseases:
   a) proper history and physical examination, with particular emphasis on the examination of the ears, nose, throat, skin and lungs;
   b) the performance and evaluation of respectively, intracutaneous and patch skin tests;
   c) pulmonary physiology and the performance and interpretation of pulmonary function tests;
   d) the performance and interpretation of oral, nasal, and bronchial provocation tests;
   e) knowledge of mediator release and function;
   f) the performance and interpretation of in vitro methods used to measure total and specific IgE;
   g) pharmacology of agents used in the routine and/or emergency treatment of asthmatic, allergic, immunologic and related disorders;
   h) preparation and standardization of allergenic extracts and the principles and practice of their use in diagnostic tests and immunotherapy;
   i) knowledge of aerobiology of inhalant allergens;
   j) identification and environmental control of antigen and irritant exposure at home and in the workplace.

2. Primary and secondary immunodeficiency states:
The training program must provide opportunities for the trainee to develop knowledge of the inherited and acquired immunodeficiency diseases and diseases in which host defense mechanisms are abnormal. The resident must be familiar with the etiology, immunopathophysiology, and methods to diagnose and treat these diseases.

The following outline summarizes the scope of knowledge and/or skills which should be included in a training program:

1. Collagen vascular diseases:
The educational content should include training in collagen vascular diseases and other systemic disorders in which immunologic mechanisms are presumed to have an etiologic or contributory role.

2. Transplantation immunology:
The trainee should be knowledgeable about the immunohematologic aspects of the major histocompatibility system, the immunologic principles of transplantation and rejection, and graft versus host reactions.

3. Malignancies affecting the immune system:
The trainee should be familiar with the pathogenesis, diagnosis, and treatment of malignancies which affect immune function.
4. Immunomodulation:
Some experience and knowledge of specific and nonspecific immunomodulating agents is desirable.

5. Immunologic aspects of other diseases:
The resident's training should be sufficient to insure knowledge of the immunologic aspects of all organ systems and diseases.

B. Laboratory Program
The education content of training in applied immunology must include knowledge of the principles, techniques and interpretation of clinical immunology laboratory procedures, including the following:
1. Humoral immunity:
   Measurement of immunoglobulin levels, immunoglobulin classes and subclasses, specific antibody determinations, protein electrophoresis and immunoelectrophoresis;
2. Cellular immunity and host defense:
   a) performance of skin tests involving cell-mediated responses;
   b) evaluation of anergy;
   c) assays of neutrophil chemotaxis, phagocytosis and killing;
   d) identification and enumeration of T cells and their subsets, B and null cells, measurement of the responses of these cells to mitogens and antigens;
   e) performance of assays for lymphokines;
   f) assessment of direct and antibody-mediated cellular cytotoxicity.
3. Detection and analysis of immune complexes and cryoprecipitable proteins;
4. Determination of total serum complement and components of the classical and alternative pathways;
5. Histocompatibility testing;
6. Preparation and use of monoclonal antibodies;
7. Serologic or cellular markers of autoimmune, allergic or other immune disorders;
8. Other tests of immune response as they develop and gain clinical relevance.

C. Research Program
A critical aspect of the training program is its research environment which provides for development of a questioning attitude and the opportunity to develop research protocols and to learn to analyze research critically. There must be evidence of a commitment to research and investigation in allergy and clinical immunology and ongoing active research by the teaching staff with investigation into clinical and basic aspects of various related problems. Residents must take part in research programs occupying 25% of their time during a 2-year period.

Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of allergy and clinical immunology. The completion of a research project during the training program is strongly encouraged. Residents should be able to communicate their knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare written reports of their research activities either for faculty review or publication.

IV. FACULTY

A. Program Director
The program director is responsible for the residency training program and should be highly competent as a scientist, clinician and teacher in the specialty of allergy and immunology. He/she must be certified by the American Board of Allergy and Immunology and demonstrate suitable equivalent qualifications. The director must possess leadership qualities and maintain close contact with the residents, contributing sufficient time to the training program to assure adequate leadership. The program director, or qualified designee, must be available to provide advice and instruction on a continuous basis.

B. Faculty/Staff
A sufficient number of faculty must be incorporated into the program to insure proper teaching and supervision in the many disciplines of the field. The staff must include qualified allergists trained in internal medicine and qualified allergists trained in pediatrics as well as faculty whose major interests are in basic and clinical aspects of immunology. One mechanism to satisfy this requirement would be to incorporate a number of faculty from both basic and clinical science departments who are able to provide expert training in each of the disciplines. All faculty must demonstrate a commitment to the teaching program and possess those special competencies in teaching and research needed to provide a broad educational experience.

C. Scholarly Activity
In general, staff members should be qualified by the same criteria as the program director and be devoted to teaching, be willing to give the necessary time and effort to the educational program, and be engaged in scholarly activities such as (1) participation in regional or national scientific societies; (2) participation in their own continuing medical education; (3) active participation in ongoing research; and (4) demonstrate involvement in scientific publications and presentations. A faculty which does not exhibit such characteristics will be cause for grave concern as to its adequacy and suitability for conducting a program of graduate education in allergy and immunology.

D. Notification of RRC of Changes
The Executive Secretary of the Residency Review Committee for Allergy and Immunology should be notified promptly of changes in faculty in the program. This information should also be provided on the annual questionnaire which is distributed by the Residency Review Committee.

V. CLINICAL AND EDUCATIONAL FACILITIES AND RESOURCES

A. Parent Institution
Allergy and immunology programs should be conducted principally in institutions with accredited graduate medical education programs in pediatrics and internal medicine. The parent institution must assure the financial, technical, moral support and facilities for the establishment and maintenance of an accredited residency in allergy and immunology.

B. Affiliated Institutions
Affiliations with other institutions may be necessary to insure graduate education in the broad fields of both pediatric and adult allergy and immunology. When the resources of two or more institutions are utilized for the clinical or basic science education, letters of agreement must be approved by the institutional governing boards. Affiliations should be avoided with institutions which are (1) at such a distance from the parent institution as to make attendance at rounds and conferences difficult and (2) which do not add to the educational value of the program.

C. Other Facilities
Adequate library facilities and equipment for the diagnosis and treatment of allergic and immunologic disorders must be conveniently available.

VI. RESIDENT AND PROGRAM EVALUATION
A semiannual record of the resident's performance should be maintained by the program director. The record should include periodic written evaluations by the program director and other attending staff members who supervised the trainee. All records relating to the resident's work should be preserved and made available to the examining boards and other responsible agencies, if requested, with the consent of the resident. There should be provision for evaluation of the training program by the staff and residents.

Review of performances of past trainees on the written examination of the American Board of Allergy and Immunology will be employed by the Residency Review Committee as one measure of the quality of a training program.

---

9 Program directors and faculty are strongly encouraged to take the recertification examination of the ABAM periodically.

10 A model form may be obtained from the Executive Office of the ABAM.
VII. CERTIFICATION
Residents who plan to seek certification by the American Board of Anesthesiology should communicate with the Executive Secretary as listed in the Directory of Residency Training Programs to ascertain the full requirements for certification.

Effective: July 1987  ACGME: September 1986

2. Special Requirements for Residency Training in Anesthesiology

I. OBJECTIVES

An accredited four year program in anesthesiology provides education, training and experience in an atmosphere of mutual respect between instructor and resident so that the resident will be stimulated and prepared to apply his acquired knowledge and talents independently. There are varying pathways to the development of a consultant anesthesiologist, and the following requirements should be regarded as minimum standards for its accomplishment.

II. GENERAL CONSIDERATIONS FOR AN APPROVED FOUR YEAR PROGRAM

The Residency Review Committee (RRC) for Anesthesiology and the Accreditation Council for Graduate Medical Education (ACGME) accredit programs only in those institutions that possess the educational resources to provide at least three years of Clinical Anesthesiology. At the present time, capabilities to provide the Clinical Base Year within the same institution is highly desirable but not required for accreditation.

III. CLINICAL BASE YEAR (USUALLY PG1)

This year is called the Clinical Base Year because its purpose is to provide the resident with twelve months of clinical education, other than that directly associated with the provision of anesthesia care. It is usually the first year of graduate medical education. Acceptable content for the Clinical Base Year includes training in internal medicine, pediatrics, surgery or a surgical specialty, obstetrics and gynecology, neurology, family practice, or any combination of these as approved for the individual resident by the anesthesiology program director. The Clinical Base Year may be spent in another than the parent or affiliated institution; however, the program director must document its educational quality. The Clinical Base Year must occur in a program accredited by the ACGME in the United States or by the Royal College of Physicians and Surgeons in Canada.

IV. CLINICAL ANESTHESIA

A. These are three years (usually PG2, PG3, PG4), referred to as Clinical Anesthesia, which consist of a minimum of thirty months devoted to learning experiences in anesthesia for general and specialty surgery and obstetrics, care of patients in critical care areas, and the care of patients with pain problems. For residents who wish to explore research as a career option, a period of clinical or laboratory research, not to exceed six months, is allowed. Program directors may arrange to send residents to affiliated specialized programs or institutions for no more than six months during the first two Clinical Anesthesia years.

B. Early months will generally be devoted to the care of patients with easily managed problems who are undergoing relatively simple surgery. As residents progress through the program, they should learn to plan and administer anesthesia care for patients with more severe and complicating diseases, as well as for those who are being anesthetized for more complex procedures.

C. For residents to become capable in both basic and subspecialty anesthesiology, they must have planned experiences in providing anesthesia for a broad range of surgical procedures. Proficiency is best achieved when these experiences consist of scheduled rotations in subspecialty anesthesia areas. Teaching shall be afforded by faculty whose interests and expertise are in the anesthesiology subspecialty involved.

D. In the PG4 year, facilities and resources must allow a resident to spend an additional period of time in one or more subspecialty areas. Such an elective or individually designed track must not prevent other residents from obtaining proper exposure to the subspecialty area or its principles of practice.

V. GENERAL CONSIDERATIONS FOR A PROGRAM APPROVED FOR ONE YEAR OF SPECIALIZED CLINICAL TRAINING

A. Certain hospitals, by virtue of their specialized missions, provide unusual facilities and clinical experience for specialized training in anesthesiology. Anesthesia programs in such hospitals are eligible for accreditation for one year of freestanding specialized training. To be enrolled in such programs, a resident must have completed a Clinical Base Year and two years of Clinical Anesthesia.

B. A portion of subspecialty training during the PG4 year may be fulfilled in these programs.

VI. FACULTY

A. The program director must possess faculty experience, leadership, organizational and administrative qualifications and the ability to function effectively within an institutional governance. For purposes of communication with the RRC, the department chairman cannot delegate the position of program director. This does not prohibit internal delegation of department responsibilities.

B. The teaching faculty must demonstrate dedication to the motivation, instruction and education of residents which is critical to an effective program. Refereed publications and significant participation in research are well recognized evidence of the quality of a faculty. While not all members of a teaching staff can be investigators, individuals engaged in these scholarly activities should constitute a portion of the department faculty and should be present in continuity. The faculty must include instructors with varying interests, capabilities and backgrounds. The faculty should include individuals who have specialized training in a significant majority of recognized subspecialties. It is also desirable to have faculty with special expertise and knowledge in computer science and biophysics. There should also be evidence of participation in a spectrum of professional activities within the institution and beyond, to local, national, and international associations. An Education Committee, a Clinical Competence Committee, a Resident Selection Committee, and procedures for quality assurance and peer review must be included in the organization of the program.

C. There should be a sufficient number of faculty to permit each resident to receive adequate supervision which shall not vary substantially with the time of day or day of the week. Under most circumstances, the number of residents in any program should not be more than twice the number of full-time teachers. In the clinical setting, faculty members should not be scheduled to direct anesthesia for more than two operating rooms simultaneously. Teaching of medical students and junior residents is recognized as a valid learning experience. However, the use of a resident as an instructor of junior residents is not a substitute for experienced faculty. Clinical instruction of residents by non-physician personnel is considered inappropriate, as is excessive supervision of such personnel by resident staff.

VII. CLINICAL EXPERIENCE

A. Through the parent hospital and/or limited affiliated institutions, a wide spectrum of patient problems should be available in adequate numbers to each resident so as to provide broad experience in the anesthetic management of patients undergoing all types of surgical procedures. Adequate exposure to specialized areas such as neurosurgical, pediatric, obstetric, and cardiothoracic procedures, as well as clinical experience in anesthesia for outpatients, is essential. A specific number of anesthetics is not required in any category, but it is the responsibility of the program director to ensure that each resident is provided broad instruction and experience. An educational program must be directed toward the production of a consultant capable of making sound judgments throughout the perioperative period. Dur-
ing the course of anesthesia and in the perioperative period, the resident must be instructed in current monitoring procedures, fluid therapy, pain management and operating room safety. Instruction and experience in the management of acute and chronic pain problems, including diagnostic and therapeutic nerve blocks, are essential parts of any training program, as is the management of resuscitation and airway problems. The resident should be familiar with techniques of sedation and anesthesia for a variety of diagnostic and therapeutic procedures outside the operating room.

B. It is strongly recommended that at least two months be devoted to the supervised care of patients in a critical care unit. An acceptable critical care rotation must include active participation in patient care by anesthesia residents, an appropriate population of critically ill patients which includes a substantial number with multi-system disease whose care required invasive monitoring and/or mechanical ventilation, and should be supervised by faculty experienced in the practice of critical care medicine. This training should be provided in units in which the majority of such patients require continuity of intensive care for longer than one or two days. Training may occur in one or more units that house a population of patients as described above. Routine, short term or overnight post-anesthesia units or intermediate step-down units or emergency rooms do not provide an acceptable critical care experience.

VIII. DIDACTIC PROGRAM

The didactic instruction provided should encompass anesthesia, including the basic sciences and other clinical disciplines as they relate to anesthesia. Regularly scheduled teaching sessions must be held to supplement ongoing clinical instruction. The organization of the didactic program should demonstrate appropriate continuity and sequencing of anesthesia-related topics. The number and type of such sessions may vary among programs, but they ordinarily include morbidity-mortality conferences, lectures, discussions, seminars devoted to journal review and resident presentations. Organization of the residency program should allow time for resident reading and study. Recent journals, references, books and other texts should be readily available to the residents and faculty. The intent is to provide a suitable climate for the development of a competent physician and consultant anesthesiologist who will continue learning after formal training is concluded. The director should seek to enrich the program through the participation of faculty from the other disciplines and other institutions.

IX. RESEARCH

An active program of clinical investigation and/or basic research contributes to a scholarly environment and is vital to the educational stimulation of both residents and faculty. The impact of this on the resident group should be demonstrable.

X. RECORDS

A comprehensive anesthesia record must be maintained for each patient as an ongoing reflection of the drug administered, the monitoring employed, the techniques used, the physiologic variations observed, the therapy provided as required, and the fluids administered. The patient's medical record should contain evidence of pre- and postoperative anesthesia assessment. When residents are participating in patient care outside of the operating room, they should be instructed in proper record keeping for the activity involved and their records reviewed by the faculty.

XI. SPECIAL POLICIES APPLICABLE TO PROGRAM REVIEW AND APPROVAL

A. When a new director, either permanent or acting, has been appointed, the RRC must be notified immediately. The RRC will initiate an inspection of the program in conjunction with this change when it deems it necessary to assure continued quality.

B. In communities in which didactic programs of several anesthesia residency programs are combined, the staff of each accredited program must actively and consistently partici-pate in the combined effort, and be capable of providing an adequate program if reviewed individually.

C. The integration of non-physician personnel in a department with an accredited program in anesthesiology will not influence the accreditation of such a program unless there is evidence that such personnel interfere with the training of resident physicians. Interference may result from dilution of faculty effort, dilution of the available teaching experience, or downgrading didactic material.

D. If a program is without a resident for two years, accreditation may be withdrawn. Reactivation of the program subsequent to withdrawal of accreditation will require a new application.

XII. CHANNELS OF INFORMATION

Questions relating to educational programs and communication for the ACGME should be directed to the Secretary, Residency Review Committee for Anesthesiology, 535 North Dearborn Street, Chicago, Illinois 60610. Inquiries relating to the credentials of individual applicants for certification should be directed to the Secretary of the American Board of Anesthesiology, Inc., 100 Constitution Plaza, Hartford, Connecticut 06103.

Effective: February 1987 ACGME: September 1986

3. Special Requirements for Residency Training in Colon and Rectal Surgery

Institutions offering residencies in colon and rectal surgery must provide the necessary education to qualify the resident as a colon and rectal specialist in the care of patients, in teaching, and in research. Surgeons admitted to each residency are required to have completed a minimum of five years of an accredited, graded program in general surgery. Thus, the residents should already have developed a satisfactory level of clinical maturity, technical skills, and surgical judgment which will enable them to begin a residency in colon and rectal surgery for the purpose of specializing in this field of surgery. The period of training should be not less than one year and the program must comply with the General Requirements for Residency Training.

The residency program must be under the direction of a colon and rectal surgeon who is certified by the American Board of Colon and Rectal Surgery or possesses equivalent qualifications. The program director must assume full responsibility for the teaching and work done in the department or section. A minimum of two staff members, including the program director, with significant teaching responsibilities. Members should have the necessary interest and ability to perform their teaching duties adequately.

The program should supply the necessary volume and variety of colon and rectal surgery to assure adequate training of residents. If there is insufficient volume or variety in the primary institutions, arrangements should be made for an affiliation in an accredited institution to correct the inadequacy. It is expected that each resident will have ample opportunity and responsibility for the care of patients with anorectal and colonic diseases.

The educational program must also include training in both diagnostic and therapeutic colonoscopy. The objective is to develop the necessary competence in the use of this instrument to qualify as an expert in the field. Therefore, adequate numbers of both diagnostic and therapeutic colonoscopies must be available at the colon and rectal training program or through an appropriate institution affiliation to satisfy this particular need.

An important aspect of the educational program is training in an outpatient facility to develop skills in patient evaluation, examination, office treatment, and surgical aftercare. Where feasible, such training should include work in the program director's office, as well as in the outpatient clinic of the hospital.

Residents in colon and rectal surgery must have sufficient knowledge of those aspects of anesthesia, radiology, and
pathology that relate to colon and rectal surgery to develop overall competence as a specialist. Such training is best accomplished in cooperation with the department of anesthesiology, radiology, and pathology.

Teaching contributes to the educational process, and therefore should be an important part of the training program. The resident should assist in the instruction of general surgical residents, medical students, and nurses and other allied health professionals. It is important to include instruction in the care of intestinal stomas, especially in institutions that do not have enterostomal therapists.

The trainee should be encouraged to do clinical and/or laboratory investigations and to present their research in scientific meetings and to publish them in recognized medical journals.

The resident’s activity outside the educational program should not be allowed to interfere with his or her performance in the educational process as defined in the agreement between the institution and the house officer.

One measure of the educational quality of a program may be its success in attracting its graduates on the examination of the American Board of Colon and Rectal Surgery.

Finally, those who plan to seek certification by the American Board of Colon and Rectal Surgery should communicate with the Secretary of the Board prior to beginning their residency to be certain that their general surgical training is acceptable as one of the requirements for certification.

Effective: January 1986  ACHE: June 1985

4. Special Requirements for Residency Training in Dermatology

OBJECTIVES AND CONDITIONS

Approved training programs in dermatology shall be organized to provide trainees with the educational and practical experience that will permit them to deliver superior specialized care to patients with diseases of the skin. Such experience must be varied and broad, progressive and systematic, and of sufficient duration. Moreover, it must include instruction in the pertinent basic sciences and in all clinical areas which bear upon the specialty of dermatology, and training in research and teaching. Accomplishment of these objectives requires a suitable institutional environment, a cooperative and supportive administrative authority, a stable financial base, an enthusiastic, competent and available staff, an adequate patient population, modern efficient equipment and space, and satisfactory liaison with other disciplines that relate to dermatology.

DURATION OF PROGRAMS

The requisite four years of postgraduate training includes a first year which should consist of broadly-based training, as is provided by a transitional year program or by first year residencies in internal medicine, general surgery, family practice, or pediatrics. Under unusual circumstances, training in other clinical disciplines may be acceptable for the first postgraduate year. The remaining three years of training must be spent in one or more accredited training programs in dermatology. At least 50 percent of the experience of the trainees in the three-year residency programs in dermatology must involve the direct care of patients. In accordance with these requirements, residency programs in dermatology are accredited for at least three years. Exceptionally, accreditation of residency programs of less than three years is possible, but only under the following conditions.

This training must represent an unusual and highly specialized experience, in research or in a selected major area of dermatology, in an institution with extraordinary capabilities in these fields and with multiple accredited training programs in other disciplines. Moreover, training under such conditions will provide the trainee with only one year of credit to be applied against the necessary three years of training in dermatology. This training may not be used in lieu of the first postgraduate year.

Residency programs accredited for four years of training in dermatology (PGY 1 through PGY 4) must provide the full three years of training in dermatology and be either directly or indirectly responsible for the training in the first postgraduate year. Thus, the trainees would spend their initial broadly-based year (PGY 1) in one of the following programs:

1. The ACGME accredited transitional year in the same or an affiliated institution.
2. An approved residency program in the same or an affiliated institution in one of the major disciplines cited above.

In each of these situations, no more than three months' rotation on the dermatology service is permissible during the first postgraduate year. Application for accreditation for four years of residency training in dermatology must include a detailed description of the first postgraduate year with a clear statement of the method of appointment of and responsibility for the trainees.

REQUISITES OF THE PROGRAM

A. Institutional

The parent institution must assure the financial, technical and moral support and provide the necessary space, facilities and supply of patients for the establishment and maintenance of an approved residency program in dermatology. Adequate exposure to both outpatients and inpatients is necessary as are opportunities to do research, to teach and to become acquainted with administrative aspects of the specialty. A cooperative relationship with other disciplines in medicine will result in the most effective implementation of these activities. When the resources of two or more institutions are utilized for the clinical or basic science education of a resident in dermatology, letters of agreement must be approved by the institutional governing boards. Affiliations should be avoided with institutions which are:

1. At such a distance from the parent institution as to make resident attendance at rounds and conferences difficult;
2. which do not add to the educational value of the program.

B. Program Director and Staff

The program director and his or her supporting staff must have had the necessary training and professional experience to enable them to properly train residents in dermatology. The dedication to the training of residents is essential, and the program director must be both adequate in number and willing and able to devote the time and effort required to assure the implementation of the administrative, educational, patient-care and research goals of the program. An instructor-to-trainee ratio of at least one-to-three is desirable, as is a minimum of two geographic full-time members of the clinical faculty, one of whom can be the training director. Faculty from any and all clinical and basic science departments can and should be utilized to provide a complete educational experience for the trainees.

C. Content

The training program shall be organized to permit the acquisition of experience and knowledge of dermatology in a graded and systematic fashion. Educational exercises should complement and when possible precede or parallel the clinical activities. Such exercises shall be organized to follow a content curriculum which will ensure resident exposure to the complete range of disorders encountered by the dermatologist. Appropriate direction and supervision are necessary throughout the training period. As the experience and confidence of the trainees grow, increasing responsibility for patient management can be assumed; however, the authority and supervisory role of the staff at all levels of training should be recognized. Residents should be adequately supported to permit their undivided attention to education and service responsibilities. Equality of the training experience must be assured for all the residents. Teaching methods throughout the training period should include various combinations of lectures, conferences, seminars, demonstrations, individual or group study of color transparencies and histologic slides, clinical rounds, chart and record reviews, faculty-
resident sessions in small groups and one-to-one settings, book and journal reviews and attendance at local, regional and national meetings. Projection equipment and facilities for viewing and taking clinical photographs should be provided. A library containing the essential texts, journals and other learning resources should be an integral part of each training area. Space should also be made available for dermatology conferences, preferably utilizing a dermatology conference room.

A vital part of the residency program is the structured study of the basic sciences related to dermatology, including allergy, anatomy, bacteriology, biochemistry, embryology, entomology, genetics, histology, immunology, mycology, oncology, parasitology, pathology, pharmacology, photobiology, physiology, serology, virology and basic principles of therapy by physical agents. Particular emphasis should be placed upon dermatologic microbiology, dermatopathology and immunodermatology. There should be a well-organized course of instruction and range of experience in these three disciplines. It is desirable that a physician with special competence in certification in dermatopathology direct and actively participate in one of the training programs. To facilitate clinical and laboratory teaching it is essential that the department have ready access to an adequate supply of properly classified anatomic and pathologic materials including histologic and photographic slides and that the resident participate actively in the interpretation of histopathologic sections. A clinical laboratory with facilities for microscopic analysis of biologic specimens (e.g., fungal and ectoparasite scrapings, topical preparations, immunofluorescence, darkfield examinations), culture for microbes (e.g., fungi, bacteria, viruses) and interpretation of histologic specimens by light, phase and electron microscopy should be conveniently available.

The residents' training should be sufficient to assure a knowledge of and competence in the performance of procedures in allergy and immunology, cryotherapy, dermatologic surgery, dermatopathology, microbiology, clinical pathology, parasitology, photobiology, physiotherapy, and topical and systemic pharmacotherapy. Among these disciplines, cryotherapy, dermatologic surgery, and pharmacotherapy should be given special emphasis in the organization and implementation of the training program.

The practice of dermatology is concerned with both ambulatory and hospitalized patients. It is essential that an active outpatient service furnish sufficient clinical material representing the broad array of diseases seen by the dermatologist. Suitable facilities which permit the use of modern diagnostic and therapeutic techniques in the care of these patients should be provided. Inpatient facilities are also essential so that patients may have the opportunity to treat the more serious cutaneous diseases on a daily basis and observe the dermatologic manifestations of systemic disease. Dermatology staff and residents must have primary rather than consultant responsibility on patients they hospitalize with dermatologic illnesses. Experience in the provision of consultation to other services whose patients manifest skin diseases as secondary diagnoses is also necessary. The keeping of complete and accurate clinical records should be emphasized throughout this phase of the training. Space and equipment should be provided to permit instruction in dermatologic surgery, electrosurgery, phototherapy, cryotherapy, application of topical medications and dressings, physiotherapy, radiotherapy, and appropriate epidermic and intraepidermal testing, phototesting, and other diagnostic procedures.

During training it is necessary for residents to gain an understanding of many diagnostic procedures and therapeutic techniques even though they may not personally perform them. Furthermore, some of these procedures, or techniques, may not be available in their programs. The physical modalities are especially notable, since an understanding of the basic properties of the electromagnetic spectrum is needed for the resident to become knowledgeable about the effects of various forms of this energy on the skin and disease and about their use in dermatologic diagnosis and therapy. Electron beam, x-ray, grenz ray, ultraviolet, and laser radiation fit into this consideration. Even if some of these modalities are unavailable within a training program, it is still an obligation of the director to assure that the resident has received appropriate instruction concerning the disease implication and therapeutic application of these energy sources.

Clinical training should also be provided in appropriate aspects of other specialties that relate to dermatology, such as allergy and immunology, environmental and industrial medicine, internal medicine, obstetrics and gynecology, oncology, ophthalmology, otolaryngology, pathology, pediatrics, physical medicine, preventive medicine, psychiatry, radiology, and surgery.

The participation or exposure of faculty and residents to basic and applied research is essential and research facilities should be available in amount and type suitable to the aims of the program. Some of these research facilities can be in departments other than dermatology.

Experience in the teaching of dermatology to other residents, medical students, nurses, and/or allied health personnel is an important element of the residency program. In addition, trainees should be given selected administrative responsibility commensurate with their interests, abilities and qualifications.

RESIDENT EVALUATION

Periodic in-training evaluation of residents should be carried out to insure that the resident is making satisfactory progress. Both formal examinations and performance ratings by the faculty can be utilized and the resident should be personally apprised of his strengths and weaknesses at appropriate intervals. Completion by the program director of resident yearly report forms, such as those requested by the American Board of Dermatology and other certifying boards, is an important part of this evaluation process.

SPECIAL RESPONSIBILITIES OF THE PROGRAM DIRECTOR

Internal analysis of the training program by the program director and his or her staff is essential. In addition, the regular surveys conducted by the Residency Review Committee for Dermatology. One measure of the quality of a program is the performance of its graduates on the certifying examination of the American Board of Dermatology.

The program director must notify the Secretary of the Residency Review Committee of any change in the program, staffing, affiliations or facilities which might significantly alter the educational experience.

At times of his or her absence, the program director must designate an interim director. If this period is for six months or longer, the Residency Review Committee should be notified. Documentation of resident evaluation, institutional and inter-institutional agreements, resident agreements and departmental statistics should be kept on file and provided upon request to the Residency Review Committee or site visitor. The accurate and complete execution of application forms, progress reports and replies to other requests from the Residency Review Committee is the responsibility of the program director. The care and precision given to these responses will be taken into consideration in the assessment of the training program.

The program director should advise all residents planning to seek certification by the American Board of Dermatology to complete the Preliminary Registration Form of this Board and to communicate directly with the Executive Director of the Board to be certain that they are in full compliance with the requirements for certification.

Effective: July 1983
ACGME: May 1982

Training Programs

1. The training program in dermatopathology shall be
5. Special Requirements for Residency Training in Emergency Medicine

I. PREAMBLE
General Characteristics of Accredited Programs:
Residencies in emergency medicine are designed to prepare physicians for the practice of emergency medicine. These programs must provide education in the basic skills and knowledge which constitute the foundations of emergency medicine practice and increasing degree of responsibility for and experience in the application of these principles to the management of clinical problems. Adequate opportunity must be provided for the resident, under guidance and supervision of a qualified teaching staff, to develop a satisfactory level of clinical maturity, judgment and technical skill which will, upon completion of the program, render the resident capable of providing quality emergency medical care.

Residency training programs in emergency medicine should produce physicians trained to:
1. provide the initial recognition, stabilization, evaluation and care of the acutely ill or injured patient;
2. arrange appropriate follow-up or referral as required;
3. manage the prehospital care of acutely ill or injured patients;
4. participate in the management of the emergency medical system providing prehospital care; and
5. engage in administration and teaching in emergency medicine and be familiar with research methodologies and their application.

II. THE INSTITUTION
The institution(s) involved in the program should provide evidence of commitment to graduate medical education including emergency medicine. The administrative and academic structure must be organized in a way that facilitates the provision of an adequate educational experience. There must be evidence of an adequate financial commitment to the program.

A. Medical School Affiliation
Medical school affiliation is desirable but not required.

B. Affiliation Agreements
When there is a cooperative educational effort involving multiple institutions, the commitment of each institution to the program must be made explicit, and should be embodied in an affiliation agreement indicating:
1. program goals and objectives and the means by which they will be accomplished;
2. the resources and facilities in the institution(s) that will be available to each resident including but not limited to library and medical records; information on professional liability insurance, resident stipends, fringe benefits and vacations;
3. the duties and responsibilities the resident will have in each institution;
4. the relationship that will exist between emergency medicine residents and residents and faculty in other programs;
5. the supervision emergency medicine residents will receive by the faculty of each institution.

C. Presence of Other Residencies
The parent institution for emergency medicine training must have a major educational commitment as evidenced by training programs in other major specialties.

D. Administration of the Emergency Services
The residency program director must have sufficient authority and responsibility for care rendered in the emergency facility and must participate in institutional policy making to the extent necessary to assure proper implementation of the residency program. The administration of emergency medicine in the hospital must be properly organized to provide sufficient personnel, equipment and facilities for the residency training in emergency medicine as well as programs of all disciplines that require emergency medicine experience. In a program which involves more than one institution, the program director will be responsible for the educational activities in all institutions, but will not be expected to have authority and responsibility for care rendered in institutions other than his/her own.

E. Facilities
In every hospital in which the emergency department is used as a training site, the following must be adequate and readily available: a) patient care and program support space; b) trained personnel; c) laboratory and x-ray support; d) medical library resources; and e) instructional space.

F. Scope, Quantity and Severity of Illness of the Patient Population
1. Recognizing the requirements of other accredited residencies utilizing the emergency department facilities, there must be an adequate number of patients of all ages and both sexes with a wide variety of clinical problems in order to provide sufficient patient population to meet the training needs of emergency medicine residents.
2. The percentage of critically ill or injured patients seen should be significant, approximating a minimum of two to four percent of the patient population or 1,000 patients per year, whichever is greater.
3. There shall be a policy regulating the care given by emergency medicine residents to patients who have personal physicians. This policy shall provide the personal physicians access for management of their patients and facilitate the continuity of the patients’ care.
G. Number of Residents

There must be an adequate number of emergency medicine residents to result in a major service impact in the emergency department. to assure a meaningfully attended emergency medicine conference schedule, to provide for graded responsibility, and to foster a sense of resident and departmental identity.

III. THE PROGRAM

A. Length of Training

1. The minimum time of graduate training in emergency medicine is 36 months in a curriculum designed and supervised by the emergency medicine program director. The 36-month program may be comprised either of the PG-1, PG-2, and PG-3 years, or the PG-2, PG-3, and PG-4 years.

B. Supervision

1. All residents on emergency department rotations must be under appropriate supervision at all times.

2. The program director must assure that all residents are appropriately supervised when rotating on other services in accordance with the policies of those services.

C. Curriculum

1. There must be a written curriculum specific to the educational needs of the emergency medicine resident, which includes goals and objectives covering the core content.

2. The written curriculum should explicitly identify educational experiences (e.g., lectures, simulation, lab) to meet each objective. There must be at least an average of 5 hours per week of planned instruction directed to emergency medicine residents and developed by the emergency medicine residency program. These conferences should include morbidity and mortality conferences, journal, review, and didactic lectures based on the defined curriculum.

Planned instruction on various aspects of emergency department administration, management, medicolegal topics, medical ethics, Emergency Medical Services systems and disaster planning must be presented.

3. The residents' programs should include critical care rotation(s), with responsibility for patient care consistent with the individual resident's ability.

4. The program must provide a mechanism for each resident to obtain information on outcomes of patients the resident has evaluated in the emergency department.

D. Emergency Medical Services

Residents must have direct experience with radiotelemetry, participate in Emergency Medical Services transportation and care, and participate in the teaching of life support to the appropriate personnel.

E. Research

Opportunity for research must be provided. Residents must be taught an understanding of basic research methodologies, statistical analysis and critical analysis of current medical literature.

IV. THE STAFF

A. Program Director

The program director must be highly qualified, as a clinician, administrator, and educator in emergency medicine. The program director must be board certified in emergency medicine or have equivalent qualifications.

The program director must devote the necessary time and effort to the teaching of emergency medicine. This person must engage in scholarly pursuits such as: a) active involvement in continuing emergency medical education, b) active participation in regional or national scientific societies, c) presentations and publications, and d) active interest in research.

The program director must have appropriate authority to oversee and to organize the activities of the educational program. The position of this position should include but not be limited to the following:

1. resident appointments and assignments;
2. supervision, direction, and administration of the educational activities;
3. evaluation of the house staff, faculty, and residency program.

The program director is also responsible for notifying the Executive Secretary of the Residency Review Committee in writing of any change in the program which may significantly alter the educational experience for the residents, such as:

1. his/her appointment as a permanent or acting program director and/or departmental chairman;
2. the addition of a required rotation of four months or longer to any institution other than those already participating in the program; and
3. any proposed change in the number of resident positions offered.

A proposed change in the number of residents or institutions participating in the program must receive prior review by the Residency Review Committee before implementation in order to determine if an adequate educational environment exists to support these changes.

B. Faculty

Physicians with teaching responsibility must be certified by the American Board of Emergency Medicine, be certified by another specialty board, or have equivalent qualifications. All faculty involved in teaching should have clear responsibilities, defined in writing, for supervision of residents, teaching, administration, and research with time specifically dedicated to the educational program. All faculty should engage in scholarly pursuits as outlined in IV.A.

C. Faculty Development

Each program must encourage the academic growth of its faculty. Faculty development opportunities must be made available to each faculty member and should include development of skills in teaching, research and scientific writing.

V. EVALUATION

There must be an effective, on-going evaluation of all components of the residency program. This evaluation process must relate to the educational objectives of the program and provide a mechanism to effect change.

A. Evaluation of Residents

At least semi-annually, there must be an evaluation of knowledge, skills, and professional growth in emergency medicine. Documentation of management of patients with emergency conditions, to include major trauma, medical, and pediatric resuscitation as well as emergency procedures performed by each resident in the program must be kept and reviewed periodically by the program director.

Formal evaluation of each resident during training is required and must include oral and written examinations. In addition, there must be a mechanism for formal evaluation of each resident on each rotation. A summary of the above evaluations must be communicated in writing to each resident. Discussions of these results between the resident and the program director or his/her designee must be held on at least a semi-annual basis. A plan to remedy deficiencies must be in writing and on file, and progress and improvement must be monitored at least every three months.

B. Impaired Residents

Emergency medicine training programs should identify impaired emergency medicine residents, and the program director must be able to intervene appropriately on behalf of the impaired resident, the patient, the institution, the public, and the faculty involved.

C. Evaluation of Faculty

At least annually, individual faculty members must be formally evaluated by both the chairman of emergency medicine and/or the residency program director, and the emergency medicine residents. Documentation of faculty evaluation should include teaching ability, clinical knowledge, and scholarly contributions. A summary of these evaluations should be communicated in writing to each faculty member.

D. Evaluation of Patient Care

The program must consider high quality patient care as the primary objective and evaluate the care provided. There must be a current and retrospective audit to provide necessary feedback for continuing improvement of emergency care.
Family Practice

E. Evaluation of the Curriculum
At least annually, the curriculum must be evaluated by both residents and faculty. The results of these evaluations must be kept on file.

F. Due Process
A mechanism for due process must be available as outlined in the "General Requirements."

VI. CERTIFICATION
Residents who plan to seek certification by the American Board of Emergency Medicine should communicate with the Secretary of that Board for information regarding the requirements for certification.

Effective: July 1987 ACGME: September 1986

6. Special Requirements for Residency Training in Family Practice

I. INTRODUCTION
Residencies in family practice must be specifically designed to meet the educational needs of medical school graduates intending to become family physicians.

The training is three years in duration after graduation from medical school and must be planned so that a coherent, integrated, and progressive educational program is assured.

Applicants who have had other types of previous training may be considered for admission to family practice residencies. Credit for this previous training may be given only in the amount that is compatible with the Special Requirements for training in Family Practice. The director of the family practice residency shall be responsible for insuring that each resident who completes the program has met these requirements.

Experience in the continuity of care offered in the family practice center is essential. Therefore, it is imperative that all programs offer three consecutive years of training which includes a continuity experience with a panel of patients and families.

The program should provide the opportunity for each resident to develop and maintain a continuing physician-patient relationship throughout the three-year period with a panel of patients. This relationship must be in continuity during the resident’s second and third year and include patient contacts in the family practice center, inpatient facility, domiciliary facility, and the patient’s home.

Family practice residency programs should provide experience and responsibility for each resident in those areas of medicine which will be of importance to the resident’s future practice. Since family practice programs are in part dependent upon other specialties for the training of residents, the ability and commitment of the institution to fulfill these requirements must be assured. Specifically, the sponsoring institutions must assure the existence and availability of those basic educational and patient care resources necessary to provide the family practice resident meaningful involvement and responsibility in the necessary clinical specialties. Further, there should be agreement regarding the resident’s need to maintain concurrent commitment to his patients in the family practice center.

The family practice residents’ identity should be maintained throughout graduate training while they learn the appropriate skills, techniques, and procedures of other specialties. Instruction in the other specialties must be conducted by faculty with expertise in these fields. Curriculum and plans for such rotations or experiences must be developed by the family practice faculty in concert with appropriate other specialty faculty. The program should implement a plan to assure that the residents retain their identity and commitment to the principles and philosophic attitudes of family practice throughout the training program.

The programs must emphasize the importance of comprehensive patient and family medical care. The residents must be given the opportunity to achieve high levels of competence in disease and problem management and to develop knowledge, skills, and attitudes which reflect expertise in patient management. Therefore, experienced family physicians should be utilized to the fullest extent as teachers within the constraints of their individual competence.

II. CURRICULUM
EVERY RESIDENCY PROGRAM MUST HAVE THE "CORE" OR REQUIRED CURRICULUM AS CONTAINED HEREIN. HOWEVER, UPON APPROVAL OF THE RESIDENCY REVIEW COMMITTEE, CURRICULUM COMPONENTS MAY VARY TO REFLECT CURRENT REGIONAL PRACTICE PATTERNS AND PATIENT CARE NEEDS, AND MAY BE FLEXIBLE ENOUGH TO UTILIZE THE STRENGTHS OF THE PROGRAM.

All major dimensions of the curriculum should be structured educational experiences for which written goals and objectives, a specific methodology for teaching and a method of evaluation exist. The organization of the curriculum should reflect the application of sound educational principles, recognizing that some elements of the curriculum are best learned in a longitudinal experience while others are more efficiently learned in an intensive experience of shorter duration.

It is recognized that the content of a rotation is more important than the time assigned to it. However, in an accreditation process it is necessary to establish guidelines for the allocation of time segments in order to assure the opportunity for residents to achieve the cognitive knowledge, psychomotor skills, attitudinal orientation and practical experience required of a family physician in each of the curricular elements. Ranges of time are indicated under the various disciplines which comprise the core curriculum. This does not prohibit additional elective time in any of the disciplines relative to the curriculum throughout the “Special Requirements.”

A. Family Practice
Family practice is a comprehensive specialty. Although the treatment of illness is a basic function of family physicians, the family physician assumes the responsibility for the total health care of the individual and family, taking into account the social, physiological, economic, cultural and biologic dimensions.

The responsibility to provide health care to families is also a fundamental concept of the discipline of family medicine. The program must provide the opportunity for residents to acquire knowledge and experience in the provision of longitudinal health care to families.

The residents’ acquisition of knowledge, skills and attitudes of family practice should take place during all curricular elements. The primary setting for this training is in the family practice center as the residents provide continuing, comprehensive care to their panels of patients.

An intensive short duration assignment to the family practice center during the first year is needed in order to provide an orientation period to introduce the comprehensive approach to health care and to help the resident develop an identity as a family physician. Additionally, residents should be assigned to the family practice center for at least one-half day per week during the first year of training.

During the second year residents should spend from two to four half days in the center. The amount of time in the center should be increased in the third year to three to five half days per week. Ranges of time are indicated for assignments to the family practice center in the second and third years may be utilized for specific educational purposes provided the overall curriculum is not thereby compromised.

11The Residency Review Committee expects the programs to have written detailed plans for their curriculum which should be available to the site surveyor.
12In identifying ranges it is recognized that certain programs will deviate from those ranges for excellent educational reasons. It is the responsibility of the program to document and justify variations from the ranges herein stated.
Certain elements of the curriculum are of special importance to family practice but are not necessarily limited to family practice. These elements must be taught longitudinally during the entire period of residency training, in didactic and clinical settings:

1. Comprehensive care
   a. Individual
      1) Health assessment and maintenance
      2) Prevention
      3) Acute and chronic illness or injury
      4) Trauma
      5) Rehabilitation
      6) Behavioral counseling
      7) Health education
      8) Human sexuality
   b. Family
      1) Family structure
      2) Family dynamics
      3) Genetic counseling
      4) Family development
      5) Family planning
      6) Child rearing and education
      7) Aging
      8) Death and dying
      9) Epidemiology of illness in families
      10) Role of family in illness management
      11) Counseling and education
      12) Nutrition

2. Continuity of primary responsibility
   a. Ambulatory care
   b. Inpatient care
   c. Home care
   d. Domiciliary care: e.g., nursing, extended care facilities
   e. Referral and consultation
   f. Integrative function of the family physician
   g. Utilization of community resources

B. Gerontology
   A significant portion of the practice of every family physician includes the care of the aged. Educational opportunities to address this element of the curriculum must be in a continuum throughout the resident's entire program. A structured multidisciplinary approach by faculty is essential to the teaching of this curricular element in the following settings: family practice center, the hospital, nursing homes, retirement homes, voluntary agencies, and in the patient's home. Care of the aged must include the preventive aspects of health care, the physiological and psychological changes of senescence, the social-cultural parameters, nutritional and pathological (acute and chronic) entities of aging.

C. Human Behavior and Psychiatry
   In family practice training, most of the resident's knowledge and skills should be acquired through a program in which psychiatry and behavioral science are integrated with family practice, internal medicine, pediatrics and other disciplines throughout the resident's total educational experience.

The family practice center should serve as the major site for residents to achieve the objectives of this portion of the curriculum. Parts of this training may be interwoven with other curricular elements. Didactic as well as clinical methods should be utilized. Instruction should be provided by faculty who have training and experience necessary to apply modern behavioral and psychiatric principles to the care of an undifferentiated population and should include qualified family physicians as teachers. Intensive short-term experiences in facilities devoted to the care of chronically ill patients should be limited.

There must be instruction in the following areas of human behavior:
   1. Diagnosis and management of the psychological components of illness;
   2. Management of psychological disorders;
   3. Family dynamics;
   4. Faculty and resident self-awareness; personal and professional growth and development;
   5. Physician/patient relationship;
   6. Patient counseling;
   7. Interviewing skills and other communicative skills;
   8. Patient education;
   9. Normal growth and development;
   10. Stages of stress in the family life cycle.

There should be a formal didactic program which supple- ments the clinical experience in human behavior. The human behavior curriculum should include the promotion of physician well-being and prevention of physician impairment.

The curriculum must identify a psychiatry training com- ponent which encompasses recognition, diagnosis and management of emotional and mental disorders along with and/or as components of organic diseases. Elements of psychotherapy, psychopharmacology, psychiatric counseling, and a broad spectrum of mental illness, alcoholism and other substance abuse must be included.

D. Community Medicine
   Residents should have experiences which help them understand the role of private enterprise, voluntary organizations and government in modern health care. In addition, residents should be taught the principles of the application of modern medical knowledge to the care of populations.

There must be instruction in at least the following areas of community medicine:
   1. Occupational medicine;
   2. Health resource agencies;
   3. Epidemiology of disease;
   4. School health;
   5. Sports medicine;
   6. Community health education;
   7. Public health services;
   8. Preventive medicine;

A structured educational experience in rural and/or innercity health care should be available to residents if such experience adds a dimension to the educational program which is not otherwise present.

Prevention of disease and disability is an important aspect of family practice. Residents should be given the opportunity to acquire specific knowledge, skills and attitudes which provide special competence in the application of modern principles of preventive medicine. This content should be presented in both didactic and clinical settings.

E. Internal Medicine
   Internal medicine experience should provide the resident with the opportunity to acquire the knowledge and skills related to the diagnosis and management of non-surgical diseases of adults. This experience should be utilized to enhance the resident's understanding of the pathophysiology of non-surgical diseases and the application of modern non-surgical diagnostic and therapeutic techniques. It should also be utilized to develop a disciplined, scientific approach to the practice of medicine.

The organization of the curriculum in internal medicine in large part will be dependent upon the organization of the delivery of patient care services in the teaching environment. The experience should include both inpatient and outpatient experiences and progress from general to specific areas of content. Faculty should include both general internists and subspecialists. The total duration of internal medicine trainings should be 8-12 months, including structured experiences in cardiology and critical care units (ICU/CCU) as well as education in endocrinology, pulmonary diseases, hematology and oncology, gastroenterology, infectious disease, rheumatology, nephrology, allergy and immunology and neurology. Where appropriate, family physicians with recognized skills in internal medicine may be utilized as instructors. Where it exists, a family practice inpatient service may be utilized to fulfill a portion of this requirement.
F. Dermatology
The curriculum must include a required educational experience in dermatology with a duration in the range of 60-120 hours. Most of this experience will be in an outpatient setting with a qualified physician teacher of dermatology and be supplementary to the learning which results from dermatologists' consultations which may occur in the family practice center.

G. Pediatrics
There must be a structured educational experience in pediatrics, the duration of which should be four to five months. The resident should have the opportunity to develop an understanding of the pre-natal period, the growth and development of the newborn through adolescence, and emotional problems of children and their management. In addition, the resident should be taught to recognize and manage behavioral, medical and surgical problems of children and adolescents in home, ambulatory and hospital settings.

The pediatric experience must include ambulatory and in-patient experiences in pediatrics, including the newborn nursery, as well as resuscitation, stabilization and preparation for transport of the distressed neonate.

H. Obstetrics and Gynecology
The resident must be provided the instruction necessary to understand the biological and psychological impact of pregnancy, delivery and care of the newborn upon a woman and her family. The resident should be taught technical skills in the provision of antepartum and postpartum care and the normal delivery process as well as the complications of pregnancy and their management. The resident should be taught certain operative skills in obstetrical and gynecological procedures as a part of the broadly based curriculum. To obtain such skills the family medicine resident must spend at least three months in a structured educational experience, of which at least two months must be in obstetrics and at least one month must be in gynecology.

A program must be able to provide an elective basis for interested family practice residents, approximately three months of additional obstetrics/gynecology training as structured educational experiences which should include high risk obstetrics and the opportunity for residents to develop the technical proficiency to perform surgical procedures which family physicians may be called upon to perform.

It is required that residents have the opportunity to provide obstetric care to pregnant women within the context of the longitudinal experience in the family practice center. The resident must assume the responsibility for provision of antenatal, confinement and postnatal care to these patients on a continuing basis.

The training program should afford an opportunity for the acquisition of skills in marriage counseling, sex education, human sexuality and family planning.

I. Surgery
The program must provide instruction in the diagnosis and management of surgical emergencies and the appropriate and timely referral of them for specialized care. The resident should also be taught to recognize conditions that are preferably managed on an elective basis.

It is important for the resident to appreciate the varieties of surgical treatments as well as the potential risks associated with those treatments. Knowledge of these matters should enable the resident to give proper advice, explanation, and emotional support to the patients and their families.

The resident must receive training in pre-and postoperative care, basic surgical principles, asepsis, handling of tissue and technical skills to assist the surgeon in the operating room. The program should provide the opportunity for residents to develop the technical proficiency to perform specific surgical procedures which family physicians may be called upon to perform. If the residents expect to include surgery as a major aspect of their practice, additional training must be obtained.

The general and subspecialty surgery experiences should total four to five months duration. The residents must be required to participate in a structured experience in general surgery of a minimum of two months duration, including operating room experience.

Outpatient experiences in general surgery are encouraged in order for the resident to achieve competencies in the diagnosis and management of a wide variety of common ambulatory general surgical problems.

The structured experiences in surgical subspecialties may be in an intense short time format, or may be in a longitudinal format. 160-200 hours of orthopedics should be required. 40-80 hours in each of the subspecialties of ophthalmology, otolaryngology and urology must be required. It is expected that experiences in the surgical subspecialties will be primarily outpatient oriented.

J. Emergency Medicine
There must be a structured education experience of one to three months duration in the delivery of emergency medicine care under competent and full-time on-site supervision. The initial month should be an intensive experience of short duration rather than a longitudinal format.

There must be sufficient quality and types of facilities, equipment, support personnel, and broad range of patient problems to provide the residents with adequate experience in initial management of serious emergencies.

The emergency medicine portion of the curriculum should utilize both didactic and practical experiences. Specific modern life-saving skills must be taught to all residents, e.g., advanced cardiac life support, airway insertion, chest tube insertion, hemostasis.

K. Diagnostic Imaging
The program must provide the residents with ample opportunity to learn the appropriate application of techniques and specialty consultations in the diagnostic imaging of organs and body systems. Instruction should include the limitations and risks attendant to these techniques. The format of the instruction should be adapted to the resources available, but must include radiographic film interpretation pertinent to family practice.

L. Practice Management
There must be a curriculum component that provides at least 60 hours of instruction in practice management. The family practice center should be considered the primary classroom for teaching practice management. Elements to be included:

1. Patient management;
2. Records;
3. Facilities;
4. Office organization;
5. Medical-legal aspects of practice;
6. Procedures for establishing a practice;
7. Team care and team development;
8. Office and business management;
9. Personnel management;
10. Automated data systems;
11. Interprofessional relationships.

M. Other Curricular Elements
Other curricular elements should include:

1. Nuclear medicine;
2. Physical medicine and rehabilitation;
3. Nutrition;
4. Clinical laboratory science;
5. Ethics;
6. Use of drugs and their interaction;
7. Art of consultation and referral;
8. Administration of anesthetics.

N. Electives
Electives which are well constructed, purposeful, and effective learning experiences are an essential part of a family practice residency program. Most electives will be concerned with sub-specialized areas of the major primary specialties and may be obtained in various ways. Electives should not utilize more than six months of the total curricu-
Family Practice

IV. FACILITIES

A. Primary Hospital

1. Number of Beds: It is essential that the participating hospitals, primary and affiliated, be of sufficient size and have an adequate number of teaching beds to assure sufficient patient load and variety of problems for the education of the number of residents in the program. Experience has demonstrated that facilities which have fewer than 135 occupied beds, are often not able to provide adequate physical, human and educational resources for training in family medicine.\textsuperscript{14}

2. Facilities: A program should provide facilities required for the education of residents in sufficiently close proximity to the primary hospital to allow for the efficient functioning of the training program. Multiple teaching facilities may be used so long as there is no compromise of the quality of the educational program and no significant reduction in attendance of residents at teaching sessions, or reduction of camaraderie and information exchange among residents and/or faculty.

3. Patients: A sufficient number of inpatients must be available to provide a broad spectrum of problems in any given discipline. The disease spectrum available for resident education must be that common to the general community, and must offer a structured educational experience which allows residents the opportunity to obtain expertise in emergency initial care of unusual, or life-threatening problems.

There should be an institutional patient care evaluation program to allow continuing improvement of ambulatory and patient care provided by the institution and medical staff.

4. Medical Staff: Medical staff must be available in sufficient number to insure adequate patient care and consultation in family practice, internal medicine, surgery, pediatrics, obstetrics/gynecology, pathology, psychiatry, radiology, ENT, urology, neurology, cardiology, dermatology, orthopedics, ophthalmology, anesthesia, and emergency medicine.

The medical staff should be organized so that family physician members may participate in appropriate hospital governance activities on a basis equivalent to that of the other specialties. Family physician faculty must have admitting and attending privileges in the hospital(s) where the majority of family practice center patients are hospitalized. Family practice residents must be able to admit and care for their family practice center patients in the hospital with family practice faculty supervision as appropriate.

B. Family Practice Center

1. Functional Status: A family practice center must be in operation for the training of family practice residents (whether or not in a temporary location), on the date the program begins. If more than one center is used, the additional center must meet the same criteria as the primary center.

2. Design: The center must be a clearly identifiable unit which includes a separate entry, waiting room and appointment system.

The design of the family practice center must insure adequate patient flow to provide appropriate patient care, accessibility and teaching opportunities. The family practice center must have necessary provisions for handicapped persons.

3. Size: Two examining rooms per physician working in the center at one time (counting as physicians both family practice residents and physician faculty who have patient care responsibilities) should be available. In cases where the

\textsuperscript{14}Requirements concerning number of hospital beds may be regarded more appropriately in terms of those available for use in training residents whether in the primary hospital alone or primary plus affiliated hospitals combined. It is important that there be no compromise in continuity of care or attendance at teaching sessions by residents because of distance between of among institutions. Number of beds must be perceived in context of the total number, types, and locations as well as medical staff available for quality care and teaching.
family practice center is utilized for training of other learners, e.g. nurses, medical students, physician assistants, sufficient additional space must be available so that the efficiency of the residents is not compromised.

Other functional areas must include: business office, record room, office library, patient care rooms, conference room, basic laboratory appropriate to office practice, resident work area, and faculty/staff offices.

The family practice center should provide for the capability of the physician to conduct individual and small group counseling.

Diagnostic laboratory and imaging services must be provided so that there is prompt and convenient access by patients and residents for patient care and education.

4. Location: The location of the family practice center in relation to the hospital(s) should be such that it allows conservation of the residents' time in order to utilize efficiently the educational opportunities and provide necessary patient care at both sites.

5. Equipment: The family practice center must contain all equipment necessary to meet the basic needs of an efficient family practice office and a quality education program for family practice residents.

6. Patient Population: A stable patient population of sufficient number and variety is necessary to ensure comprehensiveness and continuity of experiences for the residents. The major part of the patient visits should be from family units for which a resident is responsible. A patient population seeking only episodic care does not meet this requirement. Patients who provide a broad spectrum of problems and represent varied income levels and ages and both sexes should be attended in the hospital, the family practice center, at home, or in institutions for long-term care or rehabilitation.

7. Record System: Patients' ambulatory medical records must be maintained in such a way that easy and prompt accessibility is assured at all times.

The record system must provide for patient care audit and chart review and must be capable of prompt documentation of all facets of family care, including care rendered in the family practice center, hospital, home, or institution.

The medical record system must be designed for the retrievability of data pertinent to patient care, and the monitoring of the residents' experiences.

8. Provision of Patient Care: Appointments must be scheduled in the family practice center by regular employees of the center who are cognizant of the needs of the appointment system in the delivery of continuing care and patient access to a requested physician.

Continuity of care is an important concept in family practice, and for this reason the training program must demonstrate a concern for continuity of care. This concern is expressed in the role and interrelationships that the system (e.g. solo or group), the professionals, the individual patient and the patient's family, the institution and the community play in the maintenance of continuity of care.

9. Support Staff: There must be appropriate numbers and types of support staff to meet the needs of health care and resident education.

10. Teaching Consultants: Consultations by recognized specialists in their fields should be utilized by the program as a teaching mechanism. Elective consultations should be in the family practice center. Where possible, the consultant's teaching role should be available to more than one resident. The consultant's teaching role should be available to more than one resident if this can be done preserving the patient's dignity. When this is not possible, consultations should occur in a location which allows residents to participate in the consultation as an educational experience.

11. Ambulatory Units Other Than Family Practice Centers: Ambulatory units other than family practice centers are those sites which offer experience that differs from that which is offered in the primary family practice center.

The use of remote sites or rotations on clinical services must not interrupt continuity of care at the family practice center for longer than two months during the second year and two months during the third year. A resident must return to the family practice center and provide continuity of care for the resident's panel of patients for at least two months before leaving for any additional remote experience.

12. Sources of Income: The fiscal operation of the family practice center must reflect a balance between service and education which does not adversely affect the educational objectives.

There should be a plan to assure long-range fiscal stability of the Program.

It is the responsibility of the residents to render patient care in the pursuit of their education without additional remuneration based on productivity.

This does not preclude the residents from earning income from patient care during off hours provided that this activity does not interfere with the education and performance of the resident. In addition, such activity should not be in conflict with the policies of the program or the sponsoring institution.

13. Hours of Operation: The family practice center must be an exclusive facility available for patient services during weekdays commensurate with community medical practices in order to provide continuing comprehensive care and a place where patients may expect to obtain services.

When the family practice center is closed, there must be provisions for patients to have access to their personal physician or a designated substitute physician.

V. FAMILY PRACTICE RESIDENTS

A. Conceptual Understanding: Residents must be taught to demonstrate and clearly articulate the philosophy and concepts of family medicine to patients.

B. Impaired Residents: The goal of the family practice training program is to produce fully competent physicians capable of giving high quality care to their patients. Because impaired physicians cannot achieve these goals, the program should attempt to identify and prevent impending impairment. Additionally, the program must be able to intervene appropriately on behalf of its impaired resident.

C. Outside Rotations: Residents may spend time away from the family practice center to meet the needs of their training. The educational value of these rotations must be clearly documented. The availability of constant on-site supervision is required.

D. Documentation of Residents' Experience: A system for documentation of residents' experiences must be utilized to monitor the educational experience and to provide documentation for future hospital privileges.

VI. EVALUATION

A. Evaluation of Residents: There must be an adequate, ongoing effort of evaluating knowledge, competency, and performance of the residents. Evaluation of assessment, interim testing and periodic reassessment, as well as other modalities for evaluation, should be utilized.

B. Evaluation of Faculty: All teaching faculty must be evaluated on an ongoing basis. Documentation of faculty evaluation should include: teaching ability, clinical knowledge, attitudes, scholarly contributions, interpersonal skills and communication abilities.

C. Evaluation of Patient Care: The program must consider high quality patient care as one of its primary objectives and evaluate the care that is provided. There must be a current and retrospective audit to provide necessary feedback for continuing improvement of ambulatory and inpatient care.

D. Evaluation of the Program: The family practice residency must incorporate all elements of the "Special Requirements." The program should be evaluated within the context of the educational needs of the residents, teaching respon-
sibilities of the faculty and the availability of health care resources within the community.

This evaluation should include an appropriate balance between education, research and service. Continuing medical education should occupy a prominent place in the program and residents should be encouraged to develop learning patterns to continue their education.

One measurement of the quality of a program is the performance of its graduates in the certification examinations of the American Board of Family Practice. The degree of resident attrition and the presence of a critical mass of residents are also factors to be considered in the overall evaluation of the program.

E. Evaluation of the Graduate: It is the responsibility of all programs to maintain contact with their graduates to obtain information about:
1. Practice effectiveness;
2. Personal satisfaction with role;
3. Practical responsibilities;
4. Evidence of participation in continuing medical education;
5. Board certification;
6. Relevance of training to practice demands.

VII. GENERAL

The provision of the "General Requirements" must also be met for approval. All family practice residents who plan to seek certification by the American Board of Family Practice should communicate with the Secretary of the Board.

It is the responsibility of the program to notify the Secretary of the Residency Review Committee for Family Practice of significant changes in the program which may occur in the interim between site surveys. This includes, but is not limited to, changes in the program director.

Effective: July 1983 ACGME: September 1982

7. Special Requirements for Residency Training in General Surgery

I. GENERAL CHARACTERISTICS OF ACCREDITED PROGRAMS

Residencies in surgery which are designed to meet the requirements for accreditation must provide a structured educational experience of uniformly high quality which will prepare trainees to function as well qualified, independent specialists in surgery upon completion of the program. Surgery is not an exact science and there are a variety of educational plans leading to the desired qualifications as a surgeon. However, the requirements which follow must be met or exceeded in all accredited training programs in the specialty.

Since general surgery is a discipline of great breadth and a specialty which is often consultative in nature, the program should be conducted in those institutions which are accredited by the Joint Commission on Accreditation of Hospitals and classified as general hospitals. Rotation of individual trainees to affiliated institutions to obtain training not adequately available in the parent institution may be desirable. Rotations to affiliated hospitals must enhance the overall quality of the program rather than simply enlarge the program and must not be primarily for the purpose of providing service coverage.

Since interaction with peers from other disciplines contributes to the quality of the learning experience and provides the framework upon which future patterns of practice are based, it is important that there be accredited residency programs in other medical specialties in the teaching institution(s). While the minimum requirement is only for an accredited residency in internal medicine, pediatrics, or family practice in the institution, it is desirable that there be a better balance, as provided by residencies in several primary care disciplines, and in obstetrics and gynecology, pathology and radiology. Residencies in other surgical specialties, while not specifically required, contribute to quality and a balanced educational atmosphere.

The objective of the residency is to prepare the trainee to function as a qualified practitioner of surgery at the high level of performance expected of a specialist. Therefore, the educational aspects of the program must be the most important factor and the residents must be provided adequate time and sufficient facilities for study. Every residency carries with it a commitment of service to patients in the institution, but the service responsibilities must work in concert with other activities to produce a well rounded, knowledgeable and highly qualified practitioner of surgery.

The career goals and personal interests of individual residents will vary and there are several paths to an adequate education. Every resident need not conform to a single pattern, but all residents must be provided a solid foundation in the basic and principal components of the specialty and each resident within a program must be provided with an equivalent educational experience.

To be accredited, programs of graduate education in surgery must be so constructed that there is a clear demonstration by the training of acquisition of a solid foundation of fundamental surgical knowledge prior to progression to the level of supervised semi-independent patient management and operative care. An objective test mechanism is required as a component of the process of demonstration of this cognitive capability. While each program may utilize its own test instruments, the American Board of Surgery In-Training Examination is considered a most desirable example. However, the ABSITE should not be used as the only criterion of resident performance. It should have no bearing on the approval of the program.

Furthermore, it must be clearly demonstrated that a trainee has in fact reached a satisfactory level of clinical qualifications prior to completion of the program. Any program which does not establish a system of trainee evaluation which clearly shows that each trainee has successfully passed these two milestones above cannot be considered adequate.

The performance of each house officer must be evaluated by the teaching staff at least every six months and a documented record of that evaluation must be prepared and maintained for subsequent review by the accrediting and certifying authorities. All evaluations should be formally reviewed with trainees on a regular basis. In order to insure the proper relationship between and balance of the basic sciences and the other clinical disciplines of general surgery, there shall be operational systems based on individual program goals for advising program directors and evaluating all programs.

Graduate education programming in surgery must be a continuum with undergraduate medical education. All years must be under the guidance of the director of an accredited program in surgery regardless of rotations to other disciplines.

II. DURATION, SCOPE AND CONTENT OF PROGRAM

Five years of graduate training in surgery after graduation from medical school is the minimum amount of time required for acquisition of the necessary knowledge, judgment and technical skill. To be acceptable, a program must include a total of five years of which at least four years must be clinical experience. Three and one half years must be devoted to clinical surgery; and three of these years, including the final clinical year, must be devoted entirely to training in the principal components of the specialty, as defined below. No more than six months of the required clinical years may be allocated to clinical disciplines other than surgical, such as internal medicine, pediatrics, gastroenterology, anesthesia or surgical pathology. The senior or final clinical year must consist of twelve consecutive months concerned with the multiple areas within the principal components of surgery. No more than four months may be exclusively devoted to any one principal component of general surgery. Opportunity for and documentation of development of progressively independent clinical skills are essential. Training in endoscopy and surgical intensive care may be considered
as clinical surgery, but obstetrics and ophthalmology are not. Laboratory or clinical research experience and training in non-clinical disciplines such as biochemistry or radiology are highly desirable. Not more than a total of twelve months of clinical training may be devoted to training in a single surgical discipline other than the principal components of general surgery as defined, or in a special concentrated experience in a single principal component of general surgery. The program must provide for advanced education in humanistic disciplines as they relate particularly to disorders of a surgical nature and an understanding of the etiology, pathogenesis, diagnosis and management of surgical disorders. The program must also provide an opportunity for each resident to acquire the technical knowledge, the interpersonal and the psychomotor skills so important for the specialist in surgery. This goal can best be attained by means of a progressively graded curriculum of study, clinical and operative experience and increasing responsibility for application of these principles and skills in the management of a broader and more complex set of clinical conditions. Adequate and equivalent opportunity must be afforded each resident, under the guidance and supervision of a qualified teaching staff, to develop the degree of clinical independence, intraoperative judgment and operative skill to render him prepared to provide the level of care to patients with a wide range of surgical disorders in the manner appropriate to a specialist in surgery.

The basic areas of surgical education must include, but need not be limited to: wound healing; hemorrhage and blood disorders; oncology; shock and circulatory physiology; surgical pathophysiology; infectious diseases; physiology; genitourinary physiology; surgical endocrinology; surgical nutrition; fluid and electrolyte balance; metabolic response to injury, including burns; musculoskeletal biomechanics and physiology; immunobiology and transplantation; applied surgical anatomy and surgical pathology. This fundamental surgical education should be acquired primarily through clinical experience and applications and should not be based solely on didactics. Training must not be allowed to progress to the advanced years of residency with major responsibility for overall patient care until they have clearly demonstrated by clinical performance and by an objective test mechanism that they have acquired a satisfactory understanding of these fundamentals.

The program design and execution must provide the resident with an opportunity to acquire only the central core of knowledge specified above, but also to acquire a detailed knowledge and experience, under supervision, in the pre-operative, operative, and post-operative care of patients of all age groups with diseases of the alimentary tract, of the abdomen, of the breast, of the head and neck, of the cardiovascular system, and of the endocrine system, and in the comprehensive management of trauma including musculoskeletal, hand and head injuries. Specifically, arrangements must be made for the surgery resident to receive training and graded experience, under supervision, in the pre-operative, operative, and post-operative care of the injured patient, including that provided in the emergency department and intensive care unit. The above described areas are considered to be principal components of the specialty and as such must receive the appropriate degree of attention. The resident must have personal experience with a variety of rigid and flexible endoscopic techniques, including laryngoscopy, bronchoscopy, esophagoscopy, gastroscopy, colonoscopy, peritoneoscopy and intraoperative cholecystoscopy; this shall also include new and evolving endoscopic techniques. In addition, the program design must enable the residents to acquire an understanding of the principles of and to have a personal clinical experience to include operative care in the more usual problems in cardiac, thoracic, gynecologic, neurologic, orthopedic, plastic, neonatal and urologic surgery and in anesthesiology. This experience may be obtained by a formal rotation to an accredited program or assignment to a duly constituted service in the parent or affiliated institution. The program must provide the residents with experience in hospital and pre-operative management as they advance through training and must culminate in sufficiently independent responsibility for clinical decision making that the program director is assured that the graduating resident has achieved ability to execute that sound surgical judgment, including non-operative management, which characterizes the general surgical specialist.

Operative skill is essential for the surgeon and can be acquired only through personal experience and training. No amount of observation or assisting can substitute for personal performance of operative procedures. An acceptable program must provide for sufficient operative experience to train qualified surgeons, taking into account individual capability and rate of progress. The volume, variety and magnitude of the operative experience of each resident must be such as to insure that each has become technically qualified upon completion of the program. Therefore, the volume and variety of cases available must be such that there is an adequate distribution as to complexity and within the areas of general surgery, especially the principal components, to provide an equivalent and adequate distribution for all of the residents. While the overall number of operations performed by each resident is not specified, experience has shown that an acceptable range, in most instances, is from 500-800 total cases and from 150-300 cases as the "Surgeon, Senior Year". Provided that previous personal operative experience has been adequate, cases listed as "teaching assistants" may be credited toward chief year requirements. Careful unequal experience among the residents and unexplained variations from this range, or inadequate experience in breadth or complexity will be cause for questioning the acceptability of the program.

In some institutions, a so-called "Chief Resident's Service" exists. While this may be highly desirable educationally, it should not encourage two levels of care and must be administratively defined and adequately supervised by the senior teaching staff. Regardless of the structure of the teaching service, every effort must be made to afford the residents the highest possible level of responsibility. A resident may be considered to be the "surgeon" only when he or she has played a significant role in determining or confirming the diagnosis, in the provision of pre-operative care, in the selection and accomplishment of the appropriate operative procedure, in managing the post-operative course and has had the opportunity for sufficient follow-up to be acquainted both with the course of the disease and outcome of treatment.

Clinical and/or laboratory research is an important component of a well rounded residency and residents should be encouraged to participate. However, unless the resident has an interest in participating, laboratory research should not be required as a major component. A program approved for five or more years duration may assign a resident full-time research.

Educational conferences of an adequate nature must be conducted, not only as specified in the "General Requirements", but also to discuss specific clinical problems and advances in surgery. Weekly review of all current complications and deaths, in addition to specific and current clinical cases, must be conducted with documentation of participation in the conference by the residents and teaching staff. This should include radiological confirmation and pathological confirmation of all surgical specimens and autopsies. Regular attendance by multiple teaching and other senior staff members, as well as the residents, is considered to be a key index of interest in the educational aspects of the program. Programs in which there is little participation by multiple members of the designated staff cannot be considered acceptable.

III. TEACHING STAFF

The staff responsible for the direction and execution of
the program must be well qualified and of enough diversity of interest so as to represent the main facets of surgery. The program director shall be highly qualified in surgery, certified by the American Board of Surgery, or have equivalent qualifications, and shall be dedicated to surgical education. He shall be institutionally based or his principal offices shall be located so that he is readily available to the resident staff. He shall be responsible for the work done and make staff appointments in the teaching departments. He makes resident appointments and assignments and be responsible for the proper conduct of the educational activities and for their supervision, direction and administration. In discharging these responsibilities, the program director should designate other well qualified surgeons to assist in the supervision of the resident staff on the minimum basis of one for each resident at the chief level.

Program directors, as well as surgeons appointed to the teaching staff, must have a real and demonstrated interest in teaching, personally provide the necessary time and effort to the educational process and set an example by engaging in scholarly pursuits such as (1) participation in their own continuing surgical education; (2) participation in regional or national surgical scientific societies; (3) presentation and publications of scientific studies; and (4) demonstration of an active interest in research as it pertains to their own special surgical interests.

A program whose staff does not exhibit such characteristics will not be approved.

To be adequate, the teaching staff must be formally organized and meet regularly. The program director should customarily be appointed for at least the duration of the program plus one year. Key staff members must be appointed for a period long enough to insure adequate continuity in the supervision of the resident staff. Persons appointed or elected for short durations or in an "honorary" capacity cannot be considered adequate to serve as program directors or as key teaching staff members.

A teaching service shall be established and staff appointments to that service must be limited to those surgeons who meet the previous qualifications and who demonstrate in a proven and meaningful way that they are dedicated to the proper education of the residents and will provide access by the residents to their patients while providing the appropriate supervision. That service must achieve the proper balance between service and education, expressed both by actual operations performed by the resident staff and their role in active educational pursuits.

IV. OPPORTUNITIES AND FACILITIES

To be adequate, a program must have both in-patient and out-patient activities. Active resident participation in out-patient services is an essential component of any program. Here, patients are to be seen by the resident staff, a provisional diagnosis established, appropriate diagnostic procedures initiated and a preliminary treatment plan made prior to admission to the hospital. An opportunity for follow-up care must be made available so that the results of surgical care may be evaluated by the responsible residents. Some training programs may use the emergency service or private staff offices in lieu of other out-patient facilities, but where the emergency service and the elective and follow-up facilities are separate, each function more effectively and provides better experience for the residents; therefore, such an arrangement is preferred. The out-patient service must be complementary to the in-patient service and not a disconnected entity. An exposure to private or clinic office practice may be desirable so that the resident may become familiar with the patterns of private practice and when included should be so indicated in the program plan.

V. SPECIAL TRAINEEES

At the time of each program survey, or at other times at the request of the RRC, the program will provide to the RRC a compilation of any training programs in integrated hospitals that might impact on the experience of the residents in the parent program in general surgery in the prime components of that specialty, as previously defined. Such competing programs included fellowships or residencies approved by the ACGME, unapproved residencies, fellowships or other training programs and affiliations with other approved programs that provide clinical experience for trainees from the latter programs. All of the foregoing will hereinafter be referred to as "special trainees." This report will describe in detail the relationship of any such special trainees to the residents in the program in general surgery. In order to fully evaluate the impact on general surgery training, quantitative data will be required as to the operative experience of the special trainee and will be submitted on the regular operative report forms of the RRC for Surgery. A program in which the experience of residents completing the general surgery program is significantly diminished by the presence of other trainees, approved or otherwise, will be subject to adverse action by the RRC with respect to its accreditation status. Residents in surgery in the chief or final year cannot rotate on a service simultaneously with a special trainee who has completed the final year of a graduate program in a surgical specialty without prior approval of the RRC for Surgery.

Reflecting the dedication of its parent organizations, the RRC for Surgery is committed to the ideal of promoting and strengthening graduate education in general surgery. To this end, the integrity of institutional commitment to providing optimum experience in the essential components of general surgery for trainees in the fourth and fifth years of training is critical. The unique nature of the chief residency year (PGY 5) of surgical training is designed to promote the maximum maturation of judgment, decision-making and technical proficiency. The uniqueness of this experience is fragile and can be threatened by the interposition of "special trainees" (i.e., vascular, oncology, head and neck, hand, critical care, etc., fellows) between the general surgery chief resident and his ultimate responsibility to the patients, as well as his access to his attending surgeon.

Where concurrent rotation on a service of a general surgery chief resident and a special trainee has been approved, the RRC for Surgery has determined that, in principle, it is inimical to training in general surgery to assign a chief resident and a special trainee to the same patients. As a rule, the RRC for Surgery will not approve programs which propose such a relationship, i.e., both the general and special program. Under very exceptional circumstances, the RRC will consider requests for relief from this rule. Such requests must provide documentation to the effect that the integrity of the general surgical training is preserved or enhanced. The "special trainee" or fellow is not a substitute for full-time surgical faculty. Implicit in this request for relief is the requirement for abundant numbers of patients to serve the educational needs of both the chief resident and the special trainee. The allocation of these patients to one of the other remains the responsibility of the program director. In the event that the chief resident and "special trainee" share an operative experience, credit for the operation will be assigned to one or the other, but not both. Preferably, this credit will be awarded to the individual responsible for the pre- and post-operative care of the patient.

VI. SPECIAL INFORMATION

Institutions which cannot provide totally adequate resources and clinical experience within their own facilities should make formal arrangements with other institutions to become "affiliates" of the program or even to join the program as an "integrated" component. Such affiliations or integrations must be approved by the Residency Review Committee prior to implementation. Ordinarily, the final clinical year must be accomplished in the parent institution or in an "integrated" institution. An "integrated" institution is one in which a formal contractual agreement exists between the parent institution and its program and the integrated institution, which specifies that the program director of the parent institution (a) appoints the members of the teaching staff
at the integrated institution, (b) appoints the chief or director of the teaching service in the integrated institution, (c) appoints all residents in the program, and (d) determines all rotations and assignments of both residents and members of the teaching staff. Chief residents may only rotate to integrated institutions. It is recognized that not all members of the surgical staff at an integrated institution may be appointed to the teaching staff in that institution. Special approval must be obtained from the Residency Review Committee if (a) a portion of the final year is spent at an affiliated program; (b) rotations to the affiliated program exceed six months; and (c) if more than one year total is spent away from the parent institution.

The number of positions in the training program must be approved by the Residency Review Committee. Changes in numbers of positions in existing programs are similarly subject to RRC approval. The Residency Review Committee permits modest variations from the approved numbers of PGY-1 and PGY-2 positions on a temporary basis only. Whenever the resident complement is decreased, the changes should be reasonably staged to project the PGY-3 and PGY-4 residents already in the program.

The numbers of PGY-1 and PGY-2 positions should be consistent with the number of chief residency positions as well as provision of pre specialty training to identifiable subspecialties.

Programs must strive for the highest possible quality of educational experience for the residents and will be judged by the reviewing authorities on this basis. One measure of the quality of a program is the performance of its graduates with respect to the certification process of the American Board of Surgery.

The provisions of the "General Requirements" must be met in addition to the above "Special Requirements" for a program to receive accreditation.

NOTE: Residents who plan to seek certification in surgery should communicate with the Secretary of the American Board of Surgery to determine the full and current requirements for certification.

Effective: July 1986 ACGME: September 1985

Special Requirements for Postgraduate Fellowships in the Special Areas of General Surgery

I. GENERAL INFORMATION

A. A postgraduate fellowship is a prescribed post general surgery residency experience of at least one year devoted to the enhancement of knowledge and skills in a defined area of general surgery. Postgraduate fellowship programs in the subspecialties of general surgery may be accredited only in institutions which sponsor accredited residency programs in general surgery, or which are related by formal agreement to such institutions and programs. Programs in subspecialties are approved only as an integrated part of and administratively attached to the approved core program in general surgery.

B. Postgraduate fellowship education in general surgery is a component in the continuum of the educational process; therefore, such education will take place as specified in the Special Requirements.

C. Postgraduate fellowship programs will be considered for accreditation only in subspecialty areas that meet the requirements for accreditation as established by the Accreditation Council for Graduate Medical Education.

D. 1. The essentials enumerated in the Special Requirements for Residency Training in General Surgery are also applicable to the postgraduate fellowships. In conformity with the Special Requirements, programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment and attitudes that are essential to the practice of the specific subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

2. The following items, adapted from the Special Requirements for Residency Training in General Surgery, merit emphasis:

a. The postgraduate fellowship program director must be qualified to supervise and to educate fellows appropriately in the specific subspecialty and must be certified by the American Board of Surgery or possess equivalent qualifications. The program director for the subspecialty program and for the core program, as well as the institution itself, will be responsible for insuring that adequate facilities and other necessary resources are available to provide an education of high quality. There should be a sufficient number of qualified faculty to provide the educational experience and to evaluate the progress and performance of the fellow. As with residency program directors in general surgery, it is essential that postgraduate fellowship program directors devote sufficiently scheduled. Active participation of the fellow in the planning and the production of these meetings is essential.

b. A postgraduate fellowship must provide sufficiently advanced education to allow the fellow to acquire special skill and knowledge in a specific subspecialty. This education should consist of academic and technical components. The academic component should emphasize scholarship, self-instruction, teaching, development of analytic skills and surgical judgment, and research creativity. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for the practice of the subspecialty.

c. Programs will be evaluated according to the following postgraduate fellowship prerequisites:

1. A sufficient number of new and follow-up patients must be present to assure appropriate inpatient and outpatient experience for each fellow.

2. Subspecialty conferences, seminars, and literature review activities of high quality and of sufficient number must be regularly scheduled. Active participation of the fellow in the planning and the production of these meetings is essential.

3. A fellow must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

4. There must be close interaction between the parent residency program in general surgery and the postgraduate fellowship program. Lines of responsibility for the general surgery resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with residents and fellows in general surgery, and in other disciplines such as radiology, pathology, medicine, and pediatrics.

5. Reflecting the dedication of its parent organizations, the RRC for Surgery is committed to the idea of promoting and strengthening graduate education in general surgery. To this end, the integrity of institutional commitment to providing optimum experience in the essential components of general surgery for trainees is critical. The unique nature of the chief resident year (PGY5) of surgical training is designed to promote the maximum maturation of judgment, decision making and technical proficiency. The uniqueness of this experience is fragile and can be threatened by the introduction of "special trainees" (i.e., vascular, oncology, head and neck, hand, critical care, etc. fellows) between the general surgery chief resident and his ultimate responsibility to the patient as well as his access to his attending surgeon.
6. The RRC for Surgery has determined that, in principle, it is inimical to training in general surgery to assign a chief resident to the same patients with a "special trainee" or fellow who has previously completed the final years of an accredited program in general surgery. As a rule, the RRC for Surgery will not approve programs which propose such a relationship, i.e., both the general and fellowship program.

7. Under very exceptional circumstances, the RRC will consider requests for relief from this rule. Such requests must provide documentation to the effect that the integrity of the general surgery training is preserved or enhanced.

8. Implicit to this request for relief is the requirement for abundant numbers of patients to serve the educational needs of both the chief resident and the special trainee. The allocation of these patients to one or the other remains the responsibility of the program director. In the event that the chief resident and "special trainee" share an operative experience, credit for the operation will be assigned to one or the other, but not both. Preferably, this credit will be awarded to the individual responsible for the pre and postoperative care of the patient. The fellow is not a substitute for full-time surgical faculty.

9. A postgraduate fellowship program must have an investigational component. A fellow should learn to design, carryout and to interpret research studies. Facilities must be made available for research activity.

10. A postgraduate fellowship must offer supervised training in the operative procedures and in the technical skills integral to the subspecialty discipline involved. Instruction and experience must be sufficient for the fellow to acquire an understanding of the common procedures of the subspecialty, their indications, risks and limitations.

F. Postgraduate fellowship program directors must have a clearly defined method for regular periodic assessment of the performance of the fellow. The assessment must include cognitive, motor and interpersonal skills and surgical judgment. There must be provision for regular communication of this information to the fellow and to the residency program director.

G. The following policies and procedures pertain to the accreditation of postgraduate fellowship programs:

1. Hospital information forms to be used for certification of a postgraduate fellowship program will be distributed to the director of the general surgery residency program. It will be the responsibility of the residency program director to collect information from directors of the postgraduate fellowship programs that are to be reviewed for accreditation. A site visitor will review the entire institutional program in general surgery, including the postgraduate fellowship programs being considered for accreditation. The statistical and narrative reports for all components of the program will be forwarded to the Residency Review Committee for General Surgery (RRC-GS). The RRC-GS will review the institutional program in its entirety and will determine the accreditation of the general surgery residency program and the postgraduate fellowship programs.

2. Postgraduate fellowship programs will be accredited only if the residency program in general surgery is fully or provisionally accredited. The accreditation status of postgraduate fellowships programs may equal, but not exceed the accreditation status of the parent general surgery residency program. A general surgery residency program may achieve and retain accreditation whether or not the affiliated postgraduate fellowship programs are accredited. Loss of accreditation of the general surgery residency program will result in loss of accreditation of all postgraduate fellowship programs related to that residency.

The review cycle for postgraduate fellowship programs will be coordinated with the review cycle for the general surgery residency program with provision for separate review of a postgraduate fellowship program when major changes occur.

4. Progress reports may be used to obtain additional information regarding postgraduate fellowship program progress and development.

Training Programs in Hand Surgery

I. EDUCATIONAL PROGRAM

A. Surgery of the hand includes the investigation, preservation, and restoration of all structures of the upper extremity which directly affect the form and function of the limb, wrist and hand.

B. Subspecialty education in hand surgery must be organized to provide experience for the trainee to acquire the competency of a specialist. It should not be less than on continuous year and should ordinarily follow completion of full training in one of the parent disciplines, general surgery, orthopaedic surgery, or plastic surgery.

C. Clinical experience should include opportunities to observe and manage patients of all ages with a wide variety of disorders of the upper extremity as well as to learn the effectiveness of therapeutic programs. The program should be structured to permit the trainee to develop diagnostic, procedural and technical skills essential to the performance of hand surgery. It should provide for basic and advanced training as well as personal operative experience to ensure the production of qualified surgeons within this specialized field.

II. FACILITIES AND RESOURCES

A. Modern facilities to accomplish the overall educational program are available and functioning. These include inpatient, ambulatory care and laboratory resources for adult and pediatric patients, and specifically, support services in the diagnostic field of pathologic, radiologic, physical and occupational therapy, orthotics and prosthetics. This must include the opportunity for continuing personal post-hospital follow up of patients cared for by the trainee.

B. A training program should be conducted in a facility in which there is accredited training in surgery, plastic surgery and orthopedic surgery, as well as other medical and surgical specialties and subspecialties.

III. SPECIFIC KNOWLEDGE AND SKILLS

A. The training program should provide opportunities for trainees to develop clinical knowledge and skill in the field of hand surgery. Examples of the knowledge and skills that are desirably include, but are not limited to, trauma and its sequelae, congenital and developmental disorders, infections and metabolic disorders, neoplasia, vascular disorders and deforming and rheumatologic diseases. The trainee will be expected, in the course of training, to acquire the capability of diagnosing, interpreting, the laboratory data relative to, and executing a treatment plan with the appropriate technical skills and managing the above disorders. The trainee must obtain experience in microsurgery and other special technology relative to the management of hand problems. The trainee must acquire knowledge in interpretation of the special diagnostic skills such as electrodagnosis and radiology relative to treating problems of the hand. The trainee will be expected to obtain a fundamental understanding of these problems as it relates to the patient's initial management to include full rehabilitation services, after care and final evaluation.

IV. SPECIAL FEATURES

Special features will include, but are not necessarily limited to, replantation, biology, methodology, prosthesis, prosthetics, rehabilitation, microsurgery (neuro and vascular), tendon transfer and grafts.

Effective: September 1986
ACGME: June 1986

Training Programs in Pediatric Surgery

I. GENERAL CHARACTERISTICS OF ACCREDITED PROGRAMS

Accredited residency programs in pediatric surgery should be designed to provide a progressive educational experience of uniformly high quality that will prepare residents to func-
Pediatric Surgery

Education as well qualified, ethical, safe, and independent specialists in pediatric surgery. In meeting the objective of preparing trainees to function as highly qualified specialists, the educational aspects of the program are of paramount importance. In order to gain the education and experience, service responsibility to patients is also an important part of the program. The residents must, however, be provided with appropriate time, facilities, and guidance for their own program of self-study. The educational and service aspects of the program must be organized in such a way as to provide the trainee the opportunity of becoming a knowledgeable, experienced, and competent specialist.

The performance of each house officer shall be evaluated by the teaching staff at least at six-month intervals; it is desirable that comments from other departments or services involved in the training of the residents be included in this evaluation. Prior to advancement to the senior or chief resident level of supervised and semi-independent patient management and operative experience, each trainee must clearly demonstrate acquisition of basic knowledge in pediatric surgery. An objective test for this purpose is required, and an excellent instrument is the In-Training Examination prepared annually by the Education Committee of the American Pediatric Surgical Association. In addition, the trainee must demonstrate competence in clinical pediatric surgery prior to completion of the training program. Any program which does not have an effective system which clearly demonstrates that each trainee has successfully passed these two milestones cannot be considered adequate.

Records must be maintained on each trainee documenting the evaluation at six-month intervals, competence in basic surgical knowledge of pediatric surgery as demonstrated by an objective examination, and the demonstration of competence in clinical pediatric surgery prior to completion of the program. In instances in which significant deficiencies in the trainee become evident, these must be reviewed with the trainee and appropriate and individualized plans implemented to assure that the two milestones noted previously are met.

II. THE INSTITUTION

In addition to the essentials outlined in the General Requirements, institutions with an approved training program in pediatric surgery must have the following characteristics:

A. There shall be inpatient pediatric surgical admissions adequate to provide educational experience for the program. Intensive care units for both infants and older children are essential. Pediatric surgical outpatient care sessions which meet on a regular basis, at least two times weekly, must be available for initial evaluation of ambulatory patients with surgical conditions and for the follow-up management of patients with surgical conditions, from the standpoint of both short-term management and prolonged evaluation. An emergency department in which infants and children with emergency or urgent conditions can be efficiently managed twenty-four hours a day is essential. The pediatric surgical staff will ordinarily serve as consultants for this department for patients with possible surgical conditions and must manage all patients with multiple injuries.

B. To provide the necessary breadth of experience, an accredited training program in pediatrics is essential. Residency training programs in other surgical and pediatric specialties, radiology, and pathology, either within or affiliated with the institution, are highly desirable.

C. The department of radiology should be under the direction of a geographic full-time radiologist, and one or more of the staff must have special qualifications and proficiency in the radiologic management of infants and children. The department should be well staffed and organized to permit efficient and complete evaluation of patients twenty-four hours a day. The department should be equipped with the latest radiologic equipment and with the technical equipment necessary for such imaging procedures as ultrasonography, computerized tomographic scanning, and angiography. Facilities for nuclear medicine should be available either in the department of radiology or elsewhere in the hospital organization.

D. The department of pathology should be under the direction of a full-time pathologist, and one or more members must have special qualification in pediatric pathology. The department is to provide efficient and expert surgical pathology service, and surgical pathology consultation must be available at all times. The department should also provide and be responsible for the conduct of efficient and complete postmortem examinations. The department of pathology shall participate in the audiovisual program in the pediatric surgical educational program, including the conduct of appropriate conferences attended by both staff and residents on the pediatric surgical service at which the current surgical pathology material is presented and discussed. Attendance by the pediatric surgical residents is strongly encouraged at postmortem examinations on patients who have been under their care. A high institutional autopsy rate is encouraged, as this is indicative of the involvement of the staff and residents in scientific advancement.

E. Within the department of anesthesiology there must be anesthesiologists with special interest, competence, and experience in the anesthesia of infants and children. The number of such anesthesiologists must be comparable with the volume of surgical cases in the pediatric age group.

F. A medical records department shall be efficiently and properly supervised by a qualified medical records librarian. There should be appropriate and complete cross-referencing on the basis of diagnosis. The clinical records must be complete, with adequate histories and physical examinations, laboratory data, radiographic reports, operative reports, pathology reports, consultation, and discharge summaries. Progress notes should be included at frequent intervals documenting the current problems of the patient, complications, and diagnostic and treatment plans. All inpatient charts should reflect adequate supervision by the responsible member of the pediatric surgical staff. The charts shall be of sufficient completeness and clarity to function as instruments for patient care teaching and clinical investigation. The institution shall have a records committee composed of members of the medical staff who meet regularly with the medical librarian to review charts in order to insure the quality and completeness of the charts and their timely completion. This committee must have the authority to take such measures as are necessary to insure that these standards for the charts are met.

G. The institutional library shall contain a representative and authoritative collection of books and journals on pediatric surgery, pediatrics, general surgery, other surgical specialties, radiology, and the basic sciences. The library shall be managed and supervised by a well-qualified medical librarian. The Index Medicus should be part of the library, and access to computerized literature search facilities is highly desirable. Where appropriate, arrangements for an efficient loan system with a larger medical library, such as that in a medical school, should be made in order to insure the availability of appropriate books and journals that may be required by the attending staff and residents.

III. DURATION OF TRAINING

Before beginning a residency in pediatric surgery, each trainee must have satisfactorily completed a program of general surgery accredited by the ACGME or the Royal College of Surgeons of Canada. The training program in pediatric surgery must last at least two years. Eighteen months must be devoted to clinical pediatric surgery. The last twelve months of the clinical training must be at the chief pediatric surgical resident level with a high degree of responsibility for patient management and operative experience. The remaining required six months of the two years may be devoted to related clinical disciplines designed to enhance the educational experience, or may be devoted to research.

Rotations not to exceed three months may be spent at
other institutions at the discretion of the program director during the first year of training. Rotations outside the parent institution exceeding three months and not exceeding six months may be made only with the approval of the Residency Review Committee for Surgery.

IV. SCOPE AND CONTENT OF PROGRAM

The program must provide both adequate clinical experience and education in the fundamental areas of surgery related to infants and children. The trainees must be provided with the opportunity for direct and responsible patient management so that they may attain detailed knowledge of congenital, neoplastic, infective and other acquired conditions of the gastrointestinal system and other abdominal organs; of the blood and vascular system; of the integument; of the diaphragm and thorax exclusive of the heart; of the endocrine glands; of the gonads and reproductive organs; and of the head and neck. In addition, an opportunity for similar experience in traumatic conditions of the abdomen, chest, head and neck, and extremities must be provided. The trainee must have sufficient experience to become expert in the management of children who have sustained injuries to multiple organs and who have sustained burn injuries. The trainee must demonstrate efficient experience in endoscopy to become competent in laryngoscopy, bronchoscopy, esophagoscopy and gastro-duodenoscopy, and cystoscopy. The trainees must gain adequate understanding of the principles of and experience in the management of the more common problems in urologic surgery, and must have the opportunity to gain adequate knowledge of the basic principles of orthopedics, plastic surgery, and neurologic surgery. It is essential that most of the patients on the pediatric surgical service be available for teaching purposes in order that the requirements for appropriate experience and direct and responsible patient management be met.

The program must provide additional education in basic areas fundamental to pediatric surgery to include, but not be limited to, embryology, genetics, wound healing, hemostasis and blood disorders, immunobiology, transplantation, and physiology and pathology of the circulatory, respiratory, gastrointestinal, genito-urinary, and endocrine systems. Similarly, the program should provide appropriate education in fluid and electrolyte balance, nutrition, infection, metabolic response to injury, and anesthesiology.

The program must incorporate structured educational activities on a regular basis, to include: 1) teaching rounds with bedside teaching conducted by the chief or attending surgeon; 2) staff supervision of surgical procedures performed by the resident to ensure that the trainee has the opportunity to develop proper judgment and ability to make decisions, as well as safe, precise, and gentle technique in the operating room; 3) regular teaching conferences, held at least bi-monthly, to include pediatric surgical grand rounds, morbidity and mortality conferences, and radiology conferences; and 4) other relevant multidisciplinary conferences, including surgical pathology and tumor conferences. During the senior year, the trainees are to be given the opportunity for personally organizing the more formal of the pediatric surgical conferences, including pediatric surgical grand rounds and the mortality and morbidity conferences. They shall also be directly responsible for a significant share of the presentations and discussions at these conferences.

The residents must participate in the inpatient program as an integral component of the program. In the surgical outpatient facility, the residents shall have the opportunity to see patients, make appropriate provisional diagnoses, initiate diagnostic procedures, and form preliminary treatment plans. In addition and of particular importance, the residents must have the opportunity for outpatient follow-up care of surgical patients. This care shall include not only the short-term evaluation and progress of patients who have had recent surgical problems or procedures, but also the opportunity to see patients on a long-term basis, particularly those who have had operations for major congenital anomalies or neoplasms.

To meet the requirements of direct and responsible patient care, management experience as detailed previously, it is essential that those patients whose primary problem is surgical be on the pediatric surgical service and be directly managed by the surgical staff. Although appropriate consultation with specialists such as neonatologists and intensivists is strongly encouraged as this contributes to the welfare of the patients and to the education of the pediatric surgical residents, it is emphasized that the trainees must meet with patients who have had recent surgical procedures, as well as surgical patients requiring intensive care, must be on the pediatric surgical service where the care is the responsibility of the surgical staff and house staff.

Participation and productivity in scholarly pursuits by the residents, as well as the staff, is an important attribute of an accredited program. It is encouraged. Residents should have the opportunity to engage in clinical and/or laboratory research. They should also be given significant teaching responsibilities for more junior house officers and medical students assigned to the service and should also share in the development and the presentations of the formal teaching conferences. The resident's effectiveness as a teacher shall be a part of his/her overall evaluation.

V. TEACHING STAFF

The staff responsible for the organization and performance of the pediatric surgical program must be well qualified and diversified so as to represent the medical specialty of pediatric surgery. The training director responsible for the program must be institutionally based and certified by the American Board of Surgery as having Special Qualifications in Pediatric Surgery, or its equivalent. The training director must be dedicated to and actively engaged in surgical education and must be responsible for the proper conduct of the educational activities of the program. Together with the chief of service, if these positions are separate, the program director is responsible for the appointment of residents and of the teaching staff and assignments of both.

The staff must include at a minimum one other pediatric surgeon similarly qualified and devoted to surgical education. The teaching staff must be formally organized and meet regularly. The program director shall be appointed for at least the duration of the program plus one year, and the other key staff members must be appointed for a period long enough to insure adequate continuity in the functioning of the program. It is essential that the members of the teaching staff, by their own dedication to patient care and to their own education, provide exemplary models to the trainees.

VI. PATIENT VOLUME

To be approved for training in pediatric surgery, an institution must provide an adequate number and variety of pediatric surgical patients. Although arbitrary figures may not be able to reflect these conditions accurately, under usual circumstances the general pediatric surgical service should perform a minimum of 750 operations per year. The chief resident must be provided with a broad and varied experience, and is expected to be responsible under supervision for at least 120 major pediatric surgical operations during the final year. The experience must include a sufficient number of neonatal cases to insure the trainee the opportunity to acquire adequate experience, knowledge, and competence in the conditions falling under this category; and there should also be an adequate number of major solid tumor procedures.

VII. SPECIAL INFORMATION

Although it is not necessary or even desirable for all institutions to be organized in an identical manner, it is essential that a program meet the above minimum requirements for approval, either independently or in conjunction with other institutions. An important measurement of the quality of a program is the performance of its graduates on examinations of the American Board of Surgery for Special Qualifications in Pediatric Surgery.

NOTE: All questions concerning the examination for Certification for Special Qualification in Pediatric Surgery should
be addressed to the Secretary, American Board of Surgery, Inc.

Effective: July 1985  ACGME: May 1985

Training Programs in General Vascular Surgery

I. GENERAL CHARACTERISTICS OF APPROVED PROGRAMS

Graduate training programs in general vascular surgery should be designed to provide the educational resources appropriate for the development of proficiency in the diagnosis and treatment of diseases of the arterial, venous, and lymphatic circulatory systems, exclusive of those components intrinsic to the heart, thoracic aorta and intracranial vessels. The foregoing definition is hereinafter referred to as the vascular system. The training objectives are most appropriately achieved through a structured program that is properly supervised and accredited. This may be accomplished either concurrently with, or after the completion of, a graduate educational program which meets the requirements for approval and accreditation in either general surgery or thoracic surgery.

II. TYPES OF PROGRAMS

A. Appropriate education and training in general vascular surgery may be attained through four types of programs. Provision should be made, however, to assure that in any of the four types of programs, the general surgery residents' experience in vascular surgery, which is one of the principal components of general surgery, is not adversely affected, either in terms of operative experience or patient responsibility. The four types of programs are as follows:

1. A program in general vascular surgery providing a chief (senior) residency in vascular surgery after the completion of an accredited residency in general surgery and/or thoracic surgery. This type of general vascular surgery program should not result in removal of patient material or operative experience required in the core program to such an extent as to adversely affect the competency of those residents completing the core program. It is recognized that certain general surgery and thoracic surgery programs especially rich in general vascular surgery may also qualify to train vascular surgeons within the context of existing programs. Under these exceptional circumstances, additional types of programs in general vascular surgery may be possible.

2. As a component of an accredited general surgery program in which the first year of residency in general vascular surgery is preceded by a minimum of three and a half years of residency in general surgery, has no more than one break in the continuity, and in which the chief resident year satisfies the requirements of both the general surgery and general vascular surgery programs.

3. A general vascular surgery residency combined with cardiothoracic surgery training where patient material is adequate to fulfill the requirements of both areas of training.

4. The requirements for training in general vascular surgery may be fulfilled in the combination of an approved general surgery program and an approved thoracic surgery program in the same institution.

B. An application for a general vascular surgery program should not be made if the core program in either general surgery or thoracic surgery is not provisionally or fully approved. There should be only one general vascular surgery program per institution and/or core program, whichever is least.

III. DURATION AND SCOPE OF TRAINING

A. Whichever of the four types of programs offered, the general vascular surgery program must be of sufficient duration to allow the trainee to acquire an acceptable level of skill in the diagnosis and treatment of vascular diseases. Type 1 and 2 programs shall not be less than twelve months and shall be exclusively devoted to general vascular surgery. The minimum training period may not have more than one break in continuity. In a combined training program with a particularly abundant and varied case load (types 2, 3 or 4), a fraction of the twelve months spent at a level below the chief (senior) year may be acceptable. Experience as a resident at levels of training earlier than the chief (senior) residency year must be at senior level responsibility in general vascular surgery to be acceptable. Special consideration for credit as senior level general vascular surgery applied toward the required twelve months will be granted by the Residency Review Committee in exceptional circumstances. The program must provide instruction and require the trainee to become knowledgeable in the fundamental sciences including anatomy, embryology, physiology and pathology, as they relate to the diagnosis and treatment of vascular lesions.

B. Familiarity with special diagnostic techniques is of great importance in the management of vascular lesions. It is essential that the trainee have an acquaintance with the methods and techniques of angiography and an expert knowledge of the interpretation of angiographic findings. The use of non-invasive diagnostic techniques such as echocardiography, ultrasonic flow metering, and radioisotopic imaging and flow studies makes it highly desirable that the trainee also have a knowledge of these methods in order to understand not only their potential but also their limitations and hazards.

C. The minimum duration of residency in general vascular surgery as defined above must be clinical in nature. Research, laboratory, and non-vascular clinical assignments must not infringe on this requirement. Most importantly, the trainee must be provided with progressive senior surgical responsibilities in the four phases of total patient care consisting of patient evaluation, therapeutic decisions, operative experience and post-operative management.

IV. ORGANIZATION AND STAFF

A. To provide for an effective training program, a general vascular surgery service must be organized as an identifiable unit, even though it is within the framework of a larger administrative department in general surgery or general surgery or thoracic surgery. It is highly desirable that all patients with vascular disease available for teaching purposes be admitted to this unit so that the educational patient material may be centralized and utilized most efficiently. The general vascular surgery unit must be under the direction of a qualified vascular or cardiovascular surgeon certified by the American Board of Surgery or the American Board of Thoracic Surgery, or possessing equivalent qualifications, and dedicated to the teaching of general vascular surgery. The director of the general vascular surgery program must have continuous responsibility and authority for administrative and teaching policies of the service.

B. Privileges on the vascular surgery service must be granted to surgeons only with the understanding that their patients are to be available for coordinated graduate education of the residents. Such a privilege in no manner intend to infringe upon the professional authority of the staff member responsible for the care of the patient. All members of the staff of the general vascular surgery unit with an accredited program must be highly qualified in general vascular surgery, dedicated to teaching, and must devote the necessary time and effort to the educational program. They should also engage in scholarly activities.

C. The objectives of a general vascular surgery training program can only be achieved when the program is based...
within an institution approved for graduate education in general surgery and/or thoracic surgery and also in the disciplines particularly related to surgery, namely, internal medicine, radiology and pathology. Programs in general vascular surgery are approved only as an integrated part of and administratively attached to the approved core program in general surgery or thoracic surgery.

D. Reflecting the dedication of its parent organizations, the RRC for Surgery is committed to the development and strengthening of graduate education in general surgery. To this end, the integrity of institutional commitment to providing optimum experience in the essential components of general surgery for trainees is critical. The unique nature of the chief resident year (PGY5) of surgical training is designed to promote the maximum maturation of judgment, decision making and technical proficiency. The uniqueness of this experience is fragile and can be threatened by the interposition of "special trainees" (i.e., vascular, oncology, head and neck, hand, critical care, etc. fellows) between the general surgery chief resident and his ultimate responsibility to the patient as well as his access to the attending surgeon.

E. The RRC for Surgery has, therefore, determined that residents in surgery in the chief or final year cannot rotate on a service simultaneously with a special trainee who have completed the final year of a graduate program in a surgical specialty without prior approval of the RRC for Surgery.

F. Where such concurrent rotation has been approved, the RRC for Surgery has determined that, in principle, it is inimical to training in general surgery to assign a chief resident to the same patients with a "special trainee" or fellow who has previously completed the final year of an accredited program in general surgery. As a rule, the RRC for Surgery will not approve programs which propose such a relationship, i.e., both the general and special program.

G. Under very exceptional circumstances, the RRC will consider requests for relief from this rule. Such requests must provide documentation to the effect that the integrity of the general surgical training is preserved or enhanced. The "special trainee" or fellow is not a substitute for full-time surgical faculty. Implicit to this request for relief is the requirement for a resident nurse capable of attending to the educational needs of both the chief resident and the special trainee. The allocation of these patients to one or the other remains the responsibility of the program director. In the event that the chief resident and "special trainee" share an operative experience, credit for the operation will be assigned to one or the other, but not both. Preferably, this credit will be awarded to the individual responsible for the pre and post operative care of the patient.

V. PATIENT POPULATION

The institution, department or service accredited to conduct a program of graduate education in general vascular surgery must be able to provide a sufficient number and variety of vascular surgery patients to insure that the residents have an adequate exposure to a wide spectrum of lesions of the vascular system in order that they may acquire a high level of skill in their diagnosis and management. It is desirable that the resident gain an ample degree of outpatient diagnostic and follow-up experience.

VI. OPERATIVE EXPERIENCE

The resident must be afforded the opportunity to have chief (senior) resident responsibility in the operative management of a variety of cases related to surgery, namely, internal, employed reconstructive and non-reconstructive vascular procedures that include within the scope of general vascular surgery the arterial, venous, and lymphatic circulatory systems, briefly called the vascular system, and are exclusive of those components intrinsic to the heart, thoracic aorta, and intracranial vessels. Chief (senior) resident experience is defined as activity in the course of which the resident functions as the operating surgeon or performs critical technical portions of the operation while serving as first assistant. With respect to vascular reconstructive cases, a minimum of 70 procedures (exclusive of hemo access operations) with senior operative experience as defined is an adequate basis for the acquisition of the necessary skills. The demands of the acquisition of the necessary judgment in treating vascular diseases dictate that the total operative and non-operative experience of the resident must be considerably greater than the number of cases defined as the minimal requirement for senior operative participation. This experience should represent a broad balance of the spectrum of vascular disorders in proportion to the frequency of their occurrence in the general population and should be evenly distributed over the twelve month period of training.

VII. SHARED PROGRAMS

If the clinical and operative experiences in the training of the residents are shared between services in two or more hospitals integrated (as defined in the "General Requirements") with the core program, the combined experience must fulfill the organizational and educational requirements listed above.

VIII. SPECIAL INFORMATION

A. The Residency Review Committee for Surgery will be the reviewing body. Accreditation programs in general vascular surgery are being reviewed, there will be a cooperative arrangement whereby the Residency Review Committee for Thoracic Surgery will be appropriately represented and involved by the participation of members designated for this purpose by the Residency Review Committee for Thoracic Surgery in the numbers as mutually agreed upon by the Residency Review Committees for Surgery and for Thoracic Surgery.

B. Programs meeting the requirements specified above and having received the approval of the Residency Review Committee will be identified. A list of these programs will be maintained by the Secretary of the Residency Review Committee for Surgery and will be published in the Directory of Residency Training Programs where they will be separately identified as accredited general vascular surgery residencies (types 1, 2, 3 and 4).

Effective: January 1987  AGME: September 1986

8. Special Requirements for Residency Training in Internal Medicine

Residencies should be organized to provide experience in the broad field of internal medicine and those ancillary areas necessary for the practice of internal medicine. The major criterion for an acceptable residency program in internal medicine is the provision of a well supervised, progressive educational experience of not less than three years duration. Such programs must provide an intellectual environment for properly teaching and learning skills and attitudes which are essential to the practice of internal medicine. To provide excellent patient care, physicians must have as their primary professional concern the welfare of their patients. In order to be a competent internist, the resident must have the necessary humanistic qualities, attitudes and interpersonal skills which allow the development of appropriate patient-physician relationships. These include integrity, respect, compassion, professional responsibility, sensitivity to the patient's needs for comfort and encouragement, appreciation of the patient's perception of illness, and appropriate demeanor towards colleagues. Although difficult to quantify, these attributes of residents can be evaluated by faculty, peers and others during clinical encounters. The social and economic impact of disease on the patient and society as well as the efficient delivery of superior cost-effective medical care should be emphasized. These objectives can be achieved only when the leadership, the attending staff and the administration are committed to the educational program and when the proper resources and facilities are present. The objectives can be achieved only when the residency functions primarily as a service oriented activity.

Although rigid criteria for graduate medical education is not desirable, certain specific factors are essential to the success of a program. These are discussed below:
I. ADMINISTRATION
The administration of the sponsoring institution(s) should be understanding and sympathetic to the attainment of educational goals and should evidence the willingness and ability to support these goals philosophically and financially. The latter includes a commitment by the institution and by the program that embraces appropriate compensation for faculty and housestaff, areas for teaching, educational support services and opportunities for research.

Additionally, the administrative structure must be such that the program director has adequate authority to organize and oversee the activities of the educational program. Major changes in governance, structure, institutional support and goals which affect the educational program must be communicated to the Residency Review Committee for Internal Medicine. This notification must be communicated by the institutional administration or by the program director. A medical school affiliation agreement is desirable but not required for approval of a training program.

II. THE DEPARTMENT OF INTERNAL MEDICINE
A. The Program Director
The department of internal medicine administrative structure and distribution of authority must provide for the overall integration of the organized learning experience in general internal medicine and the medical subspecialties. It is desirable that the person designated as program director have responsibility for the quality of both patient care and teaching in the residency program with sufficient authority to fulfill that responsibility. Other organizational arrangements must assure that these responsibilities are met. The strength of the medical service is directly related to the professional competence and leadership qualities of the program director, whose tenure should be such as to insure continuity for the program. The program director may be on a full-time or part-time basis, but must be willing and able to spend the many hours required to organize, supervise and implement a good training program. An increasing number of institutions are finding a full-time chief of service and program director to be a major asset to the training program. If there is a change in program directors, the Residency Review Committee for Internal Medicine must be notified by the institution immediately with an explanation of the change and a curriculum vitae of the new program director.

B. Faculty
The program director, section chiefs and teaching staffs must be appropriately qualified interns, selected for their demonstrated ability in teaching, and ongoing commitment to medical education, patient care, and the scientific and humanitarian basis of medicine. This commitment should be demonstrated by active participation in appropriate scientific societies, continuing medical education and an active interest in medical research. The program director and section chiefs may be appointed on a full-time or part-time basis, but must be willing and able to spend the many hours required to organize, supervise, and implement a good training program and must have adequate term of office to achieve their goals.

Full-time appointments of program directors and section chiefs are often a major asset to the training program. While members of the teaching staff may be voluntary, part-time, or full-time, their organized learning, chiefs, and program director must share a commitment to the purposes and goals of the teaching program. It is their responsibility to assist the resident in the development of clinical judgment, medical knowledge, and clinical and technical skills. It is essential that they be able to nurture the attributes of the scholar, scientist, teacher, and humanist. They must assure the resident's acquisition of proficiency in interpersonal relationships and in the organization and management of patient care through progressive meaningful patient responsibility.

III. EDUCATIONAL PROVISIONS
A. Patient Population
The patients encountered during the period of residency training must be of sufficient number and exhibit a sufficient variety of clinical problems to provide broad experience for the resident. There should be an adequate number of patients of both sexes and a wide spectrum of ages, including those in the adolescent and geriatric age groups.

B. The Hospital
Patients must be seen not only in the in-hospital environment and critical care areas but also in emergency department and in the ambulatory setting. A geographic concentration of patients assigned to a given resident is highly desirable; it promotes effective teaching and fosters meaningful interaction with other health personnel. Bedside teaching is an essential component of all good programs and the teaching service should be designed to present this setting in a comfortable manner for students and patients. There must be space and equipment for the educational program, including appropriate meeting rooms and classrooms with visual and other educational aids. The physical plant should be planned and constructed to assure proper medical care as well as safety and comfort for the patient. There must be adequate space and equipment for up-to-date diagnosis and therapy. Increasingly, this care is being rendered in facilities for chronic care (facilities for chronic-care hospitals, skilled nursing facilities, etc.). Similarly, acute care hospitals are concerned with themselves with satellite clinics and home care programs. Programs are encouraged to involve residents whenever these relationships provide an environment for high quality patient care and suitable opportunities for learning. The program director has the responsibility to determine the educational experience through appropriate documentation.

C. Medical Records
The medical records department should be supervised by a qualified medical record librarian. Access to clinical records must continuously be available and should be comprehensive and organized to permit the collection and evaluation of selected material from clinical records for clinical investigation.

D. The Medical Library
The medical library should be readily accessible to the resident staff. There must be a means of access during those times when the library is not open and staffed. The library should contain a representative selection of books and journals on internal medicine such as the American College of Physicians' and the Annals of Internal Medicine or their equivalent. There must be an interlibrary loan system and access to a computerized research system. An Index Medicus should be present for reference use in locating medical literature. In addition to books and journals, a library of pertinent audiotapes, video-tapes and films together with the equipment necessary for their use is desirable.

IV. CONSULTATIVE SERVICES
Consultation provided by the departments of pathology, radiology, nuclear medicine, and other consultative services in the hospital contribute importantly to the residency program. Each service should be headed by qualified individuals, who ensure that their faculty participate in educational programs of the medical service as well as their own department or section. As part of the educational program it is important that all deaths be reviewed, and that autopsies be performed whenever possible. Autopsies must be performed in sufficient number to provide an adequate educational experience and to assure the quality of patient care. Autopsies are necessary to resolve diagnostic problems and often provide new insights even in instances where a definite diagnosis has been made anamirtom. Residents should be present at autopsies performed on their patients, and should carefully review the autopsy reports. Clinical and mortality conferences based on autopsy data should be held at least monthly. Other clinical services, such as general surgery, gynecology, and neurology, must provide consultations performed by, or under the supervision of, qualified specialists.
V. OTHER GRADUATE EDUCATIONAL PROGRAMS

Additional accredited residency programs should be sponsored by the institutions. Such programs permit increased peer interchange and augment the breadth of the educational experience. In the absence of other residencies the program director is obliged to make every effort to obtain a teaching commitment from related clinical departments.

VI. THE CURRICULUM AND THE TEACHING PROGRAM

A. General Principles

The ability to care for a wide range of clinical problems is one of the distinguishing characteristics of the internist therefore, ample opportunity for education in the broad field of internal medicine must be provided. This experience is fostered by rotations on general medical services, both inpatient and outpatient, with exposure to a wide spectrum of disease. Inpatient service assignments in which the resident has a meaningful responsibility must provide a substantial majority of a resident's clinical experience. The assignments should be of sufficient duration to permit continuing care throughout hospitalization. These rotations, preferably 6-8 weeks in length, must last at least 4 weeks. Emphasis should be placed on the maintenance of a detailed physical examination. Residents should be observed and supervised in these functions. Residents must have training in the proper and efficient use of laboratory data and special procedures. Peer contact and discussion is as important to the learning process as contact with teaching faculty. The number of medical residents in the program must be sufficient to provide for frequent and meaningful discussions regarding patient care. In order to provide adequate peer interaction, it is strongly recommended that a program have a minimum of 12 residents at various levels of training. For inpatient rotations, residents at more than one level of training must interact in the care of patients. An excessive number of residents from other specialties who rotate into internal medicine programs should not dilute the training experience and peer interaction for the internal medicine residents. The number of such residents who are integrated into the program, the duration of their medical rotations and their impact on the curriculum for internal medicine residents will be evaluated. The primary emphasis of an internal medicine program must be directed toward residents training for careers in internal medicine. The patient load for each first-year resident should be such as to allow time for close and effective management and detailed study of patients and yet challenge the resident with diverse and complex problems. A first-year resident should be responsible for 10-15 patients, depending upon the average length of stay and the nature and severity of the illness. A lower number is appropriate in critical and intensive care situations. Second and third-year residents may be involved in the care of substantially more patients than a first-year resident. It is important that each resident have the opportunity to follow patients on a long-term basis, to observe and learn the natural course of disease. Such long-term observational duties should include following patients from the ambulatory to the inpatient environment as well as the inpatient to the ambulatory environment.

B. Specific Experience

1. Subspecialty Experience: Education in the various subspecialty divisions of internal medicine is a vital part of the training program. Most rotations on these subspecialties should be of at least 4-6 weeks. Although experience in the subspecialty program is not necessary that each resident rotate through formal subspecialty electives in all of the areas, it is important that there be exposure to the specialized knowledge and methods of a sufficient number of the recognized medical subspecialties to gain experience with their contributions to the effective care of patients. Some of this experience may be gained in the general medical service, intensive care rotations, or ambulatory settings. Subspecialty resources should include an adequate professional and teaching staff and when appropriate, specialized laboratory and technical facilities. Not every hospital with an approved medical residency must or will have special laboratories or technical facilities for each of the subspecialties. These requirements, however, that the resident be exposed to patient care utilizing these special technical or laboratory support. This may be accomplished by the sharing of facilities among departments or cooperating institutions.

2. Experience in Other Specialties: To achieve breadth of competence, there should be available experience in areas related to internal medicine, such as neurology, psychiatry, and dermatology. Experience in medical oncology, otolaryngology, non-operative orthopedics and office gynecology are also highly desirable. These experiences may be obtained in direct elective rotations on non-medical inpatient services, ambulatory settings, or in close contact with consulting attending physicians from these specialties who act in internal medicine rotations. It is not necessary for the resident to act with appropriate supervision as consultant to other clinical services. This requirement is best satisfied by a specific assignment as medical consultant to other services.

3. Consultative Experience: Crucial to the complete internist is his ability to act as a consultant to other physicians. The resident's experience should include the opportunity to act with appropriate supervision as consultant to other clinical services. This requirement is best satisfied by a specific assignment as medical consultant to other services.

4. Experience With Ambulatory Patients: Residency programs must offer adequate experience in the ambulatory setting. Such experience permits greater appreciation of the natural history of disease and greater familiarity with the common problems encountered in the practice of internal medicine. It allows the resident the opportunity to see earlier manifestations as well as socioeconomic and psychiatric aspects of disease that may not be apparent in the hospitalized patient. It is mandatory that there be closely supervised experience in both general medicine and subspecialty patients. As with the inpatient services, there should be an active teaching program by qualified on-site staff. The patient volume in the ambulatory environment must be large enough to provide adequate numbers of new patients, yet not so large that it interferes with an opportunity for careful reflection and teaching. However, the number of patients seen at each visit should be adjusted to provide an adequate learning experience. The continuity experience should be at least a half day per week. It is desirable that the experience be structured to permit the residents to follow patients from the ambulatory setting, through hospitalization, and back to the ambulatory setting in order for the residents to achieve continuity of care. Both inpatient and outpatient records should be kept in such a manner as to facilitate this continuity of care. Organizing this experience may require assignments in a clinic or other ambulatory setting during all or most of the residents' educational program. The conditions under which ambulatory patients are managed should emulate those of office practice and may indeed take place in the office of practicing physicians. Where preceptorial conditions prevail, the supervisor must be accountable and the experience subject to audit.

5. Emergency Department Experience: The resident must have experience with and first-contact responsibility for the diagnosis and management of all categories of medical and surgical patients seen in an active emergency room. At least one continuous month of emergency department is required during the residency. The resident should participate in the decision to admit patients to the hospital. Senior residents in medicine should have additional
Internal Medicine

experience in the emergency department. There must be both careful supervision by staff and a teaching program acceptable to the program director in internal medicine.

Consultations should be readily available and residents in medicine should provide consultants to other disciplines within the emergency room.

6. Intensive Care Experience: The resident should participate directly in the care of patients with various illnesses in intensive care units. The educational component should be conducted with adequate supervision by appropriately trained intensivists and, if possible, education from subspecialists in internal medicine and from other disciplines. There should be appropriate intensive care teaching rounds and conferences acceptable to the program director in internal medicine.

7. Special Educational Experience: The ultimate responsibility for special educational tracks, such as those emphasizing primary care in the ambulatory setting, rests with the program director of the internal medicine program. Although differences in emphasis exist in such programs, it is expected that the core experience of residents will be in the care of inpatients. The quality of this experience should not differ in these various tracks and curricula from those in the traditional program. The Residency Review Committee will consider special educational tracks to be part of internal medicine programs in its review and recommendations concerning accreditation.

8. Experience with Geriatrics and Adolescent Medicine: The patient population in the training program must be representative of the full spectrum of adolescent and adult male and female medical diseases.

Rotations specific to the geriatric inpatient, nursing home, home-based patients or ambulatory services are desirable when resources and supervision are available. However, even if such facilities are not available, regular experience under appropriate supervision for the inpatient and follow-up care of the elderly is essential.

C. Educational Experiences

1. Rounds: Patient teaching rounds and patient management rounds are integral to a good training program. Patient teaching rounds are essential to the education of residents. They should be formal and regularly scheduled. Generally teaching rounds are selective rather than comprehensive so that the number of patients seen permits adequate time for discussion of such things as completeness and validity of clinical data, pathophysiology and differential diagnosis of the disease, and specific pharmacologic, dietary and social management of the patient. Teaching rounds should include direct interaction with the patient by the attending who evaluates the history and physical examination. It is of fundamental importance that the dignity of the patient-physician relationship is preserved and emphasized. The attending physicians conducting the rounds should be selected for their knowledge of medicine, and their clinical skills and their interests and abilities in teaching. There should be continuity and adequate contact between residents and faculty. For example, educational objectives may be met by teaching rounds conducted three times per week with each session at least one and one half hours in duration. Although the attending physician is responsible for the medical care on a service, it is desirable for the teaching attending to discuss patients other than his/her own. When the attending is responsible for all the patients on a service, the attending will not incorporate the rounds into their daily teaching rounds. However, the total time commitment to formal teaching should be at least 4½ hours per week. Patient management rounds are designed for day-to-day care of patients and should be coordinated to allow the supervising resident to interact with other residents. The existence of teaching rounds should in no way lessen the importance of patient management rounds. Participation in management rounds with the attending physician is considered to be an integral part of the resident’s training.

2. Conference and Seminars: Departmental conferences, seminars and literature review activities covering both general medicine and the subspecialties must be regularly scheduled. These should promote an active interchange of information between members of the department. Active resident participation in both the planning and the production of some conferences is essential. The proper content of these conferences should include information from the basic medical sciences with emphasis on the pathophysiology of disease and reviews of recent advances in clinical medicine and biomedical research. Similarly, clinical pathological conferences and/or death conferences must be regularly scheduled. The resident’s schedule should permit attendance at conferences; conferences should be scheduled to permit residents’ attendance on a regular basis.

D. Basic Sciences and Research

1. Basic Sciences: Study of the basic sciences should be part of the clinical experience of the resident. This is most effectively provided in discussion of patient care and in formal conferences. Resident preparation for conferences should include reviewing and expanding scientific knowledge with key references to the basic science underlying specific clinical topics.

2. Research: Active resident participation in clinical research projects with the advice and supervision of the teaching faculty is strongly encouraged.

VII. RESIDENT RESPONSIBILITY

A. Meaningful Patient Responsibility

Professional growth with the attendant development of mature clinical judgment requires that residents, properly supervised, be given a degree of responsibility in patient care commensurate with their ability. This can be achieved only if the resident is realistically involved in the decision-making process. The residency must be mainly an educational experience; service responsibilities must be limited to patients for whom the resident bears major diagnostic and therapeutic responsibility. Residents must be given the responsibility for direct patient care, subject to review by the attending physician, including planning and management, both diagnostic and therapeutic, except in unusual situations, it is desirable that residents write all patient care orders on patients under their care. However, final authority and responsibility must reside with the attending physician. The experience on general internal medicine services and a combination of related subspecialty services must be relevant to the attainment of clinical competence in the broad field of internal medicine. Each resident must have a minimum of 24 months of such meaningful patient responsibility.

B. Duty Hours and Personal Responsibility

It is necessary that the resident staff have a keen sense of personal responsibility for patient care. A resident’s obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week. Duty hours and night and weekend call must be sufficient to permit implementation of the concept of responsibility for patients and to provide for adequate patient care. Every third or fourth night during inpatient rotations is recommended for assurance of continued care of patients. In no case should the resident go off duty until the proper care and welfare of the patients have been assured. Residency is a full-time responsibility; outside activities which interfere with optimal performance in the residency cannot be condoned. The residents’ activity outside the educational program should not be allowed to interfere with their performance in the educational process as defined in the agreement between the institution and the resident.

C. Progression Responsibility

The degree of responsibility, both professional and administrative, is accorded to the resident. The amount of responsibility should be increased progressively with each year of training. Included should be such areas as patient care, leadership, teaching, organization and administration. This goal can be achieved by senior residents
supervising junior residents or by the senior residents acting as consultants to junior residents, particularly in the subspecialty areas. Residents from other disciplines must not supervise internal medicine residents on internal medicine services.

VIII. EVALUATION OF THE RESIDENT AND FACULTY

It is essential that the program director continually evaluate the clinical competence of the residents. This evaluation should consist in itself not only with intellectual abilities and manual skills but also with attitudes and interpersonal relationships. Included should be close observation of the resident performing specific tasks of patient management such as history and physical examination, choice of diagnostic studies, formulation of differential diagnoses or problem lists, development of plans for short and long-term medical management, discharge planning, and procedural skills. Residents should regularly, usually upon termination of a rotation, be made aware of their progress and particularly of any weaknesses. Adequate records must be maintained both of the results of the evaluation process as well as of the contents of personal interview with the resident. Problems also may arise due to research and other factors that may affect a resident's ability to perform in the faculty's role. The results of these evaluations should be utilized for counseling and in the selection of physicians for the program directors.

IX. GENERAL CONTENT

The training program should place emphasis on not only medical problems but also on every aspect of patient management in the hospital and ambulatory environment. The training program should include significant exposure to both the preventive and the rehabilitative aspects of medicine. The resident should become familiar with disease processes associated with various organ systems and with methods for their control. In the same manner, the resident should be familiar with the appropriate utilization of medical rehabilitation services. Ethical, cultural, and humanitarian aspects of each diagnostic and therapeutic decision must be emphasized in the training of program directors and attending physicians. The resident must learn to apply cost-effective measures to medical care, not only as they apply to the patient but also as they apply to the selection of procedures and studies within the hospital and ambulatory environment. The resident should learn function as a member of the health care team. The role of the resident as a member of the health care team in an accredited program in internal medicine the resident should have had experience in the prevention of illness, in the detection and treatment of illness, in the rehabilitation of patients, as well as in the socioeconomics of illness and the team approach to the provision of medical care.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by the American Board of Internal Medicine should communicate with the Registration Section of the Board. Those who wish certification by a subspecialty board of the American Board of Internal Medicine must first be certified in internal medicine and should apply to the Philadelphia office of the American Board of Internal Medicine.

Effective: July 1986 ACGME: September 1985

Special Requirements for Subspecialties of Internal Medicine

GENERAL INFORMATION

A. Programs of graduate education in the subspecialties in internal medicine should be offered only in the institutions where there are accredited residency training programs in internal medicine, or should be related by formal agreement to such institutions and training programs. Accordingly, accreditation of subspecialty programs will be granted only when the program is in direct association with a residency training program in internal medicine accredited by the Accreditation Council for Graduate Medical Education.

B. Subspecialty training in internal medicine is a component in the continuum of the educational process; therefore, ordinarily such training will take place on completion of accredited graduate education in internal medicine. Since there will be a close relationship with the residency in internal medicine, exceptions may be recognized wherein subspecialty training may be taken prior to the completion of the internal medicine residency.

C. Subspecialty programs will be considered for accreditation only in those subspecialties which meet the requirements for accreditation as established by the Accreditation Council for Graduate Medical Education. Accreditation will be granted only to those subspecialty programs which are an integral part of an accredited residency program in internal medicine and in subspecialty areas in which certificates of special competence are given by the American Board of Internal Medicine.

D. The principles enumerated in the Special Requirements for Graduate Education in Internal Medicine are also applicable to training in the subspecialties. In conformity with the Special Requirements, training programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes which are essential to the practice of the specific subspecialty. The objective can be achieved only when the program leadership, the supporting staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the training program is established and functions primarily to meet service commitments.

The following factors, as described in the Special Requirements for Graduate Education in Internal Medicine, require further emphasis:

1. The program director must be qualified to supervise and educate trainees appropriately in the specific subspecialty. The director of the subspecialty program must be certified in that subspecialty or possess suitable equivalent qualifications. These directors will be responsible for the adequacy of the facility in providing adequate resources necessary for the provision of an education of high quality. There should be sufficient qualified professional personnel to constitute a training faculty and to allow for the critical evaluation of the progress and competence of the trainees. As with program directors in internal medicine, it is essential that subspecialty program directors devote sufficient time and effort to the graduate education program and related activities. It is desirable that subspecialty program directors be full time.

2. The program must provide advanced training to allow the physician to acquire expertise as a consultant in a specific subspecialty. This training must have three major components: first, it should emphasize clinical diagnostic and therapeutic skills; second, the training must be designed to allow the trainee to develop skills in the practice of the subspecialty; and third, the training must be designed to allow the trainee to develop skills in the practice of the subspecialty.

E. Subspecialties are often expected to provide comprehensive medical care to patients in their subspecialty area. Therefore programs should provide opportunity for trainees to maintain their skills in general internal medicine as well as in the internal medicine aspects of their subspecialties.

Programs will be evaluated on the availability of the following components:

1. A sufficient number of new and follow-up patients of a wide age range must be present to assure appropriate in-patient and outpatient experience for each trainee.

2. Subspecialty conferences, seminars, and literature review activities covering the subspecialty must be regularly scheduled; active subspecialty trainee participation in both the planning and the production of conferences is essential. Attendance at multidisciplinary conferences is encouraged.
with particular attention given to those problems that bear directly on the subspecialty concerned.

3. In preparation for roles as consultants to other specialists, subspecialty trainees should have the opportunity to provide consultation, supervised by staff members. They should become experienced in teaching, which may include experience in teaching, which may include experience with undergraduate medical students, graduate medical students, and allied health personnel. This experience should include basic biomedical knowledge with the clinical aspects of the subspecialty, including the integration of clinical management principles which should be applicable to patients of all age groups.

4. There must be close interaction between the parent program in internal medicine and the subspecialty program; lines of responsibility by resident staff in both internal medicine and subspecialty programs must be clearly delineated. In addition, close working contact during the training period with trainees in accredited programs in other disciplines such as radiology, pathology, surgery, pediatrics and others is strongly encouraged; where appropriate, supervision and teaching by expert faculty in these disciplines should occur.

5. The training program in a subspecialty should have an investigational component. Trainees should learn the design and interpretation of research studies, evaluation of investigative methods and interpretation of data, and develop competence in critical assessment of new therapies and the medical literature. Active subspecialty trainee participation in research projects with the advice and supervision of a qualified staff is encouraged.

6. Trainees must have supervised training in the execution of procedures and perfection of technical skills where these are integral to the discipline involved. Even though the trainee in future practice will not perform all of the technical procedures of this field on a continuing basis, the trainee must have an understanding of the common technical procedures of the subspecialty, their indications, risks and limitations, and judicious utilization of technical resources.

F. Program directors must establish procedures for the evaluation of the clinical competence of the subspecialty trainees. This evaluation should involve intellectual abilities, manual skills, attitudes and interpersonal relationships, as well as specific tasks of patient management, decision-making skills and critical analysis of clinical situations. There must be provisions for appropriate feedback of this information to the subspecialty trainee.

G. Policies pertaining to the accreditation of subspecialties.

1. Subspecialty training program report forms will be distributed to the program director of the internal medicine residency program. It will be the responsibility of the program director of internal medicine to coordinate the collection of information from all subspecialty programs that wish to be accredited. An on-site inspector will review the entire program in internal medicine to coordinate the collection of information from all subspecialty programs that wish to be accredited. An on-site inspector will review the entire program in internal medicine, including subspecialties, and forward to the Residency Review Committee Internal Medicine (RRC-IM) the statistical and narrative reports for all aspects of the program. The RRC-IM will review the program in its entirety and make a recommendation for accreditation of the internal medicine program and its subspecialties. Subspecialty programs will be accredited only if the program in internal medicine is accredited. An internal medicine residency program may achieve and retain accreditation without any approved subspecialty programs.

2. Loss of accreditation of the internal medicine residency will result in loss of accreditation of all subspecialty programs related to that residency. The accreditation status of subspecialty programs may equal but not exceed the accreditation status of the parent internal medicine program.

3. Review cycle for subspecialty programs will coordinate with the review cycle for the internal medicine training program with provision for separate review of a subspecialty program when major changes occur.

4. Progress reports may be used to obtain additional information regarding program progress and development.

Training Programs in Cardiology

1. EDUCATIONAL PROGRAM

A subspecialty educational program in cardiology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of adult cardiovascular disorders, as well as the effectiveness of therapeutic programs.

The program should be structured to permit some individuals to develop procedural and technical skills essential to performance of one or more forms of invasive diagnostic studies: hemodynamic, angiographic and electrophysiologic. All trainees must have the opportunity to acquire skill in the interpretation of data derived from these invasive studies, as well as skill in acquisition, and interpretation of data derived from other clinical modalities associated with cardiology.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available to the trainee. These include inpatient, ambulatory care and laboratory resources. Specifically, there should be laboratories for cardiac hemodynamics and angiography, including vascular angiography. There should be provision for non-invasive cardiac procedures, including echocardiography, electrocardiography, and exercise tolerance testing. Additional facilities for electrophysiologic and intracardiac studies are desirable. Other resources should include facilities for assessment of peripheral vascular disease, pulmonary physiology, and cardiac and nuclear cardiology. Clinical care units should include coronary intensive care facilities, cardiac surgery intensive facilities, and other specialized facilities for patients with cardiovascular disease and peripheral vascular disease. Close association and participation in a cardiovascular surgical program is an important component of a cardiovascular training program.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide opportunities for the individuals to develop clinical competence in the overall field of adult cardiology. Procedural and manipulative skills with intravenous, intra-arterial and intracardiac catheterization may receive emphasis in the program, depending on the intended area of practice of the subspecialty trainee. Competence in the indications for, and the interpretation of data from such studies is an important part of the subspecialty educational program. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

a. Cardiac hemodynamics and angiography.

b. Interpretative skills in electrocardiography, EKG stress testing, echocardiography, radiographic and nuclear studies of the heart and blood vessels.

c. Invasive and non-invasive electrophysiologic studies.

d. The pathophysiology, pathogenesis, natural history, diagnosis, management and prevention of diseases of the heart and blood vessels.

e. Diagnosis and management of peripheral vascular disease.

f. Cardiac resuscitation techniques and elective cardiology.

g. Management and placement of cardiac pacemakers.

h. Coronary Care Unit management.

i. Congenital heart disease.
Training Programs in Endocrinology and Metabolism

1. EDUCATIONAL PROGRAM

A subspecialty educational program in endocrinology and metabolism must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of endocrine and metabolic diseases on an inpatient and outpatient basis. The trainee should be given an opportunity to assume responsibility for and follow patients throughout the training period in order to observe the evolution and natural history of these disorders as well as the effectiveness of the therapeutic programs.

The program should include major emphasis on biochemistry, physiology as they relate to endocrinology and metabolism. Appropriate utilization of laboratory tests, radionuclide and radiologic studies for the diagnosis and treatment of endocrine and metabolic disease should be stressed.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources.

Specifically, there should be a procedure laboratory completely equipped to provide modern capability in gastrointestinal procedures. Modern radiographic services should be available.

Facilities for intensive care critically ill patients with gastrointestinal disorders must be provided. In order to allow interface with other disciplines, the training program must be conducted in settings in which there are other services such as surgery, oncology, pediatrics, radiology and pathology.

3. SPECIAL KNOWLEDGE AND SKILL

The training program must provide for trainees to develop clinical competence in the overall field of gastroenterology, including hepatology, nutritional disorders and gastroenterologic oncology.

a. Experience should be available which will develop the trainee’s knowledge and understanding of the prudent and judicious use of special instruments and tests in the diagnosis and management of gastrointestinal disorders. Procedural and technical skills are important and may receive different emphasis in different programs depending on the intended area of practice of the gastroenterology trainee.

b. Competency in the indications for, and the interpretation of data from such studies is an important component of the subspecialty educational program.

c. Experience and knowledge of various common and uncommon gastrointestinal diseases, including cancer of the digestive system, various surgical procedures employed in relation to the digestive system disorders, natural history of digestive diseases in children and a knowledge of factors involved in nutrition and malnutrition.

Training Programs in Hematology

1. EDUCATIONAL PROGRAM

A subspecialty educational program in hematology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of blood diseases on an inpatient and outpatient basis. The trainee should be given the opportunity to assume continuing responsibility for both acute and chronically ill patients in order to observe the evolution of blood diseases as well as the benefits and adverse effects of therapy.

The program should include emphasis on basic physiologic mechanisms and therapy of diseases of the blood. Appropriate utilization of laboratory tests, biopsies and procedures used for the diagnosis and treatment of hematologic disorders should be stressed.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include in-
patient, ambulatory care and laboratory resources. Specifically, the resources which should be available to the program include hematology and coagulation laboratories, pathology department including the blood bank, diagnostic and therapeutic radiology services, and nuclear medicine services. In addition, there should be an oncology program to which the hematology trainee can relate formally in an educational experience.

3. SPECIFIC KNOWLEDGE AND SKILLS
The training program must provide opportunities for the trainees to develop clinical competence in the overall field of hematology. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

a. Diseases of the blood, including anemias, diseases of white cells and disorders of hemostasis and thrombosis.

b. Neoplastic diseases of the blood and bone forming organs.

c. Genetic aspects of hematology.

d. Immuno-hematology.

e. Blood Bank techniques.

f. Bone marrow biopsy and interpretation

g. Coagulation tests, evaluation of anticoagulant therapy, evaluation of autoantibodies and blood compatibility.

h. Knowledge of clinical pharmacology including cytokinetics, toxicity, and the limitation of drugs used in therapy.

i. Management treatment protocols.

Training Programs in Infectious Diseases

1. EDUCATIONAL PROGRAM
A subspecialty educational program in infectious diseases must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of infectious diseases on both an inpatient and outpatient basis. Experience with pediatric infectious diseases is encouraged. The trainee should be given the opportunity to observe and learn the natural history of diseases and the benefits and complications of therapy. The program should include emphasis on the basic concepts of immunology as well as an understanding of theory and practice of epidemiology. Training in vital statistics as applied to public health should be available. Appropriate utilization of laboratory tests as they relate to the diagnosis and treatment of infectious disease should be stressed.

2. FACILITIES AND RESOURCES
Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources for adult and pediatric patients. Specifically, there should be access to a laboratory for clinical microbiology, including diagnostic bacteriology, immunology, mycology, parasitology, and virology. Although a geographically defined infectious disease patient unit is not a requirement, facilities for isolation of patients with communicable diseases are necessary. It is desirable that the training program be conducted in a setting in which programs in surgery, obstetrics and gynecology, pediatrics and other medical and surgical specialties and subspecialties are available.

3. SPECIFIC KNOWLEDGE AND SKILLS
The training program must provide opportunities for trainees to develop clinical competence in the overall field of infectious diseases. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

a. Factors that determine the outcome of the interaction between host and parasite; the effects of disease states and immunosuppressive therapies on host responses to infectious agents; experience with mechanisms of enhancement of resistance by immunization.

c. Procedures such as transtracheal aspiration, thoracence-
tesis, arthrocentesis, spinal tap and aspiration of abscess cavities.

d. Methods of determining antibacterial activity of a drug.

e. Techniques to determine concentration of antibiotics in blood and other fluids.

f. Cultural techniques (and methods for identification in tissues and fluids) for bacteria, mycobacteria, fungi, viruses, rickettsia, chlamydia and parasites.

g. Standard pharmacology studies to determine absorption and excretion of antibiotics.

h. Recently developed technologies, such as the detection of antigen by means of counter immunoelectrophoresis.

Training Programs in Nephrology

21. EDUCATIONAL PROGRAM
A subspecialty educational program in nephrology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of kidney related diseases on an inpatient and outpatient basis. The trainee should be given the opportunity to assume responsibility for both acute and chronically ill patients in order to learn the natural history of renal disease as well as the effectiveness of therapeutic programs.

The program should be structured to permit individuals to gain experience in the performance and interpretation of laboratory tests and biopsies, including personal experience with these procedures. There should be close liaison with other disciplines including surgery, urology, obstetrics and gynecology, pediatrics and psychiatry.

2. FACILITIES AND RESOURCES
Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources.

Specifically, there should be facilities for acute and chronic hemodialysis programs, provision for peritoneal dialysis, a radiology service which can provide modern renal related procedures; a diagnostic radiology laboratory; and the opportunity to become familiar with renal transplantation procedures.

3. SPECIFIC KNOWLEDGE AND SKILLS
The training program must provide for trainees to develop clinical competence in the overall field of nephrology. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

a. Pathogenesis, natural history and management of congenital and acquired primary renal disease and renal diseases associated with systemic disorders.

b. Disorders in electrolyte and acid base regulation including knowledge of renal physiology.

c. Hypertension of all origins and its complications as well as treatment programs.

d. The effect of renal function and renal disease on the pharmacokinetics of drugs as well as the effects of drugs on renal structure and function.

e. The principles of immunology involved in the mechanisms of renal disease and renal transplantation.

g. Acute and chronic hemodialysis procedures.

h. Peritoneal dialysis procedures.

i. Knowledge of renal transplantation and its management decisions.

Training Programs in Oncology

1. EDUCATIONAL PROGRAM
A subspecialty educational program in oncology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration. Clinical experience should include opportunities to observe and manage patients with a wide variety of clinical neoplastic problems on an inpatient and outpatient basis. The train-
ees should be given an opportunity to assume continuing responsibility for both acute and chronically ill patients in order to learn the natural history of cancer as well as the effectiveness of therapeutic programs.

There should be broad support from other clinical specialties, including diagnostic and therapeutic radiology, gynecology, pediatrics, nuclear medicine, pathology and surgery and its sub specialties. In addition, it is desirable to have the support of oncologic nursing, rehabilitation nutrition and di- etetic and social services.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources. Specifically, there should be advanced pathology services, including electron microscopy and immunopathology; resources for nuclear medicine imaging; blood banking and blood therapy facilities; a multidisciplinary tumor conference; available cancer protocol studies; c-sit radiation oncology facilities; a modern diagnostic radiologic service; a general surgical service and its support; and pediatric support. It is desirable that there be other clinical specialties of Internal Medicine to which the oncology trainee can relate formally as well as facilities for clinical pharmacology and tumor immunology.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide for the trainees to develop clinical competence in the overall field of oncology. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

i. The etiology of cancer and natural history of cancer.

ii. The etiology of cancer including predisposing casual factors leading to neoplasia.

iii. Knowledge of the concepts of cellular biology, cytokinetics, basic and clinical pharmacology, including pharmacokinetics and toxicity.

iv. Chemotherapy, including drugs available for treatment of neoplastic diseases and indications and limitations for their use in specific clinical situations.

v. Management of treatment protocols.

vi. Marrow aspiration and biopsy and interpretation.

vii. Involvement with a multidisciplinary tumor conference, including exposure to tissue pathology.

ix. Concepts of supportive care, including hematologic, infectious disease and nutrition.

x. Familiarity with rehabilitation and psycho-social aspects of clinical management of the cancer patient.

Training Programs in Pulmonary Diseases

1. EDUCATIONAL PROGRAM

A subspecialty educational program in pulmonary diseases must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of pulmonary diseases on an inpatient and outpatient basis. The trainee should be given an opportunity to assume continuing responsibility for both acute and chronically ill patients in order to learn the natural history of pulmonary disease as well as the effectiveness of the therapeutic program.

The program should include emphasis on pulmonary physiology and its correlation with clinical disorders. Trainees should learn utilization of laboratory tests. They should gain familiarity with radionuclide procedures and radiologic studies in the diagnosis and treatment of pulmonary diseases.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources. Specifically, there should be a laboratory for pulmonary func-

tion tests, exfoliative cytology, and the availability of extensive pathology services. Appropriate space and staffing for pulmonary procedures should be available. Special units for intensive care, post-operative care and respiratory care services should be provided. There should be close liaison with other services such as pediatrics, radiology, pathology, thoracic surgery, physiology, microbiology and biochemistry. In addition, there should be a working relationship with the otolaryngology and anesthesiology services.

3. SPECIFIC KNOWLEDGE AND SKILLS

The training program must provide for trainees to develop clinical competence in the overall field of pulmonary diseases. Examples of knowledge and skills that are desirable include, but are not limited to, the following:

i. A broad spectrum of pulmonary diseases including obstructive pulmonary disease, malignancy, tuberculosis, fungus and bacterial infection, and hypersensitivity diseases.

ii. Pulmonary manifestations of systemic diseases, including connective tissue and hematologic disorders.

iii. Primary and secondary vascular diseases of the lung.

iv. Genetic and developmental disorders of the respiratory system.

v. Thoracic trauma.

vi. Interpretation of the chest roentgenograms, tomograms, bronchograms, pulmonary angiograms and other radiologic procedures.

vii. Interpretation of pulmonary function testing.

viii. Involvement in the supervision and management of patients requiring critical care.

ix. Knowledge of respiratory physical therapy and rehabilitation.

x. Interpretation of radionuclide scanning in relation to pulmonary disorders.

xi. Competence in procedures such as thoracentesis, pleural and other biopsy procedures, bronchoscopic biopsy and biopsy procedures and endotracheal intubation.

xii. Additional recommended but not mandatory skills include, insertion of chest tubes, rigid tube bronchoscopy and needle biopsy or tissue aspiration of the lung.

Training Programs in Rheumatology

1. EDUCATIONAL PROGRAM

A subspecialty educational program in rheumatology must be organized to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in the field; it shall not be less than two years duration.

Clinical experience should include opportunities to observe and manage patients with a wide variety of rheumatic diseases on an inpatient and outpatient basis including pediatric rheumatologic problems. The trainee should be given the opportunity to assume continuing responsibility for both acute and chronic rheumatic diseases in order to observe the natural history of the disease process and the effectiveness of therapeutic programs. It is desirable that a group of patients be monitored by each trainee for at least 12-18 months.

The program should include training in appropriate use of community resources that are available to assist in the rehabilitation and vocational guidance of patients with rheumatic diseases. There should be a systematic opportunity to observe and participate in comprehensive programs for the treatment of chronic rheumatic disease problems including rehabilitation medicine (e.g., physical therapy, occupational therapy) and orthopedic surgery. The program should be structured to permit individuals to gain experience in the selection and interpretation of laboratory tests, roentgenograms and biopsies. All the methodology of pertinent laboratory tests is highly desirable.

2. FACILITIES AND RESOURCES

Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources for pediatric and adult patients. Optimally there should be a clini-
cal immunology laboratory; rehabilitation medicine services with capabilities in rehabilitative therapy and occupational therapy; radiologic services including arthrography; an orthopedic surgical department with capabilities in reconstructive and rheumatologic surgery.
3. SPECIFIC KNOWLEDGE AND SKILLS
   a. The anatomy, biochemistry and physiology of the connective tissues and of musculo-skeletal systems.
   b. Pertinent microbiology and immunology, the pathophysiology of inflammation and pharmacology of anti-inflammatory drugs.
   c. Skill in the examination of the joints and the aspiration and analysis of synovial fluid.
   d. Etiology, pathogenesis, clinical features, and pathologic aspects of specific primary and systemic diseases of the joints and musculo-skeletal system.
   e. Laboratory studies including measurement of serum immunoglobulins and complement components, modern serologic tests, tissue typing, identification of various serologic and biochemical abnormalities occurring in rheumatoid diseases and the principles of immunohistologic techniques.
   f. Competency in the performance of closed biopsy of the joints and interpretation of histopathology of the synovium.
   g. Prescription of appropriate physical therapy.
   h. Involvement in the post-operative care of orthopedic surgical procedures applied to rheumatic diseases.
   i. Comprehension of muscle physiology and recognition of the methodology and indications for electromyography, muscle biopsy and nerve condition studies.

Effective: July 1987 ACGME: October 1982

9. Special Requirements for Residency Training in Neurological Surgery

I. INTRODUCTION
   A. Definition of Discipline
      Neurological surgery is a discipline of medicine which deals with the diagnosis, evaluation and treatment of disorders of the central, peripheral and autonomic nervous systems, including their supporting structures and vascular supply; and the evaluation and treatment of pathological process which modify function or activity of the nervous system, including the hypophysis. Neurological surgery includes the operative and non-operative management, diagnosis, evaluation, treatment, critical care and rehabilitation of patients with disorders of the nervous system.
   B. Accreditation Guidelines
      1. Training programs in neurological surgery are accredited by the Residency Review Committee by authority of the Accreditation Council for Graduate Medical Education. A list of accredited training programs in neurological surgery is published annually in the Directory of Residency Training Programs.
      2. To be accredited by the Accreditation Council for Graduate Medical Education, an educational program in neurological surgery shall meet not only the Special Requirements for Residency Training in Neurological Surgery but also the General Requirements of the Essentials of Accredited Residencies.

II. FACULTY QUALIFICATIONS AND RESPONSIBILITIES
   A. Program Director Qualifications
      1. The training program director shall be a well qualified neurological surgeon who possesses necessary administrative, teaching and clinical skills to conduct the program.
      2. The program director shall be certified by the American Board of Neurological Surgery or possess suitable equivalent qualifications.
      B. Program Director Responsibilities
         1. The program director must assume responsibility for all aspects of the training program and devote a significant period of time to the educational process of the residency.
         2. The institution is responsible for notifying the Executive Secretary of the Residency Review Committee in writing of any changes in program director and/or neurological departmental chairman; a proposed or anticipated formal affiliation with another institution, and a proposed or anticipated change in a required rotation to any institution other than the parent institution or institutions integrated into the program.
      C. Other Teaching Faculty Qualifications and Numbers
         1. The neurological surgery staff shall be well qualified neurological surgeons who possess the necessary administrative, teaching and clinical skills to conduct the program.
         2. All faculty members shall be certified by or be in the certification process of the American Board of Neurological Surgery or possess equivalent qualifications.
         3. Neurological surgery faculty participation in graduate medical education is highly desirable.
         4. Under most circumstances, there should be at least three neurological surgeons associated with the training program who devote a significant period of time to the educational process of the residency.
      D. Training Directors at Participating Institutions
         1. There shall be a qualified neurological surgeon responsible for the education of the residents in each geographically separate institution. Such an individual will also supervise the educational activities of other neurosurgeons relating to resident education in that institution.
         2. The neurological surgery training director at a participating institution shall be appointed in this training capacity by the program director.
         3. Appointments will generally be for a one-year period and can be renewable to ensure continuity of leadership.
         4. This appointee's major clinical responsibilities shall be at the institution where the appointee is responsible for the educational process.
      E. Scholarly Activity of Faculty
         1. There should be evidence of scholarly activity among the neurological surgery faculty. Such evidence should include a high order of teaching skills, participating in clinical and/or basic research, involvement in neurological and/or other medical scientific meetings and their organizations, and publication of papers, monographs and books.
         2. Assessment of the scholarly activity and the administrative, teaching and clinical skills of the program director and the faculty shall be part of the program's evaluation.
ESSENTIALS OF ACCREDITED RESIDENCIES

Neurological Surgery

all trainees unless they have previously had a minimum of one year of formal residency training in an accredited neurological training program.

6. There shall be a 12-month period of time as senior resident in the clinical service of neurological surgery. This is considered an essential component in each trainee's planned program.

a. The senior resident will have major or primary responsibility for patient management as deemed appropriate by the program director.

b. The senior resident shall also have administrative responsibility as designated by the program director.

B. General Educational Components

1. There shall be a well coordinated schedule of teaching conferences, rounds, and other educational activities in which both the neurological surgery faculty and the residents participate. Conferences should be coordinated among institutions in a training program so that attendance by a majority of staff and trainees is facilitated.

2. Educational experience in neuroradiology and neuropathology should be an integral part of the training program and designed for the education of neurosurgical residents. Such experience shall be under the direction of qualified neuroradiologists and neuropathologists.

3. The program shall provide opportunities for and experience in the basic sciences of neuroanatomy, neurophysiology, neurology, neurochemistry, and neuroimmunology.

4. A program for the residents to acquire such experience in the neurosciences must be evident.

5. A well organized written plan for rotation of residents among the various services and institutions involved shall also be maintained and be available to the residents and faculty.

6. The resident should participate, at some point, either in ongoing clinical and/or basic research or projects which the faculty is involved in or projects of the resident's own design.

7. The house officer's activity outside the educational program shall not be allowed to interfere with his or her performance in the educational process as defined in the agreement between the institution and house officer.

8. Resident participation in undergraduate medical education is highly desirable.

C. Related Disciplines

1. Recognizing the nature of the specialty of neurological surgery, it is unlikely that a program can mount an adequate educational experience for neurological surgery trainees without approved training programs in related fields. Clinically oriented training programs in the participating institutions of the neurological surgery program shall include accredited training programs in neurology, general surgery, internal medicine, pediatrics, and radiology.

2. There shall also be resources for the education of neurosurgical residents in anesthesia, endocrinology, ophthalmology, orthopedics, otolaryngology, pathology, and psychiatry. A lack of such programs will adversely affect the accreditation status of the neurological surgery program.

D. Number and Quality of Residents

1. One of the measures of a training program is the quality of trainees chosen for training and the ability of the program to assure a steady increase in the trainee's knowledge and skills.

2. The Residency Review Committee will evaluate the selection process of trainees and seek evidence that the program evaluates the progression of the residents during training.

3. In certain circumstances, where there is demonstrated excellence in providing an educational experience for residents and patient care, as evidenced by the quality of residents trained, the program may be authorized to take more than one resident per year. The ability to do so does not depend on any multiplication of the minimum requirements for resident training but does require the presence of more than an adequate number and distribution of cases, adequate facilities and presence of a faculty who are of national stature.

4. The number of residents at each year of training in a given program, except as provided below, shall not exceed the number approved by the most recent accreditation review of that program. Should a vacancy occur at any level of training in a program, the program director has the option of appointing a new resident at a level which might overlap with another resident in place, providing that each such appointment shall not adversely affect the training experience of residents already at that program. Furthermore, over a five-year period, commencing at the time when the resident whose departure created the vacancy would have completed training, the average number of residents graduating yearly must not exceed the number approved by the Residency Review Committee.

E. Appointment of Fellows

1. The appointment of other individuals for special training or education, such as fellows, must not dilute or direct from the educational opportunities of regularly appointed trainees.

2. Addition of such individuals by a program director requires a clear statement of the areas of training, clinical responsibilities, and duration of the fellowship. This statement is to be supplied to the Residency Review Committee at the time the program is reviewed.

3. If fellows so appointed will, in the opinion of the Residency Review Committee detract from the education of the regularly appointed trainees, the accreditation status of the program may be adversely affected.

IV. PATIENT REQUIREMENTS

A. Patient Population

1. There shall be sufficient neurological surgery patients admitted each year to ensure that the resident trainee is exposed to a full spectrum of neurological surgery diseases.

2. This must include substantial experience in the management and surgical care of patients in the pediatric age range, and should include disorders of the spine and of the peripheral nerves, cerebrovascular disease including extra cranial vascular disease, trauma, and tumors of the nervous system.

B. Minimum Surgical Requirements

1. A program must demonstrate to the satisfaction of the Residency Review Committee that it has both the volume of patients under neurological care and the breadth and depth of academic support in order to assure that the program will have the capability of providing excellent neurosurgical training to resident trainees.

2. The former must be substantiated in part by a compilation of the yearly case load. Under some circumstances the program may be required to include data for a period of up to three years prior to the date of the submitted proposal.

3. The profile of clinical experience reported to the Residency Review Committee must be limited to those utilized in the resident's educational program.

4. It is also understood that the educational requirements of the resident trainee must be considered at all times and assignment to a clinical service that limits or precludes educational opportunities will be adversely considered in evaluation of the program.

5. The following minimum number of clinical procedures is suggested with the understanding that the majority of the procedures occur at the parent institution.

6. It must be understood that achievement of this minimum of clinical procedures will not ensure accreditation of a training program.

7. Within the total clinical facilities available to the training program, there should be a minimum of approximately 300 major neurological surgery procedures per year per finishing resident.

8. The presence within a given program of this neurological surgery work-load, as well as the distribution of types
and cases, is equally important. For instance, the cases should be appropriately distributed between cranial and extracranial surgical procedures and should present a balanced spectrum of neurological surgery. As a minimum, they should include approximately sixty (60) histologically verified intracranial neoplasms and/or aneurysms and vascular malformations per year per finishing resident.

9. No affiliated hospital unit in the training program shall be required to be a component of the training program unless there are a minimum of approximately 100 major neurological surgery operations per year including twenty-five (25) procedures for a combination of brain neoplasms, aneurysms, and intracranial or spinal vascular malformations. Exceptions may be made if a hospital offers special clinical resources, i.e., stereotactic surgery, trauma, or pediatric neurological surgery, which significantly augment the resources of the training program as a whole.

V. FACILITIES
A. Parent Institution
   An educational program in neurological surgery must have one parent institution with primary responsibility for the entire program. Appropriate institutions include medical schools, hospitals, and medical foundations. The institution must demonstrate commitment to the program in terms of financial and academic support.

B. Participating Institutions
   1. The number and distribution of participating institutions must not preclude satisfactory participation by residents in teaching and training exercises.
   2. As a general rule, there shall be a maximum of two geographically separate institutions in the educational program.
   3. Residents to institutions at a distance from the parent institution which makes attendance at conferences and teaching rounds difficult are not satisfactory.

C. Inpatient Facilities
   1. Inpatient facilities available for training programs in neurological surgery shall be geographically identifiable and have an adequate number of beds, support personnel, and proper equipment to ensure quality education.
   2. Inpatient facilities may vary from one participating institution to another but should support essential prerequisites for excellence in patient care and teaching.
   3. The presence of a neurological surgery operating room with microsurgical capabilities and an intensive care unit specifically for the care of neurological surgery patients are considered definite assets to a training program as are other units for specialized neurological surgery care.
   4. Similarly, neurological surgery beds should be designated in a planned unit.

D. Research Facilities
   1. There shall be space and support personnel for research identifiable in the neurological surgery division or department and some activity should be ongoing in this area.
   2. Research facilities should be available to the neurological surgical resident.

VI. BOARD CERTIFICATION
A. Performance on Examination
   One measure of the quality of a program is the performance of its graduates on the examinations of the American Board of Neurological Surgery. The number of residents completing training and taking and passing the certification examination will be part of the evaluation.

B. Certification Requirements
   Residents who seek certification by the American Board of Neurological Surgery shall communicate with the Secretary of the Board to be sure that the requirements for certification have been fulfilled. The current address of this office is published in each edition of the Directory of Residency Training Programs.

Requests regarding evaluation of educational programs in neurological surgery and all related program inquiries should be addressed to the Executive Secretary of the Residency Review Committee for Neurological Surgery, 535 North Dearborn Street, Chicago, IL 60610.

Effective: July 1986 ACGME: June 1985

10. Special Requirements for Residency Training in Neurology

INTRODUCTION
The purpose of the training program is to prepare the physician for the independent practice of clinical neurology. This training should be based on supervised clinical work with increasing responsibility for out-patients and in-patients. It should include not only the specific diseases of the nervous system of different age groups, but also the neurological complications of medical and surgical conditions. The resident must also learn to differentiate those patients whose primary illness lies in other areas, for example, internal medicine and psychiatry.

LENGTH OF PROGRAM
Approved residency in neurology must provide at least three years of graduate education in neurology. The programs meeting these requirements may be of two types:

1. Those which provide four years of graduate training beyond the receipt of the M.D. degree, the first year of which includes a broad clinical experience in general medicine in such primary care specialties as internal medicine, family medicine or pediatrics. Except for unusual circumstances, residents should spend no more than two months, and preferably no time, in neurology or psychiatry during this year.

2. Those which provide three years of neurology residency training but accept only residents who have had an initial year of graduate training. This first year should have the minimum requirements as noted in 1. above.

\[1^7\] This material constitutes the special requirements for residency programs in neurology and includes material formerly published as a "Guide" for residency programs in neurology. The "Guide" is no longer published separately. The reader is also referred to the General Requirements for Residency Training and to the publication of the Accreditation Council for Graduate Medical Education which outline the composition and function of all Residency Review Committees and which indicate the actions which any Residency Review Committee may take, as well as those which the Accreditation Council for Graduate Medical Education (ACGME) may take.

The General Requirements and the other publications of the ACGME also indicate the approval required for the programs and the relationships between the Residency Review Committee (RRC), its parent organizations and the ACGME.

Requests to have a program accredited to train residents in neurology (or related programs regarding residency programs) should be addressed to: Secretary, Residency Review Committee for Psychiatry and Neurology, 535 North Dearborn Street, Chicago, Illinois 60610. All inquiries as to whether a physician is qualified to be examined for certification in neurology should be addressed to: Executive Director, American Board of Psychiatry and Neurology, One American Plaza, Evanston, Illinois 60201.

\[1^8\] Note: The regulations of the American Board of Psychiatry and Neurology, referred to, state that two patterns of training are acceptable:

A. Prior to entering an approved neurology training program, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine. This year should be devoted primarily to clinical experience in internal medicine or pediatrics or family practice.

B. A four-year training program in neurology would be acceptable with the provision that at least four months be spent in an approved program providing direct responsibility for the general medical care of children and/or adults.

At the present time it should be understood that although two certificates in neurology are issued by the American Board of Psychiatry and Neurology, (I) Neurology, and (II) Neurology with emphasis in Child Neurology, residency programs are approved and accredited in one area only, i.e., Neurology. Consequently, the description of special requirements for training in neurology is intended to incorporate the necessary components of residency programs including the areas of general (or adult) neurology, child neurology, the basic neuroanatomical sciences and special clinical areas which are closely allied to a full understanding and diagnostic study of nervous system diseases.
GENERAL CURRICULUM CONSIDERATIONS

It is essential that the residency program contain a component of service to patients. This component should be so designed as to assure a balance between service and education which achieves for the resident an optimal educational experience consistent with the best of medical care.

The resident must have instruction and practical experience in obtaining an orderly and detailed history from the patient, in conducting a thorough examination (general, mental status, neurological, etc.) and in organizing and recording the data. The resident must understand the indications for various laboratory and special diagnostic procedures, i.e., radiological and radioisotope studies, computed tomography, electroencephalography, electromyography and nerve conduction studies, psychological testing, and other investigations pertinent to clinical neurology, and their interpretation. The resident must learn to correlate the information derived from these neurodiagnostic studies with the clinical history and examination in formulating a differential diagnosis and management plan for patients with disorders of the nervous system.

Residents must have experience with child neurology procedures, including evaluation of neurological disease in newborns and infants. Particular emphasis should be given to understanding the growth and development of the nervous system. This training is best obtained in a child neurology service under the supervision of a qualified child neurologist.

While a wide range of clinical experience is mandatory, each resident should be counseled and aided in planning various parts of the program in accordance with individual capabilities and future plans. Clinical assignments need not be identical for each resident and the program must be flexible in this regard. Elective time should accomodate individual interests.

Programs must provide mechanisms for the evaluation of responsibility and professional maturity of residents. The early clinical assignments are based on direct patient responsibility for a limited number of patients. Subsequent assignments must place a resident in a position of increasing responsibility for the patients and for a liaison with the staff and referring physicians. Night call is an excellent method of furthering the resident’s ability to base clinical judgments in evaluation and care of patients. In this way the resident matures to a point of eventually assuming full responsibility. Reserving the hospital consultation services for the latter portions of the program when a resident’s performance is an excellent manner of inducing this responsibility. Adequate faculty supervision, however, is necessary throughout the program. Periodic review of the resident’s performance is helpful, pointing out the strengths and weaknesses of the residents and planning their educational program.

Service, teaching and research must be present in every training program. The importance of service is obvious, as clinical neurology can only be mastered at the bedside, in the out-patient department, and in the emergency room. Teaching of other residents, medical students, nurses, and health care personnel, formally or informally, are important aspects of the resident’s training in neurology. Programs should include research opportunities for residents. It is not necessary for all residents to engage in basic research, but participation in clinical research is extremely helpful in teaching the resident to appraise published reports of research.

An important exchange of ideas and mutual stimulation should develop among the neurology residents themselves. This is fostered by choosing residents from different schools and backgrounds. Also, on the neurological ward the mixing of neurological residents with medical, neurological, pediatric and psychiatric residents who may rotate through the neurological service adds a wholesome broadening of the educational experience.

CONTINUITY OF PATIENT CARE AND RESIDENT EDUCATION

While much of this education will take place through supervised experience in caring for in-patients on the neurology service, a supervised experience in the out-patient clinic is also important. As much as possible, the resident should have individual responsibility with supervision, for following long-term patients throughout the three or more years of neurology training. This can be accomplished by periodic clinics in which each resident is responsible for scheduling of personal patients. Continuity of education throughout the residency is accomplished by attendance at conferences in the various disciplines. They should include electroencephalography, neuroradiology, child neurology, neuro-ophthalmology and general neurological conferences. There should be gross and microscopic pathology conferences utilizing recent pathological specimens. Clinical pathological conferences are particularly valuable. It is useful to put increasing responsibility for the planning and supervision of the conferences on the residents.

TRAINING IN OTHER CLINICAL AREAS

General

Neurological training must include assignment as a consultant, under supervision, to the medical, surgical, obstetrics and gynecology, pediatric and psychiatry services and their subspecialties, to provide for broad exposure to the many neurological complications of systemic diseases. An appreciation of the surgical management of disorders of the nervous system can be obtained by close liaison between neurology and neurosurgery services. Patients requiring care by both disciplines should be the joint responsibility of residents from both services.

Residents should have an adequate opportunity to acquaint themselves with the management technique of the physical medicine and rehabilitation service.

B. Psychiatry

Because of the intertwining of neurological and psychiatric problems in many patients, it is important that residents in neurology have adequate training in psychiatry. Residents must be acquainted with the symptomatology and differential diagnosis of the more frequently encountered psychiatric syndromes, particularly those associated with lesions of the nervous system. The residents must become aware of the psychological aspects of the patient-physician relationship and the importance of personal, social and cultural factors in disease processes and their clinical expression. Knowledge of the use and complications of drugs used in psychiatry is essential. Time spent on a psychiatric in-patient and out-patient service with proper supervision, availability of liaison psychiatrists on the neurology service and close contact of residents from both disciplines in the care of patients is extremely valuable in acquiring these skills.

BASIC SCIENCE

Well trained neurologists must have an adequate background in those basic sciences upon which clinical neurology is founded. These include: neuroanatomy, neuropathology, neurophysiology, neuropsychology, neurochemistry, neuropharmacology, as well as the application of genetics and epidemiology to neurological disorders. They should acquire familiarity with principles of normal and abnormal personality development. Since it is not possible for residents to spend time in each of these subdisciplines within the three year period of residency, the particular resident's capabilities and needs must be considered. An extensive exposure in one or more of these areas is desirable for each resident. Didactic courses in all or some of the basic sciences are important for providing an overall review and understanding of the field. A particularly good way for the resident to review the basic sciences is to participate in the teaching of basic science courses offered in the medical school.

There should also be organized instruction in the clinical sciences relating to neurology. This is often best obtained
Nuclear Medicine

by participating in and performing laboratory procedures and attending instructional exercises in which clinical correlations with laboratory data are emphasized. The resident should be kept informed of major developments in both the basic and clinical sciences relating to nuclear medicine, usually best presented by periodic seminars, journal clubs, lectures, didactic courses and attendance at local and national meetings.

LIBRARY ACCESSIBILITY

Because of the great diversification in the neurological sciences, the library needs are great, covering not only clinical texts, monographs and journals in clinical neurology but also the basic neurosciences and behavioral sciences. While it may be impossible for a department to maintain a large collection outside of the general medical library, essential references should be maintained and be accessible.

CLINICAL FACILITIES AND TRAINING

Clinical facilities must be adequate. It is desirable that neurology patients be assembled in one area to enhance patient care and proper training. There should be adequate outpatient facilities, examining areas, conference rooms, and research and clinical laboratories. There is no set rule to the number of patients necessary for each resident. It is the program director's responsibility to see that the number of patients is adequate. They must be diversified as to age and sex, short term and long term neurologic problems, and inpatients and outpatients.

NUMBER OF RESIDENTS

The exact number of residents which may be appointed to a given program, and the exact number of full or part-time staff required to operate the program, is not specifically designated. However, the program must maintain a sufficient number of residents and staff to provide the "critical mass" needed to promote an intellectually stimulating educational atmosphere for the residents and a broad base of clinical expertise among the staff. Likewise, the available patient cases must be neither too large nor too small to provide a sound educational program. Programs that fail to recruit new residents for two consecutive years will be subject to negative action.

TEACHING STAFF

The program must have a sufficient number of qualified staff with competence in general neurology, and preferably, an area of special and recognized interest. It is desirable that the educational function and training background of the staff provide diversity of ideas in meeting the goal of providing service, teaching and research.

SPECIAL TRAINING FOR CHILD NEUROLOGISTS

Training in child neurology should be conducted only in a setting where accredited programs in both neurology and pediatrics already exist and should be integrated into the three-year program in neurology.

During the period of training, residents in a neurology training program should have experience in the special problems involved with both history taking and neurological examination of infants and newborns. Special attention should be devoted to training in the detection of congenital malformations, preinfectious, genetic, and hereditary metabolic and degenerative diseases of childhood.

The required two years of general pediatric residency, for residents seeking training in child neurology, should be designed to provide the resident with a wide variety of experiences in the care of sick children, including required rotation in a newborn nursery.

Residents should be assigned to a child neurology service under the supervision of a director who is suitably trained and experienced to oversee the work of the residents in both primary patient care responsibility and in consultation with both medical and surgical pediatric subspecialties, including a general and newborn intensive care unit. The program should provide for increasing responsibility and continuity of patient care.

It is assumed that the resident will have gained some insight into surgical neurology in his general training and so it is assumed that the setting for training in child neurology will include an active neurosurgical service. An opportunity should also be afforded the resident to study problems of growth and development, mental and learning disabilities and gain an understanding of psychiatric diseases in children.

One measure of the quality of a program may be the performance of its residents on the examinations of the American Board of Psychiatry and Neurology.

GENERAL REQUIREMENTS

The provisions of the general requirements must also be met for approval.

Effective: January 1983  ACGME: September 1982

11. Special Requirements for Residency Training in Nuclear Medicine

I. INTRODUCTION

Accredited residency training has been available in the field of nuclear medicine since 1975. The Residency Review Committee for Nuclear Medicine consists of appointees of the AMA Council on Medical Education, the American Board of Nuclear Medicine, and the Society of Nuclear Medicine, who are qualified physicists from the backgrounds of diagnostic and nuclear medicine, biology, and other recognized medical specialties.

II. GENERAL CONSIDERATIONS

A. A good residency program in nuclear medicine requires the support of strong services in other specialties, notably medicine, surgery, radiology, and pathology. Other clinical training resources should be such that the total number of residents is large enough to permit intellectual exchange and sharing experiences within and without the nuclear medicine program.

B. A training program in nuclear medicine must have a single parent institution. Affiliations with other hospitals should be based on the value of such affiliation to the training program as a whole.

C. The general criteria for approval for residency training are both qualitative and quantitative. Qualitative considerations include the qualifications of the director of nuclear medicine training; qualifications of the nuclear physicians, basic scientist associates and technologist assistants; the supervision of the work of the trainees; the quality of the educational experiences; and the accuracy, appropriateness and completeness of the nuclear medicine training performed.

D. Quantitative considerations include the number of procedures and tests and their relationship to the size of the medical center. Also considered will be the diversity and completeness of studies performed; the space and equipment of the nuclear medicine facilities; and the number of medical and nonmedical personnel in relation to the volume of work.

III. DURATION OF TRAINING

A. A minimum of four years of residency training is considered necessary to train a physician in the specialty of nuclear medicine. This training should include at least two years of satisfactory preparatory residency training in programs accredited or acceptable by ACGME. Such programs shall provide broad experience in clinical medicine in which the primary emphasis is on the patient and the patient's clinical problems. The satisfactory completion of the equivalent of an accredited Transitional Year program is recommended as the minimum primary patient care experience. Preparatory training may, or may not, be within the specialties of radiology, pathology or internal medicine. It is recommended that the preparatory postdoctoral training precede training in nuclear medicine.

B. In addition to the preparatory residency training programs, residents must complete a satisfactory manner a two-year residency training program in nuclear medicine.
IV. SCOPE OF TRAINING
A. The training program in nuclear medicine should include the diagnostic, therapeutic, and investigational uses of radionuclides. It should be of sufficient breadth to insure that all residents become thoroughly acquainted with the techniques and methodology of the major nuclear medicine diagnostic and therapeutic applications. The training experience should assure ample opportunity to attain competence in correlating the patient's problem with the optimum selection of nuclear medicine studies, performing these studies, interpreting the information obtained, correlating this information with other diagnostic studies, and following up patients receiving radionuclide therapy. The resident staff should directly participate in the performance of a sufficient number and wide variety of studies (imaging, non-imaging and therapy) under adequate staff supervision.

B. Residents should be familiar with methods of investigation and should be encouraged to participate in research, particularly as it relates to developing or evaluating instrumentation and radiopharmaceuticals, radiobioassays or radiomimounoassay advances, and the utility of new radionuclides or radiopharmaceuticals.

V. PROGRAM CURRICULUM
A. Structure
1. Didactic Presentations:
   Didactic instruction for both imaging and non-imaging applications must be well organized, thoughtfully integrated, and carried out on a regularly scheduled basis.
   2. Laboratory and Practical Experience:
      Exposure to the basic sciences should not be limited to didactic instruction even when clinically related. The resident's activities should include laboratory experience and regular contact with basic scientists in their clinical adjunctive roles.
   3. Patient Management and Consultation:
      a) At the completion of the entire training program, residents should have a sufficiently broad knowledge of medicine to obtain a pertinent history, perform an appropriate physical examination, and to arrive at a differential diagnosis. Residents should be able to plan and perform appropriate nuclear medicine procedures, to interpret the results, and to make a logical diagnosis. They should be qualified to recommend therapy or further studies. If radionuclide therapy is indicated, they should be capable of assuming responsibility for patient care.
      b) Supervision of the residents in this part of their nuclear medicine training is very important. The program should be structured so that the resident's direct responsibility increases progressively during training. At the completion of training, the resident should be knowledgeable in the relevant aspects of clinical medicine and patient care, and be able to serve as consultant to referring physicians in interpreting data, in choosing optimum nuclear medicine procedures, and in explaining the meaning, limitations and complications of such procedures.

2. Conferences and Seminars:
   a) All residents must participate in regularly scheduled clinical conferences in which the resident is responsible for presenting case material and discussing the relevant theoretical and practical issues.
   b) There should be active resident participation in well-structured seminars which review the pertinent literature with respect to current clinical problems and which discuss additional topics to supplement the didactic curriculum.

3. Teaching Case Files:
   Teaching case files involving diagnostic and therapeutic nuclear medicine procedures should cover the full spectrum of clinical applications; they should be indexed, coded with correlation and follow-up data, and readily accessible for resident use.

4. Resident Evaluation:
   It is essential that the program director regularly evaluate the clinical competence of the residents. This evaluation should concern itself not only with intellectual abilities and manual skills, but also with attitudes and interpersonal relationships. Included should be observation of the resident performing specific tasks such as image interpretation, taking a history and performing a physical examination, choosing diagnostic studies, formulating patient management and communicating effectively. Residents should regularly be made aware of their progress and particularly of any weaknesses. These records must be maintained on file and discussed with and shown to the individual resident.

5. Content
   The training program should provide educational experience in the following areas:
   1. Physical Science: Structure of matter, modes of radioactive decay and particle and photon emissions, and interactions of radiation with matter.
   2. Instrumentation: Nuclear medicine instrumentation, with special emphasis on the gamma scintillation cameras, radiation detector collimation, associated electronic instrumentation and computers, and image production and display.
   3. Mathematics, Statistics, and Computer Sciences including probability distributions, medical decision making, basic aspects of computer structure and function, programming and processing.
   4. Radiation Biology and Protection: Biological effects of ionizing radiation; means of reducing radiation exposure; calculation of the radiation dose, evaluation of radiation overexposure, medical management of persons overexposed to nuclear ionizing radiation, management and disposal of radioactive substances, establishment of radiation safety programs in accordance with federal and state regulations.
   5. Radiopharmaceuticals: Production of radionuclides, radiochemistry, pharmacokinetics and formulation of radiopharmaceuticals.
   6. Diagnostic Uses of Radionuclides: Clinical indications, technical performance and interpretation of in vivo imaging and function studies using radionuclides; use of scintillation cameras and external detectors; physiologic gating techniques; patient monitoring during intervention studies, and an understanding of the relationship between nuclear medicine procedures and other pertinent imaging modalities such as computed tomography, ultrasonography, and nuclear magnetic resonance imaging.

7. In Vitro Studies: Methodology and quality control of competitive binding and radiomimounoassay procedures; principles of activation analysis and autoradiography.

8. Therapeutic Uses of Radionuclides: Patient selection, dose administration, including dosimetry, and specific applications.

VI. PROGRAM ORGANIZATION AND RESPONSIBILITIES
A. The director of the program must be a qualified physician, certified by the American Board of Nuclear Medicine or possessing suitable equivalent qualifications, and must devote most of his/her professional time to the conduct of the residency training program and the supervision of nuclear medicine services. The program director's tenure should be long enough to assure continuity to the program.

B. The professional staff who participate in the program must be qualified nuclear medicine physicians and basic scientists. It is essential that they be trained in their subspecialties; have experience, interest and competence in resident teaching; devote adequate time to teaching activities; participate in their own continuing education; engage in scientific presentations; and have an active interest in research.

C. The program director must notify the Secretary of the Residency Review Committee of any changes as they occur which might significantly alter the educational experience, such as a change in program director, change in institutional affiliation, or a change in the number of residency positions offered.
VII. PROGRAM REQUIREMENTS

A. The medical facility and patient population of the institution or institution offering a residency program in nuclear medicine should be of such size and composition as to provide an ample and varied patient population. The program should provide an opportunity for residents to study and participate in all aspects of clinical nuclear medicine, including nuclear medicine diagnosis, and patient treatment and follow-up. The number of nuclear medicine physicians and the employees of the staff must be large enough to carry out the workload of the facility, as well as to carry out the teaching responsibilities. There must be a mechanism for maintaining case records and treatment results to facilitate patient follow-up and to provide teaching material. Adequate space must be available for educational, clinical and research functions of the nuclear medicine program. The institution or institutions should have other residency programs to provide an opportunity for interaction among residents in the various medical disciplines.

B. While minimum requirements may vary from one training program to another, a well designed program will usually perform annually at least 4,000 nuclear medicine imaging procedures; 10,000 in vitro procedures; 500 in vivo kinetic and body composition procedures; and 20 radionuclide therapeutic procedures. These procedures should be distributed over the full spectrum of nuclear medicine practice, including the pediatric age group.

C. The ratio of teaching staff to residents shall be sufficient to assure adequate clinical supervision and the teaching of the basic sciences. There should be a clinical workload adequate to the needs of residency training attempted.

VIII. LIBRARY

Residents should have ready access to a medical library with a representative collection of books and journals related to the specialty of nuclear medicine. Where appropriate there should be an interlibrary loan system through the facilities of a nearby resource or regional medical library such as a medical school or national library.

IX. RECORDS

Program directors should be familiar with the “General Requirements” of the “Essentials of Accredited Residencies,” including those relating to maintaining a personal record of each resident. It is anticipated that this record would include a record of clinical duty assignments and personal evaluations by attending staff supervising the resident. All records relating to the individual resident’s training experience should be preserved and made available to the Residency Review Committee if requested. Confidentiality regarding individual residents will be maintained in any review.

X. OTHER

A. The provisions of the “General Requirements” also must be met for approval.

B. Residents who plan to seek certification by the American Board of Nuclear Medicine should communicate with the office of that Board regarding the fulfillment of requirements for certification.

C. Programs that fail to recruit residents for at least three consecutive years will be subject to withdrawal of accreditation.

Effective: July 1986  ACGME: February 1986

12. Special Requirements for Residency Training in Obstetrics-Gynecology

A. The residency programs in obstetrics-gynecology should constitute a structured educational experience, planning in continuity with undergraduate continuing medical education, in the health care area encompassed by this specialty. While such residency programs contain a patient service component, they must be designed to provide education first and not function primarily to provide hospital service.

B. An educational program in obstetrics-gynecology must provide opportunity for increasing responsibility, appropriate supervision, formal instruction, critical evaluation and counseling for the resident.

C. The program in basic obstetrics-gynecology must provide in hospital and ambulatory training. It must include, but not necessarily be limited to, experience in the full range of obstetrics, including high-risk obstetrics, obstetrical anesthesia, immediate care of the newborn, the full range of gynecologic surgery, gynecologic oncology, gynecologic surgical pathology, non-surgical management of breast disease, reproductive endocrinology and infertility, family planning, emergency medicine, psychosexual and psychosomatic counseling, genetics, medical jurisprudence, and the full range of commonly accepted diagnostic procedures.

For those residency programs associated with post-residency fellowships, the education of fellows must not compromise the experience of residents.

I. TYPES OF GRADUATE PROGRAMS

The Residency Review Committee for Obstetrics-Gynecology, for the purpose of monitoring the structure of residencies, uses the following categories. In all cases, where more than one institution is involved, a formal written agreement must be developed between the responsible administrative bodies of those institutions.

A. Independent

An independent program is conducted within a single educational institution under a single program director. Extramural rotations for a total of no more than six months are permitted under the regulations applied to all programs (see below).

B. Integrated

An integrated program is conducted within multiple educational institutions but under a single program director. Each educational institution must have the overall quality and level of supervision and the educational requirements demanded of an independent program. The residents may rotate at any level, including the final senior resident year. The program director must have authority over the educational program in each hospital, including the appointments and assignments of all teaching staff and all residents and must assure the uniformity of the educational experience for each resident.

Additional extramural rotations for a total of no more than six months are permitted under the regulations applied to all programs (see below). These rotations will be for a total of more than six months for any resident, at institutions other than those included in the integrated program, that program becomes an affiliated program.

C. Affiliated

An affiliated program is one in which any resident spends a total of more than six months in extramural rotations outside of the parent institution (institutions in the case of integrated programs). Extramural rotations may be arranged by the program director of either an independent or integrated program in order to enhance the educational experience of the residents. Only under exceptional circumstances, and with written prior approval of the Residency Review Committee, may they be included in the final senior resident year. Residents are appointed by their parent program and the entire program must receive prior approval by the Residency Review Committee. Rotation for a total of six months or less will not require that the program be designated as an affiliated program and these
II. LENGTH OF GRADUATE MEDICAL EDUCATION

A. A resident must have a minimum of four years of approved clinically oriented graduate medical education, of which at least three years must be entirely in the specialty of obstetrics-gynecology. Residency programs preceded by a year of training sponsored by the program may contain more trainees in that year than the number being approved for each year of specialty training. Residency programs may, therefore, be of three or more years duration, but programs of different lengths or quality in the same institution will not be approved.

B. A program director, under suitable circumstances, may elect to credit a resident with a period of graduate training in obstetrics and gynecology gained by the resident before entering the program. The period of training must have been of four or more months in duration and must have been received in a hospital conducting a currently approved residency in obstetrics-gynecology. This time may then be used to provide time, within the thirty-six months of obstetrics-gynecology, for appropriate elective or other clinical services. It may not be used to shorten the total length of the residency program.

C. The Residency Review Committee has the responsibility for the review of all graduate education programs in obstetrics-gynecology seeking accreditation. If a program includes sponsorship of a first graduate year experience, then the Residency Review Committee has the responsibility for review of that first graduate year training.

III. TYPES OF FIRST GRADUATE YEAR

A. Programs differ widely in the types of experience they offer to physicians entering the first year of graduate training. Many programs include rotations to other clinical services, such as medicine, surgery or neonatology. Other programs, however, offer predominantly experience in obstetrics-gynecology but may provide elective time later in the residency for rotations to other clinical services.

B. The specific definition given to the first year of graduate training, as described in the General Requirements, depends on the content of the training and the administrative structure developed for implementing and supervising the experience.

IV. NUMBER OF RESIDENTS

A. The number of residents that can be adequately and responsibly trained depends on several interrelated factors. The provision of adequate supervision, education, individual evaluation and administrative support is critical. With this, it is of utmost importance that each resident have sufficient independent operative and clinical responsibilities to prepare for practice in the specialty.

B. Increasing responsibility must progress in an orderly fashion, culminating in a senior resident year. The senior resident year consists of twelve months of clinical experience, in the last year of the resident's program. Elective time in the senior resident year requires the prior approval of the Residency Review Committee. The senior resident must have sufficient independent operating experience to become technically competent and have enough total responsibility for management of patients to insure proficiency in the diagnostic and treatment skills that are required of a specialist in obstetrics-gynecology in the hospital setting.

C. Clinical involvement alone does not constitute an educational experience. It is also very important that each program have a dedicated program director with an interested and competent teaching faculty sufficient in number and quality to be able to supervise and instruct the residents at all levels and in all of the practice areas of the specialty.

D. The maximum number of residents in a program is linked to the number of positions in the specialty. The framework of the above requirements. Since one of the most important considerations is the clinical experience available to give each resident adequate primary responsibility, and since this usually centers upon the senior resident year, the maximum number of residents in a program depends upon how many senior residents the program can educate. Usually the maximum number of residents in a program is the number of senior residents the program can accommodate multiplied by three or four, depending upon the length of the program.

E. The minimum number of residents in a program requiring consideration. Residency programs with a planned complement of only one resident in each of three or four years may not sustain the critical mass necessary to keep the program vital and can rarely maintain approval. There must be a potential for development into a program with two or more residents at each level.

F. Accreditation is granted on the basis of a balance between the educational resources and the number of residents in the program. The appointment of residents in excess of the approved number may adversely affect the quality of the total experience of each resident. Therefore, changes in the educational resources should be reported to the Residency Review Committee and proposed increases in the number of residents must first be approved in writing by the Residency Review Committee.

G. All requests for increase in the resident complement must be based not only on the availability of an adequate patient population but also on adequate resources for supervision, education and evaluation. A request for a change in the number of residents must describe the impact of total experience upon each of the senior residents under the new circumstances. The request will be considered incomplete if it lists only expansion in beds, hospitals, or overall clinical experience and does not address the question of expansion of faculty and administrative support necessary to teach, supervise and evaluate the additional residents. Conversely, a reduction in beds, hospitals or other changes in the program which may lead to an anticipated decrease in total experience for the residents, must be promptly called to the attention of the Residency Review Committee to determine if a reduction in the number of resident positions in a given graduate medical program is necessary.

V. PROGRAM DIRECTOR AND FACULTY

A. An obstetrics-gynecology training program must have an attending staff with professional ability, as well as enthusiasm, dedication and a sense of responsibility for teaching. It should be well for the program to regard these attributes as a prerequisite to active faculty membership and promotion. The performance of the faculty must be reviewed periodically.

B. The program must exist in an educational environment which includes other relevant graduate medical education programs in the institution(s), such as internal medicine, pediatrics and surgery.

C. The program director must be able to provide a significant time commitment to the residency program, demonstrate the ability to organize and direct the teaching program, and maintain a quality teaching staff. The program director is specifically responsible for all communications with the Residency Review Committee, and must report any major change in the residency program. Further, the program director has the responsibility of verifying that residents have satisfactorily completed the program and are prepared to enter specialty practice.

D. It is desirable that the program director and the chief of service of the department be Diplomates of the American Board of Obstetrics and Gynecology. In the absence of such certification, the Residency Review Committee may approve programs in which these individuals have suitable equivalent qualifications and a high professional standing in the specialty.

E. Assignment of the responsibilities for the resident training by the program director should be clearly defined. To assure continuity of teaching efforts and departmental policy, the program director should have a reasonable tenure...
Obstetrics-Gynecology

of office. The Residency Review Committee should be notified of any change in program directors.

V. GRADUATE TEACHING

A. Every program, in order to be approved, must have a written statement of the educational objectives for the residents in that program. One example of such objectives is set forth in the current "Educational Objectives for Residents in Obstetrics and Gynecology." Directors of programs must be able to document that they are reviewing the implementation of the educational objectives and that the residents are indeed accomplishing what is anticipated of them. Any program which does not establish a system which clearly demonstrates that each resident has or has not successfully accomplished each of the items indicated in the program's statement of educational aims and objectives cannot be considered to be an adequate program.

B. The program director must establish methods of periodically and systematically evaluating and documenting the level of performance, experience and technical skills of the residents. One example of an acceptable mechanism helpful in evaluating cognitive knowledge is the CREOG In-Training Examination. On a regular basis, program directors or their designees must inform the residents of their individual progress in optimizing their evaluations and offering guidance with regard to correcting deficiencies. These evaluations, as well as a list of skills which the resident has mastered, must be documented and available (without revealing the specific resident's identity) at the time the program is reviewed for approval.

C. Formal teaching activities in obstetrics-gynecology should be structured and regularly scheduled. They should generally consist of patient rounds, case conferences, journal clubs and coverage of appropriate basic sciences pertinent to the specialty. In cross-disciplinary conferences, such as perinatology, appropriate physicians from other specialties should be invited to participate.

D. The patient population available to the training program should provide a variety of operative experiences in obstetrics-gynecology. While quality of the surgery in a hospital is more important than the actual number of cases, and while there is a great value to a resident in acting as an assistant to a skilled and experienced obstetrician-gynecologist, it is also essential that the resident gain experience in management of patients by personal evaluation of the signs and symptoms, physical and laboratory findings leading to a diagnosis and decision for therapy as well as the performance of technical procedures. An acceptable residency program in obstetrics-gynecology must be able to provide substantial, diverse and appropriate surgical experience after the residents have mastered the basic skills.

E. For the purpose of program review, accurate and complete documentation of each individual resident's experience for each year of training is mandatory. These records should indicate the level of participation of the resident and skills achieved. The program director must review at least semi-annually the record of operative experience with the individual resident for breadth and depth of experience as well as for evidence of continuing growth in technical achievements. These cumulative data will be reviewed in detail at the time of survey for program approval or continued program approval. For the purposes of these records, there is no distinction between private and service patients.

F. Complete management of a patient's care under adequate supervision should be considered the highest level of training. There are, however, circumstances under which the trainee may not assume complete management:

1. When the program director or his designee does not believe the trainee's expertise or understanding is adequate to insure the best care of the patient.
2. When the attending physician is not willing to delegate the necessary degree of responsibility.
3. When the trainee for religious or moral reasons does not wish to participate in the proposed procedures.

G. An essential feature of resident education is that a significant number of staff support the principle of delegation of complete management under supervision.

H. A medical library is an important resource to the obstetrics-gynecology training program. The library may be sponsored by the hospital or the department, but it should be readily accessible to staff, both during the day and in the evening. The textbooks should be kept up to date, and there should be an ample supply of current journals devoted to obstetrics-gynecology and related subjects. When a comprehensive library is not available in the hospital, an active reference system should be provided through ready access to larger medical libraries.

I. The fundamentals of good medical history taking and thoughtful, meticulous physical examination should be taught. Information gained by these procedures must be carefully recorded in the medical record. A reliable measure of the quality of a program is the quality of hospital records. These records should include daily appropriate progress notes by both trainees and attending staff, as well as a discharge summary. The hospital should maintain a record room with adequate cross indexing and ready reference for study of the patients' charts. Periodic summaries of department statistics are essential for evaluation of results and usually will be requested at the time a program is reviewed by the Residency Review Committee.

J. Knowledge of obstetric and gynecologic pathology is essential. Therefore, assignment to general and obstetric and gynecologic pathology may be arranged in such a way that the resident retains at least part-time contact with clinical obstetrics and gynecology (night and weekend duty, for instance), in order to fulfill the minimum clinical requirements. While much value also may be gained from assignment to other clinical services, in general such additional formal rotations are feasible only in programs of more than three years duration, as such rotations cannot be counted as a formal part of the required thirty-six months of clinical experience in obstetrics-gynecology.

K. A resident in obstetrics-gynecology should receive education and experience in the use of radiotherapy and chemotherapy for malignant diseases. Since such experience is also desirable for other residents, some system of sharing in the care of patients with pelvic malignancies should be achieved.

L. It is not required, but nevertheless highly desirable, that every program encourage a research project for each resident, but it may not detract from or be a substitute for the assignment to clinical services. An active departmental research environment is a useful educational experience, whether or not the individual resident participates directly.

M. Since obstetricians-gynecologists function as providers of comprehensive care for women, experience in the care of ambulatory patients is essential in training programs. The ratio of outpatient visits to admissions for operations should be evidence of this emphasis. Since many of the patient problems seen in the hospital outpatient department are comparable to those seen in office practice, it is essential to provide a closely supervised experience in an active outpatient setting that also insures a continuity of care for patients by the individual resident. Increasing responsibility should be given to the resident under the conscientious guidance of a qualified attending staff member.

N. It is not essential or desirable that all training programs be identical in structure or function. It is, however, mandatory that each residency program provide quality education and experience for each of the residents completing the program.

O. One significant measure of the quality of a program is the performance of its graduates on the examinations of the American Board of Obstetrics-Gynecology.
SEEK CERTIFICATION BY THE AMERICAN BOARD OF OBSTETRICS AND GYNECOLOGY SHOULD COMMUNICATE WITH THE SECRETARY OF THE BOARD TO OBTAIN THE LATEST INFORMATION REGARDING CURRENT REQUIREMENTS FOR CERTIFICATION.

EFFECTIVE: JULY 1986  ACGME: JUNE 1986

13. SPECIAL REQUIREMENTS FOR RESIDENCY TRAINING IN OPHTHALMOLOGY

I. INTRODUCTION
A. The "SPECIAL REQUIREMENTS FOR RESIDENCY TRAINING IN OPHTHALMOLOGY" set forth the educational prerequisites for training and the content of a residency training program in ophthalmology must possess, including the duration of training, institutional support and administration, faculty, educational program, patient resources, and facilities.
B. Residency training programs in ophthalmology should be organized to provide a stable, well-coordinated progressive educational experience for the resident rather than simply to provide health care to patients.

II. PREREQUISITES
A. A first postgraduate clinical year (PGY-1) in an accredited program or equivalent training is required of all candidates entering ophthalmology training programs. As a minimum, six months of the year should provide a broad experience in direct inpatient care.

III. DURATION OF TRAINING
A. The length of training in ophthalmology must be at least 36 calendar months, including appropriate short periods for vacation, special assignments, or exceptional individual circumstances approved by the program director.
B. The length of time of residency training for a particular resident may be extended by the program director if a resident progresses satisfactorily but at a slower pace than provided by the standard rotation.

IV. INSTITUTIONAL SUPPORT AND PROGRAM ADMINISTRATION
A. General
The institution must ensure that the program directors are granted sufficient authority, financial support, and facilities by the governing body of the sponsoring institution to permit them to organize and supervise the following activities of the training program: resident selection, evaluation, instructional program, patient management, research, and initiation of recommendation for staff recruitment.
B. Qualifications of the Program Director
1. The program director must be a qualified ophthalmologist, who is either certified by the American Board of Ophthalmology or is judged by the Residency Review Committee to possess suitable equivalent qualifications. The term of appointment of the program director must be adequate to ensure stability and continuity of the program.
2. The program director who serves as administrator, educator, and research coordinator must devote sufficient time to the administration and conduct of the residency training program so that the educational experience for the residents is satisfactory. The Residency Review Committee for Ophthalmology will evaluate the overall effectiveness of the program director as an administrator, educator, and research coordinator.
C. Administrative Responsibilities of the Program Director
1. The program director, with the support of the institution, must develop and maintain current documentation of institutional or inter-institutional agreements, resident agreements, patient care statistics, faculty evaluations, and assessment of resident performance. This documentation must be provided to the Residency Review Committee in the Hospital Information Forms supplied by the Committee Secretary.
2. The program director is responsible for notifying the Executive Secretary of the Residency Review Committee of any changes in program director and/or departmental chairman; formal affiliation with another institution; required rotation to any institution other than the parent institution or institutions integrated into the programs; and the number of resident positions offered.
3. A proposed change in the number of resident positions offered at any level of training or in the total number of resident positions offered and a required rotation of four months or more to any institution other than the parent institution, must receive prior review of the Residency Review Committee to determine whether adequate resources exist to train the number of residents contemplated, to determine whether an adequate balance exists between educational opportunity and clinical responsibility and to determine the educational justification of the proposed rotation.

V. THE TEACHING FACULTY
A. The faculty should possess good clinical and teaching skills. The faculty must devote adequate time to the education of residents. The faculty must have a broad range of subspecialty expertise. Such expertise will usually be acquired by subspecialty fellowship training.
B. Faculty members should be certified by the American Board of Ophthalmology or possess suitable equivalent qualifications.
C. As a general rule, there should be sufficient faculty in the program to provide a minimum of approximately one full-time equivalent faculty person for every three residents in the program.

VI. MINIMUM RESIDENT COMPLEMENT
The Residency Review Committee recognizes the importance of interaction among trainees themselves as well as between faculty and trainees in the conduct of conferences and patient care. A critical mass or minimum number of residents is essential in order to provide an opportunity for meaningful interaction throughout the training period. Each program must be structured to have a minimum of two residents in each year of training.

VII. PARTICIPATING INSTITUTIONS
A residency program in ophthalmology must have a designated parent institution where the majority of the required clinical and didactic educational experiences occur and are coordinated by the program director. Affiliations with other institutions may sometimes be desirable in order to provide complementary educational experiences for the residents. Programs that depend on rotations to hospitals other than the parent institution must submit documentation that the following criteria are being fulfilled:
A. Purpose
There must be a clear statement in the narrative section of the Hospital Information Forms regarding the purpose of each participating institution, indicating how they enhance the total program, and how they are coordinated with the other components of the overall educational experience.
B. Local Director
There must be a designated local director of the program at each participating institution. The program director must appoint or be consulted in the appointment of the local program director, and this arrangement must be documented in writing by the appropriate individuals at each institution. There must be evidence of ongoing coordination of the various components of the overall program which would include planning of the rotations, evaluation of residents, and evaluation of each institution by the residents.
C. Physical Facilities
The program director should assure that the physical facilities of each participating institution, including outpatient clinic, inpatient facilities, operating rooms, and their respective equipment, meet the "SPECIAL REQUIREMENTS."
D. Educational Experiences
1. The program director is ultimately responsible for the schedule and composition of the residents' rotations at each participating institution, as well as the extent of faculty supervision on the clinical services and in the operating room.
2. The program director is ultimately responsible for the content and quality of didactic lectures and conferences, and must assure that these are coordinated with the overall ed-
ucational activities of the program. Sample schedules must be submitted along with those from the parent institution.

3. If the participating institution is sufficiently remote from the parent institution to prevent regular attendance by residents at the didactic and clinical conferences at the parent institution, or if the rotation otherwise prevents such attendance, the program director must demonstrate that each resident is exposed to a formal educational experience that fulfills the "Special Requirements."

4. Local grand rounds should be included at each participating institution to assure optimal utilization of patients for teaching purposes; alternatively, there should be an opportunity to bring patients from participating institutions to the parent institution for presentation if grand rounds are held only there.

5. The program director must assure that all residents have equivalent educational experiences.

6. Rotations to foreign countries shall not be used to meet minimum educational standards.

VIII. EDUCATIONAL PROGRAM

The program director is responsible for the structure and content of the educational program and must provide the Residency Review Committee with a statement of objectives, methods of implementation, and procedures for assessment of the program by the faculty and the residents. The educational experience must be designed and supervised by the program director. The educational program should include:

A. Didactic Instruction in the Basic and Clinical Sciences

Residents should be educated in basic and clinical sciences through lectures and/or regularly scheduled discussions relevant to the practice of ophthalmology. Regularly scheduled required lectures or seminars should be held at the parent institution. The didactic curriculum must encompass a minimum of 360 hours of instruction for residents during the 36 month training program, at least 240 of which must be intramural. The program director is responsible for documenting resident attendance at conferences.

B. Case Presentations and Clinical Conferences

A minimum of eight hours per month should be devoted to regularly scheduled case presentations and clinical conferences attended by faculty and a majority of residents.

C. Pathology

The training experience in ocular pathology should be comprised of continuing intramural lectures, clinicopathological conferences and a minimum of 50 hours of laboratory experience in gross and microscopic examination of pathological specimens. This latter experience with a qualified pathologist may take place intramurally or extramurally at a laboratory considered by the Residency Review Committee to be capable of providing such training. If utilized, this extramural effort should occur during the 36 months of residency training, preferably early in the program, and would not be considered to be a substitute for the continuing intramural program. A short exposure to opthalmic pathology at a remote course may supplement this training but will not be considered as a substitute for the pathology requirement.

D. Clinical Experiences

The volume and variety of clinical ophthalmological problems in children and adults must be sufficient to afford each resident a graduated supervised experience with the entire spectrum of ophthalmic diseases so that the resident may develop diagnostic, therapeutic, and manual skills and judgment as to their appropriate use.

1. Out-patient Experience

a) Residents should be responsible for the care of an adequate number of outpatients during the course of training. The outpatient experience for a resident during the three year training program should consist of a minimum of approximately 5,000 patient visits appropriately distributed through a broad range of ophthalmic disease in adults and children. There must be appropriate faculty supervision in all visits. Direct faculty supervision should be present in at least two-thirds of all these visits. Residents should have major management responsibility under supervision in at least 2,000 of those visits.

b) A minimum of 1,500 of these patients should be refracted by the resident.

2. Surgical Experience

a) Residents should perform and assist at sufficient surgery to become skilled as general ophthalmic surgeons. For example, each resident's experience must typically include a minimum of 25 cataract procedures and 10 strabismus procedures which the resident has major technical and patient care responsibilities. Each resident should also have sufficient surgical experience (including laser surgery) in cornea, glaucoma, retina/vitreous opthalmic and trauma cases to provide a solid base for a general ophthalmic practice.

b) The program director is responsible for documenting the surgical experiences of each resident, to include the number of cases in each category where the resident has served as a primary surgeon, or the assistant surgeon. This documentation must be provided to the Residency Review Committee on its Hospital Information Forms and individual resident logs must be available at the time of the site visit.

3. Consultation Experience

Each resident should care for a minimum of 150 patients seen in consultation during the course of three years of training. The types of cases seen should cover a wide spectrum of ophthalmic diseases and ophthalmic manifestations of systemic diseases.

E. Fellowship Program

If the residency training program is conducted in conjunction with fellowship training programs for teaching advanced competence in specialized areas of ophthalmology, such fellowship programs must not adversely affect the experience of residents in the core training program.

IX. FACILITIES

A. Clinic

The outpatient area of each participating institution must have at a minimum one fully equipped examining lane for each resident in the clinic. There must be access to current diagnostic equipment. This should encompass equipment for ophthalmic photography (including fluorescein angiography), perimetry, ultrasonography, keratometry, retinal electrophysiology, and microbiology, as well as other appropriate equipment.

B. Operating Room Facilities

The surgical facilities at each participating institution in which residents are trained in surgery must include at least one operating room fully equipped for ophthalmic surgery, including an operating microscope.

C. Inpatient Facilities

There must be inpatient facilities with access to sufficient space and beds for good patient care. An eye examination room with a slit lamp should be available and conveniently located within or near the inpatient area of each participating institution.

D. Library

Residents should have access to a major medical library. In addition, there should be readily available a collection of ophthalmological and general medical texts, journals, films, records, and tapes.

X. OTHER

A. In its review and evaluation of training programs the Residency Review Committee for Ophthalmology may use the pass rate on the examinations of American Board of Ophthalmology for residents completing a particular program as one measure of the quality of that training program.

B. Training programs in ophthalmology should comply with all of the provisions of the "General Requirements."

C. Residents who plan to seek certification by the American Board of Ophthalmology should communicate with the Secretary of the Board regarding specific requirements for certification.

Effective: July 1987 AGME: February 1986
14. Special Requirements for Residency Training in Orthopaedic Surgery
Orthopaedic surgery is the medical specialty that includes the investigation, preservation, and restoration of the form and function of the extremities, spine and associated structures by medical, surgical and physical methods.

The Special Requirements for Orthopaedic Surgery detail the content and scope of the education and experience which a program must provide.

I. TRAINING PERIOD
A. An orthopaedic residency program may be accredited for four or five years of graduate medical education of which a minimum of three years of training must be in orthopaedic surgery.
B. An orthopaedic residency program may include one or more years of training in a broad-based accredited residency program such as general surgery, internal medicine, or pediatrics; however, the orthopaedic surgery program director must be responsible for the educational content of a minimum of four years of training, including the three years of training in orthopaedic surgery.
C. The first postgraduate year of training (PGY-1) shall not include more than three months of training in orthopaedic surgery.
D. An accredited program may include a maximum of twelve months of training in either clinical or laboratory research.
E. The organizational structure of the program must be such that:
   1. The program director designs the educational content of the residency program and is responsible for that training.
   2. A resident does not exceed six months of training in institutions in which training in orthopaedic surgery is not accredited by the ACGME.
   3. A resident does not exceed six months of training in orthopaedic surgery in another accredited orthopaedic residency program.
   4. All rotations in pediatric orthopaedics outside of the program must be approved by the Residency Review Committee, regardless of the duration of that training.

II. RESPONSIBILITIES OF INSTITUTIONS
A. Institutional Support
   The governing body of the institution should provide support for the program director in teaching, recruiting staff, selecting residents, and dismissing residents whose performance is unsatisfactory. The institution should demonstrate proper support for the program by encouraging continuity in the program directorship. Assurance of due process for residents and teaching staff should be demonstrated. In communities in which didactic programs of several residencies are combined, the staff of each accredited program must actively and consistently participate in the combined effort, and be capable of providing an adequate program if viewed alone.
B. Affiliation Agreement
   When the resources of two or more institutions are utilized for the clinical or basic science education of a resident in orthopaedic surgery, letters of agreement must be approved by the institutional governing boards. Affiliations should be avoided with institutions which are:
   1. at such a distance from the parent institution as to make resident attendance at rounds and conferences difficult, or
   2. which do not add to the educational value of the program.
   Clinical responsibility alone does not constitute a suitable educational experience.
C. Library Facilities
   Library facilities must have available current and past orthopaedic periodicals and reference books and should be readily accessible in the orthopaedic working arena of all participating institutions in the program.

III. PROGRAM ORGANIZATION AND RESPONSIBILITIES
A. Qualifications of the Program Director
   The program director should be certified by the American Board of Orthopaedic Surgery or possess suitable equivalent qualifications. The evaluator of such equivalency will be the Residency Review Committee. The program director may be the chairman of the department, division or section of orthopaedic surgery. The effectiveness of the program director will be considered by the Residency Review Committee.
B. Responsibilities of the Program Director
   1. The program director must arrange for the provision of adequate facilities, teaching staff, resident staff, teaching beds, educational resource materials, out-patient facilities, and research facilities.
   2. The program director is responsible for the selection of residents and must assure that the appointed residents meet the eligibility requirements listed under item 3 of the "General Requirements." The program director should monitor each resident's performance and progress in cognitive, judgmental, and technical skills aspects of orthopaedic surgery. It is the program director's responsibility to counsel, censure, and, after due process, to dismiss residents who fail to demonstrate appropriate industry, competence, responsibility, learning abilities, and ethics.
   3. In programs which offer postgraduate fellowships and instructorships, the program director should assure that such fellowships and instructorships do not compromise resident education.
   4. The program director must keep documentation of institutional and interinstitutional agreements, resident agreements, patient care statistics, and evaluations, including regular assessments of resident performance. These documents must be provided upon request to the Residency Review Committee or site visitor.
   5. The program director must notify the Secretary of the Residency Review Committee of any change which might significantly alter the educational experience. Examples of such changes are:
      a. Change of program director;
      b. Major changes in institutional affiliation. Any change in formal affiliation with an institution where a resident spends six months or longer requires prior approval by the Residency Review Committee;
      c. Extension of resident education period. A program director may retain a resident longer than the duration for which the program is accredited in orthopaedic surgery so that the resident may achieve sufficient competence in the specialty. The Residency Review Committee must be notified of such intention;
      d. A change in number of residents. Any change in the number of residents at any level of training or change in the total number of residents must receive prior approval of the Residency Review Committee.
C. Responsibilities of the Teaching Staff
   1. It is the responsibility of the teaching staff to insure that the structure and content of the of the residency program should reflect the education-to-service ratio that identifies the resident as a student and provide adequate experience in preoperative and postoperative, as well as intraoperative management. This responsibility must include direct supervision of the resident in operative, inpatient, outpatient and emergency cases and participation in patient care conferences and other training exercises.
   2. There must be sufficient staff available to supervise

Program directors are referred also to the "General Requirements" of the Essentials of Accredited Residencies for further explanation of the requirements for program organization and responsibilities of the program director and the staff.
ESSENTIALS OF ACCREDITED RESIDENCIES

Orthopaedic Surgery

and instruct residents at all times. The teaching staff must
demonstrate sufficient commitment in time and energy to
fulfill the teaching assignments.

3. The teaching staff must participate in appropriate sci-
centific societies, pursue their own continuing education, and
develop an active interest in related research.

D. Number of Residents
When reviewing a program for accreditation, the Resi-
dency Review Committee will approve a total number of res-
idents to be trained in the program by training year. That
number will be based primarily upon the number, qualifica-
tions, and commitment of the faculty, the volume and var-
ety of the patient population available for educational
purposes, and the quality of the educational offering as well
as on the totality of institutional resources. It is important
that the resident complement is sufficient in number to sus-
tain an educational environment.

IV. ELIGIBILITY, SELECTION, RETENTION AND
DISMISSAL OF RESIDENTS
Program directors are referred to the "General Require-
ments" of the Essentials of Accredited Residencies for guid-
ance on these issues.

V. SCOPE OF CLINICAL, BASIC SCIENCE, AND
RESEARCH EXPERIENCE

A. Clinical Resources
Clinical problems must be of sufficient variety and vol-
ume to afford the residents adequate educational experience
in diagnostic, therapeutic, judgmental, and manual skills in
adult orthopaedics, pediatric orthopaedics, fractures and
trauma, surgery of the spine, including disc surgery, hand
and foot surgery, athletic injuries, rehabilitation and related
basic sciences.

B. Resident Responsibility
The residency program should provide progressively respon-
sibility under faculty supervision. Inpatient and outpatient
experience including all age groups is necessary.

C. Teaching Rounds and Conferences
Faculty and residents must attend in regularly scheduled
and held teaching rounds and clinical conferences. Subjects
of mutual interest should be discussed at interdisciplinary
conferences.

D. Basic Medical Sciences
Basic science education must include instruction in anat-
omy, biochemistry, biomechanics, microbiology, pathology,
physiology, embryology, and other sciences related to the
musculoskeletal system. Sufficient resources (space, equip-
ment, personnel and funding) for instruction and study of
the basic sciences must be available to permit satisfactory
correlation between basic science knowledge and clinical
decision-making. Basic science reports alone by residents
are not considered a sufficient education experience.

1. Instruction in anatomy must include study and dissec-
tion of anatomical specimens by the residents, with appro-
priate lectures or other formal sessions.

2. Instruction in pathology must include formal instruc-
tion in correlative pathology in which gross and microscopic
pathology are related to clinical and roentgenographic
findings.

3. Instruction in biomechanics should be presented in sem-
inars or conferences emphasizing principles and terminol-
y and application to orthopaedics.

4. Instruction in biochemistry and in physiology must in-
clude formal presentation of information related to ortho-
paedic surgery. Instruction in microbiology and in
pharmacology should include formal presentation of such
information.

The above formal instruction in the basic medical sciences
and skills must be integrated into the daily clinical activities
by clearly linking the pathophysiologic process and findings
to diagnosis, treatment and management through faculty-
resident interchange in conferences, ward rounds, and
seminars.

E. Basic Motor Skills
Instruction in motor skills must include in-vitro experience
with the principles of the proper use of surgical instruments,
techniques, and methodology. Emphasis should be placed
upon evaluation of new or experimental techniques or ma-
terials. The basic motor skills must be integrated into daily
clinical activities in the operating room with particular em-
phasis on technique, judgment and experience by faculty-
resident interchange and appropriate conferences.

F. Research
Residents must develop competence in critical assessment
of new therapies and of medical literature. Residents must
learn the design and interpretation of research studies, eval-
uation of investigative methods, and interpretation of data
whether the research involves basic laboratory or clinical sci-
ences. Space, equipment, support personnel and funding
must be provided. Faculty expertise and time must be avail-
able to stimulate and supervise resident research. Research
productivity for residents and faculty must be documented.

G. Related Disciplines
In order to provide an adequate interdisciplinary educa-
tional experience, the institution should have accredited training
programs in general surgery, internal medicine and
pediatrics.

VII. PROGRAM EVALUATION
A. Site Visits
All programs will be evaluated periodically by the Resi-
dency Review Committee for Orthopaedic Surgery. This eval-
uation will include a site visit by a salaried field surveyor or
an orthopaedic site visitor as determined by the Residency
Review Committee for Orthopaedic Surgery. A report of the
site visit will be sent to the Residency Review Committee
and will be considered in the evaluation of the program.

B. Examinations
One measure of the quality of a program is the perfor-
mance of its graduates on examinations for certification by
the American Board of Orthopaedic Surgery.

C. Probationary Accreditation
Programs which have been accredited on a probationary
basis will be reviewed by the Residency Review Committee
within one year of that action, following a site visit by a
specialist.

D. Change of Director
Upon receiving notification of a change in program direc-
torship, the Residency Review Committee will undertake ap-
propriate re-evaluation of the program, which may include
an on-site inspection by a specialist, within one year of the
change in directorship. Programs which have operated un-
der the leadership of an acting director for more than twelve
months shall be subject to similar re-evaluation by the Resi-
dency Review Committee.

VIII. BOARD CERTIFICATION
Residents who plan to seek certification by the Ameri-
can Board of Orthopaedic Surgery should communicate with
the Secretary of the Board to obtain the latest information
regarding certification.

Effective: July 1987  ACGME: June 1986

Special Requirements for Subspecialties
of Orthopaedic Surgery

GENERAL INFORMATION
A. A postgraduate fellowship is a prescribed post resi-
dency educational experience of at least one year devoted
to the enhancement of knowledge and skills in a defined area
of orthopaedic surgery. Postgraduate fellowship programs in
the subspecialties of orthopaedic surgery may be accredited
only in institutions which have been accredited as residencies.

B. Requirement of formal agreement to such institutions and programs.
Accordingly, subspecialty programs will be considered for
accreditation only if they function in direct association with
a residency program in orthopaedic surgery accredited by the Accreditation Council for Graduate Medical Education. B. Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process; therefore, such education will take place only after completion of an accredited residency in orthopaedic surgery. C. Postgraduate fellowship programs will be considered for accreditation only in subspecialty areas that meet the requirements for accreditation as established by the Accreditation Council for Graduate Medical Education. D. The essentials enumerated in the Special Requirements for Residency Training in Orthopaedic Surgery are also applicable to the postgraduate fellowships. In conformity with the Special Requirements, programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment and attitudes that are essential to the practice of the specific subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective educational programs is not accurately defined within the subspecialty programs and functions primarily to meet service commitments. The following items, adapted from the Special Requirements for Residency Training in Orthopaedic Surgery, merit emphasis:

1. The postgraduate fellowship program director must be qualified to supervise and to educate fellows appropriately in the specific subspecialty and must be certified by the American Board of Orthopaedic Surgery or possess equivalent qualifications. The directors of the subspecialty program and of the orthopaedic surgery program, in conjunction with the administration of the institution, will be responsible for insuring that adequate facilities and other necessary resources are available to provide an education of high quality. There should be a sufficient number of qualified faculty to provide the educational experience and to evaluate the progress and performance of the fellow. As with residency program directors in orthopaedic surgery, it is essential that postgraduate fellowship program directors devote sufficient time and effort to the postgraduate fellowship program and related activities. It is desirable that the postgraduate fellowship program director is appointed on a geographic full-time basis.

2. A postgraduate fellowship program must provide sufficiently advanced education to allow the fellow to acquire special expertise in a specific subspecialty. This education should consist of academic and technical components. The academic component should emphasize scholarship, self-instruction, teaching, development of analytic skills and surgical judgment, and research creativity. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.

3. Available learning resources must include traditional libraries with current books and periodicals as well as facilities for viewing of audio-visual material such as video tapes and sound slide programs.

E. Programs will be evaluated to the following postgraduate fellowship prerequisites:

1. A sufficient number of new and follow-up patients must be present to assure appropriate inpatient and outpatient experience for each fellow.

2. Subspecialty conferences, seminars, and literature review activities of high quality and of sufficient number must be regularly scheduled. Active participation of the fellow in the planning and the production of these meetings is essential.

3. A fellow must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

4. There must be close interaction between the residency program in orthopaedic surgery and the postgraduate fellowship program. Lines of responsibility for the orthopaedic surgery resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with residents and fellows in orthopaedic surgery, and in other disciplines such as radiology, pathology, surgery, medicine and pediatrics.

5. A postgraduate fellowship program must have an investigational component. A fellow must learn to design, to carry out and to interpret research studies. Supervised participation in research projects is required. Time and facilities must be made available for research activity.

6. A postgraduate fellowship program must offer supervised training in the operative procedures and in the technical skills integral to the subspecialty discipline involved. Instruction and experience must be sufficient for the fellow to acquire an understanding of the common procedures of the subspecialty, their indications, risks and limitations.

F. Postgraduate fellowship program directors must have a clearly defined mandate for the program and their periodic assessment of the performance of the fellow. The assessment must include cognitive, motor and interpersonal skills, and surgical judgment. There must be provision for regular communication of this information to the fellow and to the director of the residency program in orthopaedic surgery.

G. The following policies and procedures pertain to the accreditation of postgraduate fellowship programs:

1. Hospital information forms to be used for accreditation of a postgraduate fellowship program will be distributed to the director of the orthopaedic surgery program. It will be the responsibility of the residency program director to collect information from directors of the postgraduate fellowship programs that are to be reviewed for accreditation. An on-site inspector will review the entire institutional program in orthopaedic surgery, including the postgraduate fellowship programs being considered for accreditation. The statistical and narrative reports for all components of the program will be forwarded to the Residency Review Committee for Orthopaedic Surgery (RRC-Os). The RRC-Os will review the institutional program in its entirety and will accredit the orthopaedic surgery residency programs and the postgraduate fellowship program.

2. Postgraduate fellowship programs will be accredited only if the residency program in orthopaedic surgery is fully or provisionally accredited. The accreditation status of the postgraduate fellowship programs may equal, but not exceed the accreditation status of the parent orthopaedic surgery residency program. An orthopaedic surgery residency program may achieve and retain accreditation whether or not the affiliated postgraduate fellowship programs are accredited. Loss of accreditation of the orthopaedic surgery residency program will result in loss of accreditation of all postgraduate fellowship programs related to that residency.

3. The review cycle for postgraduate fellowship programs will be coordinated with the review cycle for the orthopaedic surgery residency program with provision for separate review of a postgraduate fellowship program when major changes occur.

4. Progress reports may be used to obtain additional information regarding postgraduate fellowship program progress and development.

Effective: September 1986 ACGME: September 1984

Training Programs in Hand Surgery

1. EDUCATIONAL PROGRAM

a. Surgery of the hand includes the investigation, preservation, and restoration by medical, surgical or physical
methods of all structures of the upper extremity which directly affect the form and function of the limb, wrist and hand.

b. Subspecialty education in hand surgery must be organized to provide experience of a sufficient level for the fellow to acquire the competency of a specialist; it must not be less than one continuous year and should ordinarily follow completion of full training in one of the parent disciplines: orthopaedic surgery, plastic surgery or general surgery.

c. Clinical experience must include opportunities to observe and manage patients of all ages with a wide variety of disorders of the upper extremity as well as to learn the effectiveness of therapeutic programs. The program must be structured to permit the fellow to develop diagnostic, procedural and technical skills essential to the performance of hand surgery. It must provide for basic and advanced training and education as well as personal operative experience to ensure the production of qualified surgeons within this specialized field.

2. FACILITIES AND RESOURCES

a. Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources for adult and pediatric patients and specifically, support services in the diagnostic field of pathology, radiology, physical and occupational therapy, orthotics and prosthetics. There must be opportunity for continuing personal post-hospital follow-up of patients cared for by the fellows.

b. It is desirable that the educational program be affiliated with a facility in which there are additional accredited programs in surgery, plastic surgery, and orthopaedic surgery as well as other medical and surgical specialties and subspecialties.

3. SPECIFIC KNOWLEDGE AND SKILLS

a. The educational program must provide opportunities for fellows to develop clinical competence in the field of hand surgery. Examples of opportunities that are desirable for the development of knowledge and skills specific to hand surgery include, but are not limited to, trauma and its sequelae, congenital and developmental disorders, infectious and metabolic disorders, neoplasia, vascular disorders, and degenerative and rheumatologic diseases. There must be experience in the development and execution of a treatment plan (including the appropriate technical skills) to manage patients with the above disorders. This opportunity must include experience in the clinical diagnosis and interpretation of laboratory data relative to the above disorders. Experience in microsurgery and other special technology relative to the management of hand problems must be provided as well as experience in the special diagnostic skills such as electrodiagnosis and radiology relative to treating problems of the hand.

b. The spectrum of education shall extend from the initial management of the patient, through follow-up care, rehabilitation and the final evaluation.

Effective: September 1986  ACGME: June 1985

Training Programs in Musculoskeletal Oncology

1. EDUCATIONAL PROGRAM

a. The educational program in musculoskeletal oncology must be organized to provide experience at a sufficient level for the fellow to acquire the competency of a specialist in the field. Clinical experience must include opportunities to observe and to manage patients with a wide variety of clinical orthopaedic oncologic problems on both an inpatient and outpatient basis. The fellow must be given an opportunity to assume continuing responsibility for both acute and chronically ill patients in order to learn the natural history of musculoskeletal neoplasia as well as the effectiveness of therapeutic programs.

b. There should be broad support from other clinical specialties, including diagnostic and therapeutic radiology, pediatrics, nuclear medicine, pathology, surgery and its subspecialties, and medical oncology. Support of oncologic nursing, rehabilitation, nutrition, dietetic and social services, as well as physical and occupational rehabilitation is desirable.

c. The educational curriculum must include sufficient material to assure that the fellow acquires basic knowledge in musculoskeletal oncology, radiation therapy, and chemotherapy.

2. FACILITIES AND RESOURCES

a. Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient ambulatory care and laboratory resources. Specifically, there should be advanced pathology services, including electron microscopy and immunopathology, resources for nuclear medical imaging, musculoskeletal angiography, CT scanning, and sufficient facilities for qualitative correlative studies. The fellow must have day-to-day access to pathologists and to radiologists with recognized expertise in musculoskeletal pathology and radiology. There should be a weekly multi-disciplinary tumor conference involving radiation and medical oncologists, a weekly pathology conference and ongoing studies of prospective patient protocols. Additional radiation and medical oncology facilities and a modern diagnostic radiologic service are necessary. It is desirable that there be other clinical subspecialties of orthopaedic surgery and general surgery to which the orthopaedic oncology fellow may relate formally as well as special facilities for musculoskeletal pathology.

b. The program must be fully integrated and under the direction of the program director, even if housed in more than one institution. The director must have recognized expertise in musculoskeletal oncology and if more than one institution is involved, each institution should have at least one such individual on the staff. There must be a minimum of 200 new cases of benign and malignant tumors with an appropriate mix of primary and metastatic lesions in order to afford the fellow adequate educational experience in musculoskeletal oncology. This experience must include the care of both inpatients and outpatients.

c. The program should include access to an adequate library, computer facilities, and a teaching collection of slides, x-rays and specimens, etc., that are appropriately indexed for easy retrieval. Laboratory facilities, animal quarters, computer access, and shared office space, as required for creditable research must be available to the fellow. The program director is responsible to stimulate, sponsor and fund the fellow’s research activities.

3. SPECIFIC KNOWLEDGE AND SKILLS

The fellowship program must provide training to develop clinical competence in the overall field of musculoskeletal oncology. Examples of knowledge and skill that are desirable include, but are not limited to, the following:

a. The natural history of musculoskeletal neoplasia;

b. Knowledge of musculoskeletal surgical pathology;

c. Management of treatment protocols;

d. Knowledge of the indications for and limitations of surgery, radiation therapy and chemotherapy in the treatment of musculoskeletal neoplasms;

e. Knowledge of the methodology and techniques to perform creditable clinical and/or basic research in musculoskeletal oncology;

f. Acquisition of teaching skills in musculoskeletal pathology and oncology.

Effective: July 1987  ACGME: June 1986

Training Programs in Orthopaedic Sports Medicine

1. EDUCATIONAL PROGRAM

a. An educational program in orthopaedic sports medicine must provide experience for the fellow to acquire the clinical competence of a specialist in the field of orthopaedic...
dic sports medicine. The fellowship shall not be less than one year in duration.

b. Clinical experience must include inpatient and outpatient opportunities to observe, manage, operate and follow patients with a wide variety of sports medicine problems. The program must be structured to provide the fellow with an opportunity to acquire continuing responsibility with appropriate supervision for acute and chronically injured patients and to observe the natural course of athletic injuries and the effects of various therapeutic modalities on their income. The program should provide the fellow with the opportunity to work with athletic teams and/or athletic organizations.

c. The program must emphasize the pathology and biomechanics of athletic injuries and the effects of injury on the athlete, including both physical and psychological manifestations. Appropriate utilization of laboratory tests, physical modalities, and operative procedures for the diagnosis and treatment of athletic injuries must be stressed. The program must stimulate and sponsor appropriate clinical or laboratory research by the fellow.

2. FACILITIES AND RESOURCES

a. Modern facilities to accomplish the clinical and educational objectives of the specialty must be available and functioning for both inpatients and outpatients. The physical therapy and the athletic training departments must be completely equipped with the modern therapeutic modalities used in the treatment of the injured athlete. The operating room facilities must contain modern equipment, including arthroscopes, adjunctive equipment for arthroscopy, and necessary radiologic equipment. The educational program must be conducted in a setting that will allow interaction with the disciplines of radiology, physical therapy, internal medicine and such other specialties ordinarily encountered in sports medicine. The program must make available appropriate facilities for research as well as faculty expertise and supervision of such research by the fellow.

b. The program must provide sufficient opportunity for the fellow to gain knowledge and skill in a number of areas that include, but are not limited to the following:

1) Taking a history and performing an appropriate physical examination for orthopaedic sports injuries;
2) Exposure to patients with typical histories and physical findings of chronic orthopaedic sports injuries and the management of those injuries;
3) Differentiating between those sports injuries that require immediate surgical treatment and those that can be treated nonoperatively;
4) Recognizing those sports injuries for which a minor delay in treatment would not be deleterious to the patient;
5) Acute care of orthopaedic and other acute sports medicine injuries that may occur during athletic competition and how to deal with those injuries on the athletic field;
6) How to order and to interpret radiologic examinations that are used for diagnosis of sports injuries, including specific views, tomograms, bone scans, arthrograms, computed axial tomography scans, and magnetic resonance imaging;
7) Therapeutic modalities offered in the department of physical therapy, how to use them, and how to judge the appropriateness and efficacy of a treatment plan;
8) Diagnostic and operative arthroscopy;
9) Nonorthopaedic problems that occur in sports medicine and how to deal with those problems or how to refer them appropriately;
10) The psychological effect of injuries on athletes and how to deal with them or how to select consultants to assist in their management;
11) Sports equipment, particularly protective devices intended to allow the athlete to continue to compete, including helmets, protective pads, knee braces, foot orthotics, and others not specifically named.

c. The structure of the program must provide the fellow with specific experience with athletic trainers and physical therapists and with related experience in writing appropriate prescriptions and in monitoring patient progress.

Effective: July 1987  ACGME: June 1986

Training Programs in Pediatric Orthopaedics

1. EDUCATIONAL PROGRAM

a. A subspecialty education program in pediatric orthopaedics must provide experience at a sufficiently advanced level for the fellow to acquire the competence of a specialist in the field. Clinical experience should include observation and treatment of both inpatients and outpatients with a wide variety of orthopaedic disorders. The fellows must have the opportunity to assume continuous responsibility for both acutely and chronically ill patients so as to learn the natural history of pediatric orthopaedic disorders as well as the effectiveness of treatment programs and the impact on growth on these disorders.

b. The program should emphasize normal physiological mechanisms and the pathogenesis and complications of pediatric orthopaedic disorders. Utilization of appropriate laboratory procedures and allied medical personnel should be stressed.

2. FACILITIES AND RESOURCES

Modern inpatient, ambulatory care and laboratory facilities must be available and functioning. The educational program must be conducted in a setting in which comprehensive surgical, medical, and pediatric consultation services are available.

3. SPECIAL KNOWLEDGE AND SKILLS

The knowledge and skills the education program must provide include, but are not limited to, the following:

a. Prudent and judicious use of diagnostic tests;
b. Use of data resources and the need for and interpretation of data;
c. Interpretation of radiologic examination of the musculoskeletal system including vascular studies and the modalities of nuclear medicine (and other advanced techniques) with an appreciation of the risk and expected yield of the procedures;
d. Understanding of the role of physical and occupational therapists, and of orthotists and prosthetists in the rehabilitation and on-going management of pediatric orthopaedic disorders;
e. Performance of pediatric orthopaedic surgical procedures.

Effective: September 1986  ACGME: June 1985

15. Special Requirements for Residency Training in Otolaryngology

1. DURATION OF TRAINING

Residency training programs in otolaryngology are designed to meet the requirements of the Council on Medical Education of the American Medical Association, the American College of Surgeons, and the American Board of Otolaryngology. The training must be of at least five years duration, which should include one year of general surgery training, three years of progressive training in otolaryngology, and one additional year in otolaryngology, general surgery or in other residency programs accredited by ACGME. The final year of training must be a senior experience in otolaryngology.

This senior year must be spent within the institutions which are approved as part of the program, unless prior approval of an outside rotation has been obtained from the Residency Review Committee. Rotations of six months or more in any year of training, to institutions which are not approved as part of the program, require prior approval of the RRC.
II. SCOPE OF TRAINING

It is not essential or even desirable that all programs should adopt exactly the same program, or that they should offer a rigidly uniform sequence of experience. It is essential, however, that all institutions participating in graduate training in otolaryngology should be able to meet the fundamental requirements for an accredited program and, either alone or in collaboration, should obtain comparable results in the quality of training and in the experience obtained.

Residencies in otolaryngology should offer broad training and should preferably include some experience in closely related fields of surgery. Adequate educational content and overall clinical and operative experience should be provided to enable the resident on completion of his training to begin the practice of his specialty in a scientific and competent manner. Residencies in otolaryngology must provide in-depth training and experience in medicine and regional surgery. It is essential that the training program have a well-organized, comprehensive, and effective educational curriculum. The curriculum content should reflect careful planning, with evidence that the cyclical presentation of core specialty knowledge is being supplemented by the addition of current information and that teaching is being conducted in a variety of educational settings employing accepted principles of educational methodology.

Essential equipment for diagnosis and treatment should be available, including all special apparatus. The clinical material should be sufficient in variety and amount to provide adequate training in all aspects of the specialty. The program should provide for training in the following areas:

1. Morphology, physiology, pharmacology, pathology, microbiology, biochemistry, genetics, immunology, allergy and neurology relevant to the head and neck; the air and food passages; the communication sciences, including a working knowledge of audiology and speech; the endocrine disorders as they relate to otolaryngology.

2. The recognition and management of congenital anomalies, abnormal function, trauma and disease in the regions and systems enumerated in item one above.

3. The recognition and medical management of diseases and abnormality of function of the ears, upper and lower respiratory tract and food passages.

4. The recognition, technique and surgical management of congenital, inflammatory, neoplastic and traumatic states, including among others:
   a. Temporal bone surgery
   b. Paranasal sinus and nasal septum surgery
   c. Maxillofacial, plastic and reconstructive surgery of head and neck
   d. Surgery of the salivary glands
   e. Head and neck oncologic surgery
   f. Head and neck reconstructive surgery particularly as it relates to the restoration of function in congenital anomalies; following extensive surgery and complications of head and neck trauma.
   g. Peroral endoscopy, both diagnostic and therapeutic
   h. Surgery of lymphatic tissues of the pharynx
   i. Pre- and post-operative care.

5. Diagnosis and diagnostic methods including related laboratory procedures.

6. Diagnostic and therapeutic radiology, including the interpretation of roentgenograms of the nose, accessory sinuses, salivary glands, temporal bone, skull, neck, larynx, lungs and esophagus.

7. Awareness of the current literature especially pertaining to the areas mentioned in item one above.

8. Awareness of the habilitation and rehabilitation techniques and procedures pertaining to otolaryngology.

A more detailed list of the procedures to be performed by residents may be obtained by reviewing the Residency Review Committee form entitled “Otolaryngologic Operative Experience Report for an Individual Resident.” It is essential that the training programs be organized by the parent institution with progressive responsibility for the residents. Collaborative programs can be developed where two hospitals of graduate training caliber have complementary clinical resources which can be combined to advantage in developing an acceptable program.

III. APPLICATION OF THE BASIC MEDICAL SCIENCES

There should be training in the concepts and technique of speech therapy, as well as audiology and speech disorders. There should be applied training in hearing, hearing evaluation, hearing aid use, hearing conservation, hearing rehabilitation and the effects of noise on hearing. There should be instruction in the recognition and management of such disorders as aphasia, articulation, dysplasia and voice disorders as well as in normal and abnormal language development. Also, there should be applied training in vestibular function evaluation and vestibular disabilities.

Frequent departmental conferences for a detailed discussion of problem cases are important, as are also clinicopathological conferences. The residents should study and discuss with the pathologist all tissues removed at operation and all autopsy material from patients on their services. It is desirable to have the residents assigned for a period of service in the department of pathology.

Surgical anatomy should be stressed by the attending surgeons in discussing surgical cases with the residents, and also by the pathologists in the performing of autopsies as far as is possible. In addition, opportunity for the residents to work out special anatomic problems by performing dissections in the laboratory should be furnished.

Research offers an important opportunity for the application of the basic sciences in clinical problems, and is an essential part of the preparation of the resident for a lifetime of self-education after the completion of formal training. It is essential that the training program provide a meaningful research experience for the residents, sufficient to result in an awareness of the basic principles of study design, performance, analysis and reporting. The research experience may be clinical or basic in nature and should reflect careful advice and planning with the faculty. Reasonable facilities for research by the residents should be provided, together with stimulating guidance and supervision.

One of the major areas of responsibility for program directors is the area of continuing program and trainee evaluation. It is essential that the training program conduct a periodic evaluation of the adequacy of the total educational experience of the residents and of the professional and educational progress of each resident.

It is essential that the residents participate in existing national examinations. Analysis of the results of these testing programs should guide the training program in the strengths and weaknesses of the individual trainees and the teaching program.

One measure of the quality of a program is the performance of its graduates on the examination of the American Board of Otolaryngology.

IV. STAFF

The chief of the training program should be certified by
the American Board of Otolaryngology, or possess suitable equivalent qualifications.

At least one other member of the staff should be similarly qualified.

The director of the otolaryngology training program must devote sufficient time to the conduct of the program to assure that an appropriate educational experience is provided for the residents.

It is the responsibility of the program director to develop a sound administrative organizational framework and an effective teaching staff as essential elements of an approved training program. It is essential that there be clear documentation of an adequate faculty commitment to the residency training program and that there be assurance of adequate institutional support for the otolaryngology training program in terms of budgetary, space and clinical resources provided by the institution.

Staff members must have a real interest in teaching, be willing to give the necessary time and effort to the educational program and be engaged in scholarly activities such as (1) participation in regional or national scientific societies; (2) participation in their own continuing surgical education; (3) engage in scientific publications and presentations; and (4) show active interest in research as it pertains to their specialty. A staff which does not exhibit such characteristics will be cause for grave concern as to its adequacy and suitability for conducting a program of graduate education in otolaryngology.

V. SURGICAL STAFF

The surgical staff should be composed of surgeons who are highly qualified in both surgical skill and judgment. It should be properly organized and harmonious, with the designated head or chief of service responsible for the quality of work done in the department, and he should be the surgeon best fitted for this responsibility. The members of the staff should have a sincere interest in teaching and in the welfare of the residents and must be willing to give the time and effort required by the educational program.

Approval cannot be granted for residency training in otolaryngology if the service is a division of the department of surgery unless that division is headed and staffed by qualified otolaryngologists as specified above.

VI. CLINICAL MATERIAL

The institution must be able to provide an adequate number and variety of otolaryngic medical and surgical patients. Arbitrary figures cannot reveal these considerations accurately. The surgical cases provided by the hospital should reflect a broad range of pathological problems and clinical experience pertinent to otolaryngology. This is essential to give the progressive operative experience necessary for the resident. The residency program should be organized so that the residents will hold positions of increasing responsibility for the care and management of patients.

An approved residency in otolaryngology should include a well-organized and well-supervised active outpatient service.

A hospital which limits its clientele to special types of cases may, if otherwise qualified, be approved as a collaborating hospital if its residency is an integral part of an approved comprehensive program.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, to be certain regarding the full requirements for certification.

Effective: Not Specified  ACGME: November 1983

16. Special Requirements for Residency Training in Pathology

Accreditation is granted for residency training programs in pathology in the following categories:

Category AP.3—In anatomic pathology only for three or more years.
Category CP.3—In clinical pathology only for three or more years.
Category APFP.4—In both anatomic pathology and forensic pathology, two years in each, for a total of four years.
Category APNP.4—In both anatomic pathology and neuropathology, two years in each, for a total of four years.
Category FP.1—In forensic pathology for one year.
Category FP.2—In forensic pathology for two years.
Category NP.2—In neuropathology for two years.
Category DP.1—In dermatopatology for one year.
Category DP.2—In dermatopatology for two years.
Category BB.1—In blood banking for one year.
Category RIP.1—In radioisotopic pathology for one year.
Category PCH.1—In chemical pathology for one year.
Category HMP.1—In hematopathology for one year.
Category SP.1—In special pathology (formerly, special pathology) usually for one year; programs in this category are ordinarily approved in highly specialized hospitals of acknowledged excellence which because of the limitations of their clinical material cannot provide general training in anatomic or clinical pathology. Resident experience in a selective pathology program is deemed to be equivalent to one year of training in either anatomic or clinical pathology. Residents receiving part of their training in such programs should consult with The American Board of Pathology as to what other training is necessary to provide acceptable breadth of experience.

Training programs intended to qualify applicants for certification in other special fields of pathology by The American Board of Pathology are approved by the Board on an individual basis.

The provisions of the General Requirements (Section 1 to 10) must also be met for accreditation.

Training Programs in Anatomic and Clinical Pathology

1. SCOPE OF TRAINING

The training programs in AP/CP, AP and CP should be designed so as to offer the opportunity to acquire a broad and a depth understanding of the subject matter in clinical and anatomic pathology, as well as the techniques and methodology required to gain this information. Experience in the interpretation of laboratory data, in the management and direction of a laboratory, in teaching and in investigation are all objectives of a good program.

Every opportunity should be offered to and every attempt made by the training program to gain clinical correlative experience in anatomic pathology and in clinical pathology and to relate these experiences directly to the patient.

Systematic instruction in anatomic pathology should be accomplished primarily through the use of fresh tissues, microscopic slides, and photographs from current cases supplemented by museum specimens and seminars on the course materials. Equal attention should be paid to material from the autopsy service as well as from the surgical pathology service. Proficiency in frozen section diagnosis, in exfoliative and other forms of cytology, in electron and other special forms of microscopy, in histochemistry, in cytochemistry and in immunopathologic techniques is an important aim. Training should be given in forensic pathology neuropathology, pediatric pathology and gynecologic pathology and where such training is not available in the primary institutions, arrangements should be made to accomplish this in other institutions. The teaching material must be sufficient in quality and variety to afford adequate training in gross and microscopic pathology. Special emphasis, however, should be placed on the quality of the supervision and instruction and the nature and quality of opportunities to gain clinical correlative experience.

The training in clinical pathology should emphasize an
integrated understanding of procedural theory and selection, quality control and clinical correlation since the result of a clinical pathology laboratory should closely reflect the medical requirements involved. Assurance of quality, precision, accuracy and medical appropriateness of laboratory data to the diagnosis, management and prognosis of patients, and the development of medical administrative ability and responsibility are of special importance in clinical pathology.

Instruction in clinical pathology should include, but not be limited to, training in medical microbiology, medical parasitology, immunohematology, blood banking, chemical pathology, hematology, medical microbiology, immunopathology, radioisotopic pathology, toxicology, endocrinology, and the application of the physical and biological sciences to the diagnosis, prognosis and treatment of diseases. Instruction in automation and data handling in the clinical laboratory should be included in the training program. It is expected that instruction will be augmented by the use of seminar and course materials, laboratory indices of unusual cases and clinical correlative conferences.

The general criteria for approval of hospitals and laboratories are both qualitative and quantitative. On the score of quality, consideration is given to the qualifications of the director of laboratories and his associates and assistants, the supervision of work of the trainee, the quality of the educational program which includes the educational environment of other training programs, the opportunities for significant exchange of information and experience with patient care physicians through conferences, seminars, rounds, consultations and on call and the special responsibilities and exactness and completeness of the laboratory work performed and the quality control procedures used. On the score of quantity, consideration is also given to the volume and distribution of laboratory work both in absolute numbers and in relation to the size of the hospital, to the pattern of medical practice in the institution, to the diversity and completeness of tests performed, to the size and equipment of the laboratory, and to the number and qualifications of medical and nonmedical personnel in relation to the volume of work.

It is expected that the director of the program be fully qualified in the branches of the specialty for which training is approved, and that he provide adequate supervision of the hospital laboratory. Adequate supervision is not interpreted in terms of hours, but rather that the director have no obligation outside of the one approved hospital which will dilute the quality of this supervision; the equivalence of full time director by two or more qualified persons is acceptable in special instances. Similarly, two or more hospitals may be approved as a unit with a single, full time director of laboratories if it is apparent that a satisfactory training program can be conducted.

It is expected that the number of medical technologists and their qualifications will be appropriate for the volume of work in the laboratory.

Sufficient laboratory and office space, as well as equipment, should be approved for both staff and trainees to enable the department to function efficiently and the training program to be effective. There should be facilities in all hospitals for the procedures usually performed in clinical pathology, including cytogenetics and immunopathology, and for the performance of necropsies. The trainee must be provided with the opportunity to study such special procedures not within the laboratory but only if the director has special qualifications and experience in clinical pathology. The work and training of trainees must be fully supervised with appropriate and increasing responsibilities of trainees being clearly defined. Inter and intra-departmental conferences, seminars, journal clubs and demonstrations should be conducted as frequently as the volume of the material and the size of the staff permits. If an institution has no formal conference, it should be held regularly to review necropsy cases.

In institutions offering training in both anatomic and clinical pathology, the program should be so arranged as to assure even division of the residents’ training and experience in anatomic and clinical pathology. Ordinarily, this can best be achieved by a series of exclusive or nearly exclusive assignments to the various departments of the laboratory. Assignment in cytopathology is a mandatory requirement for training in anatomic pathology with the training being given according to the supervision, and appropriate responsibility. The training should be supervised by a pathologist trained or full experienced in cytopathology and should include experience with extraglandular as well as glandular material.

2. QUANTITATIVE REQUIREMENTS

In the field of anatomic pathology there should be sufficient volume and variety of necropsy, and surgical and cytopathologic material (except in special programs) to ensure adequate education, training, and experience in this branch of the specialty. There is no absolute criterion but special scrutiny will be given to a hospital in which an adequate volume and variety of the various types of anatomic material does not exist.

In the field of clinical pathology there should be a reasonable diversification of tests and in each category there should be sufficient volume to provide training and experience. There are no absolute criteria but special scrutiny will be given to a hospital in which there is not a reasonable diversification and variety.

Effective: July 1981 ACCME: May 1980

Training Programs in Blood Banking

The program must be directed and adequately supervised by a physician qualified in blood banking.

The training program shall include all aspects of blood banking, i.e., medical, technical research, and administrative. The program must be conducted in institutions where blood is regularly drawn and procedures and also must include training and experience on an active transfusion service of a hospital.

The administrative experience should include donor recruitment and processing as well as logistic aspects of blood banking. The program should also provide adequate study of the technical and laboratory facets of transfusion and transplantation. The hospital training should include clinical experience in the use of blood and blood components. The resident in blood banking should participate in research or development activities and that adequate facilities will be provided.

In order to obtain adequate training in a blood bank program, a sufficient number of blood donations and transfusions to provide the required skills should be performed in the participating institution(s). Also, an active teaching program in laboratory medicine and pathology, as well as a training program for blood bank technologists, in one or all of the institutions in the training of blood bank physicians, is desirable.

Training Programs in Chemical Pathology

The training program in chemical pathology must be directed and supervised by a physician who is qualified in clinical pathology and/or chemical pathology. If qualified in both clinical pathology and/or chemical pathology, the director must have special qualifications and experience in chemical pathology. The program must provide opportunities for trainees to become expert in the development, operation and quality control of a chemical pathology laboratory, expert in the clinical interpretation of laboratory results, and to become a consultant in these areas to physicians and patients.

The training institution should be of sufficient size to provide the program with the necessary volume and variety of clinical material in chemical pathology. The analytical rep
ertot of the laboratory must be distributed satisfactorily within the various categories and subdivisions of chemical pathology to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in chemical pathology.

The laboratory must have office and bench space sufficient to provide for both laboratory personnel and trainees. The facilities should be well equipped with modern instrumentation in all major areas of analytical chemistry.

The laboratory should have ongoing research and development programs in methods, and have good quality control programs in continuous operation. There must be adequate library facilities to provide for the trainees' needs, including an adequate selection of current periodicals.

The training program must provide opportunities for trainees to develop knowledge and skills relating to: 1) analytical chemical pathology, both basic and applied; 2) instrumentation; 3) administration and management of a chemical pathology laboratory; and 4) data processing. It is further expected that the trainee will engage in research activities during the period of training. The laboratory must therefore have the capacity to support research by trainees, including facilities, equipment, and a professional staff competent to direct research training. Clinical training in relation to chemical pathology, including the use and interpretation of chemical analyses in clinical diagnosis and management, must be an integral part of the training program.

The minimum training program in chemical pathology shall be one year in addition to the completion of acceptable residency training in an ACGME accredited program of anatomic and/or clinical pathology, as outlined in the Directory of Residency Training Programs, or equivalent postgraduate training and experience. The training program should be administratively attached to an ACGME accredited program whenever feasible.

**Effective: November 1983  ACGME: November 1983**

### Training Programs in Dermatopathology

The training program in dermatopathology shall be an equal and joint function of the department of dermatology and of the department of pathology. The training period in dermatopathology shall be one or more years subsequent to the satisfactory completion of residency training in an approved program in either dermatology or pathology as outlined in the Directory of Residency Training Programs. For pathologists, the dermatopathology program must include a minimum of six months of training in clinical dermatology in a program accredited by the Accreditation Council for Graduate Medical Education or its equivalent. For dermatologists, the dermatopathology program must include a minimum of six months of training in anatomic pathology in a program accredited by the Accreditation Council for Graduate Medical Education or its equivalent. In either instance, this experience may be either en bloc or integrated in the first year of the program.

The sponsoring institution must provide ample case material and supporting facilities to meet the training requirements in dermatopathology, clinical dermatology, autopsy pathology and surgical pathology. The dermatopathology training program must include both didactic instruction and practical experience in the clinical and microscopic diagnosis of skin disorders by means of direct inspection, appropriate microscopic techniques including light and electron microscopy, immunopathology, histochemistry, and the relevant aspects of cutaneous mycology, bacteriology, and parasitology. The program should provide an environment in which the clinical work related to the specialty is actively pursued. The program must provide a sufficient volume and variety of dermatologic problems and other educational material for the trainee to acquire the qualifications of a consultant in dermatopathology. The program must provide the trainee with the training required to set up and to operate a dermatopathology laboratory and to supervise and train laboratory personnel.

The program must be directed and supervised by a physician possessing Board certification or equivalent training and experience in either of the contributing specialties of dermatology or pathology. The program director must devote sufficient time to provide adequate leadership to the program and supervision for the trainees. The program director must evaluate the performance of trainees in accordance with the General Requirements of the Essentials of Accredited Residencies.

**Effective: July 1987  ACGME: June 1986**

### Training Programs in Forensic Pathology

1. The program shall be for a period of one year and must be directed by a pathologist who is certified by the American Board of Pathology in Forensic Pathology or has equivalent qualifications. The program director must devote sufficient time to provide adequate leadership to the program and supervision for the residents. The staff must be able to instruct one additional qualified forensic pathologist in order to be accredited as a training program for one resident. Programs that offer training for two or more residents must have a senior staff of qualified forensic pathologists that numbers at least one more than the number of residency positions.

2. Approximately 500 medicolegal autopsies should be conducted in an approved program per year. Of these, 100 or more should be in cases in which death is due to the immediate (within 24 hours) and direct effects of physical or chemical injury. The institution or office should conduct approximately 300 additional autopsies for each additional residency position requested. A resident should perform 250-350 autopsies in a year of approved training and should have experience in scene investigations, including examination of the body before it has been disturbed. The resident should have responsibility for the performance of autopsy on cases that are likely to result in criminal prosecution or civil litigation, and it is highly desirable for residents to have opportunities to participate in the legal follow-up on cases if such occurs during the course of their year of training. It is highly desirable for residents to accompany staff pathologists when they testify in court and give depositions.

3. Adequate facilities and competent personnel shall be available and properly utilized for the conduct of all bacteriologic, biochemical, toxicologic, firearms, trace evidence, physical anthropology, odontology, and other scientific studies as may be needed to insure complete postmortem investigation. When such support services are not housed at the medicolegal facility, they should be available and accessible to the resident at suitable laboratories. If the resident is to spend parts of the training program at other laboratories or institutions, such training must be adequately supervised by qualified personnel. During the year of approved training, the resident must have a period of approximately four to eight weeks devoted exclusively to laboratory experience in toxicology, physical anthropology, and components of the crime laboratory such as firearms, serology, and trace evidence.

**Effective: July 1986  ACGME: February 1986**

### Training Programs in Hematology

The training program in hematology must be directed and closely supervised by a physician who is certified in hematology and whose efforts are devoted primarily to hematology.

The training program should include all aspects of hematology, with emphasis on the basic understanding of hematologic disorders, and appropriate utilization and application...
of laboratory procedures and methods to this understanding.

The training institution must have competent personnel, adequate facilities, and modern instruments for the study of all laboratory aspects of hematologic and coagulation disorders. The program must provide a sufficient volume and variety of hemostatic problems and other hematologic material for a trainee to acquire the competency of a specialist in hematology. The program should be coordinated with an active clinical hematology service and should include active participation in regularly scheduled teaching conferences in hematology. The department should have ongoing programs in research and development in hematology.

Examples of knowledge and skills that are desirable for the trainee to achieve include, but are not limited to, the following:

a. Development of professional skills in obtaining, examining, and interpreting hematologic material.

b. Development of consultative abilities in clinical hematologic problems.

c. The minimum training period in hematology shall be one year in addition to the completion of acceptable residency training in an ACGME accredited program of anatomic and/or clinical pathology, as outlined in the Directory of Residency Training Programs, or equivalent postgraduate training and experience. The training program should be administratively attached to an ACGME accredited program whenever feasible.

Effective: November 1983
ACGME: November 1983

Training Programs in Medical Microbiology

The training program in medical microbiology must be directed and supervised by a physician who is qualified in medical microbiology and whose efforts are devoted to the laboratory aspects of medical microbiology. The training program should provide the necessary clinical and analytical capability in medical microbiology to provide experience at a sufficient level for the trainee to acquire the competency of a specialist in medical microbiology.

Instruction should include, but not be limited to, training in medical bacteriology, mycobacteriology, mycology, virology, parasitology, and immunology. Access to reference laboratories should be available for training in specialized procedures not available in the laboratory.

The laboratory should have adequate modern facilities, policies and procedures, equipment, and personnel for the performance of all laboratory aspects of medical microbiology, epidemiology, and infectious diseases. The institutional library facility should be convenient and spacious and house an adequate current collection of books and periodicals. Adequate facilities for necessary and relevant research must be provided.

The training program in medical microbiology must be designed to provide a broad knowledge in the discipline through didactic instruction and personal participation in microbiologic techniques and methodology, as well as in the reporting and interpretation of laboratory results, principles of laboratory management, teaching, and investigation.

The training program must provide opportunities for trainees to develop knowledge and skills relating to preparation and examination of cultures, identification of microorganisms, and performance of diagnostic immunologic procedures, supplemented with stock cultures of infrequently encountered and medically important microorganism microscopic slides, photographs, and seminar materials. Also, knowledge of specimen collection, transport and preservation, microscopic examination of specimens, histopathologic and clinical correlation of microbiologic data, activity and pharmacokinetics of antimicrobial agents, antibiotic assay, antimicrobial susceptibility testing, and interpretation of findings are important objectives.

Trainees must also develop knowledge and skills relating to principles of disinfection and sterilization, hospital infection control, infection control committee functions and responsibilities, microbiologic safety, quality control, workload accounting, budgeting, personnel supervision, and hospital and public health epidemiology.

Educational experiences should include opportunities to observe patients, administer drugs, and attend conferences with a variety of microscopic specimens to provide a variety of infectious diseases through interaction with physicians from other clinical services. The program should provide regular administrative meetings, seminars and conferences in medical microbiology, in pathology, and in the clinical and epidemiologic aspects of infectious diseases.

The minimum training period in medical microbiology shall be one year in addition to the completion of acceptable residency training in an ACGME accredited program of anatomic and/or clinical pathology, as outlined in the Directory of Residency Training Programs, or equivalent postgraduate training and experience. The training program should be administratively attached to an ACGME accredited program whenever feasible.

Effective: November 1983
ACGME: November 1983

Training Programs in Neuropathology

It is expected that the program will be for a minimum of one year and will be directed and adequately supervised by a qualified neuropathologist and that additional neuropathologists be involved in the training.

The neuropathology program should be associated with the department of pathology in which during each year at least 200 necropsies, with examination of the nervous system, are performed, and 100 neurosurgical specimens from operative procedures on brain and spinal cord are examined for diagnosis. In addition, there should be a reasonable number of neurorotors and peripheral nerve biopsy specimens and an opportunity to study tumors and related lesions of peripheral nerves and sympathetic and parasympathetic nervous systems. The number of residents in training should be proportional to the amount and quality of material available.

Adequate laboratory space and facilities and competent personnel should be available and properly utilized for the conduct of the special procedures customarily employed in neuropathology, including electron microscopy and histochemistry.

There should be teaching materials in the form of indices of unusual cases, course and seminar materials and microscopic slide collections augmented by photographs and/or museum specimens sufficient to provide adequate study of conditions and diseases not frequently encountered in the routine necropsy and surgical specimens.

Teaching conferences in neuropathology, joint conferences with the general pathology service and with the clinical services of neurology, psychiatry, and neurosurgery should be regularly scheduled and attended by residents.

It is expected that residents in neuropathology will participate in research and will be provided with adequate facilities for the conduct of same.

Effective: July 1981
ACGME: September 1980

Requirements for Training Programs in Radioisotopic Pathology

The training program shall include all aspects of the use of radionuclides in the study of body fluids, excreta, or tissues quantified outside the body. The training program should provide the trainee adequate information regarding the basic theory and physics of radiation, isotope produc-
tion and labeling, radiation protection, appropriate instrumentation, a broad spectrum of in vitro analyses and their interpretation, autoradiography, quality control, and other related topics. Furthermore, the program should provide the trainee with the ability to set up and operate a laboratory to perform the applicable procedures, including supervision and training of personnel.

In order to provide such training, the program shall be directed and closely supervised by a physician qualified in radioisotopic pathology and devoting his major activities to the specialty of radioisotopic pathology. The training institution should be of such size and composition as to provide not only ample radioisotopic clinical material but possess all the supporting facilities necessary to accomplish the above objectives of the program.

The minimum training period in radioisotopic pathology shall be one year in addition to the completion of acceptable residency training in an approved program of either anatomic and/or clinical pathology as outlined in the Directory of Residency Training Programs.

17. Special Requirements for Residency Training in Pediatrics

I. INTRODUCTION
Residency programs in pediatrics are organized and conducted to provide an advancing educational experience with increasing patient responsibilities over a period of three years. The Residency Review Committee designates the various levels of pediatric training as Pediatric Levels (PL) 1, 2 and 3. Residents and trainees of other specialties may also rotate through the pediatric program for short term educational experience.

PL.1 refers to the first full year of accredited basic or core training in pediatrics. The PL.1 year must contain at least eight months of pediatric experience; the remaining four months may be scheduled by the pediatric training program director for other enriching or supervised elective educational experience.

PL.2 refers to the second core year of an accredited pediatric residency. Increased assumption of responsibility including supervisory assignments is expected.

PL.3 refers to the third year of accredited pediatric clinical training. It may be a chief or senior supervising resident.

Supervisory experience must be an integral part of the total three-year program. This must include at least six months of direct and senior supervisory responsibility in general pediatrics.

II. TYPES OF PROGRAMS
An accredited training program may be entirely independent (intra mural) or may occur in two or more institutions. In the latter case the strengths of each institution are drawn upon to make a satisfactory unitary educational experience for the resident. The amount of time to be spent by the resident in each of the participating hospitals must be determined by educational needs. The educational objectives and experiences obtained in each institution must be described. Copies of formal written agreements and contracts specifying administrative and organizational relationships which bear upon the educational program must be submitted by the Residency Review Committee.

Accredited programs may use the resources of other appropriate but less closely affiliated hospitals or institutions to provide certain essential enriching elements in the hospital's training, such as newborn, subspecialty, adolescent, developmental or community pediatrics rotations. If such hospitals or institutions do not have their own accredited pediatric training programs, periods of rotation through them should not total more than three months with appropriate supervision in each of year of training.

When a program which cannot supply a complete educational program relies upon another program to provide some essential element, it is important that the arrangement between the two programs actually meet the needs of the resident. The commitment of each program to the other must be made explicit, and should be embodied in an exchange of letters or in a contract indicating:

1. the scope of the affiliation;
2. the resources in the affiliate program which will be available to the residents;
3. the duties and responsibilities the residents will have in the affiliate program;
4. the relationship which will exist between residents and staff of the affiliate and primary programs.

The needs of the residents will be met in such affiliations only by an assurance of their active participation at the affiliated institutions. The Residency Review Committee will not approve such arrangements if it appears that the affiliate program the residents are not fully absorbed into the prevailing pattern of instruction and patient care.

III. SCOPE OF TRAINING
Residency programs in pediatrics should be designed and organized to prepare physicians for comprehensive care of the pediatric patient, through a continuum of advancing educational experience and increasing patient care responsibilities. The degree of resident responsibility for patient care must be carefully advanced during the training years according to the individual's capabilities, in order to develop necessary medical judgment and demonstrated competence.

Residents at all levels should be expected to provide care for the whole patient. The program should provide a broad experience in all of the aspects of human growth and development from conception through fetal life, infancy, childhood and adolescence, including both preventive and therapeutic pediatrics. Sufficient time must be devoted to studies in the basic sciences related to clinical pediatrics. It is expected that accredited programs will include adequate training in the clinical, laboratory, public health and community aspects of pediatrics.

The residents should be exposed to pathologic conditions ranging from minor illness to life threatening conditions requiring intensive care. This should include experience with pediatric surgical patients under the supervision of a pediatric surgeon. There should be experience with health supervision of the well child, diseases encountered frequently in children seen in office-based pediatric practice, psycho logical and social problems and problems which lie in subspecialty areas, both surgical and medical, involving chronic as well as acute or emergent conditions.

IV. CURRICULUM
A. Primary Care
In keeping with the commitment of pediatrics to primary and comprehensive care, the three-year program must include the equivalent of at least six months experience in ambulatory pediatrics. There must be experience in care of the normal newborn in the nursery setting. To insure an understanding of the longitudinal aspects of disease, as well as growth and development, it is essential that at least a portion of the ambulatory experiences include continuous care of a group of patients throughout the three-year training period, as well as block assignment of time in the ambulatory setting.

There must also be evidence of structured educational experiences in adolescent medicine, child development, psychology, and the care of the handicapped child.

B. Subspecialty Training
The total amount of time committed to all subspecialty rotations should be at least eleven months but not more than fifteen months. No more than six months may be spent on any one subspecialty during the three-year training period. The rotation on neonatology must be for a minimum of four months, but not more than six months.

The program must provide a minimum of three of the following pediatric subspecialties or other subspecialties as they become approved in the future by the American Board of Pediatrics: cardiology, endocrinology/metabolism, hematology/
Pediatrics

Oncology, nephrology, pulmonology, and critical care.

Other subspecialty experiences considered highly desirable are:

- Allergy-Immunology
- Dermatology
- Gastroenterology
- Genetics
- Infectious Disease
- Neurology
- Psychiatry
- Rheumatology

The experience in the mandatory rotations should be supervised by qualified pediatric subspecialists who have a major commitment to the educational program. The remaining elective subspecialty experiences can be obtained either as part of the general rotation or as individual assignments in any stage of training. All of these subspecialty experiences must include patient care responsibility either as a primary care physician or as a supervised consultant.

C. Outpatient Services

A high quality of ambulatory pediatric care is essential for adequate training and requires the physical presence of supervising teachers in ambulatory settings where the patient load is kept at a level appropriate for adequate teaching. An array of pediatric problems of a wide variety and complexity should be included in the patient group cared for in the outpatient setting. Appropriate consideration should be given to the total environment including the psychosocial influences on, and needs of, the patient and family. Provision must be made for continuity between inpatient and ambulatory services.

Certain aspects of ambulatory care deserve special mention, and their implementation will be an important factor relative to the accreditation of training programs.

1. Continuity Clinic: This clinic provides experience with continuity of care for both residents and patients. Residents should have weekly or biweekly assignments to the clinic. This assignment should receive priority over other duties. Their patient population should include those initially cared for by the resident on the ward or in the outpatient department, children with a variety of chronic diseases, and well children of different ages. With the latter, attention should be given to development and anticipatory guidance. Children with chronic diseases and multiple problems are in the greatest need of this type of comprehensive care. The resident needs to learn how to provide this and how to function as a part of a health care team. Subspecialty consultants should be available to the residents as they care for these patients. The residents should arrange for the care of their patients when they themselves are not available. This continuity program must be a required experience throughout the three years of training.

2. Acute Illness Clinic and Emergency Room: This rotation must be an educational experience adequately supervised by pediatric faculty. This assumes that the patient load does not reach a point where learning is compromised. On the other hand, high volume forces one to set priorities and facilitates development of accurate clinical judgment. The patient load should be kept reasonable with due consideration being given to the level of training of the resident, the ratio of new patients to return visits and the complexity of the problems. The duration of such an assignment must total at least three months over the three years of core training. Training in minor surgery and orthopedics should be included in this rotation.

3. Specialty Clinics: A specialty clinic or service must provide the resident with experience as a supervised consultant. The resident should have experience in several of the following: allergy, cardiology, child development, dermatology, developmental pediatrics, endocrinology, gastroenterology, genetics, hematology/oncology, learning disorders, nephrology, neurology, psychology, pulmonary, rheumatology, care of the handicapped and of adolescents with special problems such as sports injury, substance abuse and gynecologic disorders.

D. Basic Science Teaching

Study of the basic sciences should be part of the clinical education of the resident. This is most effectively provided in an integrated manner at the patient's bedside and in conferences. Resident preparation for conferences should include reviewing and expanding scientific knowledge with key references to the basic sciences underlying specific clinical topics.

V. LEARNING EXPERIENCES

A. Resident Development

The most important vehicle for learning is the assumption of responsibility by the resident for arriving at his/her own diagnostic impressions, for consulting appropriate literature or other source material or persons, for developing plans for diagnostic studies and for writing orders. The resident should have the opportunity to become skillful in the performance of a number of procedures, some of which require special skills and/or approaches for the pediatric patient. These may include, but are not limited to, the following: lumbar puncture, venipuncture, arterial puncture, umbilical artery catheter placement, cut downs for intravenous infusions, suprapubic taps, endotracheal intubation, pleural and peritoneal paracentesis. It is expected that the faculty will teach, evaluate the performance of, and document the attainment of these skills.
B. Rounds and Conferences

The most important formal teaching session is regular patient-oriented attending rounds conducted by a qualified teacher who is immediately available to the residents for consultation and who is backed by a staff of consultants in subspecialty areas. These conferences are regular departmental conferences which include teaching sessions devoted to pathology, cardiology, neurology, basic sciences, research, psychiatry, child development and other areas, which meet at least weekly. Residents should be given the responsibility of presenting and discussing patient material or other subject matter. These conferences ought to involve the residents actively and should be conducted by qualified individuals.

Rounds and conferences should correlate fundamental physiological, biochemical, microbiological, pathological and psychological aspects of disease in infants, children and adolescence. Although departmental clinical faculty may have sufficient knowledge and expertise to provide satisfactory instruction, participation of basic scientists may increase the breadth and depth of the educational challenge. Residents should be encouraged to utilize basic science resources in the development of an understanding of the mechanisms of diseases and their management.

C. Clinical Investigation and Research

Research activities are supportive of a residency program. Research provides a healthy climate for an educational experience. Critical thinking tends to flourish in such an environment not only for the resident but also for members of the teaching staff. Active resident participation in clinical research projects with the advice and supervision of the teaching faculty is encouraged. The collection of clinical data, review of the pertinent literature, and the preparation of a paper for presentation provide a valuable educational experience.

VI. STAFF

The director of the residency program must be capable of administering the program in an effective manner and be cognizant of the education of pediatric patients. He/she must have demonstrated ability as a teacher and be knowledgeable in the related basic sciences and in research methodology. The director should be certified by the American Board of Pediatrics or should possess suitable equivalent qualifications.

Continuity of leadership over a period of years is important to the integrity of a program. It is imperative that the program director assume full responsibility for supervision of the work of the training program. When a change in program director occurs, the RRC must be notified promptly since appropriate re-evaluation of the program may be undertaken.

The chief of pediatrics/department chairman must have the ultimate responsibility for all educational programs, including any special subspecialty programs, carried on in the department. All program descriptions submitted from the department must bear his/her original signature indicating a review and approval of the submitted materials.

Of foremost importance in a successful graduate training program is the quality of supervision and evaluation of the clinical work of the residents. An attending staff with professional ability, enthusiasm, and a sense of responsibility for teaching is essential. The faculty must contain educators with diversified interests and expertise in clinical pediatrics and in the basic sciences, and should be sufficient in number to meet the training responsibilities of the program. They should be Board certified or possess suitable equivalent qualifications. One measure of the quality of the faculty is their participation in investigative activities and in the preparation of reports and papers. Qualified pediatric surgical faculty greatly enhance the residents' educational experience and should have a major role in the residents' education with respect to surgical diagnoses and pre and post operative care. A pediatric pathologist and a pediatric radiologist would enhance the educational experience of pediatric residents.

The example set by dedication of the teaching staff to patient care is essential to the excellence of the educational program. Junior staff appointments, equivalent to chief residents at the fourth-year or other advanced residency level, may be desirable in some programs. Such appointments may serve to provide better coordination and supervision of the educational and patient care programs.

The institutional staff should include qualified members of allied health professions, such as social service, physical therapy, psychology and nutrition. Adequate numbers of qualified pediatric nurses are also essential.

VII. FACILITIES

The inpatient and outpatient facilities must be adequate in size and variety and must have the appropriate equipment necessary for a broad educational experience in pediatrics.

There must be an appropriately equipped and staffed emergency room facility for the care of children and adolescents. The hospital should provide facilities that will enable pediatricians to admit patients under their care. The program must also have an intensive care facility which is appropriately equipped and staffed for the care of seriously ill children. Pediatric staff must be available to supervise the pediatric residents on both of these services.

A. Laboratory, Radiology and Pathology Facilities

Laboratory, radiology and pathology services must be adequate to permit the residents to enhance their educational experience during the care of patients. The services should be available each day throughout the entire 24 hours.

B. Medical Library

An adequate medical library should be readily available day or night. There should be an ample supply of current pediatric textbooks and journals. If library facilities are inadequate within the hospital, arrangements should be made for ready access to a larger medical library. Access to computerized literature search facilities is highly desirable.

C. Records

There can be no substitute for a well taken history and a carefully performed physical examination. On the basis of these two procedures alone, the resident should record his/her impressions, and develop an initial study and management plan. The resident’s progress notes and final summary are a revealing index of the quality of his/her training. The medical record room should maintain a cross indexing system that makes patient’s charts readily available for review and study. The Committee recommends a unit record system for inpatient and outpatient charts.

VIII. SIZE OF PROGRAM

The Committee does not designate the number of residents that should be appointed to a specific program. However, it is recognized that peer contact and discussion is important to the learning process as contact with teaching facility. The number of pediatric residents must be sufficient to provide for frequent and meaningful discussion with peers as well as to provide appropriate coverage for adequate patient care. Because of the different educational components in a pediatric residency, e.g., neonatal, outpatient, ward and emergency room, there must be a sufficient number of residents at each level to provide appropriate peer interchange. The Committee will consider the presence of residents from other services when it evaluates this dimension of a program.

Programs should have a sufficient number and variety of inpatients to assure each resident broad training and exposure. Programs will be expected to demonstrate that clinical experience is sufficiently complex and diverse to ensure that the residents will have an adequate exposure to problems, including life-threatening conditions. Deficient or excessive patient loads or imbalance between supervisory staff and residents may jeopardize the accreditation status of the program. Hospital duties should not be so pressing or consuming that they preclude ample time for other important phases of the training program or for personal needs. On the other
hand, it is equally essential that the resident have a keen sense of personal responsibility for patient care. If the resident does not assume this responsibility, no educational program can produce sympathetic and effective physicians. A resident's obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week. Night and weekend duties must be sufficient to permit implementation of the concept of responsibility for patients and to provide for adequate patient care. Residents on call must be rotated so that there is a frequency of every third or fourth night. The resident should not be relieved of duty until the proper care and welfare of the patients have been assured by the presence of a suitable professional replacement.

IX. EVALUATION

Periodic evaluation of the educational progress of all residents is required. Residents should be encouraged to take a standard in-training examination at the beginning of the PL1 and PL2 years and if past performance on this exam has been unsatisfactory, it would be desirable to retake the exam at the beginning of the PL3 year. In-house evaluations, utilizing a variety of acceptable techniques, must be carried out on a recurring basis. These evaluations must be discussed with the resident and must be kept on file and be available for a review.

Teaching faculty should also be evaluated on an on-going basis regarding their teaching ability, clinical knowledge, attitudes, scholarly contributions, interpersonal skills and communication abilities.

The effectiveness of the residency program should also be evaluated on a periodic basis in reference to the educational needs of the residents, the quality of patient care provided and the contributions of the faculty. The feedback should be used for improvement of the program.

One measure of the quality of the program is the performance of its graduates in the examination of the American Board of Pediatrics.

Residents who plan to seek certification by the American Board of Pediatrics should contact the Secretary of the Board to obtain the latest information regarding requirements for certification.

Effective: July 1985 ACGME: September 1985

Special Requirements for Subspecialties of Pediatrics

As a general rule pediatric subspecialty programs will be surveyed and reviewed in conjunction with the survey and review of the core pediatrics program to which they are attached. In special cases determined by the RRC or in the case of a new application a subspecialty program may be surveyed and reviewed separately.

A separate set of forms will be completed for the core program and for each of the subspecialty programs being surveyed. Instrumentation will be provided regarding the preparation of the forms and the details of the survey.

In order to qualify for initial accreditation, a subspecialty program must function in conjunction with an accredited core program which is in good standing. If the core program is accredited on a probationary basis, an application for accreditation of a new subspecialty program attached to that core will not be accepted by the RRC.

The Residency Review Committee will designate subspecialty programs as being accredited or not accredited. No further delineation of accreditation categories will be utilized. The accreditation of a subspecialty program will be directly tied to that of the core. If the core program is subsequently accredited on a probationary basis this is simultaneously a warning to the related subspecialty programs that accreditation is jeopardy. Withdrawal of accreditation of the core pediatrics program will result in the simultaneous loss of accreditation of all subspecialty programs which function in conjunction with it.

If the core program remains in good standing but the RRC judges a subspecialty program to be in noncompliance with the Special Requirements, a warning will be issued. If suitable improvement is not demonstrated in the time specified by the RRC, accreditation may be withdrawn from the subspecialty program. The Procedures for Reconsideration and for Appeal of Adverse Actions may be utilized by subspecialty programs from which accreditation has been withdrawn in an action separate from withdrawal of accreditation from the core program.

Inquiries about accreditation of pediatric subspecialty programs should be directed to the Executive Secretary of the RRC for Pediatrics.

Effective: January 1986

Training Programs in Pediatric Cardiology

I. DURATION OF TRAINING AND PREREQUISITES

A minimum period of two years[21] is required, and a third year, emphasizing research preparatory to an academic career, is strongly recommended. Training need not be confined to the parent institution although it is essential that the resident in pediatric cardiology receive progressive education, experience and responsibilities in the specialty.

Training programs in pediatric cardiology must exist in conjunction with an accredited three year pediatric residency program; these postgraduate programs should not dilute the patient material available to the core program.

Ordinarily, the resident will have completed three years of training in an accredited pediatric residency program prior to beginning a program in pediatric cardiology.

II. GENERAL SCOPE OF APPROVED PROGRAMS

Graduate training in pediatric cardiology should provide for properly balanced, well-organized and progressive responsibility for care and study of patients on ward and outpatient services. This must encompass age groups from the newborn (including premature infants) through adolescence. Approved programs must include adequate training in the basic medical sciences, as well as in the clinical laboratory, public health and community aspects of pediatric cardiology. Significant experience in investigational activities is expected. The resident must be exposed to pathologic conditions ranging from moderate to those found in the seriously ill child needing intensive care. There must be experience with a broad spectrum of congenital and acquired heart disease, both surgical and medical, and chronic as well as acute or emergency situations. There should be opportunities to develop teaching skills. These opportunities should include both formal and informal experiences, including rounds, outpatient clinics, conferences, grand rounds and formal lectures. There should be opportunities to participate in and learn the fundamentals of administration of a pediatric cardiology program, including organization of clinics, organization and function of the cardiac team, and interaction with support agencies in the community such as CCS, third party insurance companies, school nurses, public health nurses and others.

III. CONTENT AREAS

A. Basic Sciences

The program should offer instruction through courses, seminars, workshops, or laboratory experience to provide appropriate background in basic and fundamental disciplines related to the heart and cardiovascular system, such as anatomy, physiology, biochemistry, embryology, pathology, phar-

---

[21] At the present time only two years of training will be accredited by the Residency Review Committee.
macology, genetics, bioelectronics and biostatistics. The resident must receive instruction in cardiovascular pathology. Specimens demonstrating the various types of congenital cardiovascular anomalies should be classified and readily available for study. Conferences involving current pathologic material must be held and closely correlated with clinical experience; such conferences should include clinicians, surgeons, physiologists, roentgenologists and pathologists. Through understanding of embryology and anatomy of the normal heart and vascular system as well as the deviations from normal that may occur should be mastered. Normal and abnormal cardiovascular and cardiopulmonary physiology and metabolism should be taught, as well as fundamentals of cardiovascular pharmacology, including mechanisms of drug action, therapeutic indications, and side effects.

B. Clinical Practice

The program should prepare the resident to provide optimal care and consultation for children with cardiovascular disease. Clinical experience should be broad and include in-patient and out-patient experience and encompass age groups from neonates through adolescence (birth to 21 years, preferably) with opportunity to observe heart disease in adults, particularly congenital and rheumatic disease.

Aftercare—The resident should participate in consultations or conferences in which the medical and surgical staffs evaluate the results of surgery and the patient’s cardiac status prior to discharge from the hospital. The resident should have the opportunity to arrange for follow-up visits and send information to the referring physician to assist him/her in the future management of the patient.

Residencies in pediatric cardiology must offer broad and inclusive training in the specialty. This should include fundamentals of clinical diagnosis with special emphasis on auscultation and physical examination, roentgenology, electrocardiography, 2D and M-mode echocardiography, radionuclear cardiology, exercise stress testing, Holter monitoring and such other laboratory tests that may become established to facilitate diagnosis and management. Experience and instruction in techniques of and understanding of the limitations of cardiac catheterization and selective angiography are required. Catheterization must be provided for in the resident to participate in a minimum number of catheterizations in infants and children; this number may vary from institution to institution but should approximate 100 patients during a two-year program. The resident should have the opportunity to master the use of relevant electronic equipment, recording devices, and angiographic equipment necessary to perform cardiac catheterization. In addition, the program must provide the resident with the opportunity to learn the fundamentals of radiation safety.

Experience with pre and postoperative care of patients having cardiac surgery, both by closed and open methods, in close cooperation with the cardio-thoracic surgical staff is required. A basic understanding of current surgical techniques, methods of cardiopulmonary bypass and hypothermia is important for adequate training. The resident should understand and know how to manage postoperative complications—both immediate and delayed. Opportunity for long term follow-up observations of both pre and postoperative patients must be afforded the resident.

The program must provide the resident with the opportunity for the study of rheumatic fever, collagen diseases, infective endocarditis and other infections and metabolic conditions. The resident should be made aware of etiologic and risk factors in hypertensive and atherosclerotic heart disease, including hyperlipidemic states and should gain experience in the diagnosis and management of patients with these cardiovascular problems.

C. Research

A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in pediatric cardiology and an ongoing active research program with investigation into clinical and basic aspects of various cardiovascular problems by the teaching staff. Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development, and to critical analysis. Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of cardiology. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities either for faculty review or publication.

D. Administration

The resident should gain experience in organizational responsibilities necessary to his role as a pediatric cardiologist in the community. He should be exposed to methods of organization of the cardiac catheterization laboratory, the outpatient clinic, organization of a teaching service, and organization and day-to-day function of the entire cardiology team. He should have the opportunity to interact with Crippled Children’s Services, insurance companies, community resources and others necessary to the proper care of children with cardiac problems.

E. Conferences

Conferences must be held on a regular basis in the areas of clinical diagnosis and therapy, cardiovascular research and clinical morphologic correlations. Conferences with other disciplines such as physiology, pharmacology, pathology, neonatology, cardiovascular radiology, cardiothoracic surgery and adult cardiology are encouraged.

IV. STAFF

A. The Chief of Service

An approved pediatric cardiology training program must be under the direction of a physician certified by the American Board of Pediatrics and the Sub-Board of Pediatric Cardiology or who possesses suitable equivalent qualifications. The program director should be physically present on a day-to-day basis to supervise and direct the training program and is directly responsible to the general pediatric program director for the content, quality and supervision of the training program. Directors of pediatric cardiology training programs should provide an environment for the open discussion of ideas, creation of hypotheses which can be examined in the laboratory or by clinical protocol and will actively discourage unquestioning adherence to dogma. Implementation of the training program should involve collaborative efforts with other pediatric cardiologists, with internists working in areas of mutual concern and assistance of other training program directors so that highly-specialized resources may be shared.

B. It is desirable that members of the pediatric cardiology training staff include Board-certified or equivalent pediatric cardiologists, medical cardiologists and basic scientists actively engaged in cardiovascular research.

C. A general pediatric staff with a broad range of subspecialty interests is essential to teach complete care of infants, children and adolescents with cardiac problems.

D. Staff from other disciplines, including cardiovascular radiology, cardiothoracic surgery, adult cardiology, anesthesiology, neonatology, pulmonary disease, pathology, hematology, nephrology, gastroenterology, and genetics should be readily available. Residents should also learn to work with and utilize the special skills of pediatric cardiovascular nurses, intensive care nurses, catheterization laboratory technicians, operating room personnel, social workers and psychologists.

V. FACILITIES

It is desirable that all facilities should be located at the same institution. Where a facility is shared by several institutions in the interest of cost and efficiency, the program director may arrange for a resident to rotate to that facility.
Neonatal-Perinatal Medicine

ESSENTIALS OF ACCREDITED RESIDENCIES

A. Inpatient Services

An active inpatient pediatriic cardiology service is essential. This should provide all the diagnostic and treatment services characteristic of a comprehensive children’s facility.

1. Patients admitted to the inpatient service should be under the direct or indirect supervision of the training program staff and available to the resident.

2. The number of inpatients necessary to provide the resident with an optimum experience will vary with the number of residents and staff supervisors. A sufficient number and variety of hospital patients is necessary to assure broad training and experience and, in general, will only be provided if the minimum number of catheterizations and operations listed in Section VI are performed. A ratio of pediatric cardiology training staff to residents of 2/1 is desirable.

3. The following support facilities should be available on a 24-hour basis:

a. General X-ray diagnostic facilities; nuclear cardiology;

b. A graphics laboratory with facilities for recording the standard electrocardiogram and 2-D and M-mode echocardiograms;

c. Laboratories to do routine analyses of blood and urine, to determine blood gas values, blood chemistries, blood clotting studies and to cross match blood;

d. An operating room designed and equipped for cardiopulmonary extracorporeal circulation with appropriate monitoring devices, defibrillator and cardiac pacing devices;

e. A blood bank equipped to meet the demands of cardiac surgery must be closely affiliated with the center;

f. An intensive care unit in each center in which patients with heart disease are operated upon, with personnel and equipment available to allow provision of the special and constant care needed by pre- and postoperative patients.

B. Ambulatory Services

There must be a regularly scheduled pediatric cardiology clinic, and this must be supervised by one or more members of the cardiology staff. Time and space in this clinic must be available for residents to provide continuity and follow-up care for all patients under their care.

C. Catheterization Laboratory

The catheterization laboratory should ordinarily be located within a facility completely equipped to take care of patients in order to provide a comprehensive experience for the residents. A program which includes a catheterization laboratory located in a facility which cannot meet this criterion will be expected to provide evidence that the training of residents is not compromised in this regard.

1. Personnel

Physician in Charge—The physician in charge of the procedure must be certified by the Sub-Board of Pediatric Cardiology or possess suitable equivalent qualifications. He/She must be able to carry out the technical aspects of the procedures and correlate the results of the study with clinical information in reaching sound anatomic, electrophysiologic and hemodynamic conclusions. A second physician should be available in the event that additional help is needed or a complication develops. In addition, a radiologist competent in cardiovascular radiology, an anesthesiologist and a thoracic surgeon with expertise in the pediatric cardiovascular aspects of their specialties should be immediately available for consultation, assistance and emergency surgical procedures. Additional personnel, adequately trained in pediatric cardiological techniques, should be available.

2. Equipment

Up-to-date equipment should include facilities for diagnostic biplane angiography, blood gas analyses, and electrophysiological studies. A method for recording catheterization laboratory complications must be used and records kept of all complications. Resuscitation equipment must be available for all pediatric patients.

D. Library and Research Facilities

The training program must provide access to facilities for the resident to engage in scholarly activities including conference rooms, medical library and research laboratories. The library should be available day and night and should have an ample supply of current pediatric and cardiology textbooks and journals. Access to computerized literature search facilities is highly desirable.

VI. CLINICAL EXPERIENCE

The resident must gain experience with a wide variety of cardiovascular problems in infants and children. In general, approved training programs should have a minimum yearly case load for pediatric patients of approximately 150 cardiac catheterizations and approximately 75 operations employing extracorporeal circulation. Of these, approximately 50 catheterizations and approximately 24 open-heart surgical procedures should be performed on patients less than one year of age. Each resident should participate in or perform under supervision approximately 100 catheterizations in a two year period.

VII. PATIENT INFORMATION

Clinical data including inpatients, outpatients and patients undergoing catheterization and/or surgery, should be cross indexed and kept in such a manner as to allow rapid evaluation and analysis of the assembled information, including age, diagnosis, outcome, etc.

VIII. EVALUATION

The program must have an ongoing functional assessment of the following components of the educational program:

—resident performance
—faculty performance
—patient care
—program objectives

Well defined mechanisms for evaluation of these components must be developed and utilized for feedback for improvement of the program.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board of should communicate with the secretary of the appropriate board to be certain regarding the full requirements for certification.

Effective: July 1983

ACGME: November 1982

Training Programs in Neonatal-Perinatal Medicine

INTRODUCTION

The purpose of the training program in neonatal-perinatal medicine is to provide the residents with the background to understand the physiology of the normal neonate and the pathophysiologic of the sick infant and to diagnose and manage problems of the newborn. The program should be organized and conducted so as to assure an appropriate environment for the well-being and care of the patients as well as one which stresses the development of appropriate attitudes on the part of the residents.

Training programs in neonatal-perinatal medicine must exist in conjunction with an accredited, three-year pediatric residency program and an accredited obstetrical residency program. These postgraduate programs should not dilute the experience with patients available to the core program; rather, the presence of these programs should assure the availability of all facilities and personnel necessary for the complete care of the infant and adolescent patient. A thorough knowledge of the growth and development of the normal infant as well as a broad understanding of all aspects of child care are prerequisites for the proper management of disorders of the fetus or newborn.

DURATION OF TRAINING

Programs in neonatal-perinatal medicine must provide two
years of progressive educational experience and responsibility in the various aspects of fetal and neonatal medicine.

SCOPE OF TRAINING

The training program must emphasize fundamentals of clinical diagnosis and management. Opportunity must be provided for the resident to participate in the diagnosis and management of problems seen in the continuum of the development of the fetus through prenatal, intrapartum, and neonatal periods, including follow-up. The resident should have the opportunity to develop an appreciation of the social implications of disorders of the fetus and newly born infant. The resident must have the opportunity to learn to identify the high-risk pregnancy, to evaluate fetal well-being and maturity, and to become familiar with the aberrant factors which may develop during the intrapartum period. The resident must have the opportunity to develop special competence in the management of critically ill newborn infants, including techniques of neonatal resuscitation, preparation for transport, ventilatory support, continuous monitoring, temperature control, nutritional support, and general principles of critical care. The resident must also be made aware of laboratory techniques essential to the care of the high-risk infant. Residents should have the opportunity for teaching and for assuming some departmental administrative responsibilities. Experience in tabulating and evaluating institutional and regional fetal and neonatal morbidity and mortality should be provided. There should also be experience and instruction in techniques of collation and critical interpretation of data pertaining to immediate outcome and sequelae of various disease entities such as hyaline membrane disease, asphyxia, neonatal sepsis, erythroblastosis, etc. This experience should be closely related to the evaluations of various modalities of therapy used in these disorders. The opportunity for long-term follow-up of high-risk infants must be provided.

The program should provide the opportunity for resident participation in regularly scheduled multi-disciplinary conferences such as sessions which review perinatal mortality, morbidity and patient care, as well as participation in case conferences and current literature and research conferences.

The training program should include instruction in related basic sciences. Seminars, conferences, courses and appropriate laboratory experiences should be offered in the basic disciplines related to perinatal medicine, the fetus and the newborn. Examples are: maternal physiology, biochemistry, pharmacology, maternal influences on the fetus; fetal physiology, fetal development; placental function (placental circulation, gas exchange, growth); physiological and biochemical adaptation to birth; physiology, biochemistry, pharmacology, and pathology relevant to diseases of the newborn; psychology of pregnancy and maternal infant interaction; growth and nutrition; genetics; epidemiology; and biostatistics.

RESEARCH

A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in neonatal-perinatal medicine and an ongoing active research with investigation into clinical and basic aspects of various related problems by the teaching staff. Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development, and to critical analysis. Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of neonatal-perinatal medicine. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities either for faculty review or publication.

STAFF

The director of the training program should be certified by the American Board of Pediatrics, Sub-Board of Neonatal-Perinatal Medicine, or must possess acceptable equivalent credentials. He/she must have demonstrated competence as a teacher and researcher, and should have adequate administrative experience to direct the program.

Appropriate consultant faculty should be available to provide the trainees with a defined educational experience in related disciplines, including: fetal-maternal medicine, pediatric surgery, radiology, anesthesiology, pathology, social services, nursing and other pediatric subspecialties.

Essential staff for the training program are:

1. A sufficient number of neonatologists to provide adequate supervision and to ensure the educational and research quality of the program;
2. A pediatric cardiologist as a consultant and teacher;
3. A surgeon skilled in pediatric surgery as a consultant and teacher;
4. A cardiovascular surgeon skilled in pediatric cardiovascular surgery as a consultant;
5. An obstetrician with special competence in fetal-maternal medicine.

The following staff are recommended:

1. A bioengineer;
2. An ultrasonographer well versed in perinatal ultrasonic techniques;
3. A statistician and/or epidemiologist.

Nursing staffs must be sufficient to meet appropriate standards of care. This implies leadership by nurses skilled in neonatal and obstetrical intensive care. Medical social workers, qualified in maternal-child health, must also be available.

PATIENT POPULATION AND FACILITIES

An adequate number of infants must be available in order that the neonatal-perinatal resident may acquire competence in the management of the critically ill infant. The obstetrical and neonatal-perinatal programs must be closely associated in order that the residents may become knowledgeable about identifying the high risk pregnancy and evaluating fetal well-being and maturation. There should be a sufficient number of patients to ensure an opportunity for the residents to become competent in the technical aspects of care. An obstetrical program with fewer than 1,000 deliveries would not appear able to provide sufficient numbers to meet these objectives.

The number of infants requiring ventilatory assistance must be sufficient to provide each residency with the opportunity to become skilled in the management of these infants. Similarly, there should be an adequate number of infants requiring major surgery, including cardiac surgery, in order that the resident will have the opportunity to become skilled in the pre-operative and post-operative management of these infants.

The program must provide ample opportunity for residents to follow discharged infants in sufficient numbers to become skilled in the evaluation of such infants, as well as to become aware of the socioeconomic impact and the psychosocial stress that such infants may place upon a family. The resident must have the opportunity to become skilled in the management of these problems.

FACILITIES

Since neonatal intensive care is an integral part of the institution in which the training program is housed, it is essential that the following facilities be available within that institution or in another readily available institution which assures access, within a reasonable period of time and on a 24-hour day basis, to:

1. Microchemical laboratory;
2. Blood gas laboratory;
3. Perinatal diagnostic laboratory which performs OD, L/S ratio or equivalent determination, plasma or urinary estriols;
4. Radiology facilities;
5. Diagnostic bacteriology and virology laboratory;
6. Hematology laboratory;
Pediatric Hematology/Oncology

- Cytogenetics laboratory;
- Blood bank;
- EKG and EEG laboratories.

In addition to these essential diagnostic facilities, the following are considered desirable:
- Screening laboratory for inborn errors of metabolism;
- Clinical toxicology laboratory;
- Nuclear medicine facilities.

EVALUATION
The program must have an ongoing functional assessment of the following components of the educational program:
- Resident performance
- Faculty performance
- Patient care
- Program objectives

Well-defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing the feedback for improvement of the program.

CONCLUSION
The provisions of the General Requirements must also be met for accreditation. Individuals who plan to seek certification by the Sub-Board of Neonatal-Perinatal Medicine of the American Board of Pediatrics should communicate with the Secretary of the American Board of Pediatrics regarding the full requirements for certification.

One measure of the quality of a program is the performance of its graduates on the examinations of the Sub-Board of Neonatal-Perinatal Medicine of the American Board of Pediatrics.

Effective: July 1983, ACGME: May 1983

Training Programs in Pediatric Hematology/Oncology

INTRODUCTION
The purpose of the training program is to provide the resident with the background to diagnose and manage hematologic and oncologic diseases. This background includes an understanding of the physiology of blood and bone marrow function, as well as the pathophysiology of hematologic disorders and malignant disease.

Training programs in pediatric hematology/oncology must exist in conjunction with accredited three-year pediatric residency programs, but should not duplicate the experience with patients which is available to the core program. Rather, the presence of these programs should assure the availability of all facilities and personnel necessary for the complete care of the infant, child and adolescent patient. A thorough knowledge of the growth and development of the normal child as well as a broad understanding of all aspects of child care are prerequisites for the proper management of patients with hematologic and oncologic problems.

DURATION OF TRAINING
Programs must provide two years of progressive educational experience and responsibility in the elements of pediatric hematology and oncology.

SCOPE OF TRAINING
The training program must emphasize the fundamentals of clinical diagnosis with special emphasis on history taking and physical examination. A program in pediatric hematology/oncology should provide enough clinical experience with both inpatients and outpatients who have hematologic and oncologic disorders for the residents to develop facility in diagnosing and managing common and unusual problems.

The program should include hematologic disorders of the fetus and newborn, congenital and acquired disorders of red blood cells, white blood cells and platelets, bone marrow failure syndromes, infections disease, disturbances of iron metabolism, congenital and acquired coagulation defects, hemoglobinopathies, immunodeficiencies, leukemia, histiocytosis, and solid tumors of organs, soft tissue and bone.

In addition to specific hematologic and malignant disorders, the resident must have the opportunity to become familiar with all aspects of chemotherapy, including treatment protocols and management of complications, diagnosis and treatment of infections in the compromised host, appropriate use of transfusion of the various blood components, plasmapheresis and bone marrow transplantation. The resident should learn the methods of physiologic support of the cancer patient including parental nutrition, control of nausea and management of pain. The staging and classification of tumors, complete knowledge of the application of multimodal therapy, learning to function as a member of the "oncology team," learning the epidemiology and etiology of childhood cancer, making good observations, and keeping accurate patient data are vital aspects of pediatric oncology training.

The resident should participate in the activities of the Tumor Board and in the provision of comprehensive care to the child with cancer. He should have experience in support of the patient, family and staff in dealing with terminal illness. Development of skills in communication and counseling is important for the resident.

The residents should have the opportunity to teach, organize educational conferences and develop elementary skills in medical writing.

The residents must be exposed to the proper use of laboratory techniques for diagnosis. There should be particular emphasis on recognition of the limitations of the various methods and the pitfalls in interpretation of laboratory results. They should be familiar with the normal variations in laboratory data that occur at different ages and should know the influence of medications, toxins and systemic disease on hematologic values.

The residents should be provided with the background to enable them to utilize the diagnostic procedures of hematology and oncology. These include: a) the performance and interpretation of bone marrow aspiration and biopsy, b) venipuncture, c) lumbar puncture with evaluation of cerebrospinal fluid, d) use of the microscope, and e) interpretation of peripheral blood films. Appropriate educational experiences in the laboratories, including blood bank and tissue pathology, should be included.

The resident should be able to use the diagnostic services of radiology, nuclear medicine, computerized tomography, biopsies, ultrasound, angiography, clinical chemistry, microbiology, immunology and genetics in evaluation of patients with hematologic and oncologic disorders.

The training program should provide instruction in the related basic sciences. These include: a) structure and function of hemoglobin and iron metabolism, b) the phagocytic system, c) immunology, d) splenic function, e) cell kinetics, f) immunology, g) coagulation, h) genetics, i) the principles of radiation therapy, j) the characteristics of malignant cells, k) tissue typing, l) blood groups, m) characteristics of chemotherapeutic agents, n) microbiology and anti-infective agents in the compromised host, o) bone marrow transplantation and graft versus host disease, and p) nutrition.

RESEARCH
A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in pediatric hematology/oncology and an ongoing active research with investigation into clinical and basic aspects of various related problems by the teaching staff. Within the institution the completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and
prepare a written report of his/her research activities either for faculty review or publication.

**STAFF**

The director of the program should be certified by the Sub-Board of Hematology/Oncology of the American Board of Pediatrics, or must possess acceptable equivalent credentials. He/she must have demonstrated competence as a teacher and researcher, and should have adequate administrative experience to direct the program.

Appropriate consultant faculty should be available to provide the trainee with a defined educational experience in related disciplines, including: surgery and surgical specialties, radiation oncology, radiology, gynecology, infectious disease, pathology, psychiatry, immunology, cardiology, neurology, endocrinology, gastroenterology and genetics.

Supervision of residents must be provided by members of the teaching staff who are interested in teaching as well as in the care of patients and who can devote adequate time to both of these endeavors. The supervising faculty should include individuals competent in research in hematology and oncology.

**PATIENT POPULATION AND FACILITIES**

Adequate numbers of patients with hematologic and oncologic disorders ranging in age from newborn through adolescence must be available. It is particularly important that residents have continuing responsibility for the care of patients with malignant disease and chronic hematologic problems. There should be sufficient opportunity for the resident to provide consultation on a variety of patients to become familiar with the hematologic manifestations of a broad spectrum of pediatric disease.

Space in an ambulatory setting must be provided for optimal evaluation and care of patients. This should include facilities for outpatient chemotherapy and transfusions, and an inpatient area with full array of pediatric and related services staffed by pediatric residents and faculty. Full support must include radiology, laboratory, pathology, intensive care, respiratory therapy, physical therapy, nutrition, social services, psychiatry and psychology.

An adequate library with appropriate periodicals and texts must be available.

**EVALUATION**

The program must have an ongoing functional assessment of the following components of the educational program:

- resident performance
- faculty performance
- patient care
- program objectives

Well defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing feedback for improvement of the program.

**CONCLUSION**

The provisions of the General Requirements must also be met for accreditation. Individuals who plan to seek certification by the American Board of Pediatrics, Sub-Board of Hematology/Oncology, should communicate with the Secretary of the American Board of Pediatrics regarding the requirements for certification.

One measure of the quality of a program is the performance of its graduates on the examinations of the Sub-Board of Hematology/Oncology of the American Board of Pediatrics.

Effective: July 1983 | ACGME: May 1983

**Training Programs in Pediatric Endocrinology**

**INTRODUCTION**

The purpose of the training program is to provide the resident with the background to diagnose and manage endocrine diseases and to understand the physiology of hormonal regulation in childhood and adolescence. The program should be organized and conducted so as to assure an appropriate environment for the well-being and care of the patients as well as one which encourages scholarship on the part of the residents.

Training programs in pediatric endocrinology must exist in conjunction with an accredited three-year pediatric residency program; these postgraduate programs should not duplicate the experience with patients available to the core program. Rather, the presence of these programs should be seen as the availability of all facilities and personnel necessary for the complete care of the infant, child, and adolescent patient. A thorough knowledge of the growth and development of the normal child as well as a broad understanding of all aspects of child care are prerequisites for the proper management of individuals in the pediatric age group with endocrinologic problems.

**DURATION OF TRAINING**

Programs must provide two years of educational experience in pediatric endocrinology and responsibilities for the care of patients with endocrinologic and metabolic disorders.

**SCOPE OF TRAINING**

The training program must emphasize fundamentals of clinical diagnosis with special emphasis on history taking and physical examination. A program in pediatric endocrinology should have a broad clinical population with patient training defined by the following criteria. There should be a minimum annual exposure to 300-400 patient visits of children with general endocrinologic disorders (outpatient and/or inpatient basis). The clinical program should include 150-200 outpatient visits of children with diabetes mellitus and 15-20 hospitalized patients with diabetes mellitus yearly. General endocrinologic problems, which the resident should care for, should include children referred for: short stature, constitutional delay, genetic short stature, growth hormone deficiency, disorders of thyroid hormone physiology, secretion and synthesis, disorders of adrenal glucocorticoid physiology, secretion and metabolism, disorders of androgen excess and metabolism, the management of thyroid nodules and neoplasms, disorders of sexual development, disorders of calcium and phosphorus metabolism including rickets, parathyroid disorders, and vitamin D metabolism, disorders of fluid and electrolyte metabolism including diabetes insipidus and disorders of aldosterone metabolism. There must be clinical exposure to children with carbohydrate disorders including diabetes mellitus and hypoglycemia. The residents should be involved in the care of adolescents in order to gain knowledge of normal pubertal and hormonal alterations occurring during this phase of life and abnormal conditions, such as pituitary deficiency and gonadal dysfunction.

The trainees must be exposed to the proper use of laboratory techniques for measurement of hormones in body fluids; particular emphasis should be placed upon recognition of the limitations and pitfalls of interpretation of laboratory results. They should be familiar with normal variations that occur in laboratory data at different ages. Residents should be provided with the background which will enable them to utilize the diagnostic procedures of endocrinology involving radiology and nuclear medicine; formal rotations through such laboratories should be included. An opportunity must be available for the resident to learn about the pertinent aspects of genetics. Particular emphasis should be placed on the areas of counseling, biochemical genetics, cytogenetics and their phenotypic expression.

The training program should include instruction in related basic sciences. These include: (1) endocrine physiology and biochemistry, (2) embryology of endocrine and related systems with emphasis on sexual differentiation, (3) genetics including laboratory methods, cytogenetics and enzymology, and (4) aspects of immunology pertinent to understanding endocrine disease and the use of immunoassays. The training program should include a meaningful exposure to endocrinological research and should identify a defined segment of time during which the resident participates in such scholarly activity.
RESEARCH

A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in pediatric endocrinology and an ongoing research with investigation into clinical and basic aspects of various endocrinologic problems by the teaching staff. Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development, and to critical analysis. Ideally, the resident should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of endocrinology. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities within faculty review or publication.

STAFF

The director of the program should be certified by the Sub-Board of Pediatric Endocrinology of the American Board of Pediatrics, or must possess acceptable equivalent credentials. He/she must have demonstrated competence as a teacher and researcher, and should have adequate administrative experience to direct the program.

Appropriate consultant faculty should be available to provide the trainee with a defined educational experience in related disciplines, including: surgery, obstetrics/gynecology, internal medicine, psychiatry, neurology, radiology, nuclear medicine, genetics and pathology. Supervision of residents must be provided by members of the teaching staff who are interested in teaching as well as in the care of patients and who can devote adequate time to both of these endeavors. The supervising faculty should include individuals who are active and competent in endocrinological research.

PATIENT POPULATION AND FACILITIES

Adequate numbers of children and adolescents with endocrine disorders, growth disturbances and related metabolic disorders should be available. Patients with diabetes mellitus should be a part of the patient population. It is particularly important that the resident have continuing responsibility for care of patients with diabetes and other chronic endocrine disorders. Clinic should meet at least once weekly.

Facilities should include: 1) space in an ambulatory setting for optimal evaluation and care of patients, 2) an inpatient area with full array of pediatric and related services staffed by pediatric residents and faculty; the services must include radiology, laboratory, nuclear medicine and pathology. An adequate library with appropriate periodicals and texts must be available.

EVALUATION

The program must have an ongoing functional assessment of the following components of the educational program:
- resident performance
- faculty performance
- patient care
- program objectives

Well defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing the feedback for improvement of the program.

CONCLUSION

The provisions of the General Requirements must also be met for accreditation. Individuals who plan to seek certification by the American Board of Pediatrics, Sub-Board of Pediatric Endocrinology, should communicate with the Secretary of the American Board of Pediatrics regarding the requirements for certification.

One measure of the quality of a program is the performance of its graduates on the examinations of the Sub-Board of Pediatric Endocrinology of the American Board of Pediatrics.

Effective: July 1983 ACGME: May 1983

INTRODUCTION

The purpose of the training program is to provide the residents with the background to diagnose and manage renal diseases and to understand the physiology of fluid and electrolyte regulation in man. The program should be organized and conducted so as to assure an appropriate environment for the well-being and care of the patients while stressing the development of appropriate attitudes on the part of the residents.

Training programs in pediatric nephrology must exist in conjunction with an accredited three-year pediatric residency program. These postgraduate programs should not dilute the experience with patients available to the core program; rather, their presence should assure the availability of all facilities and personnel necessary for the complete care of the infant, child and adolescent. A thorough knowledge of the growth and development of the normal child as well as a broad understanding of all aspects of child care are prerequisites for the proper management of individuals with renal and genito-urinary problems, hypertension and disorders of body fluid physiology.

DURATION OF TRAINING

Programs in pediatric nephrology must provide two years of progressive educational experience and responsibility.

SCOPE OF TRAINING

The training program must be designed to develop the physician's competence in the clinical diagnosis, pathophysiology and medical treatment of disorders of the kidneys, urologic abnormalities, hypertension and disorders of body fluid physiology in infants, children and adolescents. Experience shall be provided in the therapy of end-stage renal disease, including dialysis and renal transplantation. Training in the selection, performance and evaluation procedures necessary for morphologic and physiological assessment of renal disease must be included. The program must provide the opportunity for the residents to teach in a variety of settings and to participate in basic science, laboratory and clinical research. Opportunity must also be provided for residents to develop competence in counseling chronically ill patients and their families.

The program should offer instruction through courses, workshops, seminars or laboratory experience to provide an appropriate background for residents in the basic and fundamental disciplines related to the kidney, such as embryology, physiology, pharmacology, pathology, immunopathology, genetics, biochemistry and parenteral nutrition.

RESEARCH

A critical aspect of the training program is its research environment. There should be evidence of a commitment to research and investigation in pediatric nephrology and an ongoing active research with investigation into clinical and basic aspects of various problems related by the teaching staff.

Within the institution, the resident should be exposed to and take part in research programs which provide an environment conducive to a questioning attitude, to protocol development and to critical analysis. Ideally, the residents should help design, conduct, evaluate and prepare for publication a clinical or laboratory research project in the area of nephrology. The completion of a research project during the training program is strongly encouraged. The resident should be able to communicate his knowledge to others both orally and in written form, conduct lectures, seminars and clinical conferences and prepare a written report of his/her research activities within faculty review or publication.

STAFF

The director of the program should be certified by the Sub-Board of Pediatric Nephrology of the American Board of Pediatrics, or must possess acceptable equivalent credentials. He/she must have demonstrated competence as a
teacher and researcher, and should have adequate administrative experience to direct the program. Appropriate consultant faculty should be available to provide the trainee with a diversified educational experience in related disciplines, including: urology, surgery, pathology, radiology, immunology, infectious disease and organ transplantation.

Supervision of residents must be provided by members of the teaching staff who are interested in teaching as well as in the care of patients and who can devote adequate time to the care and teaching of the residents. The supervising faculty should include individuals competent in research in the area of nephrology.

PATIENT POPULATION AND FACILITIES

Adequate numbers of infants, children and adolescents with renal disorders, urologic abnormalities, hypertension and disorders of body fluid physiology should be available. The facilities available must be sufficient to provide continuing contact with patients in an inpatient and ambulatory setting. Transplantation and dialysis are essential components of the program. In addition, certain ancillary support services and facilities must be available. These include urology, radiology, pathology, nuclear medicine, laboratory, nutrition services, nursing services, social services and individuals skilled in dealing with the dying patient. Appropriate research facilities, which enable the resident to carry out scholarly activities, are an important part of a program. An adequate library with appropriate periodicals and texts must be available.

EVALUATION

The program must have an ongoing functional assessment of the following components of the educational program:

— resident performance
— faculty performance
— patient care
— program objectives

Well-defined mechanisms for evaluation of these components must be developed as well as a methodology for utilizing the feedback for improvement of the program.

CONCLUSION

The provisions of the General Requirements must also be met for accreditation. Individuals who plan to seek certification by the American Board of Pediatrics, Sub Board of Pediatric Nephrology, should communicate with the Secretary of the American Board of Pediatrics regarding the requirements for certification.

One measure of the quality of a program is the performance of its graduates on the examinations of the Sub Board of Pediatric Nephrology of the American Board of Pediatrics.

Effective: July 1983  ACGME: May 1983

18. Special Requirements for Residency Training in Physical Medicine and Rehabilitation

I. INTRODUCTION

1.1 In addition to the general requirements, an approved residency in physical medicine and rehabilitation must document that it provides an educational experience of such quality and excellence as to assure that its graduates will possess those competencies necessary to enter level independent practice of this specialty. This will include a high order of knowledge about the diagnosis, etiology, treatment, prevention, and rehabilitation of those neuromusculoskeletal, cardiovascular, pulmonary, and other system disorders common to this specialty in patients of both sexes and all ages. The graduate should possess the attitudes and psychomotor skills required to perform the general and specific physical examination procedures and laboratory procedures such as electromyography and nerve conduction studies; to review the history and physical examination and treatment; to recognize the appropriate use of therapeutic modalities; to design rehabilitation strategies to minimize and prevent impairment and maximize functional independence with return of his/her patient to family and community. The graduate of an approved program should be able to effectively work as a member of a multidisciplinary team of rehabilitation practitioners to the maximum benefit of his/her patient by thoroughly understanding each allied health profession's role, by the graduate's ability to author adequately detailed prescriptions for physical treatment and by acquiring the management and leadership skills necessary to rehabilitation team leadership. Additionally, the graduate should be aware of his/her own strengths and limitations and the necessity for continued professional development. He/she should possess the necessary written and verbal communication skills essential to the effective practice of physical therapy.

1.2 The organization and philosophy of the residency program should include the resident aware that there are no short cuts to clinical competence and no substitutes for hard individual study. The initiative and originality of all residents should be stimulated, their independence of mind promoted, and their critical appraisal of current literature encouraged.

II. DURATION OF TRAINING

2.1 A minimum of four years of graduate medical education is necessary to train a physician contemplating specialization in this field, three years of which must be physical medicine and rehabilitation training. One year of the total training should be in fundamental clinical skills, such as internal medicine, family medicine, emergency medicine, neurology, cardiology, pediatrics, or a transitional year, accomplished in an accredited program, within the first half of the total training.

2.2 Programs can choose either to provide three years of physical medicine and rehabilitation training and appoint residents at the PG-2 level and/or to provide four years of training to include these fundamental clinical skills.

2.3 A program of three years duration is responsible for the thirty-six months of physical medicine and rehabilitation training and responsible for assuring that residents appointed at the PG-2 level have achieved training in fundamental clinical skills. A program of four years duration is responsible for the quality of the integrated educational experience for the entire four years, which includes training in fundamental clinical skills.

III. ADMINISTRATION AND ORGANIZATION

A. Physical medicine and rehabilitation should be organized as a major specialty operating as a service department to the broad fields of medicine and surgery.

3.2 To provide complete training, it is necessary to have beds assigned, preferably in one area and reasonably geographically located to facilitate the physical medicine and rehabilitation mission and training. A minimum of eight beds should be available for each resident assigned to an inpatient service.

3.3 The Program Director. Because the Residency Review Committee believes that the quality of the educational program is of foremost importance, the program director must have the professional ability, enthusiasm and sense of responsibility for this prioritization. The director should have the authority and time needed to fulfill administrative and teaching responsibilities in order to achieve the educational goals of the program and to participate with other institutional program directors in maintaining the quality of all programs. Many program directors have found that a full-time program director is desirable. If the position is not full-time, then he/she should have adequate time available without other conflicting responsibilities. To maintain program continuity he/she should be assigned over a period of years to the program directorship. Changes of program director must be reported immediately to the Residency Review Committee for the specialty. The program director must be qualified as a teacher, clinician and administrator, and be certified by the American Board of Physical Medicine and Rehabilitation or possess suitable equivalent
Physical Medicine and Rehabilitation

qualifications. He/she should possess broad experience in teaching residents and have a sufficient level of clinical experience and competence in management skills.

There must be a sufficient number of professional medical staff who are highly competent clinicians and motivated towards teaching residents. Ordinarily they should be Board certified or qualified to apply for admission to the examination of the American Board of Physical Medicine and Rehabilitation and/or an appropriate professional society or board, or possess qualifications acceptable for professional practice. These teachers must participate regularly and systematically in the training program and be readily available for consultations, especially when the resident is faced with a major therapeutic or diagnostic problem, a clinical emergency, or a crisis in patient care. Part-time faculty should have specific teaching responsibilities in which they engage with appropriate regularity. The teachers should be afforded an opportunity on a regular basis for advancing their educational methodology and skills, and as individuals who set examples for residents, they should make reasonable scholarly contributions, improve clinical care, participate in research and/or contribute to the professional literature. To improve educational quality a formal system should exist to identify special competencies, weaknesses of professional faculty and attention should be paid to making teaching assignments within their realms of greatest competency. Serious efforts should be made where indicated to correct faculty weakness. Residents should have a formal mechanism for faculty and rotation evaluation which is regularly reviewed by the program director.

3.5 Allied medical professional staff in the disciplines of nursing, occupational therapy, orthotics and prosthetics, physical therapy, psychology, rehabilitation nursing, social work, speech-language pathology, audiometry, and vocational counseling, who are competent in their fields and professionally certified by their respective professional organizations and who are willing and capable of contributing to the resident’s education, should be integrated into both the didactic and clinical experience of the resident whenever relevant. There should be evidence of coordination of the teaching roles of the allied health practitioners, and they too should be afforded regular opportunity for improving their educational skills.

3.6 There must be adequate equipment and space available to carry out a comprehensive training program in physical medicine and rehabilitation. Residents should gain familiarity with the safety, calibration and maintenance as well as the clinical use of medical equipment common to the various therapy areas and laboratories, including dialysis, ultrasound, radiated heat devices, ultraviolet and various other therapeutic and hydrotherapy devices, exercise equipment, canes, crutches, walkers and other ambulatory aids, wheelchairs and special devices for the impaired driver, electrodiagnostic and EMG equipment, electromyographic equipment and urodynamic laboratory instruments, simple splinting apparatus, and audiometric devices. The occupational therapy area must be adequately equipped to give the residents experience in activities of daily living, and the evaluation of and training in devices to improve skills in activities of daily living. Psychometric and vocational and social evaluation facilities and test instruments must be adequate to expose the resident to the broad spectrum of their prescriptions and their use and interpretation in the common practice of rehabilitation medicine.

3.7 The residents should have the opportunity to observe and gain fundamental understanding or orthotics and prosthetics, including fitting and manufacturing, through documented arrangements made with appropriate orthotic/prosthetic facilities. All of the items listed under sections 3.6 and 3.7 must be equipment available for all age groups with special concern of availability of modified equipment for the pediatric or geriatric patient.

3.8 Relationships with community rehabilitation service facilities are encouraged to expose the resident to nursing homes, sheltered workshops, schools for the multiply handicapped, deaf and blind, and independent living facilities for the severely physically impaired individual.

3.9 The sponsoring institution should provide adequate availability of a professional library with suitable basic textbooks and journals pertinent to general medicine and surgery and the specialty of physical medicine and rehabilitation. Loan capabilities with other main or lending libraries should be available. The library should be readily accessible during evening hours and weekends. Some scholarly experience which demands the use of library reference facilities should be a part of the residency program.

3.10 Basic teaching aids such as slide projectors, sound film units, videotape facilities and the like should be available. Reasonable access to these areas on nights and weekends for residents and staff should be available.

3.11 Adequate office space should be available for the faculty and residents to participate both in clinical examinations of patients and in self-study.

3.12 Adequate space must be available which is designated for seminars, lectures, and other teaching experiences to include team conferences and specialty care clinics such as geriatrics, pneumatics, protein and other handicaps and the like.

IV. EDUCATIONAL PROGRAMS

4.1 General. The clinical care of patients is the heart of an adequate program, since the chief objective of residency education is the development of a high order of clinical competence in its graduates. The attainment of this chief objective must not be attenuated by participation of the resident in other activities. At the same time, formal education should have a high priority. Residents should obtain adequate and supervised experience in administration, ward management and teaching. Residents should have the opportunity to participate in structured, supervised research training. A program director may elect to offer a special research or academic track for selected residents. This may take the form of an elective or research rotation within the framework of the existing educational requirements. This inclusion of structured and research training is not to compromise the attainment of clinical competence.

4.2 Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis. In a progressive fashion it should expose residents to topics appropriate to their level of training. Systematically organized formal instruction (prepared lectures, seminars, assigned reading, etc.) must be an essential part of the residency. Staff meetings, clinical case conferences, journal clubs and lectures by visitors are desirable adjuncts but must not be used as substitutes for an organized didactic curriculum.

4.3 The curriculum must include adequate and systematic training in such basic sciences relevant to physical medicine and rehabilitation as anatomy, physiology, pathology and pathophysiologic of the neuromusculoskeletal, cardiovascular and pulmonary systems, kinesiology, functional anatomy, physics, electronics and instrumentation related to the field, physiologic responses to the various physical modalities and therapeutic exercise, and the procedures commonly employed by physiatry. This training should be correlated with clinical training but should, when appropriate, include the teaching services of basic scientists. An accessible anatomy laboratory for dissection and anatomy review is highly desirable.

4.4 Number of residents. In order to insure the stimulating educational atmosphere that a good peer group provides, a minimum number of residents should be enrolled in any program at all times. It is important to determine how many residents are necessary to this "critical mass" needed to maintain vitality of a program; however, all programs should have trainees in each year of training. Failure to recruit any new trainees for two consecutive years will
result in Residency Review Committee review and possible negative action.

4.5 The clinical portion of the curriculum must include a sufficient variety, depth, and volume of clinical experiences.

4.6 The training program must include a significant amount of time spent in responsibility for the direct clinical care of hospitalized patients as well as outpatients. Residents should devote at least one-third of their residency experience to work with hospitalized patients. It is undesirable for a program to devote more than two-thirds of a resident's time to the care of hospitalized patients.

4.7 Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and demonstrates new competencies. Supervision must include faculty review of records and assurance of a clearly written patient history and physical examination and meaningful continuous record of the patient's illness, background, management strategies, as well as lucid presentations of the case summary.

4.8 Provision should be made for the resident to review personally pertinent laboratory, biopsy and roentgenographic materials for his/her patients and also to observe directly the various therapist's treatment in the treatment areas.

4.9 The clinical curriculum must be planned to develop measurable competencies in: a) history and physical examination pertinent to physical medicine and rehabilitation; b) assessment of neurological, musculoskeletal and cardiovascular-pulmonary systems to include evaluation of sensation, reflexes, muscle strength, muscle endurance, joint range of motion, functional capacity, exercise analysis, evaluation of static examination, peripheral vascular status, and heart and lung status; c) data gathering and interpreting of psychosocial and vocational factors; d) techniques for electromyography and nerve conduction studies; e) prescriptions of orthotics, prosthetics, wheelchairs and ambulatory devices as well as special beds and pads; f) prescriptions and supervision of therapeutic modalities and therapeutic exercise, occupational therapy modalities and testing, and pertinent psychosocial, vocational and speech pathology instruments, as well as the interpretation of those instruments; g) evaluation of cardiopulmonary systems as related to the physiatric responsibilities for cardiopulmonary rehabilitation; h) arthrocentesis and synovial fluid analysis; i) analysis of growth and development pertinent to the rehabilitation of children; j) collaboration with other medical professionals and members of the allied health team—the resident must learn management techniques consistent with his/her team leadership role.

4.10 The resident must have the opportunity to learn to diagnose, assess and manage the conditions commonly encountered by the physiatrist in order to provide for the rehabilitation of at least the following: a) acute musculoskeletal pain syndromes; b) chronic pain management; c) radicular pain syndromes; d) congenital or acquired myopathies, neuropathies, motor neuron and motor system diseases, and trauma; e) hereditary developmental and acquired central nervous system disorders including cerebral palsy, stroke, myelomeningocele, multiple sclerosis; f) spinal cord trauma and diseases including management of neurogenic bladder and bowel and decubitus ulcer prevention and treatment; g) amputations in patients of all ages; h) sexual disturbance peculiar to the physically impaired; i) post-fracture care; j) pulmonary and cardiac disorders commonly seen by physiatrists; k) diseases, impairment and functional limitations common to the geriatric population; l) rheumatologic disorders treated by the physiatrist; m) usual medical conditions or complications seen in the rehabilitation patient.

4.11 The resident should have a demonstrable, organized formal system for his/her evaluation, with periodic review by faculty members, in-service examination, post-rotation evaluation, and external examinations such as those provided by the American Academy of Physical Medicine and Rehabilitation, and be provided with regular, formal counseling sessions and access to his/her evaluation folder. His/her rights must be protected by due process procedures. The resident should be aware of his/her and the institution's obligations and rights. He/she should possess a written agreement encompassing the following: a) the educational experience to be provided, including the nature of assignments to other programs or institutions; b) the resident's responsibilities; c) stipend and/or compensation; d) vacation, professional leave and sick leave; e) practice privileges and other activities outside the educational programs; f) malpractice coverage and other insurance benefits; g) individual educational plans tailored to meet a resident's personal needs or career plans; h) guarantee of due process.

4.12 One measure of the quality of a program may be the performance of its residents on the examination of the American Board of Physical Medicine and Rehabilitation. All provisions of the General Requirements must also be met for approval. Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation should communicate with the Secretary of the Board through their program director to be certain regarding qualification for admission to the certifying examination.

Effective: July 1985 ACGME: November 1984

19. Special Requirements for Residency Training in Plastic Surgery

PURPOSE

The fundamental purpose of a residency training program in plastic surgery is to educate and train surgeons broadly in the art and science of plastic and reconstructive surgery. As plastic surgery is not an exact science, a variety of educational plans will produce the desired result. However, the following requirements must be met or exceeded in all accredited training programs.

OBJECTIVE

The objective of a residency training program in plastic surgery is the development of a broadly competent and responsible plastic surgeon with high moral and ethical character, capable of functioning as an independent surgeon.

I. DURATION OF TRAINING

A. The requirement for residency training for plastic surgery is a minimum of two years, one of which shall be of senior responsibility.

B. Accreditation by the Residency Review Committee and Accreditation Council for Graduate Medical Education is required for all years of the training program.

C. If a plastic surgery residency is accredited as a three year program (rather than two), the resident must complete all three years of training in that program.

II. PREREQUISITE GRADUATE EDUCATION

A. A minimum of three years of clinical training with progressive responsibility in an ACGME accredited general surgery program, or its equivalent, must be satisfactorily completed prior to entering a plastic surgery residency training program.

B. Satisfactory completion of an accredited residency in otorhinolaryngology or orthopedic surgery will also qualify a candidate to enter a plastic surgery residency.

C. The program director is responsible for having documentation on file of the satisfactory completion of prerequisite training.

III. FACULTY AND STAFF

A. The program director shall be certified by the American Board of Plastic Surgery or possess suitable equivalent qualifications and be a competent teacher, clinician and administrator, as determined by the Residency Review Committee.

B. The faculty and attending staff shall possess qualifications that contribute to the training program, including high moral and ethical standards.

C. There must be sufficient staff available to supervise and instruct residents at all times. The teaching staff should demonstrate an appropriate commitment in time and energy.
to fulfill the teaching assignments. The teaching staff should participate in appropriate professional societies, pursue their own continuing education and demonstrate an active interest in related research.

IV. CLINICAL EXPERIENCE OF PLASTIC SURGICAL TRAINING

A. Training in the specialty of plastic surgery deals with the repair, replacement and reconstruction of defects of form and function of the integument and its underlying musculoskeletal system, with emphasis on the craniofacial structures, the oropharynx, the hand, the breast, and the external genitalia. It includes aesthetic surgery of structure with undesirable form. Special knowledge and skill in the design and transfer of flaps, in the transplantation of tissues, and in the replantation of structures are vital to these ends, as is skill in excisional surgery, in management of complex wounds, and in the use of alloplastic materials. Knowledge of surgical design, surgical diagnosis, surgical and artistic anatomy, surgical physiology and pharmacology, surgical pathology and bacteriology, biochemistry, embryology, and surgical instrumentation are fundamental to this specialty. The judgment and technical capability for achieving satisfactory surgical results are mandatory qualities for the plastic surgeon.

B. Training must include clinical experience in the management of congenital and acquired defects of the face, neck, trunk and extremities.

C. The program should provide for training in the following specific areas:
1. Congenital defects of the head and neck, including clefts of the lip and palate.
2. Neoplasms of the head and neck, including training in appropriate endoscopy and a working knowledge of adjuvant oncological therapy.
3. Facial trauma, including fractures.
4. Plastic surgery of the head and neck, trunk and extremities.
5. Plastic surgery of the breast.
8. Plastic surgery of the congenital and acquired defects of the trunk and genitalia.
9. Burn management, acute and reconstructive.
11. Reconstruction by flaps and grafts.

D. Active resident participation in outpatient services is an essential component of any program. This opportunity should include diagnostic, operative and follow-up experiences in a clinic or private office setting.

E. The scope of education and the training in the above areas shall include management of shock, blood replacement, fluid and electrolyte balance, wound healing, pharmacology, anesthesia, chemotherapy, immunotherapy, histopathology, anatomy, and rehabilitation.

F. Resident experience in patient management should demonstrate graduated and progressive responsibility.

G. Resident experience in a specific area may be provided or enhanced by a rotation through another service or institution. It is the responsibility of the program director to see that the educational environment, the volume and variety of patient population and the concept of progressive surgical responsibility is scrupulously followed in such rotations, consistent with the educational requirement standards of the parent service and institution. (Regarding the duration of such rotations, see "H" below.)

H. Any rotation(s) outside the accredited program totaling more than three months of the accredited duration of the training period require(s) prior approval by the Residency Review Committee.

V. DIDACTIC PROGRAM

The scope of plastic surgery is sufficiently broad that a well-organized, comprehensive and effective educational curriculum is necessary to ensure that all residents experience training in all the various areas of the specialty. Including pertinent related basic science applications. The curriculum content should reflect careful planning with evidence that the cyclical presentation of core specialty knowledge is being supplemented by the addition of current information, including basic science material as related to plastic surgery.

A. Conferences should be held to allow discussion of topics selected to broaden knowledge in the wide field of plastic surgery and to evaluate current information.

B. Conferences should embrace the scope of plastic surgery training as outlined in sections IV-C and E.

C. Teaching conferences must include basic science subjects, such as anatomy, physiology, pathology, embryology, radiation biology, genetics, microbiology and pharmacology, as related to clinical plastic surgery.

D. There should be regular, documented attendance of conferences by residents and staff.

E. Periodic review of the morbidity and mortality experiences of the service should be documented.

VI. RESEARCH

Reasonable facilities for clinical and/or laboratory research by the residents should be provided. Reports of research should be encouraged.

VII. EVALUATION OF EDUCATIONAL PROGRAMS

A. The knowledge and progress of each resident, including personality characteristics and ethics, shall be evaluated by the program director in consultation with the teaching staff in a semi-annual written review.

B. The evaluation shall document deficiencies to be corrected prior to completion of the residency program.

C. The evaluations shall be communicated to the individual resident in a conference with the program director, with a discussion of remedial steps, if any. The review and comments shall be signed by the resident and program director and maintained on file by the program director for at least five years.

D. The thoroughness of the individual resident's evaluations and the performance of the residents on the American Board of Plastic Surgery Certifying Examination are among the factors that may be considered by the Residency Review Committee in the overall review of the residency program.

E. There must be a clearly stated basis for annual advancement of a resident and written procedures for review of grievances and for due process.

F. There should be provisions for annual in-service evaluation of the program.

VIII. COMPLIANCE WITH ESSENTIALS OF ACCREDITED RESIDENCIES

A. The program director is responsible for familiarity with the current general Essentials of Accredited Residencies, adopted by the ACCME.

B. The requirements of the current general Essentials of Accredited Residencies must be met for approval of a program.

C. The program director must notify the Secretary of the RRC of any change which might substantially alter the educational experience. Examples of such changes are:
1. Change of program director.
2. Major changes in institutional affiliation.
3. Any increase in the number of residents at any level of training must receive prior approval of the RRC.

IX. BOARD CERTIFICATION

Residents who plan to seek certification by the American Board of Plastic Surgery should communicate with the Secretary of the Board to obtain the current information regarding certification.

Effective: July 1985  ACCME: September 1984
Special Requirements for Subspecialization in Plastic Surgery

GENERAL INFORMATION

A. A postgraduate fellowship is a prescribed post-plastic surgery residency educational experience of at least one year devoted to the enhancement of knowledge and skills in a defined area of plastic surgery. Postgraduate fellowship programs of graduate education in the subspecialties of plastic surgery may be accredited only in institutions which sponsor accredited residency programs in plastic surgery, or which are related by formal agreement to such institutions or programs. Accordingly, subspecialty programs will be considered for accreditation only if they function in direct association with a residency program in plastic surgery accredited by the Accreditation Council for Graduate Medical Education.

B. Postgraduate fellowship education in plastic surgery is a component in the continuum of the educational process; therefore, such education will take place only after completion of an accredited residency in plastic surgery, except under very unusual circumstances and with the prior approval of the Residency Review Committee.

C. Postgraduate fellowship programs will be considered for accreditation only in subspecialty areas that meet the requirements for accreditation as established by the Accreditation Council for Graduate Medical Education.

D. The essentials enumerated in the Special Requirements for Residency Training in Plastic Surgery are also applicable to the postgraduate fellowships. In conformity with the Special Requirements, programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment and attitudes that are essential to the practice of the specific subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

The following items, adapted from the Special Requirements for Residency Training in Plastic Surgery, merit emphasis:

1. The postgraduate fellowship program director must be qualified to supervise and to educate fellows appropriately in the specific subspecialty and must be certified by the American Board of Plastic Surgery or possess equivalent qualifications. The program director will be responsible for insuring that adequate facilities and other necessary resources are available to provide an education of high quality. There should be a sufficient number of qualified faculty to provide the educational experience and to evaluate the progress and performance of the fellow. As with residency program directors in plastic surgery, it is essential that postgraduate fellowship program directors devote sufficient time and effort to the postgraduate fellowship program and related activities. It is desirable that the postgraduate fellowship program director is appointed on a full-time basis.

2. A postgraduate fellowship must provide sufficiently advanced education to allow the fellow to acquire special skill and knowledge in a specific subspecialty. This education should consist of academic and technical components. The academic component should emphasize scholarship, self-instruction, teaching, development of analytic skills and surgical judgment, and research creativity. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for the practice of the subspecialty.

3. Programs will be evaluated according to the following postgraduate fellowship prerequisites:

   1. A sufficient number of new and follow-up patients must be present to assure appropriate inpatient and outpatient experience for each fellow.

   2. Subspecialty conferences, seminars, and literature review activities of high quality and of sufficient number must be regularly scheduled. Active participation of the fellow in the planning and the production of these meetings is essential.

   3. A fellow must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

   4. There must be close interaction between the parent residency program in plastic surgery and the postgraduate fellowship programs. Lines of responsibility for the plastic surgery resident and the fellow must be clearly defined. In addition, the fellow should maintain a defined interaction with residents and fellows in other disciplines.

   5. A postgraduate fellowship program should have an investigative component. A fellow must be encouraged to design, to carry out, and to interpret research studies. Supervised participation in research projects should occur. Time and facilities must be available to research activity.

   6. A postgraduate fellowship must offer supervised training in the operative procedures and in the technical skills integral to the subspeciality discipline involved. Instruction and experience must be provided so that the fellow will acquire an understanding of the common procedures of the subspecialty, their indications, risks and limitations.

   7. Postgraduate fellowship program directors must have a clearly defined method for regular periodic assessment of the performance of the fellow. The assessment must include cognitive, motor, and interpersonal skills, and surgical judgment. There must be provision for regular communication of this information to the fellow and to the residency program director.

8. The following policies and procedures pertain to the accreditation of postgraduate fellowship programs:

   1. Hospital information forms to be used for accreditation of a postgraduate fellowship will be distributed to the director of the plastic surgery residency program. It will be the responsibility of the residency program director to collect information from the directors of the postgraduate fellowship programs that are to be reviewed for accreditation. A site visitor will review the entire institutional program in plastic surgery, including the postgraduate fellowship programs being considered for accreditation. The statistical and narrative reports for all components of the program will be forwarded to the Residency Review Committee for Plastic Surgery (RRC-PS). The RRC-PS will review the institutional program in its entirety and will determine the accreditation of the plastic surgery residency program and the postgraduate fellowship programs.

   2. The postgraduate fellowship programs will be accredited only if the residency program in plastic surgery is accredited. The accreditation status of the postgraduate fellowship programs may equal, but not exceed the accreditation status of the parent plastic surgery residency program. A plastic surgery residency program may achieve and retain accreditation whether or not the affiliated postgraduate fellowship programs are accredited. Loss of accreditation of the plastic surgery residency program will result in loss of accreditation of all postgraduate fellowship programs related to that residency.

   3. The review cycle for postgraduate fellowship programs will be coordinated with the review cycle for the plastic surgery residency program with provision for separate review of a postgraduate fellowship program when major changes occur.

   4. Progress reports may be used to obtain additional information regarding postgraduate fellowship program progress and development.

Effective: (Not Specified)  ACME: February 1986
Training Programs in Hand Surgery

1. EDUCATIONAL PROGRAM
   a. Surgery of the hand includes the investigation, preservation, and restoration of all structures of the upper extremity which directly affect the form and function of the limb, wrist, hand, and body by medical, surgical, or physical methods.
   b. Subspecialty education in hand surgery must be organized to provide experience of a sufficient level for the fellow to acquire the competencies of a specialist; it must not be less than one continuous year and should ordinarily follow completion of full training in one of the parent disciplines: orthopaedic surgery, plastic surgery, or general surgery.
   c. Clinical experience must include opportunities to observe and manage patients of all ages with a wide variety of disorders of the upper extremity as well as to learn the effectiveness of therapeutic programs. The program must be structured to permit the fellow to develop diagnostic, procedural and technical skills essential to the performance of hand surgery. It must provide for basic and advanced training in and education as well as personal operative experience at the highest level to ensure the production of highly qualified surgeons within this specialized field.

2. FACILITIES AND RESOURCES
   a. Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient, ambulatory care and laboratory resources for adult and pediatric patients and specifically, support services in the diagnostic field of pathology, radiology, physical and occupational therapy, orthotics and prosthetics. There must be the opportunity for prolonged personal post-hospital follow-up of patients cared for by the fellow.
   b. It is desirable that the educational program be affiliated with a facility in which there is additional accredited training in surgery, plastic surgery, and orthopaedic surgery as well as other medical and surgical specialties and subspecialties. Available learning resources must include traditional libraries with current books and periodicals as well as facilities for viewing of audio-visual material such as video tapes and sound slide programs.

3. SPECIFIC KNOWLEDGE AND SKILLS
   a. The educational program must provide opportunities for fellows to develop clinical competence in the field of hand surgery. Examples of opportunities that are desirable for the development of knowledge and skills specific to hand surgery include, but are not limited to, trauma and its sequelae, neoplasia, vascular disorders, and degenerative and rheumatologic diseases. There must be experience in the development and execution of a treatment plan (including the appropriate technical skills) to manage patients with the above disorders. This opportunity must include experience in the clinical diagnosis and interpretation of laboratory data relative to the above disorders. Experience in microsurgery and other special technology relative to the management of hand problems must be provided as well as experience in the special diagnostic skills such as electrodagnosis and radiology relative to treating problems of the hand.
   b. The spectrum of education shall extend from the initial management of the patient, through after care, rehabilitation and the final evaluation.

Effect: (Not specified) ACGME: February 1986

20. Special Requirements for Residency Training in Preventive Medicine

SPECIAL REQUIREMENTS COMMON TO RESIDENCY TRAINING IN ALL FIELDS OF PREVENTIVE MEDICINE

Preventive medicine is a specialty of medical practice, the primary foci of which are a) health and disease as they occur in communities and in defined population groups, and b) the promotion of practices with respect to the community and the individual that will advance health by the prevention of disease and injury, make possible early diagnosis and treatment, and foster rehabilitation of persons with disabilities.

Preventive medicine has a common group of basic components, whatever the specific field of practice. These components are listed below. It is obvious that a given component may be of major importance in some fields of practice and of relatively minor importance in others, but all are represented in some measure in each field.

1. Biostatistical principles and methodology;
2. Epidemiological principles and methodology;
3. Planning, administration, and evaluation of health and medical programs;
4. Environmental hazards to health and principles of their recognition and control;
5. Social, cultural, and behavioral factors in medicine;
6. Applications of primary, secondary, and tertiary preventive principles and measures in medical and administrative practice.

To acquire the knowledge and skills necessary to achieve these objectives, graduate education in preventive medicine shall include three phases, academic, clinical and practicum. Each of these shall be no less than one year in duration, except that the academic phase may be concurrent. The residencies are described below. A program director should counsel residents in the selection of assignments, services, or elective courses which will help provide the skills and knowledge needed in their subsequent practice of the field of preventive medicine.

The required phases are as follows:
A. Clinical Phase
   A graduate year of clinical training and experience in direct patient care.
   This year should provide broad experience in direct patient care, including ambulatory and inpatient hospital experience, and must be completed prior to the start of the practicum phase. These requirements may be met by a year in an accredited program in one of the recognized direct patient care specialties or through a clinical year sponsored by the preventive medicine program itself. If a preventive medicine clinical year is offered, it must provide adequately supervised experience in direct patient care, and must include at least three months of service in internal medicine and three months of inpatient hospital service in a hospital accredited by the JCAH. These minimum elements of three months duration must be concurrent. The four-year, transitional year program will satisfy this requirement, or equivalent training as described under the Special Requirements for Public Health and General Preventive Medicine and Occupational Medicine. Such training should be specifically approved by the Residency Review Committee.
B. Academic Phase
   Successful completion of a course of academic study leading to the degree of Master of Public Health or of a post-baccalaureate curriculum of equivalent extent, depth, content and rigor.
   The course of study requires a minimum of one full academic year or its equivalent as determined by the Residency Review Committee. Its content shall in all cases include biostatistics, epidemiology, health service administration and environmental health. The director of each residency program should counsel each resident about the desirability of additional subjects, including behavioral sciences, that are important to the particular field of preventive medicine contemplated. The academic requirements may be met before or after graduation from medical school.

C. Practicum Phase
   A year of continued learning and supervised application of the knowledge, skills and attitudes for preventive medicine in the field of special study.
   The practicum phase shall be a minimum of twelve months full-time or its part-time equivalent as determined by the Residency Review Committee. It shall offer both clinical and didactic components. It should be provided in a setting in which there is a well organized program appropriate to the spec-
ESSENTIALS OF ACCREDITED RESIDENCIES

Public Health and General Preventive Medicine

The clinical component of the practicum phase shall provide for the supervised application of the knowledge, skills and attitudes of preventive medicine gained in the academic phase and in the didactic component of the practicum phase.

More than one of the required phases may be offered concurrently provided that the total length of such concurrent training is not less than the sum of time required for the individual phases included.

The Residency Review Committee will accredit programs which include all three of the phases listed above, or programs which provide only the academic and practicum phases. Programs which offer only the academic and practicum phases are to accept into such programs only individuals who have already completed training in an acceptable clinical phase.

The entire residency program shall be under the supervision of a director who is certified by the American Board of Preventive Medicine in the appropriate field of preventive medicine, and who is judged by the Residency Review Committee to be suitable qualified on the basis of knowledge and experience. In exceptional circumstances, an individual who is not certified in preventive medicine, but is judged by the Residency Review Committee to possess suitable equivalent qualifications, may serve as program director. The program director must devote adequate time and professional commitment to the program to assure its educational quality.

The program director must have and maintain documentation of institutional and interinstitutional agreements and of resident agreements and evaluations, including periodic assessments of resident performance. A file should be maintained for review of documentation of periodic internal assessment of the program by the program director and faculty, by the Residency Advisory Committee, by residents in training, in addition to recent graduates, and through the use of other techniques found suitable for each residency program. A variety of acceptable techniques for performance assessment may be utilized. A record should be maintained of the instruments or processes used for assessment. The results should be discussed with the residents and then kept in a file accessible to the residents and available for review by the accrediting authority.

The program director must notify the Secretary of the Residency Review Committee of any change in program, staffing, affiliations or facilities which might significantly alter the educational experience.

In addition to the program director, there should be sufficient faculty with suitable qualifications, with adequate time commitment and with sufficient coverage of required disciplines. The program director's contribution shall be supplemented by an adequate commitment of additional faculty proportionate to the requirements for the educational needs of the residents in the various disciplines involved in the field of study.

It is essential that the program director and key faculty members have a real interest in teaching and that they be willing and able to give the necessary time and effort to the educational program. They are to be engaged in scholarly activities such as participation in the activities of appropriate scientific societies, in the continuation of their own education, and in the presentation and publication of their scientific work. They must maintain an active interest in research as it pertains to their specialty.

There shall be a Residency Advisory Committee composed of selected individual consultants from both academic and practice areas who are acknowledged to be expert in the field of study. The program director and key faculty shall be ex-officio members.

The Advisory Committee shall concern itself with the development, content, conduct, effectiveness and improvement of the training program. Additionally, it shall concern itself with the instructional techniques used and with the periodic evaluation of all phases of the program, including faculty and resident performance. The Advisory Committee should also review the credentials of individuals in affiliated programs who supervise and teach residents to assure that they are professionally qualified to perform these roles. The Advisory Committee should report periodically, at least annually, to the head of the sponsoring institution. It shall meet with the frequency required to discharge these responsibilities, but not less than semi-annually. Formal minutes of the Advisory Committee meetings should be kept.

Individual phases or parts of the training program to be accredited by the Residency Review Committee for Preventive Medicine may be offered at institutions affiliated with the sponsoring institutions. In such cases, there should be an affiliation agreement setting forth the experience and training to be provided, the plan of supervision of the residents and the reports to be provided. In such affiliations, residents shall be under the direct supervision of an individual felt to be suitably qualified in the specialty area or in a related specialty. A table of organization of the agencies or institutions involved, with delineation of the responsibility and authority delegated to the trainees, will be available.

The sponsoring institution and affiliated institutions should cooperate in program development and promotion. An efficient system of records and well-established procedures for the maintenance of registers and preparation of reports must be maintained. The facilities, including office and laboratory space, should be adequate, and a basic collection of reference texts and periodicals in preventive medicine and public health should be maintained even if a complete library is available outside the agency. The program budget should provide for transportation expenses of the resident if the training program involves travel. Support services, including secretarial, should be provided.

In evaluating these training programs, the Residency Review Committee may also consider the performance of graduates in the examinations of the American Board of Preventive Medicine.

Training Programs in Public Health and General Preventive Medicine

Public health and general preventive medicine is the specialty of preventive medicine which deals with health promotion and disease prevention in communities and in defined populations. Practitioners in this field are found in official and voluntary health agencies, academic and health care institutions, group practice settings, and health service research organizations. Some of these specialists practice clinical and therapeutic preventive medicine for individual patients, many deal with public health practice and the health affairs of communities of people, and with disease characteristics of groups of patients, and some practice in both.

1. CLINICAL PHASE

Most commonly this phase is a year in an accredited residency in internal medicine, family practice, pediatrics, or obstetrics and gynecology. An accredited transitional year program will also satisfy this requirement. In exceptional circumstances, supervised clinical experience outside an accredited residency program may satisfy this requirement. It shall be the responsibility of the program director to assure that such special clinical experiences are reasonably comparable to one year of training in an accredited program and that an adequate clinical base for further training in preventive medicine has been established. Such training should be specifically evaluated and prospectively approved by the Residency Review Committee.

If the resident has already chosen an area of special emphasis (health promotion, disease control or health administration), the clinical phase should be designed to strengthen skills in that area.

2. ACADEMIC PHASE

The course work required by an academic unit to receive
Occupational Medicine

the Master's degree, or its equivalent, must include courses in biostatistics, epidemiology, health service administration and environmental health. Residency program directors should counsel residents and school authorities on course work that should be taken in the elective options of the student. These should be chosen according to the special emphasis and interest of the student, and the Special Requirements of the Residency Review Committee.

3. PRACTICUM PHASE

This phase shall be a minimum of twelve months and shall include public health and/or preventive medicine practice and didactic components. The facilities in which this training is provided need not conform to a rigid pattern. The sponsoring agencies may be educational institutions, research centers or operating health agencies. In addition to the primary agency, field training may also be given in affiliated organizations which are chosen to meet a particular need of the resident. The resources and structure of such an affiliated agency should be well established and should serve a population or provide research and educational programs sufficiently comprehensive to assure appropriate experience in public health and/or general preventive medicine. The competence and interest of the professional and supervisory staffs of a resident's training should be assured to the satisfaction of the Residency Review Committee.

If the primary sponsor is an educational or research institution, it should be responsible for teaching residents and should have resources for developing graduate programs in preventive medicine. The research program should include studies that offer each resident an opportunity to participate in the data gathering and analysis procedures. To ensure experience in an operating health agency, affiliation should be negotiated with a health department or other active health service agency and that affiliation should be documented by a written agreement.

If the primary sponsor is a health agency, it should offer a comprehensive experience in community health. Its program may include communicable and chronic disease control, medical care administration, health protection and promotion, maternal and child health, environmental health and sanitation, and mental health. To insure an appropriate didactic component, affiliation should be negotiated with a medical school or school of public health and that relationship documented in a written agreement.

Because the practitioner of public health and preventive medicine will need management skills, the program should include experience in budgeting, fiscal control, personnel practice, and administrative techniques, including exposure to automated record keeping and computer applications to health. Special attention should also be given to the political process and governmental structure. Observation or participation in legislative and regulatory procedures should be planned if possible.

In summary, the purpose of the practicum year is to give the resident experience in practicing public health and general preventive medicine in well established programs under the guidance of skilled practitioners. The scope of that experience must be broad enough to assure an appreciation for and ability to cope with a range of preventive medical problems. Additionally, the training must provide opportunity for concentrated experience in an area of the resident's special emphasis.

Training Programs in Occupational Medicine

Occupational medicine is a specialty of preventive medicine that focuses on the effects of an individual's occupation on his or her health. The populations served are those whose working environment contains any element that can adversely affect the individual's health. The principal concerns of occupational medicine are:

A. The Worker: Physical and emotional capabilities are assessed to assure that he or she can safely perform assigned duties. Periodic examinations throughout the worker's employment life measure changes in health status for the purposes of preventing diseases and disability, and of promoting health.

B. The Work Environment: This is examined for unsafe or potentially hazardous substances, physical conditions or work practices.

C. Chemical, Physical or Biological Agents in the Work Place: These must be understood and recognized. Advice and information must be communicated to the employer so that actions necessary to protect the workers can be accomplished, and to the employee so that he/she may take actions to protect his/her own health.

1. CLINICAL PHASE

In the event this year is not taken as a part of an accredited clinical residency, it shall be the responsibility of the program director to assure that such special clinical experiences are reasonably comparable to one year of training in an accredited program and that an adequate clinical base for further training in preventive medicine has been established. Such training should be specifically evaluated and prospectively approved by the Residency Review Committee.

2. ACADEMIC PHASE

Residency program directors should counsel residents and school authorities on course work that should be taken (toxicology and industrial hygiene, physical effects on humans of temperature, pressure, noise and stress), as well as suggested elective options of the student. These should be chosen according to the special emphasis interest of the student and the Special Requirements of the Residency Review Committee.

3. PRACTICUM PHASE

The practicum phase shall offer a balance of experience and attitudes with the objectivity necessary to present adequately the relevant scientific concerns, the concerns of workers and their representatives, and the concerns of employers. Residents shall be assigned significant responsibilities in the course of this training.

In the practicum phase of training, there shall be didactic, clinical and administrative components. There should also be opportunities for the planned and supervised application of the knowledge, skills, and attitudes of preventive and occupational medicine gained in the other phases of the training.

At least four months of the practicum phase of training shall be provided in a setting in which there is a well organized program of industrial employee health services and industrial hygiene.

A. Didactic Component

The didactic component should include, but not be limited to, each of the following:

1) Environmental Physiology—Responses of the body to changes in temperature, barometric pressure, noise, and other stresses related to the work environment;
2) Determination of the fitness and the appropriate placement of workers or applicants for work;
3) Maintenance and improvement of the physical and emotional health of workers;
4) Life style risk factors in occupational and non-occupational disease and injuries;
5) Toxicology—Basic principles, clinical management, and the prevention of health problems associated with agents in the work environment that are potentially hazardous;
6) Identification and assessment of potential reproductive risks in the workplace with reference to males and females, and their progeny;
7) Industrial Hygiene—The principles of the identification, assessment, and elimination or control of potential hazards in the work environment;

---

2It is the resident's responsibility to assure that the program meets the requirements of the American Board of Preventive Medicine.
ESSENTIALS OF ACCREDITED RESIDENCIES

Aerospace Medicine/Psychiatry

85

8) Safety, including human factor considerations in accident prevention, and the medical support of accident investigation;

9) Interpretation of laboratory data from either biological or environmental monitoring, and their application to medical surveillance; and,

10) The effective management of occupational medicine programs.

B. Clinical Component

The clinical component should include, but should not be limited to, the following:

1) Diagnosis, prevention, and treatment of disorders arising from any variety of work situations, from light to heavy industry, in a supervised setting for the comprehensive evaluation of patients and, if appropriate, for their treatment;

2) Evaluation of the fitness of individuals for placement or continuation in a wide variety of jobs, demanding a knowledge of physical and mental requirements for the work involved and a familiarity with potential hazards of the work environment.

C. Administrative Component

The administrative component should include the following:

1) The planning, administration, and supervision of a broad program for the protection of the health of workers and others from harmful effects due to an organization’s environment, operations, or products, and

2) Knowledge of and experience in the application of legislative and regulatory requirements, including workers’ compensation, pertinent to such a program.

Training Programs in Aerospace Medicine

Aerospace medicine is a specialty of preventive medicine which focuses on the health of a population group defined by the operating crews and passengers of air and space vehicles, together with the support personnel who are required to operate them. Segments of this population often work and live in remote, isolated, and sometimes closed environments under conditions of physical and psychological stress rarely encountered in terrestrial life. Specialty training for the physician in this field must, therefore, address the diagnosis, prevention and treatment of disorders associated with these unique environments and with the adaptive systems designed to support life under such conditions.

In addition to the requirements common to all fields of preventive medicine, the requirements for each phase of a residency in aerospace medicine are as follows:

1. CLINICAL PHASE

Training should emphasize neuropsychiatry, ophthalmology, cardiopulmonary diagnosis and emergency medicine. It is desirable that this year of clinical training be accomplished in a hospital or medical complex in which patients suffering from aerospace medical problems are frequently encountered. Graduated patient responsibility should be assigned to residents. Such training should be specifically evaluated and prospectively approved by the Residency Review Committee. Supplemental clinical training in the areas mentioned above should be provided during the practicum year as described below.

2. ACADEMIC PHASE

Special academic requirements for aerospace medicine are normally integrated into the curriculum leading to a post-baccalaureate degree. In addition to the common requirements of these Special Requirements, course content should emphasize environmental physiology and toxicology with respect to the biological effects of altered pressure, temperature, atmospheric chemistry, and ionizing radiation. Facilities should be available for laboratory or clinical investigation of problems with direct application to the specialty, and supervised participation by the resident in a formal research project should be required. Because of the paramount role of clinical care in an aerospace medical practice, it is desirable that the academic faculty be either integral to or formally affiliated with an accredited school of medicine.

3. PRACTICUM PHASE

This year of supervised training should be accomplished in an institutional setting where operational aeromedical problems are routinely encountered and aerospace life support systems are under active study and development. Laboratory facilities should be equipped to provide simulated environments in which the effects of and adaptation to extreme conditions of temperature, barometric pressure, acceleration, weightlessness and psychological stress can be studied. A flight training program should be available both to familiarize the resident on a man- or animal level as a source of clinical material for the supervised management of common clinical problems encountered among flight personnel.

21. Special Requirements for Residency Training in Psychiatry

I. GENERAL

A. Introduction

An approved residency program in psychiatry must demonstrate that it provides an educational experience of such excellence as to assure that its graduates will possess sound clinical judgment and a high order of knowledge about the diagnosis, treatment, and prevention of psychiatric disorders and the common medical and neurological disorders which relate to the practice of psychiatry. While residents cannot be expected to achieve in four years of training the highest possible degree of expertise in all of the diagnostic and treatment procedures used in psychiatry, those individuals who satisfactorily complete residency programs in psychiatry must be competent to render effective professional care to patients. Furthermore, they must have a keen awareness of their own strengths and limitations and of the necessity for continuing their own professional development.

B. Eligibility for Program Approval

1. Program Director

a. Only those programs are eligible for approval which:

(1) provide (with rare exceptions) at least three years of residency education and usually four years of graduate education following receipt of the M.D. degree.

(2) are conducted under the sponsorship of an institution which meets the General Requirements that apply to residency programs in all specialties, as outlined in the Essentials of Accredited Residencies, and

(3) meet all of the Special Requirements of Residency Training in Psychiatry.

b. Under rare and unusual circumstances, programs of either one or two years duration may be approved, even though they do not meet all of the above requirements for psychiatry. Such one or two year programs will be approved only if they provide some highly specialized educational and/or research program.

2. Program Size

a. Although the Residency Review Committee does not designate any specific number of residents who must be in training in a given program, all programs must maintain a "critical mass" of trainees sufficient to promote an intellectually stimulating educational atmosphere. An educationally sound, minimal "critical mass" of psychiatric residents is defined as at least three trainees enrolled in each year of a program.

b. Programs which fall below this prescribed "critical mass" will be reviewed, and if this deficiency is not corrected, will be subject to negative action.

23Requests to have a program accredited to train residents in psychiatry (or limited inquiries regarding residency programs) should be addressed to: Executive Secretary, Residency Review Committee for Psychiatry, 535 North Dearborn Street, Chicago, Illinois 60610. All inquiries as to whether a physician is qualified to be admitted for examination for certification in psychiatry should be addressed to: Executive Secretary, American Board of Psychiatry and Neurology, One American Plaza, Evanston, Illinois 60201.
Programs in which the numbers of residents exceed the minimum requisite resources of patient population, faculty or facilities for their adequate training will be found deficient on the basis of size. All programs must have adequate patient populations for each mode of required training and, minimally, include organized clinical services in inpatient, outpatient, emergency, consultation-liaison and child psychiatry.

Programs shall not increase the total size of the resident complement (as of the time of the last review) by more than 20% without approval of the Residency Review Committee. Such approval will require documentation that didactic and clinical training, including supervision, will not be compromised.

3. Program Quality

a. A well-planned, high quality educational program includes specific, assessable objectives for program components and criteria for graduation. These must be written and provided to each resident and faculty member. Generally speaking, the quality of a residency program is reflected in the ability of its residents to conceptualize all illnesses in terms of biological, psychological and sociocultural factors which determine normal and disordered behavior and be able to accomplish further data gathering, differential diagnosis, formulation of a treatment plan, implementation of treatment and follow-up.

b. Clinical records will include an adequate history, mental status, and physical and neurological examinations recorded by residents, an adequate treatment plan, regular and relevant progress notes, adequate justification for diagnostic and therapeutic procedures performed and a discharge summary. Each clinical service must have a mechanism which ensures that charts are regularly reviewed for supervisory and educational purposes. Randomly selected charts will be reviewed at the time of survey.

c. Performance of its graduates on examinations for certification by the American Board of Psychiatry and Neurology may be one measure of the quality of a program.

Therefore, programs are encouraged to obtain such information as one measure of their quality control.

d. The general academic level of the teaching environment of the institution as reflected by interaction with training programs in related fields (e.g., neurology, internal medicine, pediatrics, psychology) is another measure of program quality.

C. Residency Entry Requirements

Physicians may enter programs at the second postgraduate year level only after a broad-based clinical year of accredited training in the United States or Canada in programs in internal medicine, family practice or pediatrics; or after an ACGME accredited transitional year program; or after one year of an ACGME accredited residency in a clinical specialty requiring comprehensive and continuous patient care.

1. A psychiatric first postgraduate year must include at least four months in internal medicine, family practice or pediatrics, and this training must be in a clinical setting that provides comprehensive and continuous patient care. Emergency medicine and neurology rotations do not fulfill this four month requirement.

2. A psychiatric first postgraduate year should include more than six months in psychiatry and must not include more than eight months in psychiatry.

3. A minimum of two months of neurology, or its full-time equivalent on a part-time basis, is required prior to completion of training. It is strongly recommended that this experience occur during a psychiatric first postgraduate year. For residents transferring into a program, there must be documentation in the training record that they have met this requirement in their current or prior training.

II. OBJECTIVES OF TRAINING

A. First Postgraduate Year

The training obtained during the first postgraduate year should provide residents with medical skills more relevant to psychiatric practice. These include:

1. Learning to undertake the initial clinical and laboratory studies of patients presenting with a broad range of common medical and surgical disorders;
2. Being able to diagnose common medical and surgical disorders and to formulate appropriate initial treatment plans;
3. Being able to provide limited, but appropriate, continuous care of medical illnesses and to make appropriate referrals;
4. Being especially conversant with medical disorders displaying symptoms likely to be regarded as psychiatric, and with psychiatric disorders displaying symptoms likely to be regarded as medical;
5. Being especially cognizant of the nature of the interactions between psychiatric treatments and medical and surgical treatments; and
6. Being able to relate to patients and their families, as well as other members of the health care team with compassion, respect and professional integrity.

It is recommended that the department of psychiatry maintain contact with residents in the first postgraduate year while they are on services other than psychiatry. This is an ideal time to educate residents, such as by interdisciplinary seminars, in topics dealing with the interface between psychiatry and the rest of medicine.

B. Postgraduate Years II-IV

The chief objective of residency education is the development of a high order of clinical competence. Such competence requires attainment of the necessary substantive knowledge, skills and professional attitudes.

1. Requisite Knowledge Includes:

a. Thoughtful and informed appraisals of the major theories and viewpoints in psychiatry, together with a thorough grounding in the generally accepted facts;

b. Understanding of the biological, psychological, social, economic, ethnic and family factors that significantly influence physical and psychological development in infancy, childhood, adolescence and adulthood;

c. Comprehension of the etiologies, prevalence, diagnosis and treatment of all of the psychiatric conditions in the current standard diagnostic statistical manual as well as of the diagnosis and treatment of neurologic disorders relevant to psychiatric practice;

d. Thorough appreciation of the use, reliability and validity of the generally accepted techniques for diagnostic psychological assessment;

e. Familiarity with the issues of financing and regulation of psychiatric practice, including information about the structure of governmental and private organizations that influence mental health care;

f. Solid grounding in medical ethics as applied to psychiatric practice;

g. Appreciation of the history of psychiatry and its relationship to the evolution of modern medicine;

h. Familiarity with the legal aspects of psychiatric practice;

i. Understanding of when and how to refer; and

j. Appreciation of research methods in the clinical and behavioral sciences related to psychiatry.

2. Requisite Skills Include:

a. Experience and competence with all age groups in the elements of clinical diagnosis such as interviewing; clear and accurate history taking; competent physical, neurological and mental status examination; and complete and systematic recording of findings;

b. Competence in relating history and clinical findings to be relevant biological, psychological and social issues associated with etiology and treatment;

c. Competence in formulating a differential diagnosis and treatment plan for all conditions in the current standard nomenclature, taking into consideration all relevant data;

d. Experience and competence in the major types of therapy including short and long term individual psychotherapy, psychodynamic psychotherapy, family therapy, group ther-
apy, behavior therapy, crisis intervention, pharmacological and other somatic therapies, and drug and alcohol detoxification;
e. Experience and competence in providing continuous care for a variety of patients from different age groups, seen regularly and frequently for an extended time, in a variety of treatment modalities;
f. Competence in psychiatric consultation in a variety of medical, surgical and community settings;
g. Experience in psychiatric administration, especially such as leadership of interdisciplinary teams;
h. Knowledge of the indications for and limitations of the more common psychological tests;
i. Ability to appraise critically the professional and scientific literature; and
j. Ability to teach psychiatry to students in the health professions.

3. Requisite Attitudes:
a. Residents must have a strong sense of responsibility for patients. The attitudes required of a psychiatrist are those expected of all physicians. These attitudes begin to be acquired in medical school and are broadened in the medical specialty training of the psychiatrist.
b. Other important attitudinal components for residents to develop include a desire to be aware of their own strengths and limitations; and awareness of feelings toward themselves and others; a commitment to high ethical standards, and, a commitment to continuing professional development.

C. Curriculum

1. Methods of Meeting Training Objectives
a. An approved program must have a explicitly described educational curriculum composed of (1) formal didactic instruction such as regularly scheduled and required reading assignments; (2) clinical experience in which the resident, under supervision, receives progressively greater responsibility for patient care;
b. Residency education in psychiatry demands long hours and disciplined effort. The program should carefully monitor any activity outside the residency that interferes with education, performance or clinical responsibility.
c. Formal educational activity shall have high priority in the allotment of the resident's time and energies. Clinical responsibilities must not prevent the resident from obtaining the requisite didactic educational activities and formal instruction.
d. All programs should state specifically and as clearly as possible the objectives and competencies required for successful completion of the program. These objectives and criteria should be made available to residency applicants.
e. The didactic and clinical curriculum must be of sufficient breadth and depth as to provide residents with a thorough and well balanced presentation of the generally accepted theories, schools of thought, and major diagnostic and therapeutic procedures in the field of psychiatry.
f. The curriculum must include a significant number of interdisciplinary clinical conferences and didactic seminars for residents in which psychiatric faculty members collaborate with neurologists, internists and colleagues from other medical specialties and mental health disciplines.
g. Clinical training must include an adequate amount of regularly scheduled, individual supervision. Each resident must have at least two hours of individual supervision weekly in addition to teaching conferences and rounds, in the PG-2 through PG-4 years of training.
h. An important part of the education of the resident is the development of teaching skills. Residents should have ample opportunity to teach students in the health professions.
i. All programs should provide residents an opportunity to pursue individually chosen electives.
j. There must be an educationally sound balance among time spent in direct patient care, clinical and didactic teaching, and supervision.

2. Didactic Instruction
a. Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis. In a progressive fashion, it should expose residents to topics appropriate to their level of training as outlined in Section II.B. above. Systematically organized formal instruction (prepared lectures, seminars, assigned reading, etc.) must be an essential part of the residency. Staff meetings, clinical case conferences, journals clubs, and lectures by visitors are desirable adjuncts, but must not be used as substitutes for an organized didactic curriculum.
b. The curriculum must include adequate and systematic instruction in basic biological (e.g., neurosciences) and clinical sciences relevant to psychiatry, in psychodynamic theory as well as in child and adult development, and in appropriate material from the social and behavioral sciences (e.g., psychology, sociology, anthropology).
c. The residency program should provide its residents with instruction about American culture and subcultures. Many physicians may not be sufficiently familiar with attitudes, values and social norms prevalent among various groups of contemporary Americans. Therefore, the curriculum should contain enough instruction about these issues to enable residents cultural backgrounds. This course must be especially comprehensive in those programs with residents whose cultural backgrounds are significantly different from those of their patients.
d. Didactic exercises should include the presentation and discussion of clinical case material at conferences attended by faculty and fellow residents. This training should involve experiences in formulating and discussing the theoretical and practical issues involved in the diagnosis and management of the cases presented.

3. Clinical Experience
a. Carefully supervised clinical care of patients is the core of an adequate program. The clinical services must be so organized that residents have major responsibility for the care of a significant proportion of all patients assigned to them, and that they have sufficient and high quality supervision. The amount and type of patient care responsibility a resident assumes must increase as the resident advances in training.
b. Each resident must have major responsibility for the diagnosis and treatment of a reasonable number and adequate variety of patients with both acute and chronic illnesses representing the major psychotic and nonpsychotic categories of psychiatric illness. Adequate experience must also be assured in the diagnosis and management of the medical and neurological disorders commonly encountered in psychiatric practice. Each resident must have supervised experience in the evaluation and treatment of patients of both sexes, of various ages from childhood to old age, and from a variety of ethnic, racial, social and economic backgrounds. The clinical experiences are to be designed to develop the requisite skills as outlined in Section II.B.2 above.
c. The number of patients for which residents have primary responsibility at any one time must be sufficiently small to permit them to conduct a detailed study of each patient, to provide each patient with appropriate treatment, and to have sufficient time for other aspects of their educational program. At the same time, the number must be sufficiently large to provide an adequate depth and variety of clinical experiences. Specific clinical experiences must include:
(1) Significant responsibility for the diagnosis and treatment of an appropriate number and variety of psychiatric inpatients for a period of not less than nine months, but no more than eighteen months (or its full-time equivalent if done on a part-time basis), in four years of training. In general, it is preferable that the minimum inpatient experience be twelve months, although it is recognized that in some settings other training opportunities might lead to the absolute minimum of nine months. It may be educationally reward-
Psychiatry

ing, though not required, that some of this inpatient experience occur later in training with groups of inpatients that had been encountered earlier in the residency;

(2) At least one year (or its full-time equivalent if done on a part-time basis) in an organized and well supervised outpatient program, which includes experience with a wide variety of disorders, patients and treatment modalities, with experience in both brief and long-term care of patients, utilizing both psychodynamic and biological approaches to outpatient treatment. Long-term treatment experiences must include a sufficient number of patients, seen at least weekly for one year or more, under supervision;

(3) Supervised clinical experience in the evaluation and treatment of children, adolescents, couples and families;

(4) Supervised clinical experience in the diagnosis and treatment of neurological patients;

(5) Supervised psychiatric consultation/liaison responsibility, involving patients on other medical and surgical services;

(6) Supervised responsibility on a twenty-four hour psychiatric emergency service as an integral part of the program and experience in learning crisis intervention techniques, including the evaluation and management of suicidal patients. (A psychiatric emergency service that is part of a general hospital is preferred because it broadens the resident’s clinical experience and offers valuable opportunities for collaboration and exchange of ideas with colleagues in other specialties.);

(7) Supervised responsibility in community mental health activities. This should include consultation with at least one community agency and experience in forensic or court evaluations under the supervision of a psychiatrist;

(8) Supervised, active collaboration with psychologists, psychiatric nurses, social workers and other professional and paraprofessional mental health personnel in the treatment of patients;

(9) Supervised experience with the more common psychological test procedures in a sufficient number of cases to give the resident an understanding of the clinical usefulness of these procedures and of the correlation of psychological test findings with clinical data. (Under the guidance of a qualified clinical psychologist, residents should have experience with the interpretation of the psychological tests most commonly used, and some of this experience should be with their own patients.); and

(10) Supervised clinical management of patients with alcoholism and drug abuse, including detoxification and long-term management in inpatient and/or outpatient settings, and familiarity with self-help groups.

III. ADMINISTRATION OF PROGRAM

A. Institutional Support

The administration of the sponsoring institution(s) should be understanding of and sympathetic to the attainment of educational goals and should evidence the willingness and ability to support these goals philosophically and financially. The latter includes a commitment by the institution and by the program that embraces appropriate compensation for faculty and housestaff, educational facilities and support services, as well as opportunities for research.

B. Program Director

1. Each residency program must be under the direction of a fully trained, and qualified psychiatrist whose major responsibility is to maintain an excellent educational program. The residency program director must be certified by the American Board of Psychiatry and Neurology or possess equivalent qualifications, and must devote no less than one-half time to the administration and operation of the educational program.

2. A change in program directorship must be reported within 60 days of the change, and may result in an appropriate re-evaluation of the program by the Residency Review Committee.

3. The director of the residency program should have an educational policy committee composed of members of the teaching staff and include representation from the residents. This committee should participate actively in planning, developing, implementing and evaluating all significant features of the residency program, including the selection of residents (unless there is a separate residency selection committee), determining curriculum goals and objectives, and evaluating both the teaching staff and resident staff. Each program should have a written description of the committee including its responsibility to the sponsoring department or institution and to the program director.

C. Residency Selection and Transfer

1. The program director is responsible for maintaining a process for selecting resident physicians who are personally and professionally suited for training in psychiatry. It is recommended that each program have a residency selection committee to advise the program director.

2. The program should document the procedures used to select residents. Application records should document information from medical schools and graduate medical education programs. A documented procedure should be in place for checking the credentials, the clinical training experiences and the past performance and professional integrity of residents transferring from one program to another, including from an adult to a child psychiatry program. This procedure must include solicitation and documentation of relevant information from the training directors of the programs participated in by the transferring resident. Those residents selected at the second postgraduate year or above must have satisfied the training objectives cited above for reaching that level of training.

3. The residency program director must accept only those applicants whose qualifications for residency include sufficient command of English to facilitate accurate, unimpeded communication with patients and teachers. A transferring resident’s educational program must be sufficiently individualized so that he/she will have met all the usual educational requirements of the program in order to graduate.

4. The program director is responsible to provide applicants with written descriptions of the clinical rotations and educational program. Written information must be provided regarding financial compensation, liability coverage, and the policies regarding vacations, sick leave, maternity/paternity leave, as well as other special leaves.

D. Evaluation of Competence

1. Regular, systematic, documented evaluation of the achievements of each resident should be maintained, including complete records of evaluations containing explicit statements on residents’ progress toward meeting educational objectives and their major strengths and weaknesses.

2. There must be a record maintained of specific cases treated by residents, in a manner which does not identify patients, but which illustrates each resident’s clinical experience in the program. This record must demonstrate that each resident has met the educational requirements of the program with regard to variety of patients, diagnoses, and treatment modalities. This record should be reviewed periodically with the program director or designee, and be made available to the surveyor of the program.

3. The program must provide opportunity for and document regularly scheduled meetings between the resident and the program director or designee of faculty members. These meetings should be of sufficient frequency, length and depth to ensure that the residents are continually aware of the quality of their progress toward attainment of professional competence. These evaluation sessions should be held at least
ESSENTIALS OF ACCREDITED RESIDENCIES

Child Psychiatry

semi-annually and preferably more frequently. They should give the resident opportunity to assess the program and the faculty. Provision should be made for remediation in cases of unsatisfactory performance.

4. The program must formally examine the cognitive knowledge of each resident at least annually in the PG-2 through PG-4 years, and conduct an organized examination of clinical skills at least twice during the four-years of training.

5. A written set of due process procedures must be in place for resolving problems that occur when a resident's performance fails to meet required standards. These must include the criteria for any adverse action, such as placing a resident on probation, or for terminating a resident whose performance is unsatisfactory. The procedures should be fair to the resident, patients under care, and the training program. A copy should be provided to the residents at the beginning of training.

6. Readily available procedures for assisting the resident to obtain appropriate help for significant personal or professional problems should be in place.

7. The director, upon the resident's graduation, will affirm in the training record that there is no documented evidence of unethical behavior, unprofessional behavior, or of serious question of clinical competence. Where there is such evidence, it will be comprehensively recorded, along with the responses of the trainee.

8. The program will maintain records of all evaluations required in this Section D and these will be made available on review of program.

E. Faculty
1. The residency must be staffed by a sufficiently wide variety and appropriate number of capable, qualified psychiatrists and other mental health professionals to achieve the goals and objectives of the training program. The teachers must participate regularly and systematically in the training program and be readily available for consultation whenever a resident is faced with a major therapeutic or diagnostic problem.

2. A written record of the educational responsibilities of all staff and faculty members (whether full-time or part-time) who participate directly in the education of residents is essential. That record should include qualifications and the experience of the faculty member, and the nature, as well as the frequency, duration and site of the teaching activity.

IV. PROGRAM FACILITIES AND RESOURCES

A. Clinical Facilities
1. Training programs must have available to them adequate inpatient and outpatient facilities, clinics, agencies and other suitable placements where the residents can meet the educational objectives of the program. The program should specify the facilities in which the goals and objectives are to be implemented.

2. All residents must have offices adequate in size and decor to allow them to interview patients in a professional manner. The facility must also provide adequate and specifically designated areas in which residents can perform basic physical examination and other necessary diagnostic procedures.

B. Other Educational Resources
1. The administration of the facility must provide ample space and equipment for educational activities. There must be adequate space and equipment specifically designated for seminars, lectures, and other teaching exercises.

2. The program must have available such basic teaching aids as slide projectors, sound film projectors, and teaching material such as films, audio cassettes and television tapes, and the capability for making and playing back video tapes.

3. The program must promote an atmosphere of scholarly inquiry, including the provision of access to ongoing research activity in psychiatry.

4. The sponsoring institution of an approved residency in psychiatry must provide residents with ready access to a library that contains a substantial number of current basic textbooks in psychiatry, neurology and general medicine, and a number of the major journals in psychiatry, neurology and medicine, sufficient for an excellent educational program. The library must be capable of obtaining textbooks and journals on loan, from major medical libraries, carrying out Medline and other medical information searches (or accessing a library which has this capacity) and must be reasonably available to residents on weekends and during evening hours.

5. Each resident must be given a copy of the Essentials of Accredited Residencies at the beginning of training.

Effective: July 1987 ACMS: June 1986

Training Programs in Child Psychiatry

Essential elements for approved residency training in child psychiatry are generically similar to those in general psychiatry (see the Special Requirements of the Essentials for Residency Programs in Psychiatry). The training program should offer a well-balanced patient load, adequate supervision, and a formal educational experience to provide a combination of training and practice which will be both broad enough to insure familiarity with the variety of childhood disorders, and intensive enough to insure basic treatment skills. Consultative experience is also essential.

Essential requirements for approved training for the career child psychiatrist consist of a minimum of a two-year block of time in training in general psychiatry together with two years of specialized training in child psychiatry. This is in addition to the categorical, categorical or flexible first year of post-M.D. training. To achieve greater flexibility in the sequence of training for the career child psychiatrist and to assist in recruitment, the training experience for a career child psychiatrist may be initiated in any of the three years of general psychiatric residency training, provided that the training is full-timeblock of time spent at any one time is not less than six months, and that if a six-month block is chosen it be followed at another time by not less than an eighteen-month block of full-time training in child psychiatry. Two separate twelve-month full-time blocks in child psychiatry may also be chosen. Up to six months' credit for residency training in pediatrics which was at least a year in duration, may count in place of any six month period of child psychiatry training. In summary, in addition to the categorical, categorical or flexible first graduate year, a total of four years of training, two years in general psychiatry and two years in child psychiatry, must be taken. (Ordinarily, the exposure to child psychiatry given to most general psychiatry residents as part of their basic psychiatry curriculum will not qualify for this credit.) The entry point of child psychiatry training may be anywhere after the first post-M.D. year.

Each training program accredited for child psychiatry must be an integral part of a general psychiatric residency program accredited for three years of training, or must have a formal educational affiliation with such a program. The written agreement of such affiliation must be signed by the training directors of both programs and a copy of it filed with the Executive Director of the American Board of Psychiatry and Neurology, Inc., and with the program file which will be reviewed by the Residency Review Committee and the Accreditation Council for Graduate Medical Education.

The resident in child psychiatry must be under the direction of a qualified child psychiatrist. It is desirable that he or she be Board certified or its equivalent in child psychiatry. Educational quality must have the highest priority in the allotment of the residents' time and energy. The clinical responsibilities of residents must not infringe unduly on didactic educational activities. The program must exist for the resident and not vice versa. A formal curriculum must be

\[15\text{As general psychiatry training, two years of half-time training is equivalent to one year of full-time training.}\]
Diagnostic Radiology

outlined and available. It must include a program of graduated learning and experience throughout the two years, which is marked by graduated and increasing clinical responsibility for the diagnosis and treatment of children and their families. The training should take place in a child psychiatric facility wherein a spectrum of supervised experience is available with children from infancy through adolescence. The program should provide an understanding of normal behavior as well as the impact of developmental psychopathology. Biological, socio-cultural, psychodynamic, behavioral, and familial aspects of childhood and its problems must be covered both in the clinical and the didactic experience. Opportunities for the development of both conceptual understanding and clinical skill in therapeutic interventions with children, adolescents, and families, including psychopharmacologic treatment, must be available. An experience devoted to work with out-patients should include a significant amount of work which involves active collaboration with other mental health professionals. Direct experience with psychological measurements is essential. The development of skill in working with severely disturbed children is also an essential part of the training experience and must be achieved in an in-patient or residential program. The case load for each resident must be small enough to insure the intensive study and understanding of patient management within a controlled milieu. Administrative experience in ward management should be a part of this assignment. In some circumstances, the same experience may be achieved in a day-treatment setting with an intensive milieu program. Severely disturbed children should constitute a significant period of time.

Consultation and liaison with pediatric services and community agencies such as well-baby centers, schools, courts, and the social welfare department is a third essential experience. The essential community consultation areas in which the resident should be able to function are: 1) medical, 2) educational, 3) forensic, 4) social. In this connection, the training program must provide a significant number of clinical conferences and didactic seminars not only with child psychiatry faculty members but with other medical specialists and other mental health professionals as well. There should be opportunities for the resident to apply principles he or she has learned in community consultation experience.

The emphasis on developmental considerations is the hallmark of a child psychiatric program. Toward this end, clinical experience with children of all ages and with families from all socioeconomic levels is essential. It is recognized that some programs are unable to provide such broad populations themselves but must then do so through affiliation.

Opportunities for teaching with community groups, medical students, and nurses, and opportunities for learning about research should also be available.

The program director is responsible for selecting residents, planning their progress and maintaining records of these evaluations. The program director must devote sufficient time to his program responsibilities so that the program will meet the stated requirements. He or she should provide residents with an understanding of the goals of training and evaluation procedures, as well as the responsibilities of the residents for their own learning and their own clinical work. The program director must also be responsible for the provision of adequate space and equipment for educational activities, e.g. audiovisual equipment, playroom materials and library facilities which contain basic child psychiatric textbooks and journals. Individual office space for each resident with readily available play materials must be available. Special space for physical and neurological examinations, as well as the appropriate medical equipment, must also be readily available in the training facility.

The residency program should provide its residents with instruction about the various cultures existing in the country. Many physicians may not be sufficiently familiar with the attitudes, values and social norms prevalent among the various segments of contemporary American life. Therefore, the curriculum should contain instruction about these issues adequate to enable the resident to render competent care to those patients from various cultural backgrounds for whom the resident has clinical responsibility in the course of residency training.

Finally, it is unlikely that a program can function without a "critical mass" of residents because of the elements of peer teaching and interaction as well as the need for group discussion in seminars and conferences. While it is difficult to identify the optimal "critical mass" for many programs it is clear that a minimum of two residents in each of the two years of training is essential if the program is to maintain full accreditation.

Effective: June 1979   ACGME: June 1979

22. Special Requirements for Residency Training in Diagnostic Radiology, and Therapeutic Radiology

Training Programs in Diagnostic Radiology

I. OBJECTIVE

Diagnostic radiology encompasses a variety of diagnostic imaging techniques, including all aspects of roentgen diagnosis, nuclear radiology, diagnostic ultrasound, and the use of other forms of radiant energy. The residency program in diagnostic radiology shall offer a quality graduate medical education experience of adequate scope and depth in all of these associated diagnostic disciplines.

II. TRAINING PERIOD

The program shall offer a minimum of three years of graduate medical education in diagnostic radiology, of which at least 30 months of training must be in the parent program(s).

III. DIRECTION AND SUPERVISION

A. Program Director

The program director is responsible for the total training in diagnostic radiology, which includes the instruction and supervision of residents. The director must be a staff member who is a diagnostic radiologist or a radiologist, and must contribute sufficient time to the program to ensure adequate direction.

B. Staff

The staff in the program must be qualified in those areas in which they are assigned to instruct and supervise residents, and they must contribute sufficient time to the program and provide adequate instruction and supervision.

IV. RESPONSIBILITIES OF INSTITUTIONS

A. Institutional Support

The governing body of the institution should provide support for the program director in teaching, recruiting staff, selecting residents, evaluating resident performance and dismissing residents whose performance is unsatisfactory. The institution should demonstrate proper support for the program by encouraging continuity in the program directorship. Assurance of due process for residents and teaching staff must be demonstrated.

B. Affiliation Agreement

When the resources of two or more institutions are utilized for the clinical or basic science education of a resident in diagnostic radiology, letters of agreement must be provided by the institutional governing boards. Affiliations should be avoided with institutions which:

1) are at such a distance from the parent institution as to make resident attendance at rounds and conferences difficult, or
2) do not add to the educational value of the program.

Clinical responsibility alone does not constitute a suitable educational experience.
V. FACILITIES
The program must provide adequate space, equipment, and other pertinent facilities to ensure an effective educational experience for residents in diagnostic radiology.

VI. CLINICAL RESOURCES
The program in diagnostic radiology must provide a sufficient volume and variety of patients, including pediatrics, emergency medicine, obstetrics and gynecology, for adequate resident experience in the specialty.

VII. TRAINING CONTENT
The clinical training must provide for progressive, supervised responsibility for patient care, and must ensure that the supervised resident performs those procedures commonly accepted in all aspects of diagnostic radiology. The training, in general, must include progressive study and experience in all diagnostic radiologic subspecialties, as well as diagnostic radiologic physics, radiation biology, radiation protection, and pathology. In view of the importance of understanding of pathology as a basis for radiologic diagnosis, emphasis should be placed on its study. It is expected that each training program will provide cardiovascular radiologic training. Acceptable experience requires at a minimum that the resident be present during interpretation of adult and pediatric angiographic and arteriographic evaluation of acquired and congenital conditions. Lectures alone will not suffice. Preferably, each resident shall have a defined rotation in cardiac catheterization as an observer or assistant and participate in the interpretation of those procedures. These requirements may be met by a cooperative program with radiology. The radiologic education in different organ systems should provide the opportunity for residents to develop adequate knowledge regarding normal and pathologic physiology, including the biologic and pharmacologic actions of materials administered to patients in diagnostic studies.

VIII. RESEARCH
The program should provide an environment where a resident is encouraged to engage in investigative work with appropriate faculty supervision. These projects may take the form of basic research in research laboratories or an assimilation of well-analyzed clinical material or even the reporting of individual cases. Documentation of this environment should be made in the application and indicated by papers published by residents and/or clinical staff.

IX. EDUCATIONAL ENVIRONMENT
The education in diagnostic radiology should occur in an environment which encourages the interchange of knowledge and experience among residents in the program, and with residents in other major clinical specialties located in those institutions participating in the program.

X. TRAINING COMPLEMENT
The complement of residents in the program must be commensurate with the total capacity of the program to offer an adequate educational experience in diagnostic radiology. Appointment of a minimum average of two residents per year is generally considered to provide an efficient learning environment.

XI. EVALUATION
The in-training evaluation of resident performance and progress must be documented frequently through appropriate techniques, including staff appraisal, oral or written tests, or a combination of these. One measure of the quality of the program is the performance of its graduates on examinations for certification by the American Board of Radiology.

TEACHING FILE
A teaching file of images referable to all aspects of diagnostic radiology should be available for use by residents. This file should be indexed, coded, and currently maintained.

XII. CONFERENCES
Conferences and teaching rounds must be correlated and provide for progressive resident participation. There should be intradepartmental conferences, as well as conferences with each major clinical department of sufficient frequency, and in which both residents and staff participate on a regular basis.

XIV. LITERATURE RESOURCES
The program shall provide a sufficient variety of journals, references, and resource materials pertinent to progressive levels of education in diagnostic radiology and associated fields, which are immediately accessible for resident study. In addition, residents should have access to a general medical library.

Residents who plan to seek certification by the American Board of Radiology should communicate with the Secretary of the Board to be certain regarding the full requirements for certification.

Effective: July 1985   ACGME: November 1984

Training Programs in Diagnostic Radiology With Special Competence in Nuclear Radiology

I. OBJECTIVE
This program is designed to offer training in diagnostic radiology and its subspecialties, and also in the diagnostic procedures which comprise nuclear radiology.

II. DEFINITION
Nuclear radiology is defined as a clinical subspecialty of radiology involving the imaging by external detection of the distribution of radionuclides in the body for diagnosis of disease.

III. DURATION OF THE TRAINING PERIOD
The training period in diagnostic radiology with special competence in nuclear radiology shall be four years of approved graduate medical education, which shall consist of at least twenty-four months of training in diagnostic radiology and its subspecialties and twelve months of training in nuclear radiology. The training shall provide a program of graded study, experience and responsibility in all facets of roentgen diagnosis, medical nuclear and diagnostic radiologic physics, radiobiology, health physics and protection, medical nuclear instrumentation, radiopharmaceutical chemistry and instrumentation, and the clinical applications of nuclear radiology.

IV. INSTITUTIONAL REQUIREMENTS
The institution offering a residency in diagnostic radiology with special competence in nuclear radiology must also be approved to offer training in diagnostic radiology. It must further provide adequate opportunity for the resident to participate in and personally perform a broad range of nuclear radiologic procedures.

V. DEPARTMENTAL REQUIREMENTS
All those requirements which pertain to residencies in diagnostic radiology shall also apply to programs in diagnostic radiology with special competence in nuclear radiology. In addition, the nuclear radiology portion of the program should be under the supervision of a staff member who is recognized as a specialist in nuclear radiology, or in nuclear medicine, and there should be available both stationary (camera) and portable (scanner) nuclear imaging systems.

VI. EDUCATIONAL REQUIREMENTS OF THE RESIDENCY
A. One nuclear physicist per each two residents in training should be available to provide adequate opportunity for teaching and supervision.

B. The residency program should be so planned that residents receive adequate instruction and individual training in all of the diagnostic subspecialties, in nuclear radiology, in health physics and protection, and in pathology.

C. Formal instruction in diagnostic radiologic and medical nuclear physics, radiobiology, and radiopharmaceutical chemistry are required.

D. It is important that appropriate emphasis be placed on the value of teaching rounds and conferences. In addi-
Therapeutic Radiology

Section, there should be frequent intradepartmental teaching conferences including both diagnostic and nuclear radiologic subjects.

D. It is expected that the resident participate in the research opportunities of the department. This is perhaps best accomplished by the assignment of the resident for a specific period to the diagnostic or nuclear radiologic research facilities of the department under appropriate staff supervision.

VII. LIBRARY FACILITIES

A departmental library is essential and must contain a sufficient variety of texts and journals in both the radiologic and nuclear fields to meet the needs of the various levels of resident training. There should also be easy access to a general library. Suitable areas for independent work and study should be available for the use of the residents.

VIII. TEACHING-FILM MUSEUM

A film museum containing both diagnostic and nuclear radiologic subjects indexed, coded, and currently maintained with continuing follow-up should be available for resident use.

IX. CLINICAL RESOURCES

A well-balanced educational program at this level requires a diversity of clinical material, continuous clinical teaching and an active investigative and research effort both in diagnostic and in nuclear fields.

Residents who plan to seek certification by the American Board of Radiology should communicate with the Secretary of the Board to be certain regarding the full requirements for certification.

Effective: July 1985

ACGME: November 1984

Training Programs in Therapeutic Radiology

I. OBJECTIVE

Therapeutic radiology is that branch of clinical medicine which is related to the diagnosis and treatment of patients with cancer with special emphasis in the identification of the role of radiation therapy in the care of patients, in the administration of radiation therapy in an optimum manner, and in the participation in such aspects of medical practice as may lead to improved care of the cancer patient.

II. TRAINING PERIOD

The programs shall offer at least three years of graduate medical education in therapeutic radiology. No more than six months may occur in rotations to affiliated institutions outside of the single institution in which the program resides, or outside of those participating institutions united to form an integrated program.

III. DIRECTION AND SUPERVISION

A. Program Director

The program director is responsible for the total training in therapeutic radiology, which includes the instruction and supervision of residents. The director should be a staff member certified by the American Board of Radiology or possessing equivalent qualifications, must be qualified in and practicing therapeutic radiology, and must contribute sufficient time to the program to ensure adequate direction. All radiation therapy equipment and materials, and their clinical use, shall be under the supervision and responsibility of the chief of the therapeutic radiology service.

E. Staff

The staff in the program must be qualified in those areas in which they are assigned to instruct and supervise residents, and they must contribute sufficient time to the program and provide adequate instruction and supervision.

IV. RESPONSIBILITIES OF INSTITUTIONS

A. Institutional Support

The governing body of the institution should provide support for the program director in teaching, recruiting staff, selecting residents, evaluating resident performance, and dis-

missing residents whose performance is unsatisfactory. The institution should demonstrate proper support for the program by encouraging continuity in the program directorship. Assurance of due process for residents and teaching staff should be demonstrated.

B. Affiliation Agreement

When the resources of two or more institutions are utilized for the clinical basic science education of a resident in therapeutic radiology, letters of agreement must be approved by the institutional governing boards.

Affiliations should be avoided with institutions which:

1. are at such a distance from the parent institution as to make resident attendance at rounds and conferences difficult, or

2. do not add to the educational value of the program.

Clinical responsibility alone does not constitute a suitable educational experience.

V. FACILITIES

A training program in therapeutic radiology must have adequate space, equipment and other pertinent facilities to ensure an effective educational experience for residents in therapeutic radiology.

VI. CLINICAL RESOURCES

A training program in therapeutic radiology must have a sufficient volume and variety of cancer patients, including pediatric and gynecologic patients, for adequate resident experience in the specialty. There must be adequate programs in cancer surgery, cancer chemotherapy, and hematology. Decisions relative to the appropriate application of radiation therapy techniques shall be the province of the therapeutic radiologist. The therapeutic radiologist must have hospital admitting privileges and maintain a follow-up clinic for patients treated by radiation therapy.

VII. TRAINING CONTENT

A. The clinical training staff must provide for progressive, supervised resident responsibility for patient care, and must ensure that the supervised resident personally performs those procedures commonly accepted in all aspects of therapeutic radiology.

B. Training shall include basic sciences essential to training in radiation oncology, radiation physics, radiation biology, pathology with emphasis on neoplasia, radiation effects, and medical statistics. The training curriculum will identify the manner in which these basic sciences will be taught.

C. Also included in the above basic sciences are cancer surgery and cancer chemotherapy, which play a major role in the management of the cancer patient. The training program must be designed to assure that the resident acquires a knowledge of the potential value, and the limitations of these other clinical disciplines. This may be accomplished through the attendance of various multidiscipline conferences, departmental conferences, or by actual rotations to those services.

VIII. CONFERENCES

Conferences and teaching rounds must be correlated and provide for progressive resident participation. There should be intradepartmental oncology conferences, as well as conferences with each major clinical department of sufficient frequency, in which both resident and staff participate on a regular basis.

IX. LITERATURE RESOURCES

A sufficient variety of journals, references, and resource materials pertinent to progressive levels of education in radiology and associated fields in oncology and basic sciences shall be provided and must be immediately accessible for resident study. In addition, residents should have access to a general medical library.

X. RESEARCH

Residents will be expected to engage in an investigative project during their training under appropriate staff supervision. This may take the form of laboratory research in an area relevant to therapeutic radiology, involvement in clini-
esearch, or the retrospective analysis of treated patients. Such projects undertaken by the residents should be documented in the application for accreditation of the program.

XI. EDUCATIONAL ENVIRONMENT

The education in therapeutic radiology should occur in an environment which encourages the interchange of knowledge and experience among residents in the program, and with residents in other major oncology specialties located in those institutions participating in the program.

XII. TRAINING COMPLEMENT

The complement of residents in the program must be commensurate with the total capacity of the program to offer an appropriate educational experience in therapeutic radiology. A minimum of three residents in the program is required.

XIII. EVALUATION

The in-training evaluation of resident performance and progress must be documented frequently through appropriate techniques, including staff appraisal, oral or written tests, or a combination of these.

Residents who plan to seek certification by the American Board of Radiology should communicate with the Secretary of the Board to be certain regarding the full requirements for certification.

Effective: July 1985  ACGME: November 1984

23. Special Requirements for Residency Training in Thoracic Surgery

I. INTRODUCTION

A. The "General" and "Special Requirements"

For a residency program in thoracic surgery to be accredited, compliance is required with both the General Requirements and the Special Requirements as stated in the "Essentials of Accredited Residencies." The General Requirements are common to all residency programs. The Special Requirements are specific to thoracic surgery.

See Section I, "Information Items" of the "Directory of Residency Training Programs" for additional details regarding the accreditation process.

B. General Characteristics of Accredited Programs

1. Core Knowledge and Skills

A thoracic surgical residency is a graduate education program designed to give the resident a broad clinical experience in pulmonary, esophageal, mediastinal, chest wall, diaphragmatic and cardiovascular disorders. The residents, on completion of the program, are expected to be clinically proficient in these areas as well as knowledgeable in the use of cardiac and respiratory support devices.

2. Additional Required Skills

Although operative experience constitutes the most important aspect of the program, the training should include the opportunity to correlate the pathologic and diagnostic aspects of thoracic disorders. The resident is required to be skilled in important diagnostic procedures such as bronchoscopy, and esophagoscopy, and to be able to interpret roentgenographic studies. The resident must have the opportunity under supervision to exercise preoperative judgment, to evaluate the timing of operative intervention, to select appropriate operative procedures, and to provide and evaluate the postoperative care of patients.

C. Duration and Scope of Training

1. Duration of Training

a. Two years is the minimum amount of time required in thoracic surgery for the acquisition of the necessary knowledge, judgment and technical skills needed. Laboratory investigation is not permitted as a portion of the curriculum during this time.

b. Training in nonsurgical areas such as cardiac catheterization or pulmonary function must not exceed three months during the two-year program, and is likely to be an acceptable substitute only when the remainder of the program provides an abundant surgical experience.

2. Scope of Training

a. It is desirable that the resident complete an accredited program in general surgery before beginning training in thoracic surgery. Programs or parts of programs which give the resident simultaneous responsibility for thoracic and general surgery patients are not acceptable.

b. The first year of the two consecutive years of thoracic surgery training must be on a clearly defined thoracic surgery service. Each rotation must be a minimum of three months.

c. The second year of thoracic surgery must be served on the thoracic surgery service, preferably in the parent institution, where the resident must assume senior responsibilities for the preoperative and postoperative care of patients with thoracic and cardiovascular disease.

II. INSTITUTIONAL RESPONSIBILITIES

A. Institutional Commitments

1. The Sponsoring Institution

An educational program in thoracic surgery must have one parent institution with primary responsibility for the entire program. The sponsoring institution should provide evidence of commitment to graduate medical education including thoracic surgery. Institutions, organizations or agencies offering programs in thoracic surgery must assume responsibility for the educational validity of all such programs. Whatever the institutional form, providing quality education, training, and health services must be a major mission.

2. The Participating Institutions

When there is a cooperative educational effort involving multiple institutions, the commitment of each institution to the program must be made explicit, and should be embodied in current letters of affiliation, agreements, or contracts indicating:

a. The scope of the affiliation;

b. The resources and facilities in all participating institutions which will be available to the residents;

c. The duties and responsibilities the resident will have in the participating institutions;

d. The relationship that will exist between the thoracic surgery residents and the residents and faculty in other programs in the participating institutions; and,

e. The supervision the residents will receive by faculty in each institution.

Participating institutions and their teaching staffs must ensure that all educational experiences and resources offered are consistent with the goals of the program and meet the standards set forth herein. When several institutions participate in sponsoring a program, the program director has the primary responsibility for developing mechanisms to coordinate the overall educational mission in order to facilitate the accomplishment of the program's goals and in substantial compliance with the Requirements. A program in which the distribution of the participating institutions does not allow appropriate supervision or coordination of educational experiences is not acceptable.

B. Institutional Resources and Facilities

1. Institutional Resources

Institutions must assume responsibility for assuring an administrative and academic structure which provides for management of educational and financial resources dedicated to the needs of the program, such as appointment of teaching faculty and residents, and provisions for adequate program planning and evaluation.

2. Facilities

Facilities must be appropriate and sufficient for the effective accomplishment of the educational mission of each program. In every institution used as a training site for thoracic surgery, there must be adequate space for patient care, program support and research; trained medical personnel; laboratory and x-ray support; and medical library resources.

3. Supporting Disciplines

a. Recognizing the nature of the specialty of thoracic surgery, it is unlikely that a program can provide an adequate
educational experience for its residents without approved residencies in related fields. It is important that thoracic surgery residents have the opportunity to interact with residents in other specialties.

b. To ensure a cohesive educational environment, the program director must cooperate with the leadership of other disciplines and actively foster the training of thoracic surgery residents in those disciplines. Program directors, teaching staff, and residents in thoracic surgery must work together to provide an educational system wherein the goals and requirements of the training programs can be met.

III. THE TEACHING AND RESIDENT STAFF

A. The Program Director

1. Program Director Qualifications

The director of the residency program must be highly qualified as an educator, clinician and administrator and competent in thoracic surgery. The program director should be certified by the American Board of Thoracic Surgery or possess suitable equivalent qualifications.

2. Program Director Responsibilities

a. The program director must have appropriate authority to organize and to fulfill administrative and teaching responsibilities in order to achieve the educational goals of the program and to participate with other program directors in maintaining the quality of all institutional programs. It is necessary for the program director to give sufficient time to the program to assure quality instruction and patient care. A stable educational environment cannot be maintained without continuity in program leadership.

b. One measure of a training program is the quality of the residents chosen for training. Therefore, it is the program director's responsibility to select residents carefully for the program, to supervise and to evaluate their training, and to dismiss from the program those residents who do not measure up to the standards of performance expected of a thoracic surgeon. The program director is responsible for seeing that upon completion of the program, the resident has had a broad clinical experience in all aspects of the specialty, and possesses clinical and technical skills required to be a capable thoracic surgeon.

c. The program director is responsible for the selection and evaluation of the teaching staff, and for providing initial recommendations for their appointment and retention. Opportunities for development of the teaching staff should be made available to each faculty member and should include development of skills in teaching, research and scientific writing.

d. The program director is responsible for notifying the Executive Secretary of the Residency Review Committee in writing of any program change which may significantly affect the educational experience for the residents. This will include a change in:

1) Program director and/or department chairman;
2) Formal affiliation with another institution.

e. The program director is also responsible for notifying the Executive Secretary of the Residency Review Committee in writing of the following changes. These changes must receive prior review by the Committee before implementation in order to determine if an adequate educational environment exists to support these changes:

1) A change in a required rotation to any institution other than those already participating in the program in which the rotation is four months or longer or a foreign rotation of any duration; or,
2) A change in the number of resident positions offered.

B. The Teaching Staff

1. Teaching Staff Qualifications

The teaching staff participating in the program must be highly qualified as educators with a strong interest in teaching. The teaching staff must have adequate special training and experience in their related fields. Physicians with teaching responsibilities should be Board certified in thoracic surgery or their appropriate field of expertise or possess suitable equivalent qualifications.

2. Teaching Staff Responsibilities

All teaching staff participating in the program should have clear responsibilities for resident supervision, teaching, and administration, with time specifically dedicated to the educational program.

3. Teaching Staff Size

The number of faculty members must be sufficient to ensure the accomplishment of the educational goals of each program and to provide adequate supervision for the number of residents in the program.

C. The Residents

1. Resident Qualifications

Residents who are eligible to enter graduate medical education programs accredited by the ACGME must meet the qualifications stipulated in the “General Requirements,” Section 3.

2. Resident Responsibilities

Resident responsibilities must meet the standards stipulated in the “General Requirements,” Section 5.2.

IV. THE EDUCATIONAL PROGRAM

A. Surgical Volume

1. Minimum Standards

Guidelines as to what are considered to be minimum operative experiences during the two-year residency are as follows:

a. A desirable operative experience for the resident is to perform at least three major operations a week during the course of the residency.

b. The program must demonstrate that a satisfactory volume and distribution of clinical procedures are available to the residents. Clinical procedures must include experience in, but are not limited to the following areas: lungs, pleura, chest wall, esophagus, mediastinum, diaphragm, congenital heart anomalies, acquired heart diseases, myocardial revascularization, cardiac pacemaker implantation and esophagoscopy and bronchoscopy.

c. The majority of the cardiac procedures should involve the use of cardiopulmonary bypass. Major vascular operations outside the thorax should be outlined if they are itemized in the summary of operative experiences.

d. Even though emphasis on one or another facet of thoracic surgery (pulmonary, cardiovascular, esophageal, thoracic trauma, etc.) may have characterized the resident's training experience, a resident should, nevertheless, gain knowledge concerning all phases of the field.

e. Program directors in thoracic surgery are responsible for seeing that the resident is delegated a sufficient volume of operative procedures consistent with the individual residents' ability to meet minimum standards.

2. Resident Credit for Operative Experience

Credit will be allowed for operative experience only when the following criteria are met:

a. The resident participated in the diagnosis, preoperative planning and selection of the patient for operation;

b. The resident performed those technical manipulations that constituted essential parts of the procedure itself;

c. The resident was substantially involved in postoperative care;

d. The resident was directly or indirectly supervised by responsible staff or faculty.

B. Supervision

Programs in thoracic surgery require that residents be directly involved in providing care under supervision in all institutions that accept responsibility for the quality of the educational program. There must be procedures established by the program director that ensure that all residents are supervised during their operative and clinical training.

C. Number of Residents and Fellows

1. Evaluation of Resident Complement

As part of its review process, the RRC evaluates the num-
number of residents participating in each program. The program director must assure that there are adequate facilities, qualified faculty, and an adequate clinical load and division of surgical cases for the number of residents participating in a given program.

2. Appointment of Fellows or Other Trainees
   The appointment of fellows or other trainees to the program must be reported to the Residency Review Committee so that the RRC can determine whether the educational experience of the residents is compromised. Dilution of the residents' experience by other appointees such as fellows may be deemed substantial non-compliance with this requirement.

D. Conferences
   The program director is responsible for providing a well-coordinated schedule of teaching conferences, rounds, and other educational activities in which both the thoracic surgery faculty and the residents attend and participate. Such experiences should be under the direction of qualified thoracic surgeons and other faculty in related disciplines.

E. Autopsies
   Permission for performing an autopsy should be sought in all deaths whenever possible. The number of autopsies must be sufficient number to provide an adequate educational experience in this area. It is expected that residents will attend autopsies on their own patients.

F. Resident Rotations
   1. Rotation Plan
      The program director is responsible for providing as part of the curriculum an organized written plan for rotation of residents among the various services and Institutions in the program so that continuity in the care of patients can be achieved. The residents' rotations should be carefully structured so that graded levels of responsibilities can be maintained, that all residents receive equivalent training experiences in the program and that the requirements stipulated under Section I.B.2, "Scope of Training" can be met.
   2. Rotation Objectives
      The objectives of each rotation should be well defined in the curriculum. A number of abbreviated rotations among several participating institutions in order to meet minimum requirements is discouraged.

G. Evaluation of Residents and Program
   Resident evaluation procedures should follow those found in the General Requirements Section 5.1.5. In addition, residents should be given the opportunity to evaluate faculty, residents and facilities as stipulated in the General Requirements, Part I.

H. Patient Care Responsibilities
   The educational mission of each program must not be compromised by an excessive reliance on residents to fulfill institutional service obligations. In addition, excellence in patient care must not be compromised or jeopardized by needs or prerogatives of the educational program.

V. OTHER
   A. Program Documentation
      It is the program director's responsibility to provide complete and accurate program information forms to the RRC so that an adequate assessment of the program can be made. A comprehensive and accurate evaluation of the program is possible with the detailed information requested. The program director is also responsible for seeing that the residents keep accurate records of their surgical experience and that these records are made available to the RRC upon request. Program directors should pay particular attention to consistency in the reporting of "Operative Experience Reports" for the institutions and residents. In the evaluation of the program, it is important that the statistics in both reports cover the same period of time for comparison purposes. The institution's report should be consistent with the resident's report. Failure to furnish the required information in the program information forms may jeopardize the accreditation of the program.

B. Board Score Information
   One measure of the quality of a program may be the percentage of program graduates who take the certification examination of the American Board of Thoracic Surgery and their performance on that examination.

C. Board Certification
   Residents who plan to seek certification by the American Board of Thoracic Surgery should communicate with the Secretary of that Board to be certain of the requirements for acceptance as a candidate for certification.

Effective: July 1986   ACGME: February 1986

24. Special Requirements for Residency Training in Urology

I. INTRODUCTION
   Urology is the medical and surgical specialty which deals with disorders of the genitourinary tract. To be accredited a program must provide for a minimum of 36 months of clinical urology, and this must be preceded by two prerequisite years of general surgery or other disciplines basic to urology. Twelve months of training must be spent as a senior resident in urology with appropriate clinical responsibility under supervision.

II. FACULTY
   The residency training program in urology must be headed by a director who is a Board-certified urologist or who has equivalent qualifications and who possesses effective leadership and administrative abilities as well as sound clinical judgment, investigative curiosity, and teaching skills. The director must be willing to make the commitment in time which the responsibilities of such a position demand in order to ensure that an adequate educational experience is organized for the benefit of the resident trainee.

   Contributions to the education of the residents should also be made by other members of the urology staff. Ideally these individuals should possess special expertise in different urological disciplines (such as pediatric urology, female urology, renal transplant, renal-vascular disease, oncology, infertility and endocrinology, stone disease, and urodynamics) so as to provide the greatest depth of knowledge in a variety of subjects. Evaluation of the qualifications of the staff as teachers of urology will include a review of their publications, research efforts and participation in major scientific meetings. Utilization of other staff members, however, does not relieve the director of the primary responsibility for the overall quality and organization of the program.

   So that the expertise of the faculty is utilized maximally in the teaching effort, a close working relationship must exist between the faculty and the residents. Preferably, the program director and his primary staff should be geographically located within their respective teaching institutions although other arrangements may be acceptable if it can be shown that rapid access to the faculty is available to the residents at all times. All patients on the service should be reviewed by the staff on regular teaching rounds with the residents according to a predetermined schedule, and all major surgery performed on the service by the residents should be done under the direct supervision of the staff. Throughout the training period the faculty must remain continually alert to the competence of the resident staff through personal observation.

III. FACILITIES AND RESOURCES
   Institutions involved in the training of urological residents must be able to provide broad based opportunities which include scholarly pursuits as well as relevant clinical experi-
ence in the full range of urologic disease. Institutions with limited areas of involvement in urology or those which cannot overcome academic or clinical deficiencies within their own stable training programs should seek affiliation with complementary institutions. It is important, however, that each affiliated institution offer significant educational opportunities to the overall program. An affiliation which merely dilutes the educational experience of the resident in training or a program whose affiliated institutions are too scattered to allow proper supervision and coordination of training activities should not be established or maintained.

Within the various institutions bed space sufficient for the needs of the urology service must be provided, preferably within a single area under the direction of the urology service so that care specific for urologic problems can be rendered more effectively. Diagnostic facilities providing cystoscopy, radiologic, and urodynamic equipment must be adequate to permit the urology service to carry out its necessary functions. Support facilities including office and filing space, secretarial assistance and reference libraries must be available to the urology training program.

Research facilities, while not mandatory for accreditation, are desirable since they enrich the academic environment of the program and provide the resident staff with the opportunity to explore new ideas independently. Institutions offering training programs in urology should encourage and support the development and use of such facilities.

IV. THE EDUCATIONAL PROGRAM

Programs in urology must be dedicated to the educational goals of residency training rather than the utilization of residents primarily for the purpose of facilitating patient care. For this reason there should be regularly scheduled conferences dealing with urological pathology including morbidity and mortality, urological radiology, the basic sciences and journal reviews in addition to other subjects having educational value. Conferences must be well organized, planned in advance with notification of the topics to be presented, and scheduled so that they will not conflict with other activities. They should be well attended by both residents and faculty. Each conference should be directed by a person competent to assure that a worthwhile educational experience will be provided. A list of the conferences held should be maintained and available for examination at the time of review. The list should include the names of those attending, the subjects discussed, the moderator and the principal speaker.

The faculty and residents should also be involved in pursuits which keep them abreast of current developments in medicine and which explore new avenues to advance the science of urology. Evidence of such involvement may be found in clinical or basic science research projects, departmental publications, and presentations before major scientific meetings. A listing of these activities should be made available at the time of review. In addition, the resident staff should be exposed to developments outside their own program by attendance at major medical meetings and by visits from recognized authorities from other institutions.

Sufficient numbers of patients with urological disease must be available to provide realistic experience for the residents in training. Included should be exposure not only to the common urological problems but also to specific areas of urology such as pediatric urology, urological oncology, urodynamic studies, trauma, endocrinology as it relates to urology, renal transplantation, gynecologic urology, infertility, renovascular disease, and other areas of interest peculiar to urology as a medical specialty. Each program director is responsible for maintaining an annual log of all cases performed by the urology service within each participating institution and all residents must maintain an up-to-date log of all cases in which they were the primary surgeon or assistant since the beginning of their urology training. Since clinical problems often involve multidisciplinary care beyond the ordinary competence of the urologist, teaching support from other major medical fields must be readily available within the participating institutions. The activities of these disciplines should be supervised by residents, particularly in the areas of internal medicine, general surgery, pediatrics, obstetrics and gynecology, pathology, and radiology, in order to facilitate the rapid interchange of up-to-date information so essential to a proper educational environment.

During the training resident should gain competence in the total care of the patient including initial evaluation, method of establishing the diagnosis, selection of the appropriate therapy, implementation of this therapy, and management of any resultant complications. For this reason continuity of care must be provided through pre-operative and postoperative clinics as well as inpatient contact. As a part of this experience progressive responsibility for rendering decisions must be afforded the resident.

Evidence that all of these activities are succeeding in achieving the educational goals of the program must be assessed by some form of periodic review such as self-assessment or in-service examinations. The results of these evaluations must be reviewed with the residents so that plans to correct any deficiencies may be formulated.

V. CERTIFICATION

One measure of the quality of a program is the performance of its graduates on the examinations given by the American Board of Urology, Inc. The Residency Review Committee may consider this information as part of the overall evaluation of the program.

Effective: July 1982 ACGME: February 1982

25. SPECIAL REQUIREMENTS FOR TRANSITIONAL YEAR PROGAMS

The transitional year program must be designed to fulfill the educational needs of certain medical school graduates who:

A. Have chosen a career specialty for which the respective program in graduate medical education has, as a prerequisite, one year of fundamental clinical education, which may also contain certain specific experiences for development of desired skills; or

B. Desire a broader base of clinical experience initially than is provided by the program in graduate medical education of their chosen specialty.

C. Are planning to serve temporarily on active duty in the military as general medical officers or flight/undersea medicine physicians.

The objective of the transitional year program is to provide a well balanced program of graduate medical education in multiple clinical disciplines designed to facilitate the choice of and/or preparation for a specific specialty. The transitional year is not meant to be a complete graduate education in preparation for the practice of medicine.

The sponsoring institution and the transitional year program must demonstrate substantial compliance with the general requirements of the Essentials of Accredited Residencies and the following special requirements:

I. ADMINISTRATION

A. Sponsorship

The sponsorship of the transitional year program must be by an institution and its affiliate conducting two or more ACGME accredited programs, neither of which is accredited on a probationary basis. Each will provide components of the transitional year education, and each one of the accredited participating programs must exist in the institution and its affiliates offering the transitional year. One of the accredited programs must be a discipline providing experience in military medicine.

26. Transitional year programs in military facilities may meet this requirement through affiliation with other military facilities or with civilian institutions.
fundamental clinical skills. Those disciplines considered to provide a broad scope of educational experience of fundamental clinical skills are family practice, internal medicine, obstetrics/gynecology, pediatrics, and general surgery. The number of participating programs should be limited but sufficient to represent the resources for, and capability of, providing a program of transitional year graduate education in the parent institution and its affiliates.

B. Program Director

The program director for the transitional year program must be appointed in conformity with the policies of the sponsoring institution. The program director’s tenure should assure continuity of the educational program. The program director must be a physician with demonstrated ability and experience in graduate medical education and who is able to devote the time required for program development and implementation, administration and supervision. Sufficient authority must be delegated to the program director by the sponsoring institution to facilitate effective organization and management. The responsibilities of the program director must include the following:

1. To arrange and implement educational programs in fundamental clinical skills;
2. To counsel transitional year residents in the development of a curriculum appropriate to their individual career goals;
3. To secure for the transitional year residents those particulars of applicable institutional policies which apply to all other residents;
4. To develop and implement systems for periodic evaluation of:
   a. The quality of the educational experiences and program performance;
   b. Resident performance;
   c. Resident assessment of the program’s educational components;
   d. Faculty performance.
5. To maintain records of:
   a. All resident appointments to the program;
   b. Transitional year curriculum content offered by the institution and the curriculum undertaken by each transitional year resident;
   c. Performance evaluation;
   d. Tracking residents’ subsequent education for at least one year. It is desirable that the program track the residents through their subsequent training and their eventual career choices.
6. To prepare statistical, narrative and progress reports as requested by the Transitional Year Committee of ACGME;
7. To participate in Residency Review Committee surveys of the provider disciplines.

C. Institutional Coordination Committee

This Committee should be appointed and convened by the sponsoring institution(s) and be composed of, but not limited to, the transitional year program director and the program directors (or designees) of disciplines regularly included in the curriculum and chief executive officer(s) (or designee(s)) of the sponsoring institution(s). The size of the Committee should be adequate to represent the participating disciplines, but limited in number so as to be efficient and effective in the conduct of the Committee’s activities.

The responsibilities of the Committee must include the following:

1. To recommend to institutional management and to the governing body of the sponsoring institution the policy governing the content of the educational program and the necessary contributions of resources and participation of the programs involved;
2. To assure that the standards of quality of medical care provided by transitional year residents are equivalent to those expected of first year residents in categorical programs;
3. To monitor the impact of the transitional year program on categorical residency programs so that there is no compromise of their educational resources, including the adequacy of number and variety of patient illnesses, educational materials, teaching/attending physicians and financial support;
4. To review evaluations of residency performance and assessment by the residents of the components of the transitional year;
5. To assure that the educational opportunities provided transitional year residents are equivalent to those provided first-year residents in the participating categorical programs;
6. To assure the quality of education provided by the clinical resources of non-accredited components of the program utilizing the same standards applied by the institution as it reviews its accredited categorical programs in compliance with the general requirements of the Essentials;
7. To recommend guidelines for the arbitration of disagreements;
8. To maintain records demonstrating the Committee’s activities for each of the above requirements and to have copies of these records available for transmission to the Transitional Year Review Committee of ACGME.

II. FACULTY

The faculty of the transitional year program must be the same persons or have qualifications equivalent to those of the faculty of the participating categorical programs. In addition, teaching and supervision of transitional year residents must be the same as that provided residents in categorical programs.

The faculty providing educational experiences which are not those of ACGME accredited programs must have credentials supportive of professional and academic abilities within their respective specialties.

III. CURRICULUM

The duration of the transitional year program must be one year (12 calendar months). At least six months of each resident’s curriculum must be provided by disciplines offering fundamental clinical skills, as defined above. Other rotations should be a minimum of one month in duration to assure a reasonable continuity of education and patient care. At least nine months of each resident’s rotations must be on clinical services where they are supervised by faculty of and where they associate with more senior residents in ACGME accredited programs.

During the rotations in disciplines offering fundamental clinical skills, the resident should develop the skills necessary to obtain a medical history, perform a complete physical examination, define a patient’s problems, develop a rational plan for diagnosis and implement therapy based upon the etiology, pathogenesis and clinical manifestations of various diseases.

Elective rotations should be determined by the needs of the individual resident and/or the requirements of the program for future specialty. The curriculum of each resident should be planned and balanced in accord with these individual needs and requirements in addition to the guidelines of the transitional year program director and the approval of the Institutional Coordination Committee.

Experience in emergency medicine under the supervision of a qualified teaching staff must be available. Such experience is considered valuable regardless of the career specialty ultimately selected by the resident. The resident should have experience in the diagnosis and management of all types of patients treated in an institution’s emergency department.

Selected experience in providing ambulatory care is desirable for transitional year residents. Outpatient experience must be obtained within the facilities of the sponsoring institution and provider specialty programs. Any rotations on programs exclusively devoted to ambulatory services other than emergency medicine should be limited to no more than two months of the twelve. All specialty disciplines participating in providing the transitional year residency program must
involve the residents in their departmental educational programs, such as seminars, conferences and grand rounds.

Institutional certificates to be awarded at the conclusion of training must clearly indicate that the experience was that of a "transitional year."

Program applications will be reviewed to assure an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed change in the number of residents must receive prior approval by the Transitional Year Review Committee of the ACGME.

Pathology laboratories, radiology and nuclear medicine departments and special diagnostic facilities must exist in the parent and affiliated institutions. These entities must be directed by qualified physicians interested in medical education and committed to provide competent instruction to transitional year residents when their patients require these diagnostic and/or therapeutic modalities.

The support departments of the sponsoring and affiliated institutions, such as medical schools, medical library and dietary, must contribute to the education of the residents in accordance with the general requirements of the Essentials of Accredited Residencies. All participating hospitals must be accredited by the Joint Commission on Accreditation of Hospitals (JCAH).

IV. ASSESSMENT

The transitional year program director should be provided a performance evaluation by the participating discipline upon each resident’s completion of a rotation in that discipline. At least twice a year, the transitional year residents must be apprised by the program director of the evaluations, and records of these interactions developed and retained. The residents must have the opportunity to provide written evaluations of the adequacy, quality and appropriateness of each component of their educational program. All records pertaining to the evaluations noted in this assessment section shall be kept on file by the program director and be made available for inspection during the process of accreditation of the program.

V. CONCLUSION

The transitional year experience must be of the same high quality as accorded ACGME accredited residencies. It must be a program designed to meet the educational needs of the resident. Service obligations of the sponsoring institution must be secondary to the transitional year educational objectives.

Effective: July 1985   ACGME: May 1984
Section III

STATISTICAL REPORT ON GRADUATE MEDICAL EDUCATION IN THE UNITED STATES, 1986-1987

Anne E. Crowley, Ph.D. and Sylvia L. Etzel

INTRODUCTION
This statistical report on graduate medical education in the United States for the 1986-1987 academic year contains data on the number of residency programs by specialty and by region, the number of positions offered, the number of trainees by specialty and by region, the number of foreign medical graduates in each specialty and in each state, and information on the ethnic background and citizenship of trainees.

Eleven new subspecialties have been added to the list of accredited programs. In 1986, the Accreditation Council for Graduate Medical Education (ACGME) accredited through the Residency Review Committee for Internal Medicine programs in cardiovascular disease, endocrinology and metabolism, gastroenterology, hematology (medicine), infectious diseases, medical oncology, nephrology, pulmonary diseases, and rheumatology; and through the Residency Review Committee for Pathology programs in chemical pathology and medical microbiology.

"Resident" and Related Terms
In the medical education community the terms "intern," "resident," and "fellows" are used with widely different meanings. Variation in the use of these terms occurs from specialty to specialty, from institution to institution, and even from department to department within the same institution. At times the generic term "trainee" is used to circumvent the ambiguity.

In this section the term "resident" is used to refer to persons at all levels of graduate medical education in programs accredited by the ACGME.

Historically, the AMA House of Delegates in 1975 accepted (on advice from its Council on Medical Education) the recommendation of the Citizens Commission on Graduate Medical Education to integrate the first post-MD year of graduate medical education, i.e., the internship, with subsequent years of graduate medical education. Although the term "internship" has been in common use and may still be found in some state statutes, the first year of graduate medical education was integrated as the first year of residency and the term "intern" was eliminated from the DIRECTORY.

In some institutions, the term "intern" is still used in the historical sense to identify persons in the first post-MD year. In other locales, "intern" refers to persons in the first year of any residency program. The current DIRECTORY refers to these persons as either postgraduate year-one (PGY-1) residents or first-year residents. Most individuals in the transitional year programs are PGY-1 residents.

Usage and definition of the term "fellow" has varied among the specialty boards, among specialty programs and among institutions. In many institutions, all trainees in subspecialty programs have been called "fellows." In other institutions, trainees in similar positions have been called "residents." It should be noted that the ACGME accredits programs beginning with the PGY-1 year, as well as programs which have prerequisites, including prior certification eligibility. For purposes of accreditation, all programs accredited by the ACGME are called residency programs, whether these are a specialty or a subspecialty.

METHODOLOGY
Statistical information on graduate medical education in the United States is collected annually by means of surveys of program directors and of institutions and agencies which participate to a significant extent in graduate medical education. In September each year every director of an accredited graduate medical training program is sent a computer printout of the listing of the program as it will appear in the DIRECTORY. Enclosed with the printout is a survey form requesting statistics on the number of residents on duty, by year of training, type of medical school, sex, race, and citizenship. The form also requests information about positions to be offered in the program for the following year and the availability of shared schedule positions in the program. All program directors who receive the survey by mid-November are sent a second request notice. The chief executive officer of each institution participating in graduate medical education is sent a computer printout of the listing of the institution for the DIRECTORY. Enclosed with the printout is a form requesting information on the size of the medical staff involved in teaching graduate trainees, and the appointment of osteopathic physicians to the medical staff.

Every effort has been made to assure the accuracy of the statistics reported here. All data were checked for consistency before entry to the data bases. When answers appeared to be inconsistent, the respondent was contacted by telephone for clarification. The statistics produced by electronic data processing of the data bases were checked for internal consistency.

Response Rate
Ninety-one percent of the programs accredited to train residents had responded to the survey by December 31, 1986 (Table 1). It should be noted that the response rates of the newly accredited internal medicine subspecialty programs that were surveyed, were lower than anticipated. The response rate of all programs surveyed, excluding the internal medicine subspecialties, is 95 percent. Twenty-eight of the 55 specialty categories had a response rate of 95 percent or above. Over 99 percent of the program directors responding to the survey provided all information requested, i.e., a count of residents on duty by year of training, school of medical education, sex, race, and citizenship.

DISTRIBUTION OF ACCREDITED PROGRAMS BY SPECIALTY AND GEOGRAPHIC REGION

Accredited Programs
The accreditation actions of the Residency Review Committees and of the ACGME are recorded regularly. In September 1986, there were 5,746 accredited residency training programs in the United States. This number includes the programs for which accreditation is to be terminated June 30, 1987. Statistics from the programs to be terminated were included in the tabulations; however, these programs are not listed in Section IV of the DIRECTORY. Programs which received initial accreditation after the survey began numbered 586. Directors of these programs were not sent survey forms. Most of these programs (561) were in the new internal medicine subspecialties.

Internal medicine had the largest number of accredited programs, followed by family practice, general surgery, and obstetrics/gynecology. In the 1986-1987 academic year two-fifths (41 percent) of all residents were in training programs for internal medicine, family practice, or pediatrics. For the number and percent of programs and residents in each specialty see Table 2.
Residency programs tend to be located in the more densely populated regions of the country. Over one-fifth of accredited residency programs (23 percent) were located in the Middle Atlantic region. These programs were training 23.5 percent of residents. The state of New York had the largest percentage of programs (13.7 percent) and trained the largest percentage of residents (14.4 percent). California ranked second both in percentage of programs (30.1 percent) and percentage of residents in training (9.4 percent). The number and percent of programs and residents on duty by geographic location can be found in Table 3.

acceptable candidate. A small number of programs may have planned to offer the positions reported but, because of accreditation requirements, were prohibited from appointing residents. For example, a program for which accreditation will cease at a specified future date is not permitted to accept new trainees. On the other hand, a certain number of new programs may obtain accreditation in time to accept candidates in July. Those positions would not be included in the projection.

The trend in positions offered is shown in Table 4 which gives the count of positions for July 1 as estimated by program directors the previous Fall. This table also lists trends within each specialty. The number of positions projected for July 1987 was reported by 91 percent of the program directors. An analysis of the nonrespondent programs revealed an additional 2,779 positions for July 1987. This analysis included only programs which had reported positions in 1985 and which are accredited. Thus, the total number of positions conservatively projected for July 1987 is 82,633. This projection does not include newly accredited programs.

### PGY-1 Positions Available

Several specialties have a prerequisite for entry to programs. For example, all first-year positions in allergy and immunology are open only to persons with at least three years of internal medicine or pediatrics. First-year positions

*Number of positions offered as reported by program directors in the annual survey of residency programs the previous Fall; does not include positions offered in programs newly accredited.
open to medical school graduates with no previous graduate medical education are identified as postgraduate year-one (PGY-1) positions. For the annual survey, program directors were asked to report the number of positions open to trainees seeking a first postgraduate year (PGY-1) position. Table 5 shows the number of PGY-1 positions available for July 1, 1985, 1986, and 1987 as estimated by program directors. The previous Fall.
The number of PGY-1 positions projected for July 1987 as shown in Table 5 was reported by 97 percent of the programs which are open to PGY-1 candidates. A review of the nonrespondent programs revealed a potential 702 additional PGY-1 positions. Thus, the total number of PGY-1 positions projected for July 1987 is 21,224.

Unfilled Positions
Hypothetically, the actual number of positions available might be obtained after the academic year has begun by calculating the sum of filled positions and budgeted unfilled positions. However, an analysis of the reports from program directors reveals that unfilled positions tend to be withdrawn, or at least are not reported.
Program directors were asked to report budgeted positions unfilled as of September 1. Table 6 shows the number of unfilled positions reported by program directors in 1984, 1985, and 1986. N.B. This information was obtained from program directors with a promise of confidentiality. The names and/or locations of such programs will not be released.

Shared-Schedule Positions
Approximately eight percent of programs (460) reported the availability of shared-schedule positions. Of this number, 69 percent were programs in family practice, internal medicine, pediatrics, psychiatry, or child psychiatry. The largest numbers of programs offering shared-schedule positions were found in New York (60 programs), Massachusetts (41 programs), Pennsylvania (37 programs), California (32 programs), Illinois (30 programs), Ohio (30 programs), Texas (23 programs), and Michigan (20 programs). Programs which offer shared-schedule positions and wish to be listed as such are so identified in Section IV.

Residents in Training
Table 7 shows the number of residents "on duty September 1" for three consecutive years. The counts represent 97 percent of the programs for 1984 and 1985 and 91 percent for 1986. The number of residents increased 2,728 in 1984, decreased 611 in 1985, and increased 2,301 in 1986. This increase is due mainly to the number of residents on duty reported in the new internal medicine and pediatric subspecialty programs.
The number of PGY-1 residents on duty is shown in Table 8. The number of PGY-1 residents increased 745 for 1984, decreased 371 for 1985 and 985 in 1986.

Women Residents

The number and percent of women in residency programs has been increasing steadily (Table 9). In the 1978 training year, 19 percent of residents were women; by 1986, women comprised 27 percent of all trainees. As recently as 1979, over one-third of the specialties had no women among the residents. In 1986 women were found in all specialties except chemical pathology and medical microbiology, both newly accredited subspecialties. About two-fifths (38 percent) of women residents were training in internal medicine or pediatrics. Another 29 percent were training in obstetrics/gynecology, family practice, and psychiatry.

Foreign Medical School Graduates

Information on medical school of graduation was provided by more than 99 percent of the programs reporting residents. The number of foreign medical school graduates in residency training in the United States has decreased by 474 persons since 1985. In 1986, the percent of all residents who were graduates of foreign medical schools decreased to 15.7 percent from 16.8 percent in 1985.

The percentage of foreign medical school graduates in specialty programs ranges from 1.6 percent in orthopedic surgery, to 60 percent in hematology (pathology) (Table 10). Table 11 provides a comparison by region of foreign medical school graduates for the years 1984, 1985, and 1986. The number and percentage of foreign medical school graduates who are US citizens decreased from 6,868 (55.77 percent) in 1985, to 5,845 (49 percent) in 1986 (Table 12). The number of US citizen foreign medical school graduates in PGY-1 positions also decreased. Forty-eight percent of the 2,381 PGY-1 foreign medical school graduates on duty in 1986 were US citizens (Table 13). These decreases may be due to a more accurate reporting of US citizen and non US citizen data in 1986. More detailed information was requested on foreign medical school graduates in the 1986 survey. In previous years, permanent residents may have been reported as US citizens instead of non US citizens.

Race and Citizenship of Residents

Information on the ethnic background of residents on duty in the 1986 year is shown in Table 14. The proportion of residents who were Black non-Hispanic equaled 4.5 percent of all residents. Of these, 88 percent were graduates of US or Canadian medical schools. Among foreign medical graduates 30 percent were Asian or Pacific Islanders.

The number of Black non-Hispanic residents has increased by 131 persons. The percentage of all residents who are Black has remained at 4.5 percent (Table 15). For the distribution of Black residents by specialty for the past three years see Table 16.

Of those residents for whom citizenship was indicated, 91 percent were listed as US citizens. As reported above, of foreign medical school graduates for whom citizenship was reported, 49 percent were listed as US citizens. Over 99 percent of US graduates were reported as US citizens.

TRANSITIONAL YEAR PROGRAMS

As of July 1982, "flexible" first-year programs were redesignated "transitional year" programs. These programs are evaluated according to standards published in the Requirements for Accredited Programs (Section II). A transitional year program is sponsored by at least two accredited residency programs. The objective of the 12-month curriculum is to provide a balanced medical education in multiple clinical disciplines.

The survey of 182 transitional year programs (to which 97 percent responded) revealed 1,104 trainees. Of this number, 13.7 percent (or 193) were graduates of foreign medical schools. Fifty-three percent of the foreign medical graduates in transitional year programs were US citizens. Information on transitional year programs will be found in the tables showing statistics for specialty programs.

OSTEOPATHIC PHYSICIANS IN ACGME ACCREDITED PROGRAMS

The number of osteopathic residents in ACGME accredited programs increased from 1,277 in 1985 to 1,543 in 1986. Of the osteopathic residents, 290 were in 119 federal programs which are also accredited by the American Osteopathic Association. Osteopathic residents were most frequently found in internal medicine, pediatrics, obstetrics/gynecology, and psychiatry.

The number of osteopathic physicians on staff in teaching hospitals for the past three years is shown in Table 18.

INSTITUTIONS AND AGENCIES PARTICIPATING IN GRADUATE MEDICAL EDUCATION

The number of institutions and agencies identified as offering a significant portion of training in graduate medical education programs was 1,570. The 1986 survey brought a response from 82 percent of the institutions and agencies in graduate medical education.

Hospitals are not the only institutions involved in graduate medical education. State medical examiners' offices, blood banks, ambulatory clinics, and mental health agencies also regularly provide residency training. However, the majority of graduate medical education institutions (1,343) are hospitals.

Table 19 shows the size and type of control of graduate medical education institutions reported by chief executive officers. Ten percent of the institutions listed were under the control of local governments or hospital district authorities; 15 percent were state controlled; 10 percent were federal institutions; 14 percent were church related institutions; and 48 percent were other non-profit corporations or agencies. Two percent of the institutions fall into the miscellaneous category.

It is not a requirement that institutions have a formal relationship with a medical school in order to have an accredited residency program, although 90 percent of the institutions have some type of relationship. The types of institution/
medical school relationships are designated as major, limited, or graduate only. Fifty-four percent of the institutions have a major relationship with a medical school.

**SUMMARY**

The annual surveys of residency programs on which the statistical report is based have had a higher than 90 percent response for the past five years. The number of accredited programs increased in 1985 and again in 1986, primarily as a result of the accreditation of additional subspecialty programs. The count of available residency positions is a fluid entity and seems to be dependent upon many factors, including funding and the number of qualified candidates seen by program directors. The number of PGY-1 positions has not changed significantly over the past three years. The number of reported unfilled positions, including PGY-1 unfilled positions, increased since 1985. The total number of residents on duty decreased in 1985, but increased in 1986. This increase is due mainly to the number of residents on duty in the new internal medicine and pediatric subspecialty programs. The number of new entry residents (PGY-1) increased in

Total 18,603 99.8 19,562 99.8 20,746 99.8

*Less than 1/10th percent.
1984, decreased in 1985, and decreased again in 1986. For one percent of residents were training in family practice, internal medicine, or pediatrics. This statistic has not changed significantly over the past three years.

The number and percent of residents in residency programs continues to increase, as it has for the past several years.

Both the number and percent of foreign medical graduate residents has decreased in 1986. The new test for foreign medical graduates to establish eligibility for appointment to a residency could result in further decreases in the number of foreign medical graduate residents.

The number of Black non-Hispanic residents increased slightly in 1986, although the percentage remained the same. Graduates of osteopathic medical schools in ACGME programs continues to increase. This increase is seen in non-federal programs.

The number of institutions involved in graduate medical education remains about the same as for the past three years, although the number of institutions which are not hospitals has increased since 1983. Nineteen percent of all types of institutions have some type of affiliation with a US medical school.

Section IV

DIRECTORY OF ACCREDITED PROGRAMS

This Section of the Directory contains the list of residency programs accredited as of December 31, 1986 by the Accreditation Council for Graduate Medical Education (ACGME), except those programs for which accreditation ends June 30, 1987.

The programs are listed by specialty under the state and city of the parent institution. Indented under the title of the program are the participating institutions at which the resident receives a significant portion of the training. The name and address of the program director follows. Other information on each program includes the number of years of training accredited by the ACGME, the average daily census, annual admissions, or other appropriate data to indicate the volume of clinical experience available to the trainee. (A key to the abbreviations may be found at the bottom of each page and in Appendix E.)

Also given for each program are the total number of positions for 1987-1988 (indicating the size of the program), and the number of postgraduate year one (PGY-1) positions for 1987-1988 as reported by the program director. Programs which show zero PGY-1 positions presumably do not accept applicants without prior graduate medical training.

Every effort has been made to assure an accurate and current listing of programs. However, because there is a time lag involved in publication, it is important that candidates interested in a particular program obtain the most current information about the program by writing to the program director. Programs which did not respond to the survey are identified by the symbol ▶. Such programs show zero positions. Other information on these programs may be outdated.

Graduates of schools not accredited by the Liaison Committee on Medical Education should read carefully Section I before applying to a program.

Transitional Year Programs

Transitional year programs were designed to give a broad clinical experience for physicians who feel that such experience will best serve the purpose of subsequent graduate education in their fields; and physicians who have not yet decided on their specialty but may wish to choose among several fields. The Special Requirements for a transitional year program will be found in Section II. (Persons who want information about the accreditation of Transitional programs should write to: Secretary for the Committee on Transitional Programs, 535 North Dearborn Street, Chicago, IL 60610.)

Combined Medicine/Pediatrics Programs

Combined medicine/pediatrics programs may be found in Appendix A. These programs offer two years of medicine and two years of pediatrics. Training in these combined programs is acceptable to both the American Board of Internal Medicine and the American Board of Pediatrics toward certification. Neither the Residency Review Committee for Internal Medicine nor the Residency Review Committee for Pediatrics reviews the combined programs. The RRC for Internal Medicine does review and accredit the internal medicine residencies, and the RRC for Pediatrics reviews the pediatrics residencies, which are a part of the combined programs. The combined programs are not accredited by ACGME as such.

U.S. Armed Forces Programs

Residency programs which are sponsored by the U.S. Armed Forces may have specific entrance requirements. Persons considering such programs are referred to Section I of this DIRECTORY.

National Institutes of Health Programs

Programs conducted at the National Institutes of Health (NIH) Clinical Center in Bethesda, Maryland are usually open only to advanced level trainees.

Programs With Shared-Schedule Positions

Some programs have positions which may be shared by two individuals. Each of the trainees serves part-time in the residency position. The programs which have shared-schedule positions are identified in the listing by a symbol following the name of the program.

Length of Program

Each program has been accredited to offer a given number of years of training in the specialty. The length, i.e., number of years, given in this DIRECTORY is that reviewed and accredited by the Residency Review Committee. A program director may choose to enhance the program with an additional year of training.

Institutions Listed for Programs

The hospitals and other institutions where residents will spend a significant period of time are listed for each program. Hospitals and other institutions which are the site of brief rotations (that is, less than one-sixth of the program length) are not included.

Programs—No Information

Programs for which updated information was not provided show zero positions and are identified by the symbol ▶.

## ACCREDITED PROGRAMS IN MEDICAL ONCOLOGY

### ILLINOIS cont’d

**North Chicago**

**Chicago Medical School Program**

- University of Illinois-Chicago Med Sch
- St Mary of Nazareth Hospital Center

**Program Director:**

- Edz Z Ezidri, MD
- Chicago Medical School, Dept of Medicine
- 3333 Green Bay Rd
- North Chicago, IL 60064

**Length:** 2 Years; **Total Positions:** 2 (PGY1: 2) ADC 325; AA 17,000; OPV 57,000

### INDIANA

**Indianapolis**

**Indiana University Medical Center Program**

**Indiana University Hospitals**

**Program Director:**

- Oncology Program Director
- Indiana University Medical Center, Dept of Medicine
- 545 Barnhill Road
- Indianapolis IN 46223

**Length:** 2 Year(s); **Total Positions:** 0 (PGY1: 0) ADC 0; AA 0; OPV 0

**Methodist Hospital of Indiana Program**

**Methodist Hospital of Indiana**

**Program Director:**

- Oncology Program Director
- Methodist Hospital of Indiana, Dept of Internal Medicine
- 1701 North Senate Blvd
- Indianapolis IN 46202

**Length:** 2 Year(s); **Total Positions:** 0 (PGY1: 0) ADC 0; AA 0; OPV 0

### IOWA

**Iowa City**

**University of Iowa Program A**

- University of Iowa Hospitals and Clinics
- C Patrick Burns, MD
- University Hospital
- Dept of Medicine
- Iowa City IA 52242

**Length:** 2 Year(s); **Total Positions:** 13 (PGY1: 3)

**KANSAS**

**Kansas City**

**University of Kansas Medical Center Program**

**University of Kansas Medical Center**

**Program Director:**

- Oncology Program Director
- Univ of Kansas College of Health Sci, Dept of Internal Med
- 39th & Rainbow Boulevard
- Kansas City KS 66103

**Length:** 2 Year(s); **Total Positions:** 0 (PGY1: 0) ADC 0; AA 0; OPV 0

### KENTUCKY

**Lexington**

**University of Kentucky Medical Center Program**

**University of Kentucky–Albert B Chandler Medical Center**

**Program Director:**

- Oncology Program Director
- University Hospital-Albert B Chandler Medical Center
- 800 Rose Street
- Lexington KY 40536

**Length:** 2 Year(s); **Total Positions:** 0 (PGY1: 0) ADC 0; AA 0; OPV 0

**Louisville**

**University of Louisville Program**

- University Hospital-University

**Program Director:**

- Thomas Woodcock, MD
- University of Louisville, Dept of Medicine
- Ambulatory Care Bldg, 3RD Fl
- Louisville KY 40292

**Length:** 2 Year(s); **Total Positions:** 2 (PGY1: 2) ADC 0; AA 0; OPV 0

### LOUISIANA

**New Orleans**

**Alton Ochsner Medical Foundation Program**

- Alton Ochsner Medical Foundation

**Program Director:**

- Don M Samples, MD
- Alton Ochsner Medical Foundation
- 1516 Jefferson Highway
- New Orleans LA 70121

**Length:** 2 Year(s); **Total Positions:** 0 (PGY1: 0) ADC 0; AA 0; OPV 0

**Tulane University Program**

- Charity Hospital of Louisiana-Tulane Division
- Tulane University Hospital
- Veterans Admin Med Ctr-Tulane Service (New Orleans)

**Program Director:**

- W J Stuckey, MD
- Tulane Medical Center
- 1430 Tulane Avenue
- New Orleans LA 70112

**Length:** 2 Year(s); **Total Positions:** 2 (PGY1: 2) ADC 33; AA 1,800; OPV 6,870

**Maryland**

**Baltimore**

**Johns Hopkins University Program**

- Johns Hopkins Hospital

**Program Director:**

- Martin Abeleff, MD
- Johns Hopkins Hospital, Dept of Medicine
- 600 N Wolfe St
- Baltimore MD 21205

**Length:** 2 Year(s); **Total Positions:** 18 (PGY1: 0) ADC 54; AA 1,547; OPV 17,856

**University of Maryland Program**

- University of Maryland Medical System

**Program Director:**

- Joseph Aisen, MD
- University of Maryland Medical System
- 22 S Greene St
- Baltimore MD 21201

**Length:** 2 Year(s); **Total Positions:** 0 (PGY1: 0) ADC 0; AA 0; OPV 0

**Bethesda**

**National Institutes of Health (Bethesda) Program**

**Program Director:**

- Oncology Program Director
- National Institutes of Health
- Department of Medicine
- Bethesda MD 20814

**Length:** 2 Year(s); **Total Positions:** 0 (PGY1: 0) ADC 0; AA 0; OPV 0

### MASSACHUSETTS

**Boston**

**Beth Israel Hospital Program**

**Program Director:**

- Lowell E Schnipper, MD
- Beth Israel Hospital, Dept of Medicine
- 330 Brookline Ave
- Boston MA 02215

**Length:** 2 Year(s); **Total Positions:** 0 (PGY1: 0) ADC 0; AA 0; OPV 0

**ACCREDITED PROGRAMS IN NEUROLOGY**

### PENNSYLVANIA cont'd

- **Pittsburgh**
  - Pittsburgh Program: University of Pittsburgh School of Medicine, 3600 O'Hara Street, Pittsburgh, PA 15261.
  - Program Director: Charles P. Reardon, MD.
  - Description: Offers training in various subspecialties, including neurology.

### TEXAS

- **Dallas**
  - University of Texas Southwestern Medical School Program:
    - Dallas County Hospital Dist-Parkland Mem Hosp Veterans Administration Medical Center (Dallas)
    - Program Director: T. Roger Menkes, MD.
    - Length: 3 years; Total Positions: 15 (PGY1: 10), PGY2: 5, PGY3: 0.
    - ACC: 42; AA: 15; OPV: 3,750.

- **Galveston**
  - University of Texas Medical Branch Hospitals Program:
    - Program Director: John R. Calvery, MD.
    - Length: 3 years; Total Positions: 9 (PGY1: 6), PGY2: 3, PGY3: 0.
    - ACC: 15; AA: 63; OPV: 5,741.

### SOUTH CAROLINA

- **Charleston**
  - Medical University of South Carolina Program:
    - Program Director: John E. Young, MD.
    - Length: 4 years; Total Positions: 10 (PGY1: 5), PGY2: 5.
    - ACC: 30; AA: 10; OPV: 4,026.

### TENNESSEE

- **Memphis**
  - University of Memphis Program:
    - Program Director: J. Edward Childs, MD.
    - Length: 3 years; Total Positions: 12 (PGY1: 6), PGY2: 6.
    - ACC: 24; AA: 8; OPV: 3,991.

### UTAH

- **Salt Lake City**
  - University of Utah Program:
    - Program Director: John F. Martin, MD.
    - Length: 3 years; Total Positions: 12 (PGY1: 8), PGY2: 4, PGY3: 0.
    - ACC: 23; AA: 8; OPV: 3,700.

### VERMONT

- **Burlington**
  - Medical Center Hospital of Vermont Program:
    - Program Director: John F. Martin, MD.
    - Length: 3 years; Total Positions: 6 (PGY1: 3), PGY2: 3.
    - ACC: 6; AA: 1; OPV: 4,026.

### VIRGINIA

- **Charlottesville**
  - University of Virginia Program:
    - Program Director: R. L. Clark, MD.
    - Length: 3 years; Total Positions: 15 (PGY1: 9), PGY2: 6, PGY3: 0.
    - ACC: 30; AA: 12; OPV: 4,000.

### NORFOLK

- **Eastern Virginia School of Medicine Program**
  - Program Director: Richard S. Frank, MD.
  - Length: 3 years; Total Positions: 6 (PGY1: 3), PGY2: 3.
  - ACC: 6; AA: 2; OPV: 4,025.

### RICHMOND

- **Virginia Commonwealth University MCV Program**
  - Program Director: Robert J. De Lorenzo, MD.
  - Length: 3 years; Total Positions: 21 (PGY1: 13), PGY2: 8.
  - ACC: 22; AA: 8; OPV: 4,750.

### WASHINGTON

- **Seattle**
  - University of Washington Program:
    - Program Director: Philip D. Swan, MD.
    - Length: 3 years; Total Positions: 15 (PGY1: 10), PGY2: 5.
    - ACC: 25; AA: 1,612; OPV: 5,600.

## Accredited Programs in Otolaryngology

### Kansas
- **Kansas City**
  - University of Kansas Medical Center Program
  - University of Kansas Medical Center
  - Veterans Administration Medical Center (Kansas City)
  - **Program Director:** C. W. Morris, MD
  - Univ of Kansas Medical Center
  - 39TH and Rainbow Dr.
  - Kansas City KS 66103
  - Length: 4 Years
  - Total Positions: 9 (PGY1: 0)
  - ADC: 18; AA: 1,142; OPV: 18,662

### Kentucky
- **Louisville**
  - University of Louisville Program
  - Humana Hospital-UofL
  - Kosair Children's Hospital
  - Norton Hospital
  - Veterans Administration Medical Center (Louisville)
  - **Program Director:** Jorge A. Martinez, MD
  - Univ of Louisville Health Sci Ctr, Dept of Otolaryngology
  - Myres Hall
  - Louisville KY 40292
  - Length: 4 Years
  - Total Positions: 8 (PGY1: 2)
  - ADC: 39; AA: 2,239; OPV: 14,414

### Louisiana
- **New Orleans**
  - Louisiana State University Program
  - Charity Hospital of Louisiana-L S U Division
  - Eye, Ear, Nose and Throat Hospital
  - Veterans Admin Med Ctr-L S U Service (New Orleans)
  - **Program Director:** George D. Lyons, MD
  - L S U School of Medicine, Dept of Otolaryngology
  - 2020 Gravier St, Suite A
  - New Orleans LA 70112
  - Length: 3 Years
  - Total Positions: 15 (PGY1: 0)
  - ADC: 59; AA: 2,754; OPV: 22,443

- **Tulane University Program**
  - Tulane University Hospital
  - Alton Ochsner Medical Foundation
  - Charity Hospital of Louisiana-Tulane Division
  - Eye, Ear, Nose and Throat Hospital
  - **Program Director:** Harold G Tabb, MD
  - Tulane University Medical Center
  - 1430 Tulane Ave, Suite 2000
  - New Orleans LA 70112
  - Length: 4 Years
  - Total Positions: 13 (PGY1: 0)
  - ADC: 86; AA: 4,126; OPV: 35,537

### Shreveport
- **Louisiana State University (Shreveport) Program**
  - Louisiana State University Hospital
  - Veterans Administration Medical Center (Shreveport)
  - **Program Director:** Frederick L. Stuckey, Jr, MD
  - Louisiana State University Hospital
  - 1541 Kings Highway
  - Shreveport LA 71103
  - Length: 4 Years
  - Total Positions: 10 (PGY1: 0)
  - ADC: 19; AA: 1,290; OPV: 11,145

### Maryland
- **Baltimore**
  - Greater Baltimore Medical Center Program
  - Greater Baltimore Medical Center
  - **Program Director:** Alvin P. Weinger, MD
  - Greater Baltimore Medical Center
  - 6701 N Charles St
  - Baltimore MD 21204
  - Length: 4 Years
  - Total Positions: 8 (PGY1: 0)
  - ADC: 27; AA: 4,958; OPV: 11,568

### Massachusetts
- **Boston**
  - Massachusetts Eye and Ear Infirmary/Harvard Medical School Program
  - Massachusetts Eye and Ear Infirmary
  - **Program Director:** Joseph Haddad, Jr., MD
  - Massachusetts Eye and Ear Infirmary
  - 243 Charles St
  - Boston MA 02114
  - Length: 4 Years
  - Total Positions: 19 (PGY1: 0)
  - ADC: 144; AA: 6,738; OPV: 61,494

- **Tufts University Program**
  - New England Medical Center
  - Boston City Hospital
  - **Program Director:** Werner D. Chasin, MD
  - New England Medical Center
  - 171 Harrison Ave
  - Boston MA 02111
  - Length: 4 Years
  - Total Positions: 7 (PGY1: 1)
  - ADC: 52; AA: 3,140; OPV: 34,793

### Michigan
- **Ann Arbor**
  - University of Michigan Program
  - University of Michigan Hospitals
  - Veterans Administration Medical Center (Ann Arbor)
  - **Program Director:** Charles J. Krause, MD
  - University of Michigan Hospitals
  - Dept of Otolaryngology
  - Ann Arbor MI 48109
  - Length: 4 Years
  - Total Positions: 16 (PGY1: 0)
  - ADC: 50; AA: 2,627; OPV: 33,000

### Minnesota
- **Minneapolis**
  - University of Minnesota Program
  - University of Minnesota Hospital and Clinic
  - Hennepin County Medical Center
  - St Paul Ramsey Medical Center
  - Veterans Administration Medical Center (Minneapolis)
  - **Program Director:** Arnold J. Donell, 3RD, MD
  - Box 396, University Hospital and Clinic
  - Harvard St at E River Rd
  - Minneapolis MN 55455
  - Length: 4 Years
  - Total Positions: 16 (PGY1: 0)
  - ADC: 51; AA: 2,403; OPV: 27,824

### Rochester
- **Mayo Graduate School of Medicine Program**
  - Mayo Graduate School of Medicine-Mayo Clinic
  - Rochester Methodist Hospital
  - St Mary's Hospital of Rochester
  - **Program Director:** Eugene S. Kem, MD
  - Mayo Graduate School of Medicine
  - 200 First St S W
  - Rochester MN 55905
  - Length: 4 Years
  - Total Positions: 20 (PGY1: 4)
  - ADC: 18; AA: 1,924; OPV: 42,646

### Mississippi
- **Jackson**
  - University of Mississippi Medical Center Program
  - University Hospital
  - Veterans Administration Medical Center (Jackson)
  - **Program Director:** Winson Morris, MD
  - Univ of Mississippi Medical Center
  - 2500 N State St
  - Jackson MS 39216
  - Length: 4 Years
  - Total Positions: 7 (PGY1: 0)
  - ADC: 13; AA: 836; OPV: 9,206

Section V

DIRECTORY OF INSTITUTIONS AND AGENCIES PARTICIPATING IN TRAINING

This Section contains a list of hospitals and other institutions listed in this Section. Approximately three-fifths of these institutions are identified as the "parent," i.e., principle institution for at least one residency program. The institution list is intended as a reference for information about the hospitals which are part of a residency program. Candidates seeking a residency should refer to the list of programs in Section IV. Applications for a residency position should be addressed to the program director rather than to an institution.

Relationship Between Hospitals and Medical Schools

It is not a requirement that hospitals have a formal relationship with a medical school to have an accredited program. The type of medical school relationships of an institution with the school has been provided by the dean of the medical school, and is listed as an item of information. The type of medical school-hospital relationship is indicated as M (Major), G (Graduate Only), or L (Limited). The number code following identifies the medical school. (See Appendix D for a list of schools.)

Major signifies that the hospital is an important part of the teaching program of the medical school and is a major unit in the clinical clerkship program.

Graduate indicates that the hospital is used by the school for graduate training programs only. Thus the Graduate designation is used only for hospitals not designated as Major or Limited and only in cases in which one or more of the following arrangements is in effect:

a) The house staff are selected by officials of a medical school department or by a joint committee of the hospital teaching staff and medical school faculty.

b) The medical school faculty (other than the hospital's attending staff) are regularly scheduled to participate in the teaching programs of the hospital. If the medical school faculty participation at the hospital is limited to an occasional lecture or consultation visit, or if the hospital's residents attend medical school teaching conferences only as visitors, the hospital is not designated as having a graduate affiliation.

c) A contractual arrangement (with or without financial commitment) specifies the medical school participation in the organization and supervision of the graduate training program in the hospital.

d) There is some degree of exchange of residents between this hospital and the principal teaching hospital of the medical school.

If the hospital is used for undergraduate clerkship teaching, the medical school relationship will be designated as either Major or Limited, but not Graduate.

Limited indicates that the hospital is used in the school's teaching program only to a limited extent.

There are several additional hospitals to which residents rotate for a brief period during the training program. Space limitations preclude listing these institutions in this DIRECTORY.

APPENDIX A
COMBINED MEDICINE/PEDIATRICS PROGRAMS
COMBINED MEDICINE/PEDIATRICS PROGRAMS

The programs listed below offer two years of medicine and two years of pediatrics and are acceptable to both the American Board of Internal Medicine and the American Board of Pediatrics toward certification.

Neither the ACGME nor the Residency Review Committees have reviewed these combined programs. This list has been provided by the staffs of the American Board of Internal Medicine and the American Board of Pediatrics and is printed here as a service to the reader.

The two Boards believe that all four years should be completed in the same combined training program and that continuity clinics in each specialty should be provided throughout at least three years. The training in each specialty should be undertaken in a single institution. All four years of training must be satisfactorily completed prior to admission to the Certifying Examinations of each Board. Applicants to combined training programs are encouraged to review all of the requirements for admission to the certification process of each Board, which appear in other sections of this Directory.

APPENDIX B

CERTIFICATION REQUIREMENTS
REQUIREMENTS FOR CERTIFICATION

American Specialty Boards

The Council on Medical Education of the American Medical Association and the American Board of Medical Specialties (formerly the Advisory Boards of Medical Specialties) have now approved 20 primary and 3 conjoint examining and certifying boards on the basis of minimal standards listed in the “Essentials for Approval of Examining Boards in Medical Specialties.”

The primary purposes of the boards are (1) to conduct investigations and examinations to determine the competence of voluntary candidates, (2) to grant and issue certificates of qualification to candidates successful in demonstrating their proficiency, (3) to stimulate the development of adequate training facilities, (4) to cooperate with the Accrediting Council for Graduate Medical Education in evaluating residency training programs, and (5) to advise physicians desiring certification as to the course of study and training to be pursued.

The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, nor a license to practice medicine or a specialty. The boards do not in any way interfere with or limit the professional activities of a licensed physician, nor do they desire to interfere in the regular or legitimate duties of any practitioner of medicine.

Table 1 is intended to be aid primarily to graduates of foreign medical schools. The details of requirements for certification will be found on the following pages. Each board has provided the information which is published here for the convenience of physicians interested in certification. Specific inquiries concerning certification by a specialty board should be addressed to the appropriate official whose name and address is listed in Table 2.

Most of the American specialty boards publish booklets containing statements on the requirements for certification. This information is also included for each board in the Directory of Medical Specialists. The Directory of Medical Specialists, published for the American Board of Medical Specialties by Marquis Who’s Who, Chicago, contains biographical and educational information on each living specialist (including those retired from practice) who has been certified by an examining board approved by the American Board of Surgery prerequisite.

Also certifies in Special Qualification in Diagnostic Laboratory Immunology with the American Board of Internal Medicine and the American Board of Pediatrics.

Effective July 1, 1987, the minimum time for graduates training under the control of an Emergency Medicine program shall 26 months after graduation from medical school. This is for residents who begin their Emergency Medicine training on or after this date.

Practice category options available until June 30, 1988. Practice category requirements are available by writing to the Board office.

Also certifies in the subspecialties of Cardiovascular Disease, Endocrinology and Metabolism, Gastroenterology, Hematology, Infectious Disease, Nephrology, Medical Oncology, Pulmonary Disease, Rheumatology, and in Diagnostic Laboratory Medicine, Critical Care Medicine, and Geriatric Medicine.

Also certifies in subspecialties of special areas of Pediatric Cardiology, Pediatric Hematology-Onco, Pediatric Nephrology, Pediatric Endocrinology, Neonatal-Perinatal Medicine, Pediatric Pulmonology, Pediatric Critical Care Medicine, and Diagnostic Laboratory Immunology.

Fee for Anatomic Pathology Only or Clinical Pathology Only is $850. Fee for Combined Anatomic and Clinical Pathology is $950.

Also certified in Child Neurology and subspecialty of Child Psychiatry.

Certifies in Diagnostic Radiology, Diagnostic Radiology with Special Competence in Nuclear Radiology, Therapeutic Radiology and Radiological Physics and one or more of its subspecialties.

Also certifies in Special Qualification in Diagnostic Radiology for Diagnostic Radiology, and in General Vascular Surgery and Certification of Added Qualification in Surgical Critical Care.

Certification of American Board of Surgery prerequisite.

NOTE: In this table, those items are marked "x" on which the Board makes specific statement. In most instances, there are additional qualifying statements not indicated in this table. In all instances, refer for details to the board requirements which follow. While all boards may accept the foreign medical graduate under certain circumstances, they do not all specify that ESCRAM certification is required. ALL FOREIGN GRADUATES WHO CONTEMPLATE SPECIALTY BOARD CERTIFICATION SHOULD CORRESPOND WITH THE APPROPRIATE BOARD AT THE EARLIEST POSSIBLE MOMENT.

Table 1.—Summary of American Specialty Board Requirements
Medical Association. Executive Vice President of the American Board of Medical Specialties is Donald G. Langley, M.D., One American Plaza, Evanston, Illinois 60201.

The American Board of Medical Specialties is actively concerned with the establishment, maintenance, and elevation of standards for the education and qualification of physicians recognized as specialists through the certification procedures of its member specialty boards. As a corollary, the American Board of Medical Specialties cooperates actively with all other groups concerned in establishing standards, policies, and procedures for maintaining the continuation of competence of such physicians.

The American Board and the Council on Medical Education of the American Medical Association, through the Liaison Committee for Specialty Boards, jointly issue the "Essentials for Approval of Examining Boards in Medical Specialties," which document is approved by the House of Delegates of the American Medical Association. Copies of the "Essentials" may be obtained from the Executive Director of the American Board of Medical Specialties or from the Council on Medical Education, American Medical Association, Chicago, Illinois 60610.

American Board of Allergy and Immunology
(A Conjoint Board of the American Board of Internal Medicine and the American Board of Pediatrics),
3624 Market Street
University City Science Center, Philadelphia, Pennsylvania 19104

Organization

The American Board of Allergy and Immunology (ABAI) was established in 1972 as a non-profit organization. It is sponsored jointly by the American Board of Internal Medicine, the American Board of Pediatrics, the American Academy of Allergy and Immunology, the American Academy of Pediatrics Section on Allergy, the American Association for Clinical Immunology and Allergy, the American College of Allergists, and the American Medical Association Section on Allergy. The ABAI is a conjoint Board of the American Board of Pediatrics and the American Board of Internal Medicine.

General Explanation of Requirements and Examination

The American Board of Allergy and Immunology is interested in candidates who have embarked voluntarily on a graduate program of study, with the express purpose of excelling in the practice of the specialty of allergy and immunology. In outlining its requirements, the ABAI hopes to help the candidate select superior educational programs which will develop his competency in allergy and immunology. The ABAI believes that all allergists and immunologists should have a sound fundamental knowledge of biological sciences basic to this discipline. Such knowledge is essential to the continued progress of any qualified allergist and immunologist. The ABAI anticipates that adequate knowledge in the basic sciences, as applied to this discipline, will be acquired by the candidate during a post-medical school training program. The ABAI wishes to emphasize that time and training are but a means to the end of acquiring a broad knowledge of allergy and immunology.

However, the candidate must demonstrate his competence to the ABAI in order to justify certification to practice this discipline as a specialty. The responsibility of acquiring the knowledge rests with the candidate. The responsibility of maintaining the standards of knowledge required for certification must satisfy the general and professional qualifications listed below.

Eligibility for Examination

A candidate must qualify for examination by having passed the examination of The American Board of Internal Medicine, The American Board of Pediatrics or the Royal College of Physicians and Surgeons of Canada and by presentation of evidence acceptable to the Board of Directors of the following graduate medical education:

1. at least three years of general training in Internal Medicine (with approval of the director of the second year of training and with twenty-four months of primary patient responsibility) or Pediatrics, in programs approved by the Council on Medical Education of the American Medical Association or the Royal College of Physicians and Surgeons of Canada or such other programs acceptable to the Board of Directors; and
2. at least two years of residency, fellowship, or other acceptable training in Allergy and Immunology.

Methods of Examination

1. The Certifying Examination. Each applicant shall be examined in such a manner and under such rules as the Board may prescribe and must achieve a grade acceptable to the Board of Directors before receiving the certification of the Board. In all such matters, the decision of the Board shall be final.

2. The Recertifying Examination will be administered approximately every other year. The times and places are determined by the Board and are announced in the Journal of the American Medical Association, The Annals of Allergy, The Journal of Allergy and Clinical Immunology, The Annals of Internal Medicine and The Journal of Pediatrics.

The candidate should be prepared for examination in the anatomy, pathology, physiology and biochemistry of hypersensitivity, as well as atopic disease. He should be proficient in clinical diagnosis, including laboratory procedures, and in the treatment of allergic and immunologic diseases in children and adults. In addition to a familiarity with atopic diseases such as hay fever, asthma, eczema, and urticaria, he will be expected to have a good understanding of other clinical states in which hypersensitivity or immune deficiencies play a major or contributory role, such as auto-immune diseases, transplantation immunity, connective tissue or rheumatic diseases, and those infective and parasitic diseases characterized by hypersensitivity reactions.

The candidate should be familiar with the physiology of organ systems involved in allergic diseases, most particularly the lungs, especially as modified by asthma, emphysema, chronic bronchitis and other pathological states related to or confused with immunologic reactions in this organ. He should be thoroughly familiar with the benefits and dangers of drugs used in the management of allergic diseases in general, and asthma in particular.

He should be competent in recognition of many non-allergenic states that resemble allergy, including such clinical entities as physical allergies, autonomic dysfunction, and psychogenic factors in allergic diseases.

Evidence of knowledge of current research in the field of hypersensitivity will be tested by questions concerning the beta-adrenergic receptors, chemical mediators, prostaglandins, cholinergic and adrenergic receptors, complement, immunoglobulins, lymphokines, etc.

A knowledge of controversial subjects such as gastrointestinal allergy, allergy to foods and allergy to bacteria will be required. Also the candidate will be expected to be familiar with the difficulties inherent in clinical investigation, as well as the reliability and limitations of data obtained by various methodologies.

2. Program Directors' Assessment of Competency. All candidates will be required to have written documentation from program directors of the quality of health care that they deliver. The program director will also be asked to support each candidate on the basis of his having excelled in the clinical areas of allergy and immunology.

Reexamination

1. Candidates who are unsuccessful on a Certification Examination in Allergy and Immunology are not restricted
as to the number of opportunities for reexamination and may apply for reexamination in any year.

2. The act of filing an application for reexamination is the candidate's responsibility.

Applications
Applications are available from the Executive Office and must be completed and returned by a specific date as published in appropriate announcements.

No application will be considered until the fee and all required supporting data, including letters of recommendation, have been received by the Executive Office.

Fees
The Board is a non-profit organization. The fees for examination and certification have been computed on a basis of maintaining an administrative office and conducting examinations. The Board reserves the right to change the fee when necessary.

The 1987 Registration and Examination fee remains at $750.00. Candidates whose applications are rejected receive a refund of $600.00; the Board retains $150.00 of the fee to cover the application evaluation costs incurred in the review of the candidate's application. A non-refundable late fee will apply to those applications received after the close of registration.

Those physicians previously certified by the Subspecialty Board of Allergy of The American Board of Internal Medicine or the American Board of Pediatrics may obtain a certificate from the board by transmitting a fee of $50.00 with the proper form to the Executive Secretary.

Statements of Eligibility
The Board no longer issues statements of "eligibility" for its examinations. Upon request of the registered candidate, it will reveal progress toward certification.

Cancellations
Candidates who are accepted for examinations but fail to appear or who cancel after assignment to an examination center is completed will forfeit their Registration and Examination fee. For each subsequent application for examination, they will be required to pay an additional Registration and Examination fee.

Time-Limited Certificates
Beginning with 1989, new Diplomates will receive certificates valid for ten years. Diplomates certified prior to 1989 will not be affected by this policy change. However, all Diplomates, especially those involved in training programs, are strongly encouraged to recertify as often as possible, but at a minimum of every ten years.

Special Qualification in Diagnostic Laboratory Immunology
In 1983 the American Board of Medical Specialties approved Certification of Special Qualification in Diagnostic Laboratory Immunology (DLI). The examination will be offered to Diplomates of the American Board of Allergy and Immunology, American Board of Internal Medicine, and American Board of Pediatrics every other year with ultimate certification issued every two or three years by the candidate's respective primary board. Such recognition will be made to those specialists involved in the teaching, research, or practice setting in which the diagnostic immunology laboratory is of central importance. Until 1990, the examination will be administered to those ABIM, ABIM, or APB Diplomates, who have had significant experience (at least four years) in comprehensive DLI, at least one year's training in DLI, and made significant contributions to DLI in practice, teaching and/or research, and who are recognized by their peers as competent in DLI.

THE AMERICAN BOARD OF ANESTHESIOLOGY
James F. Arens, MD, President, Galveston, Texas
Wendell C. Stevens, MD, Vice President, Portland, Oregon
Robert K. Stoeltling, MD, Assistant Secretary-Treasurer, Indianapolis, Indiana
Judith H. Donegan, MD, San Francisco, California
D. David Glass, MD, Hanover, New Hampshire
Carl C. Hugg, Jr., MD, Atlanta, Georgia
David E. Longnecker, MD, Charlottesville, Virginia
William D. Owens, MD, St. Louis, Missouri
Myer H. Rosenthal, MD, Stanford, California
Lawrence J. Saidman, MD, San Diego, California
Stephen Slogoff, MD, Houston, Texas
Alan D. Sessler, MD, Secretary-Treasurer, Rochester, Minnesota
Office of the Board, 100 Constitution Plaza, Hartford, Connecticut 06103

Certification
To be certified as a Diplomate of The American Board of Anesthesiology, each applicant must:

1. Hold a current and unrestricted license to practice medicine in one state of the United States or in Canada or, for physicians in active federal service, such a license which is temporarily inactive but fully renewable.

2. Complete the Continuum of Education in Anesthesiology as defined below. All such training must follow the date upon which the medical or osteopathic degree has been conferred.

3. Have on file with The American Board of Anesthesiology a satisfactory Certificate of Clinical Competence following the completion of the required period of Clinical Anesthesia training as described subsequently.

4. Complete all examination requirements of the Board.

The Continuum of Education
The Continuum of Education in Anesthesiology consists of four years of training subsequent to the date that the medical or osteopathic degree has been conferred. It includes 12 months of non-anesthesia clinical training (Clinical Base Year) and 36 months of Clinical Anesthesia training (CA-1, CA-2, and CA-3 years).

The time during the Continuum at which the resident receives training in either Clinical Anesthesia or Clinical Base will be decided by the director of the training program in anesthesiology following consultation with the individual resident. The program director is encouraged to plan that at least a portion of the Clinical Base occur early in the Continuum.

The Clinical Base Year must be devoted to clinical training other than clinical anesthesia. Acceptable training for the 12 months of Clinical Base shall include training in a rotating internship, internal medicine, pediatrics, surgery, or any of the surgical specialties, obstetrics and gynecology, neurology, family practice, or any combination of these as approved for the individual candidate by the director of his or her training program in anesthesiology. The Clinical Base Year must be spent in programs accredited by the Accreditation Council for Graduate Medical Education (ACGME) or, in Canada, in an institution approved by the Royal College of Physicians and Surgeons. The Clinical Base Year may also be spent in programs accredited by the American Osteopathic Association.

The three year Clinical Anesthesia curriculum (CA 1, CA-2, and CA-3) will consist of experience in Basic Anesthesia Training, Subspecialty Anesthesia Training, and Advanced Anesthesia Training. The totality of all Clinical Anesthesia experiences is encompassed in the phrase "comprehensive anesthesia assignments." The comprehensive anesthesia assignments cannot be completed in more than two ACGME accredited programs in anesthesiology and their affiliates. When the duration of a specific component of training is spec-
REQUIREMENTS FOR CERTIFICATION

Anesthesiology

563

ified (see below), at least this length of time must be spent on that component in one program.

1. Experience in Basic Anesthesia Training is intended to emphasize basic and fundamental aspects of the management of anesthesia. It is recommended that a least 12 months of the CA-1 and CA-2 years be spent in Basic Anesthesia Training with a majority of this time occurring during the CA-1 year.

2. Subspecialty Anesthesia Training experiences are required in order to emphasize the theoretical background, subject material and practice of subspecialties of anesthesiology. These subspecialties include obstetric anesthesia, pediatric anesthesia, cardiothoracic anesthesia, neuroanesthesia, anesthesia for outpatient surgery, recovery room care, regional anesthesia and pain management. It is recommended that these experiences be in the form of subspecialty rotations, and that they occupy 7-12 months of the CA-1 and CA-2 years. The sequencing of these rotations in the CA-1 and CA-2 years is left to the discretion of the program director.

In addition to the above requirements for subspecialty experiences, two months of training in the subspecialty of critical care medicine are required at some time during the Clinical Anesthesia years. An acceptable critical care rotation should include active participation in patient care by anesthesia residents. Active involvement by anesthesia faculty experiences in the practice and teaching of critical care, and an appropriate population of critically ill patients which includes a substantial number with multi-system disease whose care required invasive monitoring or mechanical ventilation. Experience in routine, short term or overnight post-anesthesia units or intermediate, step-down units or emergency room does not fulfill this requirement.

3. Experience in Advanced Anesthesia Training constitutes the CA-3 year. The resident and program director in collaboration will select one of the three tracks designated as the Advanced Clinical Track, Subspecialty Clinical Track, or Clinical Scientist Track. Regardless of the track selected, residents in the CA-3 year should expect to be assigned to the more difficult or complex anesthetic procedures or to the most seriously ill patients.

a. Residents in the Advanced Clinical Track will be expected to complete a minimum of six months of experience in advanced and complex comprehensive assignments. The remaining six months may be spent in one or more of the selected subspecialty rotations or, alternatively, additional advanced experience in comprehensive anesthesia assignments may be selected.

b. Residents in the Subspecialty Clinical Track will be expected to complete 9-12 months’ experience in one subspecialty rotation along with up to three months of advanced experience in comprehensive anesthesia assignments. Alternatively, six months experience in each of two subspecialty rotations may be selected. Such rotations may include some time assigned to medical or surgical activities directly related to the anesthetic subspecialty.

c. Residents in the Clinical Scientist Track will be expected to complete six months of advanced experience in comprehensive anesthesia assignments or, alternatively, in one selected anesthesia subspecialty rotation. The remaining six months will be devoted to laboratory or clinical investigation.

Credit for six months toward the CA-3 year may be granted for Board certification in a specialty recognized by the American Board of Medical Specialties, or for a Ph.D. degree in appropriate disciplines of relevance to anesthesiology.

Requests for approval of CA-3 year credit for non-anesthesia training will be considered on an individual basis by the Credentials Committee of the ABA following (1) written request of the resident for such credit, (2) verification of Board certification or of the Ph.D. degree and its discipline, and (3) recommendation by letter from the current anesthesiology program director. The program director may recommend only partial credit, thus preserving the alternative of requiring more than six months of clinical anesthesia training in the CA-3 year.

The maximum amount of credit granted toward the CA-3 year for non-anesthesia training occurring prior to the CA-1 year (see above) or during the CA-3 year is six months. Residents seeking such credit will be required to pursue either the Advanced Clinical Track or the Subspecialty Clinical Track, but not the Clinical Scientist Track, for the remaining portion of the CA-3 year. Thus, every resident must complete at least 30 months of Clinical Anesthesia training.

No credit will be given for residency training periods of less than six months in or under the sponsorship of any single program. In any program, credit will be given for all periods of six months or more ending with receipt of a satisfactory Certificate of Clinical Competence (see below). Credit will not be given for the final period of residency in any single program if it ends with receipt of an unsatisfactory Certificate. In such cases credit will be given only to the date of the last satisfactory Certificate received by the candidate from that program.

No more than six months’ credit toward the CA-1 and CA-2 requirements, and a maximum of 12 months’ credit toward the three-year Clinical Anesthesia requirement, may be granted for training in affiliated institutions outside the parent program. The Credentials Committee of the ABA will consider requests for prospective approval of anesthesiology training in non-affiliated institutions whether or not they are accredited by the ACGME. Each request for prospective approval must include a chronological description of the planned training rotations and a letter of support from the program director of the parent program. The resident must remain on the roster of the parent program during those months spent in affiliated or non-affiliated institutions.

Credit toward training requirements other than those described above may be recommended prospectively to the Board by the Credentials Committee when it has determined that exceptional educational or other experience warrants such judgment.

The full implementation of the requirement of a CA-3 year is in effect for residents beginning the first year of postgraduate medical training on or after May 1, 1985 or the CA-1 year on or after May 1, 1986. If there are any questions regarding the circumstances of specific residents, applicants or programs, it is advisable that they be reviewed and approved by the Credentials Committee of the ABA in advance of their implementation.

Principal Objectives of the Examination System and the Written and Oral Examinations

The examination system of the American Board of Anesthesiology is designed to identify those candidates who possess the knowledge, judgment, communicative skills, and decision-making abilities that are considered essential for the Diplomate to function as a consultant in anesthesiology and as the leader of the anesthesia care team.

The written examination analyzes primarily the cognitive and deductive skills of the candidates. It is necessary for candidates to pass the written examination to qualify for the oral examination.

The oral examination is designed to measure those components of candidates’ competence that cannot be evaluated by written examination or other instruments. Specifically, it is designed to measure not only how and what candidates do to reach conclusions concerning diagnosis and therapy, but why the formulations are made in the particular way or sequence. Further, it analyzes whether candidates can recognize and treat the complications of anesthesia practice. The principal thrust is to determine that candidates can synthesize their knowledge, judgment and analytical skills so
Anesthesiology

as to reach rational diagnoses, prevention and treatment protocols; and to establish that candidates can communicate this information effectively to others.

The Board acts to maintain the integrity of its examination and certification process and to ensure the equitable and objective administration of its examinations to all candidates. Information about behavior the Board considers a possible subversion of its examination and certification process is sent to all candidates scheduled for examination. Statistical analyses may be conducted to verify observations and reports of suspected irregularities in the conduct of an examination. Candidates whose conduct, in the Board's judgment, subverts or attempts to subvert its examination and certification process may have their examination invalidated and the results withheld, in which event they would be informed of the reasons for the Board's actions and given an opportunity to present information they deem relevant to the issue and to petition the Board to reconsider its decision.

Application Procedure

Application for admission to the examination system may be made for the first written examination which will occur after a physician has completed the four year Continuum of Education in Anesthesiology. A grace period through August 31 will be permitted so that physicians completing the Continuum by August 31st may apply for the immediately preceding July written examination.

Proper forms for making application and other information may be obtained by writing to the Secretary, Alan D. Sessler, MD, The American Board of Anesthesiology, 100 Constitution Plaza, Hartford, CT 06103. An application must be made to the Secretary upon a form prescribed by the Board: copies of the form are not acceptable. An applicant must request an application form by writing to the Board; telephone requests are not acceptable. Application blanks contain the following statement:

"I hereby make application to The American Board of Anesthesiology, Inc., for the issuance to me of a Certificate as a Consultant in Anesthesiology and for examination relative thereto, all in accordance with and subject to its rules and regulations, and the fee requested. I agree to disqualification from examination or from the issuance of a Certificate or to forfeiture and redelivery of such Certificate in the event that any of the statements hereinafter made by me are false or in the event that any of the rules governing such examinations are violated by me or in the event that I did not comply with or shall violate any of the provisions of the Certificate of Incorporation or any other laws of The American Board of Anesthesiology, Inc., or both, as then constituted. I understand that the American Board of Anesthesiology, Inc., may report the score of my first written examination to the Director of the program in which I completed my training in Clinical Anesthesiology, use any score in psychometric analyses conducted to compare the performance of examiners or groups of examinees, conduct statistical analyses to confirm observations and reports of suspected irregularities in the conduct of an examination, and respond to any inquiry about my status in its examination system in accordance with its policy as then constituted. I authorize any and all repositories to grant access to or to produce copies for the American Board of Anesthesiology, Inc., of all documents and records containing information and data pertaining to my practice of the medical specialty of anesthesiology. I understand that such information and data will be used exclusively to study and assess the certification processes of The American Board of Anesthesiology, Inc. More particularly, such information as it pertains individually to me shall be held in confidence and will be reported or released only as a part of the aggregate of such information gathered and studies without specific reference to myself or any other individuals. Such information and data will not bear in any way whatsoever upon the decision of The American Board of Anesthesiology, Inc. whether or not to grant me a Certificate as a Consultant in Anesthesiology. I agree to hold The American Board of Anesthesiology, Inc., its members, examiners, officers and agents free from any damage or claim by reason of any action they, or any of them, take in connection with this application, such examinations, the grade or grades given with respect to any examination, the fees charged by the Board or Corporation to issue me such Certification, the gathering and collecting of information and data about my practice of anesthesiology, or the use of such information or data in studies of the certification processes of The American Board of Anesthesiology, Inc., as described above.

Evidence must be submitted with the application that the candidate has a current and unrestricted license to practice medicine in one state of the United States or in Canada.

Completed applications including supporting documents and the appropriate fee (see FEES) must be received by the JANUARY 10TH prior to the date of examination. Eligibility rulings are made by the Board on recommendation of the appropriate committees or their designates.

Entrance Requirements

To enter the examination system of The American Board of Anesthesiology the applicant shall:

1. Have graduated from a medical school approved by the Liaison Committee on Medical Education, or have met medical educational requirements otherwise acceptable to The American Board of Anesthesiology; and

2. Provide evidence satisfactory to the Board of having been awarded a medical or osteopathic degree acceptable to the Board; and

3. Provide satisfactory evidence to the Board of having a current and unrestricted license to practice medicine and osteopathy in one state of the United States or in Canada, or for physicians in active federal service of having such a license which is temporarily inactive but fully renewable; and

4. Submit proof to the Board that he or she will have satisfactorily completed before the date of examination the four year Continuum of Education in Anesthesiology after receiving a medical or osteopathic degree.

5. Additionally, the applicant who has had a second or subsequent application declared void for any cause, or has completed anesthesiology residency training more than 12 months before the date of application, also shall submit proof to the Board of having reestablished his or her qualifications for admission to the examination system. Acceptable proof is documentation of having qualified on an entry examination designated by the Board or of having completed a 12 month term of additional clinical training in anesthesia in an ACGME accredited program with receipt of a satisfactory Certificate of Clinical Competence covering the final six months. The Board has designated the in-training examination administered annually by the Joint Council on In-Training Examinations as the entry examination.

6. Evaluation of various aspects of the applicant's performance will be solicited by the Board in determining his or her qualifications for admission to the examination system. Such information may be requested from the residency program director and others familiar with the applicant's professional activities. The Clinical Competence Report from the department and the program director's evaluation will be used as the basis for assessing admission qualifications. The response of the program director will be given considerable weight in these deliberations.

The Board shall determine that entry into the examination system is merited when a judgment of adequate levels of scholarship and clinical competence can be made from the information submitted.

Certificate of Clinical Competence

The Board requires that every residency training program file, on forms provided by the Board, an Evaluation of Clinical Competence in January and July on behalf of each resident who has spent any portion of the prior six months in Clinical Anesthesia training in or under the sponsorship of the residency program and its affiliates.
Entry into the examination system is contingent upon the applicant having a Certificate of Competence on file with the Board attesting to satisfactory clinical competence during a final six months of training in Clinical Anesthesia or under the sponsorship of the residency program. The Board, therefore, will deny entry into the examination system until this requirement is fulfilled.

Absence From Training

The Board’s policy on any and all absences from training is that the total absence during each year of Clinical Anesthesia training may not exceed twenty working days. Attendance at scientific meetings, not to exceed five working days per year, shall be considered a part of the training program. Duration of absence during the Clinical Base Year may conform to the policy of the institution and department in which that portion of the training is served. Absences in excess of those specified will require lengthening of the applicant’s total training time to the extent of the additional absence.

Admission to the Examination System

An applicant who is admissible to the examination system will be so notified by the Board after approval of all credentials. The Board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed appropriate. The Board reserves the right to correct clerical errors affecting its decisions.

Each candidate remains in the examination system for the number of written and oral examinations stated below. If successful completion of the written examination has not occurred within three opportunities or four years of the date of the first written examination for which a candidate is declared eligible or successful completion of the oral examination has not occurred within three opportunities or seven years of admission to the examination system, the application is voided.

It is the responsibility of each candidate to notify the Board of an address change so that its correspondence will not go astray.

Examinations

Each applicant becomes a candidate when accepted by the Board for the purposes of examination, and shall be examined in such a manner and under such rules as the Board from time to time may prescribe. The Board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed appropriate.

1. Written Examination. Candidates may take this examination upon completion of the four year Continuum. Written examinations are held annually in locations throughout the United States and Canada on a Saturday in July. Written examinations cover the basic and applied aspects of physiological, physical and clinical science. A passing grade, as determined by the Board, is required.

   In the event a candidate fails the first written examination for which he or she is eligible, two additional opportunities will be provided at yearly intervals.

2. Oral Examination. Candidates who complete the written examination successfully must wait at least six months to be declared eligible for oral examination. Oral examinations are conducted in the spring and fall of each year. Examiners consist of Directors of the Board and others who assist as associate examiners. Oral examinations evaluate all phases of anesthesiology, but emphasize clinical practice.

   In the event a candidate does not pass the first oral examination for which he or she is eligible, two additional opportunities provided. The Board requires that there be an interval between opportunities of no less than the time between alternately regularly scheduled. Therefore, the candidate who fails or fails to appear for oral examination, whether or not notice is given of the cancellation of the scheduled appointment, is not eligible to appear at the next regularly scheduled oral examination.

Failure to take an examination constitutes an opportunity just as much as failure to pass an examination. Under certain circumstances the Board, entirely at its discretion, may excuse a candidate from any scheduled examination without penalty, provided the request for such absence is filed in writing prior to date of the examination. If an applicant fails to pass either the written or oral examination within the prescribed number of opportunities or time, whichever comes first, his or her application will be declared void and a new application will be required for admission to the examination system.

The Board reserves the right to limit the number of candidates to be admitted to any examination.

Fees

The fee shall be $650.00 which must accompany the application provided that the completed application and required documentation are received in the office of The American Board of Anesthesiology on or prior to January 10th of each year. For completed applications received by November 20th and accompanied by required documentation, the fee will be $600.00—a reduction of $50.00 for early filing.

The January 10th deadline is absolute and no applications will be accepted after that date for any reason. If the application cannot be accepted, or if the application is accepted and subsequently withdrawn by the candidate, $50.00 will be retained for administrative charges and the balance will be refunded. No fee will be refunded if the candidate’s letter of withdrawal from the examination system is received in the Board office after the May 1 deadline by which candidates must notify the Board of their written examination location preference.

The reexamination fee for the written examination will be $150.00 whereas the reexamination fee for the oral examination will be $400.00. These fees will be charged candidates whether they have failed a previous examination, have cancelled a scheduled appointment for examination, or have failed to appear for any examination for which they were properly scheduled.

A charge of $50.00 will be made whenever a check returned in payment of a fee is returned for insufficient funds.

The Board is a non-profit organization. The fees for examination and certification are computed on a basis of cost of maintaining the functions of the Board. The Board reserves the right to change the fees when necessary.

Reapplication

A candidate who has failed to complete the examinations in the prescribed time for any reason may reapply by submitting a new application. Such application shall be subject to the fees, rules, privileges and requirements that apply at the time of reapplication. The reapplicant who has had a second or subsequent application declared void for any cause, or has completed anesthesia residency training more than 12 years before the date of reapplication, must reestablish his or her qualifications for admission to the examination system before filing another application. The reapplicant who is adjudged to meet existing requirements will be readmitted to the examination system.

In all instances the candidate must pass both the written and oral examinations under the new application.

Status of Individuals

The term “Board eligible” is specifically mentioned to indicate that it is neither recognized nor used by The American Board of Anesthesiology. The Board will reply to any inquiries requesting the status of individuals with one of the following statements:

1. Candidate Certified at its discretion.
2. The physician is in the Examination System.
3. The physician is neither Board Certified nor in the Examination System.
Equivalence of Royal College Certification

Fellowships in the specialty of anesthesiology which are awarded by the Royal College of Physicians and Surgeons of Canada or by the Faculty of Anaesthetists of the Royal College of Surgeons of Australia or England or Ireland or of the College of Medicine of South Africa are considered by this Board to be comparable to certification by the American Board of Anesthesiology. Nevertheless, there are Fellowship certificate holders who continue to seek entrance into the examination and certification system of the American Board of Anesthesiology. For those physicians who wish to enter the American Board of Anesthesiology examination system, one must submit an ACGME accredited program. Holders of the Fellowship certificate who wish to enter the American Board of Anesthesiology examination system may do so by successfully completing a year of clinical training in anesthesia in an ACGME accredited program.

Chemical Dependency

Qualified applicants who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease currently is known to be under control will be admitted into the examination system and to examination.

Candidates already in the examination system who have had a history of chemical dependency as reported to the Board and who submit documentation acceptable to the Board that their disease currently is known to be under control will be admitted to examination.

Candidates who have a current problem of chemical dependency or who are still in active treatment for a problem of chemical dependency as reported to the Board will not be admitted to examination. Denial of admission to examination may result in the loss of opportunities to take an examination and, ultimately, in the Board’s decision to declare the candidate’s application void for failure to successfully complete the requirements for certification within the time allotted to every candidate.

Candidates who have had a history of chemical dependency as reported to the Board will not be issued a certificate upon completion of all requirements for certification unless they submit documentation acceptable to the Board that their disease is known to be under control for five years from the date of the most recent occurrence of their disease.

Revocation of Certificate

A certificate is issued by the Board with the understanding that it remains the property of the Board during the life of the Diplomate. Any certificate issued by the Board shall be subject to revocation in the event that:

1. The issuance of such certificate or its receipt by the person so certified shall have been contrary to, or in violation of, any provision of the Certificate of Incorporation of this Board or its Bylaws; or
2. The person certified shall not have been eligible to receive such certificate whether or not the facts making him or her ineligible were known to, or could have been ascertained by the Board or any of the Directors at the time of the issuance of such certificate; or
3. The person certified shall have made any misstatement of fact in his or her application for such certificate or in any other statement or representation to the Board or its representatives; or
4. The person certified shall fail to maintain a moral, ethical and professional standing satisfactory to the Board.

The Board shall be the sole judge of whether or not the evidence or information before it is sufficient to require or permit revocation of any certificate issued by the Board, and the decision of the Board shall be final.

Recertification

Insufficient confidence in currently available methods of assessing continuing competence of the practicing anesthesiologist makes it inappropriate to implement a recertification process as yet. The American Board of Anesthesiology will continue to study all options for a meaningful recertification program but intends to expend its major effort and resources toward improvement of the process leading to primary certification.

AMERICAN BOARD OF COLON AND RECTAL SURGERY

Malcolm C. Vedenheimer, MD, President, Burlington, Massachusetts
J. Bryon Gathright, Jr., MD, Vice President, New Orleans, Louisiana
Wallace Bailey, MD, Dallas, Texas
Victor W. Fazio, MD, Cleveland, Ohio
Elias Jacobs, MD, Daly City, California
Ira J. Kocher, MD, St. Louis, Missouri
L.S. LaSalle D. Leffall, Jr., MD, Washington, DC
John M. MacKeigan, MD, Grand Rapids, Michigan
Gene W. Slagle, MD, Shreveport, Louisiana
Lee E. Smith, MD, Washington, DC
Peter A. Volpe, MD, San Francisco, California
Herand Abcarian, MD, Secretary-Treasurer/Executive Director
615 Griswold, #1717, Detroit, Michigan 48226

General Qualifications and Requirements

All candidates shall comply with the following regulations:

1. A candidate shall appear personally before the Board and shall submit to the required examinations.
2. A candidate shall limit the majority of his practice to colon and rectal surgery.
3. A candidate may be required to deliver to the Board sufficient case reports to demonstrate proficiency in colon and rectal surgery.
4. A bibliography of papers and books published by the candidate shall be submitted to the Board upon its request.

Professional Qualifications

1. A candidate must successfully complete the Qualifying Examination of the American Board of Surgery.
2. A candidate must have completed an approved residency in colon and rectal surgery.
3. A candidate shall have a license to practice medicine in the country of his residence.

Application for Examination

Each candidate for examination must complete and submit an Application for Examination which may be obtained from the Secretary of the Board. Applications must be submitted before July 15 of each year.

Within two weeks after conclusion of the training program, the applicant must submit to the Secretary of the Board a prescribed form, listing all operative procedures performed during the training period. This form is available from the Secretary of the Board and must be countersigned by the Program Director when it is submitted.

The application must also be accompanied by two unmounted, recent photographs of the applicant, and the required application fee.

The acceptability of a candidate for examination depends not only upon completion of the requirements listed under “Qualifications of Candidates,” but also upon information available to the Board regarding the candidate’s professional maturity, surgical judgment, and technical competence.

Examinations

To achieve certification by the American Board of Colon and Rectal Surgery, a candidate must pass a Written Examination (Part I) and an Oral Examination (Part II). The Written Examination is offered in the spring of the year and a candidate is required to pass this examination before being
permitted to take the oral examination. The oral examination is given in the fall of the year.

Examinations are conducted at times and places determined by the Board and this information may be obtained from the Board office. It is also published in DISEASES OF THE COLON AND RECTUM and in the Journal of the American Medical Association. Examinations will be held in one designated city in the United States.

Part I—Written Examination

The written examination is an assessment of a candidate’s knowledge on the theory and practice of colon and rectal surgery and is given in three sections, one each on colon and rectal surgery, pathology, and radiology. The colon and rectal portion of the examination is a four-hour test of multiple choice questions covering the spectrum of colon and rectal surgery and the body of basic science pertinent to it. The pathology and radiology portions of the examination each are each one hour in length and consist of questions and slide presentations.

Part II—Oral Examination

The oral examination is conducted by members of the Board or its designated examiners. Its objective is to evaluate the candidate’s clinical experience, problem-solving ability and surgical judgment, and to ascertain the candidate’s knowledge of current literature on colon and rectal diseases and surgery. Each candidate will undergo at least two 30-minute oral examinations by two 2-member examining teams.

Examination Results

The Board makes every effort to be as prompt as possible in notifying candidates of their examination results and letters of notification may be expected from four to six weeks following the examination.

Re-examinations

A candidate who has failed either the written or oral part of the examination may be re-examined after one year has elapsed.

A candidate who fails to pass either the written or oral portion of the examination may repeat that part of the examination no more than three times.

A candidate who fails to pass either the written or oral portion of the examination three times may not repeat the examination without satisfactory completion of an approved colon and rectal residency program and submission of a new application for examination.

Status of Applicants

The Board no longer uses the terms “Board eligible” or “Board qualified.” An individual’s standing with the Board varies according to the current status of his credentials.

A candidate must apply to the Board’s certifying examination within five (5) years after completion of approved colon and rectal training.

A candidate whose application for examination has been approved and who does not take the examination within three (3) years must submit a new application.

Beginning in 1987, a candidate whose application has been approved must pass the written examination within five (5) years. A candidate who has passed the written examination must then pass the oral examination within the next five (5) years.

In exceptional or unusual circumstances, the Board may, at its discretion, waive one or more of the limitations listed specified under “Status of Applicant.”

Fees

Application fee: A non-refundable fee of $200 shall accompany the application.

Examination fee: A fee of $400 is due and payable when the candidate is notified of approval to take the Written Examination (Part I).

A fee of $400 is due and payable when the candidate is notified of approval to take the Oral Examination (Part II).

Re-examination fee: A fee of $300.00 is due and payable when the candidate is notified that he has been approved for re-examination.

All fees shall be made payable to the American Board of Colon and Rectal Surgery and shall be sent to the Secretary.

Appeals

Any candidate who is not acceptable to the Board for examination or who has failed an examination, totally or in part, may appeal such a decision by the Board and may, by registered letter to the Secretary of the Board, request a hearing, specifying the reasons thereof. An ad hoc Hearing Committee shall be appointed within thirty days to conduct the hearing.

If the decision of the Hearing Committee is not satisfactory, the candidate, by registered letter to the Secretary of the Board within 21 days after receipt of the notice of an adverse decision, may request an appellate review by the Board.

Certification

A candidate who has met all the requirements and successfully completed the examinations of The American Board of Colon and Rectal Surgery will be issued a Certificate attesting to his qualifications in colon and rectal surgery. The certificate shall be signed by the President of Vice President and the Secretary, and shall bear the corporate seal of the Board.

The Certificate granted by the Board does not confer privilege or license to practice colon and rectal surgery but is evidence that a physician’s qualifications for specialty practice are recognized by his peers. It is not intended to define the requirements for membership on hospital staffs, to gain special recognition or privileges for its diplomates, to define the scope of specialty practice, or to state who may or may not engage in the practice of the specialty.

Unless the candidate specifies otherwise, the Board forwards the names of candidates who have achieved certification to the American Board of Medical Specialties for listing in the ABMS COMPENDIUM OF MEDICAL SPECIALISTS.

Recertification

The American Board of Colon and Rectal Surgery endorses the concept of voluntary recertification of its Diplomates. However, details of the process have not yet been determined. When the recertification procedure is established, appropriate announcements will be made.

Revocation of Certificates

The filing of an application for examination, participating in examination, and accepting a Certificate are voluntary acts. Therefore, the Board assumes no responsibility for any effect which certification or failure to obtain certification may have on the private or professional activities of candidates.

When an application is submitted, candidates are required to sign an agreement, a portion of which reads as follows: "I agree to disqualification from examination or from the issuance of a certificate of qualification or to forfeiture and redemption of such certificate of qualification to the Secretary of the Board in the event that any of the statements hereinafter made by me are false or in the event that any of the rules governing such examinations are violated by me."

Certificates which have been issued are subject to the provisions of the Articles of Incorporation, the Constitution and Bylaws of The American Board of Colon and Rectal Surgery, Inc., and may be revoked for violation of any of these provisions.

AMERICAN BOARD OF DERMATOLOGY

James H. Graham, MD, President, Washington, D.C.

Peyton E. Weary, MD, Vice President, Charlottesville, Virginia

William A. Caro, MD, Chicago, Illinois

Richard L. Dobson, MD, Charleston, South Carolina
Dermatology

Mark Allen Everett, MD, Oklahoma City, Oklahoma
Irwin M. Freedberg, MD, New York, New York
G. Thomas Jansen, MD, Little Rock, Arkansas
Edward A. Keel, MD, Detroit, Michigan
Peter J. Lynch, MD, Minneapolis, Minnesota
Samuel L. Moschella, MD, Burlington, Massachusetts
Harold O. Perry, MD, Rochester, Minnesota
John S. Strauss, MD, Iowa City, Iowa
Clarence S. Livingood, MD, Executive Director, American Board of Dermatology, Inc., Henry Ford Hospital, Detroit, Michigan 48202
Robert W. Goltz, MD, Assistant Executive Director, San Diego, California
Harry J. Hurley, MD, Assistant Executive Director, Upper Darby, Pennsylvania

Requirements for Eligibility to Take the Examination

Each applicant must satisfy the following requirements before he or she is eligible to take the examination of the Board.

A. General Qualifications

(1) The candidate must have graduated from a medical school in the United States accredited by the Liaison Committee on Medical Education (LCME) or an accredited medical school in Canada, or an accredited osteopathic school in the United States. Graduates from foreign medical schools are required to have the standard certificate of the Educational Commission for Foreign Medical Graduates (ECFMG).

(2) The candidate must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.

B. Residency Training Requirements

(1) Candidates for certification by the American Board of Dermatology are required to have a total of four years of postgraduate training, all of which must be in the United States or Canada. The first year must consist of clinical training in one of the following types of broad based programs in the United States accredited by the Accreditation Council for Graduate Medical Education (ACGME) or a similar program in Canada accredited by the Royal College of Physicians and Surgeons of Canada: transitional year, flexible first postgraduate year, and first year residencies in internal medicine, general surgery, family practice or pediatrics. A residency in a discipline which does not involve direct patient care, such as pathology, is not acceptable for first postgraduate year credit.

Three years of full-time training as a resident in a dermatology residency training program in the United States accredited by the ACGME or three years of full-time training as a resident in a dermatology residency training program in Canada, accredited by the Royal College of Physicians and Surgeons of Canada. Accreditation of dermatology training programs in the United States is the responsibility of the Residency Review Committee for Dermatology functioning with authority delegated to it by the ACGME. Accredited dermatology residency training programs and clinical programs for final year postgraduate year credit are listed in this Directory.

Approximately 75% of the resident's time spent in each year of dermatology residency training must be related to the direct care of dermatologic outpatients and inpatients; this includes consultations, clinical conferences, inpatient rounds, and dermatopathology, microbiology, and other basic science lectures, seminars, and conferences are essential components of the resident's training (see the Special Requirements for Residency Training in Dermatology).

The Board also recognizes the importance of basic and clinical investigation in the educational experience of trainees. Accordingly, all residents are encouraged to participate in research during their training.

During or following the first year of dermatology training (PGY2), which must conform to the requirements above (at least 75% of time related to the direct care of patients), the training director may request prospective approval from the American Board of Dermatology for a special final two years for those training programs which involve a primary commitment to investigative dermatology. For candidates entering this track, additional time may be devoted to research training during these years. The training director must provide assurance that clinical competence at a level consonant with the standards of the American Board of Dermatology will be attained by the completion of the training period.

(2) A Preliminary Registration Form must be filed by the candidate and signed by his/her training director as soon as the resident begins residency training in dermatology. It is mandatory that the training director submit a Yearly Report Form for each resident to the Board office within three weeks after completion of the first and second year of training and six weeks prior to completion of the third year of training. The training director must document that each year of training was completed in a satisfactory manner.

(3) Training must be completed within five years after the beginning of dermatology residency, except when military service or other compelling circumstances intervene.

Registration for the Examination of the Board

Candidates who have completed the training requirements as outlined above are eligible to apply to take the examination of the Board. Candidates should request an Application for Certification form from the office of the Executive Director of the Board. The completed application must be filed with the Board office before May 1st of the year in which the candidate plans to take the examination. Physicians who complete their residency training in dermatology by July 1st of a given year are eligible to apply to take the examination in the fall of that year. It is emphasized that it is the candidate’s responsibility to send a completed application form to the Board if he or she plans to take the certifying examination of the Board.

In assessing the credentials of candidates who apply voluntarily for certification by the Board, the Requirements Committee reviews the application, letters of reference, and annual evaluation reports from the candidate's training director.

A candidate is not considered an “active” candidate until his or her application has been received and approved by the Board. After the application is approved, the candidate is required to take the examination within three years. Candidates who do not take the examination within three years of the date they are declared eligible will be required to file a new application and have their eligibility for examination reviewed by the Requirements Committee. If the re-application is approved by the Board, the candidate is again eligible to take the examination for another three-year period.

The Board does not use the term “Board-eligible” in correspondence with directors of hospitals or others who send inquiries to the Board office. On written request by a candidate, the Board will send to the candidate a letter stating his or her status with the Board at any given time; this letter may be used in applying for hospital privileges or for other purposes.

Board Examination

The certifying examination consists of two parts. Part I is a comprehensive written examination and includes the topics included in this part of the examination are the following: clinical dermatology, preventive dermatology, dermatopathology, cutaneous allergy and immunology, dermatologic surgery, cutaneous oncology, sexually transmitted diseases, internal medicine as it pertains to dermatology, photobiology and cutaneous photobiology, as well as anatomy, physiology, biochemistry, radiation physics, radiation therapy, physical therapy, pharmacology, genetics, and electron microscopy as related to dermatology. Considerable em-
phases is placed on comprehensive knowledge of the literature.

Part II of the certifying examination utilizes visual aids and histopathologic sections to assess the candidates' knowledge of the topics listed for the Part I examination but with special emphasis on clinical and laboratory dermatology, dermatologic surgery, and microscopic dermatopathology. Examples of the type of projected pictorial material which are used include photographs of patients, diagrams of dermatologic surgical procedures, histopathologic sections, fungal cultures, culture mounts, bacterial cultures, Tzanck preparations, skin scrapings and smears, reagentenograms, fluorescent micrute study, and clinical examinations, pathologic effects on the skin, and electron microscopy. In microscopic dermatopathology, which accounts for 25% of the Part II examination, the questions relate to histopathologic slides which candidates examine. Candidates are required to furnish microscopes for the dermatopathology section of the Part II examination.

It is necessary for candidates to pass both Part I and Part II of the examination in order to be certified. If a candidate passes one part of the examination and not the other, the failed portion must be repeated.

The examination is given annually in the fall over a two-day period involving a total of approximately ten hours. In 1987, it will be held on November 1 and 2 at the O'Hare Holiday Inn O'Hare/Kennedy in Rosemont, Illinois, which is in the O'Hare Airport area of Chicago.

Re-examination

Candidates who fail Part I, Part II or both parts of the certifying examination are eligible to repeat the examination the following year. Candidates who fail the re-examination three times or who do not exercise the re-examination privilege within three years of the date they failed will be required to file a new application form and have their eligibility for examination reviewed by the Requirements Committee.

It is the responsibility of the candidate to notify the Board of his or her intent to take the re-examination. The request for re-examination and the appropriate fee (see Fees for Examination and Re-examination) must be mailed to the office of the Board no later than May 1st of the year in which the candidate wishes to re-examine.

Certification

After meeting the above requirements and passing the examination the candidate will be awarded a certificate which acknowledges that he or she has completed the required course of graduate study and clinical examinations, has met other specific standards and qualifications, and has passed the examination conducted by the Board. The candidate is then referred to as a diplomate of the American Board of Dermatology, Inc. The names of diplomates of the Board appear in the ABMS Directory of Certified Physicians and the ABMS Compendium of Certified Medical Specialists, published by the American Board of Medical Specialists.

Each certificate is subject to revocation in the event that (a) the physician so certified shall not have been eligible to receive such certificate, whether or not the facts concerning his or her ineligibility were known or could have been ascertained by the Directors of the Board at the time of the issuance of the certificate; (b) the physician so certified shall have made any material misrepresentation or omission in the application for such certificate or in any other statement to the Board or its representatives; (c) the physician so certified shall have been convicted by a court of competent jurisdiction of a crime relating to or arising out of the practice of medicine.

Fees for Examination and Re-examination

The members of the Board serve without compensation. Fees are based on the actual expenses incurred in office ad-

ministration and in conducting the examination.

The examination fee for the certifying examination is $700 payable when the application is filed. The fee for re-examination is $600. All checks are to be made payable to the American Board of Dermatology, Inc.

When a candidate's application for the certifying examination or a special qualification examination is disapproved or when the candidate withdraws, the Board retains an administrative fee of $50.

Publication

The American Board of Dermatology, Inc. publishes a booklet of Information which may be obtained from the Board office.

All correspondence should be sent to:
Clarence S. Livingood, M.D.
Executive Director
The American Board of Dermatology, Inc.
Henry Ford Hospital
Detroit, Michigan 48202

Certification for Special Qualification in Dermatopathology

Special Qualification certification in Dermatopathology is a joint and equal function of The American Board of Dermatology (ABD) and The American Board of Pathology (ABP). Such function will relate to qualifications of candidates, standards of examination, and the form of the certificate.

All candidates applying for examination must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.

A. Prerequisites

The American Boards of Dermatology and Pathology will admit candidates to examination for certificates of Special Qualification in Dermatopathology who are otherwise qualified and who have met one of the following requirements:

(1) Applicants already holding a basic certificate from the American Board of Dermatology or the American Board of Pathology (anatomic pathology, or anatomic and clinical pathology) and the addition of one or two years of training in dermatopathology in a program accredited for such training by the ACGME. This additional training of one or two years must be taken after the candidate has met the full training requirements for certification in dermatology or pathology.

(2) Applicants who are diplomats of both The American Board of Dermatology and The American Board of Pathology.

B. Training

Training programs in dermatopathology are reviewed and accredited by the Residency Review Subcommittee for Dermatopathology, which includes three members from the Residency Review Committee for Dermatology and three members from the Residency Review Committee for Pathology, acting with authority delegated to it by the Accreditation Council for Graduate Medical Education. Accredited training programs in dermatopathology are an equal and joint function of the departments of dermatology and pathology. The dermatopathologist applicant shall spend 50% of the required training time of the one or two year program in pathology.

Committee for Dermatopathology:

William A. Catoe, MD (ABD)  Merle W. Delmer, MD (ABD)
Mark Allen Everett, MD (ABD)  Thomas J. Gill III, MD (ABP)
James H. Graham, MD (ABD)  William H. Hartman, MD (ABP)
M. R. Abele, MD (Staff, ABD)  Robert W. Golzt, MD (Staff, ABD)

C. Deadline for Application and Date of Examination

The deadline for receipt of applications to take the examination for Special Qualification in Dermatopathology is
REQUIREMENTS FOR CERTIFICATION

Emergency Medicine

July 1st of the year in which the candidate plans to take the examination. In 1987, the examination will be given in Chicago, Illinois on November 3, 1987.

D. Fee

The fee for the examination for Special Qualification in Dermatopathology is $850 payable when the application is submitted.

Special Qualification in Dermatological Immunology/Diagnostic and Laboratory Immunology

A. Prerequisite

The requirements for Special Qualification Certification in Dermatological Immunology/Diagnostic and Laboratory Immunology (DI/DLI) are as follows:

1. An applicant must be a graduate of the American Board of Dermatology.
2. An applicant must:
   a. have satisfactorily completed an accredited one-year fellowship or residency in Dermatological Immunology/Diagnostic and Laboratory Immunology, OR
   b. have had four years experience in the practice of dermatological immunopathology under conditions acceptable to the American Board of Dermatology. Candidates following this pathway must submit their application for the examination on or before December 31, 1988 and must have successfully passed the examination prior to December 31, 1990.

B. Training

A minimum of one year of full-time training in an accredited DI/DLI training program will be required of all candidates except those who qualify under paragraph 2 above.

C. Deadline for Application and Date of Examination

The deadline for receipt of applications to take the examination for Special Qualification in DI/DLI is April 1st of the year in which the candidate plans to take the examination. The next examination in DI/DLI will be given in Chicago, Illinois on November 3, 1987.

D. Fee

The fee for the examination for Special Qualification in DI/DLI is $850, payable when the application is submitted.

Henry Thiede, MD, Rochester, New York
Michael V. Vance, MD, Paradise Valley, Arizona
Benson S. Munger, Ph.D., Executive Director, 200 Woodland Pass, Suite D, East Lansing, Michigan 48823

General Requirements

An applicant must satisfy all credential requirements at the time of application. Requirements fulfilled after the date of application will not be considered.

The applicant must have graduated from medical school and completed 12 months of internship (of PGY I) or other postmedical school training acceptable to the Board.

Graduates of approved schools of osteopathic medicine in the United States of America are considered when they have satisfactorily met the credential requirements as outlined.

An applicant graduating from a medical school other than in the United States of America, its territories or Canada must provide the Board with a verified and translated diploma.

The applicant must hold a valid, unrestricted, non-temporary license to practice medicine in the United States of America, its territories or Canada, throughout the certification process.

The applicant who is accepted to candidacy for a given examination may at no time use the words "board eligible" in connection with the Board.

Application Categories

Practice Category

Under this category the applicant must have practiced and/or taught emergency medicine a minimum of 60 months and accumulated at least 7,000 hours. This practice and/or teaching need not be continuous but it must total at least 60 months and at least 7,000 hours. No projections are allowed on an application. The Board independently verifies the emergency medicine practices listed on an application. If practices are maintained at more than one hospital during the same period of time, all the hours may be listed to fulfill the Board's requirements, but the months will only be counted once. Actual calendar months can only be counted once, regardless of the number of practices being maintained.

The practice and/or teaching must have taken place in a hospital-based emergency department within the United States, its territories or Canada. Emergency medicine practices resulting from military assignments outside the US will be considered only if the practice took place in a US military hospital which had been reviewed and accredited by the Joint Commission on Accreditation of Hospitals (JCAH).

Effective May 1982, teaching shall mean the teaching of medical students, physicians-in-training and physicians. Any other teaching may be claimed as CME. Of the minimum 7,000 hours, at least 2,800 hours must have been accumulated within any 24 consecutive months.

For each completed year in practice beginning with January 1, 1974, the applicant must submit 50 hours of continuing medical education activity, relevant to emergency medicine, and acceptable to the Board. CME can be averaged over the years of practice and can be any category.

On June 30, 1988 the practice category of application will expire. To apply under the practice category, a candidate must have fulfilled the requirements of the practice category by that date. Those applicants may apply through the 1990 application cycle.

Emergency Medicine Residency Category

Under this category the applicant must have successfully
completed a total of 36 months of post-medical school training, at least 24 months of which were in an emergency medicine residency program (PGY II and III) approved by the Residency Review Committee for Emergency Medicine or the Royal College of Physicians and Surgeons of Canada for Canadian programs. If the emergency medicine residency is structured so that it exceeds the length of training specified above, the applicant must successfully complete the requirements of the program to apply under the emergency medicine residency category. The applicant must submit 50 hours of continuing medical education activity, relevant to emergency medicine, starting one year from the date of graduation from the residency program and continuing until the date of application. CME can be averaged over the years and can be any category.

The Board independently verifies with the residency director that the candidate completed the training necessary to meet the requirements of the emergency medicine residency category of application, and the requirements of the individual residency program.

Effective July 1, 1987, the minimum time for graduate training under the control of an emergency medicine program shall be 36 months after graduation from medical school. This is for residents who begin their emergency medicine training on or after this date.

Special Application Category
An applicant who does not meet all of the specific requirements (each requirement, including medical education) of the practice category or the emergency medicine residency requirement, but who believes he/she has equivalent experience and/or training, may make special application to the Board. The Board may grant practice credit for incomplete emergency medicine residency training or for residency training in other specialties under this category of application.

The special application category is not intended to bypass the credential requirements, but rather, equivalency must be shown to the requirements of either the practice category or emergency medicine residency category.

Methods of Examination
The certification examination in emergency medicine consists of two parts. Part I is a one-day written examination. Part II is a one-day oral examination utilizing case simulations presented by a series of examiners.

Candidates must successfully complete Part I to be seated for Part II. Candidates must successfully complete both Part I and Part II to be certified.

Certification
All candidates who successfully complete both Part I and Part II shall be known as Diplomates of the American Board of Emergency Medicine and shall receive an appropriate certificate which shall remain the property of the American Board of Emergency Medicine.

Recertification
Certification is for a period of ten (10) years. Each Diplomate must be examined again to be certified.

Applications
Applications are available from the administrative office and will be accepted only during the specified application dates each year of May 1 through July 15. Only the current year’s application form will be acceptable during that year’s application cycle. The application fee must accompany the application form. This is a processing fee and is nonrefundable. The fee must be in US funds and all checks or money orders must be made payable to the American Board of Emergency Medicine. No application will be processed without receipt of the application fee.

Examinations
The written examination is offered once each year during the fall months. Oral examinations are scheduled the following year for candidates passing the written examination. Exam fees are billed and due upon assignment to an exam administration.

AMERICAN BOARD OF FAMILY PRACTICE

Thomas A. Nicholas, MD, President, Kansas City, Missouri
Willis J. Irvine, Jr., MD, Vice President, Portland, Oregon
Paul C. Brucker, MD, Treasurer, Philadelphia, Pennsylvania
Loren H. Amundson, MD, Sioux Falls, South Dakota

Nicholas J. Piscano, MD, Executive Director and Secretary, 2228 Young Drive, Lexington, Kentucky 40505

ABFP Official Definition of Family Practice
“Family practice is the medical specialty which is concerned with the total health care of the individual and the family. It is the specialty in breadth which integrates the biologic, clinical and behavioral sciences. The scope of family practice is not limited by age, sex, organ system or disease entity.”

The Certification Process
The American Board of Family Practice (ABFP) administers the certification examination in various centers throughout the United States annually, on the second Friday in July.

The American Board of Family Practice certification examination is a written test of cognitive knowledge about practice. Appropriate subject areas of the following disciplines include: internal medicine, pediatrics, surgery, obstetrics, gynecology, psychiatry and behavioral sciences, community medicine, and gerontology. Elements of the examination include, but are not limited to, diagnosis, management, and prevention of illness.

Requirements for Certification
A. GENERAL
1. All candidates for the ABFP certification examination must be graduated from a medical school in the United States or Canada, accredited by the Liaison Committee on Medical Education (LCME), or from an osteopathic college of medicine accredited by the American Osteopathic Association (AOA), or must hold a Standard Certificate certification by the Educational Council for Foreign Medical Graduates (ECFMG).

2. All candidates must hold a currently valid, full and unrestricted license to practice medicine in the United States or Canada. Furthermore, every license to practice medicine held by a candidate in any state or territory of the U.S. or province of Canada must be currently valid, full and unrestricted whether or not the candidate in effect practices in such state. Any candidate whose license to practice has been revoked, restricted or suspended in any state or territory of the United States or province of Canada shall be ineligible for certification until such time as the license is reinstated. Career military physicians serving full
time in the U.S. Armed Forces or U.S. Public Health Service may request waiver of licensure requirements by submitting proper documentation of their career U.S. Uniformed Service status. In cases where such waiver is granted and the physician subsequently leaves the service, the requirement for licensure must be satisfied immediately upon departure from the service in order to maintain Diplomate status.

3. All candidates must have satisfactorily completed three years of training (a full 36 calendar months) in a family practice residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME) subsequent to receipt of the M.D. or D.O. degree.

Although the Board prefers all three years of training to be in the same ACGME family practice program, the Board will consider other first year training as equivalent (e.g., certain transitional years, AOA osteopathic internships, etc.). In these cases, each individual's training will be evaluated by the Board. It must be noted, however, that the latter two years of residency training must be completed in the same ACGME accredited program unless the Board has granted approval of transfer from one ACGME family practice program to another. The Board allows some flexibility in the first year (G-1), but emphasizes that the continuity of care experience in a family practice center should take place in the same program during the G-2 and G-3 years.

Verification of satisfactory completion must be stated in writing by the director of the program. All applicants are subject to the approval of the ABFP, and the final decision regarding any application rests solely with the ABFP.

4. All candidates' experiences are subject to review and approval by the ABFP. Any variance from the above must have prior approval of the Board. No credit may be given for any previous training as equivalent to family practice training without the prior approval of the Board.

5. Candidates must complete all requirements of the Board no later than June 30 of the year of the examination. Complete documentation from the program director that the resident, has or is expected to have, satisfactorily completed the residency must be received by the Board by June 30. Applications supplied to the residents directly through the program director are made available only to residents expected to complete the required training on June 30th of the current year. Residents who complete their training at an interim date must write to the Board for an application.

6. No candidate will be allowed to take the examination until all fees are paid and all of the above requirements have been satisfactorily met.

B. CANADIAN APPLICANTS

Canadian applicants may qualify for examination in one of the following ways:

1. Physicians who have satisfactorily met the requirements of the College of Family Physicians of Canada (CFPC) by completion of two years of training in a program accredited by the College of Family Physicians of Canada must have a third year of accredited family practice residency. This third year of training must be satisfactorily completed in an ACGME accredited family practice program or, if taken in Canada, must be approved by the College of Family Physicians of Canada and must have the prior approval of the American Board of Family Practice. Only those programs that bring the candidate into compliance with the ACGME "Special Requirements for Training in Family Practice" will be considered as being equivalent to a third year in a U.S. accredited family practice training program. The request for approval must provide a description of the proposed curriculum signed by the program director. The request must be accompanied by documentation of satisfactory performance, which includes a description of the curriculum of the previous two years of training signed by the director of that program.

2. Physicians who have been certified by examination by the College of Family Physicians of Canada (Certificants), and who:
   a) have established legal residence in the U.S. for not less than the immediate past two (2) years at the time of application; and
   b) since residing in the U.S. have accumulated a minimum of 50 hours per year of continuing medical education approved by the American Board of Family Practice; and
   c) are actively engaged professionally full-time and exclusively in family practice (practice, and/or teaching, administration); and
   d) are members in good standing of the College of Family Physicians of Canada at the time of application;

may be permitted to apply for examination for certification by the American Board of Family Practice. In cases of Canadian Certificants, a special application form must be submitted.

C. OSTEOPATHIC PHYSICIANS

Osteopathic physicians who have graduated from an American Osteopathic Association (AOA) approved school of osteopathic medicine in the United States may qualify for ABFP examination if they meet all the same residency requirements specified for M.D. graduates. They may apply to ACGME accredited family practice programs for entry into the first year (G-1). Osteopathic physicians who have documented satisfactory completion of an AOA approved internship (G-1) year may receive credit for that portion of the G-1 year which meets the ABFP guidelines for Advanced Level Entry or Inter-program Transfers.

The amount of credit which may be granted for AOA approved rotating internships will not exceed one year. In order to qualify for the ABFP examination, all candidates must satisfactorily complete at least 36 calendar months of accredited graduate medical education. All training beyond the G-1 year (G-2/G-3 years) must be in continuity in an ACGME accredited family practice residency program.

The Recertification Process

The American Board of Family Practice confers Diplomate status for the specified period of time noted on the certificate. The certificate is dated for a seven-year period. In order to maintain Diplomate status, the Diplomate must be recertified before expiration of the currently held certificate. Although the certificate is dated for seven years, the Board routinely administers the recertification process on a six-year cycle. This allows a "reserve" year for those Diplomates who for some reason are unable to participate in the sixth year, or in cases where the Diplomate fails to receive a satisfactory score in the sixth year.

Should a Diplomate not be recertified by the end of the seventh year, the certificate will expire and the physician will lose Diplomate status with this Board. However, the physician may reapply for the recertification process, but must meet all criteria in effect at that time.
Diplomates will be given advance notice of any changes in the recertification requirements.

Re-examination

Candidates who fail the examination will be given the opportunity of taking it again as given annually. There is no limit to the number of times a qualified candidate may take the examination. A valid and unrestricted license and 50 hours per year of continuing medical education are requirements of the application necessary for re-examination. Full fees are charged for each examination.

Revocation

A. GENERAL

Each certificate issued by the Board of Directors shall be subject to revocation in any of the following circumstances:

- The issuance of such certificate or its receipt by the person so certified shall have been contrary to, or in violation of, any provision of the Articles of Incorporation of the American Board of Family Practice, Inc., or of the Bylaws of the American Board of Family Practice.
- The person certified shall not have been eligible to receive such certificate, irrespective of whether or not the facts constituting such ineligibility were known to, or could have been ascertained by, the Directors of the Corporation or its representatives.
- The person so certified shall have made a misstatement of fact in the application for such certificate or in any other statement or representation to the corporation or its representatives.
- The person so certified shall at any time have neglected to maintain the degree of competency in the field of family practice as established by the Board.

B. LICENSURE STATUS

A Diplomate of the American Board of Family Practice shall be required to hold a currently valid, full and unrestricted license to practice medicine in the United States of Canada. Furthermore, every license to practice medicine held by a Diplomate in any state or territory in the U.S. or province of Canada must be currently valid, full and unrestricted whether or not the Diplomate is in effect practices in such state.

In the event a Diplomate's license to practice in any state or territory of the United States or province of Canada is revoked, restricted or suspended, the Diplomate's status with the American Board of Family Practice is to be simultaneously rescinded at the time of the licensure revocation, restriction or suspension. If and when the physician's revoked or suspended license is reinstated in full (with no restrictions) and official documentation of reinstatement is provided to the ABFP, the physician, in order to retain Diplomate status, must meet all the recertification requirements in effect at the time including but not necessarily limited to the written recertification examination which is held annually.

Board Eligibility

The American Board of Family Practice has never used the term “board eligible.” The current requirements for admission to the certifying examination include satisfactory completion of a three year family practice residency program as accredited by the ACGME. No other pathway to the certifying examination currently exists. The term “board eligible” is now an obsolete term for all specialty boards under the aegis of the American Board of Medical Specialties.

Applying for the Certification Examination in Family Practice

An application must be submitted with a check or money order in the amount of $500 (U.S. Dollars), payable to the American Board of Family Practice and postmarked no later than the published deadline.

The application must be accompanied by a copy of all licenses to practice medicine held by the candidate in the United States or Canada.

Examination fees may be refundable in part if the candidate notifies the American Board of Family Practice by registered or certified mail, postmarked at least 30 days prior to examination, of his/her intent to withdraw.

If a candidate fails to notify the Board by certified or registered mail of his/her intent to withdraw, the entire fee may be forfeited. Any request for the application fee is approved for examination will be refunded $450.

No candidate will be admitted to the examination until all fees have been paid and all other requirements have been met.

All applications must be returned to the following address:
American Board of Family Practice
2228 Young Drive
Lexington, Kentucky 40505
(606) 259-5626

AMERICAN BOARD OF INTERNAL MEDICINE

Harold J. Fallon, MD, Chairman, Richmond Virginia*
Laurence E. Earley, MD, Chairman-Elect, Philadelphia, Pennsylvania*
James F. Desforges, MD, Secretary-Treasurer, Boston, Massachusetts*
John A. Benson, Jr., MD, President, Portland, Oregon (Ex Officio)

Changes in Policies and Procedures

This document supersedes all previous publications of the Board concerning policies and procedures. The Board's decision about a candidate's admissibility to examination is governed by the policies and procedures in effect during the current application period.

All candidates are admitted to examinations at the discretion of the Board. The Board reserves the right to cancel and reschedule examinations under unusual circumstances. In addition, the Board reserves the right to delete questions or portions of the examination. Appeal mechanisms are available to candidates who are excluded from examinations on the basis of reportedly unsatisfactory clinical competence, humanistic qualities, or moral and ethical behavior.

The Board reserves the right to make changes in its fees, policies, and procedures at any time. It cannot assume responsibility for giving advance notice thereof. The provisions of this publication are not to be construed as a contract between any candidate and the American Board of Internal Medicine.

The Board is an independent, nonprofit organization. It was established in 1936 by joint action of the Section on the Practice of Medicine of the American Medical Association and the Board of Regents of the American College of Physicians.

Purpose of the Board

The purpose of the American Board of Internal Medicine is to improve the quality of medical care by developing standards to ensure that the certified internist possesses the knowledge, skills, and attitudes essential to the provision of excellent care. Certification is recognition by peers of a superior level of ability.

Meaning of Certification

Certification by the American Board of Internal Medicine recognizes excellence in the discipline of internal medicine. Certification by the Board is not a requirement to practice internal medicine, and the Board does not confer privilege to practice. The Board does not intend either to interfere with or to restrict the professional activities of a licensed physician because the physician is not certified, or to restrict the professional activities of a certified Diplomate because the Diplomate is not certified in a subspecialty. The Board does not issue statements concerning "Board eligibility." It informs a candidate of admission to a specific examination after the application form, fee, and supporting references have been received and reviewed.

Responsibilities of the Board

The primary function of the Board is to administer the certification process. It does this by:

a) establishing postdoctoral training requirements for Board candidates,

b) assessing the credentials of candidates,

c) obtaining substantiation by appropriate authorities of the clinical skills and professional standing of candidates, and

d) developing and conducting examinations for certification and recertification. The Board conducts research to improve the definition of its certification standards and to evaluate certification procedures.

The Board establishes requirements and standards for certification with the intent of improving the quality of educational training in internal medicine.

Areas of Certification Offered

Specialty of Internal Medicine

Physicians who are awarded a Diplomate certificate in the specialty of internal medicine have completed a minimum of three years of acceptable postdoctoral education, demonstrated competence in the clinical evaluation of patients, and passed the Certifying Examination in Internal Medicine. Physicians who are awarded this certificate will have demonstrated their preparation for the practice of internal medicine.

Subspecialties of Internal Medicine

Board Diplomates may seek a second certificate in a subspecialty of internal medicine. They must meet the Board's postdoctoral training requirements in the subspecialty before taking the subspecialty examination. Physicians who are awarded these certificates will have demonstrated their preparation for the practice of a subspecialty. The Board offers examinations in the following subspecialties:

Cardiovascular Disease
Critical Care Medicine
Endocrinology and Metabolism
Gastroenterology
Hematology
Infectious Disease
Medical Oncology
Nephrology
Pulmonary Disease
Rheumatology

For information concerning certification in allergy and immunology, see following pages.

Recognition of Advanced Achievement in Internal Medicine

Board Diplomates in the specialty of internal medicine are periodically offered the opportunity to take an advanced examination. Those who pass the examination are awarded a new certificate indicating the date of the examination.

Certification in the Specialty of Internal Medicine

Prerequisites

1. Predoctoral Medical Education

Candidates from medical schools in the United States or Canada must have attended a school accredited at the date of graduation by the Liaison Committee on Medical Education or formerly by the American Medical Association, or the Committee for the Accreditation of Canadian Medical Schools. Candidates from osteopathic medical schools must have graduated from a college of osteopathic medicine accredited by the American Osteopathic Association.

Those graduates of foreign medical schools who do not hold an unrestricted license to practice in a state, territory, province, or possession of the United States or Canada or who have not passed the examinations (Part I, II, and III) of the National Board of Medical Examiners must have a permanent (valid indefinitely) certificate of the Education Commission for Foreign Medical Graduates or comparable credentials from the Medical Council of Canada. A photocopy of this certificate must accompany the application for admission to the examination.

Candidates whose ECFMG certificates are currently undergoing revalidation will not be admitted to the examination even if licensed.

Candidates who entered postdoctoral medical training in the United States via the "Fifth Pathway," as proposed by the American Medical Association, must document such training to the Board.

2. Postdoctoral Training Requirements

Candidates must meet the training requirements outlined on the following pages. Requirements for graduates of foreign and osteopathic medical schools are the same as those for other candidates.

3. Competence in Clinical Skills

It is essential that the internist have the appropriate clinical judgment, professional attitudes and behavior, in-
terpersonal skills, humanistic qualities, psychomotor skills including expertise in certain procedures, and abilities to gather data—by an organized and complete medical interview, a thorough physical examination, and the appropriate use of diagnostic studies—in order to make logical diagnoses and to prescribe optimal medical care. Directors of training programs can most appropriately provide the Board documentation of some of these clinical skills, and have established committees to assist them in this evaluation. The evaluation should be a continuing process throughout the trainee’s tenure in a hospital program. For more information, refer to “Annals of Internal Medicine,” 90: 402-411 (March) 1979, and “Annals of Internal Medicine,” 99: 720-724 (November) 1983.

The Board, after receiving an application for examination, requires verification of training and substantiation of the candidate’s overall clinical competence. This verification is sought from each director of the candidate’s training program(s). For more information about the role of the program director in certification, see following pages.

All candidates have not been evaluated for at least two years, the Board also requires verification that they are currently recognized as an internal medicine specialist in good standing. Verification is sought from the chief of medical service at the institution where the candidate’s principal staff appointment is held. Verification of licensure may also be sought from appropriate licensing authorities. Any challenge to good standing must be resolved locally to the Board’s satisfaction before admission to the examination.

4. Humanistic Qualities and Moral and Ethical Behavior

All candidates for certification must demonstrate satisfaction of humanistic qualities and moral and ethical behavior in the medical profession. The program director has the responsibility to assure the Board of such satisfactory behavior (see following pages).

Training

The Board believes that all interns should have sound knowledge of the biologic and social sciences basic to internal medicine; this knowledge should be acquired during the candidate’s predoctoral and postdoctoral training, and should be maintained by habits of continuing education. The Board has defined its requirements for duration and quality of training to assure an educational experience that is likely to develop competence in internal medicine. Residents are urged to discuss the details of their training with their program directors.

To ensure that all Diplomates are competent to fulfill the responsibility of an internist for the primary care of patients, whether they plan to practice general internal medicine or a subspecialty, the Board requires that all candidates have three years of accredited training in the broad field of internal medicine.

No internship, residency, or fellowship training taken before the date of completion of requirements for the MD or DO degree may be credited toward the Board’s training requirements.

To be admitted to an examination, physicians must have completed required postdoctoral training before July 1 of the year of examination.

The three years of required training must satisfy all the following conditions:

1. A candidate must complete three years of training as a resident in an approved program in internal medicine.

Approved indicates training accredited by the Accreditation Council for Graduate Medical Education (formerly by the Liaison Committee for Graduate Medical Education, or by the Residency Review Committee for Internal Medicine of the American Medical Association), or training completed in Canada and accredited either by the Royal College of Physicians and Surgeons of Canada or by the Professional Corporation of Physicians of Quebec.

2. A director of an approved training program in internal medicine must have responsibility for the educational process during all of the 36 months of training.

The program director may prospectively assign up to six of the 36 months of the internal medicine residency to specialties other than internal medicine, and these six months may be credited toward the 36 months of required training. This is designed to permit interdisciplinary experiences consistent with primary care internal medicine. It is not intended to permit credit for training while the candidate is a resident in another specialty (see following pages).

The Board has several policies to determine credit for the first postdoctoral year of training (PGY1), depending on which type of training was undertaken in the first year.

a) Categorical First Year in Internal Medicine. This refers to PGY1 training undertaken in the department of internal medicine under the supervision of the director of an approved internal medicine program. Twelve months of credit are given for categorical first years.

b) Categorical First Year in Internal Medicine. This refers to training undertaken in more than one department, under the supervision of the director of an approved internal medicine program. Twelve months are credited if training included a minimum of eight months of internal medicine, or six months in internal medicine and two months of pediatrics, dermatology, neurology, and/or emergency room care.

c) Flexible First Year: This refers to training in 1975-1978 that was never reviewed or accredited by a national authority. Therefore, no credit is normally given for flexible first years.

d) Transitional Year. Beginning in July 1982 the Accreditation Council on Graduate Medical Education has accredited broad PGY1 training experiences with a designated director and an institutional supervisory committee and sponsored by at least two accredited residencies. In such programs where one sponsoring residency is internal medicine candidates will receive month-by-month credit for training in internal medicine. Twelve months are credited if training included a minimum of eight months of internal medicine, or six months in internal medicine and two months of pediatrics, dermatology, neurology, and/or emergency room care.

3. Training must include a minimum of 24 months of meaningful patient responsibility.

Meaningful patient responsibility refers to time spent in direct and comprehensive care of patients. This includes responsibility for record keeping and management under the supervision of faculty and/or personal physicians. Care provided in the capacity of a consultant does not apply to the requirement of meaningful patient responsibility. Twenty of the 24 required months of meaningful patient responsibility must occur in:

a) inpatient services where disorders of general internal medicine are managed, or
b) inpatient services where disorders of one subspecialty of internal medicine are managed, or
c) emergency rooms, intensive care units, general medical or subspecialty outpatient clinics, or
d) dermatology or neurology services.

For the purposes of determining the amount of meaningful patient responsibility, four months may be taken outside of internal medicine at the discretion of the internal medicine program director, provided these months involve meaningful patient responsibility (see following pages).

4. In each year of training, the level of responsibility for patient care must increase.

In summary, the standard, recommended training pattern includes:

Year 1—A Categorical first year of training in internal medicine,
or
A Categorical first year including eight months of internal medicine; and
Year 2—Twelve months of approved residency in internal medicine, as a medicine resident; and
Year 3—Twelve months of approved residency in internal medicine, as a medicine resident.

Of the total 36 months of training, at least 24 must include meaningful patient responsibility. In each year of training, responsibility for patient care must increase.

**Training Taken in Accredited Programs Other Than Internal Medicine**

For physicians transferring to the second year of internal medicine programs from other accredited residencies, the internal medicine program director may grant a maximum of six months' credit for months of training in internal medicine which were under the supervision of an approved program in internal medicine. These six months may not include common rotations for the first postgraduate year such as emergency room, pediatrics or rotations through other specialties.

**Clinical Investigator Pathway**

The Board mission is to certify clinical expertise in internal medicine and to assure that training in this broad discipline steadily improves. At the same time ABIM continues to encourage careers in clinical investigation. Therefore the Board has established a pathway that will fulfill the training requirements for admission to a certifying examination. This pathway requires two years of accredited residency training in internal medicine with 24 months of meaningful patient responsibility and two years of documented research in the United States or Canada. Throughout the two years of research, the trainee must have continuing primary responsibility for patient care in general internal medicine, as for example, in a weekly half-day teaching clinic in general internal medicine or geriatrics, which is associated with an accredited residency in general internal medicine. Experiences in subspecialty clinics, in emergency rooms, or on attendings rounds will not fulfill this requirement.

The director of the R-2 level of residency training will be asked to assure the Board that such candidates demonstrate satisfactory overall clinical competence. Evaluation of the candidate's continuing clinical competence during the research years will also be sought.

If the two years of research are conducted during a fellowship in a subspecialty of internal medicine, that experience (neither year) may not be used for credit for admission both to a certifying examination in internal medicine and subsequently to another American Board of Internal Medicine examination.

**Candidates for Special Consideration**

Outstanding candidates with unusual training who seek certification in general internal medicine may be proposed to the Board as candidates for special consideration. Only the chairperson of a department of medicine or a program director of an approved program in internal medicine may propose a candidate for special consideration (see following pages).

**The Certifying Examination in Internal Medicine**

The Certifying Examination in Internal Medicine is a written examination. The material covered on the examination is clinically oriented and relevant to the practice of internal medicine in a hospital and ambulatory care setting, both for consultants and primary-care physicians. The questions are objective; they are designed to test the candidate's knowledge, clinical judgment, problem-solving skills, and, to an appropriate degree, knowledge of the basic sciences fundamental to internal medicine.

The Certifying Examination is administered annually in many centers throughout the United States and in a few centers in Canada, Puerto Rico, and overseas. It is given in four parts on two consecutive days. The next Certifying Examination in Internal Medicine will be held September 15-16, 1987.

Candidates will be informed of the results of the examination approximately four months after its administration. Those who pass the examination are certified as Diplomates in the specialty of internal medicine. They are awarded certificates indicating the date of the examination.

On written request and payment of a fee of $25.00, candidates may obtain rescored of any examination within a year of receiving results. The candidates' answer sheets will be destroyed 18 months after administration of the examination.

For information with regard to the Board's policy concerning accommodation to handicapped candidates during the examination, please provide, to the Registration Section in the Board office in Philadelphia, Pennsylvania.

**Certification in a Subspecialty of Internal Medicine**

**Prerequisites**

1. **Prior Certification in Internal Medicine**
   A candidate for examination in a subspecialty must be certified as a Diplomate in the specialty of internal medicine, or be certified in internal medicine by the Royal College of Physicians and Surgeons of Canada or the Professional Corporation of Physicians of Quebec. Certification in Canada is not acceptable as qualification if a candidate has not been successful in passing a Certifying Examination or has not been admitted to a Certifying Examination because of unauthorized "short track," clinical incompetence, or lack of verification of recognition as a specialist in the community. (Certification in Canada will no longer quality candidates for admission to ABIM Subspecialty Examinations after the 1987 examinations.)

2. **Training Requirements**
   Candidates must meet the training requirements outlined on the following pages.

3. **Clinical Competence**
   The Board, after receiving an application for examination, requires substantiation of the candidate's clinical competence as a subspecialist-consultant. This substantiation will be sought by the Board from the directors of the subspecialty training program(s) and of the associated residency in internal medicine. For more information about the role of program director in certification, see following pages.

   For candidates who are at least two years beyond training, the Board requires verification that they are currently recognized as a subspecialist in good standing in the appropriate subspecialty. Verification is sought from the chief of medical service at the institution where the candidate's principal staff appointment is held. Verification of licensure may also be sought from appropriate licensing authorities. Any challenge to good standing must be resolved locally to the Board's satisfaction before admission to the examination.

4. **Humanistic Qualities and Moral and Ethical Standing**
   All candidates for subspecialty certification must demonstrate satisfactory humanistic qualities and moral and ethical behavior in the medical profession. The departmental chairman and the subspecialty program director have the responsibility to assure the Board of such satisfactory behavior (see following pages).

**Training**

The Board requires a minimum of two years of full-time graduate training in a subspecialty, completed in a program associated with an approved residency in internal medicine in the United States, or Canadian fellowship training that was accredited either by The Royal College of Physicians and Surgeons of Canada or the Professional Corporation of
Physicians of Quebec. Beginning July 1, 1989 the Board will only accept subspecialty training that has been accredited by the Accreditation Council for Graduate Medical Education.

A period of training in another institution may be acceptable if the institution has a recognized reputation for an advanced educational program in the subspecialty. Applicants seeking credit for training there must submit a detailed description of the curriculum of the program for review by the appropriate subspecialty Board. Candidates are encouraged to write to the Board for prospective evaluation of such training.

If subspecialty rotations completed during training in internal medicine are used to meet the requirements for admission to a Certifying Examination in Internal Medicine, they cannot be credited toward the required subspecialty training. Practice experience and attendance at postgraduate courses cannot be credited toward the requirements.

Educational experience in a subspecialty while the candidate holds a full-time junior faculty appointment in an approved medical school in the United States or Canada may be applicable toward the requirements. Such training must have been approved by the appropriate program director. Plans for such training should be reviewed prospectively by the Board.

In general, part-time training, even though continuous, is not acceptable. Interrupted full-time training, however, is acceptable, provided that no period of full-time training is shorter than six months. Individuals planning such training should seek the guidance of the Board before acting on their plans.

Candidates for Special Consideration

Special consideration for candidates who seek subspecialty certification is restricted to full-time faculty members of accredited medical schools in the United States or Canada. Some formal training in the subspecialty is required.

Only the chairperson of a department of medicine may propose a subspecialty candidate for special consideration (see following pages).

Certification in Critical Care Medicine

The Board's first examination in critical care medicine is scheduled for November 10, 1987. Training requirements and other information pertaining to certification in critical care medicine may be obtained from the Board office.

Certification in Two Subspecialties

The Board does not wish to encourage certification in more than one subspecialty. However, requirements for dual certification in medical oncology have been published and are available from the Board and currently require three years of training.

Candidates who seek dual certification in other subspecialty combinations should submit written inquiries detailing their training to the Board for evaluation by the appropriate subspecialty boards.

Subspecialty Examinations

The subspecialty examinations are written examinations. The questions are objective. An outline of the general subject areas covered by a specific subspecialty examination is provided with the application form.

The subspecialty examinations are offered on an alternate-year schedule. The examinations are administered in centers in the United States, Puerto Rico, Canada, and overseas. They are given during one day; the sole exception is the examination in cardiovascular disease, which is given during one and one-half days. The 1987 Subspecialty Examinations will be held on November 10-11, 1987.

Candidates will be informed of the results of examination approximately four months after administration.

Those who pass a subspecialty examination are certified as Diplomates in the particular subspecialty; they are awarded certificates indicating the date of the examination.

On written request and payment of a fee of $25.00 candidates may obtain rescoring of any examination within a year of receiving results. The answer sheets of candidates will be destroyed 18 months after administration of the examination.

For information with regard to the Board's policy concerning accommodation to handicapped candidates during the examination, please provide details to the Registration Section in the Board office in Philadelphia, Pennsylvania.

Advanced Achievement in Internal Medicine

A voluntary modular examination process will provide practicing certified internists the opportunity to evaluate objectively the current clinical knowledge, continuing education, and the problem-solving skills needed to provide excellent care in internal medicine. Those certified in internal medicine by the Board in 1977 or earlier will be eligible. Those Diplomates who pass the examination will be awarded a new certificate indicating the date of the examination. The first examination is scheduled for Saturday, May 16, 1987.

Role of Program Director

The level of competence of the internist is determined in large part by the duration and quality of training and experience. It is for this reason that the Board seeks assistance from training program directors in the certification process. The Board asks program directors to substantiate that candidates for certification have the requisite clinical skills, humanistic qualities and moral and ethical standing to be certified by the Board. Such substantiation is a requirement of certification.

Responsibility for Training

The Board believes that an internal medicine program director should have responsibility for the candidate's entire educational process during training. The program director together with the candidate can design some flexibility within the basic training requirements.

The program director may permit up to six months of training in areas outside internal medicine, as long as the program director maintains contractual responsibility for the resident in internal medicine during this time. Such rotations may be dispensed by the program director throughout the 36 months of training.

A maximum of four months outside internal medicine (e.g., pediatrics, psychiatry, neurology, etc.) may be credited toward the 24-month requirement for meaningful patient responsibility if the rotations are taken with the approval of the internal medicine program director and if they involve meaningful patient responsibility.

The Board welcomes the opportunity to evaluate prospective plans for unusual training.

Substantiation of Clinical Competence

The program director of each training program of the candidate for certification is sent a clinical evaluation form and asked to verify the training indicated by the candidate. Candidates applying for certification must be judged to have satisfactory clinical competence. Substantiation of clinical competence is requested from the program director. Any candidate for any certification whose competence is judged to be less than satisfactory may, at the discretion of the Board, be excluded from the next examination.

Candidates who are judged by their program directors to have less than satisfactory clinical competence in the R-2 year of training will be required to undertake an additional twenty-four months of accredited residency in general internal medicine before requesting admission to the certifying examination. Candidates who are judged by their program directors to be less than satisfactory clinical competence in the R-3 year of training will be required to
undertake an additional twelve months of accredited residency in general internal medicine before requesting admission to the certifying examination. If this additional training is taken in a different program, since the new program director should assess the candidate’s needs and devote special attention to the improvement of deficient skills, the Board requires that residents inform the new training program director of such a rating. Therefore, residents are urged to obtain documentation of the program directors’ evaluations of their clinical competence for all years of training.

Candidates whose clinical competence has improved and is judged by the program director to be satisfactory after the additional training will be admitted to the certifying examination. Candidates who neglect to inform a new program director of unsatisfactory ratings or who do not take the required additional training in general internal medicine will not be admitted to the certifying examination.

For candidates beginning postgraduate training in June 1987 and after, the Board will require that they be judged by their program directors to have demonstrated satisfactory overall clinical competence during each of the three years of training. In the R-3 year, the candidate must also be judged to be satisfactory in each of the components defined by the Board.

For certification in subspecialties of internal medicine, substantiation of clinical competence as a subspecialist-consultant is requested from both the director of the subspecialty training program and the director of the associated residency in internal medicine.

**Verification of Humanistic Qualities and Moral and Ethical Behavior**

Program directors have the responsibility to assure the Board that candidates for Board certification have satisfactory humanistic qualities and moral and ethical behavior in the medical profession during all three years of required training.

Deficiencies in these attributes related to medical care should be identified by the program as early in the training period as possible so that remedial action can occur. Candidates who are judged to have unsatisfactory humanistic qualities and/or moral and ethical behavior should be offered the opportunity to meet with their program directors and/or their local committees on evaluation of clinical competence in order to reply to the evaluations.

When the program director cannot recommend a candidate for admission to a certification examination on the basis of these deficiencies, this judgment should be indicated on the Board evaluation form with a description of the available documentation including critical incidents that illustrate adverse behavior.

**Candidates for Special Consideration**

**Internal Medicine**

Those outstanding candidates with unusual training who seek certification in general internal medicine may be proposed to the Board for special consideration.

The principle which guides the Board in its assessment of candidates for special consideration is that the candidate’s training must be interpreted by the Board to be equivalent to 36 months of training in an approved program in internal medicine.

Except for the most unusual circumstances, it is essential that special candidates have had substantial formal training in internal medicine in the United States or Canada under the supervision of the director of an accredited residency in internal medicine.

Training in a formal subspecialty fellowship may not be substituted for training in internal medicine.

The following requirements apply to candidates for whom admission to the certifying examination is sought under the provisions of special consideration:

1. The candidate must be proposed by the chairperson of a department of medicine in an accredited medical school or the director of an approved program in internal medicine.
2. Before being proposed the candidate should have been observed by the proposer for at least one year.
3. The candidate’s curriculum vitae and bibliography must accompany the proposal. Authenticated credentials such as a permanent ECFMG certificate or unrestricted license must accompany proposals for foreign medical graduates.
4. The judgment of clinical competence must be the result of multiple observers and concurred with the local clinical competence committee. The qualities of the candidate’s performance that support this judgment must be specified in the proposal. This documentation should include the results of the candidate’s performance in a clinical evaluation exercise.
5. Potential special candidates that may be proposed include the following groups:

- Those with two years of accredited training in internal medicine in the United States or Canada after three or four years of verified foreign residency training in general internal medicine and satisfactory overall clinical competence.
- Those candidates presenting two years of accredited residency training in internal medicine in the United States or Canada after some additional equivalent training and judged to have superior overall clinical competence.
- Full-time faculty may be proposed as special candidates. The full-time faculty appointment must be in the department of the proposer and continue through the date of examination and any reexamination. The proposer must be the chairman of the department of medicine of a medical school, along with the chief of the medical service at an affiliated hospital when applicable.
- Staff will be happy to respond to written inquiries about other special candidates.

Proposals for special consideration should be received in the Board office by January 1 of the year in which the certifying examination in internal medicine is to be taken.

Should the proposal be approved after Board review, the Board will send application forms to the candidate.

**Subspecialties of Internal Medicine**

The following requirements apply to candidates for whom admission to a subspecialty examination is sought under the provisions of special consideration:

1. The candidate must be proposed by the chairperson of a department of medicine of an accredited medical school in the United States or Canada and the head of the associated subspecialty division.
2. The candidate must be current full-time faculty member in the department of the proposer and have been observed by the proposer for at least one year.
3. The candidate must have been previously certified in internal medicine by the American Board of Internal Medicine.
4. The proposal must include a description of the candidate’s training and experience in the specified subspecialty.
5. The proposal must substantiate the clinical competence of the candidate as a consultant-subspecialist.
6. The candidate’s curriculum vitae and bibliography must accompany the proposal.

Proposals should be received in the Board office by April 1 of the year in which the subspecialty examination is to be taken. Should the proposal be approved, the Board will send application forms to the candidate.

**Procedures for Application**

Candidates for all examinations must have completed the required training by July 1 of the year of examination. Candidates must use an application form which may be obtained by written request to the Board office during the scheduled period of registration.
After review and acceptance of a candidate's qualifications as presented on the application form, the candidate is informed by letter that the initial stage of processing the application form has been completed. When appropriate, the Board then seeks verification of training and substantiation of the candidate's clinical competence from the candidate's program director (see following pages). If these reports are satisfactory, the candidate will receive an admission card and examination center assignment approximately three weeks before the date of the examination.

Awareness of registration deadlines is the candidate's responsibility.

Late Applications
There is a non-refundable penalty fee of $200.00 for any application postmarked after the published registration period.

No applications will be accepted after April 1 for the Certifying Examination, or after June 1 for subspecialty examinations.

Cancellations
In order to obtain a partial refund, cancellations for all examinations must be submitted to the Board in writing before August 1 for the Certifying Examination in Internal Medicine, or before October 1 for subspecialty examinations.

Refunds
Candidates who cancel their applications before the deadline or whose applications are not approved by the Board will receive a partial refund of their fee; $65 will be retained to defray the cost of processing and evaluating the application.

Re-examination
Any candidate who does not pass any certification examination may apply for re-examination.

There is no restriction on the number of opportunities for re-examination.

If the credentials of a candidate who requests re-examination have not been reviewed by the Board during the previous two years, the application must indicate in which hospital the candidate's principal staff appointment is held. The Board requires verification of the candidate’s competence and good standing from the chief of medical service of that hospital (see following pages). Verification of licensure may also be sought from appropriate licensing authorities.

At each time of application for re-examination, the current examination fee is charged.

Announcements of Examination Information

Annals of Internal Medicine
(Medical News Section)
The Internist
Journal of the American Medical Association
(Examinations and Licensure Section)
Observer of the American College of Physicians
Resident and Staff Physicians
Appropriate subspecialty journals

In addition, the Board sends annual bulletins to directors of accredited residency programs.

Confidentiality
The Board will endeavor to release examination results in a form that will protect the anonymity of the candidate. Unless authorized by the candidate, individual examination scores will otherwise be considered completely confidential by the Board.

Candidates should be aware that the Board may, at its discretion, release the results of an examination under the following circumstances:

a) The Board may release group examination results to the director of each program in which a candidate a) received training for credit toward Board requirements in order to help program directors evaluate the effectiveness of their programs.

b) The Board may release examination results, examination scores, and other pertinent information to qualified researchers; these researchers are required to maintain the confidentiality of such material.

Irregular Behavior
All Board examinations are proctored, and proctors are required to assign seats and empower to change seats during an examination at their discretion. Proctors are required to report to the Board any irregular behavior by a candidate. Giving or obtaining unauthorized information or aid, copying of examination questions, removal of an examination from the examination center, talking or other disruptive behavior will be considered a possible subversion of the certification process. Irregular behavior that is observed, that is made apparent by statistical analysis of answer sheets, or that is shown by other means will constitute grounds for invalidation of the candidate's examination. Other sanctions such as exclusion from future examinations may be invoked at the Board's discretion.

Requirements for Examination by the American Boards of Internal Medicine and Pediatrics
Candidates who are otherwise eligible for certification by each Board may be admitted to the examinations of both Boards by such candidates complete at least two years of accredited residency training, involving graded responsibility and continuity clinics in each specialty.

Certification Offered by Collaborative Examining Groups
The American Board of Internal Medicine has joined with other specialty Boards in sponsoring the American Board of Allergy and Immunology (a Conjoint Board of the American Boards of Internal Medicine and Pediatrics). Physicians certified in internal medicine who are interested in certification in this area should write to:
American Board of Allergy and Immunology
3624 Market Street
Philadelphia, Pennsylvania 19104

Inquiries
Please address all inquiries concerning examination applications to:
American Board of Internal Medicine
3624 Market Street
Philadelphia, Pennsylvania 19104
(215) 243-1500
The Board staff is ready to discuss certification with candidates. Candidates seeking an interview should request an appointment.

Information on Registration and Examinations Schedule

1987 Certifying Examination in Internal Medicine
Registration Period: November 1, 1986 to February 1, 1987
Examination Date: September 15-16, 1987
Fee: $500
Deadline for Cancellation: August 1, 1987
Refund: $435
Admission Notification: Three weeks before examination date

1987 Subspecialty Examinations
Cardiovascular Disease
Critical Care Medicine
Endocrinology and Metabolism
Neurological Surgery

The required five years of neurosurgical training in order to insures satisfactory competence in neurosurgical surgery. It should be stressed that it is the responsibility of the candidate to seek information concerning current requirements for certification by The American Board of Neurological Surgery. Even though program directors of approved programs in neurosurgical surgery are well informed regarding requirements for certification, placement in an approved training program does not guarantee adequate training for certification and the candidate must make sure he or she receives such training.

Training Prior to Neurosurgery Residency

1. Graduation from a medical school in the United States or Canada which is acceptable to the Board and accredited by the Accreditation Council for Medical Education. Graduates from medical schools in countries other than the United States or Canada are eligible for certification provided they have a currently valid license to practice medicine in the state, province, or country of residence.

2. Graduates from U.S. or Canadian medical schools must have a currently valid license to practice medicine in the state, province, or country of residence.

3. Twelve months must be devoted to acquiring adequate clinical knowledge of fundamental clinical skills. This is known as postgraduate year one (PGY 1), general surgery year one, or internship. Although recommended for completion prior to beginning neurosurgical training, this must be completed prior to beginning the third year of that training. This may be achieved by:

A. one year of training in an approved general surgery program in the United States or Canada, or

B. one year of training in an accredited residency program to include not less than six months in surgical disciplines other than neurosurgery (the remaining six months should include training in other fundamental clinical skills considered appropriate by the neurosurgical program director, but this portion of the year may not include more than six weeks of neurosurgery and/or neurology), or

C. holding a certificate from the American Board of Surgery or a Fellowship (in surgery: not neurosurgery) of the Royal College of Surgeons of England, Edinburgh, Canada, Ireland, or Australasia.

Neurological Surgery Training Requirements

For Residents Who Began the Neurological Surgery Portion of Their Training Before July 1, 1979

1. Completion of four years of training following postgraduate year one. The neurological surgery training must occur in hospitals or institutions recognized by the American Board of Neurological Surgery and acceptable to it.

2. Of this training period, at least 30 months must be devoted to clinical neurosurgical surgery. Twelve of the 30 months should be spent as senior resident in one institution. The other remaining 18 months may be devoted to other aspect of the neurosciences.

3. The training in clinical neurosurgical surgery must be progressive but not obtained during repeated short periods in a number of institutions. It is necessary that at least 24 months of training in clinical neurosurgical surgery be obtained in one institution. Exchange of residents between approved neurosurgical training centers in the United States and Canada may be arranged by the respective training program directors with the resident’s consent. In such instances, the Secretary of the Board should be notified of this rotation before the exchange period begins. Such an exchange should in no way compromise any other training requirement.

4. The program director must notify the Board of the appointment of each new neurosurgical resident and whether or not they are entering the program with intent to obtain
certification and, if so, whether or not the director has informed the trainee of the requirements necessary to obtain such certification.

5. Prior to acceptance for the certification process, the Board requires a statement from the candidate's program director to the effect that the candidate has met the minimum time requirements and that his or her performance in training has been satisfactory and that, in the judgment of the program director, the trainee is well prepared to enter into the independent practice of neurosurgery.

For Residents Beginning the Neurological Surgery Portion of Their Training on or After July 1, 1979

1. At least 60 months of neurosurgical training is necessary. This training must occur in hospitals or institutions recognized by the American Board of Neurological Surgery, approved by the RRC in Neurosurgery, and accredited by the ACGME.

2. The 60 months of training must include at least 36 months of clinical neurosurgery. Twelve months of this period must be served as a senior resident.

3. At least 24 months in clinical neurosurgery must be obtained in one institution. The training in clinical neurosurgery must be progressive and not obtained during repeated short intervals in a number of institutions.

4. At least three months must be devoted to training in neurology. Six months is recommended.

5. The unobligated 21 months may be devoted to neuropathology, neuroradiology, basic sciences, research, or other disciplines related to neurological surgery.

6. Training in any institution other than in the parent institution and its affiliated hospitals and institutions will not be considered as counting toward the requirements unless specified in advance by the program director and approved by the Board.

7. The program director must notify the Board of the appointment of each new neurosurgical resident and whether or not they are entering the program with intent to obtain certification and, if so, whether or not the director has informed the trainee of the requirements necessary to obtain such certification.

8. Trainees beginning their final resident year on or after July 1, 1983 are required to record, in a fashion determined by the Board, operative procedures performed during their senior clinical year of training.

9. Prior to acceptance for the certification process, the Board requires a statement from the candidate's program director to the effect that the candidate has met the minimum time requirements, has been deemed satisfactory by and, in the judgment of the program director, is well prepared to enter into the independent practice of neurosurgery.

Exceptional Modifying Circumstances

Upon recommendation of the program director and notification by the Board, credit may be given for previous training if a candidate:

1. Transfers from one approved neurosurgical training program to another approved program with the consent of the directors of both programs, or

2. Transfers from one approved neurosurgical training program to another approved program without the consent of one of the program directors, but with the approval of the Board for the transfer.

In the above case, the director of the program from which the candidate transfers must indicate in writing to the new program director the credit for training, both in time and category, which he is prepared to certify that the candidate has successfully completed. A copy of such statement should be submitted to the Secretary of the Board. The new program director may or may not honor such credit, depending upon his or her appraisal of the resident's professional and educational progress in the new program. A statement of how much training credit will be accepted should also be submitted to the Secretary of the Board.

3. Before entering an approved neurosurgical training program, has had substantially more than the prerequisite training in general surgery, medical neurology or the basic neurological sciences (such credit must be approved by the Board).

Requests for training away from a parent institution or for transfer from one program to another should be submitted in writing to the Board prospectively, not retroactively.

Training by preceptorship is not considered as fulfilling certification requirements. No credit is given for time spent in such training.

Credit for partial training in foreign or other non-approved centers may be granted by the Board on an individual basis when this training is carried out as an integral part of the training program and with the advice and approval of the candidate's program director. The Board must be informed of such a rotation prior to its occurrence.

The above provisions in no way alter the basic minimum requirement of 60 months of training in neurosurgery, including a minimum of three months training in clinical neurology and 36 months of clinical neurosurgery in 12 months of which must be as senior resident, and 24 months in one institution.

Primary Examination

Each applicant for the Board's Oral Examination must first successfully pass the Primary Examination, which is a written examination prepared by the Board with the assistance of a professional testing organization. The Examination includes information on neuroanatomy, neurochemistry, neurology, neuropathology, neuropsychology, neurophysiology, neuroradiology, neurosurgery, fundamental clinical skills and material from other relevant disciplines deemed suitable and important by the Board.

The Examination is given once each year, usually in March, at such locations as are designated by the Board.

Candidates and Diplomates may take this Examination as often as desired for either credit or self-assessment.

The Examination may be taken for credit during residency training or during practice following completion of training. A trainee in an accredited training program may take it for credit at the discretion of the program director. It is also open to neurosurgeons who have successfully completed accredited training programs.

The Primary Examination for self-assessment is open to all trainees in neurosurgical training programs, as long as they are individuals eligible for eventual certification. It is also open to neurosurgeons who have successfully completed training at accredited programs.

An application must be filed to take the Primary Examination. The deadline for receipt of this application by the Board is usually the first of January. The form should be accompanied by the fee set by the Board for the Examination. This fee will be refunded only if the candidate informs the Secretary's office that he or she is not going to sit for examination prior to the deadline date for receipt of applications.

Candidates taking the Primary Examination are required to sign a pledge which states that they agree to be bound by the Board's ruling regarding credentials irrespective of scores on the Examination. By signing the pledge, candidates grant permission to the American Board of Neurological Surgery and the professional testing organization to release the Examination results, either credit or self-assessment, to the candidate's program director.

Candidates should keep in mind that they must be scheduled for Oral Examination by the Board within five years of passing the Primary Examination for credit or within five years of completing a formal training program, whichever occurs later. Compliance with this regulation requires early submission of applications for certification once candidates finish training. If a candidate cannot be scheduled within
the five year limit due to late submission of an application for Oral Examination, he or she must once again take and pass the Primary Examination for credit before being scheduled for Oral Examination within the succeeding five year period.

Candidates should also keep in mind that the Secretary’s office usually requires 18 months between submission of an application and notification of scheduling for the Oral Examination.

**Practice Requirements**

Following completion of a neurosurgical training program, an additional period of not less than two (2) years of satisfactory practice of Neurological Surgery is required prior to examination. After one year of practice, the candidate shall furnish to the Board either the names of or actual letters from three individual physicians (two neurosurgeons) who are knowledgeable about the quality of the candidate’s practice. If only the names and addresses are provided, the Board will request additional letters from these physicians. It is also the prerogative of the Board to contact other physicians in the community and, at the Board’s discretion, it may send representatives to review the candidate’s practice.

In addition to these letters, the candidate will submit either the names and addresses or actual letters from either the Medical Director or the Chief of Staff of each hospital where the candidate has hospital privileges. These letters are intended to advise the Board of the candidate’s status regarding admitting and operating privileges in each hospital where he/she practices.

Prior to Oral Examination, candidates shall forward to the Board a typewritten, chronological list of hospital patients for whom he or she has been the responsible physician or surgeon. The Practice Data Sheets and Summary of Practice Experience forms are to be prepared and ready for submission as soon as possible. For candidates completing training prior to July 1982, the Practice Data is to be submitted to the Board within the two years just prior to sitting for the Oral Examination. For candidates completing training on or after July 1, 1982, only 12 consecutive months of Practice Data is required. Information may include, but may not be limited to:

- **A.** Identifying hospital number and date of admission,
- **B.** Clinical diagnosis,
- **C.** Definitive diagnostic procedures, if performed,
- **D.** Operations, if performed,
- **E.** Results, including all complications and autopsy findings, when applicable, and
- **F.** Summary form of the clinical material seen and surgical work performed by the applicant.

No minimum volume of diagnostic or operative procedures is required; however, candidates should keep accurate records at all times so that the material is readily available. The total experience must be tabulated by the candidate in a format defined by the Board and prepared on forms available from the Board. This case material must be accompanied by documents indicating their essential accuracy from the record or medical librarian, chief of staff, chief of service, president of the medical staff or hospital administrator of the hospitals where the candidate practices.

These data must be sent to the Board at a time set by the Board. It will be reviewed prior to the Oral Examinations. Candidates are responsible for retaining duplicate copies of these records.

**Military Service Practice**

Medical officers who have elected the military as a career may apply for certification on the same basis as physicians in civilian practice. The practice requirement may be met by hospital assignments in which their duties are limited to practice of Neurological Surgery. Credit for practice in a service setting by those who are not career officers, will usually consist of one year of practice time. Credit for each year of practice. Practice information for each individual in this category must still be reviewed by the Credentials Committee and the Board.

**Certification of Those Training in Canadian Programs**

Those satisfactorily completing an approved Canadian training program are eligible for certification through the same route as candidates from the United States. Each candidate must:

1. Pass for credit the Primary Examination,
2. Have training acceptable to the American Board of Neurological Surgery, and have credentials for such training reviewed by the Credentials Committee and approved by the Board,
3. Present evidence of a satisfactory two year period of practice, and
4. Pass the Oral Examination.

Candidates who complete training in approved Canadian programs and are certified by the Royal College of Physicians and Surgeons (Canada) in neurosurgery must have completed the same training and practice requirements as graduates of accredited training programs in the United States when applying to the American Board of Neurological Surgery for Oral Examination and certification.

**Certification for Those Training in the United States and Canada but Practicing Neurological Surgery in a Foreign Country**

Prior to July 1, 1972

Foreign Certificates may be issued to applicants who began neurological training in the United States or Canada prior to July 1, 1972. Training for a Foreign Certificate must meet the requirements of the Board. Such individuals must return to a country in which they are legally licensed to practice medicine other than the United States or Canada, and must file with the Board a sworn declaration of his or her intent to return to residence in that country before he or she may be scheduled for Oral Examination. A Foreign Certification is only issued upon return of the applicant to the foreign country which he or she has declared would be the country of residence. Foreign Certificates will be valid only during residency of the recipient in a country other than the United States or Canada; they are null and void, and must be returned to the Board if the recipient becomes a resident of either the United States or Canada or returns to either country to practice. If the holder of a Foreign Certificate becomes a resident or a practitioner in the United States or Canada and wishes to gain a Regular Certificate, he or she may apply for conversion of certificate.

On or After July 1, 1972

Individuals wishing to practice in countries other than the United States or Canada who initiated their neurosurgical training on or subsequent to July 1, 1972, and who wish to practice in a foreign country but be certified by the American Board of Neurological Surgery must apply for a Regular Certificate. This certificate would also be valid for neurosurgical practice should the individual return to the United States or Canada. Residence may be established in the foreign country for the two years of practice before being scheduled for Oral Examination. During training or this period of practice, the individual must pass the Primary Examination for credit. He or she must keep track of practice data, just as any other candidate for certification, and pass the Oral Examination.

**Applications**

Applications for the Oral Examination are automatically sent to residents in June of their last year of training.
Accompanying the application is a Booklet of Information and a set of Practice Data Sheets. Additional applications are available from the Board office for those candidates who have been out of training for a period of time. The application should be filled out and returned to the Board as soon as possible after completion of training so that inquiries may be made from references provided as well as from others in the community, the individual’s training program faculty, and the hospitals where the candidate practiced.

It takes 18 months or more between submission of the application and scheduling for Oral Examination. This time is necessary so that the practice experience can be collected by the candidate and processed by the Board. Candidates must apply soon enough after completion of training in order to be scheduled for the Oral Examination within five years of passing the Primary Examination for credit or within five years of completion of their formal training program, whichever occurs later. If application is made beyond the five year limit, the candidate must again pass the Primary Examination for credit before being scheduled for the Oral Examination within the next five years.

A pledge is part of the application for Oral Examination. By signing the application, the applicant agrees to abide by all the terms and conditions of this pledge.

Upon receipt of an application, the Board takes such steps as deemed appropriate to verify the statements of facts made in the application. Inquiries are made from references and possibly from others familiar with the candidate to obtain information relevant to the requirements for examination. Prior to Oral Examination, each candidate must be in possession of hospital staff privileges in all hospitals in which he or she cares for patients. Such privileges must be full privileges in respect to the hospital’s requirements for a neurosurgeon.

The Board makes the final decision regarding a candidate’s eligibility for Oral Examination and potential certifiability after considering all available information pertaining to the entire process of certification. Applications must be typewritten.

Application fees, once received, will not be refunded.

**Oral Examination**

The Oral Examination is given two or three times a year. The format for this examination is a clinical problem solving and patient management test. The candidates are given case histories or other appropriate material, x-rays, scans and other visual aids to augment the presentation and development of the case. The candidate must be able to explain verbally how he or she would proceed in evaluating and/or managing the case and plan and perform the proposed operation or operations, if indicated. One hour is devoted to neuroanatomy and neurophysiology, one hour to neurological surgery—spinal and peripheral nerve disease; and one hour to neurology. Each of the three hours is conducted in an interview setting with two examiners. If upon receipt of notification of scheduling for the Oral Examination, the candidate cannot appear for the examination, he must notify the Board immediately, since there is usually a waiting list for each examination. The examination fee will not be refunded except under exceptional circumstances deemed appropriate by the Board.

A candidate who passes the Oral Examination will be forwarded the Board’s Certificate, once it is suitably engrossed and signed by the then current officers of the Board.

**Re-examination Rules**

If a candidate fails the examination once and wishes to repeat it, this must be requested by writing to the Board within a three year period. A new application form need not be filled out, but a re-examination fee must be paid prior to examination. A minimum of one year must elapse before taking the exam for the second time.

A candidate who has failed the Oral Examination on two occasions, must pass the Primary Examination for credit again before becoming eligible to retake the Oral Examination. A new application form must also be filed, and two letters of reference certifying the nature and quality of the candidate’s practice must be submitted to the Board. In addition, the candidate must pay the Oral Examination fee. Under these circumstances, candidates must take the Oral Examination within three years of passing the Primary Examination. Should the candidate not apply for or fail to appear for or fail the Oral Examination within the three year period, the candidate must retake and pass the Primary Examination once again before being eligible for Oral Examination.

**Payment of Fees**

The fees for filing an application and for Oral Examination will be determined by the Board. These fees reflect costs which the Board incurs to pay for obligations associated with the certification process. The application fee will not be returned even though the application for examination is denied. When notified by the Board that the candidate is eligible for examination, the candidate shall send the examination fee in the amount current (in U.S. dollars) at that time at least 30 days prior to the examination. Cancellation by the candidate less than 90 days prior to the Oral Examination date will result in no refund of the examination fee.

**Revocation of Certificate**

Pursuant to rules and regulations established by the American Board of Neurological Surgery, the Board has the authority to revoke any certificate issued by the Board if: a) such certificate was issued contrary to or in violation of any rule or regulation of the Board, b) the person to whom the certificate was issued was not eligible to receive or has since become ineligible to continue to hold such a certificate, c) the person to whom the certificate was issued made any misstatement of fact to the Board in his application or otherwise, d) the person to whom the certificate was issued is convicted of a felony. Should revocation be disputed, there is a hearing mechanism for such an action.

**AMERICAN BOARD OF NUCLEAR MEDICINE**

I. Ross McDougall, MB, ChB, PhD, Chairman, Stanford, California
John R. Hansell, MD, Vice Chairman, Philadelphia, Pennsylvania
Merle K. Loken, MD, Secretary, Minneapolis, Minnesota
Will B. Nelp, MD, Treasurer, Seattle, Washington
Naomi P. Alzraki, MD, Salt Lake City, Utah
M. Donald Blaufuss, MD, Bronx, New York
David L. Gilley, MD, Toronto, Canada
Nilo E. Herrera, MD, Danbury, Connecticut
George A. Herrmann, MD, Philadelphia, Pennsylvania
Dennis D. Patton, MD, Tucson, Arizona
Barry A. Siegel, MD, St. Louis, Missouri
Edward V. Staab, MD, Chapel Hill, North Carolina
Joseph F. Ross, MD, President,
900 Veteran Avenue, Los Angeles, California 90024

**Definition of Specialty**

Nuclear medicine is the clinical and laboratory medical specialty that employs for diagnosis, therapy and research the nuclear properties of radioactive and stable nuclides to evaluate metabolic, physiologic, and pathologic conditions of the body.

**Purposes of the Board**

The primary purpose of the board, and therefore its
most essential function, is the advancement of the health of the public through the establishment and maintenance of standards of training, education, and qualification of physicians rendering care in nuclear medicine to the people of the United States. The Board contributes to the improvement of health care in the United States and carries out this purpose by: (a) establishing requirements of graduate training related to examinations given by the Board; (b) influencing the standards required by hospitals and institutions that provide such graduate training; (c) aiding in the assessment and accreditation of programs in hospitals and institutions providing graduate training; (d) assessing the credentials of candidates for the examinations of the Board; (e) conducting an examination process to determine the competence of candidates for certification by the Board; (f) granting and issuing certificates in nuclear medicine to voluntary applicants who have not been found qualified by the Board; and (g) maintaining a registry of holders of such certificates, and serving the medical and lay public by preparing and publishing in the Directory of Medical Specialists the names of practitioners who have been certified by the Board.

Significance of Certification
A physician certified by the American Board of Nuclear Medicine has fulfilled its prerequisites for training, been certified by the Director of his/her residency training program as competent in clinical nuclear medicine, made application for and successfully completed a qualifying written examination encompassing the medical uses of radioactive materials and related physical sciences. A Diplomate of this Board is capable of:
1. Assuming clinical responsibility for patients under his/her care.
2. Serving as consultant to other physicians and advising them of the clinical indications and limitations and assessment of benefits versus risks of diagnostic and therapeutic applications of radioactive materials.
3. Conducting or supervising the performance of clinical procedures, involving the use of radioactive materials.
4. Rendering a valid written or verbal interpretation of the results of such procedures.
5. The medical management of persons exposed to ionizing radiation; the safe management and disposal of radioactive substances; and the direction of radiation safety programs.

The certificate does not confer on any person legal qualifications, privileges, or license to practice medicine or the specialty of nuclear medicine. The Board does not purport to interfere with or limit the professional activities of any licensed physician.

Requirements for Certification
A. General Requirements for Each Candidate
Assurance that the applicant represents himself/herself to be a specialist in nuclear medicine.
B. General Professional Education
Graduation from a medical school approved by the Liaison Committee on Medical Education or from a school of osteopathy. If the applicant is a graduate of a medical school outside the United States or Canada, he/she must have satisfactorily passed either the ECFMG, or the VQE, or the FMGEM administered by the ECFMG, 2100 Pennsylvania Avenue, N.W., Suite 738, Washington, D.C. 20037.
C. Preparatory Post-Doctoral Training
Training required for admission to the certifying examination in nuclear medicine shall be comprised of two or more years of preparatory post-doctoral training, and two or more years of residency training in nuclear medicine.

Preparatory post-doctoral training shall consist of two or more years of residency training in programs satisfactory to the American Board of Nuclear Medicine. Such programs shall provide broad experience in clinical medicine in which the primary emphasis is on the patient and his clinical problems. Preparatory training may be in any specialty in a residency program in the USA approved by the Accreditation Council for Graduate Medical Education (ACGME), or programs in Canada approved by the Royal College of Physicians and Surgeons of Canada, or the Professional Corporation of Physicians of Quebec. The American Board of Nuclear Medicine recommends that preparatory post-doctoral training should precede training in nuclear medicine. However, this preparatory post-doctoral training may be interspersed with or may follow the two years of nuclear medicine training.

Each nuclear medicine Residency Training Program Director must ensure that for each resident entering his program the preparatory post-doctoral training has been in a USA program approved by the ACGME, or in a Canadian program approved by the Royal College of Physicians and Surgeons of Canada (RCPSC), or the Professional Corporation of Physicians of Quebec (PCPQ).
D. Special Post-Doctoral Training in Nuclear Medicine
1. After completion of the preparatory post-doctoral training programs, there shall be satisfactory completion of a two-year fellowship training program in nuclear medicine in a nuclear medicine residency training program recognized and approved by the Residency Review Committee for Nuclear Medicine and the ACGME or a Canadian program approved by the RCPSC or the PCPQ as competent to provide a satisfactory training in nuclear medicine.

2. The two-year fellowship training program in nuclear medicine must include:
   a. A minimum of eighteen months of training in clinical nuclear medicine, which will include, but not be limited to, radioisotopic assay, in vitro and in vivo measurements, nuclear imaging, the principles of nuclear magnetic resonance imaging, therapy with unsalted radionuclides, medical management of individuals exposed to ionizing radiation, the safe management and disposal of radioactive substances, and the direction of radiation safety programs.
   b. Training in allied sciences which must include: medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry, statistics, and computer sciences; and may also include pathology, physiology, and other basic sciences associated with nuclear medicine. The time spent in training in allied science may be spaced throughout the period of training in nuclear medicine and in a manner that does not exceed six complete months of training.
   c. For candidates who have completed one or more years of residency in clinical disciplines closely related to nuclear medicine, a minimum of three months credit may be given for prior training in allied sciences (described in the preceding paragraph) if obtained during a residency in an ACGME, RCPSC or PCPQ approved program. Likewise, a maximum credit of three months may be given for approved training in radiography/radioisotopic assay or for training in ultrasound imaging and/or emission and transmission computed tomography. Regardless of the amount of training in fields allied to nuclear medicine, however, each candidate must satisfactorily complete a minimum of 18 months of clinical training in an ACGME, RCPSC or PCPQ approved program in nuclear medicine. It may be given for prior clinical training in nuclear medicine, nuclear radiology, and radiotopic pathology obtained in programs approved by the ACGME, RCPSC or PCPQ.

3. The Board considers demonstration of clinical competence in the management of the nuclear medicine patient of paramount importance in its qualification of the applicant to take the certifying examination. The Board
designates the directors of nuclear medicine residency programs and their supporting Evaluation Committees as the authorities who most appropriately can provide to the Board the necessary documentation of competence in clinical nuclear medicine, and requires that all program directors certify to the Board that each applicant from their programs is competent in clinical nuclear medicine. These reports will be reviewed by the Board before accepting an applicant to take the certifying examination.

If a residency program director's evaluation indicates a candidate's competence in clinical nuclear medicine is unsatisfactory, the applicant will not be admitted to the examination unless the Board finds that the applicant's overall performance meets its standards. An applicant not admitted to an examination on the basis of these findings may appeal in writing to the Board for a special evaluation of competence in clinical nuclear medicine within 45 days of receipt of notification. The appeal should state that a request is made for review of the decision not to admit to the examination and why the candidate considers the decision to be in error. Applicants whose clinical competence is judged satisfactory in this evaluation will be admitted to the next examination for which they apply. Candidates judged not satisfactory in this evaluation are advised to spend an additional year training before applying again for special evaluation of competence.

Applicants submitting false credentials are subject to disqualification from examination or revocation of certification.

E. Patient Care Responsibility

Candidates for certification in nuclear medicine will have the equivalent of at least two years training in which the primary emphasis is on the patient and his clinical problems. This minimum period may be spaced throughout the entire post-doctoral training but should be of sufficient duration for the trainee to become knowledgeable in the aspects of clinical medicine relevant to nuclear medicine, including patient care.

F. Canadian Training

Physicians who satisfactorily complete training in Canadian nuclear medicine programs approved by the Royal College of Physicians and Surgeons of Canada or the Professional Corporation of Physicians of Quebec are eligible for admission to the ABNM certifying examinations.

G. Completion of Training

All preliminary and nuclear medicine residency training must be completed prior to September 1st of the year the candidate takes the certifying examination.

Approved Residency Training Programs

Residency training programs in nuclear medicine accredited by the ACGME may be found in the Directory of Residency Training Programs, published annually by the American Medical Association or may be obtained by contacting: Secretary, Residency Review Committee for Nuclear Medicine, ACGME, 535 North Dearborn Street, Chicago, Illinois 60610.

Examination

An objective type examination is administered in a morning and an afternoon session. The examination evaluates the applicant's knowledge and competence in the management of patients in the area of clinical nuclear medicine, including, but not limited to, radiography, radiobiology, in vivo and in vitro measurements, nuclear imaging, the principles of nuclear magnetic resonance imaging, and therapy with unsealed radionuclides, the medical effects of exposure to ionizing radiation, the medical management of persons exposed to ionizing radiation, radiation safety, and the safe management and disposal of radioactive substances. Also included is an evaluation of the candidate's knowledge in the related sciences of medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry, computer sciences, and statistics; it may also include pathology, physiology, and other basic sciences associated with nuclear medicine.

Applications

Applicants who wish to be examined by the Board must complete, sign, and file with the Board office an application on the official form together with the supporting data required by the application. The application must include two photographs of the applicant, signed near any edge so that the face of the individual is not obscured. Do not sign the photographs on the back. The applicant must enclose a check to cover the examination fee and a self-addressed postcard which will be returned to the applicant when all application materials have been received by the ABNM. It is the responsibility of the applicant to make certain that the required evaluation form has been completed by his/her Program Director, and sent to and received by the ABNM.

As soon as determination is made concerning admission or nonadmission to the examination, the candidate will be notified by certified mail; and if admitted, assignment of the candidate number and notification of the examination site will be given.

Before the final action on applications, officers, members, and employees of the Board are not authorized to estimate the eligibility of applicants. Applicants are requested not to discuss or write for opinions regarding the status of their application. The Board decides on eligibility to take the examination only by approving or disapproving individual applications, and accordingly has no "Board Eligible" category.

Inquiries concerning the applicability of previous training and experience should be sent with complete documentation of all education and training to the Board office. A copy of the Board's response to these inquiries should be forwarded with any subsequent examination application.

Release of Information

Candidates will receive the results of their examinations (pass/fail letter) approximately four months after the examination.

A list of diplomates of the ABNM will be found in the ABMS Compendium of Certified Medical Specialists published by the American Board of Medical Specialties and in the Directory of Medical Specialists, published by Marquis Who's Who.

Upon request and with the approval of the Board Chairman, the Board releases information on diplomates to federal and state licensing bodies and to educational and professional organizations for specific, limited, and appropriate professional use. An authorization for release of this information is a part of the examination application form.

Policy on Re-examination

Applicants who fail the examination are eligible for re-examination. Applicants who qualified for the 1976 examination, by fulfilling one of the alternative training requirements, but who failed or who withdrew for a valid reason may take a subsequent examination. An examination fee must accompany each completed application for re-examination. If an applicant is disqualified from the examination by reason of dishonesty in the application or in taking the examination and his/her examination is invalidated by the Board, re-examination shall be at the Board's discretion.

Recertification

The ABNM is studying mechanisms to effect voluntary recertification. The ABNM will not rescind initial certificates unless a date of expiration is a condition of the original certificate. No certificate issued to date contains an expiration date.

Changes in Policies and Procedures
The Board reserves the right to make changes in its fees, policies, and procedures at any time, and cannot assume responsibility for giving advance notice thereof. The provisions of this publication are not to be construed as a contract between any candidate and the American Board of Nuclear Medicine.

Fees
The examination fee must accompany the application. If the applicant is rejected by the Board, or withdraws prior to August 1, the application processing fee will be retained by the Board. If the applicant withdraws after August 1, the entire examination fee will be retained by the Board.

AMERICAN BOARD OF OBSTETRICS AND GYNECOLOGY
Daniel R. Mishell, Jr., MD, President, Los Angeles, California
Charles B. Hammond, MD, Vice President, Durham, North Carolina
C. D. Christian, MD, Director of Evaluation, Tucson, Arizona
John H. Issacs, MD, Treasurer, Evanston, Illinois

Gerson Weiss, MD, Newark, New Jersey

Types of Board Status
1. Active Candidate Status
   A. A candidate for certification may achieve active candidate status when upon application the Board rules that he/she has fulfilled the requirements to take the next regularly scheduled examination. (See Requirements.)
   B. To maintain active candidate status the candidate must have applied and have been ruled eligible to take the next appropriate regularly scheduled examination: written or oral.
   C. Active candidate status which has been interrupted may be regained only by reapplication and reaffirmation by the Board of a candidate's current eligibility to take the next appropriate examination.

2. Diplomate Status
   A candidate becomes a Diplomate of the Board when he/she has fulfilled all requirements, has satisfactorily completed the written and the oral examinations and has been awarded the Board’s Diploma.

The Certification Process
Certification as a specialist in obstetrics and gynecology is the end of a process lasting many years. The required minimum duration of graduate education is four years. During the final year of graduate training, it is necessary to initiate certain measures. Because most graduate training programs begin on July 1 and end on June 30, the following summary of the certification process is based on these dates. However, applicants who complete residency training at unusual times will have an extended time in the certification process.

Between August 15 and November 30 of the final year of residency, the candidate should request and complete the application for the written examination. If he/she is ruled eligible to take the examination, he/she will do so in June of the final year of residency.

If he/she passes the written examination, the candidate enters a two-year period of practice in the specialty. The candidate is required to provide a list of patients under his/her care for a 12-month period beginning on July 1 of his/her first year of practice. Between January 1 and February 28 of his/her second year of practice, the candidate should request and complete the application for the oral examination.

The candidate may enter a 2-year Board-approved post-residency fellowship. Upon completion, this candidate will then enter a one-year period of practice in the specialty. This candidate is required to provide a list of patients under his/her care during this year of practice. Between January 1 and February 28 of this year of practice, the candidate should request and complete the application for the oral examination.

The candidate’s list of patients must be mailed to the Board office between July 1 and August 31 following the completion of the 12-month period of patient care. If ruled eligible the candidate thus takes the oral examination in December.

Important Dates in the Certification Process
I. Final year of residency
   July 1—Commence
   September 1—November 30—Apply for written examination
   June—Take written examination

II. Practice
A. First year of practice
   No Board activities necessary
B. Second year of practice
   July 1 to June 30—Patient List
   January 1—February 28—Apply for oral examination
C. Third year of practice
   August 31—Deadline for submission of patient list
   December—Take oral examination
REQUIREMENTS FOR CERTIFICATION

Obstetrics and Gynecology

III. Fellowship in Subspeciality
   A. First year (fellowship)
      No Board activities
   B. Second year (fellowship)
      No Basic Board activities
      (September 1-November 30—Apply for Subspecialty Written Examination)
   C. Third year—first year of practice
      July 1-June 30—Patient list
      January 1-February 28—Apply for the oral examination
   D. Fourth year—second year of practice
      August 31—Deadline for submission of patient list
      December—Take oral examination

Responsibility of a Candidate

It is the responsibility of the candidate to seek information concerning the current requirements for certification as an obstetrician and gynecologist. The Board does not assume responsibility for notifying a candidate of changing requirements or the impending loss of his/her eligibility to take an examination.

A physician who formally obligates himself/herself to an accredited residency program and then later breaks his/her agreement without justifiable cause may be required to provide an explanation satisfactory to the Board before being considered to have served satisfactorily as a resident in an accredited program.

The Written Examination

The Written Examination is a 3 1/3 hour examination consisting of questions of the objective (multiple choice) type. Questions will be chosen from each of the following areas of knowledge:

A. Anatomy, Embryology and Genetics.
B. Physiology.
C. Endocrinology, Fertility and Infertility.
D. Gynecology.
E. Obstetrics.
F. Medicine, Surgery and Psychosomatic Problems.
G. Pathology.
H. Oncology.

The candidate will be expected to demonstrate skills necessary to apply basic knowledge to the management of clinical problems. These skills include:
1. Obtaining needed information.
2. Interpretation and use of data obtained.
5. Following and continuing care.

The areas of information and skills examined for are further outlined in “Educational Objectives for Resident Education in Obstetrics and Gynecology” published by the Council on Resident Education in Obstetrics and Gynecology.

Requirements

1. Degree of Doctor of Medicine, or an equivalent degree, and unrestricted license (not educational or institutional) to practice medicine in one of the states or territories of the United States or a province of Canada.

Candidates with a D.O. degree must have graduated from a school of osteopathy accredited by the American Osteopathic Association.

BEGINNING WITH THE 1989 EXAMINATION, GRADUATES OF MEDICAL SCHOOLS NOT ACCREDITED BY THE LIAISON COMMITTEE FOR MEDICAL EDUCATION (LCME) OR THE COMMITTEE ON ACCREDITATION OF CANADIAN MEDICAL SCHOOLS (CACMS) MUST PROVIDE EVIDENCE OF PASSING PERFORMANCE ON BOTH PARTS OF THE FOREIGN MEDICAL GRADUATE EXAMINATION IN MEDICAL SCIENCES (FMGEMS).

2. The candidate will be required to have completed or be near completion of no less than four years in clinical programs accredited by the Accreditation Council for Graduate Medical Education or the Council of the Royal College of Physicians and Surgeons of Canada. This must include at least 36 months of obstetrics and gynecology, including the usual time as chief (senior) resident in the program. Completion of a year of “PG-1” plus a three year residency program, or a four year residency program will fulfill this requirement, but if the program consists of more than four years, the entire program must be completed.

TIME SPENT IN AN OSTEOPATHIC HOSPITAL OR IN ANY PROGRAM NOT ACCREDITED BY THE ACCREDITATION COUNCIL FOR GRADUATE MEDICAL EDUCATION WILL NOT FULFILL THIS REQUIREMENT.

3. A statement signed by the program director certifying that the candidate has:
   a. Followed satisfactorily the course of instruction designed for this program;
   b. Completed and submitted to the program director a resident experience log;
   c. Achieved the appropriate knowledge, ability, and judgment in order to provide competent clinical care in obstetrics and gynecology, as documented by ongoing evaluation during the entire resident program;
   d. Demonstrated the necessary technical skills to competently perform:
      (1) Major abdominal and vaginal surgical procedures upon the female pelvis and related structures,
      (2) Spontaneous and operative obstetric deliveries,
      (3) Surgical exploration of the abdomen,
      (4) Endoscopic procedures in the pelvis,
      (5) Diagnostic evaluation including electronic monitoring, ultrasound, colposcopy and amniocentesis,
      (6) Diagnosis and treatment of complications of the above, and
   e. Demonstrated good moral and ethical character.

4. Special considerations may be given for outstanding candidates on an individual basis if requested by a program director of an accredited program in obstetrics and gynecology. To be considered, candidates must have received adequate formal training in obstetrics and gynecology. If the request relates to foreign training, the candidate must have been observed by the proctor for at least one year. The request must document the evidence for the candidate's outstanding accomplishments.

Limited Eligibility

Candidates who fail to take the written examination within three years of completion of the residency, fail the written examination three times, or do not pass the written examination within six years of completion of the residency must have additional education in order to become eligible to take the written examination again.

The additional education shall consist of three months of full-time additional training satisfactory to the Board in an accredited obstetrics and gynecology residency program or satisfactory completion of 500 Category I credits in approved CME programs in obstetrics and gynecology during one year. Documentation of satisfactory completion of this additional education must be received with the candidate's application for the repeat written examination.

After the additional education as defined above is completed in a satisfactory manner, the candidate again becomes eligible to take the written examination. He/she must take the written examination within three years of establishing the new eligibility. Candidates who do not take the examination during those three years or who again fail the examination three times must again have additional education. Candidates must pass the examination within six years of achieving new eligibility or they will be obliged to obtain additional education.
Application for Examination in 1987

A candidate who has completed an accredited residency program and a candidate scheduled to complete an accredited residency program on or before August 31, 1987 may apply on or before November 30, 1986 to write the examination on June 29, 1987.

The form on which to apply to write the examination on June 29, 1987 may be obtained by writing to the Board Office at 947-20th Street, Suite 103, Washington, D.C. 20006. Each applicant must meet the requirements effective in the year he/she requests admission to the examination. As a part of the application form, endorsement and verification of the resident's experience, competence, SATISFACTORY PERFORMANCE and confirmation of the scheduled date for completion of the candidate's residency are requested of the director of the obstetric-gynecologic residency program.

The Board will make the final decision concerning the applicant's eligibility after considering all circumstances affecting his/her eligibility.

A candidate's application to write the examination on June 29, 1987, completed in all details, together with payment of the application fee of $125, must be received in the Board Office postmarked on or before November 30, 1986.

THE REQUIREMENT OF UNRESTRICTED LICENSE MUST HAVE BEEN MET PRIOR TO THE TIME THAT THE APPLICATION IS SUBMITTED. AN EDUCATIONAL OR INSTITUTIONAL LICENSE IS NOT SATISFACTORY.

When the candidate is ruled eligible to write the examination, he/she will be notified in early April (1) that the $250 examination fee is payable and (2) the date the fee must be paid (see FEES), if the candidate is to be scheduled to write the examination in June.

If a candidate is found to be involved in litigation or investigation regarding ethical or moral issues, he/she will not be scheduled for examination and eligibility will be re-examined. Typically, the Credentials Committee will defer such a decision for one year to gain further information.

Falsification of data (including case lists) or evidence of other egregious ethical, moral or professional misbehavior may result in a deferral of consideration of a candidate's application for at least three years and the candidate must meet all eligibility requirements in effect at the end of the deferred period.

When the Credentials Committee rules an applicant not eligible, a new application and fee may be submitted at a later date, but the candidate must then have fulfilled the requirements effective in the year of the new application.

Admission to the Written Examination

The candidate ruled eligible to write the examination will be sent an AUTHORIZATION for ADMISSION form which must be presented to the Proctor at the time of examination. When a candidate is scheduled to complete his/her residency program after submission of the application (but before September of that year), verification of the currently satisfactory manner in which the candidate is completing his/her residency must be reaffirmed by the signature of the director of the residency program on the AUTHORIZATION for ADMISSION form, dated within the month the candidate is scheduled to write the examination.

Results of the Examination

The results of the examination written in late June will usually be reported to each candidate in approximately nine weeks.

A passing grade on the written examination does not establish a candidate's eligibility to take the oral examination for certification. (See Requirements to take the oral examination.)

Requests for Re-examination

A candidate eligible to write the examination in 1987 who fails to do so, as well as the candidate who writes but fails to pass the examination in 1987 must write the Board office at 947-20th Street, Suite 103, Washington, D.C. 20006 by the 30th of November 1987 and have paid the reapplication fee of $125. It is not necessary to submit a new application in order to repeat the examination but to maintain eligibility to write the examination, the candidate must have asked to write the next scheduled examination and have paid the reapplication fee (see Status). THE CANDIDATE MUST INDICATE CONTINUATION OF UNRESTRICTED LICENSE TO PRACTICE MEDICINE IN ONE OF THE UNITED STATES OR A PROVINCE OF CANADA.

The application and examination fee (see Fees) must be paid each year a candidate is to be scheduled to write the examination.

The Oral Examination

All correspondence, applications and information directed to the Board must be in English.

All fees must be paid in U.S. currency.

Conduct of the Oral Examination

The Oral Examination is designed to evaluate the candidate's knowledge and skills in solving clinical problems in obstetrics and gynecology. It is emphasized that candidates will be examined in all areas of obstetrics and gynecology. More than half of the examination will consist of questions concerning patient management problems. The candidate's list of patients will be used freely by the examiners for this purpose but additional basic clinical problems will be included. The remainder of the examination will include recall of basic knowledge in obstetrics-gynecology and interpretation of gross and microscopic pathology, x-ray films, sonograms and related material from photographic slides.

Microscopes and slide projectors will be used. The knowledge and skills required for the Oral Examination are the same as those listed in regard to the Written Examination.

Recording devices will not be permitted during the oral examination.

Candidates will be expected to demonstrate that they have acquired the capability to perform, independently, major gynecologic operations, spontaneous and operative obstetric deliveries, to manage complications thereof and to perform the essential diagnostic procedures required of a consultant in obstetrics and gynecology.

CANDIDATES WILL BE EXPECTED TO DEMONSTRATE A LEVEL OF COMPETENCE WHICH ALLOWS THEM TO SERVE AS CONSULTANTS TO PHYSICIANS WHO ARE NON-OBSTETRICIAN-GYNECOLOGISTS IN THEIR COMMUNITY.

The report of the examining team will be reviewed by the Board of Directors and each candidate is passed or failed by vote of the Board.

You can expect the examination to be completed within a half day, with the following exception:

At the completion of the oral examination— if a candidate believes his or her examination has not been conducted in a fair and unprejudiced manner, the candidate may report within the hour to the Registration Desk and ask for a second examination. This will be provided within the next 24 hours, at no additional charge, if the candidate agrees to the following conditions:

a. The repeat examination will be conducted by an entirely different team of examiners, no one of whom shall have previously participated in an examination of the candidate.

b. Neither the questions nor the candidate's answers on the first examination will be known to or taken into account by the second group of examiners.

c. All questions will be answered in a second. The decision of the examiners conducting the second examination shall determine the results of the candidate's oral examination.
Requirements

1. Passing grade on the written examination.
2. Good moral and ethical character.
3. Unrestricted license to practice medicine in one of the United States or Territories of the United States or a Province of Canada, for no less than 12 months prior to the date of the application.
4. Actively engaged in (private or nonprivate) unsupervised practice.
   a. Independent unsupervised patient care limited to obstetrics and gynecology.
      1) for no less than 12 months immediately prior to date of application (time spent in a critical care fellowship does not meet this requirement) or
      2) for no less than 6 months immediately prior to January 1 of the year of examination, for candidates who have successfully completed a Board-approved fellowship (this includes critical care fellowships only if taken in continuity with a Board-approved specialty fellowship).
   b. Unrestricted privileges to practice as an obstetrician-gynecologist in each of the hospital(s) in which the candidate has been responsible for patient care during the 12 months ending June 30 prior to the scheduled examination. If the candidate is under investigation or probation, the examination will be deferred until the investigation is completed, the probation is lifted and full and unrestricted privileges are granted.
5. Submission of typewritten lists (in duplicate) on or before August 31 preceding the examination, of all patients dismissed from care in all hospitals during the 12 months ending June 30 prior to the scheduled examination and also of patients admitted who were discharged during the same period, showing the name of the candidate, the date of admission, discharge, type of care, and other relevant information.

THE CANDIDATE IS PERSONALLY RESPONSIBLE FOR THE PROPER PREPARATION, ACCURACY AND COMPLETENESS OF THE CASE LISTS, WHICH WILL REFLECT THE UNSUPERVISED PRACTICE (PRIVATE OR NONPRIVATE) ACTIVITY FOLLOWING RESIDENCY AND FELLOWSHIP.

6. On the day of the examination the candidate will be expected to sign the following statement: “There have been no restrictions in my hospital privileges since the date of my application.”

7. Practice which consists of ambulatory care exclusively will not be considered adequate to fulfill these requirements.

ADDITIONAL REQUIREMENTS FOR CANDIDATES PRACTICING IN A COUNTRY OTHER THAN THE UNITED STATES OR CANADA.

8. Submission with the application of a letter(s) from a senior responsible officer in the hospital(s) where the candidate practices, verifying the candidate’s responsibility for independent, unsupervised care of obstetric and gynecologic patients.

Limited Eligibility

Candidates must pass the oral examination within six years following passing the written examination and may take the oral examination only three times. If they fail the oral examinations three times, or fail to pass the oral examination within six years, they become ineligible at that time. They must repeat and pass the written examination within three years of that time to become eligible again. The repeat written examination may be taken only three times.

Candidates who fail to take or do not pass the repeat written examination during the three year period are no longer eligible for the examinations of The American Board of Obstetrics and Gynecology unless they successfully repeat a full residency in an accredited program in obstetrics and gynecology.

Candidates who do pass the repeat examination may repeat the oral examination only three times and must pass the oral examination within the ensuing three years or they will no longer be eligible for the examinations of The American Board of Obstetrics and Gynecology. Eligibility to again enter the process may be re-established only by successfully repeating a full residency in an accredited program in obstetrics and gynecology.

Determination of Eligibility

The Board will require, by confidential inquiry, documented evidence concerning a candidate’s professional reputation, moral and ethical character and in-hospital practice privileges from administrative officers of organizations and institutions to whom the candidate and his/her conduct of practice is known.

Time as a “resident” or “house officer” in excess of that necessary to fulfill the requirements to take the written examination or time in a “student” or a teaching or research appointment which does not involve appointment to the staff of an approved hospital with unrestricted privileges to practice as an obstetrician and gynecologist, will not be acceptable evidence of a degree of responsibility for patient care that is acceptable fulfillment of the required “independent practice.”

Each candidate will be required to furnish the Board with certain prescribed information concerning his/her performance in practice (maternal mortality rate—perinatal mortality rate—Caesarean Section rate—etc.).

If a candidate is found to be involved in litigation or investigation regarding ethical or moral issues, he/she will not be scheduled for examination and eligibility will be re-examined. Typically the Credentials Committee will defer such a decision for one year to gain further information.

Falsification of data (including case lists) or evidence of any egregious, moral, professional, or misbehavior may result in deferral of consideration of a candidate’s application for at least three years and the candidate must meet all eligibility requirements in effect at the end of the deferred period.

PATIENT LISTS (a) NOT PROVIDING THE INFORMATION REQUESTED (b) NOT PREPARED IN ACCORDANCE WITH THE FORMAT REQUESTED OR (c) WHICH DO NOT HAVE ADEQUATE NUMBERS OF PATIENTS OR DO NOT INCLUDE ADEQUATE BREADTH AND DEPTH OF CLINICAL PROBLEMS MAY DISQUALIFY THE CANDIDATE FOR ADMISSION TO THE ORAL EXAMINATION.

Application for Examination in 1987

Application to take the oral examination in December 1987 must be made on the “Application for the 1987 examination” form. The application, complete in all details, with payment of the application fee of $225 must be received in the Board office during January or February 1987. THE DEADLINE DATE FOR RECEIPT OF APPLICATIONS IN THE BOARD OFFICE IS A POSTMARK OF FEBRUARY 28, 1987. REQUESTS FOR THE APPROPRIATE FORM MUST BE MADE IN WRITING.

The Board will make the final decision concerning the applicant’s eligibility after considering all circumstances affecting his/her eligibility.

A candidate ruled eligible to take the oral examination in December 1987 will be so notified on or before July 15, 1987. He/she must then submit, on or before August 31, 1987:

1. Duplicate, typewritten and verified lists of all patients dismissed from his/her care in all hospitals during the 12 months preceding June 30, 1987 and a list of 25 patients from his/her ambulatory (office) practice.

2. Payment of the examination fee by personal check or money order of $350 (IN.U.S. FUNDS).
Patient Lists for the Oral Examination

Each candidate for the Oral Examination must prepare the following lists for review by his/her Examiners at the time of examination. The candidate's list of patients will be freely used as a basis for questions which will be patient-management oriented. Questions will be developed which test the ability of the candidate to:

1. Develop a Diagnosis. This includes the necessary clinical, laboratory and diagnostic procedures.
2. Select and Apply Proper Treatment under elective and emergency conditions.
3. Manage Complications. This includes prevention, recognition and treatment.
4. Plan and direct follow-up and continuing care.

Carelessly prepared or incomplete case lists may contribute to failure to pass the Oral Examination.

The Candidate should bring a duplicate patient list to the Oral Examination for personal reference. Do not include any information on this duplicate list which did not appear on the case lists sent to the Board of Examiners.

The case lists must have numbers and sufficient breadth and depth of clinical difficulty. They must include a minimum of 50 patients with significant problems. The clinical problems will vary according to the nature of the candidate's practices. However, the problems must be of sufficient variety and severity to permit the evaluation of a candidate's ability to function as a consultant. Ordinarily these lists will include patients having obstetric management and a variety of major abdominal and vaginal surgical procedures. Candidates who have successfully completed a Board-approved fellowship and who are active candidates for certification of special qualification may submit cases in a single specialty within obstetrics and gynecology.

The candidate's list must include all hospitalized patients discharged or transferred from the candidate's care during the twelve months ending June 30 of the current year and 25 ambulatory (office) patients and must be mailed to the Board office on or before August 31 preceding the December examinations.

The patients listed must be only those for whom the candidate has had personal responsibility for professional management and care. Recording such professional responsibility implies that the candidate has personally controlled the medical and/or surgical management of each patient listed. In the case of partnership or group practice, the patients listed should be only those managed by the candidate.

Procedure

A candidate ruled eligible to take the Oral Examination the following December will be notified about July 15. Following this notification and before August 31, the candidate must submit the required list of patients.

A patient list should be accurately typed in duplicate across unbound sheets of white paper 8 1/2 x 11 inches in size. Separate lists are required for each hospital. The headings must conform in all details and provide the information indicated by the format of the forms enclosed with the oral application.

Standard nomenclature should be used. Abbreviations are not acceptable. Only English language will be acceptable.

The duplicate lists of patients will not be returned after the examination. The candidate should bring a duplicate list to the oral examination.

1. GYNECOLOGY

A list of all gynecologic patients—(a) hospitalized (b) ambulatory or short-stay surgery—should be prepared in the format accompanying the application and listed in order as follows:

(1) Major operative procedures
(2) Minor operative procedures
(3) Non-surgical admissions

The preoperative diagnosis should appear for all major and minor surgical procedures. For non-surgical conditions the admission diagnosis should be recorded. The treatment recorded should include all surgical procedures as well as primary non-surgical therapy. Surgical diagnosis refers to the pathology diagnosis. FOR Hysterectomy SPECIMENS THE UTERINE WEIGHT IN GRAMS MUST BERecorded. In cases without tissue for histologic diagnosis the final clinical diagnosis should be listed.

Days in hospital on this listing of patients, as well as on all other lists, is the arithmetic difference between date of discharge and date of admission.

2. OBSTETRICS

A list of obstetric patients should be prepared in the format accompanying the application. List separately each patient with a complication or abnormality, as well as medical and surgical intervention during pregnancy, labor, delivery and the puerperium. In addition, a total of the number of normal uncomplicated obstetric patients managed by the candidate during the same 12 month period should appear at the end of the obstetric list.

Interpretation of "normal obstetric patients" for this listing implies that: pregnancy, labor, delivery and the puerperium were uncomplicated, labor began spontaneously between the 37th and 42nd week of gestation, the membranes ruptured or were ruptured after labor began, presentation was vertex, position was occiput anterior or transverse, labor was less than 24 hours in duration, delivery was spontaneous or by outlet forceps with or without episiotomy, from an anterior position, the infant was not asphyxiated (Apgar 6 or more) of normal size and healthy, the placental stage was normal and blood loss was not excessive.

Deliveries not fulfilling these criteria must be listed individually.

3. PREGNANCY TERMINATIONS

The total number of uncomplicated terminations of pregnancy of twelve or less weeks duration, managed by the candidate during this same 12 month period, should be reported simply as a total number.

Interruptions of pregnancy of more than twelve weeks (menstrual age) duration should be prepared in the format accompanying the application. List each patient separately, indicating the duration of pregnancy, the technique employed, the duration of (1) hospitalization, and/or (2) your observation of the patient.

Also list separately as individual patients, all with complications following terminations of pregnancy, either observed or reported to you following an interruption of pregnancy, regardless of the duration of the pregnancy when termination was initiated.

4. COVER SHEETS

Each list of patients, (1) gynecologic, (2) obstetric, and (3) terminations of pregnancy, from each hospital should be verified as illustrated by the form accompanying the application. Note that the record librarian or other hospital official must attest that (a) the patients listed were cared for by the candidate, and (b) that all of the hospitalized patients dismissed from the candidate's care have been separately listed or reported in the totals reported for the period indicated.

5. SUMMARY SHEET

Using the form provided for this purpose, prepare a summary of all cases for all hospitals combined.

6. AMBULATORY (OFFICE) PATIENTS

A list of 25 patients from the candidate's ambulatory
REQUIREMENTS FOR CERTIFICATION

Obstetrics and Gynecology

Determinations shall be prepared in the format accompanying the application. List separately patients who have presented with any of the following problems. List no more than five patients from any one category:

- Anemia or Anemia
- Infertility
- Abnormal Uterine Bleeding
- Developmental Problems
- Sexual Dysfunction
- Contraceptive Complications
- Hirsutism
- Abnormal Cervical-Vaginal Cytology
- Pelvic Pain
- Vaginal Discharge/Pruritus
- Breast Problems
- Medical Complications of Pregnancy
- Premenstrual Tension
- Postoperative Problems
- Sexually Transmitted Disease
- Asymptomatic Pelvic Mass
- Pelvic Relaxation Problems
- Urinary Tract Infection
- Psychosomatic Problems
- Menopause

List separately each patient and include the problem (one of the listed categories), diagnostic procedures, treatment, results and number of office visits during the 12 month period.

Admission to the Oral Examination

If the examination fee has been paid AND the duplicate lists of patients have been submitted by August 31, 1987, the candidate will receive an Authorization for Admission Form and a Reservation Card for the hotel at least one month prior to the examination, indicating the day, time and place to report for the examination. Please keep us informed of your current mailing address.

Rule of Ineligibility

A candidate ruled ineligible to take an oral examination, may subsequently re-apply, but must then submit a new application, pay the examination fee, and meet the requirements applicable at the time he/she re-applies. (See Status.) If the candidate was disqualified because the case lists were judged insufficient for a fair examination, the new case lists will be added to those already submitted.

Re-examinations

A candidate who is disqualified or who fails to pass the oral examination must reapply in order to take the examination another year by submission of a new application during January and February, with payment of the reapplication fee of $225.

A candidate reapplying for re-examination will again be asked to provide verification of his/her responsibilities for patient care and will again be notified, early in July in regard to his/her eligibility to take the next examination.

A candidate accepted for re-examination must again submit, on or before August 31, 1987, a list of patients for the 12 months prior to June 30 prior to the oral examination.

The examination fee of $225 is due each time a candidate receives notice that he/she can be scheduled to take the oral examination. Each re-examination will be conducted by examiners who have no knowledge of the fact or circumstances of a candidate's previous failure.

Postponement of Oral Examination

A candidate failing to take an oral examination for which he/she had been scheduled must submit a new application during January or February of the following year when his/her eligibility to take the next examination will be determined on the basis of the candidate's professional activity as reported during the current year. Payment of the $225 re-application fee must accompany each re-application.

If notified of his/her eligibility to take the next oral examination he/she must again submit before August 31 a listing of all patients dismissed from his/her care in all hospitals during the 12 months ending June 30 prior to the oral examination and a list of 25 patients from ambulatory (office) practice.

Fees

Since the fees have been computed to cover the costs of examination and administrative expense, they will not be refunded or credited. All fees must be paid in United States currency. The candidate's cancelled check is to be considered the receipt.

The Written Examination

The application fee of $125 must be enclosed with each application, reapplication or request to write the examination. The candidate will usually be notified early in April that his/her application or request has been approved, at which time the $250 examination fee will be due. If payment of the examination fee has not been received in the Board office postmarked on or before May 1, the candidate will not be scheduled to write the examination in June.

No application fees will be either credited against a future application or refunded.

Examination fees may be refunded provided candidates inform the Board office of their inability to write the examination prior to June 1.

The Oral Examination

The application fee of $225 must be enclosed with each application to take the oral examination. A candidate notified in mid-July of his/her eligibility to take the oral examination in December is required to pay the $350 examination fee before he/she will be scheduled to take the oral examination. If the examination fee has not been received in the Board office by August 31, the candidate will not be scheduled to take the examination the following December.

No application fees will be either credited against a future application or refunded.

Examination fees may be refunded provided candidates inform the Board office of their inability to write the examination prior to October 31.

Listings of Certified Diplomates

Each year the Board office notifies the American College of Obstetricians and Gynecologists of the names and addresses of the Diplomates certified in that year. A list of the names of the most recently certified Diplomates is sent also to the American Medical Association and to the American Board of Medical Specialties with the request that they be included in the next issues of (1) the American Medical Association Directory and (2) in the Directory of Certified Obstetrician-Gynecologists.

A candidate's name will be included in the listings only if the candidate has authorized inclusion of his/her name in the specific listings by signing accordingly on the Authorization for Admission Form at the time of his/her oral examination.

After this effort to assure initial listings of the newly certified Diplomate, the Board assumes no responsibility for a Diplomate's listing in subsequent issues of any Directory.

Revocation of Diploma or Certificate

Each candidate when making application, signs an agreement regarding disqualification or revocation of his/her diploma, certificate, or other evidence of qualification, for cause. Revocation may occur whenever:

1. The physician shall not in fact have been eligible to receive the diploma or certificate, irrespective of whether or not the facts constituting such ineligibility were known to or could have been ascertained by this Board, its mem-
592

REQUIREMENTS FOR CERTIFICATION

Ophthalmology

bers, directors, examiners, officers or agents at or before the time of issuance of such diploma or certificate.

2. Any rule governing examination for a diploma or certificate shall have been violated by the physician but the fact of such violation shall not have been ascertained until after the issuance of the diploma or certificate.

3. The physician shall violate the moral or ethical standards of the practice of medicine then accepted by organized medicine in the locality in which he/she shall be practicing and, without limitation of the foregoing, the forfeiture, revocation or suspension of his/her license to practice medicine, or the expulsion from, or suspension from the rights and privileges of membership in a local, regional or national organization of his/her professional peers shall be evidence of a violation of such standards of the ethical practice of medicine.

4. The physician shall fail to comply with the Rules and Regulations of this Board.

5. The issuance of, or receipt by him/her of such diploma, certificate or other evidence of qualification shall have been contrary to or in violation of the Certificate of Incorporation or the By-laws of this Board.

Upon revocation of any diploma or certificate by this Board as aforesaid, the holder shall return his/her diploma or certificate and other evidence of qualification to the Executive Director of the Board and his/her name shall be removed from the list of certified specialists.

AMERICAN BOARD OF OPHTHALMOLOGY

Paul R. Lichter, MD, Chairman, Ann Arbor, Michigan
Frondie A. Gutman, MD, Vice Chairman, Cleveland, Ohio
W. Banks Anderson, MD, Durham, North Carolina
Ronald M. Burke, MD, St. Louis, Missouri
J. Brooks Crawford, MD, San Francisco, California
Robert C. Drews, MD, Clayton, Missouri
John F. Flynn, MD, Miami, Florida
Frederick T. Fraunfelder, MD, Portland Oregon
George Edward Garcia, MD, Boston, Massachusetts
Robert E. Kalina, MD, Seattle, Washington
Malcolm N. Luxenberg, MD, Augusta, Georgia
Thomas H. Pettitt, MD, Los Angeles, California
Robert D. Reinecke, MD, Philadelphia, Pennsylvania
Stephen J. Ryan, MD, Los Angeles, California
William Tasman, MD, Philadelphia, Pennsylvania
Robert R. Waller, MD, Rochester, Minnesota
George W. Weinstein, MD, Morgantown, West Virginia
William H. Spencer, MD, Executive Director
Philadelphia, Office of the Board,
111 Presidential Blvd., Bala Cynwyd,
Pennsylvania 19004

Requirements

Many candidates write to the Board outlining their training and asking for an estimate of their qualifications and whether further training is required. The Board’s requirements, as published herewith, provide this information and any candidate should be able to estimate his/her status after studying these requirements. Individual officers or Directors of the Board cannot and will not make such determinations. All evaluations of a candidate’s status will be made only by the Committee on Admissions in accordance with the rules and regulations of the Board, after submission of an application for examination and payment of the registration fee, which must accompany the application. Personal interviews with officers and Directors of the Board should not be requested at any time.

EDUCATIONAL

All applicants must have graduated from a medical school or from a school of osteopathy.

1. All candidates entering ophthalmology training programs must have taken a postgraduate clinical year (PG-1) in a program accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada. The PG-1 year must be comprised of training in which the resident has primary responsibility for patient care in fields such as internal medicine, neurology, pediatrics, surgery, family practice, or emergency medicine. As a minimum, six months of this year must be a broad experience in direct patient care.

In addition to a PG-1 year, all applicants must have satisfactorily completed an entire formal graduated residency training program in ophthalmology of at least thirty-six (36) months duration (PG-4 or better) in either the United States, accredited by the Accreditation Council for Graduate Medical Education, or in Canada approved by the Royal College of Physicians and Surgeons of Canada.

The candidate’s program director is required to verify satisfactory completion of an entire formal graduated ophthalmology residency training program of at least thirty-six (36) months duration.

Only those candidates who have completed their entire ophthalmology residency, PG-4 or beyond, by August 1st are eligible to apply for the following April written qualifying examination. The Board will not accept candidates who will prospectively complete their residency training after August 1st but before the date of the April written qualifying examination.

If a program is disapproved during the course of a resident’s training, he/she must complete the remaining required number of months of training in another approved program in which case the last program director under whom the candidate trains becomes responsible for the verification of satisfactory completion. The program director’s verification form cannot be submitted to the Board until the applicant has completed the entire residency training program.

Written Qualifying Test.

LICENSURE

A candidate may have graduated from a medical school of a country other than the United States or Canada. Graduates of foreign medical schools must have a certificate from the Educational Commission for Foreign Medical Graduates (ECFMG).

All applicants must have a license to practice medicine, without restriction pertaining to the practice of ophthalmology, in the United States or Canada.

Applications

An applicant who wishes to be examined by the Board shall complete, sign and file with the Executive Director an application on the official form then in use by the Board. The application shall be considered complete only when all supporting data required by the application and the program director’s verification form are also filed with the Executive Director. Applications can be obtained from the chairman of accredited residency programs or from the Office of the Board. If an applicant wishes to be considered for a written qualifying examination to be conducted in a particular year, his/her application and all supporting data, including supporting data furnished directly by others with respect to the applicant, must be postmarked on or after January 1st and on or before August 1st except for the program director’s verification form which may be postmarked on or before October 1st of the calendar year immediately preceding the calendar year in which the Written Qualifying Examination is to be conducted.

By paying a late fee (see “Fees for Examination”) the deadline for postmarking the completed application may be extended from August 1st to September 1st. No other exceptions to, or extensions of, these requirements will be made for any reasons.

An applicant who does not receive notification from the Board office by January 15 of the acceptance or rejection of his/her application must contact the Board office in writing to inquire about the status of the application.
to contact the Board office in writing by February 15 will result in such applicant’s removal from the examination roster.

If a completed application and all required supporting data are postmarked after August 1st of a calendar year, or if a verification form is postmarked after October 1st of that calendar year, the application will not be valid, and the application fee shall be returned.

The application shall be accompanied by a check payable to the Board for the application fee. No application will be considered to be complete until the fee and all required supporting data, including a copy of your current registration to practice medicine and two recent photographs for identification at the written qualifying examination and the oral examination, have been received by the Executive Director.

**Fees**

Review of application and registration for Written Qualifying Examination, $550, payable with application.

- Late application fee, $700.
- Oral examination, $450, payable on successful completion of the Written Qualifying Examination.
- To repeat the Written Qualifying Examination, $400.
- To repeat the entire oral examination, $450.
- To repeat a single subject of the oral examination, $200.
- To repeat two or three subjects of the oral examination, $350.

The fees for examinations shall be established annually by the Board of Directors on the basis of the actual and anticipated costs of the Board in the examination of applicants and the administration of its business. The Directors of the Board shall serve without compensation except for reimbursement of expenses. Fees for accepted candidates for the written qualifying examination and the oral examination are not refundable.

**Cancellations**

To cover administrative expenses fifty percent of the original fee for the examination will be charged any candidate who cancels or fails to keep an examination assignment, written or oral, regardless of reason.

**Written Qualifying Examination**

Before being accepted for an oral examination, each applicant must pass a Written Qualifying Examination. This is a multiple choice test which may cover any topic in ophthalmology and is especially devoted to the following subjects from the Basic and Clinical Science Course of the American Academy of Ophthalmology:

2. Optics, Refraction and Contact Lenses
3. Intraocular Inflammation, Uveitis, and Ocular Tumors
4. Retina and Vitreous
5. Neuro-Ophthalmology
6. Binocular Vision and Ocular Motility
7. External Disease and Cornea
8. Glaucoma, Lens, and Anterior Segment Trauma
9. Orbit, Eyelids, and Lacrimal System
10. General Medical Care Problems
11. Ophthalmic Pathology

The test has been described in the Board’s booklet entitled “Written Qualifying Examination.”

The Written Qualifying Examination is given simultaneously in a number of designated cities in the United States and Canada in April of each year.

No applicant who cancels or fails to appear for a Written Qualifying Examination for which he/she has been scheduled will be scheduled for another such test until he/she pays to the Board the cancellation fee then in effect.

An applicant who fails to take the Written Qualifying Examination within twenty-four (24) months after notice has been sent to him/her that his/her application has been accepted will not thereafter be accepted for examination unless he/she reactivates the application for approval and submits an additional application fee.

In addition, an applicant who, on three (3) consecutive occasions, fails to take a Written Qualifying Examination for which the applicant is scheduled will not be permitted to apply for a subsequent Written Qualifying Examination until twenty-four (24) months have elapsed following the date of the last examination for which the applicant was scheduled but which he or she failed to take.

An applicant who passes the Written Qualifying Examination shall submit to the Executive Director a check payable to the Board in the amount then in effect for the Oral Examination and shall thereafter be assigned to an Oral Examination. No applicant who cancels or fails to appear for an Oral Examination to which he/she has been assigned will be scheduled for another Oral Examination until he/she pays the Board the cancellation fee then in effect.

An applicant who fails the Written Qualifying Examination may apply for re-examination and will be permitted to repeat the test upon payment of the current re-examination fee. If an applicant does not repeat the test within twenty-four (24) months after such failure, he/she will be required to reactivate the application for approval and submit an additional application fee. Re-examinations may be taken as often as necessary until the candidate is successful. For every two consecutive failures, the application must be reactivated according to the current rules and the current fee must be submitted.

**Oral Examinations**

Upon successful completion of the Written Qualifying Examination, candidates will be sent specific instructions for taking the Oral Examination.

Oral examinations are usually held twice annually at a time and place determined by the Board and shall be announced in the JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION. The Board reserves the right to limit the number of candidates admitted to any scheduled examination and to designate the candidates to be examined.

**ORAL EXAMINATIONS**

The oral examination will be divided into the following subjects:

1. Optics, Refraction and Visual Physiology
2. Neuro-ophthalmology and Orbit
3. Binocular Vision and Ocular Motility
4. Medicine, Surgery and Pathology
   - I. External Eye and Adnexa
   - II. Anterior Segment of the Eye
   - III. Posterior Segment of the Eye
5. Medicine, Surgery and Pathology
6. Medicine, Surgery and Pathology
7. Medicine, Surgery and Pathology
8. Medicine, Surgery and Pathology

1. OPTICS, REFRACTION AND VISUAL PHYSIOLOGY. Candidates should be familiar with the basic principles of physical and geometrical optics and the operation of standard optical instruments. They should understand the essentials of visual physiology including visual acuity, light and dark adaptation, accommodation, and color vision. They should know the various forms of ametropia, principles and techniques of refraction, principles of lens design, and methods of correction of ametropia with spectacles and contact lenses. Candidates should be familiar with the methods for prescribing protective lenses, absorptive lenses, and aids for low vision.

2. NEURO-OPHTHALMOLOGY AND ORBIT. Candidates should know the anatomy of the orbit and the neuroanatomy of the visual, oculomotor, and oculomotor pathways. They should be familiar with the pathogenesis, histopathology, clinical diagnosis, medical therapy and surgery of diseases of the orbit, optic nerve and chiasma. They should understand the principles and techniques of various
diagnostic procedures, including visual field testing, visually evoked responses, ultrasonography, conventional x-ray imaging, CT scanning and magnetic resonance imaging. Candidates should be familiar with the clinical features, differential diagnosis, and management of various disorders of the orbit, visual pathways, oculomotor system, and pupillomotor pathways, including the principles and complications of orbital surgery.

3. BINOCULAR VISION AND OCULAR MOTILITY: Candidates should understand the anatomy and physiology of the neuro-muscular mechanisms subserving ocular motility and binocular vision. They should be familiar with the methods of examination for detection and assessment of sensory and motor disorders. Candidates should know the clinical features, differential diagnosis, natural course, and management of the various types of comitant and noncomitant deviations. They should be familiar with the principles and complications of surgery on the extraocular muscles.

In each of the following examinations, the candidate must demonstrate adequate knowledge concerning pathogenesis, histopathology, clinical diagnosis, medical therapy and surgery of the diseases affecting the eye. PROPS illustrating clinical features, examination techniques, diagnostic studies and histopathological findings will be used to test the candidate’s knowledge of ocular anatomy, physiology, biochemistry, microbiology, immunology and pharmacology. These examinations will determine their ability to utilize and synthesize clinical, laboratory, and histopathologic data to arrive at a correct diagnosis and plan for medical and surgical management of patients. These examinations will include developmental, dystrophic, degenerative, inflammatory, infectious, toxic, traumatic, neoplastic, and vascular disease affecting the eye and its adnexa. The candidate must be able to discuss the indications for, principles of, and complications following surgical procedures.

4. MEDICINE, SURGERY, AND PATHOLOGY.

I. EXTERNAL EYE AND ADNEEXA. Examination concerns diseases of the lacrimal system, lids, conjunctive, cornea and anterior sclera.

5. MEDICINE, SURGERY, AND PATHOLOGY.

II. ANTERIOR SEGMENT OF THE EYE. Examination concerns diseases of anterior chamber angle, iris, ciliary body, and lens.

6. MEDICINE, SURGERY, AND PATHOLOGY.

III. POSTERIOR SEGMENT OF THE EYE. Examination concerns diseases of the vitreous, retina, choroid, and posterior sclera.

Re-examination
A candidate shall be required to reactivate his/her application for approval and submit an additional application fee, and pass another Written Qualifying Examination before being admitted to the Oral Examination under the following circumstances:

a) if a candidate does not take the Oral Examination within twenty-four (24) months after notice has been sent to the applicant that he/she has passed the Written Qualifying Examination;

b) if a candidate fails to repeat the oral examination within twenty-four (24) months after failing all or part of such examination;

c) if the candidate does not pass all subjects covered therein in three or fewer partial or complete examinations; or

d) if the candidate does not pass the Written Qualifying Examination and the entire Oral Examination within seventy-two (72) months after notice has been sent to him/her that his/her original application is accepted.

Results of Examinations
Within a reasonable time after completion of the written or oral examinations, the applicant shall be notified by the Executive Director as to the results thereof. The decision of the Board as to the results of the written or oral examination shall be final and conclusive. Because such is the case, individual Directors of the Board should not be contacted about specific examination results. To preserve confidentiality, results of an examination will not be given over the telephone.

Certification
An applicant who successfully passes both the Written Qualifying and oral examinations within the required time limitations hereinafore set forth, as determined by the Board in its sole discretion, shall be entitled to receive a certificate without further consideration of his/her qualifications by the Board. Physicians who have received the certificate are DIPLOMATES of the Board.

Revocation and Probation
The Board shall have authority to revoke any certificate issued by it or to place the Diplomate on probation for a fixed or indefinite time or some combination of these if:

a) if the certificate was issued contrary to or in violation of any rule or regulation of the Board;

b) the person to whom the certificate was issued was not eligible to receive it;

c) the person to whom the certificate was issued either made a substantial misstatement of a material fact to the Board in his/her application or, if such was received in any supporting data presented to the Board and accompanying or relating to the application or if a material fact was omitted from the application or those supporting data;

d) the license to practice of the person to whom the certificate was issued has been revoked.

American Board of Medical Specialties
The American Board of Medical Specialties, previously called the Advisory Board for Medical Specialties, was established in 1933 to serve in an advisory capacity to the American Specialty Boards and to cooperate with organizations that seek its advice concerning the certification of medical specialists. The official recognition of a specialty board by the American Board of Medical Specialties is indicated by the listing of Diplomates in the DIRECTORY OF MEDICAL SPECIALISTS. The American Board of Ophthalmology contributes an annual fee of $2,000 in addition to $38.00 per Diplomate certified, to the American Board of Medical Specialties, as do all other medical specialty boards, in support of the activities of ABMS.

Statements of Eligibility
The Board does not issue statements of “eligibility” for its examinations. The only information the Board will divulge is whether a candidate is or is not certified or is or is not scheduled for an examination.

AMERICAN BOARD OF ORTHOPAEDIC SURGERY

Gerald S. Laros, MD, President, Lubbock, Texas
George E. Omer, Jr. MD, President-Elect, Albuquerque, New Mexico
Franklin T. Hoaglund, MD, Secretary, San Francisco, California
Patrick J. Kelly, MD, Treasurer, Rochester, Minnesota
Michael W. Chapman, MD, Sacramento, California
Harold K. Dunn, MD, Salt Lake City, Utah
Robert B. Greer III, MD, Hershey, Pennsylvania
James H. Herrndon, MD, Providence, Rhode Island
Robert E. Leach, MD, Boston, Massachusetts
James R. Urbaniaik, MD, Durham, North Carolina
Thomas E. Whitesides, Jr., MD, Atlanta, Georgia
Frank C. Wilson, MD, Chapel Hill, North Carolina
Donald B. Kettelkamp, MD, Executive Director,  
Office of the Board, 444 North Michigan Avenue,  
Suite 2970, Chicago, Illinois 60611

**Introduction**

**A. Definition**

Orthopaedic surgery is the medical specialty that includes the preservation, investigation, and restoration of the form and function of the extremities, spine and associated structures by medical, surgical and physical methods.

**B. Purpose**

The American Board of Orthopaedic Surgery, Inc., was founded in 1934 as a private, voluntary, non-profit, autonomous organization. It functions to serve the best interests of the public and of the medical profession by establishing educational standards for orthopaedic residents and evaluating the initial and continuing qualifications and competence of orthopaedic surgeons. For this purpose, the Board reviews the credentials and practices of voluntary candidates, conducts examinations for these candidates, and issues certificates as appropriate. It defines minimum educational requirements in the specialty, stimulates graduate medical education and continuing medical education, and aids in the evaluation of educational facilities.

The Board does not confer any rights on its Diplomates, nor does it purport to direct licensed physicians in any way in the conduct of their professional duties. It is neither the intent nor the purpose of the Board to define requirements for membership in any organization or on the staff of any hospital.

**C. Members**

The members of The American Board of Orthopaedic Surgery are elected from the Diplomates of the Board who are nominated by the American Orthopaedic Association, the American Medical Association, and the American Academy of Orthopaedic Surgeons. They serve without salary.

**D. Organization**

Members of the Board elect a President, President-elect, Secretary, and Treasurer annually. An Executive Director, who is a Diplomate, serves as an ex-officio member of the Board. The President appoints members to serve on standing committees on Credentials, Examinations, Finance, Graduate Education, Planning and Development, and Certificate Renewal. Other committees may be formed as deemed necessary. The Board holds four regularly scheduled meetings yearly and additional meetings as needed.

**E. Directory**

A current directory of certified and recertified orthopaedic surgeons is maintained and published by the Board. The names of Diplomates also appear in the a Compendium of Certified Medical Specialists published by the American Board of Medical Specialties.

**General Statement of Educational Goals for Orthopaedic Surgery**

The goal of orthopaedic education is to prepare orthopaedic residents to be competent and ethical practitioners of orthopaedic surgery. In fulfillment of this goal, applicants for certification must have received through their orthopaedic residency:

**A. Education in the entire field of orthopaedic surgery, including inpatient and outpatient diagnosis and care as well as operative and nonoperative management and rehabilitation.**

**B. The opportunity to develop, through experience, the necessary cognitive, technical, interpersonal, teaching, and research skills.**

**C. The opportunity to create new knowledge and to become skilled in the critical evaluation of information.**

**D. Education in the recognition and management of basic medical and surgical problems.**

**E. An evaluation of their ethical performance.**

**Minimum Educational Requirements for Board Certification**

The Board has established the following minimum educational requirements for certification. These requirements shall not be interpreted as the minimum standards. Throughout these rules, the term “accredited” means accredited by the Accreditation Council for Graduate Medical Education.

These educational requirements (A and B) shall apply to all residents who began their first year of accredited orthopaedic surgery residency on or after January 1, 1985, with the following exception. Residents in programs currently providing only three years of orthopaedic education may receive credit for two years of accredited non-orthopaedic clinical education if they enter the orthopaedic program before January 1, 1989. This exception is available only to residents enrolled in a three-year orthopaedic program which has specifically requested the Board to make its residents eligible for this exception and has presented the Board with a plan for implementing the four-year program. The deadline for receiving such a plan was December 31, 1985. Residents entering orthopaedic residency programs structured for four or five years may receive credit for one but not two years of accredited non-orthopaedic clinical education. Requirements C, D, E, and F are effective immediately.

**A. Time Requirements**

1. Five years (60 months) of accredited postdoctoral residency are required.

2. Four of these years (48 months) must be served in a program whose curriculum is determined by the director of an accredited orthopaedic surgery residency program. The fifth of these years (36 months) must be served in an accredited orthopaedic surgery residency program and one year (12 months) may be served in an accredited graduate medical educational program whose educational content is determined by the director of an accredited orthopaedic surgery residency program.

3. Each program may develop individual sick and vacation times for the resident in accordance with overall institutional policy. However, one year of credit must include at least 46 weeks in full-time orthopaedic education; furthermore, vacation or leave time may not be accumulated to reduce the five-year requirement.

4. Program directors may retain a resident in the educational program for as long as necessary beyond the minimum time specified so that the resident can achieve the necessary degree of competence in orthopaedic surgery. Currently, according to the Special Requirements of the Residency Review Committee for Orthopaedic Surgery, the committee must be notified of such retention. This information must also be provided to the Board in the Record of Residency Assignments form.

**B. Content Requirements**

1. **General Requirements**

A minimum of 9 months during the first 36 months of graduate medical education must be broadly based on clinical services other than orthopaedics. This requirement may be fulfilled by a year of accredited residency in any broadly based program involving patient care.

2. **Orthopaedic Requirements**

The orthopaedic education must be broadly representative of the entire field of orthopaedic surgery. The distribution of educational experience must include a minimum of:

- Adult orthopaedics—12 months
- Fractures/trauma—12 months
- Children's orthopaedics—6 months
- Basic science and/or clinical specialties—6 months

Experience may be received in two or more subject areas concurrently. Concurrent or integrated programs may allocate time by proportion of experience.

Orthopaedic education must provide experience with
all patient age groups, pertinent anatomic areas, acute and chronic care, related clinical subjects and basic science, and exposure to research.

1. Children's Orthopaedics: The educational experience in children's orthopaedics must be obtained in an accredited position in the specific residency program in which the resident is enrolled or in a children's hospital in an assigned accredited residency position.

2. Anatomic areas: Orthopaedic education must include all aspects of diagnosis and care of disorders affecting the bones, joints, and soft tissues of the upper and lower extremities, including the hand and foot; the entire spine, specifically including intervertebral discs; and the bony pelvis.

3. Acute and chronic care: Orthopaedic education must include the diagnosis and care, both operative and nonoperative, of acute trauma (including athletic injuries), infectious disease, neurovascular impairment, and chronic orthopaedic problems including reconstructive surgery, neuromuscular disease, metabolic bone disease, benign and malignant tumors, and rehabilitation.

4. Related clinical subjects: Orthopaedic education must include musculoskeletal imaging procedures, use and interpretation of clinical laboratory tests, prosthetics, orthotics, physical modalities and exercises, and neurological and rheumatological disorders.

5. Research: Orthopaedic education must include exposure to clinical and/or laboratory research.

Basic science: Orthopaedic education must include instruction in anatomy, biochemistry, biophysics, microbiology, pathophysiology, and other basic sciences related to orthopaedic surgery. The resident must have the opportunity to apply these basic sciences to all phases of orthopaedic surgery.

7. Options: Twelve (12 months) of the four years required to be under the direction of the orthopaedic surgery residency program director may be spent on services consisting partially or entirely of:

a. Additional experience in general adult or children's orthopaedics or fractures/trauma;
b. An orthopaedic clinical specialty;
c. Orthopaedically related research;
d. Experience in an accredited graduate medical educational program whose educational content is reviewed and approved by the director of the orthopaedic surgery residency program.

C. Accreditation Requirements

1. The educational experience in orthopaedic surgery obtained in the United States must be in programs accredited by the Residency Review Committee for Orthopaedic Surgery and by the Accreditation Council for Graduate Medical Education. All other clinical education obtained in the United States must be in programs accredited by the Accreditation Council for Graduate Medical Education and the appropriate Residency Review Committee for the category of education for which credit is sought. (The Directory of Residency Training Programs Accredited by the Accreditation Council for Graduate Medical Education, published annually and obtainable from the American Medical Association, 535 North Dearborn Street, Chicago, IL 60610, lists accredited rotations of 6 months or longer.)

2. During the accredited orthopaedic residency, a total period of no more than 6 months may be served in unaccredited institutions.

3. Credit for time spent in residency education will be granted only for the period during which the residency program is accredited, and only for time served in an approved position within an accredited program.

4. If an orthopaedic residency program has its accreditation withdrawn by the Residency Review Committee for Orthopaedic Surgery and the Accreditation Council for Graduate Medical Education, no educational credit will be granted past the effective date of withdrawal of accreditation.

5. Educational credit may be granted for clinical experience in the military and/or public health services of the United States of America if the experience is accepted by the director of the orthopaedic surgery residency program that the applicant enters. Up to one month of credit may be granted for two months of clinical experience, not to exceed 12 months of credit, subject to approval by the Committee on Credentials. This approval should be sought prior to entry into the program.

6. Educational experience obtained in Canada must be on services approved by the Royal College of Physicians and Surgeons of Canada and must extend over a minimum of five years. The content requirements outlined in "B. Content Requirements" must be met.

7. The Board does not grant credit for foreign educational experience, other than as permitted in C.2 and C.6.

8. The term "fellow" is not synonymous with the term "resident" for the purpose of obtaining Board credit for educational experience. A resident is an individual enrolled in an approved position in an accredited educational program.

D. Achievement Requirements

1. The director of the program providing general graduate medical education must certify the satisfactory completion of that segment of the program.

2. In orthopaedic surgery residency programs, both the program director and the appropriate faculty member must certify the satisfactory completion of each rotation for which credit is awarded. (See "F. Documentation Requirements")

3. The program director responsible for the final year of the resident's education must certify that the resident has achieved a satisfactory level of competence and is qualified to take the certifying examination.

4. The certification referred to in 2. and 3. above must be made on the appropriate Record of Residency Assignments form and must be countersigned by the resident.

5. Medical practice activity outside the residency must not be allowed to interfere with deriving maximum benefits from the educational experience. Residents may not engage in such activities without the specific prior approval of the program director; such approval must be based on the judgment of the director that rotations are being completed without compromise and that the circumstances of the resident warrant such activity.

E. Continuity Requirements

The resident should have progressively increasing patient care responsibility. A part-time or piecemeal approach to residency requirements is discouraged. The final 24 months of residency education must be obtained in a single orthopaedic residency program unless prior approval of the Committee on Credentials is obtained.

F. Documentation Requirements

1. For orthopaedic education obtained in the United States, the program director must provide the Board with documentation during the residency. Form 1 of the Record of Residency Assignments must be sent when the resident begins the program. Form 1-A must be provided for residents receiving educational credit in a program other than an ACGME accredited orthopaedic residency. Form 2 must be sent yearly and must detail the location, content and time spent on each rotation that the resident has completed. This form must also indicate whether or not credit has been granted. Form 3 is due in the Board office within 30 days of completion of the residency.

2. When a resident leaves a program prematurely, the program director must record the reasons for leaving, confirm those rotations for which credit is granted, and send the completed Forms 2 and 3 of the Record of Residency Assignments to the Board office within 30 days. Before a resident enters a new program, it is the responsibility of the new program director to obtain a copy of the resident's Record of Residency Assignments forms, to review them thoroughly, and to develop an appropriate program for the
resident that will result in progressively increasing responsibility and will otherwise meet the minimum educational requirements.

Requirements for Taking the Certifying Examination

The certifying examination is divided into two parts. Part I is a written examination which may be taken any time after the completion of the educational requirements. Part II is an oral examination which may be taken upon passing Part I, completion of the practice requirement, evaluation of the applicant's practice and determination of admission to the examination. A candidate must pass both parts of the certifying examination to be certified.

After taking and passing the written examination, candidates have five years to take or retake the oral examination. Candidates who do not pass the oral examination within those five years must retake and pass the written examination before applying to take the oral examination.

An applicant desiring certification by the American Board of Orthopaedic Surgery must satisfy the educational requirements of the Rules and Procedures in effect when the applicant first enrolls in an accredited orthopaedic residency. An applicant must satisfy all other requirements in effect at the time of application.

A. Educational Requirements

1. An applicant must satisfactorily complete and document the minimum educational requirements in effect when he or she first enrolls in an accredited orthopaedic residency.

2. Upon successful completion of 54 months of the 60 months of required education and upon the recommendation of the program director, a candidate may apply to take Part I of the examination.

3. In order to be admitted to the examination, the candidate must complete the full 60 months of required education and must present an examination admission card signed by the program director confirming satisfactory completion of all educational requirements.

4. Candidates who do not take and pass the first Part I examination offered after completing residency will have their applications for subsequent examinations reviewed by the Committee on Credentials to determine whether all requirements for examination have been fulfilled.

5. An applicant who has received orthopaedic surgery residency education in Canada must have fulfilled the requirements of the American Board of Orthopaedic Surgery and must have passed the qualifying examination in orthopaedic surgery of the Royal College of Physicians and Surgeons of Canada before applying for either part of the examination of the American Board of Orthopaedic Surgery.

B. License Requirements

Applicants who are in practice at the time they apply for Part I and all applicants for Part II must possess a full and unrestricted license to practice medicine in the United States or Canada, or be engaged in full-time practice in the United States Federal Government for which licensure is not required. An applicant will be rendered ineligible for any part of the certifying examination by limitation, suspension, or termination of any right associated with the practice of medicine in any state, province, or country by reason of violation of a medical practice act or other statute or governmental regulation, disciplinary action by any medical licensing authority, or voluntary surrender while under investigation.

C. Practice Requirements

1. An applicant must be continuously and actively engaged in the practice of orthopaedic surgery, other than as a resident or fellow (or equivalent), for at least twenty-three (23) full months prior to the date of Part II of the examination. An applicant must be in one practice location for a minimum of twelve (12) consecutive months. A change in location, type of hospital practice, or practice association may result in deferral. The practice must be located in the United States or its territories, Canada, or a United States military installation. It must include hospital admitting and surgical privileges in effect at the time of application for the examination and at the time of examination. The applicant must demonstrate professional competence and adherence to acceptable ethical and professional standards. The practice must allow independent decision-making in matters of patient care. A reduction, restriction, suspension, determination, or revocation at the request of a hospital of all or any portion of an applicant's surgical staff privileges, or pending action to do so, will normally result in a deferral until such action is finally resolved and the applicant's practice has stabilized sufficiently for it to be evaluated.

2. An applicant in the United States uniformed services may satisfy the practice requirement if the applicant has been assigned as an orthopaedic surgeon in a hospital for at least twenty-three (23) full months prior to the date of examination. The applicant must submit a letter from his or her immediate supervisor evaluating his or her capability in the practice of orthopaedic surgery, as well as such other documentation as the Committee on Credentials may require to demonstrate professional competence and adherence to acceptable ethical and professional standards.

D. Evaluation of Applicant

1. Qualifications for taking Part II of the examination will be determined by the Committee on Credentials after review of the application, letters of recommendation, and other relevant information.

2. It is the responsibility of the applicant to provide the information on which the Committee on Credentials bases its evaluation of the qualifications of the applicant. This responsibility extends to information that the Committee on Credentials requests from other persons. If the Committee on Credentials does not receive requested information that it believes to be relevant to the qualifications of an applicant from the applicant, a program director, a reference, a hospital representative, or another source, the Board will notify the applicant and defer making a decision as to the admission of the applicant to the examination until the information is received.

3. An applicant must be prepared to submit as part of the application to the Committee on Credentials, if requested, a list of all patients admitted to the applicant's care in the hospital or hospitals in which the applicant has practiced. Such a list shall include the name of the hospital, the number of each patient, the patient's age, diagnostic data, dates of hospital admissions and discharges, and the nature of the surgery. The authenticity of the patient list must be certified by the hospital administrator or record librarian. An applicant engaged in practice in a partnership or assigned full-time to a private or government hospital must, upon request, submit a list of patients cared for primarily by the applicant. This list must also be certified by the hospital administrator or record librarian.

4. Representatives of the Board may visit the site of an applicant's practice if the Committee on Credentials believes that this is necessary for adequate evaluation of the work of the applicant.

Procedure for Application for Part I and Part II of the Certifying Examination

The dates and places for Part I and Part II of the certifying examination and deadlines for submission of applications and fees are announced in the Journal of the American Medical Association, and the Journal of Bone and Joint Surgery.

A. Application Deadlines

1. Part I. A completed application for Part I of the certifying examination must be postmarked on or before March 1 of the year of the examination. The application must be accompanied by a nonrefundable examination fee of $400.00 and must be sent by registered mail.

2. Part II. A completed application for the certifying
Orthopaedic Surgery

Examination must be postmarked on or before October 31 of the year preceding the examination. The application must be accompanied by a nonrefundable fee of $100.00 and must be sent by registered mail.

B. Notifying the Board of Application Changes

It is the responsibility of the applicant to notify the Board office of any change of address, practice association, or hospital affiliation. If an applicant changes practice location or practice association, or acquires new hospital staff affiliations, new references will be solicited by the Board for Part II. An applicant is also required to notify the Board of any denial of any request for hospital privileges, of any action to restrict, suspend, or terminate all or any portion of the applicant's surgical staff privileges; or any request by a hospital to resign all or any portion of the applicant's surgical staff privileges, and of any action by a government agency which would result in the restriction, suspension, or revocation of the applicant's license or any right associated with the practice of medicine.

C. Notifying the Applicant of Examination Admission

1. Part I. The applicant will receive examination information, an assigned examination number and an examination card not later than 30 days prior to the examination date.
2. Part II. The decision of the Committee on Credentials is mailed to the applicant not later than 60 days prior to the examination date.

D. Fees

1. Part I. The nonrefundable examination fee is $400.00 and must be submitted with the application form.
2. Part II. The nonrefundable application fee is $100.00 and must be submitted with the application form.
3. Part II. The candidate must submit a fee of $400.00 on or before the date specified in the letter of notification of admission to Part II of the examination. This fee will be forfeited if the candidate fails to appear for the examination or cancels after being scheduled.

Fees:

Part I Examination Fee $400.00
Part II Application Fee $100.00
Part II Examination Fee $400.00

Fees must be sent by registered mail.

E. Falsified Information and Irregular Behavior

1. If it is determined that an applicant has falsified information on the application form, or failed to provide material information, the applicant will not be considered for either part of the examination not already passed and must wait for three years before being allowed to file a new application. The applicant will not be considered for admission to either part of the examination during this three-year period.
2. Examination applicants should understand that: (1) the giving or receiving of aid in the examination as evidenced either by observation or by statistical analysis of incorrect answers of one or more participants in the examination; or (2) the unauthorized possession, reproduction, or disclosure of any materials, including, but not limited to, examination questions or answers, before, during, or after the examination; or (3) the offering of any benefit to any agent of the Board in return for any right, privilege, or benefit which is not usually granted by the Board to other similarly situated candidates or persons may be sufficient cause to bar applicants from future examinations, to terminate participation in the examination, to invalidate the results of a candidate's examination, to withhold or revoke a candidate's scores or certificate, or to take other appropriate action.

Applicants should also understand that the Board may or may not require a candidate to retake one or more portions of the examination if presented with sufficient evidence that the security of the examination has been compromised, notwithstanding the absence of any evidence of a candidate's personal involvement in such activities.

Credentiais Decisions

A. Determining Admission to Examinations

1. The Committee on Credentials meets at least once each year to consider applications for the examination. At this meeting a decision will be made approving admission to the next examination or denying admission or the decision may be deferred for further evaluation.
2. A decision approving admission to an examination applies only until the next available examination and does not carry over from one examination until the next. A new application is required for each examination.

B. Dismissal of Admission Decision

A decision on an applicant's admission to either Part I or Part II of the examination may be deferred if information is insufficient for the Committee on Credentials to make a judgment. Typically, the committee will defer such a decision for one year to gather further information. If it still has insufficient information to make a judgment, the decision may be deferred for a second year to enable representatives of the Board to conduct a site visit as described in D.4. A deferral of not more than two consecutive years is not viewed by the Board as an adverse action; thus, no appeal from a decision of the Committee on Credentials is permitted unless an applicant has been denied admission or has been deferred for more than two consecutive years.

C. Appeal of Admission Decision

An applicant denied admission to the examination will be informed of the basis for such action and may request a hearing by an appeals committee of the American Board of Orthopaedic Surgery.

Certification and Recertification by the American Board of Orthopaedic Surgery

A. Awarding Certificates

The American Board of Orthopaedic Surgery awards a certificate to a candidate who specializes in orthopaedic surgery, has met the educational requirements of the Board, has demonstrated competence in orthopaedic surgery and adherence to ethical and professional standards, and has passed both parts of the certifying examination. Certificates issued after 1985 are valid for ten years. This portion of the Board's responsibility is discharged by issuance of a certificate to an individual found qualified as of the date of certification.

B. Certificate Revocation

A certificate may be revoked prior to its expiration because of intentional and substantively misrepresentation to the Board with respect to the applicant's education and other requirements for admission to either part of the examination, or because of limitation, suspension, or termination of the right to practice medicine in any state, province, or country by reason of a violation of a medical practice act or other statute or governmental regulation, or disciplinary action by any medical licensing authority, or voluntary surrender while under investigation. Before a certificate is revoked, the Diplomate will be informed of the basis of such action and will be afforded a hearing according to procedures formulated by the American Board of Orthopaedic Surgery.

C. Certificate Reinstatement

Should the circumstances that were considered in justification for revocation or surrender of the Diplomate's certificate be corrected, the Board may reinstate after appropriate review of the individual's qualifications and performance, using the same standards as applied to other applicants for certification.

D. Recertification Process

The Board offers a recertification process to its Diplomates. Diplomates are encouraged to undertake periodic recertification. Specific rules and procedures for recertification can be obtained from the Secretary of the Board.
Unsuccessful Candidates

Unsuccessful Part I candidates may repeat the examination by submitting a new application form for the examination and again being found admissible. (See preceding pages.) Unsuccessful Part II candidates may repeat the examination by submitting a new application form for the examination and again being found admissible. Candidates who do not pass the Part II examination within five years of passing Part I must retake and repass the Part I examination before applying to retake Part II. (See preceding pages.)

AMERICAN BOARD OF OTOLARYNGOLOGY

Roger Boles, MD, President, San Francisco, California

M. Eugene Tardy, Jr., MD, Chicago, Illinois
Paul H. Ward, MD, Los Angeles, California
Bobby R. Alford, MD, Executive Vice President, 5615 Kirby Drive, Suite 936
Houston, TX 77005

General Requirements

The following qualifications are minimal requirements for examination by the American Board of Otolaryngology. The applicant:

1. Shall possess high moral, ethical and professional qualifications as determined by, and in the sole discretion of, the Board.
2. Shall be a graduate of a College of Medicine or Osteopathy.
3. Shall present evidence of a valid license to practice medicine in the United States or Canada. If the applicant is enrolled in a training program in a state not requiring licensure as a prerequisite to such enrollment, evidence of licensure shall not be required.
4. Whose post-M.D./D.O. training (accredited by the ACGME or the appropriate Canadian medical authority) began prior to July 1, 1981 must have satisfactorily completed a minimum of four years of residency training accredited by the ACGME or the appropriate Canadian medical authority; this training must include:
   a) one year of general surgical training in a residency program accredited by the ACGME or the appropriate Canadian medical authority.
   b) three years of residency training in otolaryngology-head neck surgery accredited by the ACGME or appropriate Canadian medical authority.

The training in otolaryngology-head neck surgery must involve increasing responsibility each year and include a final year of senior experience. This final year must be spent within the institutions which are approved as part of the program, unless prior approval of an outside rotation has been obtained from the Residency Review Committee. It is preferred that the year or years of general surgical residency be taken prior to the otolaryngologic training, but if/they may not be taken following otolaryngologic training. The residency training must be completed in a manner acceptable to the head of that residency program.

5. Whose post-M.D./D.O. training (accredited by the ACGME or the appropriate Canadian medical authority) began July 1, 1981 or thereafter must have satisfactorily completed a minimum of five years of residency training accredited by the ACGME or the appropriate Canadian medical authority; this training must include:
   a) at least one year of general surgical training in a residency program accredited by the ACGME or the appropriate Canadian medical authority.
   b) at least three years of residency training in otolaryngology-head neck surgery accredited by the ACGME or the appropriate Canadian medical authority.
   c) an additional year of residency training which may be in otolaryngology-head neck surgery, general surgery or other residencies accredited by the ACGME or the appropriate Canadian medical authority. If this year of training is in otolaryngology-head neck surgery, it must be taken prior to the final year of otolaryngology residency.

The training in otolaryngology-head neck surgery must involve increasing responsibility in each year and the final year of the five years of training must be a senior experience in otolaryngology-head neck surgery. This final year must be spent within the institutions which are approved as part of the program, unless prior approval of an outside rotation has been obtained from the Residency Review Committee. The residency training must be completed in a manner acceptable to the head of that residency program.

6. Who has completed otolaryngologic training in the United Kingdom or the Republic of Ireland in a program accredited by the Specialist Advisory Committee and has received a certificate of accreditation in otolaryngology-head neck surgery from the Joint Committee on Higher Surgical Training in the United Kingdom and the Republic of Ireland will be considered for examination.

7. Who has completed his training under the New Zealand program and has passed the examination leading to Fellowship of the Royal Australasian College of Surgeons.

Application for Examination

There is no required time interval between completion of the residency program and making application for examination.

1. The applicant for examination shall complete and submit the application forms supplied by the Executive Vice President of the Board. The application shall include authenticated records of the following: medical education, internship, residencies and other postgraduate studies, hospital and outpatient department appointments, teaching positions, memberships in medical societies, personal publications, and any additional information that the candidate feels might be of value in processing this application.

2. Additional information may be requested by the Board from the following:
   a) Local medical society.
   b) Board certified otolaryngologists-head neck surgeons from the geographical area in which the applicant practices.
   c) The director of the applicant’s training program.
   d) Hospital chiefs of staff.
   e) Other individuals and entities who may have knowledge of the applicants moral and ethical standing or his/her qualifications or abilities.
3. The application shall be signed by two diplomates of the American Board of Otolaryngology. It shall be accompanied by (a) two 4-inch by 3 1/2-inch unmounted, dated photographs taken within six months of the date of application, signed by the applicant on the front; (b) a list of operations assisted in and performed by the resident during the period of education in otolaryngology-head and neck surgery; (c) official verification of the satisfactory completion of surgical and otolaryngology residency training; (d) the first payment of the examination fee.

4. The completed application with an up-to-date or completed surgical list shall be mailed to Executive Vice President as soon as possible but before May 1st of each year. An update of the list must be submitted to the American Board of Otolaryngology within ten (10) days of completion of the applicant’s residency training. The applicant will be notified by the Executive Vice President when and where to appear for examination if approved by the Credentials Committee.

5. In 1987 a written examination will be offered in September and an oral examination in February of 1988.

The American Board of Otolaryngology (ABO) certification process consists of two phases: the first phase incorporates a written examination and the second phase, an oral examination. The following is a brief summary of these two phases and their possible outcomes.

In the first phase, all candidates take a written examination with three possible outcomes:

a) Candidates who score above a certain point are considered to have passed the Certification Examination and are certified. They are not required to take the oral examination.

b) Candidates who score below a certain point are considered to have failed the Certification Examination and are not certified. They are not eligible to the oral examination, but may retake the written examination in a subsequent year.

c) Candidates who score between the specified upper and lower points are considered to have neither passed nor failed the Examination, and a decision on certification is deferred.

The candidates in the deferred decision group have two routes for continuing to seek certification.

The first route requires that these candidates take the oral component of the Certification Examination when it is offered in either the first or second year subsequent to their taking the written examination. Combined performances on both the oral and written components are then evaluated, and a decision made that candidates have either passed the Certification Examination and are certified, or have failed the Certification Examination and are not certified, but may reapply to participate in the entire certification process.

The second route to certification is to decline the oral and, instead, retake the written examination at a subsequent administration.

Candidates who elect to retake the written examination, either because they took the orals and failed or because they chose not to take the orals, face the same possible outcomes they did when they first took the written examination and will be required to pay another examination fee.

6. The American Board of Otolaryngology does not recognize or use the term “Board Eligible” in any manner including requests to the Board for status reports.

7. An application following its acceptance will be considered current for a period encompassing two consecutive examination cycles. At the conclusion of said period, the application will expire.

8. The Board reserves the right to reject any application.

Re-application

Candidates whose application has expired (see paragraph 7 above) may make re-application for the examina-
6. The habilitation and rehabilitation techniques and procedures pertaining to respiration, deglutition, contraception, balance, speech and hearing;

7. The current literature, especially pertaining to the areas listed above, and

The Board intends to vigorously enforce the highest standards of honesty and integrity in the examination and the entire certification process. Accordingly, (1) the giving or receiving of aid in the examination, (2) the unauthorized possession, reproduction or disclosure of any material, including, but not limited to, examination questions or answers before, during, or after the examination, (3) the offer of any financial or other benefit to any director, officer, employee, proctor, or other agent or representative of the Board to other similarly situated candidates or persons, may be sufficient cause for the Board to terminate an applicant's participation in the examination, to invalidate the results of the examination, to withhold an applicant's scores or certificate, to bar an applicant permanently from all future examinations, to revoke a certificate, or to take other appropriate action.

During the course of the written examination, proctors will be circulating among the candidates to observe any irregularities. If there is a suspicion of any irregularity, a candidate may be moved to a more isolated area, or his or her participation in the examination may be terminated. Additionally, in any case of suspected irregularity, the Board's educational consultants may undertake statistical studies of a candidate's answers compared with the answers of other participants in the examination to provide evidence that would support or fail to support the suspected irregularities. If, in the opinion of the Board, there exists a probability that an irregularity has occurred, the Board will afford the suspected individual(s) procedural due process in order to assure fairness in the determination as to whether an irregularity has occurred. The Board will not, however, report scores or grant certification on the basis of scores which it has determined to be invalid.

**Certification by the Board**

A certificate is granted by The American Board of Otolaryngology to a candidate who has met all the requirements and has satisfactorily passed its examination. In order to assist directors of residency training programs in otolaryngology-head and neck surgery in evaluating their program, the Board will report each applicant's results on the examination to the director of the program in which the applicant completed his/her senior resident year.

**By-Laws of the Board, Article VI**

**Certification, Rejection and Revocation**

1. The Board shall issue an appropriate certificate of qualification in otolaryngology-head and neck surgery or in a subdivision thereof to those who show themselves worthy of such certification according to the requirements of training, experience and demonstrated competence as stated in the current Information Booklet of the Board.

No certificate shall be issued and any certificate issued by the Board shall be subject to revocation at any time by the Board if it shall determine that the person involved:

(a) did not possess the required qualifications and requirements for examination whether or not such deficiency was known to the Board or any member thereof or could have been ascertained by the Board prior to examination, or at the time of the issuance of a certificate or the case may be,

(b) made a material misstatement or withheld information in his application or any other representation to the Board or any Committee thereof, whether intentional or unintentional.

(c) has been convicted by a court of competent jurisdic-

**AMERICAN BOARD OF PATHOLOGY**

Robert B. Jennings, MD, President, Durham, North Carolina
Douglas A. Nelson, MD, Vice President, Syracuse, New York
Jack P. Strong, MD, Secretary, New Orleans, Louisiana
Frank B. Walker, MD, Treasurer, Grosse Pointe Farms, Michigan
Ranai S. Cotran, MD, Boston, Massachusetts
Merle W. Delmer, MD, San Antonio, Texas
Thomas J. Gill III, MD, Pittsburgh, Pennsylvania
William H. Hartmann, MD, Nashville, Tennessee
Charles S. Hirsch, MD, Hauppauge, New York
Pierre W. Keitges, MD, Kansas City, Missouri
John D. Milam, MD, Houston, Texas
Herbert M. Sommers, MD, Chicago, Illinois
M. R. Abell, MD, PhD, Executive Director, Office Of The American Board Of Pathology, Lincoln Center
5401 West Kennedy Boulevard
P.O. Box 25915, Tampa, Florida 33622

**Prerequisites for Examination**

All applications to take the examination are considered by the Credentials Committee of The American Board of Pathology (ABP) and the following items are evaluated in this process.

**I. GENERAL**

A. The candidate must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.

B. The candidate must devote professional time principally and primarily to pathology.

**II. PROFESSIONAL EDUCATION**

Graduation from a medical school in the United States or Canada accredited by the Liaison Committee on Medical Education, graduation from an osteopathic college of medicine accredited by the Bureau of Professional Education of the American Osteopathic Association, or graduation from a medical school in another country acceptable to the ABP.

**III. QUALIFICATION REQUIREMENTS**

The American Board of Pathology recognizes several pathways to qualification for examination and certification, including training, experience, or a combination of training and experience. To acknowledge the diverse activities in the practice of pathology and to accommodate the interests of individuals wishing to enter the field, The American Board of Pathology offers primary certification through one of four routes (combined anatomic and clinical pathology, anatomic pathology only, clinical pathology only, and combined anatomic or clinical pathology and a special qualification in pathology), and a variety of special qualification examinations. The special qualification examinations are utilized to indicate expertise in one segment of anatomic and/or clinical pathology.
**REQUIREMENTS FOR CERTIFICATION**

Pathology

Only pathology training and/or experience taken in the United States and Canada is acceptable toward meeting the ABP requirements. The training must be in programs that have been inspected and accredited by the Accreditation Council for Graduate Medical Education (ACGME) or specifically approved by the ABP.

In addition to the training and/or experience requirements, there is a credential requirement of one year for all candidates for primary certification or combined primary and special qualification certification. (See Additional Credential Requirement for Applicants for Primary Certification in 1990 and thereafter.)

A. Primary certificates

1. **Training**—the candidate must complete satisfactorily pathology training in a program accredited by the ACGME as outlined below.

   All applicants for primary certification in 1990 and thereafter must meet the credential requirement of one full year of clinical training, clinical experience, or clinically related research.

   a. **Combined anatomic and clinical pathology (AP/CP) certification**

      Two full years of approved training in anatomic pathology and two full years of approved training in clinical pathology.

   b. **Anatomic pathology (AP) certification**

      (1) Three full years of approved training in anatomic pathology and one additional year, which may be spent in further training or research in pathology or closely allied disciplines; in the practice of pathology; or in approved graduate medical education in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice

      or

      (2) Primary certificate in clinical pathology and two full years of approved training in anatomic pathology. Dual credit is not given for any AP training that may have been used to qualify for CP certification.

   c. **Clinical pathology (CP) certification**

      (1) Three full years of approved training in clinical pathology and one additional year, which may be spent in further training or research in pathology or closely allied disciplines; in the practice of pathology; or in approved graduate medical education in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice

      or

      (2) Primary certificate in anatomic pathology and two full years of approved training in clinical pathology. Dual credit is not given for any CP training that may have been used to qualify for AP certification.

2. **Experience**—under certain circumstances a candidate may receive credit toward a primary certificate for acceptable experience in the specialty rather than by training. One year's training credit may be received for each two full years or its equivalent of acceptable experience. However, only under exceptional circumstances will experience credits or other forms of advanced credit be given toward the requirements for the combined anatomic and clinical pathology certification. The substitution of experience credit for a portion of approved training toward the requirements for AP/CP requires the assessment of the director of the training program to ensure that such will permit a broad and adequate experience in anatomic and clinical pathology and that the director will be willing to so verify.

Credit for extensive full-time training or experience in a country other than the United States or Canada may be granted toward the requirements for a primary certificate, provided that the candidate has had a total of eight years of full-time validated experience in pathology acceptable to the ABP with four years having been in the United States or Canada. For AP qualification the training and experience must have been in AP; for CP, in CP; and for combined AP/CP, four years in AP and four years in CP.

3. **Other credit mechanisms**—the acceptability of other credits as substitutes for approved training toward anatomic and/or clinical pathology certification is evaluated on an individual basis. Credit is given only for activities that have occurred in either the United States or Canada. The total combined period of advanced credit allowed in this category for sections a, b, c, and d below will not exceed one-third of the required approved training in the respective area of anatomic pathology or clinical pathology.

To avoid any misunderstanding, potential applicants should communicate with the Office of the ABP early in the training period to ascertain if credit may be acceptable.

The training program director will be asked to assess the proposal and to provide a recommendation as to the amount of credit that the director believes the candidate should receive.

The Board will notify the director of the pathology training program of such potential credit and, prior to admission to the certifying examination, the director of the final year of training must certify that the candidate is fully qualified to sit for the examination.

   a. **Training during medical school**—credit toward the qualifications for the primary examinations in pathology may be given for post-sophomore training in an approved pathology training program during medical school providing that the candidate did not receive credit for such toward graduation from medical school and that it is validated as a significant experience by the training director or chairman of the department of pathology.

   b. **Candidates holding a master's degree or a doctor's degree in a special discipline of pathology or a basic science related to pathology may obtain training credit regardless of whether it was received before or after the medical degree.** The evaluation and approval of the amount of training credit will depend on an assessment by the ABP regarding relevance of the subjects to anatomic and/or clinical pathology.

   c. **Research with a direct application to the practice of anatomic and/or clinical pathology may be considered for credit not to exceed one-third of the training time requirement.** The ABP encourages research and believes that all candidates should carry on investigation, teaching, and the publication of scientific papers during primary training.

   d. **The ABP will allow training credit for time spent in a related clinical activity.** The evaluation and approval of the amount of credit will depend on an assessment by the ABP and the pathology training director with regard to relevance of the experience. Credit for clinical activity or a combination of research and clinical training (a, b, c, and d) will not exceed one-third of the required approved training.

4. **Additional training or experience**—A candidate for primary certification who has completed the required pathology training five years or more prior to date of submission of an application for examination must have either one year of additional training in pathology in a program accredited for such training by the ACGME or two full years of additional experiential training in the United States or Canada in a situation acceptable to the Board. This additional requirement must be met during the five-year period immediately preceding the date of submission of an application. It is effective 1 January 1987.

B. **Special Qualification Certificates**

All candidates applying for special qualification certification must hold a primary certificate from the ABP or from another primary specialty board of the American Board of Medical Specialties.
REQUIREMENTS FOR CERTIFICATION

Pathology

Credit is not given for training outside of the United States and Canada. Also, credit is not given for training in areas of special qualification that were part of the training program leading to the requirements necessary to qualify to sit for the examination in AP and/or CP.

No advanced credit will be granted for special qualification training or experience that has been used to qualify for examinations given by another primary medical specialty board.

Advanced credit is not given toward the requirements for special qualification certification by the mechanisms described in Section III.A.3, Other Credit Mechanisms.

1. Blood Banking (BB)
   a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:
      (1) One full year of additional supervised training in blood banking in a program accredited for such training by the ACGME or approved for such training by the ABP
   or
      (2) Two additional years of full-time experience in blood banking or its equivalent under circumstances acceptable to the ABP.
   b. Applicants not holding a primary certificate from the ABP but holding a primary certificate from another primary medical specialty board. **Two full years or its equivalent of approved training or acceptable experience in blood banking.**

2. Chemical Pathology (Chem P)
   a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:
      (1) One full year of additional supervised training in chemical pathology in a program accredited for such training by the ACGME or approved for such training by the ABP
   or
      (2) Two additional years of full-time experience in chemical pathology or its equivalent under circumstances acceptable to the ABP.
   b. Applicants not holding a primary certificate from the ABP but holding a primary certificate from another primary medical specialty board: **Two full years or its equivalent of approved training or acceptable experience in chemical pathology.**

3. Dermatopathology (DP)
   Certification in dermatopathology is a joint and equal function of The American Board of Pathology (ABP) and The American Board of Dermatology (ABD). Such function will relate to qualifications of candidates, standards of examinations, and the form of the certificate.
   All candidates applying for examination must hold a currently valid, full and unrestricted license to practice medicine or osteopathy in either the United States or Canada.
   a. Prerequisites
      The American Boards of Pathology and Dermatology will admit candidates to examination for certificates of special qualification in dermatopathology who are otherwise qualified and who have met one of the following requirements.
      (1) Applicants who are diplomates of both the ABP and the ABD.
      (2) Applicants already holding a primary certificate from the ABP (anatomic pathology, or combined anatomic and clinical pathology) or the ABD and the addition of one or two years of training in dermatopathology in a program accredited for such training by the ACGME. This additional training of one or two years must be taken after the candidate has met the full training requirements for certification in pathology or dermatology.

b. Training
   Training programs in dermatopathology will be an equal and joint function of the departments of pathology and dermatology. The dermatopathologist applicant shall have spent one-half of the required training time of the one or two year program in clinical dermatology.

Committee for Dermatopathology:
William A. Caro, MD, Chicago, Illinois
Mark Allen Everett, MD, Oklahoma City, Oklahoma
Merle W. Delmer, MD, San Antonio, Texas
Thomas J. Gill III, MD, Pittsburgh, Pennsylvania
James H. Graham, MD, Washington, D.C.
William H. Hartmann, MD, Knoxville, Tennessee
Candidates may obtain an additional training as follows:
Pathologists—M. R. Abell, MD, PhD
Executive Director
American Board of Pathology
Lincoln Center
5401 West Kennedy Boulevard
P.O. Box 25915
Tampa, Florida 33622
Dermatologists—Clarence S. Livingood, MD
Executive Director
American Board of Dermatology
Henry Ford Hospital
2799 West Grand Boulevard
Detroit, Michigan 48202

4. Forensic Pathology (FP)
   a. Applicants who hold a certificate in anatomic and clinical pathology, or anatomic pathology only, or in special instances, clinical pathology only:
      (1) One full year of additional supervised training in forensic pathology in a program accredited for such training by the ACGME or approved for such training by the ABP
   or
      (2) Two additional years of full-time experience in forensic pathology or its equivalent in a situation comparable to that of a program accredited for such training by the ACGME or approved for such training by the ABP.
   b. Applicants seeking combined certification in anatomic pathology and forensic pathology (AP/FP), see Section III C.Certificate Combinations.

5. Hematology (HEM)
   a. Applicants who hold a certificate in anatomic and clinical pathology or clinical pathology only, or in special instances, anatomic pathology only:
      (1) One full year of additional supervised training in hematology in a program accredited for such training by the ACGME or approved for such training by the ABP
   or
      (2) Two additional years of full-time experience in hematology or its equivalent under circumstances acceptable to the ABP.
   b. Applicants not holding a primary certificate from the ABP but holding a primary certificate from another primary medical specialty board: **Two full years or its equivalent of approved training or acceptable experience in clinical laboratory hematology.**

6. Immunopathology (IP)
   a. Applicants who hold a certificate in anatomic and clinical pathology:
      (1) One full year of additional supervised training in immunopathology in a program accredited for such training by the ACGME or approved for such training by the ABP
   or
      (2) Two additional years of full-time experience in immunopathology or its equivalent under circumstances acceptable to the ABP.
b. Applicants who hold a certificate in anatomic pathology or clinical pathology only:
   (1) Two full years of additional supervised training in immunopathology in a program accredited for such training by the ACGME or approved for such training by the ABP
   or
   (2) Four additional years of full-time experience in immunopathology or its equivalent under circumstances acceptable to the ABP.

c. Applicants who hold a certificate in anatomic pathology only or clinical pathology only plus a certificate of Special Qualification in Blood Banking, Hematology, Medical Microbiology, or Chemical Pathology:
   (1) One full year of additional supervised training in immunopathology in a program accredited for such training by the ACGME or approved for such training by the ABP
   or
   (2) Two additional years of full-time experience in immunopathology or its equivalent under circumstances acceptable to the ABP.

d. Applicants seeking combined certification in anatomic pathology or clinical pathology and immunopathology (AP/IP), see Section III C, Certificate Combinations.

7. Medical Microbiology (MB)
   a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:
      (1) One full year of additional supervised training in medical microbiology in a program accredited for such training by the ACGME or approved for such training by the ABP
      or
      (2) Two additional years of full-time experience in medical microbiology or its equivalent under circumstances acceptable to the ABP.

b. Applicants not holding a primary certificate from the ABP but holding a primary certificate from another primary medical specialty board: Two full years of its equivalence of approved training or acceptable experience in clinical laboratory microbiology.

e. Applicants who hold a certificate in anatomic and clinical pathology, or anatomic pathology only: Two full years of additional supervised training in neuropathology in a program accredited for such training by the ACGME or approved for such training by the ABP.

b. Applicants seeking combined certification in clinical pathology and radiisotopic pathology (CP/RIP), see Section III C, Certificate Combinations.

C. Certificate Combinations

Under certain circumstances special qualification training may be arranged in conjunction with the primary training requirements, permitting a candidate to qualify for a combined certificate. All applicants for combined certification in 1990 and thereafter must also meet the additional credential requirements of one full year of clinical training, clinical experience, or clinically related research. (See Additional Credential Requirement for Primary Certification in Pathology.) Dual credit is not acceptable, i.e., training in an area of special qualification as part of the requirements toward a primary certificate is not acceptable as credit for special qualification.

Advanced credit will not be given toward the requirements for combined certificates involving primary training and special qualification training by the mechanisms described in Section III A 3, Other Credit Mechanisms.

The acceptable combinations of certification and the required training are:

1. Anatomic pathology and forensic pathology (AP/FP)—two full years of approved training in anatomic pathology in a program accredited for such training by the ACGME and one full year of approved training in forensic pathology in a program accredited for such training by the ACGME.

2. Anatomic pathology and neuropathology (AP/NP)—two full years of approved training in anatomic pathology and two full years of approved training in neuropathology in a program accredited for such training by the ACGME with adequate experience in diagnostic neuropathology.

3. Anatomic pathology and hematology (AP/HEM)—two full years of approved training in anatomic pathology in a program accredited for such training by the ACGME and two full years of approved training in hematology in a program accredited for such training by the ACGME.

4. Anatomic pathology and immunopathology (AP/IP)—two full years of approved training in anatomic pathology in a program accredited for such training by the ACGME.

5. Clinical pathology (CP) plus special qualification—three full years of approved training in clinical pathology in a program accredited for such training by the ACGME plus one full year of approved special qualification training in blood banking, chemical pathology, hematology, medical microbiology, or radioisotopic pathology in a program accredited for such training by the ACGME as defined in Section III B, Special Qualification Certificates.

Additional Credential Requirement for Applicants for Primary Certification in 1990 and Thereafter

EFFECTIVE 1 JULY 1985 for residents entering primary pathology training programs in 1990 for all applicants for examination, the requirements for certification in combined anatomic and clinical pathology (AP/CP) and for combined primary pathology and special qualification cer-
Requirements for Certification

Clinical training will be five years with one of the five years being clinical training, experience, or research (see below). For certification in anatomic pathology (AP) only or in clinical pathology (CP) only, the primary training requirements are three years with a fourth year being clinical training, experience, or research.

The additional clinical requirements for certification may be met by one or a combination of the following three pathways:

1. One full year of approved graduate medical education in a transitional year training program; or in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice in a program accredited for such training by the ACGME.

2. One year of full-time research in pathology or in another clinical discipline providing that the research has clearly defined clinical implications.

3. One year of training in one of the specialty fields of pathology that includes clinical correlation and patient contact. (This year may not be used to meet the requirements both for clinical training and for special qualification certification.)

or

By the incorporation of the equivalence of one full year of clinical training, clinical experience, or clinical research throughout an anatomic and clinical pathology training program of five years or an anatomic pathology or clinical pathology training program of four years. The training director is responsible for defining and justifying this year of clinical activity.

Credit for Clinical Training Outside of the United States and Canada

Under certain circumstances, clinical training taken outside of the United States and Canada may be acceptable toward meeting the ABP credential requirement of clinical training providing that the following three criteria are fully met and validated:

1. One full year of full-time training in clinical medicine in a multi-disciplinary training program (internship) or in a training program in internal medicine, pediatric medicine, general surgery, or obstetrics and gynecology.

2. Proof from the accreditation body in the respective country that the training program in which the candidate was registered had been inspected and fully accredited. No credit will be granted for clinical training in countries in which training programs are not so accredited.

3. Validation from the director of the training program that the candidate was registered in the program, completed the training satisfactorily, and was the physician of record in the diagnosis and treatment of patients throughout the full year.

The acceptability of clinical training toward meeting the ABP requirements is assessed on an individual basis and it is advisable that an opinion be obtained from the ABP well in advance of the submission of an application for certification. The amount of advance credit for clinical training outside the United States and Canada toward the ABP requirements for certification cannot exceed a total of 12 months. No assessment of possible credit will be given until all validating reference information has been received.

Application Blank and Fee

Application must be made on the special form that may be obtained by writing the office of the ABP and forwarded with other required credentials and the application-examination fee. An application cannot be given consideration unless it is accompanied by the application-examination fee.

The application-examination fee schedule for 1987 is as follows:

<table>
<thead>
<tr>
<th>Pathology Type</th>
<th>Fee</th>
</tr>
</thead>
<tbody>
<tr>
<td>Anatomic pathology portion of combined AP/CP</td>
<td>$850</td>
</tr>
<tr>
<td>Clinical pathology portion of combined AP/CP</td>
<td>$850</td>
</tr>
<tr>
<td>Combined anatomic and clinical pathology</td>
<td>$950</td>
</tr>
<tr>
<td>Special qualification</td>
<td>$950</td>
</tr>
<tr>
<td>Anatomic or clinical pathology combined with special qualification (both parts taken at one sitting)</td>
<td>$1,100</td>
</tr>
</tbody>
</table>

The application-examination fee includes a non-refundable processing fee of $100. If the different divisions of the AP/CP and the combined primary and special qualification examinations are taken at separate sittings, there is a separate examination fee for each sitting. If the candidate fails in the examination, admission to a repeat examination is permitted, but any re-examination must occur within the three-year period of qualification described under "Qualification Period for Examination." The applicant must again pay an examination fee according to the current fee schedule before another examination will be given; if having applied for a specific examination the candidate requests a transfer to a future examination, prior to the cancellation deadline, there is a transfer fee of $300.

In the event of the candidate's illness at the time of the examination, validated by the candidate's attending physician, a major portion of the application-examination fee will be either transferred to the next examination or refunded.

Vacation, Maternity, and Other Leave

Each program may develop individual sick, vacation, and other leave policies for the resident. However, one year of approved training credit toward ABP certification requirements must be 52 weeks in duration and must include at least 48 weeks of full-time pathology training. Furthermore, unused vacation and other leave time may not be accumulated to reduce the overall duration of training.

Irregular Behavior

In the interest of protecting the integrity of the ABP and its certification examinations, the following irregular behaviors may be sufficient to bar a person from future examinations, to terminate one's participation in the examination, and to invalidate the results of one's examination, to cause the withholding or revocation of one's scores or certificate, or to merit other appropriate action by the Board:

1. The giving or receiving of aid in the examination as evidenced either by observation or by statistical analysis of candidates' answers;

2. The unauthorized possession, reproduction, or disclosure of any ABP examination-related materials, including, but not limited to, examination questions or answers, before, during, or after the examination; and/or

3. The offering of any benefit to any agent of the Board in return for any right, privilege, or benefit which is not usually granted by the Board to other similarly situated candidates or persons.

In addition, the Board may withhold a candidate's scores and require that the candidate retake one or more portions of the examination if presented with sufficient evidence that the security of the examination has been compromised, notwithstanding the absence of any evidence of the candidate's personal involvement in such activities.

Qualification Period for Examination

The ABP does not recognize or use the term "Board Eligible" and does not issue statements concerning "Board Eligibility." An applicant is declared qualified for examination only after a formal application has been received and approved by the Credentials Committee.

The ABP will permit a candidate who has qualified for examination on the basis of approved training and/or experience to sit for examination during a period not to exceed three years after being declared qualified to take the examination. When this period has expired, additional periods of qualification for examination will be permitted...
upon submission of documented evidence that the candidate has obtained further training or experience after termination of the period of qualification in the form of an additional year of approved training in an accredited program or two years of experience acceptable to the ABP.

At any time after declaring a candidate qualified for examination, the Credentials Committee, at its discretion may withdraw such qualification or may as a condition require satisfaction by the candidate of specified conditions. In the exercise of its discretion under this regulation, the Credentials Committee shall be entitled to act without reason assigned.

If it be determined that an applicant has falsified information in the application form, the applicant will not be approved for the certifying examination and must wait a period of three years before being permitted to file a new application. The applicant will not be considered qualified to sit for the certifying examination during the three-year interim.

**Examination Dates and Sites**

Examinations are held at the discretion of the Board. The primary examinations are generally conducted twice annually in May-June and in November. The tentative schedules for forthcoming examinations are:

- Anatomical and clinical pathology examinations—
  - 27, 28, 29 May 1987—Chicago, IL
  - 16, 17, 18 November 1987—New Orleans, LA
  - 19, 20, 21 May 1988—Columbus, OH
  - 9, 10, 11 November 1988—Dallas, TX
- Only one examination will be given in 1989 and 1990.
- 26, 27, 28 September 1989—Chicago, IL
- 28, 29, 30 August 1990—Dallas, TX
- Examinations for special qualification are usually held in May of each year; however, dermatopathology is scheduled separately at a time and place mutually agreed upon by The American Board of Pathology and the American Board of Dermatology.
- Examinations for special qualification—
  - 26 May 1987—Chicago, IL
  - 18 May 1988—Columbus, OH
  - 25 September 1989—Chicago, IL
  - 27 August 1990—Dallas, TX
- Examination for Special Qualification in Pathology: Immunopathology—No immunopathology examination will be given in 1987. The next immunopathology examination will be given in May 1988 and will be given every two years thereafter.
- Dermatopathology examination—
  - 3 November 1987—Chicago, IL

**Final Filing and Cut-Off Dates**

The final filing date for the receipt of an application or registration for the spring primary and special qualification examinations is 1 February of each year and for the fall primary examinations, 1 August of each year.

If the candidate cancels an appearance for the examination after these dates or does not appear for the examination, the entire application-examination fee is forfeited.

**Issuance of Certificate**

Upon satisfactorily passing the appropriate examination(s), a candidate will be issued a certificate by the ABP in the fields of pathology for which the ABP accepted the credentials. Thus, a candidate who is qualified for the combined examination in anatomic and clinical pathology, having fulfilled the minimum requirements of 24 months of approved training in anatomic pathology and 24 months of approved training in clinical pathology, will receive a certificate only after both parts (anatomic and clinical pathology) of the examination have been passed. The two parts may be taken at one session or at separate sessions within the three-year qualification period.

Candidates qualified for examination in anatomic or clinical pathology and a specialty area of pathology and claiming qualification on the basis of the required training in each area, will receive a certificate only after each part of the examination had been passed.

A candidate who has fulfilled the requirements for anatomic pathology only, or clinical pathology only, will receive a certificate after passing the examination in anatomic or in clinical pathology.

If a candidate's certificate is lost or destroyed, the ABP will issue a duplicate certificate upon written request and justification, together with the necessary engraving and handling charge of $50.

**Limitation of Number of Certificates of Special Qualification (Competence)**

Effective 1 January 1985, as a condition of admission to an examination for Special Qualification in Pathology, an individual holding two or more certificates of Special Competence and/or Special Qualification shall surrender a sufficient number of certificates to reduce their number to one. In the event that the individual fails the examination, the surrendered certificates shall be restored. This action does not include certificates of Special Competence (Qualification) in Radioisotopic Pathology and Dermatopathology.

**Appeals Procedure**

An individual who has received an unfavorable ruling regarding his qualification to take the examination may initiate an appeal of such determination by making a written request for reconsideration to the ABP Office within 90 days of the date such ruling was mailed.

A candidate who fails a certifying examination may request that the examination be rescored to verify the accuracy of the results as reported. Such request must be made in writing within 90 days of the date of mailing of the results of the examination to the candidate and must be accompanied by the fee of $50 per certifying examination or part thereof. There shall be no further appeal from failure of an examination.

**Irregular Behavior**

In the interest of protecting the integrity of the ABP and its certification examinations, the following irregular behaviors may be sufficient to bar a person from future examinations, to terminate one's participation in the examination, to invalidate the results of one's examination, to cause the withholding or revocation of one's scores or certificate, or to merit other appropriate action by the Board:

1. The giving or receiving of aid in the examination as evidenced either by observation or by statistical analysis of candidates' answers;
2. The unauthorized possession, reproduction, or disclosure of any ABP examination-related materials, including, but not limited to, examination questions or answers, before, during, or after the examination; and/or
3. The offering of any benefit to any agent of the Board in return for any right, privilege, or benefit which is not usually granted by the Board to other similarly situated candidates or persons.

In addition, the Board may withhold a candidate's scores and require that the candidate retake one or more portions of the examination if presented with sufficient evidence that the security of the examination has been compromised, notwithstanding the absence of any evidence of the candidate's personal involvement in such activities.
Graduates of osteopathic medical schools will be accepted for examination if they satisfy the training requirements of the Board. Training must be completed in programs accredited by the Residency Review Committee for Pediatrics.

II. LICENSE TO PRACTICE MEDICINE

Beginning with the 1986 Written Examination, all applicants must have an unrestricted license to practice medicine in one of the states, districts, or territories of the United States or a province of Canada, or unrestricted privileges to practice medicine in the United States Armed Forces. A temporary license, such as an institutional, educational, or limited permit issued for physicians who are pursuing hospital-based residency training is acceptable for admission to Part I of the certification process (written examination). However, prior to appearing for Part II (oral examination), a candidate will be required to submit an actual copy of his/her unrestricted license to practice medicine in one of the states, districts, or territories of the United States or a province of Canada, or unrestricted privileges to practice medicine in the United States Armed Forces.

It is Board policy that, if an applicant has any action pending against him/her regarding the right to have an unrestricted license to practice medicine, he/she may be admitted to the examination, but the certificate will not be awarded until such time as the action pending against him/her has been resolved to the Board’s satisfaction.

III. TRAINING REQUIREMENTS

Applicants must complete three years of postgraduate hospital-based pediatric training in programs accredited by the Residency Review Committee for Pediatrics or in programs in Canada approved for general pediatric specialty training by the Royal College of Physicians and Surgeons of Canada. During this period of training, the applicant is expected to assume progressive responsibility for the care of patients. Credit will not be given for training completed before the medical degree is awarded.

The Board recognizes five levels of pediatric training (PL 0 through PL 4). The Pediatric Levels are defined as follows:

PL 0 Accredited internships or residencies in fields other than pediatrics or in fields other than for extensive pediatric training in countries other than the United States or Canada. Applicants who are graduates of foreign medical schools and who received their degree prior to July 1, 1975 may request PL 0 credit for hospital-based training in another country, provided 1) it was at least one year in duration, 2) it was exclusively in the field of pediatrics, and 3) it is evaluated by the Credentials Committee of the Board to be equivalent to pediatric residency training in the United States. TRAINING AT THIS LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JULY 1, 1975.

PL 1 The first postgraduate year in general comprehensive pediatric training in an accredited program.

PL 2 The second postgraduate year in general comprehensive pediatric training in an accredited program following PL 1 but with increased responsibility for patient care and for the supervision of junior staff and medical students.

PL 3 The third postgraduate year in general comprehensive pediatric training in an accredited program. This year must be an integral part of the total three years of general pediatric training required for all medical school graduates who received their degrees after June 30, 1978. It may be a chief residency or a senior supervising residency.
PL-3 An accredited clinical program or subspecialty residency in a pediatric subspecialty area of one year in duration. SUBSPECIALTY TRAINING AT THE PL-3 LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JUNE 30, 1978.

PL-4 An accredited program or subspecialty residency in a pediatric subspecialty in which the proportion of time in nonclinical or laboratory activities is so large that a minimum of two years must be spent to gain the equivalent of a year of clinical training. SUBSPECIALTY TRAINING AT THE PL-4 LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS IN GENERAL PEDIATRICS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JUNE 30, 1978.

Training Requirements by Year of Graduation from Medical School

The requirements for admission to the certifying examinations of the Board vary depending upon the date an applicant received his/her medical school diploma.

Applicants Who Graduated Before June 30, 1978:

1. Prior to July 1, 1975, must complete three years of hospital-based pediatric training. Two of these years of training must be completed in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. These two years of required general comprehensive pediatric training must be at increasing levels of responsibility for patient care and responsibility for junior staff and medical students, e.g., PL-1 and then PL-2. Applicants may fulfill the third year of required training by completing one of the following options:
   a. A supervisory year in general comprehensive pediatrics (PL-3).
   b. An accredited subspecialty residency in a pediatric subspecialty area. Applicants entering pediatric subspecialty training are encouraged to correspond by letter with the Board prior to entering training to verify the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics.

2. Between July 1, 1975 and June 30, 1978 must complete three years of hospital-based pediatric training. Two of these years of training must be completed in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada: These two years of required general comprehensive pediatric training must be at increasing levels of responsibility for patient care and responsibility for junior staff and medical students, e.g., PL-1 and then PL-2. Applicants may fulfill the third year of required training by completing one of the following options:
   a. A supervisory year in general comprehensive pediatrics (PL-3).
   b. An accredited subspecialty residency in a pediatric subspecialty area. Applicants entering pediatric subspecialty training are encouraged to correspond by letter with the Board prior to entering training to verify the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics.

3. After June 30, 1978 must complete three years of hospital-based training in general comprehensive pediatrics in programs that are accredited by the Residency Review Committee for Pediatrics or approved by the Royal College of Physicians and Surgeons of Canada. A year of supervisory experience must be an integral part of the three year program; this year must include at least six months of direct and senior supervisory responsibility in general pediatrics. Residents should not accumulate more than six months' experience in the same subspecialty over the total three year program and the total of all such subspecialty rotations should be at least 11 months but not more than 15 months. The rotation in neonatology must be for a minimum of four months, and not more than six months, and must include experience with the normal newborn infant.

The American Board of Pediatrics recognizes that occasionally there will be an exceptional applicant who should be given special consideration to substitute other training for the third year of general comprehensive pediatrics required of medical graduates who received their degrees June 30, 1978. Information concerning special consideration may be obtained by writing to the Executive Secretary. The pediatric department chair may initiate such a request for prospective review by the Board after the resident has completed one year of general comprehensive pediatric training. Physicians nominated for special consideration may be asked to take a special screening examination. The score on this examination would be used by the Credentials Committee as one means of evaluating the petition.

TRAINING PROGRAMS: The American Board of Pediatrics approves applicants for admission to its certifying process; the Board does not accredit training programs. Requests by directors for accreditation of their programs by the Residency Review Committee for Pediatrics should be addressed to Secretary of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, Illinois 60610.

The Residency Review Committee for Pediatrics currently reviews and accredits pediatric subspecialty programs in the following areas: pediatric cardiology, pediatric endocrinology, pediatric hematology-oncology, pediatric nephrology, and neonatal-perinatal medicine. A list of accredited programs is published in this Directory. Applicants who received their medical degree prior to July 1, 1978, and who wish to apply the subspecialty training toward fulfillment of one of the three years of required training are advised to correspond with the Board regarding the acceptability of their training plans toward certification.

Applicants seeking approval of programs of specialized training that are not accredited are advised to ask their program directors to submit prospectively to the American Board of Pediatrics a description of their proposed program for evaluation by the Credentials Committee. A list of the information required for review by the Credentials Committee may be obtained by contacting the Board office. When individualized approval is granted, it does not imply automatic approval for future applicants.
CREDIT FOR TRAINING TAKEN IN ACCREDITED PROGRAMS OTHER THAN PEDIATRICS: Physicians transferring to pediatric residency training from other accredited residencies, e.g., family practice, internal medicine, transitional, are advised to correspond with the Board office to determine whether credit may be awarded for previous training. Requests for credit should be submitted prior to entering pediatric residency training.

SPECIAL AGREEMENTS: There exists a special agreement between the American Board of Pediatrics and the AMERICAN BOARD OF INTERNAL MEDICINE whereby an applicant may fulfill the training requirements of both Boards by completing two years of accredited training in general comprehensive pediatrics and two years of accredited training in internal medicine. The two Boards believe that all four years should be completed in the same combined training program. A list of institutions offering combined programs is published in this Directory of Residency Training Programs. At the present time, applicants may apply for the written examination after they have completed two years of accredited training in general comprehensive pediatrics and one year of accredited training in internal medicine. Applicants who begin combined programs after December 31, 1994, require four years of the written examination of the Board until after they have satisfactorily completed all four years of accredited training.

A special agreement also exists with the AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY whereby an applicant who completes two years of accredited training in general comprehensive pediatrics and the neurology track is necessary to meet the requirements for certification in neurology with special competence in Child Neurology fulfills the training requirements of both the American Board of Pediatrics and the American Board of Psychiatry and Neurology. Applicants can apply for the written examination after completion of two years of accredited training in general comprehensive pediatrics and two years of accredited training in neurology.

Any applicant, regardless of his/her year of graduation from medical school, may fulfill the training requirements of the Board by completing the training routes outlined in the Special Agreements between the American Board of Pediatrics and the American Board of Internal Medicine and the American Board of Psychiatry and Neurology. Candidates will not be permitted to appear for the oral examination until after they have completed all of their training.

The American Board of Pediatrics, the American Board of Psychiatry and Neurology, and the Committee on Certification in Child Psychiatry have formed a committee that is overseeing training in six pilot programs. Training includes 24 months of general comprehensive pediatrics, 18 months of child psychiatry, and 18 months of adult psychiatry. Physicians pursuing training in one of these six pilot programs will be permitted to take this Board's written examination after completing satisfactorily 24 months of general comprehensive pediatrics and 12 months of psychiatry. Candidates may proceed to the oral examination after passing the written examination and completing all five years of training. Further information concerning these combined pilot training programs may be obtained by contacting the Board office.

GRADUATE SCHOOL COURSES: It is a fundamental concept of the American Board of Pediatrics that a residency training program should provide for properly organized progressive responsibility for the care of sick children. The Board believes further that this purpose can be accomplished best through continuity of clinical experience under supervision of an attending pediatrician who are themselves responsible for the care of the children of that service. The substitution of a formal graduate or postgraduate school course that does not carry the essential ingredient of responsibility for patient care is, in the opinion of the Board, inconsistent with this principle. Accordingly, the Board will not accept such courses in fulfillment of its training requirements.

MILITARY SERVICE: Military assignments will not be accepted in lieu of a year of required training unless served as a regular resident in a military hospital that has received specific accreditation from the Residency Review Committee for Pediatrics.

SPECIAL SITUATIONS: The Board recognizes that situations may arise that are not explained by the preceding information. A physician may have worked in a pediatric field for many years, yet be deficient in the formal prerequisites for examination, or a physician may have completed specialized training not explained in the above requirements. In such cases, the individual should present his question to the Executive Secretary of the Board, who may ask the Credentials Committee to review the record and decide whether permission should be given to enter the certification process.

STATEMENT OF ELIGIBILITY: The Board does not issue statements of "eligibility" for its examinations. The Board will verify only whether a physician is certified or not certified.

IV. VERIFICATION OF TRAINING AND EVALUATION BY DIRECTORS OF HOSPITAL-BASED PEDIATRIC TRAINING PROGRAMS:

The Board regards the evaluation of trainee competency as a continuum that begins during training and is completed by the Board examinations following formal training. The Board depends upon program directors and their faculties to provide objective assessments of applicants' clinical competency as demonstrated in the training setting. In the written and oral examinations, candidates have the opportunity to demonstrate to the Board the knowledge and clinical problem solving abilities needed to diagnose and manage the health problems of children.

A. THE BOARD WILL REQUEST PROGRAM DIRECTORS TO VERIFY COMPLETION OF TRAINING AND TO SIGN THE FOLLOWING STATEMENT ON THE VERIFICATION OF CLINICAL COMPETENCE FORMS:

"I certify that the above-named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a general pediatrician; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

In recommending a candidate for the examination, a program director should keep in mind the Definition of a Passing Candidate as determined by the Board:

A candidate shall demonstrate the following abilities as they pertain to infants, children, and adolescents:

1. assessment of medical issues and formulation of a management plan for any medical or health maintenance problem;
2. execution of the management plan with the patient and family, without further medical consultation, for all common problems of disease and health maintenance for all medically life-threatening situations;
3. consultation with physicians and other professionals regarding these common problems and life-threatening situations; and
4. arrangement for help for the patient and knowledge of what to anticipate from the consultant, being prepared personally to guide further management with assistance when appropriate, for unusual problems requiring subspecialty, surgical or other specialized skills.

All applicants must have verification of training and verification of clinical competence on file in the Board office to be admitted to the written examination. It is the applicant's responsibility to be sure the program director sub-
mits all of the required documents by the appropriate deadline. When an applicant has not attained the appropriate knowledge and skills, the program director should sign Statement B on the Verification of Clinical Competency Form. By signing this statement, the program director is recommending that the applicant not be admitted to the examination. If an applicant's training is not verified and/or he/she is not recommended for admission to the examination, the applicant will be required to complete satisfactorily an additional period of hospital-based training in general comprehensive pediatrics in either an accredited program in the United States or an approved program in Canada before reappealing to the Board. Alternatively the applicant may appeal to the Credentials Committee of the Board. The Credentials Committee will gather additional information about the applicant and decide if permission to take the examination should be given.

For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission is refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Board's certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competency Form will take precedence over the certificate from the hospital. The Board must have the program director's assurance that the person meets the standards expected of a certified pediatrician. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program that have not been made up by the applicant such a sick leave, vacation or maternity leave. The Board recommends that absences from a program greater than three months during the three years of required training be made up by additional periods of training.

If the program director is also asked to provide information that will help the Board make a fair judgment about the candidate.

The program director is asked to evaluate on a nine-point scale the applicant in the following areas: gathering data by history, by physical examination, and by laboratory studies; assessing data and arriving at a diagnosis; managing the patient and maintaining health; interpersonal relationships with patients and families; interpersonal relationships with other members of the health team; work habits and personal qualities.

The program director is asked to rate the applicant's overall clinical competency by indicating which of the following phrases best describes the applicant in terms of his/her ability to care for children in the United States or Canada. In these phrases, the word "manage" is defined as identifying the nature of the problem, determining methods of resolving or alleviating the problem, and carrying out management plans including the appropriate and timely use of consultants.

1. Unable to manage many pediatric problems including the most routine ones
2. 3. Able to manage only the most routine problems in pediatrics
4. 5. Able to manage the common problems of pediatrics adequately
6. 7. Able to manage most pediatric problems in an adequate way
8. 9. Able to manage almost any pediatric problem in a highly effective manner

If an applicant receives a rating of 3 or less in any single area or a rating of 4 or less for overall clinical competency, the Credentials Committee asks that the program director submit documentation with the completed Verification of Clinical Competency Form. If the applicant's weaknesses are documented, the applicant must pass a screening examination before being admitted to the written examination. If the applicant is unsuccessful on a screening examination, the applicant should complete satisfactorily an additional period of hospital-based training in general comprehensive pediatrics in either an accredited program in the United States or an approved program in Canada before reappealing to the Board. Alternatively, the applicant may appeal to the Credentials Committee as described in section IV. A. above.

The Board will review program directors' assessments of applicants and in the future will report data from time to time anonymous data to program directors regarding their assessments of applicants and the applicants' subsequent performance on written and oral examinations.

C. THE BOARD RECOMMENDS THAT EACH PROGRAM ESTABLISH A COMMITTEE OF SUPERVISING FACULTY TO EVALUATE INDIVIDUAL HOUSE OFFICER PROGRESS DURING TRAINING AND AT THE END OF TRAINING.

Judgments should be made as objectively as possible and on a regular basis. Faculties are encouraged to use their own forms for periodic evaluation or to use forms developed by the Board. It is recommended that program directors maintain files documenting each resident's performance and that the evaluations in these files be discussed periodically with each resident. The Board, through its representatives, recommends to the Residency Review Committee for Pediatrics that when pediatric residency programs are reviewed, the presence of objective, systematically recorded evaluation of resident performance be assessed.

D. RESIDENTS WHO PLAN TO SEEK CERTIFICATION SHOULD BE ENCOURAGED TO TAKE THE IN-PERIODIC EXAMINATION AT THE BEGINNING OF THE PL-1 AND PL-2 YEARS AND AGAIN IN THE PL-3 YEAR IF PREVIOUS PERFORMANCE IS NOT SATISFACTORY.

Results can be used by the program director to evaluate the program and to indicate to residents areas in which they need additional study or training.

If program directors and their faculties may want to explore and develop evaluation procedures for assessment of physician performance. Examples are: medical record audits, rating scales for assessment of work habits, observational checklists for assessment of technical skills, peer reviews, patient-parent simulators for assessment of interpersonal skills, oral examinations, and consumer questionnaires.

The Board will continue to participate in and support research efforts to develop methods for evaluating the day-to-day performance of residents in caring for infants, children, and adolescents.

E. Since ultimate certification in a pediatric subspecialty area is contingent upon certification in general pediatrics, program directors should ensure that residents offered pediatric subspecialty residencies have a thorough grounding in general comprehensive pediatrics as an entering qualification, and that the residents meet the training requirements established for certification by the Board.

Information Concerning Examinations

The content of the examinations for certification is appropriate to the practice of general comprehensive pediatrics. Emphasis is placed on practical aspects; however, good practice is founded on sound scientific knowledge and the candidate should be prepared to demonstrate an understanding of basic science. The examinations for certification are given in two sections: Part I is a written examination, Part II is an oral examination.
The Board does not sponsor or maintain records on any courses which claim to be review courses in preparation for the examinations.

It is the candidate's responsibility to keep the Board informed of any changes in mailing address so that information concerning its examinations can be sent to the candidate at the appropriate time.

IRREGULARITIES

The validity of the performance of candidates on the written and oral examinations of the Board is secured by every means available. Information concerning the procedures to be taken by the Board in the event of irregular behavior during the examinations, giving or obtaining unauthorized information or aid before, during, of after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board, is available by contacting the Board office.

APPLICATION TO THE BOARD

Application material for admission to the certifying examinations of the Board may be obtained by contacting the Board office. The registration period for the written examination extends from November through January. Although they are encouraged to wait until after they have fulfilled the training requirements of the Board to take the written examination, applicants who received their medical degrees prior to July 1, 1975, may apply for admission after they have completed satisfactorily the two core years in pediatrics, (PL 1 and PL 2). Applicants who receive their medical degrees after June 30, 1975 will be admitted to the written examination only after they have completed satisfactorily three years of pediatric training in accredited programs prior to the date on which the examination is to be held.

A physician who has dyslexia or a serious physical handicap and who wishes to be given special consideration will be required to submit documentation of their condition prior to appearing for the written examination. Applicants should notify the Board office at the time the initial application is submitted.

APPLICATIONS MUST BE POSTMARKED BY JANUARY 31ST OF THE YEAR IN WHICH THE APPLICANT WISHES TO TAKE THEWRITTEN EXAMINATION. Early application is desirable, as subsequent assignment to sites for the oral examination depends in part upon the date the first application is received by the Board. Those applications received by this deadline will be processed and evaluated by July 1. After that date, the Board will accept applications for oral examination only if the applicant submits evidence of satisfactory completion of pediatric training programs to verify completion of training. Those applicants who meet the training requirements of the Board and who are recommended by their program director(s) for examination will be submitted and registered on the application for the written examination. An applicant who does not receive notification of acceptance or rejection of his/her application by July 1 should contact the Board office promptly in writing to inquire about the status of the application.

LATE APPLICATIONS

A physician whose application or re-examination registration material is postmarked after the published deadline (January 31 for new applications and February 28 for re-examination registration material) will be assessed an additional fee of $200 before the application or registration material will be processed. New applications and re-examination registration material will not be accepted after May 31 of the year of the examination.

Completion of Certification Process

Beginning with the 1986 Written Examination, new applicants should achieve certification within ten years of their initial acceptance into the certification process. Candidates who were admitted to the certification process prior to 1986 will have ten years, or until December 1995, to complete the certification process. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

When reapplying to the certification process, an applicant is subject to the policies of the Board in effect at that time.

FEES

The cost of certification includes the following fees, payable in United States dollars only:
- Processing and Evaluating Fee: $150.00
- Written Examination (one only): $200.00
- Total payment at the time of initial application: $350.00
- Oral Examination (one only—fee payable on receipt of appointment): $250.00
- TOTAL EXAMINATION FEES: $600.00

If an applicant is not approved to take the certifying examinations of the Board, the $200 written examination fee will be refunded. The remaining $150 is nonrefundable.

If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee ($350) again.

A reapplication fee ($250 for the written and $300 for the oral) will be assessed for each reexamination.

Each of the above fees entitles the applicant to one examination only. These fees are subject to change without notice.

PART I—WRITTEN EXAMINATION

The written examination is given once a year in September, at a number of locations throughout the United States and Canada.

The examination is given in two sessions of four hours' duration each, with a luncheon break between sessions. The examination consists of multiple-choice questions. Examples of the types of questions to be used are mailed to registered candidates prior to the administration of each examination.

Each candidate's written examination score(s) will be reported to his/her general pediatric program director(s).

PART II—ORAL EXAMINATION

A candidate may proceed to the oral examination only after completing the training requirements of the Board and passing the written examination. Site selection forms are sent each year to qualified candidates. All candidates can anticipate an approximate 15-month interim period between completion of these requirements and subsequent consideration for oral examination. Candidates are selected for oral examination appointments according to the following priorities: (1) all candidates who have taken an oral examination, in descending order (most recent year first) by the year of satisfactory completion of the written examination and (2) all candidates who have taken an oral examination, in ascending order (earliest year first) by the year of satisfactory completion of the written examination, and within years by date of initial application. Oral examinations are held five or more times each year in cities across the United States.

Failure in Examinations

Part I (Written Examination)—Written re-examinations may be taken upon payment of the additional charges stated above. Notification of the next examination date and the appropriate reapplication form will be sent to all qualified candidates in December of each year.

Part II (Oral Examination)—Candidates who are unsuccessful in the oral examination may request a second examination after a one-year interim. Site selection forms for the oral examination(s) to be offered during the next year will be sent automatically to qualified candidates. A third oral examination will not be permitted until the candidate has taken and passed another written examination.

Candidates who are unsuccessful on the written or oral examinations must contact the Board office within one year of the date of the examination if they have questions concerning their performance.
**Postponement of Examinations**

Part I (Written Examination)—After the Board has accepted an application, the candidate is expected to take the next written examination offered. Such examinations are given annually at the locations announced by notice to qualified candidates. Candidates who withdraw from the written examination after site assignment cards are entitled to a refund of $100. Candidates who withdraw from the written examination after the admission cards are prepared or who do not appear for the examination will forfeit all fees paid and will be required to submit a reapplication fee ($250) before a future examination.

Part II (Oral Examination)—Appointment letter for the next fiscal year are mailed to qualified candidates early in the year. Should a candidate withdraw from the oral examination between the time the Board receives written confirmation of his/her acceptance of an appointment and 60 days prior to his/her appointment, the candidate will forfeit all but $125 of the examination fee. A candidate who cancels from 60 to 30 days prior to their appointment will forfeit all but $50 of the examination fee. Cancellation within 30 days of administration or not appearing for the examination results in forfeiture of the entire examination fee. A site selection from the oral examinations to be offered during the next year will be sent automatically to qualified candidates in December.

**Certification by the Board**

A certificate is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have passed the examinations.

The names of certified pediatricians, but not their scores, will be sent to the appropriate organizations, directories, and journals.

**Recertification in Pediatrics**

The Board offers a voluntary recertification program that is open to all certified diplomates of the American Board of Pediatrics.

The duration of original certificates issued after April 30, 1988, will be seven years. Individuals will begin the certification renewal process at the beginning of the sixth year, thus allowing two years to complete the process.

Anyone certified prior to May 1, 1988, will not be affected by this policy of time-limited certification; however, those who choose to do so may achieve certification renewal on a voluntary basis.

For more information concerning the recertification program, contact the Board office.

*It should be noted that these criteria and conditions are subject to change. All applicants are advised to consult the Executive Secretary to ascertain any change that may have been made, especially before undertaking any variations in the training program.*

**Certification in Pediatric Subspecialties**

The American Board of Pediatrics has established a procedure for certification in the following subspecialties as areas of special competency: pediatric cardiology, pediatric critical care medicine, pediatric endocrinology, pediatric hematology-oncology, pediatric nephrology, neonatal-perinatal medicine, and pediatric pulmonology.

*Sub-Board of Pediatric Cardiology*
- Amnon Rosenthal, MD, Chairman, Ann Arbor, Michigan
- Delores A. Daniels, MD, New York, New York
- Donald A. Gitod, MD, Indianapolis, Indiana
- John L. Green, MD, Rochester, New York
- James H. Moller, MD, Minneapolis, Minnesota
- Charles E. Mullins, MD, Houston, Texas
- David C. Schwartz, MD, Cincinnati, Ohio
- Roberta C. Williams, MD, Los Angeles, California

*Sub-Board of Pediatric Hematology-Oncoology*
- George R. Honig, MD, Chairman, Chicago, Illinois
- Gerald Gilchrist, MD, Rochester, Minnesota
- William E. Hathaway, MD, Denver, Colorado
- Jeanne M. Lusher, MD, Detroit, Michigan
- Harold M. Maurer, MD, Richmond, Virginia
- Campbell W. McMillan, MD, Chapel Hill, North Carolina
- Sharon B. Murphy, MD, Memphis, Tennessee
- Thomas C. Peebles, MD, Boston, Massachusetts
- Norman J. Siegel, MD, Chairman, New Haven, Connecticut
- Russell W. Chesnay, MD, Sacramento, California
- Robert B.ettenger, MD, Los Angeles, California
- John R. Hoyer, MD, Philadelphia, Pennsylvania
- Julie R. Ingelfinger, MD, Boston, Massachusetts
- Pedro A. Jose, MD, Washington, DC
- Carolyn F. Piel, MD, San Francisco, California
- Jean C. Robillard, MD, Iowa City, Iowa
- Michael A. Simmons, MD, Chairman, Salt Lake City, Utah
- Eduardo Bancalari, MD, Miami, Florida
- Avroy Panaroff, MD, Cleveland, Ohio
- M. Jeffrey Maisels, MD, Royal Oak, Michigan
- William Oh, MD, Providence, Rhode Island
- Dale L. Phelps, MD, Rochester, New York
- George S. Sturtz, MD, Watertown, New York
- Robert L. Rosenfield, MD, Chicago, Illinois
- John G. Brooks, MD, Chairman, Rochester, New York
- Howard Eigen, MD, Indianapolis, Indiana
- Gary L. Larsen, MD, Denver, Colorado
- Richard J. Lemen, MD, Tucson, Arizona
- Robert B. Mellins, MD, New York, New York
- J. Darrell Miller, MD, Coral Gables, Florida
- Daniel C. Shannon, MD, Boston, Massachusetts
- William W. Waring, MD, New Orleans, Louisiana
- Peter R. Holbrook, MD, Chairman, Washington, DC
- Alfred W. Brann, Jr., MD, Atlanta, Georgia
- Howard Eigen, MD, Indianapolis, Indiana
- Bradley P. Fuhrman, MD, Pittsburgh, Pennsylvania
- John F. Griffith, MD, Washington, D.C.
- Julienn E. Hoffman, MD, San Francisco, California
- Michael V. Johnston, MD, Ann Arbor, Michigan
- Mark C. Rogers, MD, Baltimore, Maryland
- Andrew H. Urbach, MD, Pittsburgh, Pennsylvania

**Certification in Pediatric Cardiology**

The American Board of Pediatrics has established a procedure for certification in pediatric cardiology.

**Eligibility Criteria**

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination *before* being permitted to take the pediatric cardiology examination.

2. *Two years of full-time subspecialty residency training in an accredited pediatric cardiology training program.* Applicants should consult the Directory of Residency Training Programs published by the American Medical Association for a listing of programs accredited for subspecialty residency training in pediatric cardiology.

Subspecialty residency training programs must be for a minimum of two years in length, must provide training from pre and postnatal life to young adulthood, and must...
ensure that residents have significant involvement in research.

All sub-specialty training must be completed in the United States or Canada, unless the Credentials Committee of the Sub-Board has given approval for foreign sub-specialty training to an applicant before he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Sub-specialty residents completing their pediatric cardiology training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee on the Sub-Board.

Applicants may not apply for the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Boards/Subspecialty Committees.

3. Verification of training. Applicants will be asked to list the program(s) where they completed sub-specialty residency training in pediatric cardiology. The Sub-Board will send a Verification of Clinical Competence Form to the program director(s) in pediatric cardiology for completion.

Role of the Pediatric Cardiology Program Director

The role of the pediatric cardiology program director in the certification process is to verify completion of training and to sign the following statement on the Verification of Clinical Competence Form:

“I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric cardiologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination.”

All applicants must have verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric cardiology examination. If an applicant’s training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of training before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission is refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Sub-Board’s certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director’s statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital.

The Sub-Board must have the program director’s assurance that the person meets the standards expected of a certified pediatric cardiologist. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation, pregnancy leave, or military leave that have not been made up by the applicant. The Sub-Board recommends that absences from a program, for any reason, beyond three months during the three years of required training be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Sub-Board of Pediatric Cardiology. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Examinations

Candidates must pass both the written and oral examinations in pediatric cardiology to be certified. These examinations are offered every three years. Please contact the American Board of Pediatrics for the exact date of each examination.

The purpose of these examinations is to determine the candidate’s competency to practice the sub-specialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Examination results will be reported by name and score to the pediatric department chairman and sub-specialty program director at the institution(s) where the candidate trained.

Failure in Examinations

Candidates who are unsuccessful on the written examination will be admitted for re-examination at the next written examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on one oral examination will be re-admitted to a second oral examination upon specific application and payment of the appropriate fee. Upon failure in two oral examinations, the candidate will be required to take and pass another written examination before being admitted to a subsequent oral examination.

Candidates who are unsuccessful on the written and/or oral examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance on the examination.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the written examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponements will forfeit all fees paid. To register for a future written examination, payment of the reapplication fee will be required. Candidates for the oral examination who postpone after accepting an appointment, or those who do not appear for the examination, will forfeit the entire examination fee. To register for a future oral examination, payment of the appropriate reapplication fee will be required.

Time in Which to Complete Certification Process

Candidates should achieve certification within ten years of initial acceptance into the certification process for pediatric cardiology. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being re-admitted to the certification process.

Fees

The cost of certification includes the following fees:

New application:

- $275 processing and evaluating fee
- $525 written exam fee for one exam
- $500 TOTAL payable at time of initial application
- Plus oral exam fee for one exam—payable when an appointment is received.

Reapplication:

- $575 reapplication fee for one written exam

If an applicant is not approved to take the pediatric cardiology examination, the $525 written examination fee will be refunded. The remaining $275 processing and evaluating fee is nonrefundable. If the applicant wishes to pursue certification in the future, he/she will be required to
complete a new application and submit the full initial application fee ($800) again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities
The validity of the performance of candidates on the written and oral examinations of the Sub-Board is secured by every means available. Information concerning the procedure to be taken by the Sub-Board in the event of irregular behavior during the examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Sub-Board, is available by contacting the Board office.

Certification
A certificate for special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examinations of the Sub-Board. Certificates issued after April 30, 1988, will be valid for seven years. The names of those certified will be sent to the American Board of Medical Specialties, the Directory of Medical Specialists, and various pediatric journals for publication. Scores will not be sent to ABMS, the Directory, or the journals.

Applications
Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, North Carolina 27514. Telephone (919) 929-0461.

Late Applications
A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of $200 before the application or registration material will be processed.

Certification in Pediatric Endocrinology
The American Board of Pediatrics has established a procedure for certification in pediatric endocrinology.

Eligibility Criteria
1. Certification by the American Board of Pediatrics. Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the pediatric endocrinology examination.

2. Two years of full-time subspecialty residency training in pediatric endocrinology in a program under the supervision of a director who is certified in pediatric endocrinology or, lacking such certificate, possesses equivalent credentials. Physicians who enter their training in pediatric endocrinology on or after January 1, 1987, will be required to complete their training in a program accredited for training in pediatric endocrinology by the Residency Review Committee for Pediatrics. Applicants should consult the Directory of Residency Training Programs published by the American Medical Association for a listing of programs accredited for subspecialty residency training in pediatric endocrinology.

All subspecialty residency programs must ensure that at least half the time spent in the subspecialty area during the training period is devoted to the care of patients with endocrine disease. All subspecialty residency programs must ensure that at least half of the experience involved clinical work with children. The program must be for a minimum of two years in length and must ensure that residents have significant involvement in research. Partial credit will not be given for training of less than two years nor will credit be allowed for elective time spent in this subspecialty area during the usual residency years (PL 1, 2, 3).

All subspecialty training must be in the United States or Canada, unless the Credentials Committee of the Subspecialty Committee has given approval for foreign subspecialty training to an applicant before he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Boards/Subspecialty Committees.

3. Verification of training. Applicants will be asked to list the program(s) where they completed subspecialty residency training in pediatric endocrinology as well as the name(s) of their program director(s). The Committee will send a Verification of Clinical Competence Form to the program director(s) for completion.

Role of the Pediatric Endocrinology Program Director
The role of the pediatric endocrinology program director in the certification process is to verify the completion of the training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric endocrinologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric endocrinology examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of training before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Subspecialty Committee. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then an appeal is refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Subspecialty Committee certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Subspecialty Committee must have the program director's assurance that the person meets the standards expected of a certified pediatric endocrinologist. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Subspecialty Committee recommends that absences from a program beyond two months during the two years of required training be made up by completing an additional period of training.

Each application is considered individually and must be acceptable to the Subspecialty Committee of Pediatric Endocrinology. Questions concerning eligibility will be considered by the Credentials Committee of the Subspecialty Committee upon completion of the application and payment of the fee.

Training Programs
Subspecialty residency programs in pediatric endocrinol-
ogy have been accredited by the Residency Review Committee for Pediatrics (RRC). A list of accredited programs is published in the Directory of Residency Training Programs. A physician entering subspecialty residency training in pediatric endocrinology on or after January 1, 1987 must train in a program accredited for training in pediatric endocrinology by the RRC in order to qualify for admission to the certifying examination of the Subspecialty Committee.

Residents who are now in subspecialty training or who will enter subspecialty training in pediatric endocrinology prior to January 1, 1987, will not be required to complete their training in an accredited program. They are required, however, to complete their training only in those pediatric endocrinology training programs which are operated in association with residency programs in general comprehensive pediatrics accredited by the Residency Review Committee for Pediatrics, or associated with pediatric programs in Canada approved by the Royal College of Physicians and Surgeons of Canada.

**Special Requirements**

Special Requirements for Training Programs in Pediatric Endocrinology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610.

**Examinations**

A written examination in pediatric endocrinology is offered every three years. Please contact the American Board of Pediatrics for the exact date of each examination.

The 1992 examination will be the last examination for which applicants may apply unaccredited training toward fulfillment of the certification requirements.

The purpose of the examination is to determine the candidate's competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director(s) at the institution(s) where the candidate trained.

**Failure in Examinations**

Candidates who are unsuccessful on the examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance.

**Postponement of Examination**

After the Subspecialty Committee has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site announcement/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponements will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

**Time in Which to Complete Certification Process**

Candidates should achieve certification within ten years of initial acceptance into the certification process for pediatric endocrinology. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

**Fees**

The cost of certification includes the following fees:

- New application: $275 processing & evaluating fee
- 525 written examination fee for one exam
- $800 TOTAL payment at time of initial application

- Reapplication:
- $575 reapplication fee for one written exam
- If an applicant is not approved to take the pediatric endocrinology examination, the $525 written examination fee will be refunded. The remaining $275 processing and evaluating fee is nonrefundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee ($800) again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

**Irregularities**

The validity of the performance of candidates on the written examination of the Subspecialty Committee is secured by every means available. Information concerning the procedure to be taken by the Committee in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agency of the Board or Subspecialty Committee, is available by contacting the Board office.

**Certification**

A certificate of special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Subspecialty Committee. Certificates issued after April 30, 1988, will be valid for seven years.

The name of those certified will be sent to the American Board of Medical Specialties, the Directory of Medical Specialists, and various pediatric journals for publication. Scores will not be sent to ABMS, the Directory, or the journals.

**Applications**

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, North Carolina 27514. Telephone: (919) 929-0461.

**Late Applications**

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of $200 before the application or registration material will be processed.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

**Certification in Pediatric Hematology-Oncology**

The American Board of Pediatrics has established a procedure for certification in pediatric hematology-oncology.

**Eligibility Criteria**

1. Certification by the American Board of Pediatrics. Applicants must submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the pediatric hematology-oncology examination.
2. Three years of full-time subspecialty residency training in pediatric hematology-oncology, is required of those physicians entering training on or after January 1, 1986, in a program under the supervision of a director who is certified in pediatric hematology-oncology or lacking such certification, possesses equivalent credentials. Physicians who begin their training in pediatric hematology-oncology on or after January 1, 1987, will be required to complete their three years of subspecialty residency in a program accredited for training in pediatric hematology-oncology by the Residency Review Committee for Pediatrics. Applicants should consult the Directory of Residency Training Programs published by the American Medical Association for a listing of programs accredited for subspecialty residency training in pediatric hematology-oncology. Physicians who enter pediatric hematology-oncology training prior to January 1, 1986, may apply for admission to the examination on the basis of their completion of two years of subspecialty residency training in pediatric hematology-oncology.

All subspecialty residency programs must ensure that at least half of the experience involves clinical work with children. Subspecialty residency programs also must ensure that residents have significant involvement in research. No credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual residency years (PL 1, 2, 3).

All subspecialty training must be in the United States or Canada, unless the Credentials Committee of the Sub-Board has given approval of foreign subspecialty training to an applicant before he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Subspecialty residents completing their pediatric hematology-oncology training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Sub-Board.

Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Boards/Subspecialty Committees.

5. Verification of training. Applicants will be asked to list the program(s) where they completed subspecialty residency training in pediatric hematology-oncology. The Sub-Board will send a Verification of Clinical Competence Form to the program director(s) in pediatric hematology-oncology for completion.

Role of the Pediatric Hematology-Oncology Program Director

The role of the pediatric hematology-oncology program director in the certification process is to verify the completion of the training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attributes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric hematologist-oncologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric hematology-oncology examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of training before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Sub-Board certification program. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the individual meets the standards expected of a certified pediatric hematologist-oncologist.

Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Sub-Board recommends that absences from a program beyond two months during the two years of required training or three months during the three years of training required of those entering programs on or after January 1, 1986, be made up by completing an additional period of training.

Each application will be considered individually and must be acceptable to the Sub-Board of Pediatric Hematology-Oncology. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

Subspecialty residency programs in pediatric hematology-oncology have been accredited by the Residency Review Committee for Pediatrics (RRC). The list of accredited programs is published in the Directory of Residency Training Programs. A physician entering subspecialty residency training in pediatric hematology-oncology on or after January 1, 1987, must train in a program accredited for training in pediatric hematology-oncology by the RRC in order to qualify for admission to the certifying examination of the Sub-Board.

Residents who entered training prior to January 1, 1986, are not required to complete their training in an accredited program. They are required, however, to complete their training in those pediatric hematology-oncology training programs which are operated in association with residency programs in general comprehensive pediatrics accredited by the Residency Review Committee for Pediatrics, or associated with pediatric programs approved by the Royal College of Physicians and Surgeons of Canada.

Special Requirements

Special Requirements for Training Programs in Pediatric Hematology-Oncology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610.

Examinations

A written examination in pediatric hematology-oncology is offered every three years. Please contact the Board Office for the exact date of the next examination.

The 1993 examination will be the last examination for which applicants may apply unaccredited training toward fulfillment of the certification requirements. The purpose of the examination is to determine the candidate's competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology and the like.
Examination results will be reported by name and score of the pediatric department chairman and subspecialty program director(s) at the institution(s) where the candidate trained.

**Failure in Examinations**

Candidates who are unsuccessful on the examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee. Candidates who are unsuccessful on the examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance on the examination.

**Postponement of Examination**

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the dates set for postponements will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

**Time in Which To Complete Certification Process**

Candidates should achieve certification within ten years of initial acceptance into the certification process for pediatric hematology-oncology. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

**Fees**

The cost of certification includes the following fees:

New application:
- $275 processing and evaluating fee
- $525 written examination fee for one examination
- $800 TOTAL payment at the time of initial application

Reapplication:
- $575 reapplication fee for one written exam

If the applicant is not approved to take the pediatric hematology-oncology examination, the $525 written examination fee will be refunded. The remaining $275 processing and evaluating fee is non-refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

**Irregularities**

The validity of the performance of candidates on the examination of the Sub-Board is secured by every means available. Information concerning the procedure to be taken by the Sub-Board in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Sub-Board, is available by contacting the Board office.

**Certification**

A certificate for special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Sub-Board. Certificates issued after April 30, 1988, will be valid for seven years.

The name of the candidate will be sent to the American Board of Medical Specialties, the Directory of Medical Specialists, and various pediatric journals. Scores will not be sent to ABMS, the Directory, or the journals.

**Applications**

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514. Telephone (919) 929-0461.

**Late Applications**

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of $200 before the application or registration material will be accepted.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

**Certification in Neonatal-Perinatal Medicine**

The American Board of Pediatrics has established a procedure for certification in neonatal-perinatal medicine.

**Eligibility Criteria**

1. **Certification by the American Board of Pediatrics.** Applicants may submit their application prior to the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the neonatal-perinatal medicine examination.

2. **Two years of full-time subspecialty residency training in neonatal-perinatal medicine.** In a program under the supervision of a director who is certified in neonatal-perinatal medicine or lacking such certification, possesses equivalent credentials. Physicians who enter their training in neonatal-perinatal medicine on or after January 1, 1986, will be required to complete their training in a program accredited for training in neonatal-perinatal medicine by the Residency Review Committee for Pediatrics (RRC). Applicants should consult the Directory of Residency Training Programs published by the American Medical Association for subspecialty residency training in neonatal-perinatal medicine.

All subspecialty residency training programs must ensure that at least half of the experience involves clinical work with infants. The program must be for a minimum of two years in length and must ensure that residents have significant involvement in research. Partial credit will not be given for training of less than two years not will credit be allowed for elective time spent in subspecialty areas during the usual residency years (PL 1, 2, 3).

All subspecialty training must be in the United States or Canada, unless the Credentials Committee of the Sub-Board has given approval of foreign subspecialty training to an applicant before he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Subspecialty residents completing their neonatal-perinatal medicine training in Canada in programs approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Sub-Board.

Applicants may not apply the same training period toward fulfillment of the requirements of two different Boards/Sub-Boards/Subspecialty Committees.

3. **Verification of training.** Applicants will be asked to list the program(s) where they completed subspecialty residency training in neonatal-perinatal medicine as well as the name(s) of their program director(s). The Sub-Board will send a Verification of Clinical Competence Form to the program director(s) for completion.

**Role of the Neonatal-Perinatal Program Director**

The role of the neonatal-perinatal medicine program director in the certification process is to verify the comple-
tion of the training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a subspecialist in neonatal-perinatal medicine; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence form filed in the Board office to be admitted to the neonatal-perinatal medicine examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of training before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, the Sub-Board may consider the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Sub-Board certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the person meets the standards expected of a certified neonatologist-perinatologist. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Sub-Board recommends that absences from a program beyond two months during the two years of required training be made up by completing an additional period of training.

Each application is considered individually and must be acceptable to the Sub-Board of Neonatal-Perinatal Medicine. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

Subspecialty residency programs in neonatal-perinatal medicine have been accredited by the Residency Review Committee for Pediatrics. The list of accredited programs appears in the Directory of Residency Training Programs. A physician entering subspecialty training in neonatal-perinatal medicine on or after January 1, 1986, must train in a program accredited for training in neonatal-perinatal medicine by the RRC in order to qualify for admission to the certifying examination of the Sub-Board.

Residents who entered neonatal-perinatal medicine training prior to January 1, 1986, are not required to complete their training in a certified program. They are required, however, to complete their training in programs which are operated in association with residency programs in general comprehensive pediatrics accredited by the residency Review Committee for Pediatrics, or associated with pediatric programs approved by the Royal College of Physicians and Surgeons of Canada. Also, only those programs which are part of an institution which offers residency training in obstetrics and gynecology and includes experience in fetal-maternal-perinatal medicine will be considered.

Special Requirements

Special Requirements for Training Programs in Neonatal-Perinatal Medicine have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610.

Examinations

A written examination in neonatal-perinatal medicine is offered every two years. Please contact the Board Office for the exact date of the next examination. The 1991 examination will be the last examination that applicants may apply unaccredited training toward fulfillment of the certification requirements.

The purpose of the examination is to determine the candidate's competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology and the like.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director(s) at the institution(s) where the candidate trained.

Failure in Examinations

Candidates who are unsuccessful on the examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on the written examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance on the examination.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponements will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which to Complete Certification Process

Candidates should achieve certification within ten years of initial acceptance into the certification process for neonatal-perinatal medicine. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New application:
$275 processing and evaluating fee
$525 written examination fee for one examination
$800 TOTAL payment at the time of initial application

Reapplication:
$575 reapplication fee for one written exam
If the applicant is not approved to take the neonatal-perinatal medicine examination, the $525 written examination fee will be refunded. The remaining $275 processing and evaluating fee is non-refundable. If the applicant wishes to pursue certification in the future, he will be required to complete a new application and submit the full fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.
Irregularities

The validity of the performance of candidates on the written examination of the Sub-Board is secured by every means available. Information concerning the procedure to be taken by the Sub-Board in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Sub-Board, is available by contacting the Board office.

Certification

A certificate of special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Sub-Board. Certificates issued after April 30, 1988, will be valid for seven years.

The names of those certified will be sent to the American Board of Medical Specialties, the Directory of Medical Specialties, and various pediatric journals. Scores will not be sent to ABMS, the Directory, or the journals.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514. Telephone (919) 929-0461.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of $200 before the application or registration material will be processed. It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

Certification in Pediatric Nephrology

The American Board of Pediatrics has established a procedure for certification in pediatric nephrology.

Eligibility Criteria

1. Certification by the American Board of Pediatrics. Applicants must submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the pediatric nephrology examination.

2. Three years of full-time subspecialty residency in pediatric nephrology is required of those physicians entering training on or after January 1, 1987. This training must be completed in a program that is accredited for pediatric nephrology by the Residency Review Committee for Pediatrics. Applicants should consult the Directory of Residency Training Programs published by the American Medical Association for a listing of programs accredited for subspecialty residency training in pediatric nephrology. Physicians who enter pediatric nephrology training prior to January 1, 1987, may apply for admission to the examination after completing two years of subspecialty residency training in pediatric nephrology; such physicians are not required to complete their two years of required training in an accredited subspecialty program.

All subspecialty residency training programs must ensure that at least 15% of the experience involves clinical work with children. Subspecialty residency programs also must ensure that residents have significant involvement in research. No credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual residency (PL 1, 2, 3).

All subspecialty training must be completed in the United States or Canada, unless the Credentials Committee of the Sub-Board has given approval of foreign subspecialty training to an applicant before he/she enrols in such a program.

Applicants wishing to obtain such approval should contact the American Board of Pediatrics.

Subspecialty residents completing their pediatric nephrology training in Canada must demonstrate that they have participated in a program approved for general pediatrics by the Royal College of Physicians and Surgeons of Canada will be considered on an individual basis by the Credentials Committee of the Sub-Board.

Applicants may not apply the same training period toward fulfillment of the requirements of two different certifying Boards/Sub-Board/Subspecialty Committees.

3. Verification of training. Applicants will be asked to list the program(s) where they completed subspecialty residency training in pediatric nephrology as well as the name(s) of the program director(s). The Sub-Board will send a Verification of Clinical Competence Form to the program director(s) for completion.

Role of the Pediatric Nephrology Program Director

The role of the pediatric nephrology program director in the certification process is to verify the completion of the training and to sign the following statement on the Verification of Clinical Competence Form:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric nephrologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competence on file in the Board office to be admitted to the pediatric nephrology examination. If an applicant's training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of training before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Sub-Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Sub-Board's certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director's statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Sub-Board must have the program director's assurance that the person meets the standards expected of a certified pediatric nephrologist. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Sub-Board recommends that absences from a program be made up within two months during the two years of required training or three months during the three years of training required of those entering programs on or after January 1, 1987, be made up by completing an additional period of training.

Each application is considered individually and must be acceptable to the Sub-Board of Pediatric Nephrology. Questions concerning eligibility will be considered by the Credentials Committee of the Sub-Board upon completion of the application and payment of the fee.

Training Programs

Subspecialty residency training programs in pediatric nephrology have been accredited by the Residency Review Committee for Pediatrics. The list of accredited programs...
is published in the Directory of Residency Training Programs. A physician entering subspecialty residency training in pediatric nephrology on or after January 1, 1987, must train in a program accredited for training in pediatric nephrology by the RRC in order to qualify for admission to the certifying examination of the Sub-Board.

Residents who are now in training or will enter training prior to January 1, 1987, are not required to complete three years of training nor will they be required to complete their training in an accredited program. They are required, however, to complete their training only in those pediatric nephrology training programs which are operated in association with programs in general comprehensive pediatrics accredited by the Residency Review Committee for Pediatrics or associated with pediatric programs in Canada approved by the Royal College of Physicians and Surgeons of Canada.

Special Requirements

Special Requirements for Training Programs in Pediatric Nephrology have been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education. Copies of the Special Requirements are available from the office of the Residency Review Committee for Pediatrics, 535 North Dearborn Street, Chicago, IL 60610.

Examinations

A written examination in pediatric nephrology is offered every three years. Please contact the Board Office for the exact date of the next examination.

The purpose of the examination is to determine the candidate’s competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director(s) at the institution(s) where the candidate trained.

Failure in Examinations

Candidates who are unsuccessful on the examination will be admitted for re-examination at the next examination upon specific application and payment of the reapplication fee.

Candidates who are unsuccessful on the written examination of the Sub-Board must contact the Board office within one year of the date of the examination if they have questions concerning their performance on the examination.

Postponement of Examinations

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponements will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which to Complete Certification Process

Candidates should achieve certification within ten years of initial acceptance into the certification process for pediatric nephrology. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening examination before being readmitted to the certification process.

Fees

The cost of certification includes the following fees:

New Application:
$275 processing and evaluating fee
$525 written examination fee for one examination
$800 TOTAL payment at the time of initial application

Reapplication:
$575 reapplication fee for one written exam

If an applicant is not approved to take the pediatric nephrology examination, the $525 written examination fee will be refunded. The remaining $275 processing and evaluating fee is non-refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the written examination of the Sub-Board is secured by every means available. Information concerning the procedure to be taken by the Sub-Board in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Sub-Board is available by contacting the Board office.

Certification

A certificate of special qualifications is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Sub-Board. Certificates issued after April 30, 1988, will be valid for seven years.

The names of those certified will be sent to the American Board of Medical Specialties, the Directory of Medical Specialists, and various pediatric journals. Scores not be sent to ABMS, the Directory, or the journals.

Applications

Application forms are available only during the registration period of a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514. Telephone (919) 929-0461.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of $200 before the application or registration material will be processed.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

Certification in Pediatric Pulmonology

The American Board of Pediatrics has established a procedure for certification in pediatric pulmonology.

Eligibility Criteria

1. Certification by the American Board of Pediatrics. Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the pediatric pulmonology examination.

2. Subspecialty Training or Experience. Prior to the examination, the application must have COMPLETED one of the following to qualify for examination:

PLAN 1: Three years of full-time subspecialty residency training in pediatric pulmonology in a program under the supervision of a director who is certified in pediatric pulmonology or, lacking such certification, possesses equivalent credentials. All subspecialty training must have been broadly based and completed in the United States or Can-
REQUIREMENTS FOR CERTIFICATION

PL 1, 2, 3.

PLAN 2: Five years of broadly based pediatric pulmonology. Broadly based pediatric pulmonology encompasses the majority of the clinical components which are included in the 1978 Guidelines for Pediatric Pulmonary Training (Mellins RB, Chernick V, Doershuk CF, et al: Report of the task force to establish guidelines for pediatric pulmonary training. Pediatrics 62: 256-257, 1978). A minimum of 50% of full-time professional activities must be spent in pediatric pulmonology to receive credit. It is assumed that night and weekend time would be distributed in the same manner as regular practice time. These five years should be of such type and quality that they substitute for the clinical exposure one might have encountered during subspecialty residency training. All pediatric pulmonology experience must be accrued before December 31, 1990. No foreign pediatric pulmonology experience will be accepted by the Credentials Committee in fulfillment of these requirements.

PLAN 3: A combination of subspecialty residency training and pediatric pulmonology experience to equal five years as outlined in one of the three methods below:

(1) Those applicants who completed less than 12 months of subspecialty residency training in pediatric pulmonology may receive credit on a month-for-month basis. For example, a nine-month subspecialty residency would be credited as nine months of pediatric pulmonology experience; this, added to four years and three months of pediatric pulmonology experience would total 60 months or five years. These five years must be accrued prior to December 31, 1990.

(2) Those applicants completing 12 to 24 months of subspecialty residency training in pediatric pulmonology may receive credit on a two-for-one basis. For example, an 18-month subspecialty residency would be credited as 36 months of pediatric pulmonology experience; this, added to 24 months of pediatric pulmonology experience would total 60 months or five years. These five years must be accrued prior to December 31, 1990.

(3) Those applicants who completed 24 or more of subspecialty residency training in pediatric pulmonology prior to January 1, 1986, may receive credit on a two-for-one basis. For example, a 24-month subspecialty residency would be credited as the 60 months needed to qualify for admission. These physicians must make application and be approved for the examination given in or prior to 1992.

Those entering pediatric pulmonology training after January 1, 1986, must complete three years of training to qualify for admission to the examination.

Applicants may not apply the same training period toward fulfillment of two different certifying Boards/Sub Boards/Subspecialty Committees.

Those applicants entering the examination via the pediatric pulmonology experience or combination routes must make application, be approved for, and sit for the examination given in or prior to 1992. The Credentials Committee will evaluate the applications based upon the pediatric pulmonology experience accrued during the five years prior to the date of the examination.

An applicant seeking certification in more than one subspecialty area may qualify for examination by only one Sub-Board/Subspecialty Committee on the basis of experience; the full-time subspecialty training requirements must be fulfilled in order to qualify for certification by other Sub-Boards/Subspecialty Committees. For example, an applicant who was previously admitted to the neonatal-perinatal medicine examination with five years of experience in neonatal-perinatal medicine will be admitted to the pediatric pulmonology examination only if he/she has completed three years of subspecialty residency training in pediatric pulmonology.

3. Verification of training and/or experience. Verification of Clinical Competence Forms are required from the following:

For those utilizing the subspecialty residency training route, a Verification of Clinical Competence Form will be sent to the pediatric pulmonology program director(s) where the training occurred.

For those utilizing the pediatric pulmonology experience route, an Evaluation Form, which is provided by the Board office, will be required from:

(1) the pediatric pulmonology program director in the hospital where the applicant is seeing patients (if there is a training program);

OR

(2) the pediatric department chairman OR the chief of pediatrics in the hospital where the applicant is now or has been involved in pediatric pulmonology.

The completed Verification Form(s) should be sent directly by the program director, chief of pediatrics, or department chairman to the American Board of Pediatrics. All Verification Forms should be sent to the Board office prior to the closing of registration for a particular examination.

Role of the Pediatric Pulmonology Program Director

The role of the pediatric pulmonology program director in the certification process is to verify completion of training and to verify clinical competency by signing “Statement A” on the Verification of Clinical Competence Form which is as follows:

"I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a pediatric pulmonologist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination."

All applicants must have this verification of training and/or pediatric pulmonology experience and verification of clinical competence on file in the Board office to be admitted to the pediatric pulmonology examination. If an applicant’s training is not verified and/or he/she is not recommended for admission, the applicant will be required to complete an additional period of training before reapplying. Alternatively, the applicant may appeal to the Credentials Committee of the Subspecialty Committee. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the Subspecialty Committee’s certification process. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director’s statement on the Verification of Clinical Competence Form will take precedence over the certificate from
the hospital. The Subspecialty Committee must have the program director's assurance that the physician meets the standards expected of a certified pediatric pulmonologist. Because confusion over the meaning of training certificates exists, certificates should be withheld when a program's facility is not satisfied with a trainee's performance. Program directors are urged not to issue certificates of successful completion of training when the resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Subspecialty Committee recommends that absences from a program beyond three months during the three years of required training be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Subspecialty Committee of Pediatric Pulmonology. The Subspecialty Committee recognizes that situations may arise that are not explained by the preceding information. Exceptionally, a physician may have worked in pediatric pulmonology for many years, yet be deficient in the formal prerequisites for examination, or a physician may have completed specialized training not explained in the above requirements. In such cases, the individual should present his question to the Executive Secretary of the Board who may ask the Credentials Committee of the Subspecialty Committee to review the record. However, questions concerning eligibility will be considered by the Credentials Committee of the Subspecialty Committee only upon completion of the application and payment of the fee.

Training Programs

At the present time, there are no officially accredited training programs in pediatric pulmonology. The Accreditation Committee for Graduate Medical Education has granted the Residency Review Committee for Pediatrics the authority to begin to review and accredit subspecialty training programs. Physicians entering subspecialty training in pediatric pulmonology prior to completion of the accreditation process by the Residency Review for Pediatrics are advised to enter those programs in which the director or senior faculty of the program is certified in pediatric pulmonology or possesses equivalent credentials. Only those pediatric pulmonology training programs which are operated in association with accredited residency programs in general comprehensive pediatrics offering PL 1, 2, 3 or associated with pediatric programs approved by the Royal College of Physicians and Surgeons of Canada will be considered.

Special Requirements

Special Requirements for Training Programs in Pediatric Pulmonology have been drafted by the Subspecialty Committee. These Special Requirements are thought of as suggested criteria for training programs in pediatric pulmonology until the Residency Review Committee for Pediatrics begins to accredit training programs. The Credentials Committee of the Subspecialty Committee will be guided by these requirements in evaluating an applicant's qualifications.

Examinations

A written examination in pediatric pulmonology is offered every three years. Please contact the American Board of Pediatrics for the exact date of each examination.

The purpose of the examination is to determine the candidate's competency in the subspecialty of pediatric pulmonology. Since such competency is founded on knowledge of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director(s) at the institution(s) where the candidate trained.

Failure in Examinations

Candidates who are unsuccessful in the written examination will be admitted for re-examination at the next written examination upon specific application and payment of the reapplication fee.

Postponement of Examinations

After the Subspecialty Committee has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponement will forfeit all fees paid. To register for a future examination, payment of the reapplication fee will be required.

Time in Which to Complete Certification Process

Candidates should achieve certification within ten years of initial acceptance into the certification process for pediatric pulmonology. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees

New application:
$275 processing and evaluating fee
$25 written examination fee for one examination
$800 TOTAL payment at the time of initial application

Reapplication:
$575 reapplication fee for one written examination
If an applicant is not approved to take the pediatric pulmonology examination, the $525 written examination fee will be refunded. The remaining $275 processing and evaluating fee is non-refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full fee again.

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities

The validity of the performance of candidates on the written examination of the Subspecialty Committee is secured by every means available. Information concerning the procedure to be taken by the Committee in the event of irregular behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefits to a proctor, employee, or agent of the Board or Subspecialty Committee, is available by contacting the Board office.

Certification

A certificate of special qualifications valid for seven years is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Subspecialty Committee.

The names of those certified will be sent to the American Board of Medical Specialties, the Directory of Medical Specialists, and various pediatric journals for publication. Scores will not be sent to ABMS, the Directory, or the journals.

Applications

Application forms are available only during the registration period for a particular examination from the American
Requirements for Certification 623

Pediatrics

Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514-1651. Telephone: (919) 929-0461.

Late Applications

A physician whose application or re-examination registration material is postmarked after the published deadline will be expected to pay an additional fee of $200 before the application or registration material will be processed. It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain whether the information they have is current.

Certification in Pediatric Critical Care Medicine

The American Board of Pediatrics has established a procedure for certification in pediatric critical care medicine.

Eligibility Criteria

1. Certification by the American Board of Pediatrics. Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the pediatric critical care medicine examination.

2. Subspecialty Training or Experience. The applicant must have COMPLETED one of the following to qualify for examination:

   PLAN A. Two years of full-time subspecialty residency training in pediatric critical care medicine in a program under the supervision of a director who is certified in pediatric critical care medicine or, lacking such certification, possesses equivalent credentials. All subspecialty training must be completed in the United States or Canada, unless the Credentials Committee of the Subspecialty Committee has granted approval for foreign subspecialty training to an applicant before he/she enrolled in such a program. Applicants wishing to obtain prospective approval should contact the American Board of Pediatrics.

   Applicants will not receive credit toward the Subspecialty Committee’s requirements for any elective time spent in pediatric critical care medicine during the general pediatric residency years (PL1, 2, 3).

   PLAN B. Certification in pediatric cardiology, neonatal-perinatal medicine, or pediatric pulmonology based in completion of the full-time subspecialty residency training requirements in a program providing experience in pediatric critical care relevant to the subspecialty in which the applicant is certified plus one year of subspecialty residency training in pediatric critical care medicine in a program under the supervision of a director who is certified in pediatric critical care medicine or, lacking such certification, possesses equivalent credentials.

   PLAN C. Five years in the practice of comprehensive pediatric critical care medicine. A minimum of 50% of full-time professional activities must be spent in the practice of pediatric critical care medicine to receive credit. It is assumed that night and weekend practice time would be distributed in the same manner as regular practice time. These five years of practice should be of such type and quality that they substitute for the clinical exposure one might have encountered during critical care residency training. All training time must be accrued before December 31, 1991. No foreign practice time will be accepted by the Credentials Committee in fulfillment of the requirements.

   PLAN D. A combination of subspecialty residency training in pediatric critical care medicine and practice of comprehensive pediatric critical care medicine to equal five years as outlined in one of the two methods below:

   (1) Applicants who have completed less than 12 months of subspecialty residency training in pediatric critical care medicine may receive credit on a month-for-month basis. For example, a nine-month subspecialty residency would be credited as nine months of practice time; this, added to four years and three months of practice time would total 60 months or five years. These five years must be accrued prior to December 31, 1991.

   (2) Applicants completing 12 to 23 months of subspecialty residency training in pediatric critical care medicine may receive credit on a two-for-one basis. For example, an 18-month subspecialty residency would be credited as 36 months of practice time; this, added to 24 months of practice would total 60 months or five years. These five years must be accrued prior to December 31, 1991. Applicants entering the examination through the combination route must make application, be approved for, and sit for the examination given in or prior to 1993.

   An applicant seeking certification in more than one subspecialty area may qualify for examination by only one Subspecialty/Subspecialty Committee on the basis of practice alone. Applicants may not apply the same training period toward Subspecialty Committees except as outlined under Item 2B.

   The Subspecialty Committee recognizes that situations may arise that are not explained in the preceding information. In such cases, the individual may present his/her situation to the Credentials Committees by completing an application during an examination registration period.

3. Verification of Training and/or Practice.

   A. For those utilizing the subspecialty residency training route, Verification of Clinical Competence Form(s) will be required from the director(s) of the applicant’s pediatric critical care medicine training program(s).

   B. For those utilizing the subspecialty certification and one year of pediatric critical care medicine route, Verification Forms will be required from:

      (1) the director(s) of the applicant’s pediatric cardiology, neonatal-perinatal medicine, or pediatric pulmonology training program(s);

      AND

      (2) the director(s) of the applicant’s pediatric critical care medicine training program(s).

   C. For those utilizing the practice route, Evaluation Form(s) will be required from the pediatric critical care medicine program director (if there is a subspecialty training program) OR the pediatric department chairman OR the chief of pediatrics in the hospital(s) where the applicant is now or has been practicing pediatric critical care medicine.

   D. For those utilizing the combination subspecialty residency-practice route:

      (1) Verification Form(s) will be required from the director(s) of the applicant’s pediatric critical care medicine training program(s);

      AND

      (2) Evaluation Form(s) will be required from the pediatric critical care medicine program director (if there is a subspecialty training program) OR the pediatric department chairman OR the chief of pediatrics in the hospital(s) where the applicant is now or has been practicing pediatric critical care medicine.

   The completed Verification and Evaluation Form(s) should be sent by the program director, chief of pediatrics, or department chairman directly to the American Board of Pediatrics.

Role of the Pediatric Critical Care Medicine Program Director

The role of the pediatric critical care medicine program director in the certification process is to verify completion of training and sign the following statement on the Verification of Clinical Competence Form:

“I certify that the above named applicant has demonstrated the necessary attitudes, knowledge, clinical judgment, technical skills and interpersonal skills and is judged to be fully prepared for independent responsibility as a critical care medicine specialist; to my knowledge, he/she has moral and ethical integrity. The applicant is recommended for examination.”
All applicants must have verification of training and/or practice and verification of clinical competence on file in the Board office to be admitted to the pediatric critical care medicine examination. If an applicant’s training is not verified and/or he/she is not recommended for admission, the applicant will be required to satisfactorily complete an additional period of subspecialty residency training in pediatric critical care medicine before applying. Alternatively, the applicant may appeal to the Credentials Committee of the Subspecialty Committee. The Credentials Committee will gather additional information about the applicant and decide if permission should be granted to take the examination. For an appeal, the applicant will be asked to submit copies of certificates of satisfactory completion of training. If the applicant has been denied such a certificate, then admission will be refused on the basis of incomplete training. However, possession of such a certificate will not automatically admit the person to the certification process of the Subspecialty Committee. Most training certificates attest to the achievement of a minimal level of competence or the fulfillment of an employment contract. Therefore, the program director’s statement on the Verification of Clinical Competence Form will take precedence over the certificate from the hospital. The Subspecialty Committee must have the program director’s assurance that the applicant meets the standards expected of a certified critical care medicine specialist. Program directors are urged not to issue certificates of successful completion of training when a resident is deemed not to have met those standards.

Program directors will be asked to describe any extended periods of absence from the training program, such as sick leave, vacation or maternity leave, that have not been made up by the applicant. The Subspecialty Committee recommends that absences from a program beyond two months during the two years of required training be made up by completing an additional period of training.

Each applicant is considered individually and must be acceptable to the Subspecialty Committee of Pediatric Critical Care Medicine. The Subspecialty Committee recognizes that situations may arise that are not explained by the preceding information. Questions concerning eligibility will be considered by the Credentials Committee of the Subspecialty Committee upon completion of the application and payment of the fee.

Training Programs
At the present time, there are no accredited training programs in pediatric critical care medicine. The Accreditation Council for Graduate Medical Education has granted the Residency Review Committee for Pediatrics the authority to review and accredit subspecialty training programs. Physicians entering subspecialty training in pediatric critical care medicine prior to completion of the accreditation process by the Residency Review Committee for Pediatrics are advised to enter those programs in which the director or senior faculty of the program is certified in pediatric critical care medicine or possesses equivalent credentials.

Only those pediatric critical care medicine training programs which are operated in association with general comprehensive pediatric residency programs accredited by the Residency Review Committee for Pediatrics or associated with pediatric programs approved by the Royal College of Physicians and Surgeons of Canada will be considered.

Special Requirements
Special Requirements for Training Programs in Pediatric Critical Care Medicine are being drafted by the Subspecialty Committee. While they have not been approved by the Residency Review Committee for Pediatrics and the Accreditation Council for Graduate Medical Education, these Special Requirements will be thought of as suggested criteria for training programs in pediatric critical care medicine. The Credentials Committee of the Subspecialty Committee will be guided by these requirements when evaluating an applicant’s qualifications.

Examinations
A written examination in pediatric critical care medicine will be offered every three years. Please contact the American Board of Pediatrics for the exact date of each examination. The first examination will be given on July 10, 1987. The purpose of the examination is to determine a candidate’s competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, a candidate must be prepared to demonstrate an adequate grasp of relevant basic information in physiology, pharmacology, and the like. Examination results will be reported by name and score to the pediatric department chairman and subspecialty program director at the institution(s) where a candidate trained.

Failure in Examinations
Candidates who are unsuccessful in an examination are eligible to be admitted for re-examination at the next examination upon specific application and payment of a reapplication fee.

Candidates who are unsuccessful on an examination must contact the Board office within one year of the date of the examination if they have questions concerning their performance.

Postponement of Examinations
After the Subspecialty Committee has accepted an application, a candidate is expected to take the next examination offered. Candidates who withdraw from the examination after the site assignment/approval letters are prepared (approximately four months before the examination) will forfeit a portion of the fees paid. Candidates who withdraw after the date set for postponement (approximately six weeks before the examination) will forfeit all fees paid. To register for a future examination, payment of a reapplication fee will be required.

Time in Which to Complete Certification Process
Candidates should achieve certification within ten years of their initial acceptance into the certification process for pediatric critical care medicine. Candidates who have not been certified within the ten-year time limit must reapply and pass a screening assessment before being readmitted to the certification process.

Fees
The cost of certification for the 1987 examination includes the following fees:

- New application: $275
- Processing and evaluating fee
- $525 written examination fee for one examination
- $800 TOTAL payment at the time of initial application

If an applicant is not approved to take the pediatric critical care medicine examination, the $525 written examination fee will be refunded. The remaining $275 processing and evaluating fee is non-refundable. If the applicant wishes to pursue certification in the future, he/she will be required to complete a new application and submit the full initial application fee again.

Fees are subject to change at any time. Checks (US funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Irregularities
The validity of the performance of candidates on the written examination of the Subspecialty Committee is secured by every means available. Information concerning the procedure to be taken by the Committee in the event of irregu-
lar behavior during the written examination, such as giving or obtaining unauthorized information or aid before, during or after the examination, or offering financial or other benefit to a proctor, employee, or agent of the Board or Subspecialty Committee, is available by contacting the Board office.

**Certification**

A certificate of special competence, valid for seven years, is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Subspecialty Committee.

The name of these certified are sent to the American Board of Medical Specialties, the Directory of Medical Specialists, and various pediatric journals. Scores are not sent to ABMS, the Directory, or the journals.

**Applications**

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, 111 Silver Cedar Court, Chapel Hill, NC 27514-1651. Telephone: (919) 929-0461.

**Late Applications**

A physician whose application material is postmarked after the published deadline (December 31, 1986 for the 1987 examination) will be expected to pay an additional fee of $200 before the application is accepted. Applications postmarked after February 16, 1987, will not be accepted for the 1987 examination.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain whether the information they have is current.

**AMERICAN BOARD OF PHYSICAL MEDICINE AND REHABILITATION**

B. Stanley Cohen, MD, Chairman, Baltimore, Maryland
Murray M. Freed, MD, Vice-Chairman, Boston, Massachusetts
Victor Cummings, MD, Toledo, Ohio
Barbara J. deLateur, MD, Seattle, Washington
Arthur E. Grant, MD, San Antonio, Texas
Phala A. Helm, MD, Dallas, Texas
Catherine N. Hinterbuchner, MD, New York, New York
John L. Melvin, MD, Milwaukee, Wisconsin
John W. B. Redford, MD, Kansas City, Kansas
Donald M. See, MD, Billings, Montana
Gordon M. Martin, MD, Executive Director,
Suite 674, Norwest Center,
21 First Street, S.W., Rochester,
Minnesota 55902

**General Requirements for Certification**

A. Graduates of Educational Institutions in the United States and Canada.

1. Graduation from a medical school approved by the Liaison Committee on Medical Education, or graduation from a Canadian medical school approved by the Canadian Medical Association, or graduation from an osteopathic medical school approved by the American Osteopathic Association.

2. Satisfactory completion of the requirements of the Board for graduate education and experience in physical medicine and rehabilitation as set forth below.

3. Satisfactory compliance with rules and regulations of the Board pertaining to the completion and filing of the application for examination and the payment of required fees.

B. Graduates of Educational Institutions NOT in the United States and Canada.

1. Graduation from a school which, in the opinion of the Board, offers medical education equivalent to a medical school approved by the Liaison Committee on Medical Education.

2. Possession of a valid certificate from the Educational Commission for Foreign Medical Graduates (ECFMG) and, optionally, a certificate from the Federation Licensing Examination (FLEX), or the Fifth Pathway. Foreign medical graduates (both alien and U.S. citizens) will be expected to complete the ECFMG examination form (FOREX I: Foreign Medical Graduate Examination in Medical Science), including basic and clinical examinations, and, when indicated, English proficiency. This is required by the Accreditation Council on Graduate Medical Education (ACGME) before a resident can enter accredited graduate medical education programs in the United States.

3. Satisfactory completion of the Board's requirements for graduate education and experience in physical medicine and rehabilitation as set forth below.

4. Satisfactory compliance with rules and regulations of the Board pertaining to the completion and filing of the application for examination and the payment of required fees.

C. Having a full and unrestricted license to practice in one or more of the 50 United States or Puerto Rico, or holding the Federation Licensing Examination (FLEX) certificate, may be supportive, but not required, of an application submitted by an American and/or non-American graduate.

**Residency Training Requirements**

Applicants for the certifying examinations must have satisfactorily completed 48 months (4 years) of training in a physical medicine and rehabilitation residency approved by the ACGME on recommendation of the Residency Review Committee for Physical Medicine and Rehabilitation. The program must include 36 months of training in physical medicine and rehabilitation. Twelve of the 48 months of training should consist of a coordinated program of experience in fundamental clinical skills which includes six months in family practice, internal medicine, pediatrics, or general surgery, or a combination of these. The other six months of the year of experience may include no less than one month in any of the following more specific categories: cardiology, radiology, neurology, urology, rheumatology, nephrology, vascular medicine, pediatrics, pulmonary medicine, neurosurgery, orthopedic surgery, family practice, general surgery, or a combination of these.

The program director and the Credentials Committee of the Board, at the beginning of the residency, will make the decision regarding the acceptability for credit for the year of non-physical medicine and rehabilitation training of an ACGME-approved year of residency in family practice, internal medicine, pediatrics, neurology, orthopedics, or general surgery or an accredited "transition" year as defined by the ACGME.

This new format is mandatory for all residents who enter training in 1985 or subsequently. In some instances, three years of physical medicine and rehabilitation residency may be acceptable on recommendation of the program director, with one year of credit being granted on the basis of training criteria described above, such as a nonintegrated transitional year or other residency training. Residents who entered training in 1984 or earlier are not required to conform to the new training requirements.

**Credit for Other Specialty Training**

Candidates who have had one year or more of residency training (up to and including certification) in a residency approved by the ACGME or by the Royal College of Physicians and Surgeons of Canada or an osteopathic internship approved by the American Osteopathic Association, in related relevant specialties, including internal medicine,
neurology, orthopaedics, pediatrics, family practice, and surgery, may receive up to 12 months of non-physical medicine and rehabilitation training credit on recommendation of the program director and at the discretion of the Board. However, completion of 36 months of the physical medicine and rehabilitation training requirement is mandatory. The maximum of 12 months of training credit will be considered for approval by the Board only upon recommendation of the residency training program director.

No credit will be given toward shortening the basic required four year program for internships; for non-ACGME approved residencies or fellowships; for Fifth Pathway in a United States AMA designated training institution; or for hospital house physician experience.

A resident entering or beginning the required four year program in physical medicine and rehabilitation with previous approved graduate training or educational experience may qualify for an institutional appointment at the second year level. However, such an appointment may not be interpreted to mean that the resident is in the second year of a physical medicine and rehabilitation residency. Such a resident will be considered by the Board to be in the first year of the required four year residency training program as stated above, unless other arrangements are made by the program director and the specialty Board.

Essentially all of the required training and experience as stated above must have been taken in the United States or Canada. However, a candidate who received graduate medical education beyond an internship in a foreign country may, at the discretion of the Board, and recommended by the program director, be granted limited credit for such training but not more than six months.

Program Director Procedures

The procedure required by the Board for approval of the first year and subsequent years of graduate training as a resident is:

1) At the beginning of a residency in physical medicine and rehabilitation, the director of the residency program will submit to the Executive Director of the Board a registration form that outlines the postgraduate residency training program that meets the requirements outlined in the next section. Any anticipated credit for previous training (which may not be for more than 12 months) should be indicated at the time of submittal of the proposed preliminary outline of education. If the recommendation is approved by the Board, it should be the program director at the time of submittal of the first evaluation form.

2) Following review by the Board, the Executive Director shall then notify the program director by letter of the approval or disapproval of the proposed program of training.

3) The program director should confirm the authenticity of the medical degree and list its source along with any ECFMG or FLEX certification numbers and state licensure number.

4) An annual evaluation form is to be submitted to the Board office on each resident at the end of each year of training indicating quality of performance and number of months of residency training satisfactorily completed in physical medicine and rehabilitation including elective services.

5) If a resident transfers to another program in physical medicine and rehabilitation, the Board is to be notified by the resident and each program director involved regarding the circumstances relative to the change, the amount of credit being given in the program being terminated and the outline of the program content and time in the continuing program. A resident is expected to complete training in a single program except when significant extenuating circumstances make a change advisable.

6) When a candidate applies for admittance to the certifying examinations, the program director certifies satisfactory completion of the required residency training (or anticipated completion by August 31 of the year of examination) and also provides an indication of the candidates' competence to enter independent clinical practice in the specialty. In case of subsequent change in status or recommendation regarding a candidate, the Board office should be notified promptly.

7) For residents completing training between January and August 31 of the year of examination, the program director must complete the evaluation form for the final residency year in April and send it to the Board office by May 1 prior to the written examination. This is in lieu of submitting a final-year evaluation form in the fall of the year when the candidate is submitting the application for admittance to the certifying examinations. This evaluation form must include the final grading and listing of months of training satisfactorily completed according to designated categories. In addition, statements that the candidate is deemed qualified to enter independent practice of physical medicine and rehabilitation and should be admitted to the certifying examination are to be included.

Requirements for Admissibility to Part I of the Board Examination

To be admissible to Part I of the Board examination, candidates are required to complete satisfactorily at least 48 months of postgraduate residency training of which at least 36 months are spent in supervised education and clinical practice in physical medicine and rehabilitation and 12 months in internal medicine or an acceptable alternative in an ACGME accredited training program.

Satisfactory completion of educational and training requirements in force at the beginning of the resident's training in an accredited program will be considered acceptable for application for admittance to the certifying examination. Residents in approved physical medicine and rehabilitation training programs in Canada, on satisfactory completion of all the requirements for certification in that country, may apply for admissibility to Part I of the American Board.

Final admittance is contingent upon receipt of the final year evaluation by the program director by May 1 in the examination year.

If a resident is placed on probationary status during the final year of his or her residency program, this status must be rescinded by the program director before May 1 for the resident to be admissible.

Requirements for Admissibility to Part II of the Board Examination

At least a full year of broadly based clinical practice of physical medicine and rehabilitation following completion of residency training is required. The clinical practice should provide evidence of professional, ethical, and humanitarian standards attested to by two Fellows of the American Academy of Physical Medicine and Rehabilitation. In rare instances in which a physiatrist is not geographically available, two licensed physicians may support the candidate's application for Part II.

Alternatively, a candidate may take Part I and II together if all residency training and the practice time requirement are completed. However, if the candidate fails Part I, Part II will not count or be recognized in any way.

An optional fifth year in a physical medicine and rehabilitation residency which includes at least six months of advanced clinical practice of physical medicine and rehabilitation with essentially full patient responsibility, and also includes teaching experience, plus opportunities for time in research or relevant clinical or basic science electives may qualify such resident for admittance to Part II of the certifying examinations upon the recommendation of the training program director. An optional fifth year may be valuable for those anticipating a full or part time academic career.

Dual Specialty Certification

For those desiring to pursue double specialty certifica-
tion the Board will participate with the other Boards provided there is completion of 36 months of accredited training in general comprehensive physical medicine and rehabilitation. The proposed program agreed to by the respective training program directors should be submitted to both Boards for approval before or during the first quarter of training. Admissibility to Part I of the certification examinations may be sought at the end of training.

Application

The application form which must be submitted by a candidate applying for the examination leading to certification can be obtained only by writing to the Executive Director of the Board. The completed application shall contain a record of the candidate's undergraduate and postgraduate training and a copy of the medical degree diploma or certificate, the program director's statement that the candidate has or will have satisfactorily completed an approved graduate program, other graduate study, hospital staff appointments, teaching positions, length of time in a practice which has been limited to physical medicine and rehabilitation, medical papers published, and any other information the candidate deems relevant to the determination of his admissibility for examination.

In addition, there must be submitted with the application the names of three physiatrists or other physicians to whom the Board may write for professional and character references. At the option of the applicant, he or she may include the names of any additional physicians. The candidate will submit to the program director a form requesting him/her to rate the professional ability of the applicant which they will promptly return to the Board office. No decision regarding admissibility to the examination will be made until the physicians from whom references are requested have replied.

All information submitted to the Board by the physician from whom a reference has been requested shall remain confidential and will not be disclosed to the candidate without the permission of the said physician. Strict confidentiality of references submitted is required to assure that the Board receives complete and accurate evaluations of all candidates.

A candidate who plans to take Part I only must submit a fee of three hundred fifty dollars ($350), fifty dollars ($50) of which is a processing fee and not refundable nor reassessed. The fees must accompany the application. The candidate who is applying for Part II must write a letter of application which includes a brief description of his/her year of broadly based clinical practice and send an examination fee of three hundred dollars ($300), and must also submit a statement from a physician, preferably a Board certified physiatrist, verifying that the candidate has practiced physical medicine and rehabilitation full-time for one year. A candidate who plans to take both Parts I and II, initially the same year, must send with the application the fee of six hundred fifty dollars ($650). Fifth dollars ($50), as heretofore mentioned, is an evaluation fee and not refundable. Fees for re-examination are three hundred dollars ($300) for either Part I or II, or if both Parts I and II are retaken the same year, the fee is six hundred dollars ($600).

The completed application form or letter of application, as applicable, and appropriate fee must be submitted by November 15 of the year before the scheduled examination. A penalty fee of one hundred dollars ($100) will be required before consideration of applications postmarked after November 15 and before December 15. Once a candidate is declared admissible, fees are forfeited if the candidate withdraws for any reason or does not appear for the examination.

The candidate must have completed his graduate education or clinical practice requirements on or before August 31 following the scheduled examination date for which he has applied in order to have his application considered for the examination of that year. Except as hereafter provided, no fees paid hereunder will be refunded. Only in the event that a candidate withdraws his application prior to the meeting of the Board to act thereon or in the event that a candidate is declared not admissible to the examination, will the Board return to the candidate the refundable portion of his fee.

The Board is a non-profit organization and the fees of the candidates are used solely for defraying the actual expenses of the Board. The members of the Board serve without remuneration. The Board reserves the right to change the fees when necessary.

Designation of Admissibility

Board admissible is a term used by the Board to define the status of the candidate who has been accepted by the Board to take the examination for which the candidate has applied; designation of "Board admissible" does not continue beyond the date such examination is given, regardless of results.

A. For those candidates who have not previously applied or who have previously applied and withdrawn their application or who have previously applied and have been declared not admissible, the procedures required of candidates to be designated board admissible are as follows:

1. Timely filing of the application form and educational credentials with the Executive Secretary of the Board by the candidate.
2. Payment of the fee for the examination by the applicant.
3. Receipt of the program directors and other requested references.
4. Transmission of a letter of confirmation from the Executive Director of the Board to the candidate verifying that the applicant has fulfilled all requirements, and by Board action has been declared admissible.

B. For those candidates who are reapplying for Part I, having failed Part I; or who are applying for Part II, having successfully completed Part I, or who are reapplying for Part II, having failed Part II but who have successfully passed Part I, the procedures required of candidates to be designated board admissible are as follows:

1. Submitting a letter of reapplication for Part I of the examination by the applicant to the Executive Director of the Board or, as requested, the resubmission of an application form.
2. Submitting a letter of application for Part II of the examination by the applicant to the Executive Director of the Board. The letter should contain a statement describing the one year of full-time broadly based clinical practice.
3. Payment of the examination fee by the applicant.
4. At least a full year of broadly based clinical physical medicine and rehabilitation following completion of residency training is required. The clinical practice should provide evidence of professional, ethical, and humanistic standards attested to by two Fellows of the American Academy of Physical Medicine and Rehabilitation. In rare instances in which a physiatrist is not geographically available, two licensed physicians may support the candidate’s application for Part II.
5. Transmission of a letter of confirmation from the Executive Director of the Board to the candidate verifying that the applicant has fulfilled all requirements, and board action has been declared admissible.

Following the establishment of Board admissibility, the candidate will be notified of the time and place for the examination. A candidate who fails Part I or Part II or both Parts of the examination may re-apply for admissibility for re-
examination, if done before November 15th of the year before the scheduled examination.

Absence from Training

The Board stipulates that a resident should not be absent from the residency training for more than six weeks yearly. Any leave time or absence beyond six weeks would need to be made up by arrangement with the program director. “Leave time” includes sick leave, vacation, maternity leave, leave for locum tenens, clinical trips or work in another institution that is not an ACGME accredited residency. Leave time or vacation may not be accumulated to reduce the overall duration of training. Institutional policies regarding absences will be respected.

Forfeiture of Fees

Once a candidate is declared admissible, the fees are forfeited if the candidate withdraws for any reason or does not appear for the examination.

Examinations

As part of the requirements for certification by the American Board of Physical Medicine and Rehabilitation, candidates must demonstrate satisfactory performance in an examination conducted by the Board covering the field of physical medicine and rehabilitation.

The examination for certification is given in two parts. Part I is written, Part II is oral.

Part I (written) may be taken after the satisfactory completion of the specialized graduate education required by the Board outlined above.

Part II (oral) may be taken only after one year of full-time broadly based practice in physical medicine and rehabilitation, following residency training.

If the event a candidate taking both Part I and Part II in the same year fails Part I of the examination, results of Part II shall not be considered or disclosed.

Both the written and oral examinations will cover certain aspects of the basic sciences as well as clinical physical medicine and rehabilitation. Those basic sciences will include:

1. Anatomy, including kinesiology and functional anatomy.
2. Physics, related to the field
3. Physiology, including physiology of nerve, muscle, and bone and physiologic effects of the various physical agents used in physical medicine and rehabilitation.
4. Pathology.
5. Other fundamental sciences: The applicant may be examined concerning his knowledge of other subjects related to physical medicine and rehabilitation.

The clinical aspects will include:

1. Those diseases and conditions that come within the field of physical medicine and rehabilitation including those of children. These include various rheumatic diseases; neuromuscular diseases; cerebral and spinal cord injuries and diseases (e.g. cerebral vascular accidents, postoperative sequelae of surgery of the brain and spinal cord, cerebral palsy and paraplegia) and musculoskeletal diseases, including the large group of traumatic and orthopedic conditions.
2. The clinical use of such physical agents as heat, water, electricity, ultraviolet radiation, massage, exercise, and rehabilitation techniques.
3. Diagnostic procedures including electromyography and electrodiagnosis.
4. A knowledge of the roles of allied personnel within or associated with the field of physical medicine and rehabilitation, such as the physical therapist, occupational therapist, clinical psychologist, speech pathologist and therapist, medical social worker, and vocational counselors; and the ability to coordinate the services of such personnel.
5. An understanding of the basic principles of physical medicine and rehabilitation, and the ability to prescribe and supervise specific treatment to be executed by allied health personnel.

Method of Examination

Part I and Part II of the examination are given once each year, usually in May or June. At such time and place as the Board shall designate.

Part I is a written examination. This examination is divided into morning and afternoon periods of approximately three hours each. The questions are designed to test the candidate’s knowledge of basic sciences and clinical management as related to physical medicine and rehabilitation, and will be in the form of objective testing.

Part II is an oral examination. The oral examinations are given by the members of the Board with the assistance of selected guest examiners.

Candidates will be expected to present in a concise, orderly fashion evidence of their proficiency in the management of various clinical conditions which come within the field of physical medicine and rehabilitation. During the oral examination, questions will be asked about diagnostic procedures, therapeutic procedures and patient management. The candidate should be prepared to demonstrate his ability to interpret roentgenologic, electrodiagnostic and other material related to patient management. The candidate should demonstrate familiarity with the literature of basic and clinical research. Conciseness and clarity of statement is expected. Evidence of the maturity of the candidate in a clinical procedure and of factual knowledge will be sought.

Unethical Behavior

The Board believes that the ethics of candidates for certification is a proper matter for its concern. Scores on the Part I examination may be invalidated for reasons of irregular behavior that indicates cheating. Reports of irregular behavior may be checked by statistical methods, and if they are confirmed, sanctions may be imposed. If the examination score is invalidated because of irregular behavior, the Board will not consider the candidate’s application for a period of at least three years. A repeat application and Part I examination fee will be required.

Certificate

Upon approval of the candidate’s application and successful completion of the examinations, the Board will grant a certificate to the effect that the candidate has met the qualifications required by the Board for the specialty of Physical Medicine and Rehabilitation. The recipient of a certificate shall be known as a certificate or a diplomat of the American Board of Physical Medicine and Rehabilitation.

A certificate granted by this Board does not of itself confer or purport to confer any degree or legal qualifications, privileges, or license to practice physical medicine and rehabilitation. The Board does not limit or interfere with the professional activity of any duly licensed physician who is not certified by this Board. Privileges granted physicians in the practice of physical medicine and rehabilitation in any hospital or clinic are the prerogatives of that hospital or clinic, not of this Board.

The chief aim of the Board is to establish the training requirements, to standardize qualifications for specialists in physical medicine and rehabilitation and to certify as specialists those who voluntarily appear before the Board for such recognition and certification, according to its regulations and requirements; and thereby provide assurance to the public and the medical profession that certificants possess particular competence in physical medicine and rehabilitation.

The names of certificating Diplomates of the Board appear in the ABMS Directory of CertifiedPhysiatrists published by the American Board of Medical Specialties; of Evanston, Illinois, and in the Directory of Medical Specialists by Marquis Who’s Who, Inc. of Chicago, Illinois.
Requirements for Certification

Eugene H. Courtiss, MD, Chairman, Boston, Massachusetts
Michael E. Jabaley, MD, Vice-Chairman, Jackson, Mississippi
Thomas J. Baker, MD, Miami, Florida
Ronald B. Bergstrom, MD, Columbus, Ohio
Hal G. Bingham, MD, Gainesville, Florida
Garry S. Brody, MD, Downey, California
James R. Callison, MD, Phoenix, Arizona
Robert M. Goldwyn, MD, Brookline, Massachusetts
Norman E. Hugo, MD, Chicago, Illinois
Edward A. Luce, MD, Lexington, Kentucky
Stephen H. Miller, MD, Portland, Oregon
George Reading, MD, Rochester, New York
John Remensnyder, MD, Boston, Massachusetts
John L. Sawyer, MD, Nashville, Tennessee
Lars M. Vistnes, MD, Stanford, California
Paul M. Weeks, MD, St. Louis, Missouri
Harvey A. Zarem, MD, Los Angeles, California
Elvin G. Zook, MD, Springfield, Illinois
John E. Woods, MD, Secretary-Treasurer, 1617 John F. Kennedy Blvd., Suite 1561 Philadelphia, Pennsylvania 19103

Minimum Training Requirements

The total prerequisite and requisite training in plastic surgery is for a minimum of six years in length. Two of the last three years must be of progressive clinical training in an approved plastic surgery residency approved by the Residency Review Committee for Plastic Surgery and accredited in the United States by the Accreditation Council for Graduate Medical Education (ACGME) or in Canada by the Royal College of Physicians and Surgeons for full training. This requirement is effective for applicants beginning PGY-1 on or after July 1, 1988.

Prerequisite Requirements

1. Undergraduate Medical or Osteopathic Education

Candidates must have graduated from an accredited school of medicine in the United States or Canada which grants an MD degree or from an osteopathic school accredited by the American Osteopathic Association. Graduates of medical schools in other countries must have completed one of the following requirements: (1) certification by the ECFMG, or (2) have successfully passed the Visa Qualifying Examination (VQE).

All candidates must have a currently registered full and unrestricted license to practice medicine granted by a state, or other United States jurisdiction, or by a Canadian province. A temporary limited license such as an educational institutional or house permit is not acceptable to the Board. Candidates must be actively engaged in the practice of plastic surgery as indicated by holding active operating privileges in an approved hospital and continue to be licensed throughout the certification process.

Commissioned officers of the medical service of the armed forces of the United States or Canada on active duty need not present evidence of current registration of licensure, but must provide appropriate information regarding their status.

2. Graduate Education in Surgery for Doctors of Medicine in the United States or Canada

A. Effective July 1, 1986, a candidate must have completed a minimum of three years of clinical training with progressive responsibility in the same program in general surgery. This program must be approved by the Residency Review Committee for Surgery and accredited in the United States by the Accreditation Council for Graduate Medical Education (ACGME) or in Canada by the Royal College of Physicians and Surgeons for full training. The entire general surgery residency training must be completed prior to entering a plastic surgery residency. The general surgery program director must verify in writing the successful completion of a minimum of three years of progressive residency in his program. Each case will be evaluated by the Board on its own merits; or

B. Satisfactory completion of an accredited residency training program in orthopaedic surgery. The training must be certified in writing by the orthopaedic surgery program director. All orthopaedic surgery residency training must be completed prior to entering a plastic surgery residency; or

C. Certification by American Board of Otolaryngology. Prospective candidates may initiate residency training in plastic surgery following satisfactory completion of the entire course of training as prescribed for certification by the American Board of Otolaryngology, but they may sit for the examination(s) of The American Board of Plastic Surgery, Inc. only after becoming certified in that primary specialty. Satisfactory completion of training must be verified in writing by the appropriate program director; or

3. Graduate Education in Surgery for Doctors of Osteopathy

Effective July 1, 1984, the candidate must satisfactorily complete an entire general surgery program approved by the Residency Review Committee for Surgery and accredited by the Accreditation Council on Graduate Medical Education (ACGME) including the year of Senior Responsibility. The entire general surgery residency must be completed prior to entering a plastic surgery residency. The program director(s) must verify in writing the successful completion of the entire program in general surgery.

4. Graduate Education in Surgery for Doctors of Medicine with a Foreign Medical Degree

Candidates entering the PGY-1 level in general surgery must satisfactorily complete an entire program in general surgery approved by the Residency Review Committee for Surgery and accredited in the United States by the Accreditation Council for Graduate Medical Education (ACGME) or in Canada by the Royal College of Physicians and Surgeons for full training, including the year of senior responsibility. The entire general surgery residency must be completed prior to entering a plastic surgery residency. The program director(s) must verify in writing the successful completion of the entire program in general surgery.

The Board grants no credit for training/residency and/or experience in any other discipline.

Graduate Education in Plastic Surgery

Training in plastic surgery for a period of not less than two years is required, and the final year must be at the senior level. Prospective candidates entering a plastic surgery residency accredited for three years of training must complete the entire three years, with one year of senior responsibility. Training in plastic surgery must be obtained in either the United States or Canada. The American Board of Plastic Surgery, Inc. will recognize as acceptable training accomplished in either those programs in the United States which have been approved by the Residency Review Committee for Plastic Surgery and accredited by the Accreditation Council for Graduate Medical Education, or those programs in Canada approved by the Royal College of Physicians and Surgeons of Canada.

A candidate must hold positions of increasing responsibility for the care of patients during these years of training. For this reason major operative experience and senior responsibility are essential to surgical education and training. An important factor in the development of a surgeon is an opportunity under guidance and supervision to progress by progressive and succeeding stages to complete responsibility for the surgical care of the patient. It is equally imperative that a resident hold positions of increasing responsibility when he receives training in more than one institution, and
Requirements for Certification

Plastic Surgery

one full year of experience must be at the senior level. The normal training year for the program must be completed. No credit is granted by the Board for part of a year of training.

The Board considers a residency in plastic surgery to be a full time endeavor and looks with disfavor upon any other arrangements. The minimum acceptable training year is forty-eight (48) weeks. Should leave of absence exceed four weeks per annum and result in overlap or duplication of resident positions approved by the Residency Review Committee for Plastic Surgery, specific documentation must be provided to the Board along with approval of the program director.

Training in plastic surgery must cover the wide field of plastic surgery. It should include experience in both the functional and aesthetic management of congenital and acquired defects of the head and neck, truck and extremities. Sufficient material of a diversified nature should be available to prepare the trainee to pass the examination(s) of the Board after the prescribed period of training. If the available material on a service is inadequate, the chief of that service may correct the deficiency by establishing an affiliation with one or more surgeons on other services within that hospital, or by regular rotation of his residents on other approved affiliated services in order that a broad experience might be obtained. The trainee should be provided an opportunity to operate independently on suitable cases under more remote supervision.

This period of specialized training should emphasize the relationship of basic science—anatomy, pathology, physiology, biochemistry, microbiology—to surgical principles fundamental to all branches of surgery, and especially to plastic surgery. In addition, the training programs must provide in depth exposure to the following subjects: the care of emergencies, shock, wound healing, blood replacement, fluid and electrolyte balance, pharmacology, anesthetics, and chemotherapy.

Approved Training Programs in Plastic Surgery

Information concerning acceptable training programs may be found in the Directory of Residency Training Programs published under the aegis of the Accreditation Council for Graduate Medical Education. The candidate should inquire of the Office of the Board before initiating training if there is any question whether a residency is approved.

The American Board of Plastic Surgery, Inc. does not inspect or approve residencies. The Residency Review Committee (RRC) for Plastic Surgery inspects and makes recommendations for or against approval of a residency training program in plastic surgery only after the director of the residency has filed an application for approval with the Secretary of the Residency Review Committee for Plastic Surgery, 535 North Dearborn Street, Chicago, Illinois 60610. The RRC consists of nine members of three representatives from each of the following: The American Board of Plastic Surgery, Inc., the American College of Surgeons, and the American Medical Association.

Unless the Board and its individual members can be responsible for the placement of applicants for training. The Board does not maintain a list of available openings in programs. Prospective candidates seeking accredited training in plastic surgery should correspond directly with the directors of those training programs in which they are interested.

For additional information you may contact Director, Registry of Residency, Plastic Surgery Academic Advisory Council, University of Louisville, Division of Plastic Surgery, Louisville, Kentucky 40292.

Requirements for Admission to Examinations

The primary intent of the Board is to encourage broad and well-rounded training in Plastic Surgery. The ultimate goal is to produce a plastic surgeon capable of managing the wide variety of problems which may come under his care. The standards established by the Board are designed to further this aim. The quality of training received will be reflected in the candidate's ability to achieve good results in his practice. The examinations of the Board attempt to evaluate the cognitive skills and problem solving ability of the candidate in the specialty of plastic surgery.

General Requirements

The following requirements are in agreement with those promulgated by the American Board of Medical Specialties:
1. The Board will accept only those persons whose major professional activity is limited to the field of plastic surgery.
2. Moral and ethical standing in the profession must be satisfactory to the Board. Practices contrary to ethical public relations will receive close scrutiny and may result in rejection of the application for examination or deferral for examination until such matters have been resolved satisfactorily.
3. The Board will accept only those persons who have fulfilled the further requirements as set forth herein.

Professional Requirements

The Board may deny a candidate the privilege of sitting for the written or oral examination, or issuance of a certificate if it is found that because of additional disclosures or a recent change in status, he no longer meets the general or professional requirements.

The Board considers the requirements detailed in "Prerequisite Requirements" and "Graduate Education in Plastic Surgery" to be minimal in satisfying its purposes and encourages candidates to take advantage of broadening experiences in other fields.

The Board reserves the right to:
1. requesting list of operations performed solely by the candidate for one or more years;
2. requesting special and extra examinations, written or oral and practical; and
3. requiring any specific data concerning the candidate that may be deemed advisable before making a final decision for certification.

The Board, at its prerogative, may give consideration to exceptional individuals who did not conform to all the stipulations concerning the prerequisite and requisite training requirements.

The Board, in accordance with policies of the American Board of Medical Specialties, does not use or recognize the terms Board "Eligible" or "Qualified."

Application for Examination and Certification

Prospective candidates desiring certification by The American Board of Plastic Surgery, Inc. should write to the Office of the Board immediately following completion of required training in plastic surgery requesting application materials. A Booklet of Information and an "Application for Examination and Certification" form will be provided. The form must be completed and returned to the Office of the Board as soon as possible. The application must be completed accurately and must be signed by the candidate and twice by the program director, once acknowledging the completion of the residency in plastic surgery and once recommending the candidate for examination. Accompanying forms must be completed properly, and the required photographs must be provided. The required registration fee must also accompany the application. If a candidate has been involved in more than one program in plastic surgery, the director of each such program must verify completion of that program and recommend the candidate for examination. It is the responsibility of the candidate to obtain the letters of recommendation as requested in the application. If training was received in more than one pro-
gram, the candidate must receive the endorsement of each of the directors in junior years in the form of a letter. Additionally, the Board may require a favorable evaluation and recommendation from other surgeons.

Applications must be received in the Office of the Board no later than December 1st if they are to be reviewed and approved in time for assignment to the Qualifying Examination to be given the following spring.

If the application is approved, the candidate will be notified concerning the time and place of the Qualifying Examination. If, however, it appears that the stated requirements have not been met, further details will be requested, and the information will be reviewed by the Committee on Credentials and Requirements. The Committee on Credentials and Requirements meets only twice yearly and that decisions are not rendered at other times.

Until the application has been received and approved, the Board will not inform any person, institution, or organization that the candidate is admissible to examination.

**Fees for Examination**

Registration Fee . . . . U.S. $150.00 (not refundable)  
Qualifying Examination . . . . U.S. $400.00  
Certifying Examination . . . . U.S. $600.00  
Fees must be submitted in U.S. CURRENCY ONLY.  
Foreign currency and Canadian are unacceptable.  
The Registration Fee ($150.00) must be submitted with the “Application” and is not refundable.

The fee for the Qualifying Examination ($400.00) must be submitted WHEN THE REPLY CARD REQUESTING EXAMINATION IS RETURNED to the Office of the Board. Each admissible candidate will be sent an Announcement of Examination and a Reply Card approximately three months prior to the date of the Qualifying Examination. The Reply Card indicating whether or not the candidate wishes to take the examination, must be returned to the Office of the Board AT ONCE. The fee for the Qualifying Examination is to accompany the Card only if the candidate wishes to be scheduled for examination.

The fee for the Certifying Examination ($600.00) must be submitted WHEN THE REPLY CARD REQUESTING EXAMINATION IS RETURNED to the Office of the Board. Each admissible candidate will be sent an Announcement of Examination and a Reply Card approximately three months prior to the date of the Certifying Examination. The Reply Card indicating whether or not the candidate wishes to take the examination, must be returned to the Office of the Board AT ONCE. The fee for the Certifying Examination is to accompany the Card only if the candidate wishes to be scheduled for examination.

For both the Qualifying and Certifying Examinations, candidates who notify the Office of the Board in writing that they wish to withdraw from the examination before the Admission Cards have been dispatched will be refunded the examination fee, less a processing charge of $100.00.

Candidates who fail to notify the Office of the Board less than four (4) weeks prior to examination of their intent to withdraw or who fail to appear for examination will forfeit the entire fee. The Board may waive this rule if the circumstances are such that the Board deems it warranted.

Fees for RE-EXAMINATION(S) are the same as for the original examination.

Fees are subject to change by the Board.

The Examination

Each qualified candidate shall be entitled to take an examination or examinations as required by the Board. Upon successful completion of the required examination or examinations, the candidate shall be certified by the Board as a medical specialist in plastic surgery.

All candidates must comply with the Board regulations in effect for the year in which the examination is taken regardless of the time when the original application was approved.

All candidates taking the examination of The American Board of Plastic Surgery, Inc. must complete the entire examination.

Certification by another medical or surgical specialty Board does not exempt a candidate from any part of the examination(s).

**Rules Governing Admissibility to the Examinations**

**Qualifying Examination (Written Examination)**

Effective July 1, 1986, new candidates approved for admission to the examinations of the American Board of Plastic Surgery, Inc., may take the Qualifying Examination immediately after successful completion of their residency in plastic surgery. Beginning July 1, 1986, candidates admitted to the Certifying Examination however, the candidate must have successfully completed the Qualifying Examination and have been in the practice of plastic surgery for a least a two (2) year period.

Those who have not passed the Qualifying Examination within five (5) years after initial approval will no longer be considered admissible to the examination. To be admitted again to examination such person shall:

- Submit documented evidence of completion of not less than 150 hours of accredited Category I Continuing Medical Education in plastic surgery within the twenty-four month period prior to requesting readmission to examination. Acceptable sources of continuing medical education credits are those offered by any one of the thirteen (13) Sponsoring Organizations of the American Board of Plastic Surgery, Inc.
- Provide an evaluation acceptable to the Board as to his surgical capabilities from the chief of surgery and chief of plastic surgery in the hospitals in which he exercises surgical privileges or from such others as the Board shall request.
- Submit a new formal re-application and all attendant fees.
- Be approved by the Board for readmission to examination after all of the above documented evidence has been received.

**Certifying Examination (Oral Examination)**

Candidates approved for admission to the examinations of The American Board of Plastic Surgery, Inc., prior to July 1, 1986, will be offered five (5) consecutive opportunities to appear for the Certifying (Oral) Examination beginning with the calendar year of successful completion of the Qualifying (written) Examination. The admissibility expiration date shall be established as December 31 of the fifth calendar year after successful completion of the Qualifying Examination.

Candidates approved for admission to the examinations of The American Board of Plastic Surgery, Inc., July 1, 1986 and thereafter, will be offered five (5) consecutive opportunities to appear for the Oral Examination beginning with the calendar year of admissibility to the Certifying Examination. Before becoming admissible to the Certifying Examination, the candidate must have successfully completed the Qualifying Examination and have been in the practice of plastic surgery for at least a two (2) year period. The admissibility expiration date shall be Decem-
Requirements for Certification

Plastic Surgery

Requirement 31 of the fifth calendar year after completion of the to
tear practice period.

If a candidate has not passed the Certifying Examination
within five (5) years after notification of admisibility or if a
candidate fails the Certifying Examination three (3) times,
his admisibility date will be revised to indicate that he no
longer is a "candidate" for certification. He will not be con-
idered by the Board until after satisfactory comple-
tion of at least one year of residency in plastic surgery at
the senior level in an accredited program and receipt of a
favorable endorsement to the Board from the program
director.

A candidate who is admitted to the Certifying Exami-
tation for the fourth time and again fails, must satisfactorily
complete two (2) years of residency in plastic surgery,
including a chief year, in an accredited program and re-
ceive a favorable endorsement by the program director
before again being considered by the Board for admission
to examination.

IT IS RECOMMENDED, BUT NOT REQUIRED, BY
THE BOARD, THAT NEW CASE REPORTS BE SUBMIT-
TED EACH TIME THE CANDIDATE PRESENTS HIM-
SELF FOR THE CERTIFYING EXAMINATION.

The Qualifying Examination

The Qualifying Examination of The American Board of
Plastic Surgery, Inc., will be conducted in the spring each
year or at any time deemed suitable by the Board. The
examination will be given on the date specified and at the
time specified. No exceptions will be made, and no special
examinations will be given.

The Qualifying Examination will consist of the following:
A. A three-hour, multiple choice, written examination cov-
ering the spectrum of clinical plastic and reconstructive
surgery and the body of basic science pertinent to it. It
shall include:

1. Basic techniques, wound healing, microsurgery,
transplantation.
2. Burns, sepsis, metabolism, trauma, resuscitation,
nutrition, endocrinology, shock, hematology.
3. Pre- and post-operative care, anesthesia, cardio-
respiratory care, complications, clinical pharmacology.
4. Tumors of: head and neck, skin, breast: including
treatment by radiation therapy, immunotherapy, che-
motherapy, and surgery.
5. Trunk, lower extremity, musculoskeletal system, pres-
sure ulcers, rehabilitation.
6. Hand, peripheral nerves, rehabilitation.
7. Maxillofacial and craniofacial surgery and microsurgery.
8. Congenital anomalies: genetics, teratology, facial de-
formity, speech pathology, gynecology, and genito-
urinary problems.
9. Aesthetic surgery, psychiatry, and legal medicine.
B. A multiple choice, written examination covering pertinent:
1. Gross and microscopic pathology as well as basic
knowledge of pathology, e.g., the biologic behavior
of neoplasms, inflammation, and repair.
2. Gross, microscopic, and functional anatomy, and
embryology.

The questions for the examination cover subjects con-
sidered to be of fundamental importance to competent
performance in the field of plastic surgery. Every effort is
made to avoid "trick" questions, ambiguity, and questions
involving rare or irrelevant facts or situations. All questions
are analyzed by psychometric techniques to assure their
quality.

The candidate will pass or fail on the strength of his
performance on the entire Qualifying Examination.

Examination booklets are copyrighted as the sole prop-
erty of The American Board of Plastic Surgery, Inc. They
must not be removed from the test area or reproduced.
Reproduction of copyrighted material is a Federal offense.

After the candidate has been scheduled for examina-
tion, he will be sent an admission card five to six weeks
prior to the date of the examination. This card must be
presented when he registers for the examination at both
the morning and afternoon sessions. On this card will be
printed the candidate’s name, his candidate number, the
date and time to report, the location of the testing center,
the specific room in which the examination will be given
and the “Date Results to be Mailed.” He must use his
candidate number throughout the examination as required.
Late arrival may result in denial to admission to the
examination.

If your address, as shown on the Card, is incorrect or
will change prior to the date results are to be mailed, print
the change on the back of the card prior to turning it in to
the Proctor at the end of the afternoon session. Admission
cards will be collected from all candidates at the conclusion
of the examination.

Send your request to the Office of The American Board of Plastic
Surgery, Inc. IMMEDIATELY by telephone (215-568-4000)
if your card is lost prior to the examination.

Registration and Administration
of the Examination

You must register at the date, time and location speci-
ﬁed on your admission card both in the morning and again
in the afternoon. If for any reason you are delayed or
cannot arrive on time, you must notify the proctor or the
Office of the Board. If you find yourself unable to attend
the examination, you must notify the Office of the Board
either by letter or telephone prior to the time of registra-
tion for the morning session. If you are more than 30
minutes late, you will not be admitted to the examination.
All candidates must take the entire examination on the
same day.

The Office of the Board will provide each candidate with
lead pencils for use during the examination. No other
writing implements may be used.

Irregularities

The validity of scores awarded candidates for their per-
formance on the examinations is protected by every means
available. The Board will not report a score which its has
determined is invalid, i.e., does not represent a reasonable
assessment of the candidate’s knowledge or competence
sampled by the examination. The performance of all can-
didates is monitored and may be analyzed for the purpose of
detecting invalid scores.

The candidate is not permitted to bring into the exami-
nation any notes, textbooks or other reference materials.
No scratch paper is permitted. Space is provided in the
written examination text book so that notes and calcula-
tions can be made as necessary.

The Qualifying (written) Examination will be supervised
by proctors representing the Board and empowered by the
Board to ensure that the examination is properly conducted
in accordance with the rules of the Board. If evidence by
observation or analysis suggests that one or more can-
didates’ scores may be invalid because of irregular behavior,
the Board will withhold the scores pending further investi-
gation, and the affected candidates will be so notified.

Examples of irregularities affecting the validity of scores
which would necessitate the withholding of scores pending
further investigation would include, but not be limited to
the following: (1) using notes; (ii) sharing information or
discussing the examination in progress; (iii) copying of
answers from another candidate; (iv) permitting one’s an-
swers to be copied; and (v) unauthorized possession, repro-
duction, or disclosure of materials or other information,
including examination questions or answers or other spe-
cific information regarding the content of the examination
before, during, or after the examination.
Upon analysis of all available information in such circumstances, the Board will make a determination as to the validity of the scores in question and will notify the affected candidates. If it is determined that the scores in question are invalid, they will not be released, and notification of that determination may be made to legitimately interested third parties.

Candidates or other persons who are directly implicated in an irregularity affecting the validity of examination scores are subject to additional sanctions, including barring the persons permanently from all future examinations, terminating the candidate’s participation in an ongoing examination, invalidating the results of the candidate’s examination, withholding or revoking a certificate, or other appropriate action. Candidates or other persons subject to additional sanctions will be provided with a written notice of the charges and an opportunity to respond to such charges in accordance with the reconsideration and appeal procedure established by the Board.

**Travel and Hotel Accommodations for Candidates**

The candidate is responsible for his own travel, hotel accommodations, and expenses. A hotel reservation card will be included with the Admission Card. This is to be used if the candidate wishes to stay at the hotel in which the examination is to be given.

**Notification of Results**

Letters of notification of the results of the examination will be mailed on the date indicated on the admission card. The time period between administration of the examination and notification is necessary to allow for extensive analysis and to assure that individual results are reliable and accurate.

**Grades**

Candidates receive a single grade for the entire examination. To successfully complete the Qualifying Examination, the candidate must achieve a passing grade for the entire examination rather than for each specific section separately. Effective May, 1982, ALL candidates will be required to complete successfully the entire examination even though informed previously that they had passed one or more parts thereof.

A candidate will be judged to have successfully completed the Qualifying Examination if his grade is at or above that grade which is one standard deviation below the mean of a peer reference group. The characteristics of the peer reference group will be determined by the Board and will set the standard of performance. Each candidate participating in the Qualifying Examination will receive an individual, computer-generated letter concerning his performance and a histogram of total scores for all candidates.

The American Board of Plastic Surgery, Inc. will obtain from an appropriate contractor a report which will be sent to plastic surgery residency training directors concerning the performance of their candidates on the Qualifying and Certifying Examinations.

Hand scoring of the Qualifying Examination will be performed upon request. The request must be submitted in writing to the Office of the Board. The charge for hand scoring of the examination will be determined by the Secretary-Treasurer and this cost must be borne by the candidate requesting the hand-scoring.

**Pass**

A candidate who passes the Qualifying Examination will be notified of the fact. He will be informed of this fact. He will also be notified approximately three months in advance of the date and place of the next Certifying Examination.

**Fail**

A candidate who fails the Qualifying Examination will be informed of this fact. In case of failure, the candidate must repeat the entire Qualifying Examination rather than a component segment thereof.

**The Certifying Examination**

The Certifying Examination will be conducted each Fall or such other time as deemed suitable by the Board. Candidates will be sent an announcement approximately three months before the date of the examination. When the announcement of the Certifying Examination is received, the candidate must signify his intent to take the examination by completing and returning the reply card and examination fee IMMEDIATELY. If the reply card is not received in the Office of the Board more than sixty (60) days before the examination, the candidate will not be admitted to the examination. The names of those candidates who are late returning the reply card will be kept on file. If openings develop by the withdrawal of other candidates, the late candidates will be admitted in the order of receipt of the cards. No candidate will be admitted less than four weeks preceding the examination.

Both sides of the reply card must be completed. A candidate will not be scheduled if his hospital appointments are not recorded.

After the candidate has been scheduled for examination, he will be sent an admission card five to six weeks prior to the date of the examination. On this card will be printed the candidate’s name, his candidate number, the date and time to report, the location of the testing center, the specific room in which the candidates are to assemble, and the “date results to be mailed.” The admission card is to be retained and brought to the examination. Late arrival may result in denial of admission to the examination.

If the address printed on the admission card is incorrect or if there is to be a change of address before the “date results to be mailed,” the new address should be entered on the card in the space provided. The admission card is to be delivered to the temporary Board Office at the examination center before 11:00 a.m. on the day of registration for the Certifying Examination.

Candidates who notify the Office of the Board in writing that they wish to withdraw from the examination four weeks or more before the date of the examination that they wish to withdraw from the examination will be refunded the examination fee less a processing charge of $100.00. Candidates who withdraw from the examination after this date or who fail to appear for the examination will FORFEIT the entire fee. The Board may waive this rule if the circumstances are such that the Board deems it warranted.

**Travel and Hotel Accommodations for Candidates**

The candidate is responsible for his own travel, hotel accommodations, and expenses. A hotel reservation card will be included with the announcement. This is to be used if the candidate wishes to stay at the hotel in which the examination is to be given.

**Schedule for the Certifying Examination**

First Day
8:30 a.m. to 10:30 a.m.—All candidates to hand deliver case reports to the room designated on the admission card.

Candidates should be available in their hotel rooms (or at a telephone number where they can be reached) between 1:00 p.m. and 6:00 p.m. and 7:30 p.m. and 10:00 p.m. on the first day in case the Board wishes to contact them.
Debriefing

On the evening of the second and third day, there will be a voluntary debriefing session for the candidates who have been examined and the Examiners. The Board invites candidates to attend this meeting, if at all possible, for the purpose of evaluating the examination just completed.

The oral examination for each candidate will occupy one full day. The Board Office will make assignments as to the day (second or third day) on which a candidate will be examined.

The candidate number of those who have completed the two parts of the examination will be posted outside the temporary Board Office by 5:15 p.m. each day. The candidates who are not scheduled for a re-examination are free to leave the examination center after their numbers are posted. Candidates who have a re-examination may leave the examination center upon completion.

The Examination Process

Specific instructions concerning the examination will be given to the candidates at the assembly on the morning of the day of the examination. A schedule will be given to each candidate informing him of the time and the place of each examination session. Failure to appear on time for the examination will lead to a grade of FAIL on that section of the examination since no provisions are made to accommodate a candidate who does not fulfill his responsibilities. The candidate should be outside the examination room five (5) minutes before the assigned time. It is not necessary for the candidate to announce his presence. If the candidate has not been invited into the examination room by the examiners by ten (10) minutes after the scheduled time he should notify the temporary Board Office IMMEDIATELY.

If a candidate finds that one of the examiners to whom he has been assigned played a role in the candidate's training, is a close friend or relative, is a close professional associate, or has examined the candidate previously, the candidate MUST inform the Board staff IMMEDIATELY so that schedules can be altered.

Description of the Examination

The Certifying Examination consists of two parts given on the same day:

1. A 45-minute oral examination on eight MAJOR cases submitted by the candidate and indicative of his work in the field of plastic surgery.

2. A 45-minute oral examination on the theory and practice of plastic surgery on material prepared by the Board.

Each candidate will be examined by at least two teams of two examiners. A candidate may be examined by a third team under one of two circumstances. In the first instance, a candidate may petition for re-examination immediately following the examination, if he feels that he has been unfairly or inadequately examined by one of the two teams. If the petition to the Chairman of the Certifying Examination Committee or his designee is judged to have merit, the candidate will be given one additional 45-minute oral examination. A re-examination will be granted only if its outcome can affect the candidate's final grade. Secondly, a candidate whose performance has been judged marginal by the original two teams may, at the direction of the Chairman of the Certifying Examination Committee, be required to undergo examination by a third team. In either of the above circumstances, performance by the candidate as judged by all three examining teams shall be considered in determining the grade.

The Case Reports

The Office of the Board will send nine (9) plastic folders to each candidate for binding of the individual case reports. It is imperative that the assigned CANDIDATE NUMBER (which appears on the Admission Card) be placed on the cover of each one of the Case Reports, along with the candidate's name and hospital number of the case.

Eight (8) cases will be assembled by the candidate and brought to the Board examination. Each of the case reports will be judged on the basis of the DEGREE OF DIFFICULTY as well as the QUALITY OF EXECUTION.

All cases must have been performed by the candidates as the independent, responsible surgeon.

Trivial Cases

The candidate's cases should represent his best achievement in the specific clinical area during the period of practice to date. These case reports are the only means by which a candidate's clinical skills can be judged. A case report that does not demonstrate clinical judgment and skills beyond the reasonably expected of an individual completing the prerequisite training for a plastic surgical residency will be considered inadequate and judged trivial.

(Examples of inadequate cases are: Excision of benign skin lesions of less than two centimeters in diameter on the thigh with primary closure; treatment of a second degree burn of less than 50% of the surface area of the forearm; excision and re-attachment of an abdominal scar without tissue rearrangement.)

a. Patients managed by the candidate within the context of a residency, fellowship or other similarly supervised training program are not acceptable as case reports.

b. Hospital and office records must clearly identify the candidate as the attending physician and surgeon.

c. No significant portion of submitted operative procedures may have been performed by any individual other than the candidate.

The candidate will not be admitted to the examination if preliminary review of the cases shows that the possibility exists that the candidate received supervision or guidance. The following DISCLAIMER STATEMENT must be included in the case reports if assistance has been provided by any surgical assistant other than a resident, intern, physician's assistant, medical student or nurse:

Patient's Name:
This is to certify that I did not provide supervision or guidance in the planning and execution of the operative treatment of this patient.

Signed:
Each candidate will bring to the examination the following materials on each of his eight (8) submitted cases collated in this order:

1. A brief narrative summary of preoperative, operative, and postoperative course of the patient.

2. Pre- and postoperative photographs: approximately 3 1/2 x 5" black and white or color prints mounted on 8 1/2 x 11" paper. Descriptive legends and dates of the photo should be placed adjacent to each photo. No transparencies will be allowed.

3. Photocopies (e.g., xerox) of the original operative reports.

4. Photocopies (e.g., xerox) of original anesthetic records.

5. Photocopies (e.g., xerox) of pertinent laboratory data.
6. Photocopies (e.g., xerox) of the pathologist's reports.
7. Photocopies (e.g., xerox) of pertinent X-rays or scans (actual x-rays are unacceptable). Each x-ray or scan should be dated in a manner that is easily seen.
8. Drawings, if they would clarify a presentation.
9. Photocopies (e.g., xerox) of the original progress notes (including patient's history and physical examination) both from the hospital and the office records including the initial consultation. If legibility is a problem include a typewritten copy also.
10. Information indicating the final outcome of the treatment.

Note: If the records are not in English, an accurate and complete English translation must accompany them.

The diversified nature of the case material submitted is evidence of the candidate's expertise in the representative areas of plastic surgery and should be drawn from the following categories. There must be cases in seven of the nine categories and they may be performed in the hospital or ambulatory setting.

All cases except those in Category 9 must have had operative treatment.
1. Congenital facial clefts
2. Defects requiring reconstructive surgery:
   a) of the maxillofacial region
   b) of the trunk including breast reduction
   c) extremities
3. Acute burns.
4. Facial bone fractures (simple nasal fractures are not acceptable)
5. Aesthetic operations (reduction mammoplasty is not considered aesthetic for purposes of this examination)
6. Malignancies or conditions prone to malignancy:
   a) of the head and neck region
   b) of the body and extremities
7. Hand surgery
8. Congenital anomalies:
   (Examples: syndactyly, microtia, prominent ears, hypospadias, congenital cysts, extensive nevi, congenital constriction bands, and craniofacial dysostosis)
9. Operative treatment of complications (i.e., iatrogenic or unexpected) surgical treatment previously rendered to the patient by the candidate.

The eight cases must be selected from at least three of the following five anatomical regions:
1. Head and neck
2. Upper extremity
3. Trunk
4. Lower extremity
5. Genitourinary system
   Each report must be typed or reproduced on standard, letter-sized paper (8 1/2" x 11") with the candidate's name, the number of the case, the hospital case number, the principal diagnosis, and primary operation listed on the title page. The cases should be bound singly in the folders supplied by the Board.

The candidate should supply two copies of a list of his cases on a single sheet of paper. This list should be identified with the candidate's number and should include the following information for each case:
1. Category
2. Patient's hospital number
3. Primary diagnosis
4. Procedure(s) done by the candidate
   One copy of this list should be bound at the beginning of the first case in the folder supplied by the Board. The second copy should be separate and unbound to be handed in with the case reports.

The candidate should include the following signed statement in the front of the folder containing his first case.

Only one statement is necessary for the entire group of cases:
"I hereby certify that the planning and essential surgical procedures herein were performed by me as an INDEPENDENT operator."

The plastic surgeon need not necessarily be the admitting physician, so long as he is clearly the responsible surgeon.

The American Board of Plastic Surgery, Inc. regards the case reports submitted as important evidence of the candidate's basic ability to carry out plastic surgery procedures and to organize and present information in a succinct and complete fashion. IMPROPER OR DISORGANIZED PREPARATION OF THIS MATERIAL WILL BE SUFFICIENT CAUSE TO DISQUALIFY THE CANDIDATE FOR CONTINUED EXAMINATION.

If a candidate is disqualified for continuation of the examination process because his case reports are judged unacceptable, he is considered to have not taken the examination and it is not recorded as a failure.

The candidate must be prepared to defend his choice of operation, to present alternate treatment plans, and to discuss pertinent literature on the subject. The Board, at its discretion, may request certification of the case reports by the hospital where the operations were performed.

The Oral Examination
Each examination session is designed to evaluate the candidate's breadth and depth of knowledge and your ability to apply it in the solution of a wide range of clinical problems. Each session is structured to the extent in that the examiners are given a schema to be followed. This approach assures uniformity and prevents duplication. Each of the examiners on each team is expected to pose problems and questions to the candidate.

The Examiners
The examiners are all Diplomates of The American Board of Plastic Surgery, Inc., are active in the practice and/or teaching of plastic surgery, and have been certified by the Board for more than five years. They are respected members of the profession known for their surgical knowledge, expertise, and scientific contributions. They have been instructed in the technique and purposes of the examination process. Ordinarily, each team includes a present or past Director of the Board.

Irregularities
The provisions regarding irregularities described in the section on the Qualifying Examination are applicable also to the Certifying Examination.

Grades
Candidates will be evaluated by each member of his examining teams and may be discussed in detail by the entire Board. The final decision regarding certification will be rendered by the entire Board at its meeting following completion of the Certifying Examination.

Questions Regarding Results
DO NOT call the Board Office for information. DO NOT call your examiners, as they have been instructed to refer all calls to the Board Office. Your results will be provided to you in the letter which you will receive after the "Date Results to be Mailed." Regardless of your reason, the results of the examination will be divulged to NO ONE until after the Board has had time to reach you.

If you wish to discuss your performance after you have received your letter of notification you may correspond in writing with the Secretary. The American Board of Plastic Surgery Inc., at the Board Office.

THE BOARD IS DETERMINED THAT THE EXAMINATION SHALL BE AS COMPREHENSIVE AND OBJECTIVE AS PRACTICAL. ITS INTENTION IS THAT EVERY
CANDIDATE BE PROVIDED AN EQUAL OPPORTUNITY TO BECOME CERTIFIED. THE SAME STANDARD IS APPLIED TO EACH CANDIDATE IN SO FAR AS POSSIBLE.

Important Dates
June 30: Potential candidates (senior/chief residents) should initiate contact with the Board by this date.
December 1: Last date to submit formal application for admission to the upcoming Qualifying Examination (given in spring of following year).
March 1: Last date to return Reply Cards to register for the Qualifying Examination.
September 1: Last date to return Reply Cards to register for the Certifying Examination.

Pass (See “Certification”)

Certification
After a candidate has met the requirements for admis-sibility and passed the examinations of the Board, a certifi-cate attesting to his qualifications in plastic surgery will be issued by the Board. It shall be the prerogative of the Board to determine the fitness, professionally and ethi-cally, of any candidate for a certificate; and the Board, for cause, may defer or deny certification to any candidate.

Certificates issued by the Board shall be in such form as the Board of Directors may from time to time determine and shall be signed by the Chairman, the Vice-Chairman, and the Secretary-Treasurer of the Board and shall have placed upon them the Official Seal of the Board. All those candidates whose certificate is received after December 1, 1984, will be issued certificates which will be valid for a period of ten (10) years, after which they will expire. Those desiring to renew their certification upon expiration of their certified status must fulfill the requirements for recertification specified by the Board at the time. Certificates issued before December 1, 1984, are not time limited.

Certificates of the Board shall state that the holder has met the requirements of the Board and is certified by the Board as a medical specialist in plastic surgery and is entitled to be known as a “Diplomate of The American Board of Plastic Surgery, Inc.” Diplomates will have their names reported to the American Board of Medical Specialties and Marquis Who’s Who, Inc. for publication in their directories unless they notify the Board in advance that they do not wish to be listed.

The Directors may adopt such further rules and regulations governing examinations, issuance, and revocation of certification as they may from time to time determine. The Directors may adopt further rules and regulations to implement the principle of continuing education of physicians certified by the Board.

Inquiry as to Status
The Board considers a candidate’s record not to be in the public domain. When an inquiry is received by the Board regarding an individual’s status with the Board, a general—but factual—statement is provided which indicates that person’s location within the process of certification. The information will be provided only to individuals, organizations, and institutions with a reasonably valid “need to know” for professional reasons.

Recertification
The American Board of Plastic Surgery will offer recerti-fication to its Diplomates on a voluntary basis. Those per-sons certified in plastic surgery prior to December 1, 1984 were issued a certificate with no indication of time limited validity. All certificates issued after December 1, 1984 bear a limited date of ten (10) years, after which they are no longer valid.

The Board supplied basic identifying data on newly certified Diplomates through the American Board of Medi-cal Specialties and Marquis Who’s Who for publication in their directories. Each biographic entry shows the individ-ual’s original certification in plastic surgery and this listing is expected to continue unchanged for those who certification has no expiration date.

Upon recertification of a Diplomate, the Board will supply pertinent data to both the American Board of Medical Specialties and Marquis Who’s Who so that the individ-ual’s biographic entry will show recertification in plastic surgery as well as the original certification.

After December 1, 1984, those whose certificates bear an expiration date will have their biographic listings re-tained in the two publications after the expiration date ONLY if they have acquired recertification in plastic surgery. Diplomates should apply for recertification in the seventh year of their dated certificate (e.g., certificates issued 1985—apply in 1992). This will insure that the Diplomate— if he is successfully recertified—will be listed without interrup-tion in the two publications.

Foreign Certificates
A person holding the Foreign Certificate issued prior to June 30, 1973 by The American Board of Plastic Surgery, Inc. must relinquish the certificate to the Board in the event he returns to the United States for the purpose of practicing plastic surgery. Such an individual may apply for examination and certification in the manner described herein.

Revocation of Certificates
Any certificate issued by the Board shall be subject to revocation at any time if the Board determines that a candidate who has received such a certificate was not properly qualified to receive it. The Board may revoke the certificate of any Diplomate who, after opportunity for full and fair hearing by the medical staff or other appropriate body of a hospital, state or county medical society, govern-ment licensing body, professional specialty society or a court of law, has been found guilty of or pleaded guilty to a felony, professional incompetence, professional misconduct, unethical conduct or harmful, deceptive or fraudulent advertising.

The American Board of Plastic Surgery, Inc. shall have the jurisdiction and right to determine and decide whether or not the evidence or information placed before it is sufficient to constitute grounds for the revocation of any certificate issued by the Board. The candidate will be provided with the “Standards Policy” of the Board, and the Policy will be observed in pursuance of resolution of the problem.

Each certificate issued by the Board of Directors shall be subject to revocation if the physician so certified shall have made any misstatement of material fact, or failed to make any statement of material fact, in his application for such certificate or in any other statement or representation to the corporation or its representatives, or shall have other-wise acquired the certificate by deception. Upon revoca-tion the certificate shall be returned and surrendered to the Board.

AMERICAN BOARD OF PREVENTIVE MEDICINE
Eugene W. Fowlkner, MD, Chairman, Nashville, Tennessee
Terence R. Collins, MD, Vice Chairman for Public Health and General Preventive Medicine, Gainesville, Florida
Lloyd B. Tepper, MD, Vice Chairman for Occupational Medicine, Allentown, Pennsylvania
George F. Catlett, MD, Vice Chairman for Aerospace Medicine, New York, New York
Joan M. Atkinson, MD, Columbia, South Carolina
George E. Anderson, MD, Boiling AFB, D.C.
John W. Atwater, MD, Ann Arbor, Michigan
Constance C. Conrad, MD, Atlanta, Georgia
Robert W. Day, MD, Seattle, Washington
Eligibility Requirements for Examination

Each applicant for a certificate in public health and general preventive medicine, aerospace medicine, or occupational medicine is required to meet certain eligibility requirements and to pass an examination. Such eligibility requirements are set forth in the By-laws of the Board. For the information of applicants such requirements are briefly outlined below; but for a full statement thereof reference must be made to the By-laws, as from time to time in force, by which alone such requirements are governed:

**General Requirements**

1. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education of the American Medical Association, or from a school of osteopathic medicine which was at the time approved by the American Osteopathic Association, or from a foreign school satisfactory to the Board:
2. A year of postgraduate clinical training developed as part of an approved residency program in preventive medicine or in a clinical program approved by one or more Residency Review Committees comprising experience involving direct patient care; or service or training deemed by the Board to be equivalent to such training;
3. An unrestricted license to practice medicine in a State, Territory, Commonwealth or possession of the United States or in a Province of Canada.
4. Residency of not less than one year which shall have provided supervised experience in the practice of public health, aerospace medicine, occupational medicine or general preventive medicine including planned instruction, observation and active participation in a comprehensive organized program in one of the specialty areas, approved by the Accreditation Council for Graduate Medical Education on the recommendation of the Joint Residency Review Committee for Preventive Medicine of the American Medical Association's Council on Medical Education and the American Board of Preventive Medicine; or a period of experience deemed by the Board to be substantially equivalent to such residency.
5. A period of academic training consisting of completion of a course of study leading to a master's degree in preventive medicine or public health, the content of which shall include biostatistics, epidemiology, health services administration and environmental health; or successful completion of post-baccalaureate study of the extent, depth, content and rigor generally required in such master's degree program.

**Special Requirements in Public Health and General Preventive Medicine**

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, preventive medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.
2. The applicant must have been engaged in training for, or the practice of, public health for at least two of the five years preceding application for certification.

**Special Requirements in Aerospace Medicine**

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, aerospace medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.
2. The applicant must have been engaged in training for, or the practice of aerospace medicine for at least two of the five years preceding application for certification.

**Special Requirements in Occupational Medicine**

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, occupational medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.
2. The applicant must have been engaged in training for, or the practice of, occupational medicine for at least two of the five years preceding application for certification.

**Equivalencies for Eligibility Determination**

Individuals who have not formally completed all of the components previously described may be considered eligible if their training and experience is considered by the Board to provide suitable equivalency for their formal training.

The Board will consider granting certain credit toward satisfying requirements for eligibility for such factors as:
1. Certification by one of the American specialty boards with significant preventive medicine components in their practice (e.g. internal medicine, pediatrics, family practice) plus a minimum of two years of full-time practice of preventive medicine;
2. Teaching or research experience in fields relevant to preventive medicine; and
3. Suitable periods of practice, research or teaching in preventive medicine.

An applicant who is lacking a formal academic year may substitute four additional years of practice in the special area of aerospace medicine, occupational medicine, general preventive medicine or public health.

Each applicant is considered individually by the Board in accordance with the existing guidelines.

**Applications for Examination and Re-examination**

Each application for examination must be made on the prescribed form (which may be obtained from the Secretary of the American Board of Preventive Medicine). It must be accompanied by the required documentation, application fee, and two recent, clear, autographed photographs of the applicant. An official transcript of all graduate academic training in preventive medicine should be sent directly to the Board from the registrar of the institution where the training was undertaken.

No member of the Board is authorized to give an opinion as to the eligibility of candidates. The determination of eligibility will be made only by the full Board, after receiving full application information. Each candidate must comply with Board regulations in effect at the time the examination is taken and also those in effect at the time the certificate (if any) is issued, regardless of when his original application was filed.

An applicant declared ineligible for admission to examination may refile or reopen his or her application on the basis of new or additional information within two years of the filing date of his original application, without payment of an additional application fee.

An applicant declared eligible for admission to examination who fails to pass examination within three years of the date of the first examination for which he or she is declared eligible, is required to file a new application, and to pay a new application fee.
Candidates failing the examination, may, upon timely application and payment of appropriate fee, be admitted to re-examination within a three-year period.

Candidates failing three examinations will not be admitted to subsequent examinations unless the Board so directs.

**Multiple Certification**

An individual may establish eligibility for certification in multiple fields of preventive medicine by submitting separate applications and fees for each field. Eligibility determination will be carried out independently and candidates may be given credit for any period of appropriate training or experience, regardless of its having been used to establish eligibility in another field.

**Fees**

Applicants fee: $150

Must be submitted with application; is not refundable.

Examination fee: $700

Fee is payable 45 days prior to the examination date.

**Examination**

The examination is a one, one-day examination. It is a multiple choice examination covering all of preventive medicine but weighted in those areas for which candidate is declared.

**Certification**

Upon satisfactory completion of the examination and proof to the satisfaction of the Board that the applicant is eligible for certification, a certificate will be issued to the effect that the applicant has been found to be possessed of special knowledge in the field specified. The certificate will be signed by officers of the Board and will have its seal affixed. Each certificate remains the property of the Board, but the person to whom it is issued is entitled to its possession unless and until it is revoked. Any certificate issued by the Board may be revoked if evidence, satisfactory to the Board, is presented that the applicant was not eligible to receive it at the time of application or issuance, or that any pertinent fact had been misstated, misrepresented, or concealed. The issuance of a certificate to any person does not constitute such person a member of the Board.

**AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY**

Robert Fishman, MD, President, San Francisco

California

John A. Talbott, MD, Vice President, New York, New York

Robert Michel, MD, Secretary, New York, New York

Jack P. Whisman, MD, Treasurer, Rochester, Minnesota

Elliott L. Mancall, MD, Executive Committee Member-at-Large, Philadelphia, Pennsylvania

William E. Bell, MD, Iowa City, Iowa

J. Donald Easton, MD, Providence, Rhode Island

Ludwig Gutmann, MD, Morgantown, West Virginia

Maurice J. Martin, MD, Rochester, Minnesota

Layton McCurdy, MD, Philadelphia, Pennsylvania

John F. McDermott, Jr., MD, Honolulu, Hawaii

N. Paul Rosman, MD, Boston, Massachusetts

Stuart A. Schnick, MD, Denver, Colorado

James L. Shore, MD, Denver, Colorado

Gary Tucker, MD, Seattle, Washington

William L. Webb, Jr., MD, Hartford, Connecticut

Stephen C. Scheiber, MD, Executive Secretary, One American Plaza, Suite 808, Evanston, Illinois 60201

**Certificates**

The Board currently issues four types of certificates: (1) in psychiatry, (2) in neurology, (3) in child psychiatry, and (4) in neurology with special qualification in child neurology. An applicant may be certified in more than one area. The applicant shall receive a separate certificate for each area in which he or she qualifies. Each certificate shall be in such form and for such period of time as may be specified by the Board.

**Revocation of Certificates**

The Board shall have authority to revoke any certificate issued by it or to place a certificate holder on probation for a fixed or indefinite time if:

(a) The certificate was issued contrary to or in violation of any Bylaws or any Rule or Regulation of the Board;

(b) The person to whom the certificate was issued made any material misstatement or omission of fact to the Board in his application or otherwise;

(c) A license to practice medicine of the person to whom the certificate was issued is forfeited, revoked or suspended without such person's consent.

**Board Eligibility**

The American Board of Psychiatry and Neurology, in accord with the policy of the American Board of Medical Specialties, does not recognize or use the term "Board Eligible" and does not issue statements concerning "Board Eligibility." The Board informs an applicant of its decision to allow examination only when the applicant has an active, approved application on file in the Board office.

**Application**

An applicant who wishes to be examined by the Board shall complete and file with the Executive Secretary an application on the official form, together with the required application fee and supporting data. Photocopies of applications are not acceptable. Application forms may be obtained from the Executive Secretary. Application fees are not refundable.

Deadline for receipt of completed applications in the Executive Office of the Board is the September 1 preceding the scheduled date of the Part I examination.

Applications which are not accompanied by the application fee will not be processed. Application fees unaccompanied by the formal application will be returned.

An acknowledgement postcard accompanies each application. That card, when stamped, self-addressed, and enclosed with the application, will be returned to the candidate as acknowledgment that the application has been received by the Board office.

Once the card is returned to the candidate, it will be a minimum of ten weeks before the candidate will receive information regarding the status of the application. Applications received on the deadline date may take longer because of the volume received at that time.

An application which does not receive notification from the Board office by December 15 of the acceptance or rejection of his or her application must contact the Board office promptly in writing to inquire about the status of the application. Failure to contact the Board office promptly in writing after December 15 will result in such candidate's renewal from the examination roster.

A resident may initiate the application process for the Part I examination during the last six months of residency training, provided that all training requirements are fulfilled no later than October 1 of the year in which he or she is submitting an application. After making formal application by the September 1 application deadline, the applicant must submit formal documentation of training within two weeks of its completion. The final review of application materials, however, cannot take place until the applicant successfully completes and documents Board training requirements.

**Appeal Procedure for Negative Determinations Regarding Applications or Examinations**

The rejection of credentials for admission to an examination is considered a "negative determination." An applicant who receives a negative determination may appeal by complying with the following procedures.
1) Within thirty (30) days after date of notice of a negative determination, the applicant must give written notice of appeal to the Review Committee of the Board at the address specified below. Information tending to rebut the negative determination must be received within fifty-five (55) days after date of notice of a negative determination.

2) There is a fee attached to the appeal procedure. The fee for appeal of a credentials matter is equal to the application fee. This fee must accompany the information tending to rebut the negative determination.

3) The Review Committee will review the written information required in (1) above and the applicant will be notified in writing of a decision. If the Review Committee decides to affirm the negative determination in question, the applicant right to appeal the decision. Notice of intent to appeal the Review Committee’s decision and request to appear personally with or without counsel before the Review Committee must be received within thirty (30) days after date of notice of the Committee’s original decision. At any such appearance, the applicant will be given an opportunity to present his or her position. A transcript of the proceeding will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate. If the applicant requests to appear personally with or without counsel before the Review Committee, and subsequently, without good cause, fails to appear at the proceeding or advises the Review Committee less than ten (10) days before the scheduled date of the proceeding that he or she cannot or will not appear at the proceeding, the Review Committee may decide to notify the applicant in writing that no other opportunity for a personal appearance before the Review Committee shall be provided.

4) If the applicant appeals the decision of the Review Committee to the Board, the Board will review all of the evidence considered by the Review Committee. However, the Board will not consider any evidence that was not presented to the Review Committee. If the Board disagrees with the decision of the Review Committee, it may reverse the decision or remand that matter to the Review Committee for further consideration with precise instructions as to the basis of such reconsideration. The applicant will be informed in writing of the Board’s decision which, in all events, will be final and binding on the Board and on the applicant.

5) All notices or other correspondence directed to the Review Committee or to the Board should be sent to the following address:

American Board of Psychiatry and Neurology, Inc.
One American Plaza
Suite 808
Evanston, Illinois 60201

General Requirements
At the time of submission of the application, the applicant must establish that:

(a) He or she has an unlimited license to practice medicine in a state, commonwealth, or territory of the United States, or a province of Canada. All applicants are required to submit copies of licenses with current registrations with their Part I applications.

(b) He or she has satisfactorily completed the Board’s specialized training requirements in psychiatry or neurology, or both; or that he or she is in the last six months of such training. (Please refer to the “application” section.)

Training Requirements
Certificate in Psychiatry
An applicant who seeks admission to examination for certification in psychiatry must have satisfactorily completed an approved PGY-1 and three full years of postgraduate, specialized training in a program accredited by the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada. This training must be in the specialty of psychiatry. No residency training credit can be given for time spent in a residency program in another specialty. Training programs approved by the Residency Review Committees and accredited by the Accreditation Council for Graduate Medical Education can be found in the current issue of the Directory of Residency Training Programs published by the American Medical Association. This directory includes the “Essentials of Accredited Residencies.” Training may be completed on a part-time basis, provided that it is no less than half-time, and credit will not be given for less than on-year blocks of training except under special circumstances which must be approved by the ABPN Credentials Committee for Psychiatry.

To ensure continuity of training, the Board requires that two years of the three years of residency following the PGY-1 be spent in a single program. On occasion, the Board will consider alternate patterns of training that have not included the required two years spent in a single program, provided that the total residency permitted the applicant to assume progressive levels of responsibility and that a comprehensive curriculum was covered. In such cases, it is the responsibility of the applicant to provide detailed documentation from the respective training director outlining training content, duties, and responsibilities. Each case will be considered on an individual basis. In rare instances, the Board may consider the credentials of exceptional individuals who have made outstanding contributions to the field of psychiatry.

First Year Training Requirements
Satisfaction of the following training requirements for residency is mandatory for physicians entering training programs on or after July 1, 1977 and before July 1, 1985 for psychiatry.

Two patterns of training are acceptable:

1) Three Years Training Following a First Postgraduate Year:
Prior to entering an approved three-year training program in psychiatry, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine or Doctor of Osteopathy. This year of clinical experience should emphasize internal medicine, pediatrics or family practice. The following programs would be acceptable:

- The categorical first year, categorical first year, and the flexible first year are in accord with those defined by the Department of Graduate Medical Education, American Medical Association. These were in effect from 1977 through 1981. Effective July 1, 1982, ACGME-approved first postgraduate year training programs include only categorical and transitional programs.

- Categorical First Year—These are first-year programs planned, sponsored, and conducted by a single, approved residency program as part of that residency. The content of such a first year will be limited to the specialty field of the sponsoring residency program.

- The categorical first year (beginning after 1977 and before 1985 for psychiatry candidates) must be completed in internal medicine, family practice, pediatrics, surgery or obstetrics and gynecology.

- Categorical First Year—The asterisk designates a first-year program that was planned, sponsored, and supervised by a single, approved residency program as part of that residency’s program of graduate medical education, the content of which will not be limited to the single specialty of the sponsoring residency program but may have included experience in two or more specialty fields.

- The categorical first year in psychiatry must have included at least four months with direct patient care responsibility in internal medicine, family practice or pediatrics.
"Flexible First Year—The first year will be sponsored by two or more approved residencies and will be jointly planned and supervised by the residencies that sponsor it. Such a first year is designed to give a broad clinical experience for: (a) students who need the need for this type of first year; (b) program directors who feel that such an experience will best serve the purpose of subsequent graduate education in their field; and (c) students who have not yet decided on their specialty but may wish to choose among several fields during their first graduate year. The content of a flexible first year must include four months of internal medicine, but the remainder of the year may be designed in accordance with the purposes of the two or more sponsoring residency programs, and the interests and needs of the student."

"Transitional Programs—Transitional programs are provided for physicians who desire in their first or later graduate year an experience in several specialties prior to embarking on further training in a single specialty."

The criteria for a transitional year are outlined in the Directory of Residency Training Programs published by the American Medical Association.

Physicians entering psychiatry training as of July 1, 1983, may enter programs at the second postgraduate year level in July, 1986 only after a broad-based clinical year of accredited training in the United States or Canada in internal medicine, family practice, or pediatrics; or after an ACGME-approved transitional year program; or after one year of an ACGME-approved residency in a clinical specialty requiring comprehensive and continuous patient care.

Beginning July 1, 1988, all osteopathic physicians entering a PGY-2 year in psychiatry must have successfully completed an ACGME-approved first postgraduate year as described above.

2. Four-Year Training Programs:

A four-year program in psychiatry would be acceptable with the provision that no less than four months during the first year be spent in an approved program providing supervised, direct responsibility for the general medical care of children and/or adults. For the candidate who spends 12 or more months in an approved program providing supervised, direct responsibility for the general medical care of children and/or adults this may come at any time in the four years.

Certificate in Neurology

An applicant who seeks admission to examination for certification either in neurology must have satisfactorily completed an approved PGY-1 year and three full years of postgraduate, specialized training in a program accredited by the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada. The training must be in the specialty of neurology. No residency training credit can be given for time spent in a residency program in another specialty. Training programs approved by the Residency Review Committees and accredited by the Accreditation Council for Graduate Medical Education can be found in the current issue of the Directory of Residency Training Programs published by the American Medical Association. This directory includes the "Essentials of Accredited Residencies."

Training may be completed on a part-time basis, provided that it is no less than half-time, and credit will not be given for less than one-year blocks of training except under special circumstances which must be approved by the ABPN Credentials Committee for Neurology.

To ensure continuity of training, the Board requires that two years of the three years of residency following the PGY-1 be spent in a single program. On occasion, the Board will consider alternate patterns of training that have not included the required two years spent in a single program, provided that the total residency permitted the applicant to assume progressive levels of responsibility and that a comprehensive curriculum was covered. In such cases, it is the responsibility of the applicant to provide detailed documentation from the respective training directors outlining training content, duties, and responsibilities. Each case will be considered on an individual basis. In rare instances, the Board may consider the credentials of exceptional individuals who have made outstanding contributions to the field of neurology.

First Year Training Requirements

Satisfaction of the following training requirements for residency is mandatory for physicians entering training programs on or after July 1, 1977 and before July 1, 1985 for neurology.

Two patterns of training are acceptable:

1) Three Years Training Following a First Postgraduate Year:

Prior to entering an approved three-year training program in neurology, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine or Doctor of Osteopathy. This year of clinical experience should emphasize internal medicine, pediatrics or family practice. The following programs would be acceptable:

- The categorical first year, categorical first year, and the flexible first year are in accord with those defined by the Department of Graduate Medical Education, American Medical Association. These were in effect from 1977 through 1981. Effective July, 1982, ACGME-approved first postgraduate year training programs include only categorical and transitional programs.

- "Categorical First Year—These are first-year programs planned, sponsored, and conducted by a single, approved residency program as part of that residency. The content of such a first year will be limited to the specialty field of the sponsoring residency program."

The categorical first year (beginning after 1977 and before 1985 for neurology candidates) must be completed in internal medicine, family practice, pediatrics, surgery or obstetrics and gynecology.

- "Categorical First Year—The asterisk designates a first-year program that was planned, sponsored, and supervised by a single, approved residency program as part of that residency's program of graduate medical education, the content of which will not be limited to the single specialty the sponsoring residency program but may have included experience in two or more specialty fields."

- The categorical first year in neurology must have included at least four months with direct patient care responsibility in internal medicine, family practice or pediatrics.

2) Four-Year Training Programs:

The first year will be sponsored by two or more approved residencies and will be jointly planned and supervised by the residencies that sponsor it. Such a first year is designed to give a broad clinical experience for:

(a) students who feel the need for this type of first year; (b) program directors who feel that such an experience will best serve the purpose of subsequent graduate education in their field; and (c) students who have not yet decided on their specialty but may wish to choose among several fields during their first graduate year. The content of a flexible first year must include four months of internal medicine, but the remainder of the year may be designed in accordance with the purposes of the two or more sponsoring residency programs, and the interests and needs of the student.

"Transitional Programs—Transitional programs are provided for physicians who desire in their first or later graduate year an experience in several specialties prior to embarking on further training in a single specialty."

The criteria for a transitional year are outlined in the Directory of Residency Training Programs published by the American Medical Association.

Beginning July 1, 1988, all osteopathic physicians entering a PGY-2 year in neurology must have successfully
completed an ACGME-approved first postgraduate year as described above.

Physicians entering neurology training as of July 1, 1986, may enter programs at the second postgraduate year level in PGY-2, which must comply with the Board's requirements for certification and examination as stated in the section on GENERAL REQUIREMENTS. An applicant seeking admission to the residency training program in neuroscience must have completed the following training in ACGME-approved programs:

1. Two (2) years of residency training in general pediatrics.
2. Three (3) years of residency training in neurology which includes:
   a. One (1) year of adult clinical neurological residency.
   b. One (1) year of neurological residency devoted to clinical child neurology.
   c. One (1) year in neurology in which the trainee may be offered experience in (a) basic neurological sciences such as: neuroanatomy, neurophysiology, neuropathology, neuropathology, neuropsychology, neuropsychiatry, neurochemistry; (b) closely related specialties such as neuroradiology, neurosurgery, neuro-ophthalmology, child psychiatry, and child psychology; and (c) special studies and laboratory procedures; and (d) clinical and/or laboratory research, all relevant to the training of an effective neurologist and investigator in the field of child neurology.

Certificate in Child Neurology

Each applicant for certification in Child Neurology must be certified by the Board in the specialty of general pediatrics, prior to applying for examination in child neurology. The general policies regarding training, application and examination in child neurology are contained in the pamphlet “Information for Applicants for Certification in Child Neurology,” which is available from the Secretary of the Board.

Dual Certification in Psychiatry and Neurology

For applicants seeking certification both in psychiatry and neurology who have begun postgraduate training prior to January 1, 1987, a total of five years of ACGME-approved postgraduate training is required:

1. A PGY-1 which meets requirements for either psychiatry or neurology.
2. Two years of approved residency in psychiatry in a single training program, and
3. Two years of approved residency in neurology in a single training program.

Applicants seeking certification both in psychiatry and neurology who begin postgraduate training after January 1, 1987, must complete a PGY-1 which meets the requirements for entry into a neurology program. Additionally, applicants must complete (a) six full years of postgraduate training in approved programs in the United States or Canada including three full years in psychiatry and three full years in neurology, or (b) at the discretion and approval of both training directors and in accordance with the Residency Review Committee requirements, the applicant may complete five full years of postgraduate training in approved programs in the United States or Canada, including two full years in psychiatry, to full years in neurology, and a fifth full year of training designed to be eligible for simultaneous credit in psychiatry and neurology.

Dual Certification in Child Psychiatry and in Neurology with Special Qualification in Child Neurology

An applicant who wishes to obtain certificates both in child psychiatry and child neurology must meet the following requirements. He or she must be certified by the Board in the specialty of general psychiatry prior to applying for examination in child psychiatry. The applicant must also meet the requirements for certification in neurology with special qualification in child neurology. One year of training in neurology must be substituted for one year of the required psychiatric training.

Supplementary Certification

A candidate who has been certified in psychiatry, neurology, or psychology with special qualification in child neurology may apply for supplementary certification in another specialty upon submission of a new Part I application and application fee. If the credentials for such other certificate are acceptable to the Board, the candidate will be scheduled for the next available Part I examination in the supplementary specialty.

Candidates who have achieved certification in neurology and are desirous of gaining certification in neurology with special qualification in child neurology shall be required to take two one-hour examinations in child neurology during the Part II examinations. Such candidates will not be required to re-take the Part I examination in neurology.

It is Board policy to maintain only one active application per candidate at any time.

Applicants with Non-U.S. Training

The following criteria pertain to all applicants whose residency training was undertaken at a center located outside the United States or Canada. The candidate must possess an unlimited license to practice medicine in a state, commonwealth, or territory of the United States or province of Canada.

For Neurology

Only training completed in programs approved by the Accreditation Council for Graduate Medical Education (ACGME) in the United States, or the Royal College of Physicians and Surgeons in Canada, will be considered.

For Psychiatry

These criteria also apply to applicants who completed residency training in the United Kingdom prior to July 1, 1976.

1. The candidate must have had full-time specialty training in a manner equivalent in length of time and content to that required for U.S. training.
2. The candidate must successfully complete a comparable national certification examination in the country of training in the specialty in which the physician is seeking admission to examination.
3. The candidate must have achieved certification within the past seven (7) years. If certification was achieved earlier, then the candidate must have had one year of clinical practice in that specialty in which he or her professional work.
REQUIREMENTS FOR CERTIFICATION

Psychiatry and Neurology

has been observed by at least two ABPN diplomates in that specialty and documented by two letters of sponsorship from such diplomates.

At present, the only certifications recognized by the Board are for psychiatry and neurology. The United Kingdom's MRCPsych (Member of the Royal College of Psychiatrists), Australia and New Zealand's MRANZCP (Member of the Royal Australian and New Zealand College of Psychiatrists), and the South African Medical and Dental Council's F.P. Psychiat (S.A.) (Fellowship of the Faculty of Psychiatry of the College of Medicine of South Africa) and Israel's Speciality Certification of the Scientific Council of the Israel Medical Association.

As of July 1, 1985, all applicants for admission to examination, with the exception of those who have a certificate and training in its entirety in one of the above-mentioned countries, must have an approved year of primary care training in the United States or Canada.

Training Credit for Applicants in Psychiatry from the United Kingdom

The following criteria apply to all applicants for Psychiatry to begin their psychiatric residency training on or after July 1, 1976.

For each year of psychiatric residency training completed in an approved hospital program in the United Kingdom, one year of training credit will be given toward eligibility for examination by the Board in psychiatry.

The hospital program must be among those approved by the Visiting Inspecting Specialty Committee in Psychiatry of the Royal College of Physicians.

In order to obtain credit for two or three years of approved training in the United Kingdom, at least two years of the training must be spent at the same training center in psychiatry.

The applicant will be responsible for sending the details of his or her training to the American Board of Psychiatry and Neurology's Executive Office, along with verification of this training from the approved hospital or hospitals in the United Kingdom. The applicant's program director must certify that the applicant was engaged in full-time residency training.

As of July 1, 1985, all applicants for admission to examination must have an approved year of primary care training in the United States or Canada.

Applicants who have completed residency training in the United Kingdom prior to July 1, 1976, must meet the criteria outlined in the section "Applicants With Non-U.S. Training."

Examinations

Though the purpose of the examination is to test the qualification of the candidate in psychiatry or neurology, or both, it must not be forgotten that both these medical disciplines constitute part of the broad field of general medicine. The Board requires proficiency in neurology on the part of those it certifies in psychiatry and vice versa, but examines the candidate in accordance with the certificate he or she seeks.

The Board uses DSM-III as its primary authority in psychiatric diagnostic nomenclature.

Each candidate must pass both Part I and Part II of the examinations given by the Board. Each examination shall cover such subjects as the Board may determine.

The Board may conduct such examinations at such times and in such places and at such limits of the United States as it deems appropriate. The Board reserves the right to limit the number of candidates admitted to any scheduled examination. The administration and grading of all examinations shall be at the sole discretion of the Board. After completion of such examinations, the candidate will be notified by the Executive Secretary as to the results.

Rules on Forfeiture of Examination Fees

A candidate who is unable to attend any examination to which he or she has been admitted and who fails to notify the Executive Secretary in writing at least three (3) months before the start of such examination shall forfeit the examination fee. All fees may be modified from time to time as necessary.

Part I Examination Content

Successful completion of the Part I written examination in psychiatry and neurology is required of candidates seeking certification in either psychiatry, neurology, or neurology with special qualification in child neurology.

Examination for Psychiatry Candidates

The psychiatric portion of the examination will include questions on the following areas in psychiatry: normal and abnormal growth and development through the life cycle, biological dimensions of psychiatry, psychosocial dimensions, and clinical psychiatry (phenomenological, diagnosis and treatment).

The neurologic portion of the examination will include questions on the following areas in neurology: clinical neurology, neuroanatomy, neuropathology, neuropharmacology, and clinical diagnostic procedures (including questions on cerebrospinal fluid, neuro-opthalmology, electroencephalography and neuroimaging) and therapy and management of patients with neurologic disorders. AS OF THE APRIL 1981 PART I EXAMINATION, PSYCHIATRIC CANDIDATES WHO SUCCESSFULLY COMPLETE THE PART I EXAMINATION WILL BE REQUIRED TO TAKE THE PART II EXAMINATION IN CLINICAL PSYCHIATRY ONLY.

Examination for Neurology Candidates

The neurological portion of the examination will include questions on the following areas in adult and child neurology: neuroanatomy, neuropathology, neurochemistry, neurophysiology, basic and applied neuropharmacology, neuroimmunology, neurovirology, neurogenetics, neurendocrinology, neuroimaging, neuro-opthalmology, neurootology and cerebrospinal fluid.

The psychiatric portion of the examination will include questions on the following areas in psychiatry: growth and development, psychopathology, biological psychiatry, psychosocial psychiatry and diagnostic procedures.

For candidates in both psychiatry and neurology, there will also be bridging clinical material common to both psychiatry and neurology on the following areas: altered states of consciousness, memory disorders, perceptual disorders with cerebral damage, motor disorders and verbal expressive disorders, dementia and deterioration in specific diseases, personality changes with cerebral lesions, mental retardation, clinical aspects of diagnostic testing including psychological testing, radiography, and EEG, and psychiatric management of patients with medical disorders.

AS OF THE APRIL 1983 PART I EXAMINATION, NEUROLOGY AND CHILD NEUROLOGY CANDIDATES WHO SUCCESSFULLY COMPLETE THE PART I EXAMINATION WILL BE REQUIRED TO TAKE THE PART II EXAMINATION IN CLINICAL NEUROLOGY AND CHILD NEUROLOGY ONLY.

Part I Examination Procedures

The Part I examination is given once a year, in the spring, on a regional basis throughout the United States and Canada, as well as in selected sites outside the continental United States. Candidates will be expected to indicate, in order of preference, their choice of two examination sites. Every effort is made to accommodate candidates in the locale of their choice, but transfer to another site cannot be made during the three-month period preceding the Part I examination.

After an applicant has been advised by the Board of acceptance for examination, the applicant shall, on request, submit the required examination fee.
Because of the volume of applications, the Board must adhere firmly to the deadlines established for receipt of examination fees. A candidate's name will be removed from the examination roster if he or she fails to submit the examination fee by the deadline specified. Candidates will then be required to request and submit a new application and examination fee.

All candidates are required to sit for Part I examination for which they have applied. Applicants who fail to do so will be required to request and submit a new application, supporting documentation and examination application fee.

A candidate who passes Part I shall, upon request, submit to the Executive Secretary a check payable to the Board to cover the fee for Part II. The Part II examination is given three or four times a year at selected locations in the United States. Candidates who pass Part I will automatically be assigned to a Part II examination with a specific date and location. The limited space available and the complicated logistics involved in administering the Part II examination make it impossible for the Board to allow candidates to select either the site or the date for Part II examination. Candidates assigned to a Part II examination are expected to be present as scheduled. All candidates will be scheduled for the Part II within one year following notification of successful completion of Part I.

Through April, 1986, a passing grade on the Part I examination will be valid for a period of seven (7) years from the date of passing. All individuals holding such a grade may apply or re-apply for the Part II examination. Effective March, 1987, a passing grade on the Part I examination dated March, 1987 or thereafter, will be valid for a period of six (6) years or three (3) attempts to complete the Part II examination successfully, whichever comes first.

**Appeal Procedure for Negative Determinations Regarding Part I Examinations**

A candidate who has received a failing grade on the Part I examination may request in writing to have his or her examination hand-scored by the National Board of Medical Examiners within thirty (30) days after date of notice of a negative determination. The fee for this procedure would be equal to the Part I examination fee. The fee must accompany the request. All requests should be directed to the following address:

American Board of Psychiatry and Neurology, Inc.
One American Plaza, Suite 808
Evaston, IL 60201

**Part II Examination Content**

Part II, an oral examination, will include the examination of patients under the supervision of one or more examiners. The manner of examining patients, and the reasoning and deductions therefrom will constitute an important part of the examination. Knowledge of basic science principles, special diagnostic procedures, and management recommendations and risks are also essential parts of this examination, which is focused upon evaluation of clinical skills.

Candidates are expected to discuss the patient and their findings with their examiners. Questions frequently cover such areas as diagnosis, treatment, prognosis and management. Reference to the basic sciences of psychiatry and neurology may be made.

**Psychiatry candidates** who successfully completed the Part I examination prior to April 1, 1981 will take three examinations:

1. one-hour examination in clinical psychiatry (patient)
2. one-hour examination in clinical psychiatry (audio-visual)
3. one-hour examination in clinical neurology (without patient)

Psychiatry candidates who successfully completed the Part I examination after April 1, 1981 will take two examinations:

1. one-hour examination in clinical psychiatry (patient)
2. one-hour examination in clinical psychiatry (audio-visual)

In the patient section, the psychiatry candidate will be given 30 minutes to examine a patient under the supervision of one or more examiners. Following the examination of the patient, the candidate will be examined by one or more examiners. This section will stress physician-patient interaction, conduct of the clinical examination, capacity to elicit clinical data, formulation, differential diagnosis and prognosis, therapeutic management and knowledge of therapies. Additional questions may be addressed to the basic science of psychiatry.

The psychiatry audio-visual section will consist of a 20-minute video-taped psychiatric examination which the candidate will observe. Candidates will then be individually examined by one or more examiners with particular reference to the content of the tape. This discussion may also include other clinical topics.

The previously administered special written, multiple-choice examination in neurology for psychiatry candidates was discontinued after the 1983 examination. Those psychiatry candidates who did not take or did not pass the neurology portion of the Part II examination are required to take a one-hour neurology oral examination at a regularly scheduled Part II examination. The neurology section will follow the same format as outlined for the section without a patient for neurology candidates.

**Neurology candidates** who successfully completed the Part I examination prior to April 1, 1982 will take four examinations:

1. one-hour examination in clinical psychiatry (audio-visual)
2. one-hour examination in clinical neurology (patient)
3. one-hour examination in clinical neurology (without patient)
4. one-hour examination in clinical/child neurology (without patient)

Neurology candidates who successfully completed the Part I examination after April 1, 1982 will take three examinations:

1. one-hour examination in clinical neurology (patient)
2. one-hour examination in clinical neurology (without patient)
3. one-hour examination in clinical child neurology (without patient)

**Child neurology candidates** who successfully completed the Part I examination prior to April 1, 1982 will take four examinations:

1. one-hour examination in clinical psychiatry (audio-visual)
2. one-hour examination in clinical neurology (without patient)
3. one-hour examination in clinical child neurology (patient)
4. one-hour examination in clinical child neurology (without patient)

Child neurology candidates who successfully completed the Part I examination after April 1, 1982 will take three examinations:

1. one-hour examination in clinical neurology (without patient)
2. one-hour examination in clinical child neurology (patient)
3. one-hour examination in clinical child neurology (without patient)
Since candidates in child neurology are to be "Certified in Neurology with Special Qualifications in Child Neurology," it is agreed that those candidates will be expected to pass a one-hour oral examination in clinical neurology (without patient) which is set at the same level of difficulty as established for neurology candidates. The pass/fail standards for that hour in clinical neurology (without patient) will be the same whether the candidate is seeking certification in neurology or in neurology with special qualification in child neurology.

The neurology and child neurology candidates who successfully completed the Part I examination prior to April 1, 1982 who have not yet taken, or did not successfully complete the psychiatry portion of the Part II examination are required to take a one-hour psychiatry audio-visual examination at a regularly scheduled Part II examination. The Psychiatry audio-visual section will follow the same format as outlined for the audio-visual section for psychiatry candidates.

In the neurology and child neurology patient sections, the candidate will be given 30 minutes to examine the patient under the supervision of one or more examiners. During the conduct of the examination, the candidate's ability to obtain an adequate history and perform a neurological examination will be observed. Following examination of the patient, the 30-minute discussion with examiners will focus on the evaluation of the findings and discussion of the diagnosis, treatment and management. This discussion may not be limited to the patient examined and may also include other clinical topics. The examiners may also ask additional questions concerning the basic science of that particular section. As of October, 1984, multiple written simulated patient encounters will be utilized as a basis for discussion of diagnosis and treatment in those sections in which there is no patient present. This format will succeed the audio-visual format.

**Part II Examination Procedures**

All successful Part I candidates will receive a notice of assignment to a Part II examination together with a request to submit the required examination fee. Scheduling for the Part II examination will be made as much as possible, on a regional basis as much as is possible. Candidates who fail to take Part II as scheduled by the Board will be required to reapply for the Part II examination.

The limited availability and the complicated logistics involved in administering the Part II make it impossible for the Board to allow candidates to select either the site or the date for examination. It is the candidate's privilege to decline the assigned examination, but there is no guarantee that another date or location will be available within the year's examination cycle.

Candidates who do not pay the Part II examination fee for their scheduled examination by the deadline specified, will be removed from the roster of candidates for that examination. Such candidates will be required to request and submit a Part II application in order to be scheduled for a future Part II examination. Examination fees will be requested at the appropriate time.

Candidates who pay their Part II examination fee but fail to appear at their scheduled Part II examination, will forfeit the fee. Such candidates will be required to request and submit a Part II application in order to be scheduled for a future Part II examination. Examination fees will be requested at the appropriate time.

One month prior to the date of the assigned Part II examination, a candidate will receive informational materials and an admission notice specifying the time and date to report for registration. Candidates are requested to report for registration only at the time indicated on the admission notice. Registration schedules are arranged to accommodate candidates in accordance with their examination schedules.

The Board office is unable to provide information concerning specific examination schedules prior to registration.

**Policy for Retaking of Part II Examination**

Effective July 1, 1976, a passing grade on the part I examination dated anytime from April 1, 1969, to April 15, 1986, will be valid for a period of seven (7) years from the date of passing.

Effective March, 1987, a passing grade on the Part I examination dated March, 1987, or thereafter, will be valid for a period of six (6) years, or three (3) attempts to complete the Part II examination successfully, whichever comes first.

In order to complete the Part II examination successfully, a candidate must pass both major and minor subjects.

(1) A candidate who passes both sections of the major subject of the Part II examination need not repeat this portion of the examination. To pass the major subject, the candidate must achieve final passing grades on both sections of the major subject at the same examination. A candidate who fails one or both sections of the major subject must take both hours of examination in the major subject at each subsequently scheduled examination until he or she passes both sections at the same examination.

(2) Candidates who pass the Part II examination in the minor subject(s) need not repeat this portion of the examination.

(3) Candidates who are unsuccessful in the Part II examination during the time period allotted to complete the Part II examination will be required to request and submit a new Part II application, documentation and application fee.

**Procedures for Retaking of Part II Examination**

Candidates who have failed the Part II examination are automatically assigned to another Part II examination and are required to be present as scheduled. Candidates who fail to take the re-examination at the time specified are required to request and submit a Part II application. Candidates submitting the Part II application will be scheduled for examination within one year, if possible, from the date the Part II application is received in the Board office. Candidates will be scheduled for examination based on space availability and order of receipt of application. Invitations will be sent at least two months prior to the scheduled examination. A request for the examination fee will be made at that time. The examination fee should not be sent with the application.

Candidates who have submitted a Part II application may choose to decline two invitations to Part II examinations. If the third invitation is declined, the candidate will be required to request and submit a new Part II application and will be placed at the end of the waiting list once the application is received in the Board office.

Candidates should be aware of the examination date of their passing the Part I examination.

**Appeal Procedure for Negative Determinations Regarding Part II Psychiatry Examinations**

The invalidation of an examination score or a failing grade on an examination are considered "negative determinations." A candidate who receives a negative determination may appeal by complying with the following procedures.

1) Within thirty (30) days after date of notice of a negative determination, the candidate must give written notice of appeal to the Review Committee of the Board at the address specified below. Information tending to rebut the negative determination must be received within fifty-five (55) days after date of notice of a negative determination.

2) There is a fee attached to the appeal procedure. The fee for appeal of a Part II psychiatry examination would be
equal to the candidate's re-examination fee. This fee must accompany the information tended to rebut the negative determination.

3) The Review Committee will review the written information in (1) above and the candidate will be notified in writing of the decision. If the Review Committee decides to affirm the negative determination in question, the candidate has the right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally with or without counsel before the Review Committee must be received within thirty (30) days after the date of notice of the Committee's original decision. At any such appearance, the candidate will be given the opportunity to present his or her position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate. If the candidate requests to appear personally with or without counsel before the Review Committee, and subsequently, without good cause, fails to appear at the proceeding or advises the Review Committee in writing less than ten (10) days before the scheduled date of the proceeding that he/she cannot or will not appear at the proceeding, the Review Committee may decide to notify the candidate in writing that no other opportunity for a personal appearance before the Review Committee shall be provided.

4) If the candidate appeals the decision of the Review Committee to the Board, the Board will review all of the evidence considered by the Review Committee. However, the Board will not consider any evidence that was not presented to the Review Committee. If the Board disagrees with the decision of the Review Committee, it may reverse the decision or remand the matter to the Review Committee for further consideration with precise instructions as to the basis for such reconsideration. The candidate will be informed in writing of the Board's decision which, in all events, will be final and binding on the Board and on the candidate.

5) All notices or other correspondence directed to the Review Committee or to the Board should be sent to the following address:

American Board of Psychiatry and Neurology, Inc.
One American Plaza, Suite 808
Evanston, IL 60201

Application Procedure for Negative Determinations Regarding Part II Neurology Examinations

The failing grade on a Part II neurology examination are considered a "negative determination." A candidate will be advised of which sections were failed in the initial grade letter sent from the Board office. This is considered the first level of feedback. A candidate who receives a negative determination may appeal by complying with the following procedures.

1) Within thirty (30) days after date of notice of a negative determination, the unsuccessful candidate may, by writing, indicate his/her request for a preliminary review of this negative determination. After such request, the candidate will be provided information concerning his/her performance. This is considered the second and final level of feedback provided to the candidate. Fee for this preliminary review will be $100. This fee must be received before information is provided.

2) Following this, the unsuccessful candidate may, by writing, indicate his/her request for a formal appeal to the Neurology Review Committee. Information tending to rebuff the negative determination should be forwarded with three additional copies for members of the Review Committee, along with the fee, and must be received within fifty-five (55) days after date of notice of a negative determination. No additional feedback will be provided to the candidate. The fee for this formal appeal will be equal to the candidate's re-examination fee and is separate from the fee in (1) above.

3) The Neurology Review Committee will review the written information in (2) above and the candidate will be notified in writing of the decision. If the Review Committee decides to affirm the negative determination in question, the candidate has the right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally with or without counsel before the Review Committee must be received within thirty (30) days after date of notice of the Committee's original decision. At any such appearance, the candidate will be given the opportunity to present his/her position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate. If the candidate requests to appear personally with or without counsel before the Review Committee, and subsequently, without good cause, fails to appear at the proceeding or advises the Review Committee in writing less than ten (10) days before the scheduled date of the proceeding that he/she cannot or will not appear at the proceeding, the Review Committee may decide to notify the candidate in writing that no other opportunity for a personal appearance before the Review Committee shall be provided.

4) If the candidate appeals the decision of the Review Committee to the Board, the Board will review all of the evidence considered by the Review Committee. However, the Board will not consider any evidence that was not presented to the Review Committee. If the Board disagrees with the decision of the Review Committee, it may reverse the decision or remand the matter to the Review Committee for further consideration with precise instructions as to the basis for such reconsideration. The candidate will be informed in writing of the Board's decision which, in all events, will be final and binding on the Board and on the candidate.

5) All notices or other correspondence directed to the Review Committee or to the Board should be sent to the following address:

American Board of Psychiatry and Neurology, Inc.
One American Plaza, Suite 808
Evanston, IL 60201

Application and Fees

An applicant who wishes to be certified in child psychiatry shall complete, sign and file with the Executive Secretary of the Board an application on the official form together with the required supporting data. Applications may be obtained from the Executive Secretary. The application shall be accompanied by a check payable to the Board for $270. Part of this fee is refundable.

No application will be considered until the fee and all required data have been received by the Executive Secretary. The application, supporting data and fee must be received by the Board no later than the May 1 preceding the full examination for which the candidate is applying.

Determinations of applicants' acceptability will be made in accordance with the rules and regulations of the Board.

Those applicants accepted for examination will be notified and scheduled for examination. The examination fee of $650 ($400 for the oral examination, $250 for the written examination) is payable when such payment is requested by the Executive Secretary of the Board.

Applicants denied admission to the examination will be notified of their deficiencies in meeting the standards of the Committee.

Applications will remain active for one examination pe only. Candidates who fail to present themselves for the next scheduled examination or within the date of acceptance of the applications will be required to submit a new application and all documentation and pay a new application fee.
The number of space available for examination may be limited. After the quota is filled, applications will be placed on a waiting list in order of receipt in the Board office. In the event that a candidate is not accepted for the examination for which he or she applied due to space limitations, his or her application will be held over for the following year's examination.

All completed applications must be received in the Board office no later than May 1 preceding the date of examination for which the candidate is applying. Applicants who do not receive a notification from the Board office by July 1 of acceptance or rejection of their application must contact the Board office promptly in writing to inquire about the status of the application. Failure to contact the Board office in writing by July 15 will result in such applicant's removal from the examination roster.

General Requirements
Each applicant for certification in child psychiatry must comply with the following requirements:

(a) He or she must have been certified by the Board in the specialty of general psychiatry prior to submitting an application for examination in child psychiatry. He or she must at all times continue to meet all requirements of the Board for certification in general psychiatry.

(b) He or she must have satisfactorily completed the Board's specialized training requirements in child psychiatry.

Training Requirements
All candidates beginning their specialized training in child psychiatry after June 30, 1965, must have two years of training in child psychiatric centers approved by the Committee in conjunction with the Residency Review Committee for Psychiatry. All training must be completed in the U.S. No credit will be given for training done less than half-time.

The exposure to child psychiatry given to most general psychiatry residents as part of their basic psychiatric curriculum will not qualify for this credit.

The two years of specialized training in child psychiatry are usually taken at one center, but may be taken at no more than two centers. If training is taken at two centers, the training director of each center must evaluate the candidate's training in that center.

The training director of the second center is responsible for ensuring that the total two years of the candidate's specialized child psychiatry training in the combined program is balanced to meet the essentials of the second training program as these have been described and submitted to the Board. A minimum of one year of training must be taken at the second center.

Candidates who have completed at least one year of approved pediatric training at RESIDENCY level (PL2 and beyond the categorical PGY-1 or PL1 year) after July 1, 1960, may be granted up to six months' credit toward child psychiatry training requirements. The six months' credit may be granted if the director of the child psychiatry training program recommends such credit, and if the candidate completes a minimum of one year of training in that child psychiatry program (in the event that training is split between two child psychiatry training programs). This recommendation should be set forth in the form of a letter from the director of the training program to the child psychiatry trainee. A copy should be attached to the application for examination in child psychiatry. This letter should specify the following:

1. The exact dates of the pediatric training for which child psychiatry training credit is being granted and the pediatric residency program in which this training was obtained;
2. The exact number of months of credit being granted toward child psychiatry training.

Thus, the following patterns of specialized training in child psychiatry are acceptable:

1. Two years of training in basic psychiatry, plus two years of training in child psychiatry;
2. Two years of training in basic psychiatry and at least 18 months of training in child psychiatry, plus up to (but not more than) six months of child psychiatry training credit for one year of pediatric training at RESIDENCY level (PL2 and beyond the categorical PGY-1 or PL1 year). The total minimum amount of child psychiatry training is TWO FULL YEARS.

All trainees who contemplate a training program at variance with one of the above training patterns are advised to submit his or her proposed training sequence to the Executive Secretary of the Board. This should be done before beginning child psychiatry training, in order to allow for an advisory opinion of the Committee as to whether the proposed training is likely to meet requirements for admission to examination.

The applicant should obtain from his or her training director(s) a statement certifying satisfactory completion of the training requirements during the period for which training credit was granted.

The Committee may require, at its discretion, submission of the publication of the applicant and/or a series of case reports of children treated by the applicant, as part of the qualifications of acceptability for examination for certification in child psychiatry.

In rare instances, alternate training pathways will be individually considered by the Credentials Committee for those exceptionally qualified individuals who have made outstanding contributions to the field of child psychiatry. A candidate must be nominated by a director of a training program approved by the Residency Review Committee for Psychiatry. The program director must be from the institution where the candidate had a substantial portion of his or her training experience, or where he or she has a current professional appointment. The director must justify the unique but adequate character of the candidate's training program in child psychiatry, and must describe in detail the candidate's clinical experience and qualifications, as well as his or her professional goals and accomplishments. The candidate must have completed at least five years of training, and evidence must be submitted showing that he or she has had satisfactory direct responsibility for patient care in the field of child psychiatry. In addition to the usual application form, the candidate's curriculum vitae, bibliography, and publications should be submitted for consideration. Each inquiry will be considered on an individual basis by the Credentials Committee and the Committee on Certification in Child Psychiatry. Applicants admitted under this plan must sit for the next scheduled examination and are restricted to an initial examination and one re-examination. Candidates who are unsuccessful in completing the examination process within this period will be required to meet the Committee's current training requirements.

Examinations
The Committee on Certification in Child Psychiatry does not endorse or recommend any texts or other teaching aids identified as "Board preparation" material. Furthermore, this Committee does not have any affiliation with or responsibility for programs identifying themselves as "Board Review Courses."

Examinations are given once a year. The Committee reserves the right to limit the number of candidates admitted to any scheduled examination. There will be oral and written examinations which will include examination in all areas relating to normal personality development and pathological deviations from infancy through adolescence. The examinations will cover any area of developmental disturbance, etiological factors, and therapeutic measures and planning. Knowledge and critical understanding of the history and literature of child psychiatry as they apply to practice in the field will constitute a part of the examina-
tion. The utilization of psychological testing, contributions of collaborative personnel, and types of social planning will be included in the examination. A major part of the examination will assess the candidate's ability to make use of their observations and of material presented, to formulate a differential diagnosis, and to organize a practical program of therapy and management from these data. The focus of the written examination is on the general literature in child psychiatry, including history, theory, child development and child psychopathology. The majority of questions are from the literature of the past ten years, with emphasis on the past five years. The written examination is not designed to test primarily for clinical knowledge, since this is done in the oral examination sections.

The examination consists of a written examination, covering all areas of child psychiatry noted above, plus the following three oral examinations:

1) A 45-minute examination on the preschool child;
2) A 60-minute examination on the adolescence;
3) A 45-minute examination on child psychiatry consultation.

The examination covering the preschool and grade school age children will be given as one continuous examination lasting 75 minutes. During this time the candidate will be presented with one videotape segment and one typewritten vignette, each depicting a clinical case example. In the instance where the videotape is of a preschool age patient, the written vignette will be based on the case of a grade school aged child, and vice versa. Candidates are evaluated on their ability to observe and describe the most significant behaviors of the child and to determine the additional data needed to define the clinical situation, formulate a differential diagnosis and treatment plan.

The examination in adolescence will include the psychiatric examination of an adolescent under the supervision of an examiner. The manner and process of interviewing the adolescent and the reasoning and deductions therefrom, including differential diagnosis and treatment plan, will constitute an important part of the examination.

The examination on child psychiatry consultation will include short vignettes focusing on consultation with medical colleagues, schools, courts, and social agencies. The examination allows time for candidates to show their familiarity with community resources and how to facilitate their utilization. The candidate should demonstrate understanding of the principles of consulting and working appropriately with other professional disciplines. Questions may also be asked about consultative problems such as child abuse, psychophysiological disorders, delinquency and learning disabilities.

Certification requires successful completion of all sections of the examination. The current regulations for failure or conditional pass (condition) of the examination for certification in child psychiatry are as follows:

Failure: Fails two (2) or more oral sections of examination
Fails two (2) or more oral sections and the written examination:
A candidate who fails the examination must upon re-examination repeat the entire oral examination. The written examination must be repeated only if it has been specified that the written examination has failed.

Condition: Fails one (1) oral section of the examination and/or the written examination
A candidate who fails only one section of the oral examination must repeat only that section. If only one oral section and the written examination have failed, then that section and the written examination must be repeated.

Effective with the February 1980 examination passage of all portions of the oral examination is valid for a period of four (4) years.

Candidates who are unsuccessful in their initial examination must appear for the next child psychiatry examination as scheduled.

Candidates electing to decline the scheduled re-examination are required to request and submit a new completed application and application fee.

Candidates who are unsuccessful in completing any portion of the oral examination in their re-examination, must repeat all section of the oral examination. Those candidates who are unsuccessful in their re-examination must then request and submit a new completed application and application fee.

Candidates who fail only the written examination may be re-examined. Such examinations are given on the same day as the written examination for all other child psychiatry candidates. If the examination for all candidates is held in the midwest, no alternate sites will be offered. Candidates who decline the written examination to which they have been will automatically be assigned to the written examination for the following year. A written examination fee will be requested at the appropriate time. This option applies solely to candidates who must repeat only the written examination.

Any candidate who is unable to attend an examination and who fails to notify the Executive Secretary of the Board in writing at least two (2) months before the date of the examination will forfeit the examination fee and the application fee. Such candidates must request and submit a new application and application fee.

Appeal Procedure for Negative Determinations Regarding Applications or Examinations in Child Psychiatry

An applicant whose application for admission to examination for certification has been rejected or a candidate who has received a failing grade on the examination may appeal such rejection or failure (both of which are hereafter called "negative determinations") by complying with the following procedures.

(1) Within thirty (30) days after date of notice of a negative determination, the applicant or candidate must give written notice of appeal to the Review Committee of the Committee on Certification in Child Psychiatry (hereafter called the "Committee") at the address specified in (4) below. Information tending to rebut the negative determination and the appeal fee (see 5 below) must be received within fifty-five (55) days after date of notice of a negative determination.

(2) The Review Committee will review the documentation required in (1) above. If the Review Committee decides to affirm the negative determination in question, the applicant will be notified in writing of the decision, and the reasons therefor. The applicant has the right to appeal the decision. Notice of intent to appeal the Review Committee's decision and request to appear personally or without counsel before the Review Committee must be received by the ABPN within thirty (30) days after date of notice of the Committee's original decision. At any such appearance the appellant will be given an opportunity to present his or her position. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate. Appellants who request to appear personally or with counsel before the Review Committee, and subsequently, without good cause, fails to appear at the proceeding or advise the Review Committee in writing less than thirty (30) days before the scheduled date of the proceeding that they cannot or will not appear at the proceeding may forfeit the opportunity for a personalappearance before the Review Committee.
(3) If the appellant appeals the decision of the Review Committee to the Committee, the Committee will review all of the evidence considered by the Review Committee; however, the Committee will not consider any evidence that was not presented to the Review Committee. If the Committee disagrees with the decision of the Review Committee, it may reverse the decision or remand the matter to the Review Committee for further consideration with precise instructions as to the basis of such reconsideration. The appellant will be informed in writing of the Committee’s decision which, in all events, will be final and binding on the Committee and on the applicant or candidate.

(4) All notices or other correspondence directed to the Review Committee or to the Committee should be sent to the following address:
Committee on Certification in Child Psychiatry, American Board of Psychiatry and Neurology, Inc., One American Plaza, Suite 808, Evanston, Illinois 60201

(5) There is a fee attached for appeal of negative determinations. The fee for appeal of a negative determination of credentials is equal to the application fee. The fee for appeal of an oral examination failure is equal to the oral examination fee. The fee for the written examination is equal to the written examination fee.

Amendment of Rules and Regulations
The Board of Directors has authority to issue and amend from time to time, rules and regulations relating to the issuance and revocation of certificates in child psychiatry.

Revocation of Certificates
All certificates issued by the Board shall be issued subject to the provisions of its Certificate of Incorporation, Bylaws and Rules and Regulations. The Board has authority to revoke any certificate issued by it or to place a certificate-holder on probation for a fixed or indefinite time, in accordance with the rules and regulations of the Board, on the following grounds:
(a) The certificate was issued contrary to or in violation of its Bylaws or Rules and Regulations;
(b) The person to whom the certificate was issued was not eligible to receive, or has since become ineligible to hold, the certificate;
(c) The person to whom the certificate was issued made any material misstatement or omission of fact to the Board in his or her application or otherwise;
(d) A license to practice medicine of the person to whom the certificate was issued is forfeited, revoked or suspended.

Kenneth L. Krabbenhoft, MD, Secretary/Director,
300 Park, Suite 440
Birmingham, Michigan 48009

Certificates
A certificate will be issued to each candidate who has finished a prescribed and approved period of training and study and has passed a written and oral examination demonstrating an adequate level of knowledge and ability in diagnostic radiology and/or therapeutic radiology and breast radiology in accordance with the definitions as stated in the Bylaws and Rules and Regulations of The American Board of Radiology.

Definitions
1. DIAGNOSTIC RADIOLOGY is that branch of radiology which deals with the utilization of all modalities of radiant energy in medical diagnosis and therapeutic procedures utilizing radiologic guidance. This includes, but is not restricted to imaging techniques and methodologies utilizing radiations emitted by x-ray tubes, radionuclides, thermographic devices, ultrasonographic devices, and radiofrequency electromagnetic radiation emitted by atoms.

2. NUCLEAR MEDICINE is a subspecialty involving the imaging by external detection of the organ localized and/or physiological distribution of radionuclides of the body for diagnosis of disease and for therapeutic applications.

3. RADIATION ONCOLOGY is that branch of radiology which deals with the therapeutic applications of radiant energy and its modifiers and the study and management of disease, especially malignant tumors.

Qualifications of Applicants for Certification by the American Board of Radiology
Each applicant for admission to an examination for a certificate to be issued by The American Board of Radiology in diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, and/or therapeutic radiology shall be required to present evidence satisfactory to the Board that the applicant has met the following standards:
A. General Qualifications
That the applicant is a specialist in diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, and/or therapeutic radiology as outlined in Article II, Section 2, of the Rules and Regulations, AND IS RECOGNIZED BY HIS/HER PEERS TO HAVE HIGHER MORA L AND ETHICAL STANDARDS IN HIS/HER PROFESSION.
B. General Professional Education
Graduation from a medical school accredited at the date of graduation by the Liaison Committee on Medical Education of the American Medical Association; or the Canadian Medical Association or from a College of Osteopathic Medicine approved by the American Osteopathic Association. If the applicant is a graduate of a medical school outside the United States or Canada, the applicant must be screened with approval by an agency approved by the Board of Trustees.
C. Special Training
This period of special training shall be as the Board of Trustees by resolution or motion shall determine from time to time.
Effective for candidates beginning their training July 1, 1981, and thereafter, the Board of Trustees shall require each applicant to submit a written statement from the program director, attesting that the applicant will have satisfactorily completed the pre-
scribed special training at the time of the written examination and is prepared to take that examination.

D. In special instances these requirements may be modified by majority vote of the entire Board of Trustees, or by the Executive Committee acting in its stead.

E. If the program director fails to indicate in writing that the applicant is appropriately apprised of his deficiencies. The Executive Committee of the Board will notify the applicant in writing that an appeals mechanism exists as outlined in paragraphs (F) and (G) below.

F. In utilizing the appeals mechanism, the applicant must provide the Executive Committee of the Board with the written statement describing the reasons which he/she believes will support his/her appeal. The Executive Committee may ask the program director to submit a written response to the applicant's appeal.

G. The Executive Committee must reach a final decision with the least possible delay in order that the applicant who wins his/her appeal does not lose the opportunity to be accepted for the examination for which he/she has applied.

Diagnostic Radiology

1. Candidates beginning their training in diagnostic radiology after June 30, 1975 and who have not had an approved internship will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in diagnostic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The fourth year may be spent in one of the following programs: a categorical year; a categorical year; a flexible year; a year of approved residency in radiology or one of its branches; or in a year of another approved specialty. No credit will be allowed for a foreign internship.

2. Candidates beginning their training in diagnostic radiology after June 30, 1984 will be required to have four years of approved postgraduate training in that field, exclusive of an internship or clinical year (if the latter is required by the program director). A minimum of four months but no more than twelve months must be spent in nuclear radiology in the four-year program. Candidates will be eligible for the written examination when they have completed 36 of the required 48 months of approved training, or if they complete this amount by September 30 of the year in which the examination is given.

A maximum of three months may be spent in therapeutic radiology.

Diagnostic Radiology with Special Competence in Nuclear Radiology

1. The American Board of Radiology will give a special examination leading to a certificate in diagnostic radiology with special competence in nuclear radiology to those diplomates in radiology, roentgenology, diagnostic radiology, or diagnostic roentgenology who have fulfilled the requirement of one full year of formal training in nuclear radiology in an approved department of diagnostic radiology, nuclear medicine, or diagnostic radiology with special competence in nuclear radiology. This examination will consist of three sections. The categories to be covered are: (1) bone, bone marrow, genitourinary tract, tumor and abscess localization; (2) central nervous system, endocrinology, gastrointestinal tract, hepatobiliary tract, and spleen; and (3) cardiopulmonary systems.

2. Continuing its policy adopted in June 1979, the Board will give an oral examination to candidates for the certificate in diagnostic radiology with special competence in nuclear radiology. This examination will consist of eleven examinations (twenty if candidate previously failed physics in the written examination in diagnostic radiology). The categories to be covered are: bones and joints, chest, gastrointestinal tract, general body, head and neck, musculoskeletal, neuroradiology, nuclear radiology (three examiners) (see above), ultrasound, and pediatric radiology. This examination will be given to candidates who have not been previously certified, who have passed the written examination in diagnostic radiology, and who will have completed four years of approved postgraduate training. These candidates must apply for the examination at least three years after the date of the first examination. The United States or Canada, four years of which have been spent in residency training comprising at least twenty-six months of diagnostic radiology and its subspecialties and twelve months in nuclear radiology.

3. Candidates beginning their training in diagnostic radiology with special competence in nuclear radiology after July 1, 1981 or thereafter will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in therapeutic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The fourth year must be spent in nuclear radiology in an accredited training program for diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or for nuclear medicine.

Therapeutic Radiology

Candidates beginning their training in therapeutic radiology after June 30, 1975 and who have not had an approved internship will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in therapeutic radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Accreditation Council for Graduate Medical Education. The other year may be spent in one of the following programs: a categorical year; a categorical year; a flexible year; a year of approved residency in radiology or one of its branches; or in a year in another approved specialty. No credit will be allowed for a foreign internship.

The three-year residency training period must include a minimum of six-month period in Pathology and training in the therapeutic aspects of nuclear medicine. The other years must be spent in each subject for a minimum of three months for time spent in each subject. A maximum of three months' training in diagnostic radiology will be allowed. Candidates in this category will be eligible for the written examination when they have completed 36 of the required 48 months of approved training, or if they will complete this amount by September 30 of the year in which the examination is given.

Application and Fee

Application for examination must be made in exact duplicate (2 original copies on prescribed forms which may be obtained from the Secretary). No xerox or any other kind of copy will be accepted. The data summary form enclosed with the application is an integral part that must be completed. These forms shall be forwarded with the required data, two unmounted photographs autographed on the front, and the application fee of $750.00 (U.S. Currency) by the deadline established for filing. A certified check or money order is required to be made payable to THE AMERICAN BOARD OF RADIOLOGY, INC. APPLICATIONS FOR EITHER THE WRITTEN OR THE ORAL EXAMINATION TO BE GIVEN IN ANY YEAR WILL NOT BE ACCEPTED PRIOR TO APRIL 1 OF THE PRECEDING YEAR AND MUST BE FILED NO LATER THAN THE DEADLINE OF SEPTEMBER 30 OF THE PRECED-
ING YEAR. The application fee (noted above) will cover both the written and the oral examinations provided the candidate is successful on his/her first attempt in both the written and oral examinations.

Incomplete applications will not be accepted. The postmark affixed to the last item received to complete the application must be on or before the deadline date.

All applications must be typed or neatly printed (in ink).

In the event of withdrawal of an application, only a portion of the fee can be refunded.

Beginning July 1, 1981:

A candidate will have three consecutive opportunities to pass the written examination beginning with the written examination for which he/she is first declared eligible. If a candidate fails to accomplish this, he/she must submit a new application and the fee in effect at that time. Failure to accept an appointment, cancellation of an appointment or failure to appear for a scheduled written examination will be recorded as disqualifications.

A candidate who fails the written examination after three attempts must submit a new application together with the fee in effect at that time.

A candidate who has passed the written examination will have three consecutive opportunities to appear for and pass the oral examination beginning with the oral examination for which he/she is first declared eligible. If a candidate fails to accomplish this, he/she must submit a new application and the fee in effect at that time and reinstitute the examination process, including the written examination. Failure to accept an appointment, cancellation of an appointment or failure to appear for a scheduled oral examination will be regarded as one of the three opportunities.

A candidate who finds it necessary for any reason to cancel after acceptance of an appointment for either the written or oral examination shall be required to submit an additional fee of $100.00. This amount represents administrative costs to the Board. A candidate who FAILS TO APPEAR for an examination without notifying the office of the ABR at least twenty (20) days prior to the first date of the examination will be charged the full examination fee in effect at the time of examination. Under certain circumstances, the ABR, entirely at its discretion, may excuse such a candidate from this penalty, provided the reason for such absence is substantiated in writing.

Objectives of the Written Examination

In 1955 it became apparent to the Board of Trustees of The American Board of Radiology that the then current oral examination could not cover the entire burgeoning field of Radiology without the addition of more segments, and in turn more examiners. This would not only impose a further burden on candidates but also on the Board itself. It was decided, therefore, to search for other methods of examination. At that time, it was agreed to adopt a written examination to be given annually as a prerequisite for the oral examination. The content of the examination will include the basic sciences of anatomy, pathology, physiology and pharmacology as these subjects relate to its clinical practice. Also to be included are radiological techniques, radiological physics, and radiation biology. The content of the examination in therapeutic radiology will include the basic sciences of physics, radiation biology, and clinical oncology as well as anatomy, pathology, physiology and chemotherapy as these subjects relate to the clinical practice of therapeutic radiology.

With the help of many radiologists who were not Trustees of the Board, a pool of multiple-choice questions was developed and the first examination was given in 1969 to all candidates seeking certification in diagnostic radiology and in therapeutic radiology.

Content of Written Examination in Each Field

Each examination consists of between 320 and 375 multiple-choice questions to be administered over a period of approximately eight hours. About one-half of the questions are distributed on the afternoon of one day and the other half distributed on the morning of the following day.

New written examinations are formulated each year in all categories of radiology and the content of the examinations is carefully evaluated in order to keep pace with new information and developments. Even the number of questions in each category may be changed as necessary dictates from year to year.

Beginning in 1984, a candidate who takes the written examination in diagnostic radiology and fails the diagnostic portion but passes either physics or radiology must repeat the diagnostic portion but will not be required to repeat physics.

Beginning in 1984, a candidate who takes the written examination in therapeutic radiology and passes the clinical portion but fails either physics or radiology must repeat the clinical portion only. Those candidates who fail the physics and the radiology portions of the examination OR the clinical oncology portion of the examination must repeat the entire examination.

Candidates in diagnostic radiology may expect to be asked questions on magnetic resonance imaging in the written and oral examinations. However, these questions will not be considered in arriving at a pass/fail determination.

Oral Examination

Oral examinations are given at a time designated by the Board of Trustees. At the present time the oral examinations are conducted yearly in May and/or June.

Eligibility for the oral examination is determined by the Executive Committee. Experience has shown that to delay taking the oral examination does not benefit the candidate.

No recording device of any kind may be brought to the examination.

Content of Oral Examination

In general, the examination consists of five parts: interpretation, problems concerning the clinical application of radionuclides, and questions in pathology, physiology, and radiological physics.

The examination in radiation oncology is on the management of malignant diseases, radiation physics and radiation biology.

Re-examinations

Failures

A candidate who fails or conditions the oral examination in diagnostic radiology or in therapeutic radiology may be re-examined in one year. The re-examination fee in effect at that time must be submitted certified check or money order.

Candidates who have conditioned one or two categories in the oral examination will be re-examined by two examiners in each conditioned category. The candidate must pass the rere-examination by both examiners in each category to remove the condition.

Effective July 1, 1981 a candidate who has failed the oral examination three times must start the examination procedure from the beginning with the submission of a new application, pay the fee in effect at that time and retake the written examination.

Status of a Physician

The Board will reply to an inquiry concerning the status of a physician with one of the following statements:

1. The physician is Board certified.
2. The physician is in the examination process.
3. The physician is neither certified nor in the examination process.
4. No official status of “Board Qualified” or “Board Eligible” is recognized by the Board.

**Final Action of the Board**

The final action of the Board is based on the applicant's professional record, training, and attainment in the field of diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or in therapeutic radiology, as well as on the results of his examination. This Board has been organized, not to prevent qualified radiologists from obtaining certificates, but to assist them in becoming recognized in their communities as men and women competent to practice diagnostic radiology, diagnostic radiology with special competence in nuclear radiology, or therapeutic radiology.

**Revocation of Certificates**

Certificates issued by this Board are subject to the provisions of Articles of Incorporation and the Bylaws. According to Article IX, Section 4, of the Bylaws, “Any certificate issued by the Board of Trustees shall be subject to revocation in the event that:

(a) The issuance of such certificate or its receipt by the individual so certified shall have been contrary to or in violation of any provision of the Certificate of Incorporation of this, The American Board of Radiology, or of these Bylaws or rules and regulations adopted by the Board of Trustees; or

(b) The individual so certified shall not have been eligible in fact to receive such certificate; or

(c) The individual so certified shall have made any misstatement of fact in the application or in any other communication to the Corporation or its representatives; or

(d) The individual so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in the opinion of the Board of Trustees, moral turpitude; or

(e) The license to practice medicine of the individual so certified shall be revoked.

Before any such certificate shall be revoked a notice shall be sent by registered or certified mail to the last known address of the holder of such certificate, as it appears on the records of this Corporation, setting forth the act, omission, or conduct alleged or complained of, and giving the holder of such certificate a reasonable opportunity to answer in writing thereto. Such certificate holder shall have not less than 30 days in which to reply thereto.

The Board of Trustees may at its discretion make such further investigation as it deems necessary and proper.

The Board of Trustees of this Corporation shall have the sole power, jurisdiction and right to determine and decide whether or not the evidence or information before it is sufficient to constitute one of the grounds for revocation of any certificate issued by this Corporation, and the decision of such Board of Trustees in the premises shall be final.

All correspondence should be addressed to the Secretary:

Philadelphia, Pennsylvania

**Specialty of Surgery (“General Surgery”) Defined**

The Board interprets the term “general surgery” in a comprehensive, but still specific manner, as follows:

1. A CENTRAL CORE OF KNOWLEDGE AND SKILLS COMMON TO ALL SURGICAL SPECIALTIES; viz., anatomy, physiology, metabolism, pathology, wound healing, shock and resuscitation, neoplasia and nutrition.

2. THE DIAGNOSIS, PRE-OPERATIVE, OPERATIVE, AND POSTOPERATIVE CARE, INCLUDING THAT PROVIDED IN THE EMERGENCY DEPARTMENT AND THE INTENSIVE CARE UNIT, OF PATIENTS WITH DISEASES OF THE FOLLOWING PRIMARY COMPONENTS:

   a. Alimentary Tract.
   b. Abdomen and its Contents.
   c. Breast.
   d. Head and Neck.
   e. Vascular System, excluding the intracranial vessels, the heart and those vessels intrinsically and immediately adjacent thereto.
   f. Endocrine System.
   g. Comprehensive Management of Trauma, including musculoskeletal, hand and head injuries. The respon-
sibility for all phases of care of the injured patient is an essential component of general surgery.

3. ADEQUATE EMPLOYMENT OF ENDOSCOPIC TECHNIQUES, PARTICULARLY RIGID PROTONOSCOPY AND OPERATIVE CHOLEDOCHOSCOPY. In addition, the general surgeon must be familiar with a variety of endoscopic techniques such as laryngoscopy, bronchoscopy, esophagoscopy, gastroscopy, colonoscopy and peritoneoscopy.

4. ADDITIONALLY AS SECONDARY COMPONENTS, the general surgeon is expected to possess understanding of the principles of and to have acquired a personal clinical experience, to include operative care, in the more common problems in thoracic, cardiac, gynecologic, neurologic, orthopaedic, plastic, neonatal and urologic surgery, and anesthesiology. Appropriate clinical experience in the special disciplines enumerated in the preceding sentence should be acquired by a formal rotation on a separately constituted service, or by having been the operating surgeon or first assistant surgeon on an acceptable number and variety of cases.

The Meaning of Certification

The Board considers certification to be based upon a process which includes the educational and evaluation phases and an examination phase. It holds that the preliminary and graduate medical-surgical phases are of the utmost importance and therefore relies heavily upon the judgment of the program director and faculty to ensure that the applicant has had an appropriate educational experience and has attained a sufficiently high level of knowledge, judgment and skills to be prepared for designation, by the Board's certificate, as a specialist in surgery and to enter into independent practice thereof.

Graduate Education in Surgery

I. GENERAL INFORMATION

The purpose of graduate education in surgery is to provide the opportunity to acquire a broad understanding of human biology as it relates to disorders of a surgical nature and the technical knowledge and skills appropriate to be applied by a specialist in surgery. This goal can best be attained by means of a progressively graded curriculum of study and clinical experience under guidance and supervision of senior surgeons and which provides progression through succeeding stages of responsibility for patient care up to the final one of complete management. Major operative experience and senior/chief responsibility at the final stage of the program are essential components of surgical education. The Board will not accept into the process of certification anyone who has not had such an experience in the specialty of surgery, as previously defined, regardless of the number of years spent in educational programs.

The graduate educational requirements set forth in these columns are considered to be the minimal requirements of the Board and should not be interpreted to be restrictive in nature. The Board recognizes that the time required for the total educational process should be sufficient to provide adequate clinical experience for the development of sound surgical judgment and adequate technical skill. The requirements do not preclude additional desirable educational experience and program directors are encouraged to retain residents in a program as long as is required to achieve the necessary level of qualifications.

The integration of basic sciences with clinical training is considered to be superior to formal courses in such subjects. Accordingly, while recognizing the value of formal courses in the study of surgery and the basic sciences at approved graduate schools of medicine, the Board will not accept in lieu of any part of the required clinical years of surgical education.

The Board may at its discretion require that a member of the Board or a designated Diplomate observe and report upon the clinical performance of a candidate before establishing his admittance to examinations or awarding him certification.

While a program may develop individual sick, vacation and other leave policies for the resident, one year of approved training toward the Board's requirements must be fifty-two (52) weeks in duration and must include at least forty-eight (48) weeks of full-time surgical training. Furthermore, unused vacation and other leave time may not be accumulated to reduce the overall duration of training expected by the Board.

All phases of the graduate educational process must be completed in a manner satisfactory to the Board.

II. ACCEPTABLE PROGRAMS

The residency program in surgery in the United States which are reviewed and approved by the Residency Review Committee for Surgery or the Accreditation Council for Graduate Medical Education (ACGME) are acceptable to the Board as an adequate educational experience.

In Canada, those University residency programs in surgery which bear accreditation by the Royal College of Physicians and Surgeons are acceptable educational experience. Applicants from such programs must meet the Board's specific requirements and cannot receive credit for training in countries other than the United States or Canada.

Except as mentioned above, participation in surgical training programs in countries other than the United States is not creditable toward the Board's educational requirements unless under the specific conditions set forth in the section "Credit for Foreign Graduate Education."

To provide flexibility and the opportunity for experimentation in surgical education, proposed programs at variance with the requirements outlined will be considered upon request by program directors to the Residency Review Committee for Surgery (535 North Dearborn Street, Chicago, Illinois 60610).

Listings of accredited programs in the United States may be found in the Directory of Residency Training Programs, published annually under the aegis of the Accreditation Council for Graduate Medical Education (ACGME).

Requirements for General Certification in Surgery

I. GENERAL

A. Must have demonstrated to the satisfaction of the authorities of the graduate educational program in surgery, to their peers and to the Board, that one has attained the level of qualifications in surgery required by the Board.

B. Must have an ethical standing in the profession and a moral status in the community acceptable to the Board.

C. Must be actively engaged in the practice of surgery as indicated by holding active operating privileges in a hospital approved by the Joint Commission or Accreditation of Hospitals, or be currently engaged in pursuing additional graduate education in a component of surgery or one of the other recognized surgical specialties.

D. Must have a currently registered full and unrestricted license to practice medicine granted by a state, or other United States jurisdiction, or by a Canadian province. A temporary limited license such as an educational, institutional or house staff permit is not acceptable to the Board.

II. EDUCATIONAL

A. Undergraduate Medical

1. Must have graduated from an accredited school of medicine in the United States or Canada with an MD degree or an equivalent degree.

2. Graduates of schools of medicine from countries other than the United States or Canada must present evidence of (a) final certification by the Educational Commission for Foreign Medical Graduates (ECFMG), or (b) successful passing of the Foreign Medical Graduate Examination in the Medical Sciences (FMGEE).
B. Graduate Education in Surgery

1. Must have satisfactorily completed a MINIMUM OF FIVE YEARS of progressive education, following graduation from medical school, in a program in surgery (general surgery) accredited by the ACGME. Exceptions may be considered by the Board on an individual basis, upon request by a program director.

2. Must have completed ALL PHASES of graduate education in surgery in a program in surgery accredited by the ACGME. Training received in accredited programs in other recognized specialties, although containing some exposure to surgery, is not acceptable. A FLEXIBLE OR TRANSITIONAL first year is NOT creditable toward the Board's requirements as a PGY-1 unless it is accomplished in an institution having an accredited program in surgery and at least six months of the year is spent in surgical disciplines and under the jurisdiction of the surgery program director.

3. Must successfully complete the ENTIRE PROGRAM as-accredited. If an accredited program is lengthened by one year, residents in the final year of the program as previously accredited may be acceptable upon completion of that year. All others would be required to complete all years of the program under the new accreditation status.

4. Must have a program accredited for a minimum of five years, at least four years of clinical surgical experience with progressively increasing levels of responsibility. There must be no less than thirty-six months devoted to the primary components of surgery (general surgery) as previously defined. The ENTIRE FINAL "CHIEF RESIDENT" YEAR MUST BE DEVOTED TO THE PRIMARY COMPONENTS OF THE SPECIALTY OF SURGERY. No more than four months of the chief residency year may be devoted to any one of the primary components of surgery. During junior years a total of six months may be assigned to non-surgical disciplines such as medicine, gastroenterology, pediatrics, etc. No more than a total of twelve months during junior years may be allocated to training in any ONE surgical specialty other than general surgery. Training in anesthesiology, surgical pathology and endoscopy is considered to be surgical, but obstetrics and ophthalmology are not. One year of the minimal five may be allocated to non-clinical activities such as laboratory research or basic sciences.

5. Must have a FINAL YEAR in the capacity of CHIEF RESIDENT in general surgery. The Board considers the terms chief resident and senior resident to be synonymous and to mean the final clinical year in the program in which the resident assumes the ultimate responsibilities for patient care. Time unspent in teaching programs by a chief resident may not be served prior to the final year. The chief residency year must be spent only in the parent or an integrated institution unless rotation to an affiliated institution has been specifically approved by the Residency Review Committee for Surgery.

6. The Board expects a training year to include no less than forty-eight (48) weeks of full-time surgical training.

7. All phases of the graduate educational process must be in accordance with the Special Requirements for Residency Training in General Surgery as promulgated by the Accreditation Council for Graduate Medical Education and approved by the Residency Review Committee for Surgery.

8. The Board believes that optimal surgical education requires that the resident remain in the same program for at least the final two years of his training.

III. OPERATIVE EXPERIENCE

Applications for examination must have had an operative experience of such breadth and depth as may be deemed adequate by the Board and this must include operative experience in each of the primary components of surgery. Each applicant must submit a Resident's Record form on which are to be tabulated the operative procedures performed and those on which he has been first assistant or teaching assistant. The Resident's Record forms should be obtained from the Residency Review Committee for Surgery by the office of the program director and made available to the resident. An Operative Experience form prepared by the Board may be used if a Resident's Record form is not available.

In tabulating cases for credit toward Board requirements a resident may claim a case "As Surgeon" when he has actively participated in the patient's care so that he has made or confirmed the diagnosis; participated in selection of the appropriate operative procedure; has either performed or has been responsibly involved in performing the critical portions of the operative procedure; and has been a responsible participant in both pre- and post-operative care.

Credit may be claimed as a "teaching assistant" only when the resident has actually been at the table, scrubbed, and has guided a more junior resident through at least the critical parts of an operation. All this must be accomplished under the supervision of the responsible member of the senior staff.

An individual cannot claim credit as both "surgeon" and "teaching assistant."

Failure to submit a complete and properly authenticated list of operative procedures will constitute an incomplete application.

Applicants are advised to keep a copy of the lists of operative work they submit, for their records, as the Board cannot furnish copies.

IV. SPECIAL INFORMATION FOR PROGRAM DIRECTORS

A. Program directors are cautioned that appointment of residents at advanced levels without being certain that their previous training is in accordance with the Board's requirements, may result in the affected residents not being accepted by the Board upon completion of the program. In any case in which there is question, it would be prudent to make inquiry of the Board prior to taking action.

B. According to the Special Requirements for Residency Training in General Surgery promulgated by the Accreditation Council for Graduate Medical Education, special approval of the Residency Review Committee for Surgery must be obtained (1) if a chief resident is assigned to an institution other than the the parent one or an "integrated" one; (2) if rotations to any one approved "affiliate" exceed six months; (3) if more than one year of the total program is spent away from the parent and integrated institutions; and (4) if more than six months' total is spent in any assignment outside the parent, the integrated and approved affiliated institutions. The Board concurs in this and will find any violations of these requirements to be non-acceptable training.

C. Since the Residency Review Committee does not act upon the adequacy of training outside the United States, program directors must request the Board's approval, in advance, if they wish periods of training abroad to be creditable toward the Board's requirements. The Board will rule on individual requests.

Credit for Military Service

Credit will not be granted toward the minimum requirements of the Board for service in the Armed Forces, the Public Health Service, the National Institutes of Health or other governmental agencies unless the service was as a duly appointed resident in an accredited program in surgery.

Credit for Foreign Graduate Education

Acceptance for examination and certification by the American Board of Surgery is based upon satisfactory completion of the stated requirements in accredited residency programs in surgery in the United States. Applicants from approved Canadian programs must have completed all of the requirements in the Canadian program or in combination with an accredited U.S. program. No credit for training outside the U.S. and Canada will be granted to those
applicants seeking certification who completed a Canadian program. Applicants from Canadian programs must complete the Board-stipulated requirements to appear. Regardless of an individual’s professional attainments here or abroad, no credit will be granted directly to a candidate for surgical education in a foreign country. The Board will consider granting partial credit only upon the request of the Director of an accredited program who has observed the candidate as a junior resident for nine to twelve months and wishes to advance the candidate to a higher level in that program. The credit granted will not be valid until the candidate has successfully completed the program. If the candidate moves to another program the credit is not transferable and must again be requested by the new program director.

Rules Governing Admissibility to Examinations for General Certification in Surgery

1) An applicant is admissible to the examinations only when all of the preliminary and graduate educational requirements of the Board, currently in force at the time of receipt of the formal application, have been satisfactorily fulfilled; his operative experience has been reviewed and deemed acceptable; his general credentials are in order; the program director has certified to the Board in writing that he has attained the required clinical skills; and the formal application has been reviewed and approved. The applicant then must successfully complete the cognitive qualifying examination before becoming a “candidate for certification.” When all of the above requirements have been met, the applicant will be notified that he has become a “candidate for certification” and will be scheduled for appearance at the appropriate certifying examination.

2) Applicants approved in 1985 or thereafter will be offered three opportunities for taking the Qualifying Examination within the five-year period following approval of the formal application. Examinees will be assigned to a specified center designated by the Board based upon the last recorded address of the applicant. Those who have not completed the Qualifying Examination within five (5) years will no longer be considered applicants. To be admitted to examination again, as “new applicants,” such persons shall:
   a. Submit documented evidence of completion of not less than 150 hours of accredited Category I Continuing Medical Education in general surgery within the twenty-four-month period prior to requesting readmission to examination.
   b. Receive an evaluation acceptable to the Board as to his surgical capabilities from the chiefs of surgery in the hospitals in which he exercises surgical privileges or from such other peers as the Board shall select.
   c. Submit a new formal reapplication and all attendant fees.
   d. Be approved by the Board for readmission to examination.

3) The certifying examination will be offered to those who have passed the qualifying examination and have thus become “candidates for certification,” at the earliest practicable time consistent with the Board’s geographical examination policy. Candidates will be assigned to centers as designated by the Board. Candidates will be offered three (3) or only three (3) reexaminations for appearance for examination during the five academic years following completion of the qualifying examination. The admisibility expiration date shall be established as June 30th of the fifth calendar year after the qualifying examination, but an opportunity offered which is refused or not taken will be counted as one of the three (3) or only three (3) opportunities for appearance for examination. The candidate must be able to appear or to attend at the opportunities offered, his admisibility date will be revised to indicate that he is no longer a “candidate for certification.” He will not again be considered by the Board until after satisfactory completion of at least one year of residency in surgery at an advanced level in an accredited program and receipt of a favorable endorsement to the Board from the program director. If the Board approved the candidate’s application for readmission to the certifying examination and upon his completion of an additional year of residency in surgery, he will be offered three further opportunities within the ensuing five years. If he is not successful within that time, he cannot again be considered unless he then completes a minimum of three (3) years of residency in surgery, including a chief year, in an accredited program and receive a favorable endorsement by the program director. The candidate must then reapply as a “new applicant.” Such “new applicants” will be required to submit a reapplication for admission to examination and all supporting documents, pay all established fees and again successfully complete the qualifying examination before advancing to the status of “candidate for certification.”

4) The Board, on the basis of its judgment, may deny an “applicant” or “active candidate for certification” the privilege of examination whenever the facts in the case are deemed by the Board to so warrant.

The Board does not use or sanction the terms “board eligible” or “board qualified.” The standing of an individual with the Board varies according to the current status of his credentials and will be so reported.

Special Certification

The Board has been authorized by the American Board of Medical Specialties to award Certification of Special or Added Qualifications in certain limited disciplines pertinent to the overall specialty of surgery, to those Diplomates of this Board who meet the agreed-upon requirements. Certification of Special Qualifications is now authorized in pediatric surgery, general vascular surgery, and Certification of Added Qualifications in surgical critical care.

The Board considers all the above disciplines to be an integral part of the specialty of surgery and expects that all surgeons certified in surgery by this Board will be qualified to practice in these areas if they so desire and demonstrate the capability. The Certificates of Special or Added Qualifications are designed to recognize only those Diplomates who have acquired, attended, and other training and other activities, special qualifications in these disciplines beyond those expected of the well-trained general surgeon.

Those seeking the American Board of Surgery’s Certification of Special or Added Qualifications must have been certified on surgery by this Board; must have completed the required additional training in the discipline beyond that required for General Certification; and have obtained experience and/or patient care data acceptable to the Board; must show evidence of dedication to the discipline by the means specified by the Board and receive favorable peer review by recognized Diplomates in the particular discipline. Finally, successful completion of the prescribed examinations is required.

Those who are interested in obtaining information regarding certification in pediatric surgery, general vascular surgery, or surgical critical care, may obtain it from the Board upon request.

The Examinations Offered by the Board

The Board offers examinations leading to Certification in Surgery, Certification of Special Qualifications in Pediatric Surgery, and in General Vascular Surgery; Certification of Added Qualifications in Surgical Critical Care; and an In-Training Examination.

The examinations leading to certification are offered to individuals, but the in-training examination is offered to
program directors for their use as an educational tool, for the assessment of the individual resident’s grasp of surgical fundamentals. The Board notifies each candidate for general and special certification of his performance on examinations. Beginning with candidates whose formal applications were approved in 1975, the Board reports their performance on the Board’s examinations to the director of the program in which the candidate completed his final year of residency. All reports pertaining to the in-training examination are provided only to the program director. All examinations are composed by members of the American Board of Surgery with participating by invited Examination Consultants. Any written examination may be reviewed by a candidate at the Board office within one year upon request, by appointment and payment of the fee.

I. EXAMINATIONS FOR GENERAL CERTIFICATION IN SURGERY

A. THE QUALIFYING EXAMINATION

This examination is written and is offered once a year, usually in November. It is given simultaneously in a number of locations in the United States. Applicants whose applications have been approved by the Board are sent annually, throughout their period of admissibility, an announcement of the examination. With the announcement is a reply card which must be returned to the Board if the applicant wishes to be scheduled for this examination. Shortly before the date of examination he is sent an admission card indicating the specific location of the examination center, and reporting times, and a pamphlet describing the examination and the types of questions to be expected.

The examination consists of multiple-choice questions designed to evaluate knowledge of general surgical principles and the basic sciences applicable to surgery. It is administered in two sections, one in the morning and one in the afternoon, but is considered to be one single examination and is so graded. It assesses a candidate’s fund of cognitive information relevant to the specialty of surgery. Successful completion of the qualifying examination is a requirement for all, to attain the status of “active candidate for certification” and admission to the certifying examination.

B. CERTIFYING EXAMINATIONS

Examinations are ordinarily held six times a year, within the continental United States. Candidates for certification will receive an announcement of the examination to which they may be assigned, based on their geographic location, approximately two months in advance of the examination, with a reply card which must be returned at once if a candidate wishes to be included in that examination. Failure to return or late return of the card will result in that examination being counted as one of the three opportunities to be offered. If the Board cannot accommodate a candidate at that particular examination it will not be counted as an opportunity. A candidate firmly assigned to an examination will be sent an admission card indicating the specific time and place to report for examination.

The examinations consist of three oral sessions conducted by teams of two examiners each, directed toward determining the candidate’s understanding of clinical entities, his level of surgical judgment, and his problem solving ability. During all sessions, the ability to apply knowledge of anatomy, physiology, pathology, biochemistry, and bacteriology to clinical problems is also evaluated.

II. EXAMINATIONS FOR CERTIFICATION OF SPECIAL OR ADDED QUALIFICATIONS

The Board offers examinations for “Certification of Special Qualifications in Pediatric Surgery,” “Certification of Special Qualifications in General Vascular Surgery,” and for “Certification of Added Qualification in Surgical Critical Care.” These examinations are described in the separate pamphlets pertaining to the respective disciplines, which may be obtained from the Board Office upon request.

III. IN-TRAINING EXAMINATION

The Board offers annually to program directors of accredited residency programs in surgery, a written “in-training examination” which is designed to test the general level of knowledge which has been attained by residents regarding the fundamentals and the basic sciences related to surgery. The test is aimed at the level of the third-year resident, but at the program director’s discretion, may be administered to any one. It is also designed to meet the first milestone which is required by the “Essentials” for residencies in general surgery.

The Board will normally furnish pertinent information to the directors of all accredited programs in surgery several months in advance of each year’s examination and ascertain the number of test booklets desired.

The examination, administered by the participating program director, takes place each winter.

Program directors should take note of the fact that the Board does not contact each institution in which residents are located, but depends upon the director of the program to order an adequate number of test booklets for residents in his total program which includes not only his own institution but also all those included under his program designation in the Directory of Residency Training Programs.

It is important to note that the in-training examination is not offered to individuals, but to program directors only.

The in-training examination is not required by the Board as part of the certification process.

Even though the in-training examination is prepared by the Board as a convenience to program directors, it is to be used as an assessment of residents’ progress and not as a pool of questions for study or other purposes. Duplication and improper use of the examination material defeats the purpose of the examination and will not be tolerated by the Board. The examination is protected under the copyright laws.

Application for Examination for General Certification in Surgery

A prospective candidate for examination by the Board should carefully read the requirements set forth in its booklet. If he needs advice about his plans for graduate education in surgery, or believes that he has met or is within six months of meeting the requirements, he should write the Board and request an Evaluation Form. This form must be completed precisely and returned to the Board. The candidate will then be advised as to whether or not it appears that he has met or will meet the requirements, or what will be necessary. Candidates should not submit documents, testimonials, letters of recommendation, case reports or other information unless requested by the Board.

Candidates should communicate with the Board at least four months before completion of their educational requirements and not later than June 1st if they wish to receive the formal Application for Examination and be considered for the qualifying examination to be given in that year. The application for examination form must be completed and returned to the Board no later than August 31st of the candidate will not be considered for the qualifying examination to be given in that year.

Candidates who complete the educational requirements after September 30th will not be considered for admission to the qualifying examination in that year, but must wait until the following year.

The acceptability of a candidate does not depend solely upon the completion of an approved program of education, but also upon information available to the Board.
regarding his professional maturity, surgical judgment, technical capabilities and ethical standing.

A candidate who has submitted an application for examination form will be notified as to his admittance to examination.

**Fees (General Certification)**

| Registration—payable with Application Form | U.S. $150.00 |
| Qualifying Examination | U.S. $350.00 |
| Ongoing Examination | U.S. $500.00 |

(Both examination fees payable with the Reply Card.)

Fees for a re-examination are the same as shown above, for each Examination.

All fees must be received at least ten (10) business days prior to an examination.

Each fee for examination or re-examination includes a U.S. $100.00 processing charge which is not refunded if the candidate withdraws after he has been assigned to an examination center.

A candidate who withdraws must notify the Board Office at least ten (10) business days before the examination for which he is scheduled. A candidate who fails to appear for examination or who withdraws without giving at least ten (10) days’ notice as defined above, may forfeit the entire fee for examination.

Fees are subject to change as directed by the Board.

The Board is a non-profit organization. The members of the Board, except those who are on the Executive Staff, serve without remuneration.

**Issuance of Certificates**

A candidate who has met all the requirements and has successfully completed the examinations of the American Board of Surgery in one or another of the areas of certification will then be issued a certificate by this Board, signed by its Officers, attesting to his qualifications in that area.

The Board issues Certificates in Surgery, Certificates of Special Qualifications in Pediatric Surgery, Certificates of Special Qualification in General Vascular Surgery, and Certificates of Added Qualifications in Surgical Critical Care.

**Recertification**

The policy of the American Board of Surgery is that it will offer Recertification to its Diplomates in surgery and in all the disciplines in which its offers special certification.

The Board considers recertification to be voluntary in the same connotation as original certification. Those persons certified in surgery prior to December 31, 1975 were issued a certificate with no indication of time limited validity. All Certificates issued on or after January 1, 1976, both general and special bear a limiting date of ten years, after which they are no longer valid.

Those whose certificates have expired will no longer be listed in Diplomate directories unless they have acquired recertification.

1. **RECERTIFICATION IN SURGERY (GENERAL SURGERY)**

   The REQUIREMENTS to be met by those seeking recertification are:
   1. Have been previously issued and hold a certificate issued by the American Board of Surgery.
   2. Have been certified seven or more years at the time of application for recertification.
   3. Hold a valid license to practice medicine and/or surgery.
   4. Currently hold privileges to practice surgery in a hospital(s) accredited by the Joint Commission on Accreditation of Hospitals, or such other hospitals as may be judged acceptable by the Board.
   5. Be currently engaged in the practice and/or teaching of surgery.
   6. Receive a satisfactory evaluation as to his surgical qualifications by the current chiefs of surgery in those hospitals in which practice privileges are exercised, or by the president or chief of medical staff or similar official.

7. Be in good standing in the profession as evidenced by membership in the local medical/surgical society, fellowship in the American College of Surgeons or other regional or national surgical associations. This requirement is not applicable to Diplomates residing and practicing abroad. If not a member of any association it shall be of the applicant’s own choice.

8. Present evidence that they have engaged in educational activities essential to the maintenance of qualifications in surgery, including reading of surgical journals, self-education/self-assessment programs, participation in organized Continuing Medical Education conferences, attending medical education conferences, and attendance at specialty society meetings.

While the Board does not intend to establish a requirement for a specified number of hours credit/time by Category of Continuing Medical Education in surgery, it will take into consideration the reported activities of those who apply for recertification and this will be a factor in assessing credentials.

9. Submit for the Board’s consideration a practice profile in the form of an operative experience report covering the last two calendar years prior to application. The report must be authenticated by an official (other than the applicant) of the hospital in which the operations were performed.

10. Approval of the above credentials by the Board and authorization for admission to the examination for recertification. If the individual’s credentials are not approved he will be so notified.

11. Attainment of a score on the examination for recertification which has been determined by the Board to demonstrate acceptable knowledge of the specialty of surgery.

The American Board of Surgery will offer an examination for recertification annually or at other appropriate intervals and at such centers and times as may be decided by the Board. The examination will be written, primarily clinical, and devoted to the components of the specialty of surgery as defined earlier in these columns. The examination will be constructed and administered by the Board.

The American Board of Surgery and the American College of Surgeons have agreed that while surgical education and the certification process are directly interconnected they need not be carried out by the same body. It was further agreed that the American College of Surgeons would continue as in the past to provide the opportunities for continuing education for the surgeon through its Congresses, post graduate courses, surgical education and self-assessment programs (SESAP) and other activities and that the Board would not produce nor provide educational materials nor opportunities, but would continue to be the body concerned with testing and certification of the specialist in surgery.

It was agreed also that the Board would recommend, but not require, participation in the SESAP of the College and would base a significant part of any examination for recertification upon the material contained in SESAP and other educational activities of the College, but would not utilize the actual SESAP questions as such.

The recertification procedure involves submission of an application by those seeking recertification. The application will be accompanied by the necessary documentation to indicate that the applicant meets the requirements. Those who meet all the requirements will be admitted to examination. However, in cases in which requirements have not clearly been met, the Credentials Committee will thoroughly review the data submitted and make recommendations to the Board of Directors as to further action. Those who pass the examination will be recertified. Applicants who fail the examination may take it four more times in consecutive years. If the applicant has not become recerti-
MRREQUtMENTS FOR CERTIFICATION

Thoracic Surgery

fied within the five years it will be necessary to establish credentials with the Board again and meet the requirements listed in items (3) through (11) above, before further examination.

Those desiring to seek recertification are encouraged to communicate with the Board for further information regarding the process.

II. RECERTIFICATION IN SPECIAL DISCIPLINES

Recertification is offered to those Diplomates holding certificates of special qualifications in general vascular surgery, and pediatric surgery and certificates of added qualifications in surgical critical care.

Recertification in surgery is not a prerequisite for becoming recertified in general vascular surgery or in pediatric surgery.

The requirements to be met for recertification of those Diplomates holding special certificates are similar to the requirements for recertification in surgery, but differ slightly according to the discipline. Details of the requirements are available in the special publications regarding each special certificate. These publications may be obtained from the Board upon request.

Inquiry as to Status

The Board considers an individual's record not to be in the public domain. When an inquiry is received by the Board regarding an individual's status, a general but factual statement is provided which indicates the person's location within the examination process. The information will be provided only to individuals, organizations, and institutions with a "need to know" for professional reasons.

Irregularities

The furnishing of false information to the Board or examination irregularities may result in the rejection of an application, the barring of a candidate from examination, the denial or revocation of a certificate, or other appropriate sanctions, all as more fully set forth in the Application for Admission to Examination and the Instructions to Examinees.

Reconsideration and Appeals

The Board has adopted a policy with regard to reconsideration and appeals of decisions adverse to applicants regarding their individual credentials and admissibility to the examinations and questions regarding the form, content, administration and results of examinations. A copy of that policy is available from the Board office to anyone considering a request for reconsideration or an appeal. A request for reconsideration, which is the first step, must be made in writing to the Board office within 90 days of receipt of notice from the Board of the action in question.

Revocation of Certificate

Any certificate issued by the American Board of Surgery, Inc. shall be subject to revocation at any time that the Directors shall determine, in their sole judgment, that a candidate who has received the certificate was in some respect not properly qualified to receive it.

AMERICAN BOARD OF THORACIC SURGERY

Hassan Najafi, MD, Chairman, Chicago, Illinois
Richard J. Cleveland, MD, Vice Chairman, Boston, Massachusetts
James V. Maloney, Jr., MD, Secretary-Treasurer, Los Angeles, California

Martin F. McKneally, MD, Albany, New York
John L. Ochsner, MD, New Orleans, Louisiana
W. Spencer Payne, MD, Rochester, Minnesota
Richard M. Peters, MD, San Diego, California
W. Gerald Rainer, MD, Denver, Colorado
Benson R. Wilcox, MD, Chapel Hill, North Carolina
Glenis Lundberg, Executive Assistant, One American Plaza, Suite 803, Evanston, Illinois 60201

General Requirements

1. Certification by the American Board of Surgery.

Training Requirements

Candidates must fulfill all the training requirements of the Board in force at the time their applications are received.

Candidates for certification must complete a minimum of 24 months of identifiable training in thoracic and cardiovascular surgery in a program approved by the Residency Review Committee for Thoracic Surgery or in a program approved for full training by the Royal College of Surgeons of Canada. Training in both general thoracic surgery and cardiovascular surgery is an essential part of any approved program no matter what are of thoracic surgery a candidate may choose for his/her practice.

Candidates who have satisfactorily completed a minimum of two years of training in thoracic surgery and are recommended by their program director are eligible for examination subject to the following conditions:

Candidates for certification will be accepted for exami-
nation only if they have completed two years of training in a program approved by the Residency Review Committee for Thoracic Surgery or in a program approved for full training by the Royal College of Surgeons of Canada.

Candidates who apply for examination more than five years after the satisfactory completion of their residency must have an additional year of training in an approved program before they will be eligible to apply for examination.

Operative Experience Criteria

1. The application of candidates whose supervised operative experience falls below the minimal numerical acceptable standard based on 1 standard deviation of the mean value of the number of operations performed by each candidate for the previous year will be referred to the Credentials Committee for review. For candidates applying in 1986, 175 major operative cases are required.

2. The applications of candidates whose supervised operative experience for full credit in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery is below minimal acceptable standards for one or more areas within thoracic and cardiovascular surgery will be referred to the Credentials Committee for review. The numerical criterion of the minimal acceptable standard for each area is based on 1 standard deviation of the mean of the number of operations in that area of all candidates for the previous year. Based on the candidates for 1986, the number of procedures required to meet minimal acceptable standards in the various areas for 1987 are:

   Lungs, pleura, chest wall 50
   Pneumonectomy, lobectomy, segmentectomy 30
   Other 20
   Esophagus, mediastinum, diaphragm 15
   Esophageal operations 8
   Other 7
   Congenital heart 25
   Open operations 10
   Other 15
   Acquired valvular heart 20
   Myocardial revascularization 35
   Pacemaker implantations 10
   Bronchoscopy and esophagoscopy 25

   Endoscopic procedures may also be counted for credit when they are performed immediately preceding a thoracic operation.

   Major vascular operations outside the thorax should be listed.

   The Board recognizes that supervised operative experience in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery protects the patient who, in most instances, is the personal and identifiable responsibility of a faculty surgeon. This supervised experience optimally prepares the candidate to begin the independent practice of cardiothoracic surgery after the completion of his/her residency.

   The Credentials Committee has been authorized by the Board to reject candidates from approved programs if their training is considered to be inadequate. The candidate, the program director, and the Residency Review Committee for Thoracic Surgery will be notified if such actions are taken by the Credentials Committee.

   Even though emphasis on one or another facet of thoracic surgery (pulmonary, cardiovascular, esophageal, thoracic trauma, etc.) may have characterized the candidate's training experience, a candidate is nevertheless held accountable for knowledge concerning all phases of the field. This includes a knowledge of extracorporeal perfusion (physiologic concepts, techniques, and complications). In addition, a candidate should have had responsibility for the care of pediatric general thoracic surgical patients. The candidate should also be skilled in the management of acutely ill patients in the intensive care unit. This requires a knowledge of respirators, blood gases, metabolic alterations, cardiac output, hyperalimentation, and of many other areas.

   By virtue of their training in cardiothoracic surgery, candidates are expected to be fully qualified in the care of critically ill patients.

Criteria for Credit

Credit will be allowed for supervised operative experience in a well-organized teaching setting only when the following criteria are met:

a. The resident participated in the diagnosis, pre-operative planning and selection of patient for operation or surgical indication.

b. The resident performed under appropriate supervision in a well-organized teaching setting approved by the Residency Review Committee for Thoracic Surgery those technical manipulations that constituted essential parts of the procedure itself.

c. The resident was substantially involved in post-operative care.

   Supervision and active participation by the cardiothoracic faculty is required in preoperative, intraoperative, and postoperative care.

   The Board wishes to emphasize, in addition, that first-assisting at operations is considered an important part of resident training, particularly in complex or relatively uncommon cases such as certain kinds of congenital heart surgery and certain operations to correct disorders of the esophagus.

Credit for Foreign Graduate Education

Candidates receiving training outside the United States or Canada may be considered for examination by the Credentials Committee regardless of when the training occurred when the following conditions have been met:

1. The candidate has obtained certification by the American Board of Surgery.

2. The candidate has been allowed no more than one year's credit by the Credentials Committee for training outside the United States and Canada.

3. The candidate has obtained one year of thoracic residency training at the senior level in an approved United States or Canadian program.

Applications

Prospective candidates desiring to apply for examination should consider whether they are able to meet the minimum requirements of the Board. They should then submit a letter to the office of the Secretary of the Board, outlining briefly their training and experience in thoracic surgery.

An application blank will be sent to those candidates who have completed residency training programs which have been approved by the Residency Review Committee for Thoracic Surgery. Candidates who have completed their training in other than approved programs will be sent an Evaluation Form, which, when completed and returned, will be considered by the Credentials Committee of the Board. If the candidate's training is potentially acceptable, an application blank will be sent.

Candidates are notified of their eligibility for examination when their applications have been approved. Candidates who do not exercise the examination privilege within three years of the date they are declared eligible will be required to file a new application, have their eligibility for examination reviewed by the Credentials Committee, and pay a new registration fee.

Examinations

It is the policy of the American Board of Thoracic Surgery to examine candidates only upon completion of their thoracic surgery residency.

Separate written and oral examinations are held annually at times and places determined by the Board. Informa-
tion regarding the dates and places of the examinations is published in the Examination and Licensure column of the Journal of the American Medical Association, the Journal of Thoracic and Cardiovascular Surgery, and the Annals of Thoracic Surgery.

**Part I—Written Examination**

The examination consists of an objective multiple choice written examination designed primarily to assess cognitive skills.

**Part II—Oral Examination**

Successful completion of the Part I (written) examination will be a requirement for admission to the Part II (oral) examination. The oral examination must be taken within three years after the candidate has passed the written examination, or the candidate will be required to submit a new application for approval by the Board and pay a new registration and examination fee. The oral examination is designed to test the candidate’s knowledge, judgment, and ability to correlate information in the management of clinical problems in thoracic and cardiovascular surgery.

**Re-examinations**

Candidates who fail an examination (Part I or Part II) are eligible to repeat the examination the following year.

Candidates who fail an examination (Part I or Part II) three times must complete an additional year of training, preferably in a program approved by the Residency Review Committee for Thoracic Surgery, before they will be considered for examination again. If training in an approved program cannot be obtained, training may take place in an unapproved program if the training has been reviewed and approved in advance by the Credentials Committee.

Candidates who are eligible for re-examination and who do not exercise the re-examination privilege within three years of the date they failed will be required to file a new application blank, have their eligibility for examination reviewed by the Credentials Committee, and pay a new registration and examination fee.

**Fees**

<table>
<thead>
<tr>
<th>Fee</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Registration fee</td>
<td>$100.00</td>
</tr>
<tr>
<td>Part I examination fee</td>

<tr>
<td>Part II examination fee</td>
<td>$350.00</td>
</tr>
<tr>
<td>Part II re-examination fee</td>
<td>$350.00</td>
</tr>
</tbody>
</table>

Candidates who do not appear for the examination (Part I or Part II) or who cancel less than six weeks before either examination may forfeit their examination fee.

The Board is a non-profit corporation, and the fees from candidates are used solely for defraying actual expenses incurred in office administration and conducting examinations and the business of the Board. The directors of the Board serve without compensation.

**Appeals**

Individuals who receive an unfavorable ruling from the Credentials Committee of the Board may appeal such determination by mailing a notice of appeal to the office of the American Board of Thoracic Surgery within 30 days of the date such ruling was mailed. Copies of the appeals procedures of the American Board of Thoracic Surgery may be obtained from the office of the Board. Under the appeals procedures of the American Board of Thoracic Surgery, the only appeal permitted from a failure of the written examination is a hand rescoring to verify the accuracy of the score as reported. The request for re-scoring must be made within 30 days of the time the examination results are received by the candidate. The only appeal with respect to the oral examination is the opportunity to request a re-examination immediately following the completion of the oral examination.

**Certification**

After a candidate has met the requirements for eligibility and passed the examination, a certificate attesting to his qualifications in thoracic surgery will be issued by the Board.

**Recertification**

Applicants who are certified in thoracic surgery after December 31, 1975, will be issued certificates valid for ten years from the date of certification, after which the certificates will no longer be valid. Certificates can be renewed prior to expiration by fulfilling the requirements for recertification specified by the American Board of Thoracic Surgery at that time. A Recertification Booklet is available upon request.

**Revocation of Certificate**

No certificate shall be issued and any certificate may be revoked by the Board if it shall determine that:

(a) the candidate for certification did not possess the required qualifications and requirements for examination whether or not such deficiency was known to the Board or any Committee thereof prior to examination or at the time of the issuance of the certificate as the case may be,

(b) the candidate for certification withheld information in his/her application, made a material misstatement or any other representation to the Board or any Committee thereof, whether intentional or unintentional,

(c) the candidate for certification or certified physician was convicted by a court of competent jurisdiction of any felony or misdemeanor involving moral turpitude and, in the opinion of the Board, having a material relationship to the practice of medicine, or

(d) the candidate for certification or certified physician had his license to practice medicine revoked or was disciplined or censured by any court or other body having proper jurisdiction and authority because of any act or omission arising from the practice of medicine.

The American Board of Urology and the various other specialty boards are members of The American Board of Medical Specialties, which includes as associate members...
The Association of American Medical Colleges, The American Hospital Association, The Federation of State Medical Boards of the USA, The National Board of Medical Examiners and The Council of Medical Specialty Societies.

The American Board of Medical Specialties in conjunction with the Residency Review Committee for Urology and the Accreditation Council for Graduate Medical Education (ACGME) has established academic standards for specialization which The American Board of Urology, Inc. has adopted.

In addition to the various specialty boards, which are classified as regular members, the Association of American Medical Colleges, the American Hospital Association, the Federation of State Medical Boards of the USA, the National Board of Medical Examiners, and the Council of Medical Specialty Societies are associate members of the American Board of Medical Specialties.

Training programs in urology are reviewed by the Residency Review Committee for Urology, which consists of representatives from The American Board of Urology, Inc., the Council on Medical Education of the American Medical Association, and the American College of Surgeons. Upon recommendation of the Residency Review Committee, the ACGME determines the accreditation status of each program.

A list of approved residencies for training in urology may be found in the Directory of Residency Training Programs of the American Medical Association.

Requirements for all Applicants

Every applicant for certification by The American Board of Urology must meet certain basic requirements.

The applicant must have been appointed to an accredited residency program as designated in the AMA Directory of Residency Training Programs, Section II, General Essentials of Accredited Residencies, Paragraph III, "Eligibility and Selection of Residents."

A. APPLICATION
1. A special application form, provided by the Executive Secretary, shall be completed by applicant and returned to the Board office by registered or certified mail with return card requested. Application must be received in the Board office by January 1 in order to permit the applicant to be seated for the written or qualifying examination the following June. Application and documentation material postmarked before January 1 will incur the late fee of $100.

2. The application must be accompanied by a notarized copy of a graduation certificate from a medical school approved by the Liaison Committee on Medical Education or from school of osteopathy approved by the Bureau of Professional Education of the American Osteopathic Association, and by specific verification of successful completion of the post-urology postgraduate training program requirement, which must be in a program approved by ACGME. Two years of pre-urology must be documented separately and may not be included in the description of the urology program. (See Section C.)

Foreign medical graduates (except those from approved Canadian urologic residencies) must furnish a notarized copy of an ECFMG certificate (or Fifth Pathway) and/or VQME or FMGE.

3. A portion of the examination fee shall be paid at the time the application is submitted, as specified in section B, FEE.

4. Applications from a senior resident must be accompanied by a letter of recommendation from the program director confirming that the applicant will have completed at least six months of training in a capacity of a senior or chief resident by June of the year in which the written or qualifying examination is taken.

Also, for each senior resident, the program director must complete an evaluation form supplied by the Board and return it to the Board Office where it must be received by March 1 preceding the qualifying examination (Part I) in June. The applicant is responsible for insuring that these supporting documents are on file in the Board of Urology at the indicated time.

5. Applications for certification will be examined by the Credentials Committee, reviewed by the Board. Additional information, if required, will be requested by the Executive Secretary.

6. A candidate must take the qualifying examination (Part I) within three years after completing residency. Applications received after this period must indicate evidence that the candidate has completed 200 hours of continuing urologic education, finished within the last eighteen months, approved by the Office of Education of the American Urological Association and acceptable in writing by the Executive Secretary.

7. An applicant who does not pass the qualifying examination (Part I), within five years of date of original application will be required to file a new application, with payment of fees as specified at that time, submitting documentation of 200 hours of continuing urologic education completed within the past eighteen months and approved in writing by the Executive Secretary and of satisfactory completion of a preliminary written examination.

8. A new application will be required of an applicant who does not take the examination within five years of the date of original application, submitting documentation of 200 hours of continuing urologic education completed within the past eighteen months and approved in writing by the Executive Secretary and of satisfactory completion of a preliminary qualifying examination.

9. Applicants or candidates, who fail any portion of the examination on three occasions, will be required to file a new application with payment of fees as specified at the time of reapplication. The application must include documentation of approved 200 hours of continuing urologic education in the areas indicating the lowest scores on the Candidate Profile Report stated in the results of the written examination, completed within the last eighteen months and approved in writing by the Executive Secretary.

10. A candidate must take the certifying examination (Part II) within five years of notification of admisibility. Failure to do so within five years will require completion of 200 hours of continuing urologic education as delineated above. Paragraph II of a preliminary written examination. If a candidate does not pass the preliminary examination, application must be resubmitted for the entire certification process.

11. A new application, with fee then current, will be required of candidates who do not pass the certifying examination (Part II) within five years after notice of admisibility and after submitting documentation of 200 hours of continuing urologic education completed within the past eighteen months and approved in writing by the Executive Secretary, and satisfactory completion of a preliminary written examination.

12. Applicants or candidates who fail the qualifying examination (Part I) or any section of the certifying examination (Part II) will be permitted to repeat at the first opportunity or within three years. A base fee of $500 will be assessed for the qualifying re-examination (Part I) plus a $100 increase for each re-examination thereafter, and $150 each for examination in pathology, radiology, and the oral portion of the certifying examination (Part II). If the oral re-examination is taken at the time of the initial failure, the fee is $250.

13. A candidate who fails to pass the qualifying examination (Part I) or the certifying examination (Part II) four times will be required, within two years from date of notification, to document and additional 200 hours of continuing urologic education, completed within the past eighteen months, approved by the Office of Education of the American Urologic Association and accepted in writing by the
Executive Secretary. In addition, the candidate will be required to take a preliminary written examination, and if that is not passed the candidate must make new application for the entire certification procedure.

14. Applications will be considered inactive if two unexcused successive examination appointments are cancelled by the applicant. (See Section VI, B, Fees) To regain active status, the applicant will be required to pay a base reinstatement fee of $400 and an additional $100 for excused absence; $200 for unexcused absence and $250 for no shows in order to have the application returned to active status.

B. FEES

The current examination fee is $950.00 but may be changed without notice. This fee is to reimburse the Board for expenses incurred in preparing and processing the applications and examinations of the candidate. No fees are returnable or refundable. Unused fees will be credited for the next available examination only, and if they are not utilized at the first available opportunity, credit will be disallowed.

Payment of $550 must accompany the initial application, except in the case of senior residents who shall pay $400 at the time of initial application to take the qualifying examination (Part I). In all cases, the balance of the examination fee shall be paid by the candidate on notification of successful completion of the qualifying examination (Part I) and admissibility to take the certifying examination (Part II). An applicant secures no vested right to certification as a result of paying an examination fee.

Candidates failing to take the certifying examination (Part II) within five years of notification of admissibility will be required to file a new application with payment of fees in full as specified at that date after submitting documentation of 200 hours of continuing urologic education completed within the past eighteen months and approved in writing by the Executive Secretary and successfully completing a preliminary qualifying examination.

A $100 late filing fee will be assessed for any document required by the Board and not received in the Board office by the described deadlines. Express mail is recommended.

The fee for recertification application is $1000.

C. EDUCATION PREREQUISITES

1. Applicants must submit a notarized copy of a graduation certificate from a medical school approved and recognized by the Liaison Committee on Medical Education or the Council of Medical Education of the American Osteopathic Association, or from a medical school deemed by the Board to provide equal or superior medical educational opportunities and experience.

2. Effective July 1, 1984, before beginning the final year of residency in an approved urology program, the applicant must complete two years of postgraduate clinical training in areas other than urology. One of these two years—preferably both—should be in surgical training. Neither of these two postgraduate years may be substituted for time required in a urology residency program of three to four years. (Specifically, one year of other training and four years of urologic residency cannot fulfill this requirement.) Applicants must satisfactorily complete a urologic residency of at least three clinical years in a program approved by the Accreditation Council on Graduate Medical Education and the Residency Review Committee for Urology. The program must be served as a senior or chief resident with appropriate clinical responsibility.

3. Training in a formally integrated urologic residency program, variations in preliminary and urologic training may be permitted by the Board at its discretion, provided the basic minimum intervals of training are observed.

4. The Board urges applicants to seek more than minimal training opportunities, and encourages them to acquire additional experience in both surgical and urologic residency programs.

5. Applications that do not indicate that the candidate has satisfied these basic requirements will be judged on individual merit and the Board may, at its discretion, permit some variation from these requirements when suitable and satisfactory documentation of equivalent or superior education and training is provided.

6. The term "Board eligible" is no longer recognized. A candidate is either admissible, in the certifying track or a Diplomate of the Board. Requests for verification of status of a candidate must be accompanied by a signed Release of Information form (except if the physician is a Diplomate of the Board).

ANY VARIATIONS FROM THE ABOVE DESCRIBED BASIC REQUIREMENTS MUST BE APPROVED BY THE BOARD BEFORE AN APPLICANT STARTS A PRE- UROLOGY OR UROLOGY RESIDENCY PROGRAM.

D. LICENSURE AND PRACTICE

1. Applicants for the qualifying examination (Part I) may be practicing urologists or senior residents as specified in section A.

2. Candidates for the certifying examination (Part II) having met all other requirements and passed the qualifying examination (Part I) must document a minimum of 18 months in the practice of urology in a community, or in association with an academic appointment, or in the Armed Forces.

3. The standard requirement for certification is full time practice in urology.

4. It is the purpose of The American Board of Urology to ascertain and document the qualifications of any candidate for certification. This is a responsibility to the public. The Board is authorized by the candidate to make and will be held harmless for such investigations of professional ethics and reputation. The Credentials Committee of the Board may discuss with the applicant the substance of any peer review letter it receives. Under no condition will the source of peer review letters be revealed to any person other than the members of the Board of Trustees.

The applicant must provide documentation of licensure to practice medicine and have satisfactorily completed the educational prerequisites and practice requirements. The Board must be satisfied that the candidate has ethical, moral and professional stature. Following is the Policy of The American Board of Urology as adopted in 1981:

Additional peer comments are solicited by The American Board of Urology to identify candidates whose practice patterns may deviate significantly from those judged adequate by colleagues. The purpose of peer review is to alert The American Board of Urology to possible irregularities involving practice patterns or standards of performance. A significant indication of concern as determined by the review of two or more Board members will be a basis for Board action.

The purpose of the case log is to allow the Board to review the volume and diversity of practice and to assess the appropriateness of those procedures. The information provided in the log allows the examiners to focus their interview on apparently questionable areas as indicated by numbers or types of procedures and to question the candidate regarding their appropriateness. If, on review of the log, the initial reviewer is concerned about practice procedures, the log will be reviewed by at least one other Board member. If there is agreement among the interviewers, this assessment of practice activity may be a basis for Board action.

The log material and peer comments may be subjects for deferment of Board action until the questionable areas are clarified.

Actions of the Board to achieve clarification may include:

1. Inquire into questionable practices at the time of examination.

2. Inquire into questionable practices at a requested
Board.
3. Request for certified copies of candidate’s hospital records for review.
4. A site visit at the candidate’s expense.
5. Other appropriate measures that may be deemed necessary to assess apparent deviations from standard urologic practice.

Requirements for Certification

The requirements for certification include:

A. EVIDENCE OF HOSPITAL PRACTICE
1. The candidate must mail so it is received in the Board Office by DECEMBER 1, prior to the examination the following February, a list of all major and minor surgical cases since completing his residency. In the case of practitioners, lists for the previous 18 months are required. These surgical logs must be prepared in accordance with the form provided by the American Board of Urology and must be verified by the hospital administrator in each of the hospitals where the procedures were performed. Overall hospital urology mortality rate must be verified by the hospital administrator. Express mail is recommended.
2. Photostatic copies of the complete hospital record of any one or more of the above cases may be requested by the Board office. The candidate is expected to furnish this within one month of the request.

B. EXAMINATIONS
1. Qualifying Examination (Written) Part I.
This examination will be given in June of each year, simultaneously at various locations. It is available upon application and approval to any physician who has completed a urology residency qualified under Section VI, C. or who has completed six months of training in the capacity of a chief or senior resident. The examination, conducted in writing, is designed to assess the candidate’s knowledge of the entire field of urology and allied subjects. Following is a concise outline of the areas which may be included in the examination:
- Anatomy—Gross anatomy, structure relations, blood and nerve supply, and lymphatic drainage of all of the organs involved in urology, including the adrenal gland.
- Physiology—Physiology of the pituitary, as related to urology, adrenal gland, kidney; organs of urinary transport, prostate, seminal vesicles, testis, epididymis, and penis.
- Embryology—Growth and development of the genitourinary system and of its physiology peculiar to the infant and child. This area includes endocrinology, sex differentiation, and ambiguous sex, pediatric endocrinology and genitourinary physiology.
- Neoplasms—Diagnosis, surgical and non-surgical treatment and prognosis of all benign and malignant neoplasms including the adrenal gland.
- Calculous disease—All aspects of calculous disease including etiology, diagnosis techniques, and all forms of medical and surgical treatment.
- Obstructive disease—Bladder and urinary diversions—The pathophysiology, etiology and diagnosis of obstruction; treatment of acquired obstructive lesions and all varieties of urinary diversions.
- Trauma and fistula—Etiology, diagnosis and treatment of all such lesions including genitourinary strictures.
- Neurogenic bladder, incontinence, priapism, impotence and endocrinology related to urology and infertility.
- Fluid and electrolyte problems, transplantation, renovascular lesions, and nephrology that is essential to urology.
- Comprehensive fluid and electrolyte matters, parenchymal diseases of the kidney treated by nephrologist about which the urologist should be familiar.

Infectious disease—The diagnosis and treatment of all infections of the genitourinary tract including basic bacteriology, immunology related to urology.

Congenital anomalies—All disorders of the genitourinary system.
Obstructive uropathy (congenital and acquired) infectious disease, nephropathy, urinary diversion, and neoplasms as they relate specifically to the infant and child—All of the obstructive lesions in pediatric urology; pediatric nephrology familiar to the urologist; urinary diversion in the infant and child; all neoplasms in pediatric urology.

Female urology—Comprehensive history and physical examination of the female patient; familiarity with diagnosis and treatment of the wide range of disorders and diseases involving the anatomy and physiology of the female genitourinary organs; anatomic structures common to urology and gynecology.

The urologist should demonstrate competence in the performance and interpretation of urodynamic studies for vesical and urethral dysfunction. The candidate must demonstrate knowledge of the indications for a technique necessary to perform voiding cystourethrography, urethral profile studies, cystometrography, and sphincter electromyography.

The trained urologist must be competent in the endoscopic, pharmacologic and surgical management of female incontinence. The candidate must demonstrate knowledge of diagnosis, localization and treatment of female genital urinary infections.

The urologist must be familiar with the indications for intermittent catherization and the technique.

The candidate must be familiar with the diagnosis and treatment of genitourinary neoplasms in the female.

2. Certifying Examination—Part II
This examination is given annually in late January and February and consists of a standardized oral, pathology and radiology examination. Any candidate who has passed qualifying examination (Part I), who have a minimum of eighteen months in private, academic or military practice and who have been approved by the Credentials Committee will be admisible to take certifying examination (Part II) by completing the Suplemental Application. It must be returned by registered or certified mail with return card requested, must be in the Board Office by JULY 1.

Before the certifying examination (Part II) is taken, the Board will investigate the professionalism of each candidate in an attempt to assess ethical conduct and attitude toward patients and fellow practitioners.

Objectives of the Certifying Examination (Part II):
The oral examination is an interactive process between examiner and candidate during which an assessment can be made of the ability of the candidate to diagnose and manage urologic problems.

Inasmuch as the qualifying examination (Part I) has been passed by the candidate, the examiner presumes in the oral examination that the candidate has a satisfactory degree of cognitive knowledge of urology.

Therefore, this section of the certifying examination, will be devoted to the following considerations of the candidate:
A. Problem solving ability. Evaluation is made of the candidate’s ability to collect pertinent information systematically, integrate it, assess the problem and propose an appropriate solution.
B. Response to a change in clinical situation. The candidate’s ability to deal with changing clinical conditions is evaluated through the interactive relationship between the examiner and the candidate. Changed clinical conditions may be posed arbitrarily by the examiner in order to assess various responses of the candidate, or may be developed by the examiner from the outcome of recommendations offered by the candidate during the interview.
C. Professional behavior in his role as a urologist. The candidate’s attitude, interaction with the examiner, and expression of patient management concerns contribute to the assessment of professional behavior.
Beginning in 1987, the American Board of Urology has adopted criterion reference testing (Rasch Model).

**Final Action of the Board**

Final action concerning each applicant is made by the entire Board and is based on the applicant’s training, professional record, attainments in the field of urology, and the results of the examination. However, an appeals mechanism is available to all applicants at any stage of the certification proceedings. Details of this procedure are available upon request from the Board office.

If an appeal procedure is initiated, it must be filed within 90 days from the time the candidate was notified of a board decision. The activities described in Articles VII and VIII of this guidebook proceed from the certificate of incorporation and bylaws which state the nature of the business, objects, and purposes proposed to be transacted and carried out by this corporation.

**Guidelines for Special Training**

Although certificates of special qualifications in certain areas of urology are not offered by the Board, it is recognized that special expertise in some aspects of the discipline may be achieved through an organized program of study, practice, and exposure, which is in addition to formal residency training. The Board has established guidelines for such special training programs in the fields of pediatric urology, renal transplantation, urologic oncology, and male and female reproductive surgery. These guidelines and others to be developed in the future can be obtained by program directors and prospective trainees from the office of The American Board of Urology, Inc.

**Recertification**

Recertification on a voluntary basis has been available since 1981. Certificates issued by the Board on or after January 1, 1985, are valid for 10 years. A physician failing to be recertified by the expiration date is not longer a Diplomate of the Board. It is recommended that Diplomates possessing a time-limited certificate plan to recertify at least one year before expiration. Recertification accomplished before the date of expiration of the certificate will be granted for a period of 10 years beyond the date of expiration of the previous certificate, not the date of recertification. Recertification is an effort to assess the continuing competence of the practicing urologist and currently requires:

a. A current certificate issued by the American Board of Urology.

b. A current license to practice medicine issued by a State Board of Medical Licensure.

c. Current privileges to practice urology in a hospital accredited by the Joint Commission on Accreditation of Hospitals or such other hospital as may be judged acceptable by the Board.

d. Current engagement in practice, teaching, research or administration of urology.

e. A satisfactory evaluation of urological qualifications by the hospital administrator, the medical director or chief of urology, or by the chief of medical staff or similar officials in those hospitals where the applicant exercises practice privileges.

f. Documentation of good standing in the medical profession.

g. Verified participation during the three years preceding application in at least 150 hours of continuing education in urology. At least 60 hours must have been earned in Category I activities accredited by the Accreditation Council for Continuing Medical Education (ACME) and the other 90 hours may be accrued through Categories II-VI activities, as designated currently by the Council of Medical Education of the AMA. These requirements may also be met by submitting any current valid certificate which document such CME credits.

h. A list submitted by the applicant of three to five local physicians, preferably urologists, who will provide a letter of reference on request.

i. Peer review by The American Board of Urology.

j. Agreement for an evaluation by a site visit to the applicant’s community by a representative of the Board if necessary.

k. Attainment of a performance level determined by the Board to demonstrate acceptable knowledge of the specialty of urology on an examination for certification given by the Board. Diplomates may select either a self-assessment examination or a closed-book and oral examination.

**Revocation of Certificate**

Certificates issued by this Board are subject to the provisions of the Articles of Incorporation and the By-laws. According to Article IX, Section 4, of the By-laws, "Each Certificate shall be subject to revocation in the event that:

A. The issuance of such certificate or its receipt by the physician so certified shall have been contrary to, or in violation of, any provision of the Certificate of Incorporation of this, The American Board of Urology, Inc., or of the By-laws;

or

B. The physician or party certified shall not have been eligible to receive such certificate, irrespective of whether or not the facts constituting ineligibility were known to, or could have been ascertained by, the directors of the Board at the time of issuance of such certificate;

or

C. The physician or party certified has made any misstatement of fact in application for such certificate or in any other statement or representation to the Board or its representatives;

or

D. The physician so certified shall at any time have neglected to maintain the degree of competency in the practice of the specialty of urology as established by the Board, and shall refuse to submit to re-examination by the Board;

or

E. The physician so certified has been found to be guilty of unethical practices or immoral conduct or of conduct leading to revocation of his license. These objective standards include conduct that violates state medical laws, rules and regulations of local and state urologic Boards and relevant American Medical Association guidelines, and conduct leading to revocation of license.

"The Board of Trustees of this Corporation shall have the sole power, jurisdiction and right to determine and decide whether the evidence or information before it is sufficient to constitute grounds for revocation of any certificate issued by this Corporation. The Board of Trustees, may, however, at its discretion, require any physician so certified to appear before the Board of Trustees or before any one or more of them or before any individual or individuals designated by the Board of Trustees, upon not less than twenty (20) days written notice, and to show cause at the time and place specified in such notice, why the certificate should not be revoked upon any one or more of the above-described grounds specified in such notice. Failure of any physician so notified to appear as required in such notice, without excuse deemed sufficient to the Board of Trustees, shall constitute, ipso facto, cause for revocation of the certificate. The decisions of the Board of Trustees relating to all matters under this Section 4 shall be final and binding."

"The undersigned hereby acknowledges that he has read and understands the above provision regarding the grounds for revocation of certificates issued and the procedures to be followed in determining whether or not a certificate should be revoked and agrees to hold the Board, its officers and agents harmless from any damage, claim or complaint by reason of any action taken in good faith and consistent with such procedures."
APPENDIX C

MEDICAL LICENSURE REQUIREMENTS
MEDICAL LICENSURE REQUIREMENTS

The following information has been provided by Annette Van Veen Doigle of the staff of the AMA Department of Data Planning and Evaluation in cooperation with Arthur Osteen, Ph.D. of the Office of Physician Credentials and Qualifications. The tables are taken (with publication corrections) from “U.S. Medical Licensure Statistics 1985 and Licensure Requirements 1985,” published by the AMA.

Policies for Initial Medical Licensure for Graduates of U.S. Medical Schools

The initial medical license of most U.S. medical school graduates is granted by endorsement of their National Board Certificates. All licensing jurisdictions, except Louisiana, Texas, and the Virgin Islands, will endorse certificates from the National Board. The Texas licensing board will endorse National Board certificates when Part II of the examination was passed before January 1, 1978, and will endorse state licenses based on the National Board certificate when Part II of the National Board examination was passed after January 1, 1978, if the candidate passes Component 2 of the Federation Licensing Examination (FLEX). Louisiana will endorse the National Board certificate for reciprocal candidates only. Candidates who graduated from approved U.S. or Canadian medical schools on or after January 1, 1978 must also pass the clinical competence portion of FLEX. Those graduates who are not licensed by endorsement of a National Board certificate, must pass the FLEX which is used by all states as the medical licensing examination. In many states the certificate of the National Board of Examiners for Osteopathic Physicians and Surgeons can be endorsed for licensure. Boards of medical examiners in Guam, Massachusetts, New Jersey, South Carolina, and West Virginia will endorse U.S. specialty board certificates for licensing purposes in specific circumstances as delineated by the licensure regulations of those states.

Policies for Licensure of Graduates of Foreign Medical Schools

Most of the state medical boards will accept graduate training in Canada as equivalent to training undertaken in the U.S. Thirty-eight states will issue a medical license to a graduate of a Canadian medical school who holds a license in one of the provinces of Canada. Twenty-six licensing boards will, under certain specified conditions, endorse a Licensure of the Medical Council of Canada certificate held by a foreign medical graduate.

In the most recent survey (May, 1986) conducted by the AMA Department of Data Planning and Evaluation, 42 states have indicated they will license foreign medical graduates who hold a Fifth Pathway certificate, but do not hold a standard ECFMG certificate.

Foreign educated candidates for licensure are permitted by three state boards to take the FLEX before they have had graduate training if they have the standard ECFMG certificate. Candidates are not awarded a license until they have undertaken one or more years of training in the U.S. and have met other specific requirements of the individual boards, e.g., an Educational Commission for Foreign Medical Graduates (ECFMG) certificate, personal interview, etc. Six licensing boards, those in Illinois, Maryland, Ohio, Puerto Rico, Vermont, West Virginia, and Virginia maintain lists of state-approved schools; only graduates of these schools can be licensed.

Tables 1, 2, and 5 on the following pages summarize the licensure policies of state boards. It is strongly recommended that candidates contact the specific state board for the most current information on licensure requirements in that state. Names and addresses of the corresponding officers are listed in Table 6 of this Appendix.

Restricted Licenses and Educational Permits

Forty-nine boards provide for the issuance of educational permits, limited and temporary licenses, or other certificates for the restricted practice of medicine. The terms for the issuance of such certificates vary. Such certificates may be issued (1) for residents in training, (2) for supervised employment in state or private hospitals, and (3) for full-time practice until the next regular session of the licensing board. These permits must generally be renewed once a year with a stipulated maximum number of renewals allowed (usually five years).

Amendments to the Immigration and Nationality Act made through Public Law 94-484, the Health Professions Educational Assistance Act of 1976, establish requirements for the admission of alien physicians to the United States, whether for permanent residency or for participation in graduate medical education training programs. The amendments require that alien graduates of foreign medical schools pass an examination determined by the Secretary of Health and Human Services to be the equivalent to Parts I and II of the National Board of Medical Examiners examination. The amendments also require that alien medical graduates demonstrate competence in oral and written English.

The Secretary of Health and Human Services has determined that the Foreign Medical Graduate Examination in the Medical Sciences (FMGEMS), which is prepared by the National Board of Medical Examiners and administered by the Educational Commission for Foreign Medical Graduates, is the equivalent of Parts I and II of the National Board of Medical Examiners examination for purposes of the amendments to the Immigration and Nationality Act. This examination, which lasts for two days and is composed of equal proportions of clinical science and basic science questions in a multiple choice format, is given twice a year at examination centers abroad and in the United States. Applications for the examination and questions should be addressed to the Educational Commission for Foreign Medical Graduates, 3624 Market Street, Philadelphia, PA 19104, U.S.A.

Graduates of foreign medical schools who are citizens of the United States and lawful permanent residents of the United States must pass the FMGEMS Examination in order to be provided with the ECFMG Certificate.

NL.—Indicates no limit.
1.—0-1 indicates that physician may sit for examination upon acceptance to or during the first year of accredited residency training.
2.—Applicant must pass an oral examination if 10 years have elapsed since last licensure examination.
3.—Oral examination required.
4.—Not required of University of Arkansas students.
5.—Before taking Component II.
6.—Or 5 years licensed practice.
7.—Applicant must be "board-eligible" by an American Specialty Board.
8.—If graduated before 1970 (before July 28, 1985 for Washington), only one year of graduate training is required.
9.—At discretion of the board.
10.—At board discretion, years of licensed practice may be substituted for training requirement.
11.—Two years are required for graduates of Canadian medical schools.
12.—First year of residency in pathology and psychiatry not accepted.
13.—After July 1, 1987 two years will be required.

NOTE: All State Boards of Medical Examiners consider Canadian citizens who have graduated from an accredited Canadian medical school on the same basis for licensure as graduates of accredited U.S. medical schools.

--- Did not respond.
1—Must be endorsed by provincial licensing board.
2—Training not required.
3—Two years formal postgraduate training required. (Or its equivalent, Ohio only.)
4—Regulations pending.
5—Applicant must have received LMCC in or after May, 1970. (After Dec. 31, 1969, Washington.)
6—By vote of board.
7—Must be endorsed by provincial licensing board. If Medical Council of Canada examination was taken after January 1, 1978, candidate must also pass Component II of FLEX.
8—Oral examination is required.

**NOTE:** This summary should be verified by direct communication with the corresponding officer of the licensing board in the state in which the physician is interested. IN ALL STATES, licenses based on endorsement/acceptance of a physician's credentials are granted to those physicians meeting all state requirements—AT THE DISCRETION OF THE LICENSING BOARD. Additional information provided by the state follows.

1. Indicates that states did not respond to the question.

2. D-1 indicates that physician may sit for examination upon acceptance to or during the first year of accredited residency training.

3. After completion of an additional 12-month medical postgraduate program.

4. With three years postgraduate training in an accredited US and/or Canadian training institution.

5. One year in California, two in other states.

6. University of Colorado Fifth Pathway only.

7. One year accredited graduate medical education or five years licensed practice in state or country is required.

8. If passed the ECFMG examination or FMGEMS.

9. Applicant must be "board-eligible" by an American Specialty Board.

10. Or Visa Qualifying Examination.

11. Only if graduate of state-approved medical education program.

12. With required medical postgraduate training.

13. Provided all other licensure requirements are met.

14. May be counted as one year of required postgraduate training.

15. ECFMG certification (subsequent to July, 1984) obtained on a basis of FMGEMS only. VQE, if successfully passed, accepted as a substitute for FMGEMS.

16. At board discretion, years of licensed practice may be substituted for training requirement.

17. Must have passed ECFMG examination or FMGEMS.

18. For candidates receiving a medical degree on or after July 1, 1985, three years of accredited postgraduate training is required.

19. A standard ECFMG certification is required of the graduates of foreign medical schools except graduates of foreign medical schools located in Canada, England, Scotland, Ireland, Australia, and New Zealand.

20. Students in the AIA approved Fifth Pathway program must have completed one year of supervised clinical training and one year of approved postgraduate training (Item 1). Item 2 is waived for the Fifth Pathway student only.

22. Graduate education must be in US.

23. After July 1, 1982 two years will be required.

24. Up to three years at board discretion.

25. If passed the ECFMG examination. If the Medical Council of Canada was passed after January 1, 1978, candidate must also pass FLEX Component II.

27. With valid ECFMG certificate.

28. Oral examination is required.

X—Indicates yes.
1—In many cases there is an additional recording or registration fee.
2—Plus $175 application fee. Oral examination fee is $400.
3—May vary.
4—Available under certain conditions.
5—Plus $150 for licensure: $50 (Oklahoma).
6—Plus cost of FLEX and oral examination.
7—If graduate of foreign medical school, add $25.
8—Active, $5 inactive (Montana); $150 inactive (Nevada); $65 inactive or out-of-state (Oregon).
9—$225 if partial retest.
10—Plus $25 if initial applicant.

</table>

**NOTE:** ALL BOARDS REQUIRE THAT EACH COMPONENT MUST BE PASSED WITH A SCORE OF 75 OR BETTER. IN ALL STATES, LICENSES ARE GRANTED TO PHYSICIANS MEETING ALL REQUIREMENTS—AT THE DISCRETION OF THE BOARD. This summary should be verified by direct communication with the corresponding officer of the licensing board in the state in which the physician is interested.

**X**—Indicates yes.

**——** Indicates no answer or rules pending.

1—Penalties vary from state to state. In some, once the maximum has been reached, the candidate is ineligible for licensure. In other states, the candidate will be required to show evidence of additional study or meet other board regulations.

2—Not required of University of Arkansas students.

3—0-1 indicates that physician may sit for examination upon acceptance to or during the first year of accredited residency training.

4—Before taking Component II.

5—If graduated before July 1, 1985, one year is required.

6—If graduated after July 1, 1985, three years are required.

7—Two years for graduates of Canadian medical schools.

8—Up to three years at discretion of board.

9—If graduated before July 28, 1985, only one year is required.
