      4) Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
   h. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
   i. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
   j. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning, and drug or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
   k. Preparation of an accurate statistical and narrative description of the program as requested by the RRC. Adequate data collection and analysis is necessary for overall program evaluation and total quality management. The program director should gather, analyze, and maintain data regarding resident and faculty performance.
   l. Gathering and analyzing initial, discharge and follow-up data regarding the functional outcomes of persons served.
   m. Notification to the RRC of major programmatic changes. The RRC must be notified immediately of any change in program directorship.

B. Number and Qualifications of Faculty

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must
be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director, there must be at least one other faculty member with expertise in SCIM who is dedicated to the program.

2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities in the field of SCIM, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. The faculty should actively participate in teaching, research and scholarly activity in the field of SCIM.

3. The faculty should be Board-certified in a specialty or subspecialty related to the care of persons with SCD or possess suitable equivalent qualifications.

4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

5. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

C. Other Program Personnel

Programs must be provided the additional professional, technical and clerical personnel needed to support the administration and educational conduct of the program.

IV. Facilities and Resources

A. Institutional Facilities

Education in SCIM should include experience in both inpatient and outpatient facilities. The sponsoring and participating institutions must operate or have access to a service delivery system dedicated to the care of persons with SCD. Necessary resources include:

1. an emergency department that treats patients with SCI,
2. an accredited acute care hospital,
3. a dedicated inpatient rehabilitation unit,
4. a designated outpatient clinic for persons with SCD, and
5. availability of home care and independent living programs.

B. Specific Facilities and Resources

1. The sponsoring institution must have available the equipment, diagnostic imaging devices, electrodiagnostic devices, laboratory services, a urodynamic laboratory, and clinical facilities necessary to provide appropriate care to persons with spinal cord dysfunction. Medical library facilities and services for teaching experiences must be available, along with a medical records system that allows for efficient case retrieval.

2. The sponsoring institutions must have available specialty consultant services in anesthesia, emergency medicine, family practice, internal medicine (including the relevant subspecialties), neurological surgery, neurology, orthopedic surgery, pathology, pediatrics, physical medicine and rehabilitation, plastic surgery, psychiatry, radiology, surgery, and urology.

C. Library

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.

2. Residents must have regular access, including nights and weekends, to computer and audiovisual capabilities and electronic retrieval of information from medical information databases.

3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

D. Patient Population

The patient population must be of sufficient size and diversity of age so as to provide the resident with the opportunity to care for an adequate number of persons with new SCD, to care for persons re-admitted to the hospital with intercurrent illness, and to care for appropriate numbers of outpatients. There should be a minimum census of eight patients per resident.

V. Educational Program

A. Clinical Components

1. The clinical portion of the curriculum must include a sufficient variety, depth, and volume of clinical experiences. The educational program should take into consideration the resident's documented past educational and patient care experiences. The training program must provide for the resident to spend a significant amount of time in responsibility for the direct care of hospitalized as well as non-hospitalized patients. Residents must devote at least one third of their clinical experience to the care of hospitalized patients and at least one third to non-hospitalized patients.

2. The educational program must be designed for the resident to attain the following knowledge and competencies within the subspecialty and interdisciplinary care team:

a. Initial Care

1. Understand the organization and interdisciplinary practices of the Emergency Medical Services system relating to the prehospital and initial Emergency Department care of spinal cord injured patients as well as their concomitant and associated injuries. This is not meant to interfere with the independent decision making of the attending physician during the initial care.

2. Understand the techniques of appropriate spinal immobilization in order to protect patients from additional neurological damage.

3. Be able to perform a comprehensive neurologic assessment and determine the appropriate injury level of the patient.

4. Understand the supportive role of SCIM to neurological surgery, orthopedic surgery, emergency medicine, and other appropriate physicians in initial care sites, including intensive and critical care units.

5. Understand and assist in the management of the abnormalities and complications in other body systems resulting from SCI, especially the following: pulmonary, genitourinary, endocrine, metabolic, vascular, cardiac, gastrointestinal, musculoskeletal and integumentary.

b. Post-Initial Care

1. Understand how the stability of the spine is evaluated and know the various options for treatment of fractures/dislocations at all vertebral levels.

2. Understand the optimal coordination of services of the various physicians and other health professionals in the pre-
3. Develop the skills to initiate and direct appropriate rehabilitation programming in the early hospital phase of treatment.

4. Understand the relationship between the extent and level of SCI on the patient's ultimate residual functional capacity and be able to inform and counsel the patient, the family, and other health specialists on a timely basis about the impact of the disability.

5. Through lectures and appropriate clinical assignments under the integrated services of pediatricians and specialists in SCIM, understand special needs and problems that children and adolescents with SCI may have in areas such as behavior, bladder and bowel and skin care, growth and development, immunizations, mobility, nutrition, pediatrics, self-care, recreation, and schooling. Also understand the special needs of parents and others in relating to and assisting young patients with these problems.

c. Initial and Ongoing Medical Rehabilitation

1. Coordinate the transition from post-initial care to rehabilitation and assume primary management responsibility.

2. Establish short and long term rehabilitation goals and coordinate the implementation of the rehabilitation program to meet such goals.

3. Monitor the evolution of neural dysfunction in order to recognize conditions that may require additional evaluation, consultation, or modification of treatment.

4. After post-initial care, in conjunction with the interspecialty SCI team, participate in the management of SCI following either operative or nonoperative stabilization, including activity restrictions and appropriate orthotic support.

5. Understand the collaborative role of integral members of the SCI care team.

6. Recognize, diagnose, and coordinate treatment for respiratory complications such as tracheostomies, airway obstruction, atelectasis, pneumonia, and tracheal stenosis, as well as for mechanical methods of respiration including both fixed and portable equipment. The resident should be able to manage patients with high quadriplegics and respirator-dependent patients, including weaning them from the respirator, and evaluating indications and contraindications of phrenic nerve pacing, motorized wheelchairs, portable respirators, environmental control systems, home modifications, etc.

7. Recognize, diagnose, and treat orthostatic hypotension and other cardiovascular abnormalities during initial mobilization of the patient.

8. Evaluate and manage skin problems utilizing various techniques of prevention such as the proper use of specialized beds, other surfaces, cushions, and wheelchairs, to manage pressure ulcers effectively; and, in consultation with surgical colleagues, determine the indications for various surgical procedures including resection of bone and the development of flaps and other techniques for soft tissue coverage. The resident should also develop an understanding of the pre- and post-operative management of these patients.

9. With appropriate consultation, identify the risk of infection and coordinate treatment and infection control including the judicious use of antimicrobials.

10. Coordinate and implement management of the neurogenic bowel.

11. Understand management of the neurogenic bladder and sexual dysfunction and that the role of urologists is pivotal in the diagnosis and management of bladder dysfunction, urinary tract infection, urinary calculi, sexual dysfunction, obstructive uropathy with or without stones, infertility and problems of ejaculation; such specialists should be utilized early in the care of these patients.

12. Diagnose and treat, with appropriate consultation, complications such as deep vein thrombosis, pulmonary embolus, autonomic hyperreflexia, substance abuse, pain, spasticity, depression, and the sequelae of associated illnesses and pre-existing diseases.

13. Recognize pharmacologic alterations associated with SCI, including changes in pharmacokinetics, pharmacodynamics, drug interactions, over-medication, and compliance.

14. Diagnose and manage the psychological dysfunction associated with SCI.

15. Perform a functional assessment based on neurological, musculoskeletal and cardiopulmonary examinations and psychosocial and prevocational evaluations.

16. Determine functional goals for self-care, mobility, and vocational and avocational activities based on the level and completeness of the lesion.

17. If appropriate, prescribe motor retraining and conditioning activities, orthoses, and the adaptive equipment needed to meet the rehabilitation goals.

18. Anticipate the approximate length of stay, cost of hospitalization, equipment needs, etc, with the involvement of the patient, the patient's support persons and appropriate agencies.

19. Identify the indications for and the use of clinical neurophysiologic testing to assess the extent of neuropraxia, denervation, reinnervation, phrenic nerve function, and spinal cord function.

20. Identify the indications and use of functional electrical stimulation (FES) as applied to the management of spinal cord impairment.

21. Understand the kinesiology of upper extremity function and the use of muscle substitution patterns in retraining; the value, indications and contraindications of tendon and muscle transfers and other operative procedures that would enhance function.

22. Within the interdisciplinary and interspecialty SCI teams, understand the concepts of muscle and tendon transfer, and of other operative procedures that enhance extremity function, and manage the post-operative retraining, when indicated.

23. Prescribe appropriate motor vehicle modifications to promote independence in mobility and transportation.

24. Understand group process and team dynamics, and coordinate the activities of the interdisciplinary team through daily rounds, staff conferences, and patient and family educational and training sessions in order to maximize the goals established by the patient and team.

25. Understand the training and capabilities of rehabilitation nurses, social workers, psychologists, physical therapists, occupational therapists, prosthetists, orthotists, speech/language pathologists and recreational and vocational counselors; recognize the professional role and contributions of the various allied health professions individually and collectively; encourage their full participation in patient care management while maintaining medical responsibility; and appreciate that a team effort, with as much continuity as practical, will produce a more satisfying out-
Program Requirements for Residency Education in Spinal Cord Injury Medicine (Physical Medicine and Rehabilitation)

26. Conduct a problem-oriented conference and set goals with the participation of the allied health staff.

d. Discharge Planning
   1. Determine when the rehabilitation goals have been achieved, finalize the discharge plan, and arrange for the appropriate level of care to match the patient's needs.
   2. Participate in family meetings/discharge planning conferences, with focus upon community integration and adjustment to disability.
   3. Organize and conduct programs of patient and family education.
   4. In concert with appropriate disciplines and other team members, manage the psychological effects of the impairment in order to prevent their interference with the reintegration and re-entry to the community.
   5. Use the full range of community resources to facilitate the transition to the community.
   6. Understand the needs for personal care attendants, architectural modifications, and community follow-up care.

e. Follow-Up Phase—Sustaining Care
   1. Recognize, diagnose and treat intercurrent disease in conjunction with the proper consultants. There should be special emphasis on the prevention and management of these diseases in patients at various levels of SCI.
   2. Diagnose and coordinate the treatment of the complications associated with chronic SCI including pressure sores, spasticity, pain, urinary calculi, urinary tract infection, fractures, post-traumatic syringomyelia, and progressive respiratory decline.
   3. Set up a program of regular follow-up, evaluation, and preventive health care to keep the person at his/her maximum health and rehabilitation status, and coordinate this care with the patient's personal community physician.
   4. Direct or establish the patient in a program of vocational rehabilitation, if appropriate.
   5. Appreciate that the ultimate goal is to return and maintain the person with SCI as a satisfied and productive member of society.
   6. Understand the prevention and management of complications associated with long-standing disability, the effects of aging with a disability, and the provision of long-term follow-up services.
   7. Coordinate and manage an SCI home care program.
   8. Develop and maintain as needed a professional relationship with primary care physicians and be available to assist in the provision of care for specific health care issues, including follow-up examinations and management of complex issues of SCI care.
   9. In all phases of care, understand and define the ethical and legal issues especially pertinent to SCI, including diminished competence and the right to refuse treatment.

3. The program should be designed so that the resident has an opportunity to follow individual patients longitudinally as well as the ability to encounter a wide variety of patient problems.

4. The program should be designed so that the resident has an opportunity to develop a management style compatible with the interdisciplinary team process.

B. Didactic Components

1. Basic science content. There should be a didactic curriculum taught by faculty and a self-directed learning program to address the theoretical and clinical principles that form the fundamentals for care of patients with SCD. Pathophysiology, discussion and knowledge of clinical manifestations, and management principles about the care of such patients should constitute the major topics for study.

2. Specialty content. Specialists in anesthesiology, emergency medicine, internal medicine (including the relevant subspecialties), neurology, neurosurgery, orthopedic surgery, pediatrics, physical medicine and rehabilitation, plastic surgery, psychiatry, radiology, surgery, and urology should take an active role in the didactic curriculum, providing instruction in the areas of their practices relevant to SCD.

3. Conferences
   a. Required conferences should include case-oriented multidisciplinary conferences, journal club, and quality management seminars relevant to clinical care on the spinal cord program.
   b. Conferences must be of sufficient quality and frequency to provide in-depth coverage of the major topics in SCIM over 1 year.
   c. There must be documentation of staff and resident attendance.
   d. Educational activities must be carried out under the direct supervision of faculty members.

C. Resident Policies

1. Supervision
   a. The level of supervision of the residents should be determined by the program director based on formal and informal evaluations.
   b. The program director should assign a member of the faculty as supervisor to each resident. Written objectives for each clinical rotation must be provided to the resident.
   c. The supervisor is responsible for the educational experience according to the written plan developed at the beginning of the training. The supervisor must meet regularly with the program director and resident for appropriate monitoring and feedback.

2. Duty hours. While the actual number of hours worked by a subspecialty resident may vary, the resident should have sufficient off-duty time to avoid undue fatigue and stress. The resident should be allowed to spend, on average, at least 1 full day out of 7 away from the hospital, and should be assigned on-call duty in the hospital no more frequently than an average of every third night. The program director is responsible for monitoring, according to written policies, on-duty assignments as well as activities outside the program.

3. Graded responsibility. Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and demonstrates additional competencies. The program should be flexible but sufficiently structured to allow for such graded responsibility.

4. Peer interaction. The resident must have opportunity to meet and share experience with residents in the core program and in other specialties. It is desirable for the resident to interact with peers in primary care and relevant subspecialties. Residents should have the opportunity to teach other residents, medical students, and other health care professionals.

5. Presence of other learners/fellows. Rotation to the SCIM program by residents from other specialties or subspecialties as well as medical students is desirable.

D. Other Program Components

1. Research and Scholarly Activity. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of
Program Requirements for Residency Education in Spinal Cord Injury Medicine (Physical Medicine and Rehabilitation)

vi. Evaluation

Evaluation is an essential component of the program. The program director and faculty must have a plan that addresses the evaluation of residents, faculty, and the program. Well-designed evaluation, combined with feedback, improves the program and focuses the learning process.

A. Residents

1. Policy and Principles
   a. Evaluation should be based on the program objectives and on the objectives of the resident's individualized program.
   b. Evaluation must be carried out semi-annually and should be followed by extensive feedback to the resident. Remedial objectives may be established.

2. The following areas should be evaluated:
   a. acquisition of described competencies,
   b. problem-solving skills,
   c. interpersonal relationship skills,
   d. ability to access, retrieve, and critically evaluate the literature,
   e. information management,
   f. quality and cost-effectiveness measures of patient care, and
   g. research and other scholarly accomplishments.

B. Faculty and Program

1. Faculty evaluation by residents should be on a semi-annual basis.

2. Areas to be evaluated are:
   a. clinical skills and competencies,
   b. teaching skills,
   c. scholarly activity,
   d. leadership skills, and
   e. interpersonal skills.

3. The educational effectiveness of the program must be evaluated annually and in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by the residents must be assessed. Written, confidential evaluations by residents should be utilized in this process. Resident satisfaction at the completion of training should also be assessed.

4. One measure of the quality of a program is the performance of its residents on the examinations of the American Board of Physical Medicine and Rehabilitation for special qualifications in SCIM.

VII. Board Certification

Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation in Spinal Cord Injury Medicine should communicate with the Executive Director of the ABPMR to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: February 2002 Effective: July 2002
Program Requirements for Residency Education in Plastic Surgery

Common Program Requirements appear in bold. Sections of text not in bold are specialty-specific requirements.

I. Introduction
Education in the specialty of plastic surgery deals with the resection, repair, replacement, and reconstruction of defects of form and function of the integument and its underlying anatomic systems, including the craniofacial structures, the oropharynx, the trunk, the extremities, the breast, and the perineum. It includes aesthetic (cosmetic) surgery of structures with undesirable form. Special knowledge and skill in the design and transfer of flaps, in the transplantation of tissues, and in the replantation of structures are vital to these ends, as is skill in excisional surgery, in management of complex wounds, and in the use of alloplastic materials. Residency education in plastic surgery is designed to educate and train physicians broadly in the art and science of plastic and reconstructive surgery and to develop a competent and responsible plastic surgeon with high moral and ethical character capable of functioning as an independent surgeon. A variety of educational plans will produce the desired result.

II. Institutional Support
A. Sponsoring Institution
One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions. The sponsoring institution must provide sufficient faculty, financial resources, and academic and library support to enable the program to comply with the requirements for accreditation.

B. Participating Institutions
1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties’ needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC).
3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is 1 month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should
   a. identify the faculty who will assume educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV and V of these Program Requirements;
   b. outline the educational goals and objectives to be attained by the resident during the assignment;
   c. specify the period of resident assignment;
   d. establish the policies and procedures that will govern resident education during the assignment.

III. Resident Appointment
A. Eligibility Criteria
The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.
1. The program director must have documentation on file of the satisfactory completion of prerequisite education before the candidate begins plastic surgery residency education.
2. In selecting from among qualified applicants, it is strongly suggested that the program participate in an organized matching program, such as the Plastic Surgery Match, the Hand Surgery Match, the Craniofacial Surgery Match, or the NRMP.

B. Number of Residents
The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education, such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.
1. Programs may not enroll more residents at any level than the number of residents approved by the RRC for that year of education.
2. Any increase in resident complement, including a temporary increase, must be approved in advance by the RRC. This also includes a temporary increase in resident complement when a resident’s education must be extended for remedial reasons.
3. Vacant positions in either program format must be filled at the same level as the vacancy. If the program director wishes to fill a vacancy with a resident at another level, this request for a temporary increase in resident complement also requires advance approval from the RRC.

C. Resident Transfer
To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section VB., prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education. Although residents may transfer from one program to another, they may not change from one format education to another, i.e., integrated to independent or vice versa, without advance approval of the RRC.

D. Appointment of Fellows and Other Students
The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents. The addition of fellows or other students requires a clear statement of the areas of education, clinical responsibilities, duration of the education, and the impact of these fellows/other students on the education of the plastic surgery residents.
IV. Faculty
The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director
There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.

1. The program director must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field.
   b. be certified in Plastic Surgery by the American Board of Plastic Surgery or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing and based at the primary teaching site.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).
3. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.
4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.
5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.
6. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s) as specified in section II.B of this document.
   b. Any change in the approved resident complement.
   c. Change in the format of the educational program.

   On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.
7. Annually compiling a comprehensive record of the number and type of operative procedures performed by each resident completing the program. This record must include all of the procedures in which the plastic surgery resident was either surgeon or assistant during the plastic surgery program. The operative log must be provided as requested in the format and form specified by the RRC and it must be signed by both the resident and the program director as a statement of its accuracy. These records must be maintained by the program director.
8. Advising resident applicants of the prerequisite requirements of the American Board of Plastic Surgery.

C. Faculty Qualifications
1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified in Plastic Surgery by the American Board of Plastic Surgery or possess qualifications judged by the RRC to be acceptable.
   c. be appointed in good standing to the staff of an institution participating in the program.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities
1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section IV.C.1.

E. Other Program Personnel
The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program
The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

A. Role of Program Director and Faculty
1. The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by
   a. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
   b. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
   c. providing residents with direct experience in progressive responsibility for patient management.
B. ACGME Competencies
The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. **Patient care** that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

2. **Medical knowledge** about established and evolving biomedical, clinical, and cognitive (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

3. **Practice-based learning and improvement** that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

4. **Interpersonal and communication skills** that result in effective information exchange and collaboration with patients, their families, and other health professionals.

5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
   a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
   b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
   c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings of, for example, case reports or clinical series.
   d. Active participation in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

D. Resident Duty Hours and the Working Environment
Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allottedment of residents’ time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. **Supervision of Residents**
   a. All patient care must be supervised by qualified faculty.
      - The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
   b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
   c. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

2. **Duty Hours**
   a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.
   b. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
   c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
   d. Adequate time for rest and personal activities must be provided between all duty periods. This should consist of a 10-hour time period provided between all daily duty periods, and after in-house call.

3. **On-Call Activities**
   The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.
   a. In-house call must occur no more frequently than every third night, averaged over a four-week period.
   b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, maintain continuity of medical and surgical care, transfer care of patients, or conduct outpatient clinics.
   c. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the resident has not previously provided care.
   d. At-home call (pager call) is defined as call taken from outside the assigned institution.
      1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
      2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

4. Moonlighting
   a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
   b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III. D. I.k.
   c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), ie, internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

5. Oversight
   a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.
   b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

6. Duty Hours Exception
   An RRC may grant exceptions for up to 10% of the 80-hour limit, to individual programs based on a sound educational rationale. However, prior permission of the institution's GMEC is required.

E. The Educational Program

The RRC accredits independent plastic surgery programs of 2 or 3 years or integrated programs of 5 or 6 years. All prerequisite residency education must be taken within programs accredited by the ACGME, the Royal College of Physicians and Surgeons of Canada, or the American Dental Association.

1. Program Formats
   a. Independent format: residents complete 2 or 3 years of concentrated plastic surgery education, with 12 months of chief responsibility, after successful completion of one of the following prerequisite curricula:
      1) A minimum of 3 years of clinical education with progressive responsibility in a general surgery program. A transitional year or rotating internships may not be used to fulfill this requirement.
      2) A complete neurological surgery, orthopaedic surgery, otorhinolaryngology, or urology residency.
      3) Satisfactory completion of an educational program in oral and maxillofacial surgery approved by the American Dental Association (ADA) is an alternate pathway for prerequisite education prior to a plastic surgery residency. This pathway is available only to those individuals holding the DMD/MD or DDS/MD degree. This education also must include a minimum of 24 months of progressive responsibility on surgical rotations under the direction of the general surgery program director after receipt of the MD degree. Rotations in general surgery during medical school, prior to receiving the MD degree, will not be considered as fulfilling any part of the 24-month minimum requirement.
   b. Integrated format: residents complete 5 or 6 years of ACGME-accredited plastic surgery education following receipt of an MD or DO degree from an institution accredited by the Liaison Committee on Medical Education (LCME) or the American Osteopathic Association (AOA). Graduates of schools of medicine from countries other than the United States or Canada must present evidence of final certification by the Educational Commission for Foreign Medical Graduates (ECFMG).
      1) The integrated curriculum must contain 5 or 6 years of clinical surgical education under the authority and direction of the plastic surgery program director.
      2) Of these 5 or 6 years, 24 months must be concentrated plastic surgery education with no less than 12 months of chief responsibility on the clinical service of plastic surgery. Residents must complete the last 24 months of their education in the same plastic surgery program.
      3) Additional clinical experiences appropriate to plastic surgery education should be provided in anesthesiology, burn management, critical care medicine, emergency medicine, cardiothoracic surgery, general surgery, neurological surgery, oncologic surgery, orthopedic surgery, otorhinolaryngology, pediatric surgery, trauma management, and vascular surgery.
   c. Prior to entry into the program, each resident must be notified in writing of the required program length.

2. Didactic Component

The scope of plastic surgery is so broad that a well-organized, comprehensive, and an effective educational curriculum is necessary to ensure that all residents obtain experience in all the various areas of the specialty.
   a. The faculty should organize the conferences which allow discussion of topics selected to broaden knowledge in the wide field of plastic surgery and to evaluate current information.
   b. Conferences must include the pertinent basic science subjects, such as anatomy, physiology, pathology, embryology, radiation biology, genetics, microbiology, pharmacology, and also practice management, ethics, and medicolegal topics.
   c. Periodic review of the morbidity and mortality experiences of the service must be documented.
   d. The residents must participate and present educational material at conferences. Adequate time for preparation should be permitted, both to maximize the educational experience for the residents and to emphasize the importance of the experience.
   e. The attendance of faculty and residents at conferences should be documented.

3. Clinical Component

Knowledge of surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pharmacology, wound healing, surgical pathology and microbiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation are fundamental to the specialty. The judgment and technical capability for achieving satisfactory surgical results are mandatory qualities for the plastic surgeon.
   a. Specific clinical experience should be provided in the following areas:
      1) Congenital defects of the head and neck, including clefts of the lip and palate, and craniofacial surgery.
      2) Neoplasms of the head and neck, including the oropharynx, and endoscopy.
      3) Craniomaxillofacial trauma, including fractures.
      4) Aesthetic (cosmetic) surgery of the head and neck, trunk, and extremities.

Program Requirements for Residency Education in Plastic Surgery
5) Plastic surgery of the breast.
6) Surgery of the hand/upper extremities.
7) Plastic surgery of the lower extremities.
8) Plastic surgery of congenital and acquired defects of the trunk and genitalia.
9) Burn management, acute and reconstructive.
10) Microsurgical techniques applicable to plastic surgery.
11) Reconstruction by tissue transfer, including flaps and grafts.
12) Surgery of benign and malignant lesions of the skin and soft tissues.

b. The sponsoring and participating institutions of the program must have an adequate number and variety of adult and pediatric surgical patients for resident education. Experience in all 12 categories of surgical experience is important and must not be limited by excessive clinical responsibility in any one or several categories or by excessive nonclinical activities.
c. Generally equivalent and adequate distribution of categories and cases among the residents must be demonstrated.
d. Resident experience in patient management should demonstrate graduated and progressive responsibility.
e. Experience in a well-organized and well-supervised outpatient clinic operating in relation to an inpatient service used in the program is required. This experience must include:
   1) the opportunity to see patients, establish provisional diagnoses, and initiate preliminary plans prior to the patient's treatment;
   2) an opportunity for follow-up care so that the results of surgical care may be evaluated by the responsible residents; and
   3) supervision under appropriate faculty supervision.
f. Experience in office practice procedures and management is strongly suggested. If residents participate in preoperative and postoperative care in a private office, the program director must ensure that the resident functions with an appropriate degree of responsibility with adequate supervision.
g. Recognizing the comprehensive nature of the specialty of plastic surgery, there should be clinical resources for the education of plastic surgery residents in anesthesiology, burn management, emergency medicine, cardiothoracic surgery, general surgery, neurological surgery, orthopedic surgery, otolaryngology, pediatric surgery, surgical critical care, surgical oncology, trauma management, and vascular surgery.

VI. Evaluation

A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include:
   a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
   b. mechanisms for providing regular and timely performance feedback to residents that includes at least
      1) written semiannual evaluation that is communicated to each resident in a timely manner and
      2) the maintenance of a record of evaluation for each resident that is accessible to the resident.
   c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.
d. a written basis for annual advancement of a resident.

2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty Evaluation

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, ie, at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment

a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.

VI. Experimentation and Innovation

A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

Common Program Requirements: 7/1/03
ACGME: 2/15/94 Effective: 1/1/95 (major revision) Technical revision 7/1/99
ACGME: 9/1/99 Effective editorial revision: 1/1/00
ACGME: 2/1/01 Effective: 7/1/02 Competency revisions
Program Requirements for Residency Education in Craniofacial Surgery (Plastic Surgery)

I. Introduction

A. Definition of the Specialty
1. Craniofacial surgery is a subspecialty of plastic surgery that includes the in-depth study and reconstructive treatment of disorders of the soft and hard tissues of the face and cranial areas, such as congenital anomalies and posttraumatic and other acquired conditions. Although craniofacial surgery includes combined intracranial and extracranial surgery, the broad scope of the subspecialty is applicable to other procedures in the craniofacial region. Surgeons trained in craniofacial surgery should be able to manage any hard- or soft-tissue reconstruction problem of the craniofacial region.
2. The team approach to many problems may be appropriate, resulting in the integration of other specialties into the craniofacial team. In addition to plastic surgery, these specialties should include neurological surgery, ophthalmology, otolaryngology, oral surgery, and orthodontics.
3. The primary goals of a craniofacial surgery educational program are to provide a broad education in the art and science of the specialty and sufficient experience for surgeons to acquire competency as specialists in the field.

B. Duration and Scope of Education
1. The length of the educational program in craniofacial surgery is 1 year. Before entry into the program, each prospective craniofacial surgery resident must be notified in writing of the length of the program.
2. Admission to a craniofacial surgery educational program is open to those who have satisfactorily completed an accredited plastic surgery residency program or to other appropriately qualified surgeons.
3. The craniofacial surgery educational program should be associated with an accredited program in plastic surgery; exceptions must be justified. The educational relationship should demonstrate the use of shared resources to include, for example, faculty, educational conferences, patient management, and other institutional resources.

C. Program Goals and Objectives
1. Although educational programs in craniofacial surgery may differ in format and objectives, each program must demonstrate that residents are provided with the opportunity to obtain the knowledge, skills, clinical judgment, and attitudes essential to the practice of craniofacial surgery.
2. The craniofacial surgery resident must be provided with progressive senior surgical responsibility in the four essential phases of total patient care: preoperative evaluation, therapeutic decision making, operative experience, and postoperative management.
3. The craniofacial surgery resident must be provided with sufficient knowledge of the sciences of embryology, anatomy, physiology, and pathology as these relate to the diagnosis and treatment of diseases of the craniofacial areas. Education in the diagnosis and management of disease and deformity involving the jaws, teeth, and occlusion also must be included in the program.

II. Institutional Organization

A. Sponsoring Institution
1. There must be one institution responsible for the conduct of the educational program as required by the Institutional Requirements.
2. The sponsoring institution must provide sufficient resources to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.
3. A sufficient number of patients must be available to ensure inpatient and outpatient experiences for each craniofacial surgery resident without diluting the educational experience for regularly enrolled plastic surgery residents or residents in other specialties.

B. Participating Institutions
1. If the resources of two or more institutions are required to support the program, interinstitutional agreements must be developed by the sponsoring and participating institutions as required by the Institutional Requirements.
2. Participation by any institution that provides 2 months or more of the educational program must be approved prospectively by the Residency Review Committee (RRC) for Plastic Surgery.
3. Assignments to participating institutions must be based on a clear educational rationale and should provide special clinical resources not otherwise available to the program.

C. Library
1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals at each institution participating in the program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

D. Appointment of Residents
1. The RRC will approve a total number of residents in the program per year, based on the number and qualifications of the faculty, the volume and variety of patients available for educational purposes, and the institutional resources committed to the program. The minimum faculty/resident ratio is 1:1.
2. The program may not graduate more residents in any given year than are approved by the RRC unless prior approval has been obtained.

III. Faculty Qualifications and Responsibilities
The program director and faculty are responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director
There must be one program director responsible for the program.
1. Qualifications of the program director
   a. Requisite and documented clinical, educational, and administrative abilities and experience in craniofacial surgery.
   b. Licensure to practice medicine in the state where the sponsoring institution is located.
   c. Certification in plastic surgery and certification in the subspecialty or judged by the RRC to possess appropriate qualifications.
Program Requirements for Residency Education in Craniofacial Surgery (Plastic Surgery)

d. Appointment in good standing to the medical staff of an institution participating in the program.

2. Responsibilities of the program director
   a. Preparation of a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents at each level of education and for each major clinical assignment. This statement must be distributed to residents and members of the faculty. It should be readily available for review.
   b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
   c. Selection and supervision of faculty and other program personnel at each institution participating in the program.
   d. Supervision of residents through explicit written description of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
   e. Regular evaluation of the resident's knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
   f. The program director, with participation of the faculty, shall
      1. at least semiannually evaluate the knowledge, skills, and professional growth of the craniofacial surgery residents, using appropriate criteria and procedures;
      2. communicate each evaluation to the resident in a timely manner;
      3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
      4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
      5. provide a final written evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation should be part of the resident's permanent record maintained by the institution.
   g. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
   h. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. The program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services for residents.
   
   Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.
   i. Prepare an accurate statistical and narrative description of the program as requested by the RRC.
   j. Notify the Executive Director of the RRC for Plastic Surgery of any changes that might substantially alter the educational experience, eg, a change in program director or changes in participating institutions.

B. Faculty

1. There must be a sufficient number of faculty with documented qualifications in craniofacial surgery to instruct and supervise adequately all residents in the program. Members of the faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.

2. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support for the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

3. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

4. The faculty must be organized and have regular, documented meetings to review program goals and objectives and program effectiveness in achieving them. At least one resident representative should participate in these reviews.

5. The faculty should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support for the program, the volume and variety of patients available to the program for educational purposes, the didactic course of study, the performance of the faculty, and the quality of resident supervision.

C. Other Program Personnel

The program must be provided with the professional, technical, and clerical personnel to support the administration and educational conduct of the program.

IV. The Educational Program

The program director and the faculty are responsible for providing the intellectual environment necessary for acquiring the knowledge, skills, clinical judgment, and attitudes that are essential for the practice of the specialty. These objectives can be achieved only when the program leadership, the faculty, and the sponsoring institution are committed to the educational program and when appropriate resources and facilities are available.

A. General

1. The program director and faculty must prepare and comply with written educational goals for the program. All educational components of the program must be related to program goals and objectives.

2. The program design and structure must be approved by the RRC as part of the review process.

3. Clinical, basic science, and research conferences; monthly morbidity and mortality sessions; and other conferences focused specifically on craniofacial surgery must be conducted regularly and as scheduled. The topic and subject matter of these conferences must be linked to the goals and objectives for the course of study.

4. Written lines of responsibility describing the relationship between craniofacial surgery residents and plastic surgery residents regarding their clinical responsibilities must be supplied to the RRC at the time of the review.

B. Academic and Clinical Components

The educational program should include the areas outlined below.

1. Basic science
   a. Normal and abnormal embryology and fetal development of the head and neck with special emphasis on the development of the cranium, the maxillary and mandibular complex, the mechanisms of clefting, and the development of the temporomandibular joint and surrounding musculature.
   b. Normal growth and development of the cranium and face with special attention to dental development and occlusion and to
the consequences of congenital anomalies, trauma, surgery, and radiation.
c. Dental radiographs, cephalometric analysis, and study models; construction of splints and their use in craniofacial and maxillofacial surgery.
d. Interpretation of sophisticated diagnostic imaging modalities used in craniofacial surgery, such as computed tomography, magnetic resonance imaging, and arteriography.
e. Standards of beauty and normalcy as they relate to the face and an understanding of the relationship of cephalometric values to soft-tissue features.
f. Bone healing, including primary healing, malunion, nonunion, osteomyelitis, and the physiology and methods of bone grafting.
g. Use of alloplastic materials used for reconstruction.
h. Congenital, developmental, and secondary deformities of the head and face, including the embryology, pathogenesis, anatomy, natural history, and course of the disease following treatment.
2. Congenital anomalies and disorders
   The foundation of this subspecialty is the treatment of congenital craniofacial anomalies. Because such treatment can be applied to a variety of acquired deformities, the program must include in-depth training, education, and participation in the diagnosis, planning, operative treatment, and postoperative care of craniofacial problems including but not necessarily limited to:
   a. craniosynostosis;
   b. congenital and developmental deformities of the face that may be related to craniosynostosis, including midface hypoplasia and facial asymmetries;
   c. syndromal malformations of the face such as Treacher Collins, hemifacial microsomia;
   d. congenital orbital dysmorphologies including orbitofacial clefts and hypertelorism;
   e. facial cleft deformities;
   f. atrophic and hypertrophic disorders such as Romberg's disease, bone dysplasia;
   g. craniofacial manifestations of systemic disorders such as neurofibromatosis and vascular malformations and lymphatic disorders;
   h. posttraumatic complex skull and facial deformities;
   i. congenital and acquired disorders of the facial skeleton and occlusal relationships; and
   j. craniofacial concepts in the exposure and/or reconstruction in cranial base oncologic surgery.
3. Clinical activities
   The clinical education should include active participation in an integrated craniofacial team with sufficient patient volume to provide an exposure to diverse craniofacial problems. In addition to plastic surgery, the craniofacial team should include neurological surgery, ophthalmology, otolaryngology, dentistry, and orthodontics. Clinical activities should include:
   a. education, training, and participation in the surgical methods of craniofacial surgery, including rigid fixation of skull facial bones and training in the fabrication of dental splints;
   b. preoperative assessment and decision making regarding methods and timing of intervention in craniofacial disorders;
   c. management of craniofacial patients from the preoperative through the postoperative stages; and
   d. knowledge of critical care in the postoperative management of craniofacial patients.
4. Education and experience in the following areas is desirable:
   a. Diagnostic methods and treatment techniques of temporomandibular joint disorders.
   b. Aesthetic contour deformities such as maseteric hypertrophy, frontal cranial remodeling.
   c. Elective orthognathic surgery for orthodontic problems.
   d. Surgical correction of congenital clefts of the lip and palate with emphasis on both primary and late repairs and revisions.
   e. Reconstructive management of defects after ablative surgery for malignancy about the maxillofacial region, including pedicle and free flap surgery and bone grafting techniques.
C. Operative Experience
   1. A program of graduate education in craniofacial surgery must provide a sufficient number and variety of surgical experiences to ensure that residents receive sufficient exposure to a wide range of diseases and injuries to the soft and hard tissues of the maxillofacial region.
   2. The resident must be allowed senior responsibility as the operating surgeon while performing critical portions of the surgery in the operative management of a range of common craniofacial surgery procedures.
   3. The craniofacial surgery resident is not a substitute for faculty and should not act on a regular basis as a teaching assistant to the chief resident in plastic surgery. If the craniofacial surgery resident and the plastic surgery resident share operative experience, only one surgeon may receive credit as surgeon for the experience.
D. Resident Policies
   1. Supervision
      All patient care services must be supervised by appropriately qualified faculty. The program director must ensure, direct, and document proper supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with other residents and faculty. The level and appropriateness of resident supervision must be based on the severity and complexity of the patient's condition.
   2. Duty hours and conditions of work
      The resident's work schedule should be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities, and be on call in the hospital no more often that every third night. The ratio of hours worked to on-call time will vary and necessitate flexibility.
E. Program Research and Scholarly Activity
   Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
   1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty may be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity.
   2. The types of activities should include:
      a. participation in clinical discussion, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship.
      b. participation in journal clubs and conferences.
      c. participation in regional and national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in peer-reviewed journals.
II. Institutional Organization

A. Sponsoring Institution

The educational program should have one sponsoring institution that has primary responsibility for the entire program. The sponsoring institution should provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to permit the program to comply with the requirements for accreditation.

B. Participating Institutions

1. When multiple institutions participate in the educational program, the commitment of each participating institution must be documented in a written agreement that complies with the ACGME Institutional Requirements.

2. Assignments to participating institutions must be based on an appropriate educational rationale. Assignments that dilute the education of residents or that do not provide proper supervision and coordination of educational activities should not be established or maintained.

3. Assignments to participating institutions that are geographically distant from the sponsoring institution are not desirable. To be justifiable, such assignments must offer special resources or opportunities not otherwise available to the program.

4. The number and location of participating institutions must not preclude the participation of residents and faculty in the educational activities of the hand surgery course of study.

C. Appointment of Residents

1. The total number of residents must be approved in advance by the Residency Review Committee (RRC). The number of residents shall be based primarily on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to resident education.

2. Programs may not graduate more hand surgery residents in any given year than the number of residents approved by the RRC.

3. Any increase, including a temporary increase in resident complement, must receive prior approval of the RRC. Requests for changes in the approved resident complement of a program must include a strong educational rationale.

III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

A single program director must be responsible for the program.

1. Qualifications of the program director

a. Requisite and documented clinical, educational, and administrative abilities and experience.

b. License to practice medicine in the state where the institution that sponsors the program is located.

c. Certification by the appropriate ABMS Board or suitable equivalent qualifications in the appropriate specialty and a certificate of added qualifications in hand surgery or suitable equivalent qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.

d. Appointment in good standing to the medical staff of an institution participating in the program.
Program Requirements for Residency Education in Hand Surgery (Plastic Surgery)

1. The hand surgery faculty must be certified by the one of the sponsoring boards, or possess suitable equivalent qualifications and be certified in hand surgery or possess suitable equivalent qualifications. The majority of the faculty must possess certificates of added qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.

2. There must be a sufficient number of qualified faculty to adequately instruct and supervise hand surgery residents to ensure optimal patient care and resident education. The faculty must be able to devote sufficient time to the program to meet their supervisory and teaching responsibilities.

3. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, and an ongoing commitment to their own continuing medical education, and participation in scholarly activities.

4. A faculty member at each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

5. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving these goals. The hand surgery resident should participate in these reviews.

6. The faculty should, at least annually, evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the acceptability of added qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.

C. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for developing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty must be research investigators, the faculty as a
whole must demonstrate broad involvement in scholarly activity. Scholarship is defined as an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. This activity should include

1. participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;
2. participation in journal clubs and research conferences;
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations’ meetings and publication in their journals;
4. participation in research, particularly in projects funded following peer review and/or that result in publications or presentations at regional and national scientific meetings;
5. offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research; and
6. provision of support for resident participation in scholarly activities.

D. Other Program Personnel
Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Facilities and Resources

A. Inpatient Facilities
1. Inpatient facilities should have a sufficient number of beds, support personnel, and proper equipment to ensure quality patient care and education.
2. Operating suite and diagnostic and treatment facilities must contain technologically current equipment.

B. Outpatient Facilities
Appropriately equipped outpatient facilities including support staff, operating suites, and clinic and office space must be available for resident participation in the preoperative evaluation, treatment, and postoperative follow-up of patients for whom the resident has responsibility.

C. Library Facilities
1. The residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangements with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.

V. Educational Program

A. Program Design
1. The program director and faculty must prepare and implement written educational goals for the program.
2. The program design and/or structure must be approved by the RRC as part of the regular review process.

B. Clinical Component
1. Residents must be provided with education in surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pathology, pharmacology, wound healing, microbiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation.
2. A sufficient number and variety of adult and pediatric hand surgery patients must be available for resident education.
3. Generally equivalent and sufficient distribution of operative procedures among the residents in all categories of hand surgery must be demonstrated.
4. Residents should be provided with graduated and progressive patient management responsibility.
5. Because judgment and technical capability to achieve satisfactory surgical results are mandatory qualifications for the hand surgeon, education should be provided in the following areas:
   a. Skin repair, including grafts and flaps, multiple tissue flaps, free microscopic tissue transfers, and insertion of tissue expanders
   b. Fingertip injuries
   c. Tendon repair, including flexor tendon repair and graft, implantation of tendon spacer, extensor tendon repair, and tenolysis/tenodesis
   d. Tendon transfer and tendon balancing
   e. Nerve repair, including major and digital, graft, neurolysis, surgical treatment of neuroma, transpositions, and nerve decompressions
   f. Management of fractures and dislocations, including phalangeal and metacarpal with and without internal fixation; wrist, radius, and ulna with and without internal fixation; and injuries to joint ligaments
   g. Bone grafts
   h. Joint and tendon sheath repairs, including release of contracture, synovectomy, arthroplasty with and without implant, arthrodesis, trigger finger release, and stiff joints that result from rheumatoid or other injury
   i. Pollicization or ray transfer
   j. Foot to hand transfer
   k. Tumors, benign and malignant
   l. Dupuytren’s contracture
   m. Replantation, revascularization
   n. Amputations
   o. Fasciotomy, deep incision and drainage for infection, and wound debridement
   p. Congenital deformities, including syndactyly and others
   q. Management of upper extremity vascular disorders and insufficiencies
   r. Foreign body, implant removal
   s. Thermal injuries
   t. Arthroscopy
   u. Upper extremity pain management

C. Didactic Components
1. A comprehensive, organized course of study must be offered, to include educational conferences that are well defined, documented, and regularly held. At minimum, the program must provide a didactic component for clinical education referencing section V.B.1 of these Program Requirements for Residency Education in Hand Surgery.
2. The written course of study should reflect careful planning, with evidence of a cyclical presentation of core specialty knowledge supplemented by the addition of current information, including practice management, ethics, and medicolegal topics as they relate to hand surgery.
   a. Conferences must include basic science subjects related to clinical surgery of the hand, such as anatomy, physiology, pathology, genetics, microbiology, and pharmacology. A periodic review of the morbidity and mortality experience of the service must be included.
   b. A list of the conferences should be maintained and available for review at the time of the site visit.
   c. Conferences should be attended by both the residents and the faculty, and such attendance should be documented.
   d. Conferences should be organized by the faculty to ensure that sufficient educational experience is provided. Hand surgery residents assigned to participating institutions other than the
sponsoring institution should attend the hand surgery conferences at those sites.
6. Residents should make presentations at conferences and actively participate in conference discussions. Adequate time for resident preparation should be permitted to maximize the educational experience.

7. Hand surgery residents should be encouraged to pursue clinical or basic science research interests.

D. Supervision
1. All patient care services must be supervised by qualified hand surgery faculty. The program director must ensure, direct, and document proper supervision of residents at all times.
2. Residents must be provided with rapid, reliable systems for communicating with faculty at all times.
3. Hand surgery residents may function as intermediate supervisors when documented prior experience makes it appropriate, but faculty supervision must be available.

E. Duty Hours
1. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. The ratio of hours worked to on-call time will vary, particularly at senior levels, and flexibility will be necessary.
2. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.
3. Sufficient support services must be provided to ensure that residents are not required to spend excessive time in noneducational activities that can be discharged properly by other personnel.
4. The hand surgery residency is a full-time responsibility. Activities outside the educational program must not interfere with resident opportunity for rest, relaxation, and study.

F. Appointment of Other Residents
1. The appointment of other residents for hand surgery education must not dilute or detract from the educational opportunities of hand surgery residents.
2. The appointment of other residents to the hand surgery service requires a clear statement of the areas of education, clinical responsibilities, and duration of the education. This statement must be supplied to the RRC at the time the program is reviewed.
3. If such residents so appointed will, in the judgment of the RRC, detract from the education of the hand surgery residents, the accreditation status of the program may be adversely affected.

VI. Evaluation

A. Resident Evaluation
The program director and faculty are responsible for regularly evaluating the residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

B. Faculty Evaluation
1. At least annually, all individual faculty members must be formally evaluated by the program director. Hand surgery residents should be provided with the opportunity to evaluate faculty.
2. A mechanism for sharing the results of such evaluations with the faculty that preserves resident confidentiality in the evaluation process must be employed.
3. The program should demonstrate that such evaluations are used in improving the program.

C. Program Evaluation
1. The educational effectiveness of a program must be evaluated at least annually. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by hand surgery residents should be utilized in this process.
2. One measure of the quality of a program is the performance of its graduates on the examination for the certificate of added qualifications in hand surgery given by one of the sponsoring boards. The RRC may consider this information as part of the overall evaluation of the program.

VII. Board Certification
Residents who plan to seek hand surgery certification as administered by the American Board of Plastic Surgery should communicate with the secretary of the board to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: September 1997 Effective: July 1998
Program Requirements for Residency Education in Preventive Medicine

I. Introduction

A. Definition
Preventive Medicine is the specialty of medical practice that focuses on the health of individuals, communities, and defined populations. Its goal is to protect, promote, and maintain health and well-being and to prevent disease, disability, and death. Preventive medicine specialists have core competencies in biostatistics, epidemiology, environmental and occupational medicine, planning and evaluation of health services, management of health care organizations, research into causes of disease and injury in population groups, and the practice of prevention in clinical medicine. They apply knowledge and skills gained from the medical, social, economic, and behavioral sciences. Preventive medicine has three specialty areas with common core knowledge, skills, and competencies that emphasize different populations, environments, or practice settings: aerospace medicine, occupational medicine, and public health and general preventive medicine.

1. Aerospace medicine focuses on the health of the operating crews and passengers of air and space vehicles, together with the support personnel who are required to operate such vehicles. Segments of this population often work and live in remote, isolated, and sometimes closed environments under conditions of physical and psychological stress.

2. Occupational medicine focuses on the health of workers including the ability to perform work; the physical, chemical, biological, and social environments of the workplace; and the health outcomes of environmental exposures. Practitioners in this field diagnose, treat, and prevent morbidity caused by environmental exposures and stressors. They recognize that work and the environment in which work is performed can have favorable or adverse effects upon the health of workers as well as of other populations; that the nature or circumstances of work can be arranged to protect worker health; and that health and well-being at the workplace are promoted when workers' physical attributes or limitations are accommodated in job placement.

3. Public health and general preventive medicine focuses on promoting health, preventing disease, and managing the health of communities and defined populations. These practitioners combine population-based public health skills with knowledge of primary, secondary, and tertiary prevention-oriented clinical practice in a wide variety of settings.

B. Objectives and Components of the Residency Educational Process
The objective of preventive medicine is to develop in physicians the competencies requisite to the practice of preventive medicine in the recognized specialty areas. The main components of the residency educational process are:

1. definition of specific educational goals in terms of competencies, skills, and knowledge, expressed in behavioral, measurable terms;
2. assessment of the incoming resident relative to the specific educational goals;
3. design and provision of educational experiences through which specific educational goals may be achieved;
4. documentation of provision of educational experiences and the attainment of educational goals in terms of interim and overall outcome performance measures; and
5. use of periodic performance measures to determine the quality of the educational experience and the clinical competence of the individual resident, as well as the quality of the program.

C. Duration and Scope of Education
1. An accredited residency program in preventive medicine must provide 36 months of training.
2. The educational program must include the following core components:
   a. A 12-month clinical phase leading to the acquisition of clinical competencies as specified in III.E
   b. A total of 24 months in
      1. An academic phase leading to the acquisition of academic competencies as specified in III.F, and an MPH or other appropriate post-graduate degree;
      2. A minimum of 12 months in a practicum phase leading to the acquisition of core preventive medicine and specialty (ie aerospace, occupational, or public health) competencies as specified in III.G. through III.J.

Programs with a status of full accreditation may pursue combined training programs. Programs seeking to integrate preventive medicine training with other Accreditation Council for Graduate Medical Education (ACGME)-accredited training (combined programs) must meet all preventive medicine requirements. Programs must also meet all requirements as specified by both certifying boards of the integrated residencies.

II. Residency Design

A. General
1. Identification of specialty area
Residency programs must identify the specialty area of preventive medicine of the residency, the period of desired length of accreditation (1, 2, or 3 years), and the planned number of residents in each year.

   Documentation Requirement: The appropriate form must be completed and supplied in advance of a planned site visit.

   Measure: Accurately completed form.

2. Change in training period
The length of residency training for a particular resident may be extended by the program director if that resident needs additional training. If the extension is for only 6 months or less, the program director must notify the Residency Review Committee (RRC) of the extension and must describe the proposed curriculum for that resident and the measures taken to minimize the impact on other residents. Any changes in rotation schedules should be included in the notification. Approval must be obtained in advance from the RRC if the extension is greater than 6 months.

3. Educational goals overview
The program must prepare a written overview statement outlining the educational goals of the program with respect to knowledge, skills, and competencies to be acquired by residents during the training period. This statement must be distributed to residents and members of the teaching staff.

   Documentation Requirement: The written overview statement outlining the educational goals of the program with respect to knowledge, skills, and competencies of residents to be acquired during the training period must be supplied in advance of a planned site visit.
Measure: Overview statement covers core and appropriate specialty area goals and competencies. Content is preventive medicine. Depth and breadth are commensurate with the selected specialty area. Indicates how the knowledge, skills, and competencies are to be met.

4. Program Schedule
Prepare a written schedule of activities for each resident during the accredited length of the residency that demonstrates the provision of knowledge, skills, and competencies, including directly supervised clinical care, outlined in the educational goals. The residency program must specify a minimum set of competencies that each resident must acquire prior to completion of the program. This statement must be distributed to residents and members of the teaching staff.

Documentation Requirement: The written schedule must be submitted in advance of a planned site visit.

Measure: The statement provides a coherent approach to provision of an overall resident experience that will create the opportunity for the resident to acquire the knowledge, skills, and core and specialty area competencies during the accredited length of the residency.

5. Resident Support
Salaries and benefits of individual residents must comply with the institutional requirements for funding of residents.

6. Grievance Process
The program must ensure that all training sites have a grievance process that is in compliance with the Institutional Requirements (Institutional Agreements and Conditions of Resident Employment). A written statement describing the grievance process for each training site must be available for review at the time of the site visit.

Documentation Requirement: Appropriate policies included in institutional agreements for all training sites.

Measure: Policies are accurate and comply with the Institutional Requirements.

B. Resident Qualifications
1. Entering the clinical phase
Residents entering the clinical phase must meet one of the eligibility requirements as outlined in the Institutional Requirements section II.A.1. In addition, residents must have completed steps I and II of the United States Medical Licensing Examination (USMLE) or, prior to 1996, its equivalent.

2. Entering either the academic or practicum phases
The entering resident must have completed training in an ACGME-accredited clinical year (12 months) with a minimum of 6 months of direct patient care. Direct patient care is the provision of preventive, diagnostic, and therapeutic interventions to patients. (Note: Hereinafter patient care is defined as the provision of preventive, diagnostic, and therapeutic intervention to patients.)

3. Entering the practicum phase only
   a. The entering resident must have completed an ACGME-accredited clinical year and have an MPH or other appropriate postgraduate degree. The MPH or other appropriate postgraduate degree must be accredited by the Council on Education in Public Health (CEPH) or other appropriate postgraduate accrediting body.
   b. If the resident has not been awarded an MPH or other appropriate postgraduate degree, then knowledge of each of the four core subjects—biostatistics, epidemiology, environmental and occupational health, and health services organization and administration—must have been obtained through at least 40 contact hours for each course in an academic setting. The resident must complete the accredited MPH, or other appropriate postgraduate degree, prior to the end of the residency program.
   c. The entering resident must have completed training in an ACGME-accredited clinical year (12 months) with a minimum of 6 months of direct patient care. Direct patient care is the provision of preventive, diagnostic, and therapeutic interventions to patients.

Documentation Requirement: The program must maintain and make available for site visitor inspection a file for each resident (the resident file) that contains copies of certificates and academic institution records to document the specified requirements. Copies of these documents must be submitted to the RRC on request.

Measure: Resident files contain the appropriate documentation.

C. Program Director
1. Qualifications
The entire residency program must be under the supervision of one physician, the program director, who is certified by the American Board of Preventive Medicine (ABPM) in the appropriate specialty area of preventive medicine or has suitable qualifications and experience as determined by the RRC.

The program director must have the following:
   a. Clinical, educational, and administrative experience
   b. License to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)
   c. Appointment in good standing to the medical staff of an institution participating in the program

Documentation Requirement: The curriculum vitae (CV) of the program director must be submitted in advance of a site visit, when program directors change, and on the request of the RRC.

Measure: Documentation in the CV that the requirements are met.

2. Program director responsibilities
The program director is responsible for and must be able to demonstrate the provision of the following:
   a. Supervision of residents to achieve the objectives of the educational goals of the residency and educational plans of the residents.
   b. Counseling of residents in the academic phase in the selection of assignments, services, or elective courses that will assist the resident in achieving the skills and knowledge needed in the resident's practicum experiences and intended fields of practice in preventive medicine.
   c. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
   d. Selection, development, and supervision of the faculty and other program personnel at each institution participating in the program.
   e. Supervision of residents for applicable patient care and practicum experiences through explicit written descriptions of supervisory lines of responsibility. Patient care responsibilities include gradual assumption of clinical responsibility under direct supervision for a variety of clinical problems and preventive encounters. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
   f. Provision of information that describes the program's accreditation status, educational objectives, and structure to each applicant, or in the case of a major change to each resident.
Faculty

2. Faculty responsibilities
   a. All members of the faculty must demonstrate a strong interest in the education of residents and support of the goals and objectives of the program through provision of appropriate knowledge, skills, direct clinical supervision, or competencies. Faculty must also demonstrate a commitment to their own continuing education and participation in scholarly activities.
   b. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include the following:
      1. Active participation of the teaching staff in discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
      2. Participation in journal clubs and research conferences.
      3. Active participation in regional or national professional and scientific societies, particularly through presentation at the organizations’ meetings and publication in their journals. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
      4. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
      5. Provision of support for resident participation in scholarly activities.

3. Active participation in the review of residents and of planning and review of the residency program.

Documentation Requirement: Minutes of planning meetings; logs of journal club, rounds, or case conference attendance; membership on thesis committees; updated CVs for faculty and staff that document continuing education, meeting attendance, and publications.

Measure: Program documents attesting to faculty contributions to program planning, review, and resident education.

E. Sponsoring Institution

The sponsoring institution must maintain office and laboratory space and access to computer facilities. A collection of basic reference texts and periodicals in preventive medicine and public health must be maintained. Residents must be provided with office facilities and support services during assigned duty hours. Funds must be provided for residents for travel to appropriate professional meetings.

Documentation Requirement: Facilities and support are documented at the time of the site visit.

Measure: Facilities and support are provided.

1. For programs offering training in basic clinical competencies
   The institution’s Graduate Medical Education Committee (GMEC) should approve the program. In addition to the preventive medicine residency, there must be at least one ACGME-accredited residency at the same institution that provides direct patient care.

Documentation Requirement: The program has on file and available to the program director documentation of an ACGME-accredited residency program that provides direct patient care.

Measure: The program has on file and available to the site visitor current documentation of approval of the clinical year by the institution’s GMEC.

2. For programs offering training in core preventive medicine knowledge (academic phase)
   Core preventive medicine knowledge is offered through a course of study leading to the degree of Master of Public Health or other appropriate postgraduate degree. The MPH or other appropriate postgraduate degree must be accredited by the CEPH or other appropriate postgraduate accrediting body.

The sponsoring institution must provide an environment of inquiry and scholarship in which residents have structured research opportunities to participate in the development of new knowledge.

Documentation Requirement: Accreditation documentation. A description of the sponsoring institution must include a statement of its research activities and how participation in these is available to the resident.

Measure: Research opportunities are available to the resident. The accreditation is documented.

3. For programs offering training in competencies of preventive medicine practice (practicum phase)
   a. Aerospace medicine
      1. The year of acquisition of competencies in aerospace medicine practice must be accomplished in an institutional setting where operational aerospace problems are routinely encountered and aerospace life support systems are under active study and development.
      2. Laboratory facilities should be equipped to provide simulated environments in which the effects of and adaptation to extreme conditions of temperature, barometric pressure, acceleration, weightlessness, and psychological stress can be studied.
b. Occupational medicine
Acquisition of practice competencies in occupational medicine must be accomplished in institutions that provide comprehensive occupational health services to defined work groups, including regular and frequent presence in the work sites served.

c. Public health and general preventive medicine
The sponsoring institution may be an academically affiliated institution, an academically affiliated health care organization, or a government public health agency.
1. If the sponsoring institution is an academic institution or an academically affiliated health care organization, it should have resources for developing a comprehensive graduate program in preventive medicine. An affiliation must be established with a governmental public health agency to ensure appropriate public health practice and research opportunities.
2. If the sponsoring institution is a health agency, it should offer a comprehensive experience in community or public health. To ensure an appropriate didactic component, affiliations must be established with a medical school or a school of public health.

Documentation Requirement: Affiliation agreements are current and provided to the BRC and site visitor.
Measure: Appropriate affiliation agreements clearly documenting these requirements.

4. Support departments
The support departments of the sponsoring institutions, such as medical records and the medical library, must contribute to the education of residents in accordance with the Essentials of Accredited Residencies in Graduate Medical Education.

Documentation Requirement: The site visitor report must address the availability of medical records and medical reference materials.
Measure: Medical records and medical reference materials are available to the resident and faculty.

5. JCAHO accreditation
The Joint Commission on Accreditation of Healthcare Organizations (JCAHO) must accredit all participating hospitals.

Documentation Requirement: Programs must have on file and readily available for site visitor inspection a copy of current accreditation of all participating hospitals by JCAHO.
Measure: Required documents are current.

F. Facilities and General Support
The residency program and its affiliates must maintain adequate facilities, including office and laboratory space and access to computer facilities. Residents should have convenient access to the Internet and other online resources, and when available, the electronic medical information system of participating health care institutions.

A collection of basic reference texts and periodicals in preventive medicine and public health shall be maintained. Access to support services must be provided. Residents must be provided with adequate office facilities during assigned duty hours. All residents must be provided funds for travel to designated professional meetings.

Documentation Requirement: The program must supply in advance of a site visit a description of facilities and general support available to the resident.
Measure: The facilities and general support adequately support resident education.

G. Library
Residents must have access to medical reference materials, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases and an on-site reference librarian. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

Documentation Requirement: A description of availability of medical reference materials to residents must be supplied prior to a site visit.
Measure: The resident has the ability to access adequate medical reference materials, eg, reference texts and journal articles.

H. Participating Institutions and Training Sites
1. Individual phases or parts of the training program may be offered at participating institutions; the participating institutions must meet all requirements of the Institutional Requirements.

The participating institution must provide experiences through which the appropriate knowledge, skills, and competency may be acquired consistent with the overall educational objectives of the residency.

a. A faculty or staff member at each participating institution or training site must be designated to assume responsibility for the following:

1. The day-to-day activities of the program at that institution.
2. Supervision of residents to achieve the objectives of the educational goals of the residency and educational plans of the residents as appropriate to the participating institution.
3. Direct supervision of residents to ensure applicable patient care and practicum experiences through explicit written descriptions of supervisory lines of responsibility. Such guidelines must be communicated to all members of the program. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.

b. The responsible faculty or staff member and the residents assigned to the participating institution must coordinate all activities with the program director.

2. The reciprocal commitments of the residency program and the participating institutions must be explicit in a written agreement or contract, to include the following:

a. The educational objectives of the affiliation experience, and the knowledge, skills, and competency experiences to be provided.
b. The scope of the affiliation with placement locations noted.
c. The resources, including space, support services, and clinical facilities of the affiliate, that will be available to the residents.
d. The duties and responsibilities the residents will have in the affiliate.
e. The relationship that will exist between residents and staff of the residency program and the affiliate.
f. The supervisory relationship and identified supervisor, who shall be qualified by certification or equivalent experience in the area, as determined by the program director. There must be active participation by the residents at the affiliated site, and resident supervision on-site must be performed by a physician or appropriately qualified health professional. Supervisors must directly assess clinical development.
g. Procedures for academic discipline and handling of resident complaints or grievances.
III. Educational Objectives

A. Competencies, Skills, and Knowledge
1. The program director and teaching staff must prepare a list of specific competencies, skills, and knowledge that they are prepared to deliver to residents through the training program. Competency acquisition must be evaluated through the use of clearly defined performance indicators.

2. Residents in the same program may be in different “tracks” that have a different method or approach to training. Programs are encouraged to seek innovative ways to deliver and fund GME; however, the entire program will be assessed by the RRC—no tracks can be accredited separately.

B. Educational Courses, Rotations, and Activities
The program director and teaching staff must prepare a matrix of educational courses, rotations, supervised clinical experiences, and other educational activities available through the residency by which a resident will have the opportunity to acquire the specific competencies, skills, and knowledge. This matrix must be cross-referenced to the knowledge, skills, and competencies. Ongoing activities that provide an opportunity for group faculty resident interaction, such as weekly didactic series, journal club, and grand rounds, are essential.

C. Incoming Resident Assessment
Each incoming resident must be assessed as to his/her knowledge, skills, and competencies in relationship to the educational goals for the residency program. This assessment may take the form of a self-assessment, an in-service exam, a structured interview, or other method that assesses knowledge, skills, and competencies. This assessment is used by the program director and faculty to guide the development of an individualized educational plan for each resident.

Measure: Written agreements or contracts demonstrate that each affiliated institution can provide a well-planned, relevant educational opportunity for the resident. The program director and the supervisor at the participating institution must sign these agreements.

D. Educational Plan
1. The residents, in collaboration with the program director and teaching staff, must prepare a written educational plan that directs the acquisition of a core set of competencies, skills, and knowledge appropriate to the objectives of individual residents, based on the residents’ assessments. The educational plan will detail the courses, rotations, and activities to which they will be assigned to achieve the designated skills, knowledge, and competencies during their residencies.

Documentation Requirement: The program must have a written educational plan on file for each resident prior to a site visit.

Measure: The educational plan documents each resident’s baseline skill, knowledge, and competency inventory; the resident’s individual educational objectives; and the courses, rotations, and activities schedules that will provide the opportunity for each resident to meet the educational objectives.

2. The assigned activities must be organized into a structured schedule prior to each year of residency experience. A record of courses, rotations, and activities attended must be completed at the close of each year.

Residencies that offer 2- or 3-year programs may create schedules that concurrently integrate courses, rotations, and activities that incorporate the following criteria:

a. Adequate time is available to complete each objective.

b. The sequential acquisition of knowledge, skills, and competencies is clinical, academic/didactic, practicum.

c. The practicum experiences may be concurrent with academic experiences, but may not precede didactic experiences.

d. Resident hours on duty in a clinical setting shall be scheduled and monitored to avoid excessive stress and fatigue. Residents must have a keen sense of personal responsibility for continuing patient care and must recognize that their obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week.

e. Resident care in the clinical setting must be directly supervised.

f. In no case should a resident go off duty until the proper care and welfare of patients have been addressed and, if applicable, until responsibilities to the community and public have been fulfilled.

g. Duty hours and night and weekend call for residents must reflect the responsibility for patients and provide for adequate patient care.

h. Residents must not be required regularly to perform excessively difficult or prolonged duties. When averaged over any 4-week period, residents should spend no more than 80 hours per week in all duties. Residents at all levels should, on average, have the opportunity to spend at least 1 day out of 7 free of hospital duties and should be on call no more often than every third night. There should be adequate opportunity to rest and sleep when on call for 24 hours or more. There should be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Patient care quality and education continuity must be ensured through assignment of progressive responsibility.

Documentation Requirement: The program must submit the educational plans for all current residents and the final completed schedules for residents who have completed the program since the prior site visit.

Measure: Resident schedules show progressive responsibility.
Current residents: Documents the learning goals for an individual resident in terms of competencies, knowledge, and skills. Documents development of a schedule that includes courses, rotations, and activities conducive to the accomplishment of the learning plan.

Former residents: Documents completion of an educational program in preventive medicine.

E. General Clinical Competencies
The acquisition of basic clinical competencies will require an ACGME-accredited clinical year (12 months) with 6 months of direct patient care. The following competencies must be obtained by all residents by the time they graduate. (These competencies may also be acquired during academic and practicum training of the residency program and should be incorporated where applicable.)
1. Patient Care: Residents must be able to provide patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. Medical Knowledge: Residents must demonstrate knowledge about established and evolving biomedical, clinical, and cognitive (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. Practice Based Learning and Improvement: Residents must be able to investigate and evaluate their patient care practices, appraise and assimilate scientific evidence, and improve their patient care practices.
4. Interpersonal Skills and Communication: Residents must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with patients, their patients' families, and professional associates.
5. Professionalism: Residents must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. Systems-based Practice: Residents must demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

Documentation Requirement: Resident schedules and incoming resident assessment.

Measure: The academic courses cover the knowledge areas listed above.

F. Academic Competencies—Preventive Medicine Knowledge Content Areas
1. Core knowledge content areas
The program must address in adequate depth and breadth the following competencies, skills, and knowledge that underlie the practice of preventive medicine:
   a. Health services administration
   b. Biostatistics
   c. Epidemiology
   d. Clinical preventive medicine
   e. Behavioral aspects of health
   f. Environmental health
2. Aerospace medicine knowledge content areas
   a. History of aerospace medicine
   b. The flight environment
   c. Clinical aerospace medicine
   d. Operational aerospace medicine
   e. Management and administration
3. Occupational medicine knowledge content areas
   a. Disability management and work fitness
   b. Workplace health and surveillance
   c. Hazard recognition, evaluation, and control
   d. Clinical occupational medicine
   e. Regulations and government agencies
   f. Environmental health and risk assessment
   g. Health promotion and clinical prevention
   h. Management and administration
   i. Toxicology
4. Public health and general preventive medicine
   The knowledge content areas for public health and general preventive medicine, while similar to those of the core content areas, emphasize more in-depth knowledge in each area.
   a. Health services administration, public health practice, and managerial medicine
   b. Environmental health
   c. Biostatistics
   d. Epidemiology
   e. Clinical preventive medicine

Documentation Requirement: Resident schedules, resident academic records, rotation and course descriptions, academic transcripts.

Measure: The academic courses cover the knowledge areas listed above.

G. Preventive Medicine Competencies
The attainment of advanced preventive medicine practice competencies requires a sequence of continued learning and supervised application of the knowledge, skills, and attitudes of preventive medicine in the specialty area. The resident must assume progressively responsibility for patients and/or the clinical and administrative management of populations or communities during the course of training.

The resident shall acquire the following core preventive medicine competencies:
1. Communication, program, and needs assessment
   a. Communicate clearly to multiple professional and lay target groups, in both written and oral presentations, the level of risk from hazards and the rationale for interventions
   b. Conduct program and needs assessments and prioritize activities using objective, measurable criteria such as epidemiological impact and cost-effectiveness
2. Computer applications relevant to preventive medicine
   Residents shall be able to use computers for word processing, reference retrieval, statistical analysis, graphic display, database management, and communication.
3. Interpretation of relevant laws and regulations
   Residents shall be able to identify and review relevant laws and regulations germane to the resident's specialty area and assignments.
4. Identification of ethical, social, and cultural issues relating to public health and preventive medicine contexts
   Residents shall be able to recognize ethical, cultural, and social issues related to a particular issue and develop interventions and programs that acknowledge and appropriately address the issues.
5. Identification of organizational and decision-making processes
   Residents shall be able to identify organizational decision-making structures, stakeholders, style, and processes.
6. Identification and coordination of resources to improve the community's health
   Residents shall be able to assess program and community resources, develop a plan for appropriate resources, and integrate resources for program implementation.
7. Epidemiology and biostatistics, including the ability to
   a. characterize the health of a community
   b. design and conduct an epidemiological study
   c. design and operate a surveillance system
   d. select and conduct appropriate statistical analyses

Graduate Medical Education Directory 2004-2005
e. design and conduct an outbreak or cluster investigation, and
f. translate epidemiological findings into a recommendation for
   a specific intervention.
8. Management and administration, including the ability to
   a. assess data and formulate policy for a given health issue,
   b. develop and implement a plan to address a specific health
      problem,
   c. conduct an evaluation or quality assessment based on process
      and outcome performance measures, and
   d. manage the human and financial resources for the operation
      of a program or project.
9. Clinical preventive medicine, including the ability to
   a. develop, deliver, and implement, under supervision, appropri-
      ate clinical services for both individuals and populations and
   b. evaluate the effectiveness of clinical services for both individ-
      uals and populations.
10. Occupational and environmental health, including opportunities
    for residents to be able to assess and respond to individual and
    population risks for occupational and environmental disorders
    Documentation Requirement: Resident schedules, rotation de-
    scriptions, interinstitutional agreements.
    Measure: Adequate depth and breadth is provided.

H. Aerospace Medicine Competencies
Specially training for the physician in aerospace medicine must
provide for the attainment of competencies relevant to the diagno-
sis, prevention, and treatment of disorders associated with the
unique aerospace environments and with the adaptive systems de-
designed to enhance performance and support life under such
conditions.
1. Manage the health status of individuals working in all aspects of
   the aerospace environment
   a. Adequate supervised time in direct clinical care of aerospace
      medical problems must be provided to assure competency in
      managing aerospace and general medical problems in aero-
      space personnel.
   b. The resident is expected to develop and apply medical stand-
      ards and grant exceptions and to facilitate prevention, early
diagnosis, and treatment of health hazards.
   c. For programs with a training track in space medicine: The
      resident is expected to perform all activities of a crew surgeon
      for a space flight, develop and apply medical care standards
      and programs, evaluate the physiologic effects of spaceflight
      on crewmembers, and conduct and evaluate longitudinal stud-
      ies on astronauts.
2. Promote aerospace passenger health, safety, and comfort
   The resident is expected to acquire skills to educate passengers
   and physicians about the hazards of flight with certain medical
   conditions and to serve as passenger advocates to promote flight
   safety.
3. Facilitate optimum care of patients transported in the aerospace
   environment
   The resident is expected to identify appropriate patients for
   aeromedical transport and to provide guidance for safe aerome-
   dical transport of patients with common medical problems.
4. Apply human factors/ergonomic concepts to the aerospace envi-
   ronment
   The resident will acquire skills to advise in the development of
   air and space flight equipment, biomedical equipment, and vehi-
   cles for flight and space flight; techniques for enhancing perfor-
   mance; and techniques of crew resource management
5. Promote aerospace operational safety and mishap prevention
   The resident will acquire skills to provide appropriate safety in-
   formation and education and to conduct the medical aspects of
   any mishap investigation, including recommendations to prevent
   recurrences.
6. Interpret, integrate, and/or perform aeromedical research
   The resident will acquire skills to effectively conduct aerome-
   dical research into health, safety, human factors, and biomedical
   engineering aspects of the flight environment.
   Documentation Requirement: Resident schedules, rotation de-
   scriptions, interinstitutional agreements.
   Measure: Adequate depth and breadth is provided.

I. Occupational Medicine Competencies
Residents must be able to perform the following tasks:
1. Manage the health status of individuals who work in diverse work
   settings
   a. Adequate supervised time in direct clinical care of workers,
      from numerous employers and employed in more than one
      work setting, must be provided to ensure competency in miti-
      gating and managing medical problems of workers.
   b. Residents must be able to assess safe/unsafe work practices
      and to safeguard employees and others, based on clinic and
      worksite experience.
2. Monitor/survey workforces and interpret monitoring/surveillance
data for prevention of disease in workplaces and to enhance the
   health and productivity of workers
   Active participation in several surveillance or monitoring pro-
   grams, for different types of workforces, is required to learn prin-
   ciples of administration and maintenance of practical workforce
   and environmental public health programs. Residents must plan
   at least one such program.
3. Manage worker insurance documentation and paperwork, for
   work-related injuries that may arise in numerous work settings
   Residents should first learn worker insurance competencies
   under direct supervision of faculty and demonstrate competency
   to "open," direct, and "close" injury/illness cases.
4. Recognize outbreak events of public health significance, as they
   appear in clinical or consultation settings
   a. Residents should understand the concept of sentinel events
      and know how to assemble/work with a team of fellow profes-
      sionals who can evaluate and identify worksite public health
      causes of injury and illness.
   b. Residents must be able to recognize and evaluate potentially
      hazardous workplace and environmental conditions, and re-
      commend controls or programs to reduce exposures, and to en-
      hance the health and productivity of workers.
   c. Reliance on toxicologic and risk assessment principles in the
      evaluation of hazards must be demonstrated.
5. Report outcome findings of clinical and surveillance evaluations
   to affected workers as ethically required; advise management
   concerning summary (rather than individual) results or trends of
   public health significance
   Documentation Requirement: Resident schedules, rotation de-
   scriptions, interinstitutional agreements.
   Measure: Competencies, skills, and knowledge relevant to pre-
   ventive intervention in the workplace are addressed in workplace
   settings. The resident has the opportunity to demonstrate contruc-
   tive participation in comprehensive programs to prevent occupa-
   tional injury and illness and maintain worker health. Clinic settings
   demonstrate bridging from clinical activities to effective preventive
   intervention in the workplace.

J. Public Health and General Preventive Medicine
Competencies
Residents in public health and general preventive medicine must
attain competencies in public health, clinical preventive medicine
Program Requirements for Residency Education in Preventive Medicine

IV. Evaluations

The program director and faculty must annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of supervision of residents.

A. Courses, Rotations, and Activities

1. Written method of evaluation. The program will evaluate in writing the provision of and individual resident participation in assigned courses, rotations, and activities. The method will evaluate achievement of competency, skill, and knowledge objectives from the perspectives of both the resident and the faculty.

Documentation Requirement: The program will submit a written description prior to the site visit of the method by which the program director and the resident will document resident participation in assigned courses, rotations, and activities as well as acquisition of skills and knowledge and demonstration of competencies.

Measure: Evaluation method provides for documentation by the supervisor and the resident of resident participation in learning experiences, the skills and knowledge acquired, and the competencies demonstrated.

2. Faculty and residents will use the evaluation method to evaluate the courses, rotations, and activities of each resident on at least a semiannual basis.

Documentation Requirement: The program will maintain and make readily available to site visitors copies of evaluations by both the residents and the faculty of courses, rotations, and activities for the prior 5 years. Evaluation of residents in the academic phase will be the responsibility of the sponsoring institution and will include a transcript or equivalent document provided to each resident. The evaluations for each resident must be available for review by the individual resident.

Measure: Documents for each resident for each experience that learning opportunities were provided, skills and knowledge were acquired, and competencies were demonstrated.

B. Summary Resident Evaluation

The program director, with participation of the faculty, shall evaluate resident progress toward educational goals in writing at least semiannually. Where progress toward educational goals deviates significantly from the educational plan, counseling or corrective actions must be documented.

Fair procedures, as established by the sponsoring institution, and in compliance with the ACGME Institutional Requirements regarding academic discipline and resident complaints or grievances, must be implemented.

Faculty should monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

The evaluations must be reviewed with the resident formally and in a timely manner. Where appropriate, interim evaluation is encouraged.

Documentation Requirement: These evaluations must be on file for the prior 5 years and readily available to the site visitor.

Measure: Documents that the resident has been supplied feedback on progress against plan on acquisition of knowledge, skills, and demonstration of competencies. Final evaluation documents completion of learning plan.

C. Program Evaluation

1. Residents

Residents shall annually provide a confidential written evaluation of the educational program based on completion of a written questionnaire. This evaluation shall be provided to the program director. An additional confidential evaluation shall be provided to the chair of the residency advisory committee (RAC).

Documentation Requirement: Confidential written evaluations by each resident of the program must be maintained on file for the prior 5 years, be noted in the RAC minutes, and be readily available to the site visitor.

Measure: Documents that each resident has provided annual feedback to the program on the program structure, factors considered conducive to acquisition of skills and knowledge and demonstration of competencies, activities planned but not provided, and suggestions for program enhancement.
2. Faculty-Residency Advisory Committee
The RAC shall consist of faculty, external members, practicum supervisors, and at least one resident representative. A majority of the members must have their primary affiliation outside the sponsoring institution. Members must be certified in preventive medicine or knowledgeable about specialty training in preventive medicine. The RAC chair must be a physician. The program director must serve in an ex-officio capacity.

The RAC must meet at least semiannually.

The mission of the RAC is to promote a residency training experience that is aligned with preventive medicine practice. The RAC, as an external body, complements the graduate medical education committee (GMEC), which serves to evaluate and support the residency from within the sponsoring institution.

The functions of the RAC are to advise and assist the program director to
a. develop and update a written residency mission statement that describes goals and objectives;
b. develop educational experiences and practicum rotations;
c. provide new or emerging knowledge, skills, or competencies that may influence the content or conduct of preventive medicine education;
d. review the GMEC review of the residency program;
e. review confidential and written resident evaluations of the program and make recommendations for changes;
f. review the program director evaluation of individual residents; and
g. provide an annual report to the institution through the chair of the committee.

Documentation Requirement: Minutes document the functions of the RAC.

Measure: Minutes are available in the program files that document the activity of the RAC and faculty/member participation.

D. Resident Progression and Program Completion
The program director and faculty must document completion of courses, rotations, and activities and must certify that residents completing the program have fulfilled all established requirements of their educational plan. This final evaluation must be part of the resident's permanent record and must be maintained by the institution.

Although a person may have entered a practicum phase with an incomplete academic phase, that person may not be certified as having completed the practicum phase in the absence of a transcript certifying that all the requirements for the Master of Public Health or other appropriate postgraduate degree have been completed.

Documentation Requirement: This documentation must be available for site visitor review.

Measure: Documents status in and/or completion of the educational plan by each resident. Documents that a resident completing the practicum has achieved the planned competencies.

E. Resident Summary
The residency must maintain a database of all residents participating in the program and their professional status for 5 years.

1. The program must monitor the percentage of entering residents who take the certifying examination of the American Board of Preventive Medicine (ABPM). A minimum of 50% of entering residents must take the certifying exam averaged over any 5-year period.

2. Of those residents taking the certifying examination, a minimum of 50% must pass the certifying examination averaged over any 5-year period.

Documentation Requirement: Prior to the site visit the program must provide documentation of the residents participating in the program, their professional status, the percentage taking the certifying examination, and the percentage passing the certifying examination.

Measure: 50% of entering residents must take the certifying examination of the ABPM, and of those taking the examination, 50% must pass.

F. Institutional Report of Program Director
The program director and the chair of the RAC must provide to the director of graduate medical education, or equivalent, at the institution an annual written report of the residency quality. The program director and the chair of the RAC must provide a written plan of corrective actions for any recommendations received from the director of graduate medical education.

Documentation Requirement: Reports and plans for corrective actions written since the prior site visit must be readily available to the site visitor.

Measure: Recommendations are acted upon by the residency program director.

ACGME: September 2000 Effective: July 2002

Program Requirements for Residency Education in Medical Toxicology (Preventive Medicine)

I. Introduction

A. Definition and Description of the Subspecialty
1. Medical toxicology is a clinical specialty that includes the monitoring, prevention, evaluation and treatment of injury and illness due to occupational and environmental exposures, pharmaceutical agents, as well as unintentional and intentional poisoning in all age groups. A medical toxicology residency must be organized to provide residents with experience in the clinical practice of medical toxicology for all age groups and to provide a sound basis for the development of physician practitioners, educators, researchers, and administrators capable of practicing medical toxicology in academic and clinical settings.

2. Residencies in medical toxicology must teach the basic skills and knowledge that constitute the foundations of medical toxicology practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. It is expected that the resident will develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render the resident capable of independent practice in medical toxicology.

3. Programs must provide a broad education in medical toxicology to prepare the resident to function as a specialist capable of providing comprehensive patient care.

B. Duration and Scope of Education
1. Prerequisite training for entry into a medical toxicology program should include the satisfactory completion of an ACGME-accredited residency. [Note: Candidates who do not meet this criterion should consult the American Board of Emergency Medicine, or the American Board of Preventive Medicine regarding their eligibility for subspecialty certification.]
2. The length of the educational program is 24 months. The program must be associated with an ACGME-accredited residency program in emergency medicine, or preventive medicine.

3. Prior to entry into the program, each resident must be notified in writing of the required length of the program.

II. Institutional Organization

A. Sponsoring Institution

1. The sponsoring institution must provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation. It is highly desirable that the program structure include the participation of a medical school, a school of public health, and a school of pharmacy or department of pharmacology.

2. Programs in medical toxicology should be based at a primary hospital (hereafter referred to as the primary clinical site). The majority of the didactic and clinical experiences should take place at the primary clinical site.

3. The following services must be organized and provided at the primary clinical site:
   a. An emergency service for both adult and pediatric patients, adult and pediatric inpatient facilities, and adult and pediatric intensive care facilities
   b. Renal dialysis services with 24-hour availability
   c. Toxicology laboratory services with 24-hour availability
   d. Inpatient and outpatient facilities with staff who consult the toxicology service
   e. It is desirable that hyperbaric oxygen therapy is available

4. The program must develop an institutional affiliation to provide residents with clinical experiences not provided at the primary clinical site, other than those listed in II.A.3.a-d.

B. Participating Institutions

1. All participating institutions must provide appropriate support services to ensure an adequate educational experience. This includes support personnel in all categories and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.

2. The program must develop an institutional affiliation with a clinical facility to provide residents with clinical experience in critical care areas should this experience not be provided at the sponsoring institution.
   a. Approval of participating institutions will be based on the presence of sufficient opportunities for residents to manage, either as primary physicians or consultants, the entire course of critically poisoned patients in both the pediatric and adult categories.
   b. Institutional resources must be available to support the provision of clinical experience in adult and pediatric critical care areas for residents without prior experience of at least 1 month in an adult intensive care unit and 1 month in a pediatric intensive care unit.
   c. Programs using multiple participating institutions must ensure the provision of a unified educational experience for the residents. Each participating institution must offer significant educational opportunities to the overall program that do not duplicate experiences otherwise available within the program. An acceptable educational rationale must be provided for each participating institution.
   d. Participating institutions must not be geographically distant from the sponsoring institution unless special resources are provided that are not available at the primary clinical site.
   e. The number and geographic distribution of participating institutions must not preclude all residents' participation in conferences and other educational exercises.
   f. A letter of agreement with each institution participating in the program must be developed to include
      1. the educational objectives and the method to accomplish and to evaluate each objective;
      2. the resources and facilities in the institution(s) that will be available to each resident, including but not limited to library resources;
      3. the resident's duties and responsibilities and duty hours for the assignment; and
      4. the relationship that will exist between medical toxicology residents and residents in other programs.

C. Library

Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions. Reference material specific to the content of the subspecialty must be available in either text or electronic retrieval form.

D. Appointment of Residents

The Residency Review Committee (RRC) will approve the number of medical toxicology residents in the program. Approval will be based on the number, qualifications, and scholarly activity of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources available to the program.

III. Faculty Qualifications and Responsibilities

A. In addition to the qualifications and responsibilities of the program director and faculty described in the Program Requirements for Residency Education in the Subspecialties of Emergency Medicine or the Program Requirements for Residency Education in Preventive Medicine, there must be a minimum of two medical toxicology faculty who each devote a minimum of 5 hours per week of direct teaching time to the residents and whose medical practice makes them available to the residents for consultations on cases.

B. The program director and faculty must be certified in medical toxicology or possess suitable equivalent qualifications as determined by the RRC.

C. Consultants from appropriate medical subspecialties including those with special expertise in disaster and mass casualty incident management, hyperbaric medicine, immunology, industrial hygiene, occupational toxicology, pulmonary medicine, biostatistics, epidemiology, public health, botany, cardiology, dermatology, gastroenterology, nephrology, ophthalmology, pathology, pharmacology, surgical subspecialty, zoology, hazardous materials and mass exposure to toxins, laboratory toxicology, forensic toxicology and environmental toxicology, and nonmedical specialties, such as botany, herpetology, and mycology should be available for consultation and academic lectures.

IV. The Educational Program

A. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC.

B. The curriculum must include the following academic and clinical content:
   1. The clinical manifestations, differential diagnosis, and management of poisoning
2. The biochemistry of metabolic processes, the pharmacology, pharmacokinetics, and teratogenesis, toxicity, and interactions of therapeutic drugs.

3. The biochemistry of toxins, kinetics, metabolism, mechanisms of acute and chronic injury, and carcinogenesis.

4. Experimental design and statistical analysis of data as related to laboratory, clinical, and epidemiologic research.

5. Laboratory techniques in toxicology.

6. Occupational toxicology, including acute and chronic workplace exposure to intoxicants and basic concepts of the workplace and industrial hygiene.

7. Prevention of poisoning, including prevention of occupational exposures by intervention methodologies, that take into account the epidemiology, environmental factors, and the role of regulation and legislation in prevention.

8. Environmental toxicology, including identification of hazardous materials and the basic principles of management of large-scale environmental contamination and mass exposures.

9. The function, management, and financing of poison control centers.

10. Oral and written communication skills and teaching techniques.

11. Principles of epidemiology and risk communication, analytical laboratory techniques, and research methodologies in toxicology.

C. Clinical Experience

Residents must have a minimum of 12 months of clinical experience as the primary or consulting physician responsible for providing direct/bedside patient evaluation, management, screening, and preventive services.

Residents must be provided with experience in evaluating and managing patients with workplace and environmental exposures and must have experience in workplace evaluation, as well as in an occupational medicine or toxicology clinic.

D. Residents must have opportunities to evaluate and manage patients with acute and long-term workplace and environmental toxic exposures. Clinical training should include experience in an industrial setting or an occupational medicine clinic or access to occupational medicine patients in a referral setting. The resident should also have the opportunity to evaluate and manage intoxicated patients in both industrial and referral settings, including responsibility for providing bedside evaluation, management, screening, and preventive services for a minimum of 12 months or its full-time equivalent.

E. Regional Poison Information Center

1. The program must provide residents with educational experiences in a regional poison control center certified by the American Association of Poison Control Centers or its equivalent. It is highly desirable that the poison control center be in physical proximity to the primary clinical site.

2. Each resident must have 12 months' experience with a referral population of poisoned patients under the supervision of a physician who is certified in medical toxicology or who possesses suitable equivalent qualifications as determined by the RRC.

3. The poison control center should have at least 1,500 calls annually that require physician telephone consultation or intervention.

F. Planned Educational Conferences

Each program must offer to its residents an average of at least 5 hours per week of planned educational experiences (not including change-of-shift reports). These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administration of seminars, and research methods. They may include but are not limited to problem-based learning, laboratory research, and computer-based instruction, as well as joint conferences cosponsored with other disciplines.

G. Additional Educational Experiences

The program curriculum must include pharmacology, pharmacokinetics, and drug interactions. This must be accomplished by (1) an affiliation with a school of pharmacy or department of pharmacology that provides regular didactic experience and consultation to residents or (2) the presence of a Doctor of Pharmacy or PhD pharmacologist as a participating member of the teaching faculty.

H. Additional Clinical Experiences

The program should provide the opportunity for the residents to maintain their primary board skills during training, but it may not require that residents provide more than 12 hours per week of clinical practice not related to medical toxicology as a condition of the educational program.

I. Communication and Teaching Experience

Residents must have progressive experience and responsibility for the teaching of medical toxicology to health care professionals. Residents in the second year of training should participate in the teaching and supervision of first-year residents and should be responsible for regular contributions to formal didactic experiences within the training program, in other academic departments in the institution(s), and in the community. Research leading to publication should be encouraged.

V. Board Certification

Those planning to seek a subspecialty certificate from their primary board should communicate with the administrative officer of the board to ascertain the full requirements.

ACGME: June 1998 Effective: June 1998

Program Requirements for Residency Education in Undersea and Hyperbaric Medicine (Preventive Medicine)

I. Introduction

A. Definition and Scope of the Specialty

1. The subspecialty of Undersea and Hyperbaric Medicine is a discipline that deals with the prevention of injury and illness due to exposure to environments in which the ambient pressure is increased, such as in diving or hyperbaric chamber exposure, and the therapeutic use of high environmental pressure and the delivery of oxygen under high pressure to treat disease. The scope of the subspecialty emphasizes the occupational, environmental, safety, and clinical aspects of diving, hyperbaric chamber operations, compressed air work and hyperbaric oxygen therapy. A program in undersea and hyperbaric medicine must provide a broad educational experience and a sound basis for the development of physician practitioners, educators, researchers, and administrators capable of practicing in academic and clinical settings.

2. Training in undersea and hyperbaric medicine must teach the basic skills and knowledge that constitute the foundations of undersea and hyperbaric medicine practice and must provide progressive responsibility for and experience in the application of...
Program Requirements for Residency Education in Undersea and Hyperbaric Medicine (Preventive Medicine)

1. The length of the educational program must be 12 months. The program must be associated with an ACGME-accredited residency program in emergency medicine or preventive medicine.
2. Prior to entry into the program, each prospective resident must be notified in writing of the required length of the program.

II. Institutional Organization
A. The sponsoring institution must provide sufficient faculty, financial resources, clinical, research, and library facilities to meet the educational needs of the residents and enable the program to comply with the requirements for accreditation. It is highly desirable that the program structure include the participation of a medical school.
B. The program should be based at a primary hospital (hereafter referred to as the primary clinical site). More of the didactic and clinical experiences should take place at the primary clinical site than at any other single site. Educationally justified exceptions to this requirement will be considered.
C. The following services must be organized and provided at the primary clinical site:
   1. Twenty-four hour availability of hyperbaric medicine services, with at least 100 consultations and 1000 patient treatments per year.
   2. An emergency service for both adult and pediatric patients, adult and pediatric inpatient facilities, and adult and pediatric surgical and intensive care facilities.
   3. Inpatient and outpatient facilities with staff who consult the hyperbaric medicine service.
D. Participating Institutions
   1. All participating institutions must provide appropriate support services to ensure an adequate educational experience. This includes support personnel and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.
   2. The program must develop an institutional affiliation with a clinical facility to provide residents with clinical experience in critical care areas should this experience not be provided at the sponsoring institution.
   3. Approval of participating institutions will be based on the presence of sufficient opportunities for residents to manage, as appropriate, either as primary physicians or consultants, the entire course of therapy, including critically ill patients in both adult and pediatric categories.
   4. Programs using multiple participating institutions must ensure the provision of a unified educational experience for the residents. Each participating institution must offer significant educational opportunities to the overall program that do not duplicate experiences otherwise available within the program. An acceptable educational rationale must be provided for each participating institution.
   5. Participating institutions must not be geographically distant from the sponsoring institution unless special resources are provided that are not available at the primary clinical site.

III. Faculty Qualifications and Responsibilities
The program director and the faculty are responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director
There must be a single program director responsible for the program.
1. Qualifications of the program director
   a. Licensure to practice medicine in the state where the institution that sponsors the program is located.
   b. Certification in undersea and hyperbaric medicine by the American Board of Emergency Medicine or the American Board of Preventive Medicine or possess appropriate educational qualifications as determined by the RRC.
2. Responsibilities of the program director
   a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and faculty. It should be readily available for review.
   b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
   c. Selection and supervision of the faculty and other program personnel at each institution participating in the program.
   d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
   e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
   f. The program director, with participation of the faculty, shall:
      1) at least quarterly evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
      2) communicate each evaluation to the resident in a timely manner;
      3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
      4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
      5) provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
   g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
   h. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
   i. Preparation of an accurate statistical and narrative description of the program as requested by a review committee.
   j. Notification of the RRC regarding major programmatic changes.

B. Faculty
   1. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all the residents in the program at each participating institution. The faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director, one additional faculty member must possess certification by the American Board of Emergency Medicine or the American Board of Preventive Medicine in undersea and hyperbaric medicine or possess appropriate educational qualifications as determined by the RRC.
   2. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
   3. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all of the faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity.
   4. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
   5. Consultants from appropriate medical subspecialties should be available for consultation and didactic teaching, including those with experience and understanding of such fields of medicine as preventive medicine, infectious disease, orthopaedics, vascular surgery, plastic surgery, anesthesiology, critical care, emergency medicine, ophthalmology, oral surgery, podiatry, pulmonary medicine, otolaryngology, rehabilitative medicine, and other disciplines as they pertain to the comprehensive treatment of the clinical hyperbaric patient.

C. Other Program Personnel
   Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. The Educational Program
   The program director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency should be related to the program goals. Clinical, basic science, and research conferences as well as seminars and critical literature review activities pertaining to the subspecialty must be conducted regularly and as scheduled. The program design and/or structure must be approved by the RRC.
   A. The curriculum must include the following academic and clinical content:
      1. History of undersea and hyperbaric medicine
      2. Decompression theory and physiology, including theory and application of decompression tables
      3. Oxygen physiology in normobaric, hyperbaric and hypobaric environments; oxygen toxicity
      4. Pathophysiology of decompression illness and arterial gas embolism, including inertigenic gas embolism
      5. Diving operations and human performance in the hypo/hyperbaric environment
      6. Medical examination/standards for divers and personnel working in hypo/hyperbaric environments
      7. Effects of hyperbaric oxygenation on infectious disease
      8. Principles of treatment of toxic gas exposures, such as carbon monoxide poisoning
      9. Effects of hyperbaric oxygenation on irradiated tissues and ischemic wounds
      10. Tissue oxygen measurement
      11. Multiplace and monoplace hyperbaric chamber operations, including safety considerations, management of critically ill
Residents must have progressive experience and responsibility for the teaching of undersea and hyperbaric medicine to health care trainees and professionals, including medical students, interns, residents, and nurses. Residents should participate in the formal didactic teaching program. Research leading to publication should be encouraged.

V. Facilities and Resources

A. Space and Equipment

Adequate space must be available for faculty to perform their educational, research, and administrative functions. A library containing hyperbaric texts and journals must be readily available. Adequate conference and teaching space must be available for didactic and case conferences.

B. Inpatient, Ambulatory Care, Laboratory, and Other Clinical Facilities

A hyperbaric chamber must be available that is capable of treatment of the full range of conditions amenable to hyperbaric oxygen therapy. A full service clinical laboratory must be available at all times that is capable of measurement of chemist, blood indices, and microbiology of patients needing hyperbaric therapy. Radiologic services must be available within the institution at all times. Inpatient and outpatient facilities, including intensive care units capable of addressing the needs of patients with respiratory poisons, gas forming infections, wound healing problems, gas embolism, and other conditions requiring hyperbaric treatment, must be available.

C. Patient Population

There shall be sufficient patients of all ages and both sexes with medical and surgical conditions requiring hyperbaric therapy. Patients with necrotizing infections, carbon monoxide and cyanide poisoning, diving problems, gas embolism, and osteomyelitis must be present in the patient population.

D. Support Services

Support services must include physical therapy, social services, occupational medicine, and psychologic and psychological testing services.

VI. Certification

Those planning to seek a subspecialty certificate from their primary board should communicate with the administrative officer of the Board to ascertain the full requirements.

ACGME: February 2002 Effective: February 2002
Program Requirements for Residency Education in Psychiatry

I. Introduction

A. Scope of Education

An approved residency program in psychiatry must provide an educational experience designed to ensure that its graduates will possess sound clinical judgment, requisite skills, and a high order of knowledge about the diagnosis, treatment, and prevention of all psychiatric disorders as well as other common medical and neurological disorders that relate to the practice of psychiatry. While residents cannot be expected to achieve the highest possible degree of expertise in all of the diagnostic and treatment procedures used in psychiatry in 4 years of training, those individuals who satisfactorily complete residency programs in psychiatry must be competent to render effective professional care to patients. Furthermore, they must have a keen awareness of their own strengths and limitations and of the necessity for continuing their own professional development. The didactic and clinical program must be of sufficient breadth and depth to provide residents with a thorough and well-balanced presentation of psychological, sociocultural, and neurobiological observations and theories and knowledge of major diagnostic and therapeutic procedures in the field of psychiatry. It must also provide the education and training necessary to understand the major psychiatric literature, to evaluate the reliability and validity of scientific studies, and to appropriately incorporate new knowledge into the practice of medicine.

Programs are expected to operate in accordance with the "AMA Principles of Ethics with Special Annotations for Psychiatry" and to ensure that the application and teaching of these principles are an integral part of the educational process.

B. Duration and Scope of Education

1. Admission Requirements

Physicians may enter psychiatry programs at either the first-year or second-year postgraduate level. Physicians may enter programs at the second-year postgraduate level only after successful completion of one of the following:

a. A clinical year of training in an Accreditation Council of Graduate Medical Education (ACGME)-accredited program in internal medicine, family practice, or pediatrics
b. An ACGME-accredited transitional year program
c. One year of an ACGME-accredited residency in a clinical specialty requiring comprehensive and continuous patient care
d. For physicians entering at the PG-2 level, the PG-1 year may be credited toward the 48-month requirement

2. Length of the Program

a. A complete psychiatry residency is 48 months. Twelve of those months may be spent in an ACGME-approved child and adolescent psychiatry residency. Accreditation by the ACGME is required for all years of the training program. Programs may not permit residents to use vacation time or other benefit time to advance the date of graduation from training. Although residency is best completed on a full-time basis, part-time training at no less than half time is permissible to accommodate residents with personal commitments (eg, child care).

3. Program Format by Year of Training

a. First year of training

A psychiatric first postgraduate year must include at least 4 months in internal medicine, family practice, and/or pediatrics. This training must be in a clinical setting that provides comprehensive and continuous patient care.

1) Neurology rotations may not be used to fulfill this 4-month requirement.

2) One month, but no more, of this requirement can be fulfilled by an emergency medicine or intensive care rotation, as long as the experience is predominantly with medical evaluation and treatment as opposed to surgical procedures.

3) A psychiatric first postgraduate year should not include more than 6 months in psychiatry and must not include more than 8 months in psychiatry.

4) A minimum of 2 months of neurology, or its full-time equivalent (FTE) on a part-time basis, is required prior to completion of training. It is highly desirable that this experience occur during a psychiatric first postgraduate year, and it may include a maximum of 1 month of supervised inpatient or outpatient child neurology.

5) The program director of the Department of Psychiatry must maintain contact with residents during the first postgraduate year while they are on services other than psychiatry.

b. The second through fourth years of training

Although some of the training described below may be offered in the first postgraduate year, all must be completed prior to graduation from the program.

1) The program must have an explicitly described educational curriculum covering the broad spectrum of clinical psychiatry as outlined in V.B.1.a.m.

2) The formal didactic instruction must include regularly scheduled lectures, teaching rounds, seminars, clinical conferences, and required reading assignments covering the topics identified in Section V.

3) There must be an educationally sound balance among time spent in direct patient care, clinical and didactic teaching, and supervision. Formal educational activity shall have high priority in the allotment of the resident's time and energies. Service needs and clinical responsibilities must not prevent the resident from obtaining the requisite didactic educational activities and formal instruction.

4) Planned Educational Experiences. Each program must offer its residents planned and sufficient educational experiences. These educational experiences should include

Review Committee (RBC) prior to implementation and at each subsequent review of the program.

c. Prior to entry into the program, each resident must be notified in writing of the required length of training for which the program is accredited. The required length of training for a particular resident may not be changed without mutual agreement during his/her program, unless there is a break in his/her training or the resident requires remedial training.

d. Programs should meet all of the Program Requirements of Residency Training in Psychiatry. Under rare and unusual circumstances, programs of either 1 year's or 2 years' duration may be approved, even though they do not meet all of the above requirements for psychiatry. Such 1- or 2-year programs will be approved only if they provide some highly specialized educational and/or research programs. Also, such programs will be approved only if they ensure that residents will complete the didactic and clinical requirements outlined in the Program Requirements.
II. Institutional Organization

A. Sponsoring Organization
1. Programs should be conducted under the sponsorship of an institution that meets the Institutional Requirements that apply to residency programs in all specialties, as outlined in the Essentials of Accredited Residencies.
2. The administration of the sponsoring institution(s) should be understanding of and sympathetic to the attainment of educational goals and should evidence its willingness and ability to support these goals philosophically and financially. The latter includes a commitment by the institution and by the program that embraces appropriate compensation for faculty and residents, adequate offices and educational facilities, support services, and opportunities for research.
3. It is important that each affiliated institution demonstrate significant commitment to the overall program. The educational rationale for including each institution within the program must be stated. The number and distribution of participating training sites must not preclude satisfactory participation by residents in teaching and didactic exercises. Geographic proximity will be one factor in evaluating program cohesion, continuity, and "critical mass." Affiliated training sites will be evaluated on the basis of whether they contribute to a well-integrated educational program with respect to both didactic and clinical experiences.
4. When there is a cooperative educational effort involving multiple institutions, the commitment of each institution in the program must be made explicit in an affiliation agreement with each institution that conforms to ACGME Institutional Requirements.

B. Selection and Appointment of Residents
1. The program director is responsible for maintaining a process for selecting resident physicians who are personally and professionally suited for training in psychiatry. It is highly desirable that each program have a residency selection committee to advise the program director.
2. The program must document the procedures used to select residents. Application records must contain complete information from medical schools and graduate medical education programs. A documented procedure must be in place for evaluating the credentials, clinical training experiences, past performance, and professional integrity of residents transferring from one program to another, including from a general psychiatry to a child and adolescent psychiatry program. This procedure must include solicitation and documentation of relevant information from the training directors of the previous programs participated in by the transferring resident. This documentation must specify all clinical and didactic experiences for which the resident has been given credit. Those residents selected at the second postgraduate year or above must have satisfied the training objectives cited above for reaching that level of training.
3. The residency program director must accept only those applicants whose qualifications for residency include sufficient command of English to facilitate accurate, unimpeded communication with patients and teachers.
4. A transferring resident's educational program must be sufficiently individualized so that he/she will have met all the educational and clinical experiences of the program, as accredited, prior to graduation.
5. The RRC will determine the size of the program's permanent resident complement by approving a range based on the program's clinical and academic resources.
6. To promote an educationally sound, intellectually stimulating atmosphere and effective graded responsibility, programs must maintain a critical mass of at least three residents at each level of training. Programs that fall below this prescribed critical mass will be reviewed, and if this deficiency is not corrected, they may be cited for noncompliance, except when the number of PG-4 residents is below critical mass owing to residents entering child and adolescent psychiatry training.
7. Programs in which the number of residents exceeds the resources of patient population, faculty, or facilities for adequate training will be found deficient on the basis of size.
8. Any permanent change in the number of approved positions requires prior approval by the RRC. [Note: Programs seeking interim approval of a permanent increase in the number of approved resident positions should contact the executive director of the RRC.] Prior approval is not required for temporary changes in resident numbers owing to makeup or remedial time for currently enrolled residents or to fill vacancies. Approval of permanent increases above the approved range of residents will require documentation that didactic and clinical training, including supervision, will not be compromised.

III. Faculty Qualifications and Responsibilities
The program leadership and the teaching staff are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Chair of Psychiatry
The chair of psychiatry must be a physician and must either be certified by the American Board of Psychiatry and Neurology or judged by the RRC to possess appropriate educational qualifications.

B. Program Director
There must be a single program director responsible for the program. Each residency program must be under the direction of an experienced, fully trained, and qualified psychiatrist whose major responsibility is to maintain an excellent educational program. The residency program director must possess the necessary administrative, teaching, and clinical skills and experience to conduct the program. Continuity of leadership over a period of years is important to the stability of a residency program. Frequent changes in leadership or long periods of temporary leadership usually have a negative effect on an educational program and may adversely affect the accreditation status of the program. The program director must
1. be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
2. be either certified by the American Board of Psychiatry and Neurology or judged by the RRC to possess appropriate qualifications.
3. have an appointment in good standing to the medical staff of an institution participating in the program.
4. devote at least one-half of his/her time to the administration and operation of the educational program, including didactic, supervisory, and clinical teaching activities. Programs with multiple institutions, many residents, and/or a large clinical population will require additional time.

C. Responsibilities of the Program Director

1. The program director must have appropriate authority to oversee and to organize the activities of the educational program. The responsibilities of this position should include but not be limited to the following:
   a. Resident appointments and assignments in accordance with institutional and departmental policies and procedures.
   b. Supervision, direction, and administration of the educational activities.
   c. Coordination of training in each geographically separate institution.
   d. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
   e. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
   f. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
   g. Provision of a written final evaluation for each resident who completes the program, as specified in Sections VI.A.7 and VI.A.8.
   h. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to applicants, residents, and members of the teaching staff. It should be readily available for review.
   i. Provision of written information to applicants and residents regarding financial compensation, liability coverage, and the policies regarding vacations, sick leave, parental leave, and other special leaves.
   j. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
   k. Monitoring resident stress, including physical or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
   l. Maintenance of a permanent record of evaluation for each resident that is accessible to the resident and other authorized personnel. These will be made available on review of program.
   m. Preparation of an accurate statistical and narrative description of the program as requested by the RRC for Psychiatry.
   n. Written notification to the Executive Director of the RRC within 60 days of any major change in the program that may significantly alter the educational experience for the residents, including
      1) changes in leadership of the department or the program;
      2) changes in administrative structure, such as an alteration in the hierarchical status of the program/department within the institution; and
   o. Changes in the resident complement that would bring the number of residents below the required critical mass of three residents per year for 2 consecutive years.

2. The program director must obtain prior approval for the following changes in the program in order for the RRC to determine if an adequate educational environment exists to support these changes:
   a. The addition of any participating institution to which residents rotate for 6 months FTE or longer
   b. The addition or deletion of any rotation of 6 months FTE or longer
   c. Any change in the approved number of resident positions in the program
   d. Any change in the total length of the program.

On review of such proposals or important changes in a program, the RRC may determine that a site visit is necessary.

D. Education Policy Committee

The director of the residency program should have an educational policy committee composed of members of the psychiatry program teaching staff that includes representation from the residents as well as a member of the teaching staff from each ACGME-approved subspecialty residency that may be affiliated with the psychiatry residency. There should be a written description of the committee, including its responsibility to the sponsoring department or institution and to the program director. This committee should participate actively in

1. planning, developing, implementing, and evaluating all significant features of the residency program, including the selection of residents (unless there is a separate residency selection committee);
2. determining curriculum goals and objectives; and
3. evaluating both the teaching staff and the residents.

E. Number and Qualifications of the Faculty

All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, commitment to their own continuing medical education, and participation in scholarly activities.

1. There must be a sufficient number of teaching staff to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. The residency must be staffed by a sufficiently wide variety and appropriate number of capable psychiatrists and other mental health professionals with documented qualifications to achieve the goals and objectives of the training program.

2. The faculty psychiatrists should be certified by the American Board of Psychiatry and Neurology or have appropriate qualifications in psychiatry satisfactory to the RRC.

3. A written record of the educational responsibilities of all staff and faculty members (whether full-time or part-time) who participate directly in the education of residents is essential. That record should include the qualifications and experience of each faculty member and the nature, as well as the frequency, duration, and site, of the teaching activity.

4. There must be evidence of scholarly activity among the faculty psychiatrists. Scholarly activity is defined as professional activities that serve to enhance the profession or professional knowledge. While not all members of a faculty need be investigators, scholarly activities should be present on a continuous basis. There should also be evidence of participation in a spectrum of academic and professional activities within the institution as
Program Requirements for Residency Education in Psychiatry

IV. Program Facilities and Resources

A. Clinical Facilities and Resources

1. All programs must have adequate patient populations for each mode of required training and, minimally, must include organized clinical services in inpatient, outpatient, emergency, consultation/liaison, and child and adolescent psychiatry.

2. Training programs must have available to them adequate patient populations for each and educational conduct of the program.

3. Each clinical service must have a mechanism that ensures that patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

B. Other Educational Resources

1. The administration of the facility where the program is located must provide ample space and equipment for educational activities. There must be adequate space and equipment specifically designated for seminars, lectures, and other teaching exercises.

2. The program must have available audiovisual equipment and teaching material such as films, audiotapes, and videotapes, as well as the capability to record and play back educational videotapes.

3. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases.

4. There must be access to an on-site library and/or to an electronic collection of appropriate texts and journals. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends. This library should provide:
   a. a substantial number of current basic textbooks in psychiatry, neurology, and general medicine;
   b. a number of the major journals in psychiatry, neurology, and medicine sufficient for an excellent educational program;
   c. the capability to obtain textbooks and journals on loan from major medical libraries;
   d. capability to perform MEDLINE or other medical information searches (or ready access to a library that has this capacity);
   and
   e. access to the Internet.

5. Each clinical service must have a mechanism that ensures that charts are appropriately maintained and readily accessible for regular review for supervisory and educational purposes. Randomly selected charts will be reviewed at the time of survey.

V. The Educational Program

The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC for Psychiatry as part of the regular review process.

A. Objectives of Training

1. First Year
   The training obtained during the first postgraduate year should provide residents with medical skills most relevant to psychiatric practice. These include being able to:
   a. perform a complete initial history and physical examination, including appropriate diagnostic studies;
   b. diagnose common medical and surgical disorders and formulate appropriate initial treatment plans;
   c. provide limited, but appropriate, continuous care of patients with medical illnesses and to make appropriate referrals;
   d. be especially conversant with medical disorders displaying symptoms likely to be regarded as psychiatric and with psychiatric disorders displaying symptoms likely to be regarded as medical;
   e. be especially cognizant of the nature of the interactions between psychiatric treatments and medical and surgical treatments; and
   f. relate to patients and their families, as well as other members of the health care team with compassion, respect, and professional integrity.

2. Second Through Fourth Years
   The program must provide a well-planned, high-quality curriculum that includes specific, assessable objectives for program components as well as criteria for graduation. These must be in writing and provided to each resident and faculty member. Residents must be taught to conceptualize all illnesses in terms of biological, psychological, and sociocultural factors that determine normal and abnormal behavior. They must be educated to gather and organize data, integrate these data within a comprehensive formulation of the problem to support a well-reasoned differential diagnosis, formulate a treatment plan, and implement treatments and follow-up care as required. The program must provide residents with sufficient opportunities to develop knowledge, clinical skills, sensitivity to cultural diversity, and professional principles.
Program Requirements for Residency Education in Psychiatry

a. The didactic curriculum should include:
1) critical appraisals of the major theories and viewpoints in psychiatry, together with a thorough grounding in the generally accepted clinical facts;
2) presentation of the biological, psychological, sociocultural, economic, ethnic, gender, religious/spiritual, sexual orientation, and family factors that significantly influence physical and psychological development throughout the life cycle;
3) presentation of the etiologies, prevalence, diagnosis, treatment, and prevention of all major psychiatric disorders in the current standard diagnostic statistical manual, including the biological, psychological, sociocultural, and iatrogenic factors that affect the long-term course and treatment of psychiatric disorders/conditions;
4) comprehension of the diagnosis and treatment of neurologic disorders commonly encountered in psychiatric practice such as neoplasms, dementia, headaches, traumatic brain injury, infectious diseases, movement disorders, multiple sclerosis, Parkinson's disease, seizure disorders, stroke, intractable pain, and other related disorders;
5) the use, reliability, and validity of the generally accepted diagnostic techniques, including physical examination of the patient, laboratory testing, imaging, neurophysiologic and neuropsychological testing, and psychological testing;
6) the financing and regulation of psychiatric practice, including information about the structure of public and private organizations that influence mental health care;
7) medical ethics as applied to psychiatric practice;
8) the history of psychiatry and its relationship to the evolution of medicine;
9) the legal aspects of psychiatric practice;
10) when and how to refer; and
11) research methods in the clinical and behavioral sciences related to psychiatry.

b. Clinical training should provide sufficient experiences in:
1) the elements of clinical diagnosis with all age groups (of both sexes, to include some ethnic minorities), such as interviewing; clear and accurate history taking; physical, neurological, and mental status examination; and complete and systematic recording of findings;
2) relating history and clinical findings to the relevant biological, psychological, behavioral, and sociocultural issues associated with etiology and treatment;
3) formulating a differential diagnosis and treatment plan for all psychiatric disorders in the current standard nomenclature, taking into consideration all relevant data;
4) the major types of therapy, including short- and long-term individual psychotherapy, psychodynamic psychotherapy, family/couples therapy, group therapy, cognitive and behavior therapy, crisis intervention, drug and alcohol detoxification, and pharmacological regimens, including concurrent use of medications and psychotherapy;
5) electroconvulsive therapy, a somatic therapy that is viewed as so important that its absence must be justified (Examples of other somatic therapies include biofeedback and phototherapy);
6) providing continuous care for a variety of patients from different age groups, seen regularly and frequently for an extended time, in a variety of treatment modalities;
7) psychiatric consultation in a variety of medical and surgical settings;
8) providing care and treatment for the chronically mentally ill with appropriate psychopharmacologic, psychotherapeutic, and social rehabilitative interventions;
9) psychiatric administration, especially leadership of interdisciplin ary teams, including supervised experience in utilization review, quality assurance, and performance improvement;
10) providing psychiatric care to patients who are receiving treatment from nonmedical therapists and coordinating such treatment;
11) knowledge of the indications for and limitations of the more common psychological and neuropsychological tests;
12) critically appraising the professional and scientific literature; and
13) teaching psychiatry to medical students, residents, and others in the health professions.

B. Curriculum

1. Clinical Experience

Carefully supervised clinical care of patients is the core of an adequate program. The clinical services must be so organized that residents have major responsibility for the care of a significant proportion of all patients assigned to them and have sufficient and ongoing high-quality supervision. The number of patients for which residents have primary responsibility at any one time must be adequate enough to permit them to provide each patient with appropriate treatment and to have sufficient time for other aspects of their educational program. At the same time, the total number must be large enough to provide an adequate depth and variety of clinical experiences. The amount and type of patient care responsibility a resident assumes must increase as the resident advances in training. Each resident must have major responsibility for the diagnosis and treatment of a reasonable number and adequate variety of patients with both acute and chronic illnesses representing the major psychotic and nonpsychotic categories of psychiatric diagnoses/conditions. Adequate experience in the diagnosis and management of the medical and neurological disorders encountered in psychiatric practice also must be ensured. Each resident must have supervised experience in the evaluation and treatment of patients of different ages throughout the life cycle and from a variety of ethnic, racial, sociocultural, and economic backgrounds. It is desirable that residents have didactic learning and supervised experiences in the delivery of psychiatric services in the public sector and in managed care health systems. The clinical experiences are to be designed to develop the requisite skills as outlined in Section V.A.2.b., above. Specific clinical experiences must include the following:

a. Neurology: Two months of supervised clinical experience in the diagnosis and treatment of patients with neurological disorders/conditions. This 2-month experience (or its equivalent if done on a part-time basis) may occur in an inpatient, outpatient, or consultation/liaison setting. A maximum of 1 month of child neurology may be used toward the 2-month requirement. The 2-month training experience must provide opportunities to conduct initial evaluations, to participate in the subsequent diagnostic process, and to follow patients during the treatment and/or evolution of their neurological disorders/conditions. The training in neurology should have sufficient didactic and clinical experience for residents to develop expertise in the diagnosis of those neurological disorders/conditions that might reasonably be expected to be encountered in psychiatric practice and that must be considered in the differential diagnosis of psychiatric disorders/conditions.
b. Inpatient: Significant responsibility for the assessment, diagnosis, and treatment of an appropriate number and variety of general psychiatric inpatients for a period of not less than 9 months, but no more than 18 months (or its PTE if done on a part-time basis). In general, it is highly desirable that the minimum general inpatient experience be 12 months, although it is recognized that in some settings other training opportunities might lead to the absolute minimum of 9 months. The experience must provide residents with sufficient opportunities to develop competence in the intensive biopsychosocial assessment and management of patients with acute mental disorders/conditions. It is recognized that the setting in which this care occurs may vary according to the health care delivery system. Rotations on specialized clinical services such as addiction psychiatry, geriatric psychiatry, forensic psychiatry, geriatric psychiatry, research units, and day and/or partial hospitalization may not totally substitute for the general psychiatric inpatient experience. These may be included to meet the required minimum experiences, with adequate documentation to demonstrate that the experience on such specialized units is with acutely ill patients and is comparable in breadth, depth, and experience to training on general inpatient psychiatry units. Up to 3 months of rotations on specialized clinical services as noted above may be applied to the minimum 8-month requirement. However, no portion of this experience may be counted to meet the timed requirement in child and adolescent psychiatry. Experience in any special unit used to provide inpatient psychiatry must be under the direction and supervision of a psychiatrist.

c. Outpatient: An organized, continuous, supervised clinical experience in the assessment, diagnosis, and treatment of outpatients of at least 1 year (or its PTE if done on a part-time basis) that emphasizes a developmental and biopsychosocial approach to outpatient treatment. At least 80% of this experience must be with adult patients. A minimum of 20% of the overall experience (clinical time and patient volume) must be continuous and followed for a duration of at least 1 year. The outpatient requirement must include experience with a wide variety of disorders, patients, and treatment modalities, with experience in both brief and long-term care of patients, using individual psychotherapy (including psychodynamic, cognitive, behavioral, supportive, and biopsychosocial treatments and psychosocial rehabilitation approaches to outpatient treatment. Long-term psychotherapy experience must include a sufficient number of patients, seen at least weekly for at least 1 year, under supervision. Other long-term treatment experiences should include patients with differing disorders and patients who are chronically mentally ill. No portion of this experience may be counted to meet the timed requirements in child and adolescent psychiatry.

d. Child and Adolescent Psychiatry: An organized clinical experience under the supervision of child and adolescent psychiatrists in the evaluation, diagnosis, and treatment of children, adolescents, and their families. Such experiences should be no less than 2 months PTE and involve a sufficient number and variety of patients, by both age and psychopathology, treated with a variety of interventional modalities. Residents should have experiences in determining the developmental status and needs for intervention with the children of some of their adult patients, and in consulting with these patients regarding the referral of their children for psychiatric services. Residents must have patient care responsibility under the supervision of child and adolescent psychiatrists who are certified in child and adolescent psychiatry by the American Board of Psychiatry and Neurology or who possess appropriate educational qualifications. This 2-month experience may be provided in a variety of settings (eg, outpatient). While adolescent inpatient units may be used to satisfy a portion of this requirement, rotations to student health services may not.

e. Consultation/Liaison: Supervised psychiatric consultation/liaison responsibility for a minimum of 2 months PTE, involving adult patients on other medical and surgical services. On-call experiences may be a part of this training. Up to 1 month of pediatric consultation/liaison psychiatry may be credited toward the 2-month requirement.

f. Emergency Psychiatry: Supervised responsibility on an organized, 24-hour psychiatric emergency service that is responsible for evaluation, crisis management, and triage of psychiatric patients. Instruction and experience should be provided in the evaluation and management of suicidal patients. A psychiatric emergency service that is a part of, or interfaces with, other medical emergency services is desirable because of the opportunities for collaboration and educational exchange with colleagues in other specialties. There must be organized instruction and supervised clinical opportunities available to residents in emergency psychiatry that lead to the development of knowledge and skills in the emergency evaluation, crisis management, and triage of patients. This should include the assessment and management of patients who are a danger to themselves or others, the evaluation and reduction of risk to caregivers, and knowledge of relevant issues in forensic psychiatry. There should be sufficient continued contact with patients to enable the resident to evaluate the effectiveness of clinical interventions. While on-call experiences may be a part of this training, such experiences alone will not be sufficient to constitute adequate training in emergency psychiatry. A portion of this experience may occur in ambulatory urgent care settings but must be separate and distinct from the 12 months of training designated for the outpatient requirement.

g. Community Psychiatry: Supervised responsibility for the care of persistently chronically ill patients in the public sector (eg, community mental health centers and public hospitals and agencies, or other community-based settings). Experiential settings may include residential treatment centers, community mental health agencies, vocational rehabilitation centers, and senior citizen agencies. Opportunities should exist to consult with, learn about, and use community resources and services in planning patient care and to work collaboratively with case managers, crisis teams, and other mental health professionals.

h. Geriatric Psychiatry: One-month PTE supervised clinical management of geriatric patients with a variety of psychiatric disorders, including familiarity with long-term care in a variety of settings. This may be fulfilled as part of the inpatient or outpatient requirement.

i. Addiction Psychiatry: One-month PTE supervised evaluation and clinical management of patients with in inpatient and/or outpatient settings, and familiarity with rehabilitation and self-help groups. This may be fulfilled as part of the inpatient or outpatient requirement.

j. Forensic Psychiatry: Experience under the supervision of a psychiatrist in evaluation of patients with forensic problems.

k. Supervised clinical experience in the evaluation and treatment of couples, families, and groups.

l. Psychological Testing: Supervised experience with the more common psychological test procedures, including neuro-
psychological assessment, in a sufficient number of cases to
give the resident an understanding of the clinical usefulness
of these procedures and of the correlation of psychological
test findings with clinical data. Under the supervision and
guidance of a qualified clinical psychologist, residents should have
experience with the interpretation of the psychological
tests most commonly used, and some of this experience
should be with their own patients.
m. Supervised, active collaboration with psychologists, psychia-
tric nurses, social workers, and other professional and par-
professional mental health personnel in the treatment of
patients.

2. Didactic Components
The didactic and clinical curriculum must be of sufficient
breadth and depth to provide residents with a thorough, well-
balanced presentation of the generally accepted theories,
schools of thought, and major diagnostic and therapeutic pro-
ducts in the field of psychiatry.
a. The curriculum must include a significant number of interdis-
ciplinary clinical conferences and didactic seminars for resi-
dents in which psychiatric faculty members collaborate with
neurologists, internists, and colleagues from other medical
specialties and mental health disciplines.
b. Didactic instruction must be systematically organized,
thoughtfully integrated, based on sound educational prin-
ciples, and include prepared lectures, seminars, and assigned
readings that are carried out on a regularly scheduled basis.
In a progressive fashion, it should expose residents to topics
appropriate to their level of training as outlined in Section VA.2.
Staff meetings, clinical case conferences, journal clubs, and
lectures by visiting professors are desirable adjuncts, but
must not be used as substitutes for an organized didactic
curriculum.
c. The curriculum must include adequate and systematic instruc-
tion in neurobiology, psychopharmacology, and other clinical
sciences relevant to psychiatry; child and adult development;
major psychological theories, including learning theory and
psychodynamic theory; and appropriate material from the
sociocultural and behavioral sciences such as sociology and
anthropology. The curriculum should address development,
psychopathology, and topics relevant to treatment modalities
employed with patients with severe psychiatric disorders/conditions.
d. The residency program should provide its residents with in-
spection about American culture and subcultures, particularly
those found in the patient community associated with the
training program. This instruction should include such issues
as gender, race, ethnicity, socioeconomic status, religion/spiri-
tuality, and sexual orientation. Many physicians may not be
sufficiently familiar with attitudes, values, and social norms
prevailing among various groups of contemporary Americans.
Therefore, the curriculum should contain enough instruction
about these issues to enable residents to render competent
care to patients from various cultural and ethnic backgrounds.
Understanding cultural diversity is an essential characteristic
of good clinical care. The program must devote sufficient di-
ciatric training to residents whose cultural backgrounds are
different from those of their patients and provide a suitable
educational program for them.
e. Didactic exercises must include resident presentation and dis-
cussion of clinical case material at conferences attended by
faculty and fellow residents. This training should involve ex-
periences in integrative case formulation that includes
neurobiological, phenomenological, psychological, and
sociocultural issues involved in the diagnosis and management
of cases presented.

3. Supervision
Clinical training must include adequate, regularly scheduled, in-
dividual supervision. Each resident must have at least 2 hours of
individual supervision weekly, in addition to teaching confer-
ences and rounds except when on nonpsychiatric rotations. Resi-
dents must be provided with prompt, reliable systems for com-
munication and interaction with supervisory physicians.

4. Clinical Records
Clinical records must reflect the residents’ ability to
a. record an adequate history and perform mental status, physi-
cal, and neurological examinations;
b. organize a comprehensive differential diagnosis and discus-
sion of relevant psychological and sociocultural issues;
c. proceed with appropriate laboratory and other diagnostic
procedures;
d. develop and implement an appropriate treatment plan fol-
lowed by regular and relevant progress notes; and
e. prepare an adequate discharge summary and plan.

C. Resident Policies
1. The program should not allow on-call schedules and activities
outside the residency that interfere with education, clinical per-
formance, or clinical patient care responsibilities. The program
should ensure
a. one day out of 7 free of program duties;
b. on average, on-call duty no more than every fourth night while
on psychiatric services; and
c. adequate backup if patient care needs create resident fatigue
sufficient to jeopardize patient care or resident welfare during
or following on-call periods.
2. Each resident must be given a copy of the Essentials of Ac-
credited Residencies at the beginning of training.
3. Readily available procedures for assisting the resident to obtain
appropriate help for significant personal or professional problems
should be in place.

D. Other Required Components
1. Scholarly Activity of the Residents and Faculty
Graduate medical education must take place in an environment
of inquiry and scholarship in which residents participate in the
development of new knowledge, learn to evaluate research find-
ings, and develop habits of inquiry as a continuing professional
responsibility. The following components of a scholarly environ-
ment should be present:
a. The program must promote an atmosphere of scholarly in-
quiry, including the provision of access to ongoing research ac-
tivity in psychiatry. Residents must be taught the design and
interpretation of research studies, including the responsible
use of informed consent, research methodology, and interpre-
tation of data. The program must teach expertise in the criti-
cal assessment of new therapies and developments that are
described in the literature. Residents must be advised and su-
ervised by faculty members qualified in the conduct of re-
search. Programs must have a plan to foster the development of
skills for residents who are interested in conducting psychia-
tric research. This plan should include opportunities for con-
ducting research under the supervision of a mentor and
training in the principles and methods of research.
b. Active participation of the teaching staff in clinical discus-
sions, rounds, and conferences in a manner that promotes a
spirit of inquiry and scholarship. Scholarship implies an
in-depth understanding of basic mechanisms of normal and
abnormal states and the application of current knowledge to practice.

2. Progressing Responsibility
   Under supervision, resident clinical experience in patient management should demonstrate graduated and progressive responsibility.

3. Teaching Opportunities
   Residents must be instructed in appropriate methods of teaching and have ample opportunity to teach students in the health professions.

4. Electives
   All programs should provide residents an opportunity to pursue individually chosen electives.

5. Record of Clinical Experience
   There must be a record maintained of specific cases treated by residents, in a manner that does not identify patients but that illustrates each resident's clinical experience in the program. This record must demonstrate that each resident has met the educational requirements of the program with regard to variety of patients, diagnoses, and treatment modalities. In the case of transferring residents, the records should include the experiences in the prior as well as the current program. This record must be reviewed periodically with the program director or a designee and be made available to the surveyor of the program.

VI. Internal Evaluation
The educational effectiveness of the entire program must be evaluated in a systematic manner by the residents and the faculty. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Confidential written evaluations by residents should be utilized in this process. The results of these evaluations must be kept on file.

A. Evaluation of Residents
   All programs should state specifically and as clearly as possible the objectives and competencies required for successful completion of the program. These objectives and criteria should be made available to residency applicants.

1. Regular, systematic, documented evaluation of the knowledge, skills, and professional growth of each resident, using appropriate criteria and procedures, must be maintained, including complete records of evaluations containing explicit statements on the resident’s progress toward meeting educational objectives and his/her major strengths and weaknesses. Each evaluation should be communicated to the resident in an ongoing and timely manner.

2. The program must provide opportunity for and document regularly scheduled meetings between the resident and the program director or designated faculty members. These meetings should be of sufficient frequency, length, and depth to ensure that the residents are continually aware of the quality of their progress toward attainment of professional goals and objectives. These evaluation sessions should be held at least semiannually and preferably more frequently. The program should give residents opportunities to assess the program and the faculty in a manner that ensures resident confidentiality. Provision should be made for remediation in cases of unsatisfactory performance.

3. The program must formally examine the cognitive knowledge of each resident at least annually in the PG-2 through PG-4 years, and conduct an organized examination of clinical skills at least twice during the 4 years of training. In a timely manner, the program must develop specific remedial plans for residents who do not perform satisfactorily. Residents must not advance to the next year of training, or graduate from the program, unless the outcome from the remedial plan results in the attainment of educational and clinical goals established for the program.

4. Residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional, educational, and clinical growth.

5. A written set of due-process procedures must be in place for resolving problems that occur when a resident’s performance fails to meet required standards. These procedures must conform to those policies and procedures adopted by the sponsoring institution for the provision of due process to all residents training in sponsored programs, and must include the criteria for any adverse action, such as placing a resident on probation, or for terminating a resident whose performance is unsatisfactory. The procedures should be fair to the residents, to patients under their care, and to the training program. A copy should be provided to the residents at the beginning of training.

6. Upon any resident’s departure from a program (including by graduation), the program director must prepare a letter describing the nature and length of the rotations for which the resident has been given credit. If a resident departs the program without receiving full credit for all educational experiences, the reasons for withholding credit must be specified in the letter. The resident must be given the letter, and a copy must be retained in the resident’s permanent file.

7. When a resident leaves the program (including by graduation), the program director will affirm in the training record that there is no documented evidence of unethical or unprofessional behavior, nor any serious question regarding clinical competence. Where there is such evidence, it will be comprehensively recorded, along with the responses of the trainee. The evaluation should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident’s permanent record maintained by the institution.

8. For residents transferring to child and adolescent psychiatry, it is essential that the program director document the nature and length of the rotations for which the resident has been given credit and include a listing of any remaining requirements needed to successfully complete the general psychiatry program. The resident must be informed that eligibility for certification by the American Board of Psychiatry and Neurology is not possible unless all general psychiatry program requirements are met, even if the resident completes the requirements for training in child and adolescent psychiatry. A copy of this notification must be provided to the resident and a copy included in the resident’s permanent file.

B. Evaluation of Resident Competencies
The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance.

1. This plan should include use of dependable measures to assess residents’ competence in the following:
Program Requirements for Residency Education in Psychiatry

A. Definition of the Subspecialty
Addiction psychiatry is the psychiatry subspecialty that focuses on the prevention, evaluation, and treatment of Substance-related Disorders as well as related education and research. In addition, the addiction psychiatrist will be fully trained in techniques required in the treatment of the larger group of patients with dual diagnoses of addictive disorders and other psychiatric disorders.

B. Duration and Scope of Education
1. The training period in addiction psychiatry must be 12 months. Any program that extends training beyond these minimum requirements must present a clear educational rationale consonant with the special requirements and objectives for residency training in addiction psychiatry.

2. Training in addiction psychiatry that occurred during the general residency training will not be credited toward the one-year requirement.

3. Training is best accomplished on a full-time basis. If it is undertaken on a part-time basis, the 12-month program must be completed within a two-year period.

4. Prior to entry, each addiction psychiatry resident must be notified in writing of the required length of training for which the program is accredited. The required length of training may not be changed without mutual agreement unless there is a break in training or the resident requires remedial training.

C. Educational Goals and Objectives
1. The program must offer advanced training such that the knowledge, skills, clinical judgment, and attitudes essential to the practice of addiction psychiatry at the consultant level are provided.

2. Clinical experience must include the opportunity to evaluate and follow a variety of patients of both sexes, including adolescents, adults, and geriatric age groups spanning a broad range of diagnoses as enumerated in Program Requirements V.D.1.a-d. Residents must provide both primary and consultative care in both inpatient (including intensive care) and outpatient settings for patients with a wide variety of types of Substance-related Disorders. Where the primary site of training is devoted to the care of patients with only a particular form of Substance-related Disorders, appropriate affiliations must be arranged to ensure that adequate exposure is provided to a sufficient number and variety of patients with Substance-related Disorders.

3. Programs must be based on a structured written curriculum with well-defined goals and objectives. Clinical, basic science, and research conferences as well as seminars and critical literature review activities pertaining to Substance-related Disorders must be conducted regularly and as scheduled. The curriculum must include sufficient didactic content so that the graduates will have a comprehensive understanding of the pharmacology of all commonly abused substances, as well as the actions of pharmacological agents used to treat these conditions. Clinical experience and...
didactics should be integrated to provide appropriate progressive learning.
4. Training must focus on the biopsychosocial and functional concepts of diagnosis and treatment as applied to inpatient, outpatient, and other treatment settings. Iatrogenic aspects of illness, as well as cultural, ethnic, racial, socioeconomic, ethical, and legal considerations that may affect or interact with the psychiatric care of these patients must be included in the program.
5. The program should present the epidemiology of Substance-related Disorders, such as cultural, ethnic, racial, gender, sexual orientation, socioeconomic, and familial factors affecting the availability and use of addicting substances.

II. Institutional Support

A. Sponsoring Institution
1. One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.
2. The program must be administratively attached to and sponsored by a core residency program in psychiatry that holds full accreditation from the ACGME. The program must function in close relationship to the general psychiatry residency.
3. The program must take place in facilities approved by the appropriate state licensing agencies and, where appropriate, by the Joint Commission Accreditation of Healthcare Organizations.

B. Participating Institutions
1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program. The number of and distance between participating institutions shall not impair training and participation in conferences and other organized educational aspects of the program.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC).
3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should
   a. identify the faculty who will assume the educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections V.D. and VLA of the Program Requirements;
   b. outline the educational goals and objectives to be attained by the resident during the assignment;
   c. specify the period of resident assignment;
   d. establish the policies that will govern resident education during the assignment.

C. Facilities and Resources
All elements of the program must be located in designated facilities based on written affiliation agreements between the participating institutions and the administration of the program.
1. Inpatient Care Facility: The sponsor of the program must be a part of, or affiliated with, at least one acute care general hospital with a full range of services, including medical and surgical services, intensive care units, emergency services, diagnostic laboratory, and imaging services. If the acute care hospital is specialized and does not itself have the full spectrum of services described above, the program must document that it has access for training purposes to other affiliated acute care facilities that have the services not present at the specialized facility.
2. Partial Hospitalization and Day Treatment: Programs must have access to a partial hospitalization and/or day treatment program (such as an intensive outpatient program). Such programs may be located in community-based institutions or within the sponsoring department of psychiatry in its acute care hospital. Exposure to self-help and other community programs (such as 12-step programs widely used by patients with Substance-related Disorders) must be provided.
3. Ambulatory Care Services: The program must provide experience in a multidisciplinary ambulatory care facility such as a methadone maintenance clinic, an alcohol treatment clinic, or other specialized outpatient program.
4. Library: Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
   a. Library services should include computer support for electronic retrieval of information from medical databases.
   b. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the training program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.
5. Ancillary Support Services: At all participating facilities, there must be appropriate support services to ensure an adequate educational experience. This includes support personnel in all categories including clerical and laboratory and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.

III. Resident Appointment

A. Eligibility Criteria
The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. The addiction psychiatry resident must have satisfactorily completed an ACGME-accredited general psychiatry residency prior to entering the program.

B. Number of Residents
The RRC will approve the number of residents based upon established criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching. Any permanent changes in resident complement will require prior approval by the RRC.

C. Resident Transfer
To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the perfor-
Program Requirements for Residency Education in Addiction Psychiatry (Psychiatry)

A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students
The appointment of fellows and other residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents. At the same time, the presence of residents in addiction psychiatry must not dilute or otherwise detract from the didactic or clinical experience available to general psychiatry residents.

IV. Faculty
The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director
1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must
   a. be an active clinician and possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field.
   b. be certified by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of addiction psychiatry or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing and based at the primary teaching site.
   d. devote sufficient time to the program to ensure implementation and achievement of the educational goals and objectives.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).
3. Using the ADS to promptly notify the executive director of the RRC of a change in program director or department chair.
4. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s) as specified in section II.B. of this document.
   b. Change in the approved resident complement.
   c. Change in the format of the educational program.
   On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.
5. Supervising the recruitment, selection, and appointment process for applicants, including compliance with appropriate credentialing policies and procedures in accordance with institutional and departmental policies and procedures. The director must receive documentation from the prior general psychiatry program in order to verify satisfactory completion of all educational and ethical requirements for graduation, before appointment to the program.
6. Ensuring the provision of written descriptions of departmental policies regarding salary and benefits, due process, sickness and other leaves, on-call responsibilities, and vacation time to all residents upon appointment to the program. All residents must be provided with written descriptions of the malpractice coverage provided for each clinical assignment.
7. Monitoring the progress of each addiction psychiatry resident, including the maintenance of a training record that documents completion of all required components of the program as well as evaluations of residents’ clinical and didactic work by supervisors and teachers. This record shall include a patient log which shall document for each addiction psychiatry resident that he/she has completed all clinical experiences required by the Program Requirements and the educational objectives of the program.
8. Maintaining all other training records including those related to appointment, departmental processes regarding due process, sickness and other leaves, on-call responsibilities, and vacation time.
9. Reporting to the RRC by September 1st of each year the name of each resident in the program.

C. Faculty Qualifications
1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of addiction psychiatry or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing to the staff of an institution participating in the program.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities
1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately the residents in the program. In addition to the program director, there must be at least one other faculty member certified by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of addiction psychiatry or possess qualifications judged to be acceptable by the RRC. Programs with large patient populations, multiple institutions, and large resident complements will be expected to have the number of physician faculty appropriate to the program’s size and structure.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E.1.

E. Other Program Personnel
1. Addiction psychiatry residents must be provided with meaningful patient care experiences as part of an interdisciplinary care
team. The resident should work in settings that include representatives from clinical disciplines such as social work, psychology, psychiatric nursing, occupational therapy, pharmacy, and nutrition, as well as clinicians in anesthesia (including pain management), emergency medicine, family practice, geriatrics, internal medicine, neurology, obstetrics-gynecology, surgical specialties, and pediatrics/adolescent medicine as appropriate for the care of the patient. In addition, residents should work with other staff such as substance abuse counselors and, where appropriate, with teachers.

2. The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program
The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

A. Role of Program Director and Faculty
The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by

1. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.

2. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge, supplemented by the addition of current information, and the development of resident competence in the six areas listed below.

3. providing residents with direct experience in progressive responsibility for patient management.

4. assuring the opportunity for residents to achieve the cognitive knowledge, interpersonal skills, professional attitudes, and practical experience required of an addiction psychiatrist providing acute and chronic care for the patient with Substance-related Disorders.

B. ACGME Competencies
The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

2. Medical knowledge about established and evolving biomedical, clinical, and cognitive (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

4. Interpersonal and communication skills that result in effective information exchange and collaboration with patients, their families, and other health professionals.

5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Curriculum Content
The field of addiction psychiatry requires knowledge of pharmacology, psychiatry, general medicine, as well as an understanding of the interaction of these disciplines. Programs must include both direct experiences in clinical care as well as formal didactic conferences. Instruction and experience must include the performance of the mental status examination, a neuropsychiatric evaluation instrument such as the Mini-Mental Status Examination, community and environmental assessments, family and care giver assessments, medical assessments, and physical and psychological functional assessments. These skills comprise the basis for the formal assessment of the addicted patient using a synthesis of clinical findings, historical and current information, as well as data from laboratory and other special studies.

1. Residents must acquire knowledge and skills in the following areas:
   a. Knowledge of the signs and symptoms of the use and abuse of all of the major categories of substances enumerated in V.D.2.a-g, as well as knowledge of the types of treatment required for each.
   b. Knowledge of the signs of withdrawal from these major categories of substances, knowledge and experience with the range of options for treatment of the withdrawal syndromes, and the complications commonly associated with such withdrawal.
   c. Knowledge of the signs and symptoms of overdose, the medical and psychiatric sequelae of overdose, and experience in providing proper treatment of overdose.
   d. Management of detoxification: Inpatient management of Substance-related Disorders. Experience in working collaboratively with specialists in the emergency department and intensive care units in the diagnosis and management of acute overdose symptoms.
   e. Knowledge of the signs and symptoms of the social and psychological problems as well as the medical and psychiatric disorders which often accompany the chronic use and abuse of the major categories of substances.
   f. Experience in the use of psychoactive medications in the treatment of psychiatric disorders often accompanying the major categories of Substance-related Disorders.
   g. Experience in the use of techniques required for confrontation of and intervention with a chronic substance abuser, and in dealing with the defense mechanisms that cause the patient to resist entry into treatment.
   h. Experience in the use of the various psychotherapeutic modalities involved in the ongoing management of the chronic substance abusing patient, including individual psychotherapies (e.g., cognitive-behavioral therapy), couples therapy, family therapy, group therapy, motivational enhancement therapy, and relapse prevention therapy.
   i. Experience in working collaboratively with other mental health providers and allied health professionals, including nurses, social workers, psychologists, nurse practitioners, counselors, pharmacists, and others who participate in the care of patients with Substance-related Disorders.
Program Requirements for Residency Education in Addiction Psychiatry (Psychiatry)

j. Knowledge and understanding of the special problems of the pregnant woman with Substance-related Disorders and of the babies born to these women.

k. Knowledge of family systems and dynamics relevant to the etiology, diagnosis, and treatment of Substance-related Disorders.

l. Knowledge of the genetic vulnerabilities, risk and protective factors, epidemiology, and prevention of Substance-related Disorders.

m. Familiarity with the major medical journals and professional-scientific organizations dealing with research on the understanding and treatment of Substance-related Disorders.

n. Critical analysis of research reports, as presented in journal clubs and seminars.

o. Experience in teaching and supervising clinical trainees in the care of patients with Substance-related Disorders.

p. Understanding of the current economic aspects of providing psychiatric and other healthcare services to the addicted patient.

q. Knowledge of quality assurance measures and cost effectiveness of various treatment modalities for Substance-related Disorders.

2. Conferences

Conferences in addiction psychiatry, such as grand rounds, case conferences, reading seminars, and journal clubs, should be specifically designed to complement the clinical experiences. Regular attendance by residents and faculty should be documented.

D. Clinical Experiences

The number and variety of new and follow-up patients spanning the life cycle from adolescence to old age must be sufficient to ensure an adequate outpatient and inpatient experience as specified in 1.C.2. The spectrum of patients should include diverse socioeconomic, educational, and cultural backgrounds.

The training program must include the following clinical components:

1. Evaluation, consultation, and treatment of:
   a. Patients with primary Substance-related Disorders and their families.
   b. Medical and surgical patients in the emergency department, intensive care units, and general wards of the hospital with acute and chronic Substance-related Disorders, including acute intoxication and overdose.
   c. Psychiatric inpatients and outpatients with chemical dependencies and co-morbid psychopathology to include a broad range of psychiatric diagnoses, such as affective disorders, psychotic disorders, organic disorders, personality disorders, and anxiety disorders as well as patients suffering from medical conditions commonly associated with Substance-related Disorders such as hepatitis and HIV/AIDS.
   d. Medication dependent patients with chronic medical disorders/conditions (such as patients with chronic pain).

2. Exposure to patients with Substance-related Disorders related to the following substances:
   a. alcohol
   b. opioids
   c. cocaine and other stimulants
   d. cannabis and hallucinogens
   e. benzodiazepines
   f. other substances of abuse, including sedatives, hypnotics or anxiolytics
   g. miscellaneous/unusual, e.g., nutmeg, designer drugs, organic solvents/inhalants.

3. Treatment by the resident of a minimum of 5 addicted outpatients with a variety of diagnoses requiring individual treatment for at least 6 months.

4. Rotations should provide residents with experience in evaluating acute and chronic patients in inpatient and outpatient settings. There should be an identifiable structured educational experience in neuropsychiatry relevant to the practice of addiction psychiatry that includes both didactic and clinical training methods. The curriculum should emphasize functional assessment, signs and symptoms of neuropsychiatric impairment associated with Substance-related Disorders, and the identification of physical illnesses and iatrogenic factors that can alter mental status, and behavior.

5. The program must provide specific experiences in consultation to acute and chronic medically ill patients with Substance-related Disorders who are being treated on emergency, intensive care, medical and/or surgical services of a general hospital. Supervision of addiction psychiatry residents in their clinical evaluation of such patients, as well as in their consultative role, is essential. The program should provide residents with the opportunity to function at the level of a specialist consultant to primary care physicians and to intensive care specialists.

6. Experience in working with multidisciplinary teams as a consultant and as a team leader, including the integration of recommendations and decisions from consulting medical specialists and other professionals in related health disciplines.

7. Experience in working with patients who are participating in self-help programs.

8. Experience with opiate replacement therapy.

E. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
   a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
   b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
   c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
   d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

F. Resident Policies

The program director must ensure, direct, and document the implementation of and compliance with appropriate resident policies at all times.

1. Duty hours
   a. Residents must be provided with adequate opportunities to rest and sleep when on duty for 24 hours or more. On-call
rooms to permit rest and privacy must be available for each resident on night duty in the hospital.
b. The educational goals and objectives of the program and the resident learning objectives must not be compromised by excessive reliance on residents to fulfill service obligations. Duty hours, however, must reflect the fact that responsibility for continuing patient care is not automatically discharged at specific times. Programs must ensure adequate backup support when patient care responsibilities are difficult or prolonged.
c. Resident duty hours and on-call periods must not be excessive. The structuring of duty hours and on-call schedules must focus on the needs of the patient, continuity of care, and the educational needs of the resident. Duty hours must be consistent with the Specialty Requirements. The program director is responsible for monitoring resident activities to ensure that resident fatigue does not contribute to diminished learning or performance or detract from patient safety.

2. Graded Responsibility
The responsibility given to residents in patient care should depend upon each resident's knowledge, problem-solving ability, manual skills, experience, and the severity and complexity of each patient's status.

3. Supervision
a. All patient care services must be supervised by qualified faculty.
b. The program director must ensure, direct, and document adequate supervision of residents at all times. Supervision must include observation, assessment, and demonstration of the residents' knowledge and skills in clinical evaluation, technical proficiency, and professional attitudes.
c. Residents must be provided with rapid, reliable systems for communicating with supervisors.
d. Each resident must have a minimum of two hours of individual supervision weekly, of which one hour may be group supervision.

4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.

5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

6. Professional activities: Residency education is a full-time endeavor. The program director must ensure that activities extrinsic to the program, such as moonlighting, do not interfere with the ability of the resident to achieve the goals and objectives of the educational program. The program director must comply with the sponsoring institution's policies and procedures regarding moonlighting, in compliance with the Institutional Requirements.

7. Presence of Other Training Programs: The addiction psychiatry program should provide peer interaction between its residents and those of other medical/surgical specialties. To achieve this goal an ACGME-accredited training program in at least one non-psychiatric specialty, such as neurology, internal medicine, or family medicine should be present within the participating institutions of the program. Peer interaction among the residents should occur in the course of clinical and/or didactic work, but must be satisfactory when organized around joint patient evaluation and/or care.

8. Resident teaching experiences: The program should provide appropriate experiences designed to develop administrative and teaching skills for the addiction psychiatry residents. As the residents progress through the program, they should have the opportunity to teach personnel such as other residents, medical students, and other allied health professionals.

VI. Evaluation

A. Resident Evaluation
1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include:
   a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
   b. mechanisms for providing regular and timely performance feedback to residents that includes at least:
      1) written quarterly evaluations of the residents by all supervisors and the directors of clinical components of training,
      2) written semiannual evaluation that is communicated to each resident in a timely manner, and
      3) the maintenance of a record of evaluation for each resident that is accessible to the resident.
   c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.

2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty Evaluation
The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation
The educational effectiveness of a program must be evaluated at least annually in a systematic manner.
1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution.
Program Requirements for Residency Education in Addiction Psychiatry (Psychiatry)

I. Introduction

Scope of Training
Child and adolescent psychiatry is a specialty of medical practice within psychiatry. The goal of residency training in child and adolescent psychiatry is to produce specialists in the delivery of skilled and comprehensive medical care of children and adolescents suffering from psychiatric disorders. The child and adolescent psychiatrist must have a thorough understanding of the development, assessment, treatment, and prevention of psychopathology as it appears from infancy through adulthood. He or she also should have the skills to serve as an effective consultant to primary care physicians, nonpsychiatrist mental health providers, schools, community agencies, and other programs serving children and adolescents.

Approved residencies in child and adolescent psychiatry must offer well-supervised and well-balanced clinical experiences with a continuum of care that may include inpatients, day hospital patients, outpatients, and consultees and must also provide a formal educational experience. The residency must provide a combination of didactic and clinical work that is both broad enough to ensure knowledge of the full spectrum of disorders of childhood and adolescence and intensive enough to ensure thorough diagnostic, treatment, and consultative skills. Diagnostic and therapeutic experiences must be provided in sufficient number and depth with preschool, grade school, and adolescent patients of both sexes and their families for the resident to understand the breadth of clinical problems the resident will study and treat.

II. Program Length and Prerequisites

A. In addition to the postgraduate first year and a minimum of 2 years of accredited training in general psychiatry, 2 years of training in an Accreditation Council for Graduate Medical Education (ACGME)-accredited child and adolescent psychiatry program is required.

B. To achieve greater flexibility in the sequence of residency training and to assist in recruitment, the 2-year child and adolescent psychiatry training experience may be initiated immediately following or at any point beyond the PGY-1 level in the psychiatry residency sequence. Training is best done full-time, and it must be done in no more than two blocks. If done in two blocks, the blocks must not be more than 6 months apart, and the shorter block must not be less than 6 months long. At the discretion of the program director, training credit for part-time status may be given as long as the training is half-time or more and is completed in 4 years or less.

C. In general, training in child and adolescent psychiatry obtained as part of the curriculum for general psychiatry training may not count toward residency training in child and adolescent psychiatry. However, certain clinical experiences, limited to 1 month of child neurology and 1 month of pediatric consultation/liaison, may be designated as full credit in the Program Requirements in general psychiatry and child and adolescent psychiatry. The program director must document areas for which credit is given in both programs. These experiences may not be used to reduce the total length of time devoted to training in either general or child and adolescent psychiatry.

D. Prior to entry into the program, each resident must be notified in writing of the required length of training for which the program is accredited. The required length of training for a particular resident may not be changed during his or her program without mutual agreement, unless there is an interruption in his or her training or the resident requires remedial training.

III. Institutional Organization

A. Institutional Support
The administration of the sponsoring institution(s) should understand the educational goals and should evidence its willingness and ability to support these goals financially as well as philosophically.

B. Affiliation Agreements

1. In programs where more than one clinical site is used for the training of residents, there must be letters of agreement between the sponsoring institution of the child and adolescent psychiatry residency and each participating institution that conform to Institutional Requirements I.C.1-5.

2. In addition, each training program accredited for child and adolescent psychiatry must have a formal educational affiliation agreement with a general psychiatry residency program that is accredited for at least 3 years of training. The written agreement of such affiliation must be signed by the residency directors of both programs, and copies must be submitted for review by the Residency Review Committee (RRC).
C. Participating Institutions
It is important that each affiliated institution offer significant educational opportunities to the overall program. The number and distribution of participating training sites must not preclude satisfactory participation by residents in teaching and training exercises. Geographic proximity will be one factor in evaluating program cohesion, continuity, and "critical mass." Affiliated training sites will be evaluated on the basis of whether they contribute to a well-integrated educational program with respect to both didactic and clinical experiences.

D. Appointment of Residents
1. The program must document the procedures used to select residents in accordance with institutional and departmental policies and procedures. Application records must document information from graduate medical education programs. A documented procedure must be in place for checking the credentials, the clinical training experiences, and the past performance and professional integrity of residents transferring from one program to another, including from a general psychiatry program to a child and adolescent psychiatry program. This procedure must include solicitation and documentation of relevant information from the training directors of the previous programs participated in by the transferring resident.

2. The residency program director must accept only those applicants whose qualifications for residency include sufficient command of English to permit accurate, unimpeded communication.

3. A program must have at least 4 residents in the 2-year training program. (This may not include those residents who participate in a triple board training format.) Peer interaction and the need for group discussion in seminars and conferences are crucial.

4. The number of residents from other graduate medical education programs and mental health disciplines who participate in the child and adolescent psychiatry educational curriculum should not be so large as to compromise the educational resources of the child and adolescent psychiatry residency.

IV. Faculty Qualifications and Responsibilities

A. Head of Child and Adolescent Psychiatry
1. The head of the department, division, or section of child and adolescent psychiatry should be a fully trained child and adolescent psychiatrist with documented clinical, educational, and administrative abilities and experience, and should be certified in child and adolescent psychiatry by the American Board of Psychiatry and Neurology or judged by the Residency Review Committee to possess appropriate educational qualifications.

2. The head of child and adolescent psychiatry must be appointed to and in good standing with the medical staff of an institution participating in the program.

B. Program Director
1. There must be a single program director responsible for the program. The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation and resident progress and performance.

2. Qualifications of the Program Director
   a. The residency program in child and adolescent psychiatry must be under the direction of a fully trained child and adolescent psychiatrist with documented clinical, educational, and administrative abilities and experience, who is certified in child and adolescent psychiatry by the American Board of Psychiatry and Neurology or judged by the Residency Review Committee to possess appropriate educational qualifications.

b. The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)

c. The program director must be appointed to and in good standing with the medical staff of an institution participating in the program.

3. Responsibilities of the Program Director
   a. Devotion of at least half-time to the training program, including teaching activities.

   b. Preparation of a written statement outlining the overall educational goals and objectives of the program, as well as the knowledge and skills residents should achieve in each year of training. This statement must be distributed to applicants who are interviewed, residents, and members of the teaching staff.

   c. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.

   d. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program in consultation with the chair or division chief.

   e. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.

   f. Regular evaluation, with participation of members of the teaching staff, of residents’ knowledge, skills, and performance, including the development of professional attitudes consistent with being a physician as specified in Section VI.

   g. Provision of a written final evaluation for each resident who completes the program and maintenance of a permanent record of evaluation for each resident that is accessible to the resident and other authorized personnel.

   h. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.

   i. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

   j. Providing an annual written evaluation of the quality of teaching and supervision of each of the teaching faculty.

   k. Providing written information regarding financial compensation, liability coverage, and the policies regarding vacations, sick leave, and family leave as well as other special leaves to residents and applicants who are interviewed.

   l. Preparation of an accurate statistical and narrative description of the program as requested by the RRC for Psychiatry.

   m. Notifying the executive director of the RRC in writing within 30 days of any major change in the program that may significantly alter the educational experience for the residents, including
Program Requirements for Residency Education in Child and Adolescent Psychiatry (Psychiatry)

C. Faculty
1. The residency must be staffed by an appropriate number of capable, qualified child and adolescent psychiatrists and other mental health professionals with sufficient breadth and depth of documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. The psychiatric faculty should be certified in child and adolescent psychiatry by the American Board of Psychiatry and Neurology or judged by the Residency Review Committee to possess appropriate educational qualifications.
2. Psychiatric faculty must participate regularly and systematically in the training program. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

D. Other Program Personnel
Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. Facilities and Resources
A. Training programs must have adequate facilities and affiliations to meet the educational objectives of the program. Ample office space with readily accessible play materials must be available for each resident to see patients.
B. Space for physical and neurological examinations and appropriate medical equipment must be readily available. Access to laboratory testing also must be readily available.
C. There must be adequate space and equipment specifically designated for seminars, lectures, and other educational activities. The program must have available such basic teaching aids such as videotaping equipment or one-way mirrors.
D. The sponsoring institution must provide residents with ready access to a library that contains a substantial number of current basic textbooks and major journals in psychiatry, child and adolescent psychiatry, neurology, pediatrics, and general medicine, sufficient for an excellent educational program. The library must be capable of obtaining textbooks and journals on loan from major medical libraries and of carrying out MEDLINE and other medical information searches (or accessing a library that has this capacity), and it must be reasonably available to residents on weekends and during evening hours.

VI. Educational Program

A. Goals
The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals, which must include knowledge, skill, and attitude objectives. There must be sufficient stable leadership, faculty, clinical facilities, and affiliations to provide a consistent educational experience. The program design and/or structure must be approved by the RRC as part of the regular review process.

B. Curriculum
1. An approved program must have an explicitly described educational curriculum composed of formal didactic instruction and a program of graduated learning and supervised clinical experience through the 2 years that is distributed to residents and faculty. The latter is to be marked by progressive responsibility for the diagnosis and treatment of preschool and grade-school children, adolescents, and their families.
2. Educational quality must have the highest priority in the allotment of the residents' time and energy. The clinical responsibilities of residents must not infringe unduly on didactic activities.

C. Clinical Experience
1. Clinical instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis.
2. Goals that include knowledge, skill, and attitude objectives must be specified for each clinical rotation.
3. Each resident must have responsibility for the evaluation and treatment of a sufficient number and adequate variety of patients representing the full spectrum of psychiatric illnesses in children and adolescents, including developmental and substance use disorders. The number of patients for which residents have primary responsibility at any one time must permit them to provide each patient with appropriate treatment and to have sufficient time for other aspects of their educational program. The depth and variety of clinical experiences must be adequate.
4. Clinical records, recorded by the child and adolescent psychiatry residents, should document an adequate individual and family history, mental status, physical and neurological examinations when appropriate, supplementary medical and psychological data, and integration of these data into a formulation, differential diagnosis, and comprehensive treatment plan.
5. Opportunities for the development of both conceptual understanding and clinical skills in the major treatment modalities with children and adolescents, which include brief and long-term individual therapy, family therapy, group therapy, crisis in-
tervention, supportive therapy, psychodynamic psychotherapy, cognitive-behavioral therapy and pharmacotherapy, must be provided. There must be opportunities for residents to be involved in providing continuous care for a variety of patients from different age groups, seen regularly and frequently for an extended time, in a variety of treatment modalities. Residents should have some experience with continuity of patient care across clinical programs providing different levels of care. Work with outpatients must include work with some child and adolescent patients for at least a year's duration.

6. Residents must have an opportunity to evaluate and treat patients from diverse cultural backgrounds and varied socioeconomic levels.

7. Training must include supervised, active collaboration with other professional mental health personnel, pediatricians, and teachers and other school personnel in the evaluation and treatment of patients.

8. There must be teaching about the appropriate uses and limitations of psychological tests. Residents should have the opportunity to observe some of their patients being tested.

9. There must be an organized teaching and clinical experience in pediatric neurology, mental retardation, and other developmental disorders.

10. Residents must have experiences in the initial management of psychiatric emergencies in children and adolescents. This experience may occur in a variety of settings.

11. Experience with acutely and severely disturbed children or young adolescents is an essential part of training. This experience must occur in settings with an organized treatment program, such as inpatient units, residential treatment facilities, partial hospitalization programs, and/or day treatment programs. This experience must be the full-time equivalent of not less than 4 or more than 10 months. The resident must be actively involved with the diagnostic assessment, treatment planning, and treatment provision for these acutely and severely disturbed patients.

12. Residents must have experience as consultants in situations in which they do not primarily engage in treatment but use their specialized knowledge and skills to assist others to function better in their roles. Training and experience in consultation to facilities serving children, adolescents, and their families must include:
   a. supervised consultation experience with an adequate number of pediatric patients in outpatient and/or inpatient medical facilities;
   b. supervised formal observation and/or consultation experiences in schools;
   c. supervised training and experience in legal issues relevant to child and adolescent psychiatry, which may include forensic consultation, court testimony, and/or interaction with a juvenile justice system; and
   d. training and experience in supervised consultation to community systems of care and their treatment components.

13. Residents must have experience in administrative decision-making processes and practice management involving health care delivery and interactions with health care systems.

D. Didactic Curriculum

1. Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis. Goals that include knowledge and attitude objectives must be specified for each course or seminar. Systematically organized formal instruction (prepared lectures, seminars, assigned reading, etc) must be integral to the residency. Staff meetings, clinical case conferences, journal clubs, and grand rounds are important adjuncts, but they must not be used as substitutes for an organized didactic curriculum.

2. Emphasis on development is an essential part of training in child and adolescent psychiatry. The teaching of developmental knowledge and the integration of neurobiological, phenomenological, psychological, and sociocultural issues into a comprehensive formulation of clinical problems are essential. Teaching about normal development should include observation of and interaction with normal children of various ages.

3. The didactic and clinical curriculum must be of sufficient breadth and depth to provide residents with a thorough, well-balanced presentation of the generally accepted observations and theories and major diagnostic, therapeutic, and preventive procedures in the field of child and adolescent psychiatry.

4. The curriculum must include adequate and systematic instruction in basic neurobiological, psychological, and clinical sciences relevant to psychiatry and in the application of developmental psychological and sociocultural theories relevant to the understanding of psychopathology. It must provide teaching about the full gamut of psychopathology in children and adolescents, including the etiology, epidemiology, diagnosis, treatment, and prevention of the major psychiatric conditions that affect children and adolescents.

5. These courses must be teaching in the ethical practice of child and adolescent psychiatry. There must be instruction in diversity and cultural issues pertinent to children and adolescents.

6. Residents must receive instruction in the recognition and management of domestic and community violence as it affects children and adolescents. This includes physical and sexual abuse as well as neglect.

7. The opportunity for residents to be involved in research or scholarly activity must be available.

8. The curriculum must include an adequate number of interdisciplinary clinical conferences and didactic seminars for residents, in which faculty psychiatrists collaborate in teaching with colleagues from other medical specialties and mental health disciplines.

9. There should be instruction in the principles and practice of utilization review, quality assurance, and performance improvement.

E. Other Required Components

1. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
   a. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
   b. participation in journal clubs and research conferences.
   c. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
   d. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
Program Requirements for Residency Education in Child and Adolescent Psychiatry (Psychiatry)

VII. Internal Evaluation

The program will maintain records of all evaluations required in this section, and these will be made available on review of the program.

A. Evaluation of Residents

1. The program must provide opportunity for and document regularly scheduled meetings between the resident and the program director or designated faculty members. These meetings should be of sufficient frequency, length, and depth to ensure that the residents are continually aware of the quality of their progress toward attainment of program goals. At least semiannually, the program director must evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures. Provision should be made for remediation in cases of unsatisfactory performance.

2. Each evaluation must be communicated to the resident in a timely manner.

3. Residents must be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.

4. In addition to periodic assessments, an annual evaluation procedure is required that must include a written examination of the knowledge base as well as a formal documented clinical skills examination.

5. Programs must develop at least one written core competency for its residents in each of the following areas:
   a. Clinical science
   b. Interpersonal skills and communication
   c. Patient care
   d. Practice-based learning and improvement
   e. Professionalism and ethical behavior
   f. Systems-based care

   The program must provide documented evidence to demonstrate that the proficiency/competence of each resident is assessed using techniques that may include supervisory reports, videotapes, oral examinations, case reports, patient care observations, or other methods.

6. Evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently, ethically, and independently, based on the program's defined core competencies.

7. At the time of the resident's graduation or departure from the program, the program director will affirm in the training record whether there is documented evidence of unethical behavior, unprofessional behavior, or clinical incompetence. Where there is such evidence, it must be comprehensively recorded, along with the responses of the resident. This final evaluation should be part of the resident's permanent record maintained by the institution.

8. A written set of due-process procedures must be in place for resolving problems that occur if a resident's performance fails to meet required standards. These must include the criteria for any adverse action, such as placing a resident on probation, or for terminating a resident whose performance is unsatisfactory. The procedures should be fair to the resident, patients under care, and the training program. A copy should be provided to the residents at the beginning of training.

B. Faculty Evaluation

The program director is responsible for the evaluation of faculty teaching and supervision. This must include an annual confidential written assessment of faculty members by the residents, a summary of which must be provided to faculty.

C. Program Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the overall educational program and the extent to which the educational goals have been met by residents must be assessed. Confidential written evaluations by residents must be utilized in this process. The teaching staff must annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

VIII. Inquiries Concerning Accreditation and Certification

1. All inquiries concerning the accreditation of child and adolescent psychiatry residency programs should be addressed to the Executive Director, Residency Review Committee for Psychiatry, 515 N State St/Ste 2000, Chicago, IL 60610.

2. All inquiries as to whether an individual physician is qualified to be admitted for examination for certification in psychiatry should be addressed to Executive Vice President, American Board of Psychiatry and Neurology, 500 Lake Cook Rd/Ste 335, Deerfield, IL 60015.

ACGME: February 2000 Effective: January 2001
Program Requirements for Residency Education in Forensic Psychiatry (Psychiatry)

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition of the Subspecialty
Forensic psychiatry is the psychiatry subspecialty that focuses on interrelationships between psychiatry and the law (civil, criminal, and administrative law), that include (1) the psychiatric evaluation of individuals involved with the legal system, or consultations on behalf of the third parties such as employers or insurance companies; (2) the specialized psychiatric treatment required by those who have been incarcerated in jails, prisons, or special forensic psychiatric hospitals; (3) active involvement in the area of legal regulation of general psychiatric practice; and (4) related education and research efforts.

B. Duration and Scope of Education
1. The training period in forensic psychiatry must be 12 months.
2. Training in forensic psychiatry that occurs during the general residency training will not be credited toward the one-year requirement.
3. Training is best accomplished on a full-time basis. If it is undertaken on a part-time basis, the 12-month program must be completed within a 2-year period.
4. Prior to entry, each forensic psychiatry resident must be notified in writing of the required length of training for which the program is accredited and the requirements for satisfactory completion of the program. Neither the required length of training for a particular individual nor the graduation requirements may be changed without mutual agreement during his or her program unless there is a break in his or her training or the individual requires remedial training.

C. Educational Goals and Objectives
1. The program must offer advanced training that affords sufficient opportunities for the resident to develop the knowledge, skills, clinical judgment, and attitudes essential to the practice of forensic psychiatry.
2. Clinical experience must include experiences in the following three areas: (a) forensic evaluation of a variety of subjects of both genders, including adolescent, adult, and geriatric age groups, who represent a broad range of mental disorders and circumstances, in both civil and criminal contexts; (b) consultation to general psychiatric services on issues related to the legal regulation of psychiatric practice, such as civil commitment, confidentiality, refusal of treatment, decision-making competence, guardianship, etc; (c) treatment of persons involved in the criminal justice system. Appropriate affiliations must be arranged to ensure that adequate exposure to a sufficient number and variety of experiences is provided.
3. Programs must be based on a structured written curriculum with well-defined goals and objectives. Clinical case conferences and seminars dealing with topics such as law, ethics, the relevant basic and social sciences, and research must be conducted regularly and as scheduled. The curriculum must include sufficient didactic content so that graduates will be knowledgeable about the content outlined in V.C.1-5.
4. Training must focus on the social and legal context for forensic work, both civil and criminal. Instruction should take into account the sociocultural, ethnic, economic, and ethical considerations that affect mentally ill persons who come into contact with the legal system.

II. Institutional Support

A. Sponsoring Institution
1. One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.
2. The program must be administratively attached to and sponsored by a core residency program in psychiatry that holds full accreditation from the ACGME.
3. The program must take place in facilities approved by state licensing agencies and, where appropriate, the Joint Commission on the Accreditation of Healthcare Organizations.

B. Participating Institutions
1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program. The number of and distance between participating institutions should not be so great as to interfere with training and participation in conferences and other organized educational aspects of the program.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties’ needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC).
3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should
   a. identify the faculty who will assume the educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections V.D. and VI.A of the Program Requirements;
   b. outline the educational goals and objectives to be attained by the resident during the assignment;
   c. specify the period of resident assignment;
   d. establish the policies that will govern resident education during the assignment.

C. Facilities and Resources
1. All elements of the program must be located in designated facilities based on written affiliation agreements and must include experiences in the following three venues:
   a. Facilities in which forensic psychiatric evaluations are performed on subjects with a broad variety of psychiatric disorders, where residents can learn evaluation techniques. These may include court clinics, inpatient forensic units, outpatient forensic clinics, and private practices.
b. Facilities that provide general psychiatric services to patients with a broad variety of psychiatric disorders, where residents can learn consultation regarding legal issues or psychiatric practice. These may include inpatient and outpatient facilities or may be specialized facilities that provide psychiatric care to correctional populations.

c. Facilities that treat persons in the correctional system, where residents can learn about the specialized treatment issues raised by these populations and settings. These may include prisons, jails, hospital-based correctional units, halfway facilities, rehabilitation programs, community probation programs, forensic clinics, juvenile detention facilities, and maximum security forensic hospital facilities. Appropriate support services to ensure an adequate educational experience at all participating institutions must be available, including support personnel and a physically safe environment in which residents may carry out their clinical and educational functions.

II. Resident Appointment

A. Eligibility Criteria
The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. The forensic psychiatry resident must have satisfactorily completed an ACGME-accredited general psychiatry residency prior to entering the program. An excessively high rate of resident attrition from a program will be a cause of concern to the RRC.

B. Number of Residents
The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching. Any permanent changes in resident complement require prior approval by the RRC.

C. Resident Transfer
To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section V. A., prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students
The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents. At the same time, the presence of residents in forensic psychiatry must not dilute or otherwise detract from the didactic or clinical experience available to general psychiatry residents.

V. Faculty
The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director
1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution. Frequent changes in leadership or long periods of temporary leadership are undesirable and may adversely affect the accreditation status of the program.

2. The program director must
   a. possess requisite specialty expertise as well as documented educational, clinical, and administrative abilities and experience in his or her field.
   b. be certified by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of forensic psychiatry or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing and based at the primary teaching site.
   d. be an active clinician and must devote sufficient time to the program to ensure implementation of the educational goals and objectives.
   e. participate in scholarly activities appropriate to the subspecialty such as local, regional, and national specialty societies; research; presentations; and publication.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).

3. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.

4. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s) as specified in section II.B. of this document.
   b. Change in the approved resident complement for those specialties that approve resident complement.
   c. Change in the format of the educational program.

On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

5. Selecting residents for appointment to the program in accordance with institutional and departmental policies and procedures. The director must receive documentation from the general psychiatry program completed by an applicant to verify satisfactory completion of all educational and ethical requirements for graduation before the applicant is appointed to the program. Agreements with applicants made prior to the completion of the general residency must be contingent on this requirement.
6. Monitoring the progress of each forensic psychiatry resident, including the maintenance of a training record that documents completion of all required components of the program as well as evaluations of residents' clinical and didactic work by supervisors and teachers. This record shall include a patient log that shall document that each resident has completed all clinical experiences required by the Program Requirements and the educational objectives of the program.

7. Ensuring the provision of written descriptions of departmental policies regarding salary and benefits, due process, sickness and other leaves, on-call responsibilities, and vacation time to all residents on their appointment to the program. All residents must be provided with written descriptions of the malpractice coverage provided for each clinical assignment.

8. Reporting the name of each resident in the program to the RRC by September 1 of each year.

C. Faculty Qualifications
1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of forensic psychiatry or possess qualifications judged by the RRC to be acceptable.
   c. be appointed in good standing to the staff of an institution participating in the program.
   d. be additionally qualified by experience in forensic psychiatry to provide the expertise needed to fulfill the didactic, clinical, and research goals of the program.
   e. include at least one certified child and adolescent psychiatrist.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.
3. Programs with large patient populations, multiple institutions, and large resident complements will be expected to have additional faculty appropriate to their program’s size and structure.

D. Faculty Responsibilities
1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately the residents in the program.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section IV.C.1.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director. The director of forensic psychiatry training at each participating institution shall be appointed by or with the concurrence of the forensic psychiatry program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

E. Other Program Personnel
1. In addition to the faculty psychiatrists, the faculty must include a lawyer and a forensic psychologist.
2. The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program
The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

A. Role of Program Director and Faculty
The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by
1. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
2. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge, supplemented by the addition of current information, and the development of resident competence in the six areas listed below.
3. providing residents with direct experience in progressive responsibility for patient management.

B. ACGME Competencies
The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:
1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. Medical knowledge about established and evolving biomedical, clinical, and cognitive (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.
4. Interpersonal and communication skills that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger
context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Didactic Curriculum
The didactic curriculum must include the following components:

1. A psychiatric curriculum that includes the
   a) history of forensic psychiatry;
   b) roles and responsibilities of forensic psychiatrists;
   c) assessment of competency to stand trial, criminal responsibility, amnesia, testamentary capacity, and civil competency;
   d) issues involved in the assessment of dangerousness;
   e) assessment of the accused sexual offender;
   f) evaluation and treatment of incarcerated individuals;
   g) ethical, administrative, and legal issues in forensic psychiatry;
   h) legal regulation of psychiatric practice;
   i) writing of a forensic report; and
   j) eyewitness testimony.

2. A law curriculum that covers issues in the legal system related to forensic psychiatry, such as
   a) fundamentals of law, statutes, and administrative regulations;
   b) the structure of federal and state court systems;
   c) use of a law library or on-line legal reference services;
   d) theory and practice of sentencing of the convicted offender;
   e) basic civil procedure;
   f) basic criminal procedure;
   g) jurisdiction;
   h) responsibility;
   i) tort law;
   j) children's rights;
   k) family law;
   l) confinement;
   m) structure and function of juvenile justice systems; and,
   n) structure and function of correctional systems.

3. A civil law curriculum that includes issues such as
   a) conservators and guardianships;
   b) child custody determinations;
   c) parental competence and termination of parental rights;
   d) child abuse/neglect;
   e) psychiatric disability determinations;
   f) testamentary capacity;
   g) psychiatric malpractice;
   h) personal injury litigation; and
   i) developmental disability law, ie, individualized educational needs and the right to the least restrictive environment for education.

4. A criminal law curriculum that includes issues such as
   a) competence to stand trial;
   b) competence to enter a plea;
   c) testimonial capacity;
   d) voluntariness of confessions;
   e) insanity defense(s);
   f) diminished capacity;
   g) evaluations in aid of sentencing;
   h) safe release of persons acquitted by reason of insanity; and
   i) competence to be executed.

5. Conferences in forensic psychiatry, such as grand rounds, case conferences, readings seminars, and journal clubs, should be specifically designed to augment the clinical experiences. Regular attendance by the residents and the faculty should be documented.

D. Forensic experiences
1. Forensic experiences must provide residents with sufficient opportunity for the psychiatric evaluation of individuals involving
   a) criminal behavior,
   b) criminal responsibility and competency to stand trial,
   c) sexual misconduct,
   d) dangerousness, and
   e) civil law and regulation of psychiatry issues.

2. Residents also must have experience in the review of written records, including clinical and legal documents, and in the preparation of written reports and/or testimony in a diversity of cases, for example:
   a) aiding the court in the sentencing of criminal offenders,
   b) domestic relations cases,
   c) personal injury cases,
   d) allegations of sexual abuse, and
   e) other cases involving ethical issues and legal regulation, such as involuntary hospitalization, confidentiality, right to treatment, right to refuse treatment, informed consent, and professional liability.

3. Residents must have supervised experience in testifying in court or in mock trial simulations.

4. Residents must have supervised training in the relevance of legal documents, such as police reports, court testimony, polygraphs, hypnosis, neuroanalysis, psychological and neuropsychological testing, brain-imaging techniques, and other procedures relevant to assessments and treatment in forensic psychiatry.

5. Consultative experiences must provide residents with an opportunity to interact with clinicians regarding legal issues that arise in psychiatric practice. This can occur in inpatient or outpatient settings and should include patients from diverse socioeconomic, educational, ethnic, and cultural backgrounds, with a variety of diagnoses. Residents should have the opportunity to consult with clinicians regarding civil commitment and dangerousness, confidentiality, decision-making competence, guardianship, and refusal of treatment.

6. Clinical placement must provide residents with experience in the evaluation and management of acutely and chronically ill patients in correctional systems such as prisons, jails, community programs, and secure forensic facilities. There also must be experience in working with other professionals and personnel in both forensic and community settings. A sufficient number and variety of patients, ranging from adolescence to old age and of diverse backgrounds, should be provided to ensure an adequate experience. Residents must have at least 6 months' experience in the management of patients in correctional systems.

7. Direct clinical work with children under the age of 14 years should be limited to residents who have previously completed ACGME-approved training in child and adolescent psychiatry or to residents who are under the supervision of a board-certified child and adolescent psychiatrist or an individual who possesses qualifications judged to be acceptable by the RRC.

E. Scholarly Activities
1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
   a) The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
   b) The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.

d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, eg, sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

F. Resident Policies
The program director must ensure, direct, and document the implementation of and compliance with appropriate resident policies at all times.

1. Duty hours
   a. Residents must be provided with adequate opportunities to rest and sleep when on duty for 24 hours or more. On-call rooms to permit rest and privacy must be available for each resident on night duty in the hospital.
   b. The educational goals and objectives of the program and the resident learning objectives must not be compromised by excessive reliance on residents to fulfill service obligations. Duty hours, however, must reflect the fact that responsibility for continuing patient care is not automatically discharged at specific times. Programs must ensure adequate backup support when patient care responsibilities are difficult or prolonged.
   c. Resident duty hours and on-call periods must not be excessive. The structuring of duty hours and on-call schedules must focus on the needs of the patient, continuity of care, and the educational needs of the resident. Duty hours must be consistent with the Specialty Requirements. The program director is responsible for monitoring resident activities to ensure that resident fatigue does not contribute to diminished learning or performance or detract from patient safety.

2. Graded Responsibility
   The responsibility given to residents in patient care should depend upon each resident's knowledge, problem-solving ability, manual skills, experience, and the severity and complexity of each patient's status.

3. Supervision
   a. All patient care services must be supervised by qualified faculty.
   b. The program director must ensure, direct, and document adequate supervision of residents at all times.
   c. Residents must be provided with rapid, reliable systems for communicating with supervisors.
   d. Each resident must have a minimum of two hours of individual supervision weekly, of which one hour must be individual and one hour may be group supervision.

4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.

5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

6. Professional activities: Residency education is a full-time endeavor. The program director must ensure that activities extrinsic to the program, such as moonlighting, do not interfere with the ability of the resident to achieve the goals and objectives of the educational program. The program director must comply with the sponsoring institution's policies and procedures regarding moonlighting, in compliance with the Institutional Requirements.

7. Presence of Other Training Programs: The forensic psychiatry program should provide peer interaction between its residents and those of other specialties. To achieve this goal, an accredited training program in at least one nonpsychiatric medical specialty should be present within the program’s participating institutions. Peer interaction among the residents should occur in the course of clinical and/or didactic work, but it is most satisfactory when organized around joint patient evaluation and/or care. In addition, peer interaction with students in related fields, such as law, psychology, and social work, is highly desirable.

8. Resident Administrative and Teaching Experiences: The program should provide appropriate experience designed to develop the administrative and teaching skills of forensic psychiatry residents. As residents progress through the program, they should have the opportunity to teach personnel such as other residents, mental health professionals, and students.

VI. Evaluation

A. Resident Evaluation
   1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include:
      a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
      b. mechanisms for providing regular and timely performance feedback to residents that includes at least
         1) quarterly written evaluations of the residents by all supervisors and the directors of clinical components of training,
         2) written semiannual evaluation that is communicated to each resident in a timely manner, and
         3) the maintenance of a record of evaluation for each resident that is accessible to the resident.
      c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.
   2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident’s permanent record maintained by the institution.
The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment
   a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
   b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the subspecialty certification examination should be used as one measure of evaluating program effectiveness.

VII. Experimentation and Innovation
A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.
B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.
C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

VIII. Board Certification
Residents who plan to seek certification by the American Board of Psychiatry and Neurology in the subspecialty of forensic psychiatry should communicate with the Executive Vice President of the Board to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: February 2003 Effective: July 2003
program. Such facilities may be either discrete institutions separate from an acute care hospital or formally designated units or services within an acute care hospital. Suitable training sites include both nonpsychiatric facilities (such as a nursing facility or chronic care hospital) and psychiatric facilities.

3. An Ambulatory Care Service: The ambulatory care service must be designed to render care in a multidisciplinary environment such as a geriatric clinic, psychiatric outpatient department, or community mental health center where nonpsychiatric medical specialists are also available.

4. Ancillary Support Services: At all participating facilities, there must be sufficient administrative support to ensure adequate teaching facilities, appropriate office space, support personnel, and teaching resources.

5. Library: Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.

a. Library services should include the electronic retrieval of information from medical databases.

b. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

III. Resident Appointment

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. The geriatric psychiatry resident must have satisfactorily completed an ACGME-accredited general psychiatry residency prior to entering the program.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching. Any permanent changes in the resident complement will require prior approval by the Residency Review Committee.

C. Resident Transfer

To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section V. A., prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents. At the same time, the presence of residents in geriatric psychiatry must not substantially dilute or otherwise detract from the didactic or clinical experience available to general psychiatry residents.

2. A Long-Term Care Facility: Inclusion of at least one long-term care facility is an essential component of the geriatric psychiatry program. Such facilities may be either discrete institutions separate from an acute care hospital or formally designated units or services within an acute care hospital. Suitable training sites include both nonpsychiatric facilities (such as a nursing facility or chronic care hospital) and psychiatric facilities.
IV. Faculty
The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director
1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field.
   b. be certified by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of geriatric psychiatry or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing and based at the primary teaching site.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the Accreditation Data System (ADS).
3. Using the ADS to promptly notify the executive director of the RRC of a change in program director or department chair.
4. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s) as specified in section II.B. of this document.
   b. Change in the approved resident complement for those specialties that approve resident complement.
   c. Change in the format of the educational program.
   On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.
5. Supervising the recruitment and appointment process for applicants, including compliance with appropriate credentialling policies and procedures in accordance with institutional and departmental policies and procedures. No applicants should be appointed to the program without written documentation of completion of a general psychiatry residency from the prior program director that verifies satisfactory completion of all educational and ethical requirements for graduation.
6. Monitoring the progress of each geriatric psychiatry resident, including the maintenance of a training record that documents completion of all required components of the program as well as the evaluations of performance by supervisors and teachers. This record shall include a patient log that must document that each resident has completed all clinical experiences required by the Program Requirements and the educational objectives of the program.
7. Assuring that residents are provided written descriptions of the departmental policies regarding due process, sickness and other leaves, on-call responsibilities, and vacation time upon appointment to the program. All residents must be provided with written descriptions of the professional liability coverage provided for each clinical assignment.
8. Reporting to the Residency Review Committee by September of each year the name of each geriatric psychiatry resident in the program.

C. Faculty Qualifications
1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified by the American Board of Psychiatry and Neurology in the subspecialty of geriatric psychiatry or possess qualifications judged by the RRC to be acceptable.
   c. be appointed in good standing to the staff of an institution participating in the program.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities
1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately the residents in the program. In addition to the program director, there must be at least one other faculty member who is certified by the American Board of Psychiatry and Neurology in the subspecialty of geriatric psychiatry or possess qualifications judged by the RRC to be acceptable.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E.1.

E. Other Program Personnel
1. Geriatric Care Team
Geriatric psychiatry residents must be provided with meaningful patient care experiences as part of an interdisciplinary care team.
   a. In addition to geriatric psychiatry, the Geriatric Care Team should include representatives from related clinical disciplines such as psychology, social work, psychiatric nursing, activity or occupational therapy, physical therapy, pharmacy, and nutrition.
   b. A variety of individuals representing disciplines within medicine, such as family practice, internal medicine (including their geriatric subspecialties), neurology, and physical medicine and rehabilitation, should be available for participation on the Geriatric Care Team as needed for patient care and teaching purposes.
   c. It is highly desirable that geriatric psychiatry residents have access to professionals representing allied disciplines (such as ethics, law, and pastoral care) as needed for patient care and teaching purposes.
d. Geriatric psychiatry residents should be provided with opportunities to participate as members of medical geriatric teams in institutions where such teams are present.

2. The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program
The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

A. Role of Program Director and Faculty
The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by
1. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
2. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge, supplemented by the addition of current information, and the development of resident competence in the six areas listed below.
3. providing residents with direct experience in progressive responsibility for patient management.

B. ACGME Competencies
The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:
1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. Medical knowledge about established and evolving biomedical, clinical, and cognitive (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvement in patient care.
4. Interpersonal and communication skills that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Didactic Components
1. The program curriculum must address, as a minimum, the following content and skill areas:
   a. The current scientific understanding of aging and longevity, including theories of aging, epidemiology and natural history of aging, and diseases of the aged. This includes specific knowledge of: the effects of biologic aging on human physiology with emphasis on altered pharmacokinetics, pharmacodynamics, and sensory acuity in the elderly; the differences and gradations between normal and abnormal age changes with particular reference to such areas as memory and cognition, affective stability, personality and behavioral patterns, and sexuality. There must be an understanding of successful and maladaptive responses to stressors frequently encountered in older adults such as retirement, widowhood, role changes, interpersonal and health status losses, financial reverses, environmental relocations, and increased dependency.
   b. The relevance of cultural and ethnic differences, and the special problems of disadvantaged minority groups, as these bear upon distinguishing and treating abnormal and maladaptive clinical changes as well as the use of psychosocial support services.
   c. The epidemiology, diagnosis, and treatment of all major psychiatric disorders seen in the elderly. Such disorders, seen alone and in combination, typically include but are not limited to: affective disorders, dementias, delirium, late-onset psychoses, medical presentations of psychiatric disorders, iatrogenesis, adjustment disorders, anxiety disorders, sleep disorders, sexual disorders, substance-related disorders, personality disorders, and continuation of psychiatric illnesses that began earlier in life.
   d. The performance of mental status examination, including structured cognitive assessment, community and environmental assessment, family and care giver assessment, medical assessment, and functional assessment. Such skills form the basis for formal multidimensional geriatric assessment using the appropriate synthesis of clinical findings and historical as well as current information acquired from the patient and/or relevant others (such as family members, care givers, and other health care professionals). The multidimensional assessment is essential to short-term and long-term diagnostic and treatment planning. Training must be provided in formulating these various assessments into an appropriate and coherent treatment plan.
   e. The formal and informal administrative leadership of the mental health care team, including skills in communicating treatment plans to the patient and the family.
   f. The selection and use of clinical laboratory tests; radiologic and other imaging procedures; and polysomnographic, electrophysiologic, and neuropsychologic tests as well as making appropriate referrals to and consultations with other health care specialists.
   g. The initiation and flexible guidance of treatment with the need for ongoing monitoring of changes in mental and physical health status and medical regimens. Residents should be taught to recognize and manage psychiatric comorbid disorders (for example, dementia and depression) as well as the management of other disturbances often seen in the elderly such as agitation, wandering, changes in sleep patterns, and aggressiveness.
   h. The recognition of the stressful impact of psychiatric illness on care givers. Attention should be placed on the appropriate guidance of and protection of care givers as well as the assessment of their emotional state and ability to function.
   i. Recognition and assessment of elder abuse and appropriate intervention strategies.
   j. The appropriate use of community of home health services, respite care, and the need for institutional long-term care.
k. The management of the care of elderly persons with emotional or behavioral disorders, including the awareness of appropriate modifications in techniques and goals in applying the various psychotherapies (with individual, group, and family focuses) and behavioral strategies.

l. The indications, side effects, and therapeutic limitations of psychoactive drugs and the pharmacologic alterations associated with aging, including changes in pharmacokinetics, pharmacodynamics, drug interactions, appropriate medication management and strategies to recognize and correct medication noncompliance. Attention should be given to the psychiatric manifestations of iatrogenic influences such as the multiple medications frequently taken by the elderly.

m. The use of nonpharmacologic approaches with particular reference to applications and limitations of behavioral therapeutic strategies, physical restraint, and the appropriate use and application of electroconvulsive therapy in the elderly.

n. The appropriate use of psychodynamic understanding of developmental problems, conflict, and adjustment difficulties in the elderly which may complicate the clinical presentation and influence the doctor-patient relationship or treatment planning.

o. The appropriate use of psychotherapies as applied to the elderly.

p. The ethical and legal issues especially pertinent to geriatric psychiatry, including competence, guardianship, right to refuse treatment, wills, informed consent, elder abuse, the withholding of medical treatments, and federal legislative guidelines governing psychotropic drug prescription in nursing homes.

q. The current economic aspects of supporting services, including but not limited to Title III of the Older Americans Act, Medicare, Medicaid, and cost containment.

r. The research methodologies related to geriatric psychiatry, including biostatistics, clinical epidemiology, medical information retrieval, physical restraint analysis, and critical literature review, and research design (including cross-sectional and longitudinal methods).

2. Conferences
Conferences in geriatric psychiatry, such as grand rounds, case conferences, readings seminars, and journal club should be specifically designed to augment the clinical experiences. Regular attendance by the residents and the faculty should be documented.

D. Clinical Components
1. Patient Population
There must be sufficient number and variety of patients in all institutions where training takes place to accomplish the educational goals. This should include not only the spectrum of psychiatric diagnoses, but also experience with a diversity of patients by sex, socioeconomic, educational, and cultural backgrounds.

2. The training program must include the following clinical components:
   a. Longitudinal Care Experience
      All geriatric psychiatry residents should have the opportunity at a senior level of responsibility to follow and treat a sufficient number of patients requiring continuing care. This experience should be of sufficient duration for the resident to understand the problems and learn the skills associated with longitudinal management and treatment. Emphasis during this experience should be placed on approaches to consultation, diagnosis, and treatment of the acutely and chronically ill elderly in a diversity of care settings, both medical and psychiatric, including those with less technologically sophisticated environments. Training should include clinical experience in geriatric psychopharmacology; electroconvulsive therapy (ECT); the use of relevant individual and group psychotherapies; the use of activity therapies; the psychosocial impact of institutionalization; family dynamics in the context of aging, including intergenerational issues; teaching nonmental health professionals about mental health in the aged; the bioethical dilemmas encountered when treating illness in the very old; and working within facilities that may have limitations, such as a decreased staff-patient ratio.
   b. Geriatric Psychiatry Consultation Experience
      Attaining skills as a consultant is an essential part of training. Consultation experiences should be formally available on the nonpsychiatric services of an acute care hospital. There should include consultation to inpatient, outpatient, and emergency services. There should also be consultative experience in chronic care facilities. Familiarity with the organizational and administrative aspects of home health care services should be provided. Exposure to outreach services and crisis intervention services in both community and home settings should be provided.
   c. Other Medical Specialty Experience
      There should be an identifiable, structured educational experience in neurology, physical medicine and rehabilitation, geriatric medicine or geriatric family practice, and palliative care relative to the practice of psychiatry that includes both didactic and clinical training methods. The curriculum should address functional assessment, altered signs and symptoms of physical illness that occur in the elderly, and the identification of physical illnesses and iatrogenic factors that can alter mental status and behavior.

3. Additional Educational Environment
The program must provide opportunities for the geriatric psychiatry resident to render continuing care and to exercise leadership responsibilities in organizing recommendations from the mental health team as well as in integrating recommendations and input from primary care physicians, consulting medical specialists, and representatives of other allied disciplines.

E. Scholarly Activities
1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
   a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
   b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
   c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
   d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space,
F. Resident Policies
The program director must ensure, direct, and document the implementation of and compliance with appropriate resident policies at all times.

1. Duty hours
   a. Residents must be provided with adequate opportunities to rest and sleep when on duty for 24 hours or more. On-call rooms to permit rest and privacy must be available for each resident on night duty in the hospital.
   b. The educational goals and objectives of the program and the resident learning objectives must not be compromised by excessive reliance on residents to fulfill service obligations. Duty hours, however, must reflect the fact that responsibility for continuing patient care is not automatically discharged at specific times. Programs must ensure adequate backup support when patient care responsibilities are difficult or prolonged.
   c. Resident duty hours and on-call periods must not be excessive. The structuring of duty hours and on-call schedules must focus on the needs of the patient, continuity of care, and the educational needs of the resident. Duty hours must be consistent with the Specialty Requirements. The program director is responsible for monitoring resident activities to ensure that resident fatigue does not contribute to diminished learning or performance or detract from patient safety.

2. Graded Responsibility
   The responsibility given to residents in patient care should depend upon each resident's knowledge, problem-solving ability, manual skills, experience, and the severity and complexity of each patient's status.

3. Supervision
   a. All patient care services must be supervised by qualified faculty.
   b. The program director must ensure, direct, and document adequate supervision of residents at all times.
   c. Residents must be provided with rapid, reliable systems for communicating with supervisors.
   d. Each resident shall have a minimum of two hours of individual supervision weekly, of which one hour may be group supervision.

4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.

5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

6. Professional activities: Residency education is a full-time endeavor. The program director must ensure that activities extrinsic to the program, such as moonlighting, do not interfere with the ability of the resident to achieve the goals and objectives of the educational program. The program director must comply with the sponsoring institution's policies and procedures regarding moonlighting, in compliance with the Institutional Requirements.

7. Presence of Other Training Programs: The program should provide peer interaction between its geriatric psychiatry residents and those of other medical specialties. To achieve this goal, there should be an ACGME-accredited training program in at least one relevant nonpsychiatric specialty such as neurology, internal medicine, family practice, geriatric medicine, or physical medicine and rehabilitation within the participating institutions of the geriatric psychiatry program. Peer interaction among the residents should occur in the course of clinical and/or didactic work but is most satisfactory when organized around joint patient evaluation and/or care.

8. Resident Teaching Experiences: The program should provide appropriate experiences designed to develop the administrative and teaching skills of the geriatric psychiatry residents. As the geriatric psychiatry residents progress through the program, they should have the opportunity to teach personnel such as other residents, medical students, nurses and allied health professionals.

VI. Evaluation
A. Resident Evaluation
   1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include
      a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
      b. mechanisms for providing regular and timely performance feedback to residents that includes at least
         1) quarterly evaluation of the geriatric psychiatry residents by all supervisors and the directors of clinical components of training,
         2) written semiannual evaluation of the knowledge, skills and professional growth of the residents, using appropriate criteria and procedures that is communicated to each resident in a timely manner. More frequent evaluations should be scheduled and documented, if necessary, and
         3) the maintenance of a record of evaluation for each resident that is accessible to the resident.
      c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.

   2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty Evaluation
   The performance of the faculty must be evaluated by the program in less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly
activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation
The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d.), and the residents’ confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment
   a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
   b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the subspecialty certification examination should be used as one measure of evaluating program effectiveness.

VII. Experimentation and Innovation
A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

VIII. Board Certification
Residents who plan to seek certification by the American Board of Psychiatry and Neurology in the subspecialty of geriatric psychiatry should communicate with the Executive Vice President/Secretary of the Board to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: February 2003 Effective: July 2003

Program Requirements for Residency Education in Geriatric Psychiatry (Psychiatry)

I. Scope and Duration of Training
A. Definition and Scope of the Specialty
Pain management is a discipline within the practice of medicine that specializes in the management of patients suffering from acute, chronic, and cancer pain. The management of acute and chronic pain syndromes is a complex matter involving many areas of interest and medical disciplines. Clinical and investigative efforts are vital to the progress of the specialty.

B. Duration of Training
Subspecialty training in pain management shall consist of 12 months of full-time training, beginning after satisfactory completion of a core residency program. At least 9 of the 12 months of training must be in clinical pain management. The remainder may be in clinical activities or research relevant to pain management. Assignments must not be made to activities not directly related to pain management.

II. Institutional Organization
A. Relationship to Core Program
Accreditation of a subspecialty program in pain management will be granted only when the program is in direct association with a core residency program in psychiatry accredited by the Accreditation Council for Graduate Medical Education (ACGME). If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the pain management program is conducted. Rotations outside the institution in which the pain management program is based should not exceed 4 months.

B. Appointment of Residents
Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed increase in the number of residents must receive prior approval by the Residency Review Committee (RRC). Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.

C. Institutional Policy: Resources
Because pain management is a multidisciplinary approach to a common problem, there should be an institutional policy governing the educational resources committed to pain management that ensures cooperation of all involved disciplines.

III. Program Director/Faculty
A. Program Director
The program director must be a psychiatrist who has been certified in pain management by the American Board of Psychiatry and Neurology or possess appropriate educational qualifications as judged by the RRC. The program director should have appropriate experience in pain management as a clinician, administrator, and educator.

The subspecialty program director has responsibility for the teaching program in pain management subject to the approval of the director of the core residency program.

B. Medical Director
The medical director of the pain management service may be someone other than the subspecialty program director. Recognizing the institutional and multidisciplinary nature of pain management, the primary speciality of the medical director is not as important as the provision that such an individual represent the best-qualified person within the institution.
C. Faculty
Qualified physicians with expertise in pain management must have a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty residents in pain management must possess expertise in the care of patients with acute, chronic, and cancer pain problems. Such expertise frequently crosses specialty boundaries. Thus, the program is encouraged to include faculty from American Board of Medical Specialties (ABMS)-recognized medical specialties other than psychiatry. Where appropriate, supervision and teaching by faculty in these and other disciplines should be incorporated into the teaching program for subspecialty residents in pain management.

At least three faculty with expertise in pain management should be involved in teaching pain management residents, and those should equal two or more full-time equivalents. A ratio of at least one full-time equivalent faculty member to two subspecialty residents shall be maintained.

IV. Facilities and Resources
A. Space and Equipment
A pain management center (clinic) must be located within a hospital/medical office complex and must be designed specifically for the management of patient pain. Space for research and teaching conferences in pain management must be available.

Appropriate monitoring and life-support equipment must be immediately available wherever invasive pain management procedures are performed.

There must be appropriate on-call facilities for male and female residents and faculty.

B. Support Services
The following functions and support must be available:
1. Appropriate laboratory facilities
2. Appropriate radiologic imaging facilities
3. Psychiatric/psychological services, including behavioral modification
4. Physical and/or occupational therapy
5. Social services
6. Medical record keeping
7. Other services including vocational, nursing, pharmacy, dietary, pastoral, and end-of-life care, as well as liaison with hospice and abuse services
8. Appropriate electrodiagnostic facilities

C. Patient Population
For each resident in the subspecialty of pain management each year, there must be a minimum of 200 new patients. A minimum of 15% of the resident's experience should be spent in managing each of the three types of pain problems: acute pain, chronic pain, and cancer pain.

There must be ready access to consultation from other disciplines involved in pain management.

D. Library
There must be a departmental library with adequate material relevant to pain management. This may be supplemented but not replaced by private faculty book collections and hospital or institutional libraries. There must be adequate computer facilities available for each resident, including literature search engines and Internet services.

V. The Educational Program
A. Educational Environment
An accredited program in pain management must provide educational, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated and prepared to apply acquired knowledge and talents independently.

B. Clinical Components
There should be exposure to a wide variety of clinical pain problems. Such exposure is necessary for the development of broad clinical skills and knowledge required for a specialist in pain management. Subspecialty training in pain management must include experience in the management of both inpatients and outpatients.

The resident must become familiar with theory, benefits, indications, and practical applications of the following procedures and techniques:
1. A broad range of peripheral nerve block procedures
2. Epidural and subarachnoid injections
3. Joint and bursal sac injections
4. Cryotherapeutic techniques
5. Epidural, subarachnoid, or peripheral neurolysis
6. Electrical stimulation techniques
7. Implanted epidural and intrathecal catheters, ports, and infusion pumps
8. Acupuncture and acupressure
9. Behavioral modification and biofeedback
10. Rehabilitative and restorative therapies
11. Hypnosis, stress management, and relaxation techniques
12. Trigeminal rhizolysis
13. Peripheral neurectomy and neurolysis
14. Sympathectomy techniques
15. Management of chronic headache
16. Alternative pain therapies
17. Neurosurgical ablative techniques
18. Prevention, recognition, and management of local anesthetic overdose, including airway management and resuscitation
19. Recognition and management of therapies, side effects, and complications of pharmacologic agents used in pain management

In addition to the above skills, the pain management resident must have significant experience in providing concise written and verbal consultation to other services, including evidence-based differential diagnosis, planning, potential complications of treatment(s), prognosis, and follow-up.

C. Didactic Components
The pain management curriculum must include the following topics in lectures and reading:
1. Anatomy and physiology of the pain projection system
2. Epidemiology, economic impact, and sociology of pain disorders
3. Pharmacology of opiates, nonnarcotic analgesics, nonsteroidal anti-inflammatory agents, and other medications commonly used in pain management
4. Pharmacology of centrally acting drugs used in pain management
5. Measurement and assessment of pain and function
6. Principles of neural stimulation
7. Indications and limitations of diagnostic testing, including electrodiagnostic evaluation
8. Nerve blocks in pain management
9. Neuroablative procedures
10. Behavioral, cognitive, and supportive psychotherapeutic treatment principles, including rehabilitation and the role of team management
11. Principles and techniques of acute pain management
12. Principles and techniques of cancer pain management, including death and dying, and the ethical principles involved in hospital, hospice, and home care
13. Principles and techniques of management of other chronic pain problems
14. Principles of physical therapy, occupational therapy, and rehabilitation of the patient with chronic pain
15. Principles of multidisciplinary approaches to pain management
16. Management of pain in children
17. Management of pain in the elderly
18. Principles and ethics of pain research in humans and animals
19. Organization and management of a pain management center
20. Continuing quality improvement, utilization review, and program evaluation
21. Disability assessment and rehabilitation management
22. Assessment and management of musculoskeletal conditions
23. Psychological screening tools to evaluate pain disorders
24. History and physical examination skills, including indications/contraindications and interpretation of diagnostic studies relating to pain disorders

D. Pain Center Management
Subspecialty residents in pain management must gain experience in the management of a pain center (clinic) with regards to appointment and training of nonphysician personnel, establishment of policies relating to management of pain problems, coordination of the activities of the pain center with other inpatient and outpatient services, and basic economics of pain-related health-care delivery.

E. Resident Teaching
The subspecialty resident in pain management must become experienced in teaching principles of pain management to resident physicians, medical students, and other health-care professionals.

F. Conferences
Pain management conferences must be held regularly. These should include morbidity and mortality conferences, journal reviews, and research seminars. Active participation in the planning and presentation of these conferences by the pain management resident and faculty is essential. Attendance at multidisciplinary conferences is encouraged.

VI. Scholarly Activity
The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and psychiatry pain management training must be conducted in centers where there is active research activity both in clinical and basic neuroscience fields. This activity should include the following:
A. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
B. Participation in journal clubs and research conferences.
C. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.

D. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
E. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
F. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activities. The goal for the resident should be at least one scientific presentation, abstract, or publication.

VII. Evaluation
A. Faculty responsible for teaching subspecialty residents in psychiatry pain management must provide critical evaluations of each resident's progress and competence to the psychiatry pain management program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in psychiatry pain management must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.
B. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in psychiatry pain management should be involved in continuous quality improvement, utilization review, and risk management.

VIII. Board Certification
The record of its graduates in obtaining certification in pain management by ABMS certifying bodies represents one measure of the quality of a program. The RBC will consider this information as part of the overall evaluation of the program.

ACGME: June 2000 Effective: June 2000

Program Requirements for Residency Education in Psychosomatic Medicine (Psychiatry)

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction
A. Definition and Scope of the Specialty
Psychosomatic Medicine is the discipline encompassing the study and practice of psychiatric disorders in patients with medical, surgical, obstetrical and neurological conditions, particularly for patients with complex and/or chronic conditions. Physicians specializing in psychosomatic medicine have expertise in the diagnosis and treatment of psychiatric disorders in complex medically ill patients. The practice of psychosomatic medicine requires comprehensive knowledge of patients with acute or chronic medical, neurological, or surgical illness in which psychiatric morbidity affects their medical care and/or quality of life; patients with somatoform disorder or with psychological factors in which psychiatric morbidity affects a...
physical condition; and patients with a psychiatric disorder that is the
direct consequence of a primary medical condition.

B. Duration and Scope of Education
1. An accredited residency program in psychosomatic medicine
must provide 12 months of supervised graduate education.
2. To be eligible for accreditation, the subspecialty program must
function as an integral part of an accredited residency program
in psychiatry. There must be a reporting relationship, to ensure
compliance with the ACGME accreditation standards, from the program
director of the subspecialty program to the program di-
rector of the parent psychiatry residency program.
3. Prior to entry into the program, each resident must be notified in
writing of the required length of training.

II. Institutional Support
A. Sponsoring Institution
One sponsoring institution must assume the ultimate respon-
sibility for the program as described in the Institutional Require-
ments, and this responsibility extends to resident assignments at
all participating institutions.

B. Participating Institutions
1. Assignments to participating institutions must be based on a
clear educational rationale, must have clearly stated learning
objectives and activities, and should provide resources not
otherwise available to the program.
2. Assignments at participating institutions must be of sufficient
length to ensure a quality educational experience and should
provide sufficient opportunity for continuity of care. Although
the number of participating institutions may vary with the
various specialties' needs, all participating institutions must
demonstrate the ability to promote the program goals and ed-
ucational and peer activities. Exceptions must be justified
and prior-approved.
3. Program letters of agreement must be developed for each par-
ticipating institution that provides an educational experience
for a resident that is one month in duration or longer. In in-
stances where two or more participating institutions in the
program function as a single unit under the authority of the
program director, letters are not necessary. The agreements
should
a. identify the faculty who will assume the educational and su-
 ervisory responsibility for residents and specify the fac-
ty responsibilities for teaching, supervision, and formal
  evaluation of resident performance per Sections IV.D. and
  VI.A of the Program Requirements;
b. outline the educational outcomes to be attained by the resi-
dent during the assignment;
c. specify the period of resident assignment;
d. establish the policies that will govern resident education
during the assignment.

III. Resident Appointment
A. Eligibility Criteria
1. The program director must comply with the criteria for resi-
dent eligibility as specified in the Institutional Require-
ments.
2. Subspecialty training in psychosomatic medicine is a voluntary
component in the continuum of the educational process; such
training should take place on satisfactory completion of an
ACGME-accredited program in psychiatry.

B. Number of Residents
The RRC will approve the number of residents based upon estab-
lished written criteria that include the adequacy of resources
for resident education such as quality and volume of patients
and related clinical material available for education, fac-
ulty-resident ratio, institutional funding, and the quality of fac-
tulty teaching.

C. Resident Transfer
To determine the appropriate level of education for a resident
who is transferring from another residency program, the pro-
gram director must receive written verification of the previous
educational experiences and a statement regarding the perfor-
mane evaluation of the transferring resident prior to accep-
tance into the program. A program director is required to pro-
vide verification of residency education for any residents who
may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students
1. The appointment of other residents requires a clear statement of
the areas of training, clinical responsibilities, and duration of the
special education. This statement must be supplied to the Resi-
dency Review Committee at the time the program is site visited.
2. The appointment of fellows and other specialty residents or
students for special education must not dilute or detract from
the educational opportunities of the regularly appointed psy-
chosomatic residents. If such residents/trainees so appointed
will, in the judgment of the Residency Review Committee, de-
tract from the education of the regularly appointed psychoso-
matic residents, the accreditation status of the program may be
adversely affected.

IV. Faculty
The program director and faculty are responsible for the gen-
eral administration of the program and for the establish-
ment and maintenance of a stable educational environment. Adequate
lengths of appointment for the program director and faculty are
essential to maintaining such an environment. The length of ap-
pointment for the program director should provide for contin-
unity of leadership.

A. Qualifications of the Program Director
1. There must be a single program director responsible for the
program. The person designated with this authority is ac-
countable for the operation of the program and should be a
member of the staff of the sponsoring or integrated institu-
tion.
2. The program director must
a. possess requisite specialty expertise as well as documented
  educational and administrative abilities and experience in
  his or her field.
b. be certified in psychosomatic medicine by the American
  Board of Psychiatry and Neurology or possess qualifications
  judged to be acceptable by the RRC.
c. be appointed in good standing and based at the primary
teaching site.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational
program in all institutions that participate in the program.
This includes selecting and supervising the faculty and other
program personnel at each participating institution, appoint-
ing a local site director, and monitoring appropriate resident
supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).

3. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.

4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.

5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

6. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s) as specified in section II.B. of this document.
   b. Change in the approved resident complement for those specialties that approve resident complement.
   c. Change in the format of the educational program. On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

C. Faculty Qualifications
1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified in psychosomatic medicine by the American Board of Psychiatry and Neurology or possess qualifications judged by the RRC to be acceptable.
   c. be appointed in good standing to the staff of an institution participating in the program.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities
1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately the residents in the program. In addition to the program director, there must be a minimum of one additional physician faculty member who meets the requirements in IV.C. above.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E.1.

E. Other Program Personnel
The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program
The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process. The educational program must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes that are essential for practice of the subspecialty.

A. Role of Program Director and Faculty
The program director, with the assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by:
1. Preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
2. Preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
3. Providing residents with direct experience in progressive responsibility for patient management. The responsibility given to residents in patient care should depend upon each resident's knowledge, problem-solving ability, manual skills, experience, and the severity and complexity of each patient's illness.

B. ACGME Competencies
The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:
1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. Medical knowledge about established and evolving biomedical, clinical, and cognitive (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.
4. Interpersonal and communication skills that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Components of the Educational Program
1. Curriculum
The training program must provide opportunities for residents to acquire advanced clinical knowledge and skills in the field of psychosomatic medicine. This objective must be accomplished by a combination of supervised clinical experiences and formal didactic conferences. The curriculum must assure residents the opportunity to acquire the cognitive knowledge, interpersonal skills, professional attitudes, and practical experience required of a psychiatrist with added qualifications in psychosomatic medicine. All major dimensions of the curriculum must be structured educational experiences guided by written goals and objectives as well as by specified teaching and evaluation methods. Educational experiences must be planned and faculty must attend and meaningfully participate.

2. Didactic experiences in psychosomatic medicine must provide residents with sufficient opportunity to develop knowledge, skill and proficiency involving

a. the nature and extent of psychiatric morbidity in medical illness and its treatments,
b. the impact of comorbid psychiatric disorders on the course of medical illness,
c. understanding of how and why patients respond to illness,
d. knowledge of appropriate treatment interventions for co-existing psychiatric disorders in the medically ill

e. psychological and psychiatric effects of new medical or surgical therapies,
f. the epidemiology of psychiatric illness and its treatment in medical disease, and
g. knowledge of the nature and factors that influence the physicianpatient relationship.

D. Clinical Components

1. Patient Population

There must be an adequate number of patients representing both sexes with a wide variety of clinical problems to provide a patient population sufficient to meet the educational needs of the residents. The number of critically ill patients available for the residents at the primary clinical site should be sufficient to meet the educational goals of the program.

2. Clinical experiences in psychosomatic medicine must provide residents with sufficient opportunity for the psychiatric evaluation of individuals involving

a. psychiatric complications of medical illnesses,
b. psychiatric complications of medical treatments, especially medications, new surgical or medical procedures, transplantation, and a range of experimental therapies,
c. typical and atypical presentations of psychiatric disorders that are due to medical, neurological, and surgical illnesses,
d. evaluation and management of delirium, dementia, and secondary (“organic”) psychotic disorders,
e. evaluation and management of somatoform disorders, and chronic pain,
f. assessment of capacity to give informed consent for medical and surgical procedures in the presence of cognitive impairment,
g. provision of non-pharmacologic interventions, including cognitive-behavioral psychotherapy, interpersonal psychotherapy, as well as focused, short-term psychotherapy in patients suffering the effects of complex medical disorders or their treatments,
h. indications for, and use of, psychotropics in specific medical, neurological, obstetrical, and surgical conditions,
i. interactions between psychotropic medications and the full-range of medications used for a variety of medical and surgical conditions,
j. collaboration with other physicians, and other members of the multidisciplinary treatment team,
k. teaching other physicians and other members of the multidisciplinary team how to recognize and respond to various psychiatric disorders,
l. leading an integrated psychosocial health care team in the medical setting.

3. Residents must participate in continuity of patient care.

4. A written statement defining the role of related disciplines must be in place outlining requirements for multidisciplinary care and resident interactions with other specialties.

E. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:

a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals,
b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks,
c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.

d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

F. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents’ time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. Supervision of Residents

a. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty. Supervision of the residents by psychosomatic faculty members must be available at all times.

b. Faculty schedules must be structured to provide residents with continuous supervision and consultation. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

2. Duty Hours

a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care, (both inpatient and outpatient), administrative duties re-
lated to patient care, the provision for transfer of patient
care, time spent in-house during call activities, and sched-
uled academic activities such as conferences. Duty hours
do not include reading and preparation time spent away
from the duty site.

b. Duty hours must be limited to 80 hours per week, averaged
over a four-week period, inclusive of all in-house call
activities.

c. Residents must be provided with 1 day in 7 free from all ed-
ucational and clinical responsibilities, averaged over a
4-week period, inclusive of call. One day is defined as one
continuous 24-hour period free from all clinical, educa-
tional, and administrative activities.

d. Adequate time for rest and personal activities must be pro-
vided. This should consist of a 10 hour time period pro-
vided between all daily duty periods and after in-house call.

3. On-Call Activities
The objective of on-call activities is to provide residents with
continuity of patient care experiences throughout a 24-hour
period. In-house call is defined as those duty hours beyond
the normal work day when residents are required to be im-
mediately available in the assigned institution.

a. In-house call must occur no more frequently than every
third night, averaged over a four-week period.

b. Continuous on-site duty, including in-house call, must not
exceed 24 consecutive hours. Residents may remain on duty
for up to six additional hours to participate in didactic ac-
tivities, transfer care of patients, conduct outpatient clini-
ces, and maintain continuity of medical care.

c. No new patients may be accepted after 24 hours of contin-
uous duty. A new patient is defined as any patient for whom
the resident has not previously provided care.

d. At-home call (pager call) is defined as call taken from out-
side the assigned institution.

1) The frequency of at-home call is not subject to the every
third night limitation. However, at-home call must not
be so frequent as to preclude rest and reasonable per-
sonal time for each resident. Residents taking at-home
call must be provided with 1 day in 7 completely free
from all educational and clinical responsibilities, aver-
aged over a 4-week period.

2) When residents are called into the hospital from home,
the hours residents spend in-house are counted toward the
80-hour limit.

3) The program director and the faculty must monitor the
demands of at-home call in their programs and make
scheduling adjustments as necessary to mitigate exces-
sive service demands and/or fatigue.

4. Moonlighting
a. Because residency education is a full-time endeavor, the
program director must ensure that moonlighting does not
interfere with the ability of the resident to achieve the
goals and objectives of the educational program.

b. The program director must comply with the sponsoring in-
stitution's written policies and procedures regarding moon-
lighting, in compliance with the Institutional Requirements
III. D. 1.k.

c. Moonlighting that occurs within the residency program
and/or the sponsoring institution or the non-hospital spon-
sor's primary clinical site(s), i.e., internal moonlighting,
must be counted toward the 80-hour weekly limit on duty
hours.

5. Oversight

a. Each program must have written policies and procedures
consistent with the institutional and Program Require-
ments for resident duty hours and the working environ-
ment. These policies must be distributed to the residents
and the faculty. Monitoring of duty hours is required with
frequency sufficient to ensure an appropriate balance be-
tween education and service.

b. Back-up support systems must be provided when patient
care responsibilities are unusually difficult or prolonged,
or if unexpected circumstances create resident fatigue suf-
ficient to jeopardize patient care.

VI. Evaluation

A. Resident Evaluation
1. The residency program must demonstrate that it has an effec-
tive plan for assessing resident performance throughout the
program and for utilizing the results to improve resident per-
formance. This plan should include

a. the use of methods that produce an accurate assessment of
residents' competence.

b. mechanisms for providing regular and timely performance
feedback to residents that includes at least

1) written semianual evaluation that is communicated to
each resident in a timely manner

2) the maintenance of a record of evaluation for each resi-
dent that is accessible to the resident.

c. a process involving use of assessment results to achieve
progressive improvements in residents' competence and per-
formance. Appropriate sources of evaluation include fac-
ulty, patients, peers, self, and other professional staff.

2. The program director must provide a final evaluation for each
resident who completes the program. The evaluation must in-
clude a review of the resident's performance during the final
period of education and should verify that the resident has
demonstrated sufficient professional ability to practice com-
petently and independently. The final evaluation must be part
of the resident's permanent record maintained by the institu-
tion. The final evaluation of each resident must document profi-
cency in the following outcome areas:

a. knowledge of abnormal behavior and psychiatric illnesses that
occur among medical, neurological, obstetrics-gynecology, and
surgical patients,

b. knowledge of biological, psychological and social factors that
influence the development, course and outcome of medi-
cal/surgical diseases,

c. ability to diagnose and treat psychiatric disturbances that oc-
cur among the physically ill, including the administration of
psychotropic medications to seriously ill patients,

d. understanding of pharmacology, including the
psychopharmacology of the medically ill, with emphasis on,
and psychiatric side effects of, non-psychotropic medications
and the interactions of psychotropic medications with other
medications on the central nervous system,

e. ability to provide consultation in medical and surgical
settings,

f. facilitative skills necessary to enhance the care of psychiatric
disturbances among the physically ill through cooperative in-
teraction with other physicians and allied health
professionals,

g. ability to effectively supervise medical students and residents
performing consultations and to teach medical and surgical
colleagues about psychiatric complications of physical illness,

h. participation in the development of new knowledge, evalua-
tion of research findings, and the continuing acquisition of

398
new knowledge, through the development of good habits of inquiry,
I. knowledge of the organizational and administrative skills needed to finance, staff, and manage a psychosomatic medicine service.

**B. Faculty Evaluation**
The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

**C. Program Evaluation**
The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. **Outcome assessment**
   a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
   b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. When averaged over any five-year period, a minimum of 80% of all program graduates must successfully complete the examinations of the American Board of Psychiatry and Neurology.

**VII. Experimentation and Innovation**
A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

**VIII. Board Certification**
Residents who plan to seek certification by the American Board of Psychiatry and Neurology should communicate with the Executive Vice President of the Board to ascertain the current requirements for acceptance as a candidate for certification.

*ACGME: June 2003  Effective: June 2003*

---

**Program Requirements for Residency Education in Diagnostic Radiology**

**Common Program Requirements**
Sections of text that are not bolded are specialty-specific requirements.

**I. Introduction**

A. **Definition and Scope of the Specialty**
Diagnostic radiology encompasses a variety of diagnostic and image-guided therapeutic techniques, including all aspects of radiological diagnosis, nuclear radiology, diagnostic ultrasound, magnetic resonance, computed tomography, interventional procedures, and the use of other forms of radiant energy. The residency program in diagnostic radiology shall offer a quality graduate medical educational experience of adequate scope and depth in all of these associated diagnostic disciplines.

B. **Duration and Scope of Education**
Resident education in diagnostic radiology must include 5 years of clinically oriented graduate medical education, of which 4 years must be in diagnostic radiology. The clinical year must consist of Accreditation Council for Graduate Medical Education (ACGME), Royal College of Physicians and Surgeons of Canada (RCPSC), or equivalent accredited training in internal medicine, pediatrics, surgery or surgical specialties, obstetrics and gynecology, neurology, family practice, emergency medicine, or any combination of these, or an ACGME or equivalent accredited transitional year.

   If the clinical year is offered by the institution of the core residency, and it is not itself an ACGME-accredited year, the program director will be responsible for assuring the quality of the year.

   The diagnostic radiology program shall offer a minimum of 4 years of graduate medical education (including vacation and meeting time) in diagnostic radiology, of which at least 42 months of training must be in the parent or integrated institution(s). (Time spent attending the AFIP course is excluded.) The minimum period of training in nuclear radiology shall be 6 months. The maximum period of training in any subspecialty area shall be 12 months.

**II. Institutional Support**

A. **Sponsoring Institution**
One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. **Participating Institutions**
1. Assignments to participating institutions must be based on a clear educational rationale, have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. All participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the RRC.
3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In
instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should

a. identify the faculty who will assume the educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.B. and V.A of the Program Requirements;

b. outline the educational goals and objectives to be attained by the resident during the assignment;

c. specify the period of resident assignment;

d. establish the policies that will govern resident education during the assignment.

4. Integrated and Affiliated Institutions

Institutions may participate on an affiliated or an integrated basis. When another institution is utilized and a single program director assumes responsibility for the entire residency, including the appointment of all residents and teaching staff, that institution is designated as integrated. Within a single program some participating hospitals may qualify as integrated, while others are merely affiliated. Rotations to affiliated institutions may not exceed 6 months during the 4 years of training. (Time spent attending the AFIP course is excluded.) Rotations to integrated institutions are not limited in duration. Participation by any affiliated institution providing more than 3 months of training must be approved by the RRC. Prior approval of the RRC is required for participation of an institution on an integrated basis, regardless of the duration of the rotations.

Affiliation shall be avoided with institutions that are at such a distance from the parent institution as to make resident attendance at rounds and conferences impractical, unless there is a comparable educational experience at the affiliated institution. Service responsibility alone at a participating institution does not constitute a suitable educational experience.

C. Facilities and Resources

1. The program must provide not only adequate space, equipment, and other pertinent facilities to ensure an effective educational experience for residents in diagnostic radiology but also the modern facilities and equipment required in all of the subspecialty rotations.

2. There must be 24-hour access to an on-site departmental library or to a collection of journals, references, and resource materials pertinent to progressive levels of education in diagnostic radiology and associated fields in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must include standard diagnostic radiology and radiological subspecialty textbooks and major radiology journals.

3. Residents must have ready access to a major medical library, and journals must include standard diagnostic radiology and associated fields in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must include standard diagnostic radiology and radiological subspecialty textbooks and major radiology journals.

III. Resident Appointment

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a diagnostic radiologist who is a member of the staff of the sponsoring or integrated institution.

2. The program director must:

a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field, including at least 3 years of participation as an active faculty member in an accredited residency program.
b. be certified by the American Board of Radiology or possess qualifications judged to be acceptable by the RRC.
c. be appointed in good standing and based at the primary teaching site.
d. be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)

3. A complete curriculum vitae of the program director shall be filed with the Executive Director of the RRC at the time of appointment and updated with each review of the program by the RRC.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).

3. Promptly notifying the executive director of the RRC, using the ADS, of a change in program director or department chair.

4. Ensuring the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.

5. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

6. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s).
   b. Change in the approved resident complement.
   c. Change in the format of the educational program.

   On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

C. Faculty Qualifications
1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified by the American Board of Radiology or possess qualifications judged by the RRC to be acceptable.
   c. be appointed in good standing to the staff of an institution participating in the program.

2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities
1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately the residents in the program. As noted (III.B.3), there must be at least one full-time equivalent faculty member at the parent and integrated institutions for every resident in the program. All members of the faculty must have their academic appointment in the department of radiology.

2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.

3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E.1.

4. Didactic and clinical teaching must be provided by faculty with documented interests and expertise in the subspecialty involved. The teaching faculty responsible for the training in each designated subspecialty area must demonstrate a commitment to the subspecialty. Such commitment may be demonstrated by any of the following: (1) fellowship training or 3 years of subspecialty practice; (2) membership in a subspecialty society; (3) publications and presentations in the subspecialty; (4) annual CME credits in the subspecialty.

5. At least one physician faculty member must be designated to have primary responsibility for the educational content of each of the nine subspecialty areas. This individual must practice at least 50% of his or her time in the department. The nine subspecialty areas are neuroradiology, musculoskeletal radiology, vascular and interventional radiology, chest radiology, breast imaging, abdominal radiology, pediatric radiology, ultrasonography (including obstetrical and vascular ultrasound), and nuclear radiology. No faculty member may have primary responsibility for the educational content of more than one subspecialty area, although faculty may have clinical responsibility and/or teaching responsibilities in several subspecialty areas. A pediatric radiologist may have a primary appointment at another institution and still be the designated faculty member supervising pediatric radiologic education.

E. Other Program Personnel
The program must be provided with the additional professional, technical, and clerical personnel needed to support the administrative and educational conduct of the program. A dedicated residency program coordinator is required.

V. The Educational Program
A. Role of Program Director and Faculty
The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by

1. Preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.

2. Preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information. The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

3. Providing residents with direct experience in progressive responsibility for patient management as they advance through
the program. The educational program must culminate in sufficiently independent responsibility for clinical decision-making to ensure that the graduating resident has developed sound clinical judgment. The level of resident responsibility should be increased progressively with each year of education. This includes responsibility in patient care, leadership, teaching, and practice management. Senior residents should supervise or act as consultants to junior residents and medical students.

4. Ensuring that residents continue to be involved in clinical responsibilities throughout residency. Full-time participation in educational conferences, clinical services, and call responsibilities is expected at all levels of training, including the entire final year of residency.

B. ACGME Competencies

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

2. Medical knowledge about established and evolving biomed-  
cal, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

4. Interpersonal and communication skills that result in effective information exchange and collaboration with patients, their families, and other health professionals.

5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. While not all members of a teaching faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. Scholarship is defined as the following:

a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.

b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.

c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.

d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

3. Resident research

During their training, all residents should be encouraged to engage in an investigative project under faculty supervision. This may take the form of laboratory research, clinical research, or the retrospective analysis of data from patients, and results of such projects shall be suitable for publication or presentation at local, regional, or national scientific meetings.

D. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. Supervision of Residents

   a. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Faculty supervision must be available at all sites of training. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

   b. Duty hours must be limited to 80 hours per week, averaged over a 4-week period, inclusive of all in-house call activities.

   c. Duty hours do not include reading and preparation time spent away from the duty site.

2. Duty Hours

   a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.

   b. Duty hours must be limited to 80 hours per week, averaged over a 4-week period, inclusive of all in-house call activities.

   c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
d. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

3. On-Call Activities
The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

a. In-house call must occur no more frequently than every third night, averaged over a four-week period.

b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct out-patient clinics, and maintain continuity of medical and surgical care. During this time, residents may complete call activities and participate in read-out sessions with faculty of the previous night's cases.

c. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as reading a new study or participating in an interventional procedure on a patient for whom the resident has not previously provided care.

d. At-home call (pager call) is defined as call taken from outside the assigned institution.

1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

4. Moonlighting
a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.

b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III. D. L. K.

c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), ie, internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

5. Oversight
a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.

b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

6. Duty Hours Exception
The RRC for Diagnostic Radiology will not consider requests for exception to the limit to 80 hours per week, averaged monthly.

F. Didactic Components
The education in diagnostic radiology must occur in an environment that encourages the interchange of knowledge and experience among residents in the program and with residents in other major clinical specialties located in those institutions participating in the program.

Diagnostic radiologic physics, radiation biology, radiation protection, and pathology are required elements of the curriculum. In view of the importance of understanding pathology as a basis for radiologic diagnosis, emphasis should be placed on its study. Radiologic/pathologic conferences are required for those residents who do not participate in formalized extramural pathology teaching programs. Didactic instruction in molecular imaging should be offered.

Teaching files (electronic or film) of cases related to all aspects of diagnostic radiology must be available for use by residents. Aggregates of these files should contain a minimum of 1000 cases that are actively maintained and continually enhanced with new cases. The American College of Radiology learning file or its equivalent should be available to residents; this only partially meets the teaching file requirements.

Conferences and teaching rounds must be correlated and provide for progressive resident participation. There should be intradepartmental conferences as well as interdepartmental conferences of appropriate frequency with each major clinical department in which both residents and faculty participate on a regular basis.

G. Clinical Components
The program in diagnostic radiology must provide a sufficient volume and variety of patients to ensure that residents gain experience in the full range of radiologic examinations, procedures, and interpretations. A reasonable volume is no less than 75000 total radiologic examinations at the parent or integrated program, and no less than 7,000 radiologic examinations per year per resident. The number of examinations in each of the subspecialty areas must be of sufficient volume to ensure adequate training experience. If volume in any subspecialty area is less than acceptable, a plan must be developed to increase trainee exposure. The presence of residents and subspecialty residents from outside institutions for limited rotations should not dilute the educational experience of the core program residents.

The clinical training must provide for progressive, supervised responsibility for patient care and must ensure that the supervised resident performs those procedures commonly accepted in all aspects of diagnostic radiology. The training must include progressive study and experience in all of the diagnostic radiologic subspecialties. The training program should ensure sufficient time to gain experience in neuroradiology, musculoskeletal radiology, vascular and interventional radiology, chest radiology, breast imaging, abdominal radiology, pediatric radiology, ultrasoundography (including obstetrical and vascular ultrasound), and nuclear radiology. There must be a minimum of 12 weeks of clinical rotations in breast imaging.

Additionally, each resident must have documented supervised experience in interventional procedures, for example, image-guided biopsies, drainage procedures, noncoronary angioplasty.
embolization and infusion procedures, and percutaneous introduction techniques.

The program director must require that residents maintain a record (electronic or written) in which they document the performance, interpretation, and complications of vascular, interventional, and invasive procedures. The record must be reviewed by the program director or faculty designee on a yearly basis.

Training and clinical experience are required in plain film interpretation, computed tomography, magnetic resonance imaging, angiography, and nuclear radiology examinations of the cardiovascular system (heart and great vessels). This training must include both the adult and the pediatric age group. The program must also provide didactic instruction in cardiac anatomy, physiology, and pathology, including the coronary arteries.

Radiologic education in different organ systems must provide the opportunity for residents to develop adequate knowledge regarding normal and pathologic physiology, including the biologic and pharmacologic actions of materials administered to patients in diagnostic studies.

Each resident must have basic life-support training, and advanced cardiac life-support training is recommended.

VI. Evaluation

A. Residency Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. The evaluation process should involve use of assessment results to achieve progressive improvements in residents' competence and performance. This plan should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

   Evaluations of each resident's progress and competence should be conducted preferably at the end of each rotation, but not less than four times yearly. The program director or the program director's designee must meet with all the residents at least semiannually to discuss these evaluations and provide feedback on performance.

   Residents should be advanced to positions of higher responsibility only on the basis of their satisfactory progressive professional growth and scholarship. More frequent reviews of performance for residents experiencing difficulties or receiving unfavorable evaluations are required. When a resident fails to progress satisfactorily, a written plan identifying the problems and addressing how they can be corrected must be placed in his or her individual file.

   A record of evaluation should be maintained for each resident and should be accessible to the resident.

   Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.

2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty Evaluation

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, ie, at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment

   a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.

   b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. During the most recent 5-year period, at least 50% of its graduates should pass without condition the written and oral examinations on the first attempt.

VII. Experimentation and Innovation

A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

VIII. Board Certification

Residents who plan to seek certification by the American Board of Radiology should communicate with the Executive Director of the Board to ascertain the current requirements, including duration of training, for acceptance as a candidate for certification.

ACGME: July 2003   Editorial Revision: December 2003
Policies and Procedures for Residency Education in the Subspecialties of Diagnostic Radiology

Subspecialty programs must be administratively linked to an accredited core residency program in diagnostic radiology. (The only exception is pediatric radiology, as discussed below.) An application for accreditation of a new subspecialty program will be considered only if the core program has full accreditation. An application will not be accepted for review if the core program in diagnostic radiology is accredited on a provisional or a probationary basis, or if it has been accredited with a warning that adverse action will be taken if it is not in substantial compliance with the Essentials of Accredited Residencies in Graduate Medical Education at the time of the next review.

A subspecialty program in pediatric radiology may not necessarily be administratively linked to an accredited core residency program in diagnostic radiology if the pediatric radiology program is conducted in a children's hospital. In such a case, the subspecialty program may be considered free-standing and, therefore, not required to be under the sponsorship of a diagnostic radiology residency program.

An on-site survey of the proposed program is required for the initial review by the Residency Review Committee. Accreditation will be granted on the basis of the application and the written report from the on-site survey of the proposed program. Following the initial approval, the subspecialty program will be surveyed and reviewed in conjunction with the core diagnostic radiology program.

Subspecialty programs will be designated as "accredited" or "non-accredited." No other delineation of accreditation categories will be used. The accreditation status of the subspecialty program will be directly related to that of the core diagnostic radiology program, as follows:

Subspecialty programs may be cited for deficiencies and advised that either the deficiencies must be corrected by the specified time or accreditation will be withdrawn regardless of the accreditation status of the associated diagnostic radiology program.

If the associated diagnostic radiology program is accredited on a probationary basis, or accredited with a warning that adverse action will be taken, the subspecialty program will be informed that its accreditation status is also in jeopardy. Thereafter, accreditation of the subspecialty programs will be withdrawn if the Residency Review Committee finds that the sponsoring institution(s) is (are) not making satisfactory progress in addressing the adverse accreditation status of the core diagnostic radiology program.

Withdrawal of accreditation of the core diagnostic radiology residency program will result in simultaneous withdrawal of accreditation of the subspecialty program.

In the case of withholding of accreditation or withdrawing accreditation of subspecialty programs, the Procedures for Proposed Adverse Actions and the Procedures for Appeal of Adverse Actions apply.

Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology

These requirements apply to all of the accredited subspecialty areas and should be consulted along with the individual subspecialty Program Requirements.

I. General Information
A. A residency education program in a subspecialty of diagnostic radiology is an educational experience of at least 1 year designed to develop advanced knowledge and skills in a specific clinical area. All educational components of the program should be related to program goals. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.

Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

B. Residency education programs in the subspecialties of diagnostic radiology may be accredited only in institutions that either sponsor a residency education program in diagnostic radiology accredited by the ACGME or are integrated by formal agreement into such programs. (See Program Requirements for Pediatric Radiology for exceptions to this requirement.) Close cooperation between the subspecialty and residency program directors is required.

C. Rotations to affiliated institutions can be approved for a period not exceeding 25% of the total program; adequate educational justification for such rotations must be provided to the RRC prior to implementation. The definitions governing affiliated and integrated institutions in the Program Requirements for Residency Education in Diagnostic Radiology also apply to the subspecialty programs of diagnostic radiology.

D. Subspecialty programs will not be approved if they have substantial negative impact on the education of the diagnostic radiology residents in the core program.

II. Faculty Qualifications and Responsibilities

The program director and faculty are responsible for the general administration of a program, including activities related to the recruitment and selection, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

Subspecialty education programs must provide a scholarly environment for acquiring the necessary cognitive and procedural clinical skills essential to the practice of the specific subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program. It is also imperative that appropriate resources and facilities be present. Service obligations must not compromise educational goals and objectives.

A. Qualifications of the Program Director

There must be a single program director responsible for the subspecialty program. The director must be an experienced educator and supervisor of residents in the subspecialty. He or she must...
be certified by the American Board of Radiology in diagnostic radiology or radiology or possess appropriate qualifications, and shall have had postresidency experience in the subspecialty, preferably fellowship training. (See Program Requirements for Residency Education in the individual subspecialties for subspecialty certification requirements.) The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.) The program director must be a member of the radiology faculty, spend essentially all professional time in the subspecialty, and devote sufficient time to fulfill all responsibilities inherent in meeting the educational goals of the program.

B. Responsibilities of the Program Director

It is the responsibility of the subspecialty program director to support the residency education program by devoting his or her principal effort to its management and administration, as well as to teaching, research, and clinical care limited to the integrated institutions. This general responsibility includes the following specifics:

1. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff and should be readily available for review.

2. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.

3. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.

4. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.

5. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

6. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.

7. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

8. Preparation of an accurate statistical and narrative description of the program.

9. Notification of the RRC regarding major program changes. Prior approval of the RRC is required for the addition or deletion of a major participating hospital, for an increase in the number of residents in the program, and for a major change in the program's organization.

C. Faculty

There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.

All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

III. Facilities and Resources

A. Space and Equipment

(See Program Requirements for Residency Education in the individual subspecialties for space and equipment requirements.)

B. Library

Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. Access to computerized literature search facilities is necessary. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Educational Program

The director and teaching staff must prepare and comply with written goals for the program. All educational components of the program should be related to the program goals. The program design must be approved by the RRC as part of the regular review process. A written statement of the educational objectives must be given to each resident.

A postgraduate residency must provide advanced education so that the residents can acquire special skill and knowledge in a specific subspecialty. This education should consist of a cognitive and a technical component. The cognitive component should emphasize the scholarly attributes of self-instruction, teaching, skilled clinical analysis, sound judgment, and research creativity. The technical component must provide appropriate opportunity for the residents to acquire the operative and other psychomotor skills required for the practice of the subspecialty.

A. Clinical Components

A sufficient number of patients must be available to ensure appropriate inpatient and outpatient experience for each subspecialty resident without adversely affecting the experience of residents in the diagnostic radiology core program.

The total number of residents is dependent on the program's resources and its capacity to provide an excellent educational experience.
B. Didactic Components
Subspecialty conferences, including review of all current complications and deaths, seminars, and clinical and basic science instruction, must be regularly scheduled. Active participation of the subspecialty resident in the planning and the production of these meetings is essential.

C. Supervision
A resident must have the opportunity to provide consultation with faculty supervision. He or she should have clearly defined educational responsibilities for diagnostic radiology residents, medical students, and professional personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

There must be close interaction between the core residency program in diagnostic radiology and the subspecialty program. Lines of responsibility for the diagnostic radiology residents and the subspecialty resident must be clearly defined. It is imperative that the educational program for the subspecialty resident not adversely affect the education of the diagnostic radiology residents, in terms of either experience or patient responsibility.

D. Duty Hours and Conditions of Work
The program director must establish an environment that is optimal both for resident education and for patient care, including the responsibility for continuity of care, while ensuring that undue stress and fatigue among residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not subjected to excessively difficult or prolonged working hours. It is desirable that residents' work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night.

During the on-call hours residents should be provided with adequate sleeping, lounge, and food facilities. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the resident does not spend an inordinate amount of time in noneducational activities that can be discharged properly by other personnel.

E. Scholarly Activity
Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity.

This activity should include:
1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. participation in journal clubs and research conferences.
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
4. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
6. provision of support for resident participation in scholarly activities.

F. Research
A subspecialty program should have an investigational component such that the residents may become familiar with the design, implementation, and interpretation of clinical research studies. Facilities should be made available for research activity. (See Program Requirements for the individual subspecialties for further requirements.)

V. Evaluation
A. Residents
Subspecialty program directors must establish clearly defined procedures for regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as judgment.

The program director, with participation of members of the teaching staff, shall:
1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. communicate each evaluation to the resident in a timely manner.
3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

B. Faculty
Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Residents should participate in these evaluations.

C. Program
The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed by the subspecialty program director, the core diagnostic radiology program director, and the Institutional Review Committee on a regular basis. Written evaluations by residents should be utilized in this process.

VI. Board Certification
Residents who plan to seek certification by the American Board of Radiology should communicate with the Executive Director of the Board to ascertain the current requirements for acceptance as a candidate for subspecialty certification.

ACOME: February 1994  Editorial Revision: June 6, 2002
Program Requirements for Residency Education in Abdominal Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which in some cases may exceed the common requirements.

I. Scope and Duration of Training

A. Definition and Scope of the Specialty

Abdominal radiology constitutes the application and interpretation of conventional radiology, computed tomography, ultrasonography, magnetic resonance (MR) imaging, nuclear medicine, fluoroscopy, and interventional methods customarily included within the specialty of diagnostic radiology as they apply to diseases involving the gastrointestinal tract, genitourinary tract, and the intraperitoneal and extra peritoneal abdominal organs.

The program must be organized to enhance substantially the residents’ knowledge of the application of all forms of diagnostic imaging and interventional techniques to the unique clinical pathophysiologic problems encountered in diseases affecting the gastrointestinal and genitourinary systems. The program should include education in normal and pathologic anatomy and physiology of gastrointestinal and genitourinary disease and be structured to develop expertise in the appropriate application of all forms of diagnostic imaging and interventions to problems of the abdomen and pelvis.

B. Duration of Training

Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

II. Faculty Qualifications and Responsibilities

The director of the program in abdominal radiology must be an experienced educator and supervisor of residents in abdominal radiology. The program director must be certified by the American Board of Radiology in radiology or diagnostic radiology, or possess equivalent qualifications, and shall have had postresidency experience in abdominal radiology, preferably fellowship training.

The faculty should include, in addition to the program director, at least one other full-time radiologist specializing in abdominal radiology. At a minimum, the program faculty must have two full-time equivalent faculty members dedicated to the program. Although it is desirable that abdominal radiologists supervise special imaging such as computed tomography, ultrasonography, and magnetic resonance imaging, in instances where they are not expert in a special imaging technique, other radiologists who are specialists in those areas must be part-time members of the abdominal radiology faculty. The faculty must provide didactic teaching and supervision of the residents’ performance and interpretation of all abdominal imaging procedures.

(See Program Requirements for the Subspecialties of Diagnostic Radiology for additional program director and faculty requirements.)

The total number of residents in the program must be commensurate with the capacity of the program to offer an adequate educational experience in abdominal radiology. The minimum number of residents need not be greater than one, but at least two residents is desirable. To ensure adequate supervision and evaluation of the residents’ academic progress, the faculty/resident ratio should not be less than one faculty member to each resident.

III. Facilities and Resources

A. Space and Equipment

Modern imaging equipment and adequate space must be available to accomplish the overall educational program in abdominal radiology. There must be state-of-the-art equipment for conventional radiography, digital fluoroscopy, computed tomography, ultrasonography, nuclear medicine, and magnetic resonance imaging. Laboratory and pathology services must be adequate to support the educational experience in abdominal radiology. Adequate areas for display of images, interpretation of images, and consultation with clinicians must be available.

B. Library

Ancillary teaching resources must include access to a medical library. A variety of textbooks, journals, and other teaching materials in abdominal radiology and related medical and surgical fields must be available. A subspecialty teaching file and in-house file must be actively developed and available for use by residents. The ACR teaching files in gastrointestinal and genitourinary radiology only partially meet this requirement.

IV. Educational Program

A. Clinical Components

The program must provide both clinical and didactic experiences that encompass the full breadth of diseases and their pathophysiology, including coverage of uncommon problems involving the gastrointestinal tract, genitourinary tract, and abdomen, including but not limited to the liver and biliary system, pancreas, stomach, esophagus, small bowel, colon, spleen, kidneys, adrenal glands, bladder, male and female reproductive systems, and lymphatic system.

The program must provide an adequate volume and variety of imaging studies and interventional procedures and must provide instruction in their indications, appropriate utilization, risks, and alternatives. The resident must have the opportunity to perform the abdominal imaging studies, including: urography; cystography; hysterosalpingography; computed tomography; ultrasonography; MR imaging; and plain radiographic and fluoroscopic studies of the hollow gastrointestinal tract.

The resident also must gain experience in performing guided biopsies of intraperitoneal and retroperitoneal structures and aspiration and drainage of abscesses. The resident must be familiar with the indications and complications of percutaneous nephrostomy and transhepatic cholangiography and obtain experience in providing fluoroscopic guidance for the dilation of gastrointestinal, biliary, pancreatic, and ureteric duct strictures. Interpretation of endoscopic retrograde cholangiopancreatography (ERCP) and operative cholangiography must be taught. The program also should provide opportunity, through conferences and individual consultation, for the residents to integrate invasive procedures, where indicated, into optimal care plans for patients, even though formal responsibility for performing the procedures may not be part of the program.

The program must provide instruction in the indications for, as well as the complications of, certain procedures, such as visceral angiography, tumor embolization, radionuclide scintigraphy, lithotripsy, gastroscopy, nephrostomy, and cholecystostomy.
Graded responsibility or independence given to residents should depend on their knowledge, technical skill, and experience. Attending faculty must be available to perform and/or supervise procedures as required.

B. Didactic Components
A major goal of the didactic portion of the training program should be to provide the resident with understanding of the pathophysiology of diseases that affect the gastrointestinal and genitourinary tracts. Diagnostic skill and understanding of uncommon problems in abdominal disease, as well as of the indications, risks, limitations, alternatives, and appropriate utilization of imaging and interventional procedures, should be part of the body of knowledge imparted.

Education must be available in the basic radiologic sciences, e.g., diagnostic radiologic physics, radiation biology, and the pharmacology of radiographic contrast materials.

There must be intradepartmental conferences, as well as conferences with related clinical departments, in which residents in abdominal radiology participate on a regular basis. These should include one or more weekly departmental conferences in abdominal radiology, and at least one monthly interdepartmental clinical conference.

Residents must be given the opportunity to present the radiologic aspects of cases in combined clinical conferences related to allied disciplines. They also should prepare clinically and/or pathologically proven cases for inclusion in an ongoing teaching file. There must be daily image interpretation sessions that require that residents reach their own diagnostic conclusions, which then are reviewed and critiqued by faculty. Diagnostic reports generated by residents should be closely reviewed for content, level of confidence, grammar, and style.

Residents should be encouraged to attend and participate in regional conferences. They should attend at least one national meeting or postgraduate course in abdominal radiology during the year of fellowship training.

C. Additional Required Components
There should be an ACGME-accredited residency or subspecialty training program available in general surgery, gastroenterology, oncology, urology, gynecology, and pathology, at a minimum there must be Board-certified (or equivalent) specialists in these areas to provide appropriate patient populations and educational resources in the institution. These specialists may serve as additional faculty.

D. Scholarly Activities
The training program should have a research component that offers an opportunity for residents to learn the fundamentals of design, performance, and interpretation of research studies, as well as how to evaluate investigative methods. Particular attention should be given to developing competence in critical assessment of new imaging modalities and of the radiologic literature, and residents will be expected to participate actively in research projects. The program must provide sufficient office space, supplies, and secretarial support to enable residents to conduct research projects as well as perform literature searches, manuscript preparation, statistical analysis, and photography.

V. Duty Hours and Conditions of Work
(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

VI. Evaluation
(See Program Requirements for the Subspecialties of Diagnostic Radiology for evaluation requirements.)

ACGME: June 22, 1998  Effective: June 23, 1998  Editorial Revision: June 8, 2002

Program Requirements for Residency Education in Cardiothoracic Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which may in some cases exceed the common requirements.

I. Scope, Duration, and Organization of Training

A. Definition and Scope of the Specialty
Special training and skill are required to enable the cardiothoracic radiologist to function as an expert diagnostic and therapeutic consultant and practitioner. The training program in the subspecialty of cardiothoracic radiology constitutes a closely supervised experience in the application and interpretation of imaging examinations and interventional procedures related to the lungs, pleura, mediastinum, chest wall, heart, pericardium, and the thoracic vascular system in the adult. The imaging methods and procedures include, but are not necessarily limited to, routine radiography, fluoroscopy, computed tomography (CT), magnetic resonance (MR) imaging, ultrasound, and interventional techniques.

The objective of training in this subspecialty of radiology is to provide trainees with an organized, comprehensive, and highly supervised full-time educational experience in the selection, interpretation, and performance of examinations and procedures related to cardiothoracic radiology; a thorough knowledge of the recent clinical aspects of diseases of the thorax; and opportunities and skills for research in the field of cardiothoracic radiology. The majority of the time in the program should be spent in clinical training in cardiothoracic radiology.

B. Duration of Training
The program shall offer 1 year of graduate medical education in cardiothoracic radiology. This year of training must follow successful completion of an Accreditation Council for Graduate Medical Education (ACGME)-accredited program in diagnostic radiology or its equivalent.

C. Institutional Organization
A cardiothoracic radiology training program should function in direct association and/or affiliation with an ACGME-accredited training program in general diagnostic radiology.

D. Faculty/Resident Numbers
There should be at least one trainee in the program. The total number of trainees must be commensurate with the capacity of the program to offer an adequate educational experience in cardiothoracic radiology. To ensure adequate supervision and evaluation of a trainee's academic progress, the faculty/trainee ratio should not be less than one full-time faculty person for every trainee in the program.
II. Faculty Qualifications and Responsibilities

The program director must be certified by the American Board of Radiology in Diagnostic Radiology or possess other appropriate qualifications, and shall have had appropriate postresidency experience in cardiothoracic radiology, preferably subspecialty training in cardiothoracic radiology.

At a minimum, the cardiothoracic radiology faculty must include, in addition to the program director, one or more radiologists who commit a significant portion of their professional effort to cardiothoracic imaging and to the program. Faculty participating in cardiothoracic radiology training must be certified by the American Board of Radiology in Diagnostic Radiology or possess other appropriate qualifications, and shall have had appropriate postresidency experience in cardiothoracic radiology, preferably subspecialty training. Faculty are strongly encouraged to spend the majority of their professional activity in the field of cardiothoracic radiology; however, individual faculty expertise may be limited to a segment of cardiothoracic radiology or a related discipline, such as cardiovascular and interventional radiology, CT, or MR imaging. The faculty must provide didactic teaching and supervision of all aspects of the trainees' performance and interpretation of cardiothoracic imaging procedures.

III. Facilities and Resources

A. Space and Equipment

Modern facilities and equipment with adequate space should be available. Access to conventional radiographic, fluoroscopic, CT, MR, and ultrasound equipment must be provided. Where possible, exposure to and use of computed or digital radiography, picture archiving and communications systems (PACS), and nuclear medicine are desirable. The interventional rooms should be equipped for monitoring so that examinations may be performed on high-risk patients. A room should be available near the procedure room for sterilization and preparation of instrument trays and other reusable supplies. There must be adequate space within the department to house these facilities. Adequate areas for image display, interpretation of images, and consultation with clinicians and adequate office space for cardiothoracic radiology faculty and trainees should be provided.

B. Office Space and Research Support

The institution should provide office space, computer facilities, office supplies, and secretarial help for the conduct of research projects. Assistance with literature searches, editing, statistical tabulation, and photography should be provided. The institution should provide laboratory facilities to support research efforts. It is also desirable that there be an animal facility with radiographic-fluoroscopic equipment, particularly that which might be used for invasive diagnostic and therapeutic procedures.

C. Library

There should be ready access to a library of general medical texts and periodicals. A collection of the major diagnostic radiology journals and current textbooks in diagnostic radiology, cardiothoracic radiology, and anatomy should also be available. Computerized literature search facilities must be available, and the ACR (or comparable) teaching films and videodiscs, including current sections of cardiothoracic radiology, should be available.

IV. The Educational Program

A. Clinical Components

The program must provide a sufficient volume and variety of pulmonary and cardiac disorders, including neoplastic, infiltrative, infectious, immunologic, vascular, traumatic, degenerative, and congenital disorders so that trainees gain adequate experience in the full gamut of cardiothoracic imaging techniques, procedures, and interpretations. The program must provide an adequate volume and variety of interventional cases, eg, percutaneous aspiration and drainage procedures, and noninterventional examinations, eg, CT, MR, and radiographic studies. Clinical experience may be supplemented by training affiliations with other institutions.

The program must offer the opportunity for trainees to consult on, conduct, and interpret under close supervision invasive and noninvasive procedures in cardiothoracic radiology. Imaging studies shall include standard radiography and intensive care radiography, CT, and MR imaging. Experience in percutaneous biopsy procedures, ultrasound- and CT-guided thoracentesis, drainage procedures involving the plural space, pulmonary angiography, and thoracic aortography, nuclear medicine (including positron-emission tomography) and computed radiography, and PACS, when possible, should be included in the program. Clinical experience in adult cardiac imaging, including chest radiographs, CT, and MR imaging, is a necessary component of the training program.

With regard to invasive procedures, trainees must be given graduated responsibility in the performance of procedures as their competence increases. Responsibility for these procedures should include preprocedural and postprocedural patient care. The program director should require that trainees maintain documentation of the interventional cases in which they have been the performing radiologist and should review the logs with them at least once in the course of the training year.

Strong clinical services in pulmonary medicine, cardiology, cardiothoracic surgery, and general thoracic surgery should be present in the institution sponsoring the cardiothoracic radiology program. There should be clinical and educational exposure to thoracic-oriented specialties such as cardiac and general thoracic surgery, pulmonary and critical care medicine, cardiology, thoracic trauma, oncology, and pathology. Access to both inpatients and outpatients is required.

The program should emphasize the importance of imaging protocols to ensure that excessive or inappropriate exams are not performed.

The subspecialty program in cardiothoracic radiology must not have any adverse impact, such as dilution of available clinical material, on the training of diagnostic radiology residents at the same institution. To ensure this, close cooperation between the subspecialty and residency program directors is required.

B. Supervision

All clinical training must be supervised. The responsibility or independence given to trainees should depend on their knowledge, manual and cognitive skills, and experience. Personnel must be available to perform or to supervise technical procedures.

C. Didactic Components

A written curriculum should be available and distributed to residents and faculty. The didactic component and teaching sessions should cover the principles of cardiothoracic radiology and the concepts of anatomy, physiology, internal medicine, and cardiothoracic surgery pertinent to the practice of cardiothoracic radiology.

Attendance and participation in regular image interpretation sessions is required. Intra- and interdepartmental conferences in cardiothoracic radiology should average approximately one per week. Regularly scheduled interdepartmental conferences that incorporate clinical cardiothoracic disciplines such as pulmonary medicine, cardiology, thoracic oncology, cardiothoracic surgery, general thoracic surgery, and pulmonary pathology are a necessary component of the program. Faculty and trainee attendance should
be documented. Trainees should be encouraged to attend and participate in local extramural conferences and should attend at least one national meeting or postgraduate course in cardiothoracic radiology during the year in training. Trainees should be encouraged to present the radiologic aspects of cases that are discussed in clinical conferences with the allied disciplines, including formulation of a diagnosis and/or recommendations for further imaging or imaging-guided intervention. They should also prepare clinically or pathologically proven cases for inclusion in a teaching file. Diagnostic reports generated by trainees should be closely reviewed for content, grammar, and style.

D. Other Required Components
1. Trainee participation in research
   The training period in cardiothoracic radiology should provide research opportunities for the trainee. S/he should be able to participate in the design, performance, and interpretation of research studies and have the opportunity to develop competence in critical assessment of investigative techniques. Completion of at least one clinical or basic research investigation during the period of training is encouraged.

2. Interchange with trainees in other specialties and students
   The training program must allow close interaction with the diagnostic radiology residency program. Trainees should be encouraged to participate in research projects with persons in other specialties, particularly those related to cardiothoracic disease.
   They should attend clinical conferences in other specialties and serve as consultants to these conferences. It is desirable that they participate in the clinical teaching of medical students and the preclinical teaching of subjects such as anatomy and physiology.

3. Duty hours and conditions of work
   (See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

V. Evaluation
(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

ACGME: June 2002 Effective: June 11, 2002

Program Requirements for Residency Education in Endovascular Surgical Neuroradiology (Radiology-Diagnostic)

I. Definitions and Objectives
   Endovascular surgical neuroradiology is a subspecialty that uses catheter technology, radiologic imaging, and clinical expertise to diagnose and treat diseases of the central nervous system. The unique clinical and invasive nature of this subspecialty requires special training and skills. The program must include training and experience in the following:
   A. Signs and symptoms of disorders amenable to diagnosis and treatment by endovascular surgical neuroradiology techniques.
   B. Neurological examinations to evaluate patients with neurological disorders.
   C. Pathophysiology and natural history of these disorders.
   D. Indications and contraindications to endovascular surgical neuroradiology procedures.
   E. Clinical and technical aspects of endovascular surgical neuroradiology procedures.
   F. Medical and surgical alternatives.
   G. Preoperative and postoperative management of endovascular patients.
   H. Neurointensive care management.
   I. Fundamentals of imaging physics and radiation biology.
   J. Interpretation of radiographic studies pertinent to the practice.

In this subspecialty, the objective of training is to give residents an organized, comprehensive, supervised, full-time educational experience in endovascular surgical neuroradiology. This experience includes the management of patients with neurological disease, the performance of endovascular surgical neuroradiology procedures, and the integration of endovascular surgical neuroradiology therapy into the clinical management of patients.

Training in endovascular surgical neuroradiology must be conducted in an environment conducive to investigative studies of a clinical or basic science nature.

A program in endovascular surgical neuroradiology must be jointly administered by Accreditation Council for Graduate Medical Education (ACGME)-accredited programs in neurological surgery, diagnostic radiology, and neuroradiology, which must be present within the same institution. Exceptions to this requirement will be subject to the review and approval, on a case-by-case basis, by the RRCs for Neurological Surgery and Diagnostic Radiology. The program is not intended to replace or duplicate the ACGME-accredited program in neuroradiology.

II. Duration of Training
   The program shall offer 1 year of graduate medical education in endovascular surgical neuroradiology.

III. Program Director
   The program director must be certified by either the American Board of Radiology or the American Board of Neurological Surgery or possess appropriate educational qualifications as determined by the RRC. The program director must have special expertise in endovascular surgical neuroradiology techniques and concentrate at least 50% of his/her practice in endovascular surgical neuroradiology therapy. In addition, the program director must devote sufficient time to the program to fulfill all the responsibilities inherent in meeting its educational goals. The program director should hold appointments to the teaching staff in both neurological surgery and radiology. The program director is responsible for establishing and maintaining the curriculum, selecting and supervising the residents, and selecting faculty members. The program director must have adequate support from the institution and both departments to carry out the mission of the program.

   The director of the endovascular surgical neuroradiology training program must be appointed by and be responsible to the program director of the sponsoring training program.

IV. Faculty
   Besides the program director, the program faculty must include at least one full-time member with expertise in endovascular surgical neuroradiology techniques, who (1) is certified by either the American Board of Radiology or the American Board of Neurological Surgery or (2) possesses appropriate educational qualifications as determined by the RRC. The faculty must provide didactic teaching
and direct supervision of residents' performance in clinical patient management and in the procedural, interpretive, and consultative aspects of endovascular surgical neuroradiology therapy. The faculty also should stimulate scholarly activities and be able to direct residents in the conduct of such activities. Faculty members should hold appointments jointly in radiology and neurological surgery departments. Evaluation of the faculty should be accomplished at least annually.

V. Faculty-to-Resident Ratio
The total number of residents in the program must be commensurate with the capacity of the program to offer an adequate educational experience in endovascular surgical neuroradiology therapy. To ensure adequate teaching supervision and evaluation of a resident's academic progress, the faculty-to-resident ratio must be at least one full-time faculty person for every resident enrolled in the program.

VI. Educational Program

A. Curriculum
The training program must offer didactic and clinical experiences that encompass the full clinical spectrum of endovascular surgical neuroradiology therapy.

1. Preparatory requirements
   a. Common requirements: All endovascular surgical neuroradiology residents must have completed at least 12 months, preferably consecutive, in neuroradiology. In addition, all endovascular surgical neuroradiology residents must have skills and knowledge in catheter techniques.
   b. Trainees accepted into an ACGME-accredited program in endovascular surgical neuroradiology who do not come from a radiology training program shall have access to a 1-year period of training in neuroradiology in the institution sponsoring the endovascular surgical neuroradiology program.
   c. Residents entering from a neurosurgery background must have fulfilled the following preparatory requirements, in addition to the common requirements:
      1) Completed an ACGME accredited residency in neurological surgery.
      2) Completed a course in basic radiology skills acceptable to the program director where the neuroradiology training will occur. The basic radiology skills and neuroradiology training may be acquired during elective time in the neurological surgery residency.
   d. Residents entering from a neurology background must have fulfilled the following preparatory requirements, in addition to the common requirements:
      1) Completed an ACGME accredited residency in neurology.
      2) Completed an ACGME-accredited 1-year vascular neurology program;
      3) Completed a 3-month course in basic radiology skills acceptable to the program director where the neuroradiology training will occur. The basic radiology skills and neuroradiology training may be acquired during elective time in the neurology residency.
      4) Completed 3 months of clinical experience in an ACGME-accredited neurological surgery program, which may be acquired during elective time in neurology and/or vascular neurology training.
   e. Residents entering from a radiology background must have fulfilled the following preparatory requirements, in addition to the common requirements:
      1) Completed an ACGME accredited residency in diagnostic radiology.
      2) Completed 3 months of clinical experience in an ACGME accredited neurological surgery program, which may be acquired during elective time in diagnostic radiology and/or neuroradiology training.
   f. Specifically, the preparatory training must provide residents skills and knowledge in the following areas:
      1) The use of needles, catheters, guidewires, and angiographic devices and materials.
      2) The basic radiological sciences, including radiation physics, radiation protection, and the pharmacology of radiographic contrast materials.
      3) Angiography and image interpretation.
      4) The proper use and interpretation of laboratory tests and methods that are adjunctive to endovascular surgical neuroradiology procedures, such as physiological monitoring, noninvasive neurovascular testing, and noninvasive neurovascular imaging.
      5) The evaluation of patients with neurological disease.
      6) The basic and clinical neurosciences, including neuroanatomy, neurobiology, and the pathophysiology and natural history of neurologic disorders, especially cerebrovascular and neoplastic conditions.
      7) The clinical aspects of patient assessment, treatment planning, and patient management related to endovascular surgical neuroradiology therapy, including the fundamentals of invasive monitoring and neurointensive care management.
      8) The clinical indications, risks, and limitations of endovascular surgical neuroradiology procedures.
      9) The use and administration of analgesics, antibiotics, anticoagulation agents, neuroanesthetic agents, and other drugs commonly used in endovascular surgical neuroradiology procedures.
      10) The director of the Endovascular Surgical Neuroradiology Program is responsible for documenting that the applicant has completed the appropriate preparatory training.

2. Endovascular surgical neuroradiology clinical training
A period of 12 continuous months must be spent in clinical endovascular surgical neuroradiology training, during which the resident has the opportunity to carry out all of the following under close supervision: perform clinical preprocedure evaluations of patients, interpret preliminary diagnostic studies, consult with clinicians on other services, perform diagnostic and therapeutic endovascular surgical neuroradiology procedures, generate procedural reports, and participate in short-term and long-term postprocedure follow-up care, including neurointensive care. The continuity of care must be of sufficient duration to ensure that the resident is familiar with the outcome of all endovascular surgical neuroradiology procedures. Residents should serve as consultants under the supervision of staff endovascular surgical neuroradiology practitioners. Direct interactions of residents with patients must be closely observed to ensure that appropriate standards of care and concern for patient welfare are strictly maintained. Communication, consultation, and coordination of care with the referring clinical staff and clinical services must be maintained and documented with appropriate notes in the medical record.

The program must provide adequate opportunity for residents to participate in and personally perform and analyze a broad spectrum of endovascular procedures in adults, children, and neonates. Specific training should be provided in the following areas:
Program Requirements for Residency Education in Endovascular Surgical Neuroradiology (Radiology-Diagnostic)

a. Anatomical and physiologic basic knowledge:
   1) Basic knowledge in arterial angiographic anatomy of the brain, spine, spinal cord, and head and neck.
   2) Venous angiographic anatomy of the brain, spine, spinal cord, and head and neck.
   3) Collateral circulation
   4) Dangerous anastomosis
   5) Cerebral blood flow
   6) Autoregulation
   7) Pharmacology of CNS vasculature
b. Technical aspects of endovascular surgical neuroradiology, including:
   1) Catheter and delivery systems
   2) Embolic agents in cerebral, spinal, and head and neck embolization
   3) Flow-controlled embolization
   4) Complication of cerebral embolization
   5) Flow control between the extracranial and intracranial circulation
   6) Electrophysiology
   7) Provocative testing (pretherapeutic evaluation)
   8) Complications of brain, spine, spinal cord, and head and neck embolization.
   9) Imaging of vascular system
c. Pharmacology
   1) Contrast materials
   2) Provocative testing with anesthetics and sedatives
   3) Anticoagulants
   4) Thrombolytics
   d. Coagulation cascade
e. Brain arteriovenous malformation, spinal cord, arteriovenous fistulas of the brain, spine, spinal cord, head and neck vascular malformations, is chemic stroke, and cerebral aneurysms
   1) Classification
   2) Clinical presentation
   3) Natural history
   4) Epidemiology
   5) Hemodynamic basis
   6) Indications for treatment
   7) Contraindication for treatment
   8) Therapeutic modalities
   9) Combined therapies
f. Tumors of the head, neck, spine, and central nervous system
g. Revascularization for occlusive vascular diseases
   1) Arteriopathie
   2) Atherosclerotic lesions
   3) Techniques of revascularization: balloon angioplasty, thrombolytics, and stenting.
   h. Embolization for epistaxis or other causes of hemorrhage
   i. Invasive functional testing
   j. Balloon test occlusions
3. Conferences and didactic training
   Residents must make daily rounds with the attending faculty during which patient management decisions are discussed and made. Conferences should be organized by the faculty and held to allow discussion of topics selected to broaden knowledge in the field of endovascular surgical neuroradiology. Specifically, teaching conferences should embrace the scope of endovascular surgical neuroradiology as outlined in Section I (Definitions and Objectives) of these Program Requirements. Conferences should include journal clubs, pathology meetings, and neuroanatomy dissection courses related to endovascular surgical neuroradiology.

There must be didactic and interactive conference time, including interdepartmental meetings with neurosurgeons and neuroradiologists. Regular review of all mortality and morbidity related to the performance of endovascular surgical neuroradiology procedures must be documented. Residents must participate actively in these reviews, which should be held at least monthly. Residents should be encouraged to attend and participate in local extramural conferences and should attend at least one national meeting or postgraduate course in endovascular surgical neuroradiology therapy while in training.

VII. Patient Population
The institution's patient population must have a diversity of illnesses from which broad experience in endovascular surgical neuroradiology therapy can be obtained. The case material should encompass a range of neurological diseases, including neurovascular. An adequate variety and number of endovascular surgical neuroradiology procedures must be available for each resident. Each program must perform at least 100 therapeutic endovascular surgical neuroradiology procedures per year. These procedures include the treatment of aneurysms, brain arteriovenous malformations, arteriovenous fistulas of the brain, tumors of the central nervous system, occlusive vascular diseases, revascularization, traumatic injury, maxillofacial vascular malformation, and tumors. In addition, the program must provide adequate training and experience in invasive functional testing.

Each resident must maintain a personal case log, which the program director must certify at the completion of training.

The program director must submit the entire clinical experience of the endovascular surgical neuroradiology program and the residents in the format prescribed by the RRC. The list of procedures and the logs must be made available to the RRC at the time of its review of the core program and the endovascular neuroradiology training program.

The subspecialty program in endovascular surgical neuroradiology must not have an adverse impact on the educational experience of diagnostic radiology, neuroradiology, neurological surgery, or vascular surgery residents in the same institution.

VIII. Equipment and Facilities
Modern imaging/procedure rooms and equipment must be available and must permit the performance of all endovascular surgical neuroradiology procedures. Rooms in which endovascular surgical neuroradiology procedures are performed should be equipped with physiological monitoring and resuscitative equipment. The following state-of-the-art equipment must be available: MRI scanner, CT scanner, digital subtraction angiography equipment, ultrasound, and a radiographic-fluoroscopic room(s) with a tilt table. Facilities for storing catheters, guidewires, contrast materials, embolic agents, and other supplies must be next to or within procedure rooms. There must be adequate space and facilities for image display and interpretation and for consultation with other clinicians.

The institutions where endovascular surgical neuroradiology training is conducted must include appropriate inpatient, outpatient, emergency, and intensive care facilities for direct resident involvement in providing comprehensive endovascular surgical neuroradiology care.

IX. Scholarly Activity
Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment...
of inquiry and scholarship rests with the teaching staff. While not
all members of a teaching staff must be investigators, the staff as a
whole must demonstrate broad involvement in scholarly activity.
This activity should include
1. active participation of the teaching staff in clinical discussions,
rounds, and conferences in a manner that promotes a spirit of in-
quiry and scholarship. Scholarship implies an in-depth under-
standing of basic mechanisms of normal and abnormal states and
the application of current knowledge to practice.
2. participation in journal clubs and research conferences.
3. active participation in regional or national professional and sci-
entific societies, particularly through presentations at the orga-
nizations’ meetings and publications in their journals.
4. participation in research, particularly in projects that are funded
following peer review and/or result in publications or presenta-
tions at regional and national scientific meetings.
5. offering of guidance and technical support (eg, research design,
statistical analysis) for residents involved in research.
6. provision of support for resident participation in scholarly
activities

X. Research
A subspecialty program should have an investigational component
such that the residents may become familiar with the design, imple-
mentation, and interpretation of clinical research studies. Facilities
should be made available for research activity.

XI. Research Facilities
The institution should provide laboratory facilities to support re-
search projects pertinent to endovascular therapies.

XII. Interchange With Residents in Other Specialties
and Students
Residents should be encouraged to participate in research activities
with residents and staff in other related specialties. They also
should be encouraged to attend and participate in clinical confer-
ces. It is desirable that they participate in the clinical teaching of
neurological surgery and radiology residents and medical students.

XIII. Duty Hours and Conditions of Work
(See Program Requirements for Residency Education in the
Subspecialties of Diagnostic Radiology for details concerning duty
hour requirements.)

XIV. Evaluation
A. Residents
Subspecialty program directors must establish clearly defined pro-
cedures for regular evaluation of residents’ knowledge, skills, and
overall performance, including the development of professional atti-
uDES consistent with being a physician. The assessment must in-
clude cognitive, motor, and interpersonal skills as well as judgment.
The program director, with participation of members of the teach-
ing staff, shall
1. at least semianually evaluate the knowledge, skills, and profes-
sional growth of the residents, using appropriate criteria and
procedures.
2. communicate each evaluation to the resident in a timely manner.
3. advance residents to positions of higher responsibility only on
the basis of evidence of their satisfactory progressive scholarship
and professional growth.
4. maintain a permanent record of evaluation for each resident and
have it accessible to the resident and other authorized person-
nel.
5. provide a written final evaluation for each resident who com-
pletes the program. The evaluation must include a review of the
resident’s performance during the final period of training and
should verify that the resident has demonstrated sufficient pro-
fessional ability to practice competently and independently. This
final evaluation should be part of the resident’s permanent re-
cord maintained by the institution.

B. Faculty
Faculty must be evaluated at least annually to review teaching abili-
ties, commitment to the educational program, clinical knowledge,
and scholarly activities. Residents should participate in these
evaluations.

C. Program
The educational effectiveness of a program must be evaluated in a
systematic manner. In particular, the quality of the curriculum and
the extent to which the educational goals have been met by resi-
dents must be assessed by the subspecialty program director, the
core diagnostic radiology program director, and the Institutional
Review Committee on a regular basis. Written evaluations by resi-
dents should be utilized in this process.

ACGME: June 26, 2000 Effective: June 27, 2000

Program Requirements for
Residency Education in
Musculoskeletal Radiology
(Radiology-Diagnostic)

In addition to complying with the Program Requirements for Resi-
dency Education in the Subspecialties of Diagnostic Radiology, pro-
grams must comply with the following requirements, which in some
cases may exceed the common requirements.

I. Scope and Duration of Training

A. Definition and Scope of the Subspecialty
The musculoskeletal radiology training program constitutes a
closely supervised experience in the application and interpretation
of all imaging examinations and procedures as they relate to the
analysis of disorders of the musculoskeletal system, including
bones, joints, and soft tissues. The imaging methods and procedures
include, but are not necessarily limited to, routine radiography,
computed tomography, ultrasonography, radionuclide scintigraphy,
magnetic resonance, arthrography, and image-guided percutaneous
biopsy techniques. The objective of training in musculoskeletal
radiology is to provide an organized, comprehensive, supervised, and
progressively responsible full-time educational experience in the
selection, interpretation, and performance of these examinations
and procedures. A further objective is to provide the resident an op-
portunity to develop skills necessary for clinical and/or basic re-
search in the subspecialty of musculoskeletal radiology.

B. Duration of Training
Prerequisite training for entry into a diagnostic radiology subspe-
cialty program should include the satisfactory completion of a diag-
nostic radiology residency accredited by the Accreditation Council
for Graduate Medical Education (ACGME) or the Royal College of
Physicians and Surgeons of Canada (RCPSC), or other training
judged suitable by the program director.

414
II. Faculty Qualifications and Responsibilities

The program director must be certified in diagnostic radiology or radiology by the American Board of Radiology or possess equivalent qualifications.

In addition to the program director, the program must include at least one person experienced in musculoskeletal radiology who has a substantial commitment to the training program. If necessary, other radiologists with expertise in certain imaging methods or procedures may function at least as part-time members of the training program. To ensure adequate supervision of the residents, there must be at least one full-time faculty person available for each two residents in the program.

III. Facilities and Resources

A. Space and Equipment

Modern facilities and equipment and adequate space must be available to ensure an adequate educational experience for the resident. Access to routine radiographic, computed tomographic, scintigraphic, magnetic resonance, and ultrasound equipment must be provided. Adequate space for film display, film interpretation, and consultation with referring physicians must be available, and adequate office space, office supplies, and secretarial help for the conduct of research projects should be provided for musculoskeletal radiology faculty and residents. Assistance with literature searches, editing, statistical tabulation, and photography should be provided.

B. Library

The training program must provide ancillary teaching resources including access to a medical library with a sufficient number of textbooks and journals related to musculoskeletal diseases and electronic literature search capabilities. A musculoskeletal radiology/pathology teaching file must be developed and available for use by the residents. The American College of Radiology teaching file will only partially meet this requirement.

IV. Educational Program

A. Clinical Components

Residents in musculoskeletal radiology must be provided access to a variety of patients encompassing the entire range of disorders of the musculoskeletal system, including articlar, degenerative, metabolic, hematopoietic, infectious, traumatic, vascular, congenital, and neoplastic diseases. The imaging methods and procedures available for training should include routine radiography, computed tomography, ultrasonography, radionuclide scintigraphy, magnetic resonance, arthrography, and image-guided percutaneous biopsy techniques.

The program curriculum must provide clinical experience and didactic sessions encompassing the entire spectrum of musculoskeletal diseases. This must include both the axial and the appendicular skeletons of both adult and pediatric patients. The resident must interpret, under appropriate supervision, diagnostic examinations that include routine radiography, computed tomography, and magnetic resonance. Furthermore, the resident must perform and interpret arthrograms. The program must provide experience with image-guided percutaneous biopsy procedures and exposure to ultrasonography, bone densitometry, and radionuclide scintigraphy as they relate to diseases of the musculoskeletal system. A log must be kept by each resident documenting the types of arthrographic and biopsy procedures that she or he performs. With regard to invasive procedures, residents are to be given graduated responsibility as competence increases; such responsibility should include pre-procedural and post-procedural patient care. Emphasis is placed on close coordination and cooperation with referring physicians, including orthopedic surgeons, rheumatologists, and emergency department specialists, and on establishment of proper imaging protocols to ensure that excessive or inappropriate examinations are not ordered and performed. Access to both inpatients and outpatients is required.

B. Didactic Components

There must be didactic conferences and teaching sessions that provide coverage of musculoskeletal concepts related to anatomy, physiology, pathology, orthopedic surgery, and rheumatology. Attendance and participation in department conferences, such as daily film interpretation sessions, are required. Regularly scheduled interdepartmental conferences in, for example, orthopedic surgery, neurosurgery, and other appropriate surgical specialties; pathology; rheumatology; and oncology are also necessary components of the program. In addition, the training experience should include radiology-oriented conferences with medical students and graduate medical staff. The resident also should be encouraged to attend at least one national meeting or postgraduate course dealing with musculoskeletal radiology during his/her fellowship year.

Although the precise responsibility of the resident will vary from one clinical conference to another, opportunities must exist for active participation in the formulation of a diagnosis and/or the generation of an imaging protocol; such participation is to be used as a means by which the program director and other faculty members judge the resident's progress.

C. Resident Participation in Research

The training period in musculoskeletal radiology should provide sufficient research opportunities for the resident. He or she should be able to participate in the design, performance and interpretation of research studies and have the opportunity to develop competence in critical assessment of investigative techniques. Completion of at least one clinical or basic research investigation during the period of training is encouraged. Laboratory facilities to support research projects should be available in the institution.

D. Interchange With Residents in Other Specialties

The presence of accredited training programs in orthopedic surgery and rheumatology is highly desirable. Shared experiences with residents in orthopedic surgery, rheumatology, pathology, and other appropriate specialties, including surgical subspecialties, are strongly encouraged. When appropriate, supervision and teaching by faculty expert in these additional disciplines should be available.

V. Evaluation

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

Editorial Revision: June 6, 2002

Program Requirements for Residency Education in Neuroradiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, pro-
grants must comply with the following requirements, which may in some cases exceed the common requirements.

I. Introduction

A. Definition and Scope of the Subspecialty
The body of knowledge and practice of neuroradiology comprises both imaging (plain film interpretation, computed tomography, magnetic resonance imaging, ultrasonography, nuclear radiology) and invasive procedures related to the brain, spine and spinal cord, head, neck, and organs of special sense (eyes, ears, nose) in adults and children. Special training and skills are required to enable the neuroradiologist to function as an expert diagnostic and therapeutic consultant and practitioner. In addition to knowledge of imaging findings, the resident must learn the fundamentals of pathology, pathophysiology, and clinical manifestations of the brain, spine and spinal cord, head, neck, and organs of special sense. The program must provide residents with an organized, comprehensive, and supervised full-time educational experience in the selection, interpretation, and performance of neuroradiologic examinations and procedures. The program must also provide residents with opportunities to conduct research in the field of neuroradiology.

The training program must provide the resident with the opportunity to develop, under supervision, progressively independent skills in the performance and interpretation of neuroradiologic imaging studies and invasive procedures. At the culmination of training, the resident should be capable of independent and accurate clinical decision making in all areas of neuroradiology.

B. General Information
The program shall offer 1 year of graduate medical education in neuroradiology. All of the program components specified in the Program Requirements must be offered in the first year, which is the year that is accredited. Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

II. Faculty Qualifications and Responsibilities

A. Program Director
The program director must be certified by the American Board of Radiology in diagnostic radiology or radiology, or possess appropriate educational qualifications, and shall have a certificate of Added Qualifications in Neuroradiology. The program director must be a credentialed member of the radiology faculty and must spend at least 80% of his or her clinical and academic time in neuroradiology. The program director shall select and supervise the residents and select other neuroradiology faculty members. The program director shall perform quarterly reviews of the residents and obtain feedback from the residents on the program and the faculty.

B. Faculty
The neuroradiology faculty must include, in addition to the program director, one or more neuroradiologists who spend at least 80% of their time in the practice of neuroradiology. The faculty must provide teaching and supervision of the residents' performance and interpretations of neuroradiologic procedures.

C. Faculty/Resident Ratio
The total number of residents in the program must be commensurate with the capacity of the program to offer an adequate educational experience in neuroradiology and not to have a negative impact on the core diagnostic radiology program. The minimum number of residents need not be greater than one, but two or more residents are desirable. To ensure adequate supervision and evaluation of a resident's academic progress, the faculty/resident ratio must be at least one full-time faculty person for each resident.

III. Facilities and Resources

A. Equipment and Space
The following equipment, which must be "state of the art," must be available: magnetic resonance scanner, computed tomography (CT) scanner, digital subtraction angiography equipment, a radiographic fluoroscopic room(s) with tiltable table for performing myelography, ultrasound equipment with Doppler capability, and conventional radiographic equipment. Physiological monitoring must be available. There must be adequate facilities adjacent to or within examination rooms, for storing supplies needed for the conduct of invasive neuroradiologic procedures. There must be appropriately trained nurses and technologists for these invasive procedures. A crash cart for emergency ventilation and cardiac life support must be available.

Adequate space for image display, interpretation of studies, and consultation with clinicians must be available. There must be adequate office space and support space for neuroradiology faculty/staff and residents.

The program should provide adequate office space and supplies and secretarial support for the conduct of research projects. Assistance with literature searches, editing, statistical tabulation, and photography should be provided.

B. Laboratory
The institution should provide laboratory facilities to support research projects.

C. Library
There should be ready access to a library of current general medical texts and periodicals. In particular, there should be periodicals and texts in the fields of neuroradiology, diagnostic radiology, head and neck radiology, neurology, neurosurgery, neuroanatomy, physics, neuropathology, otolaryngology, neurophysiology, and orthopedic surgery. Computerized literature search facilities and Internet access must be available. A film-based, web-based, or electronic neuroradiology teaching file containing or providing access to a minimum of 500 cases must be available for use by the neuroradiology residents. The available teaching material should be enhanced with new cases when appropriate.

IV. Educational Program

A. Curriculum
The program must offer the opportunity for residents to perform and interpret noninvasive and invasive diagnostic and interventional procedures under supervision. The procedures shall include diagnostic catheter-based cerebral angiography; other percutaneous minimally-invasive procedures (image-guided biopsies, spinal canal access for myelography, spinal fluid analysis, and medication installation); CT; MRI; MR/CT angiography; ultrasound of the central nervous system (including its vascular structures); plain film radiography related to the brain, head (including organs of special sense), skull base, and neck and spine; and nuclear medicine studies of the central nervous system. MR techniques such as magnetic resonance spectroscopy, functional activation studies, diffusion, and perfusion imaging should be incorporated into the training program. Residents must be given graduated responsibility in the performance and interpretation of the noninvasive and invasive proce-
dures. Responsibility for these procedures should include pre- and postprocedural patient care. The resident must be thoroughly familiar with all aspects of administering and monitoring sedation of the conscious patient. They also must have advanced cardiac life support training and certification.

B. Clinical Components

The program in neuroradiology must provide a sufficient volume and variety of patients with neurological, neurosurgical, ophthalmologic, otolaryngologic, spinal, and other pertinent disorders so that residents gain adequate experience in the full gamut of neuroradiologic examinations, procedures, and interpretations. The neuroradiology training program should provide a minimum number of procedures per year as follows:

1. 2500 total examinations (including plain radiographs, CT, MR, ultrasound, catheter angiograms, and image-guided invasive procedures). Of these 2500 examinations, there should be at least:
   a. 1000 neuroradiological CT scans;
   b. 1000 neuroradiological MR scans.
2. Residents must have participated in and documented the following:
   a. At least 50 catheter-based angiographic procedures.
   b. At least 50 image-guided invasive procedures (CT, MR, or fluoroscopically guided).
   c. Participation in at least five intracranial microcatheter procedures is highly recommended.
3. The 12-month training program must consist of at least:
   a. Four weeks or equivalent dedicated training in pediatric neuroradiology.
   b. Four weeks or equivalent dedicated training in head and neck radiology.
   c. Four weeks or equivalent dedicated training in spine radiology including image-guided procedures.
   d. Six to 8 weeks or equivalent dedicated training in vascular neuroradiology. During this period there should be a special emphasis on catheter neuroangiography. Experience in microcatheter techniques for thrombolysis treatment of acute stroke is strongly recommended. The program must offer the opportunity for residents to perform and interpret noninvasive and invasive diagnostic catheter-based cerebral angiography, other percutaneous minimally invasive procedures (image-guided biopsies, spinal canal access for myelography, spinal fluid analysis, and medication installation), CT, MRI, MR/CT angiography, ultrasound of the central nervous system (including its vascular structures), and plain film radiography related to the brain, head (including organs of special sense), skull base, neck, and spine.
   e. Two to 4 weeks or equivalent dedicated experience performing and interpreting vascular sonography.
   f. Twenty-four to 26 weeks or equivalent dedicated training in general adult diagnostic neuroangiography.

C. Conferences

Residents must participate in one or more weekly departmental conferences in neuroradiology and one or more interdepartmental conferences with allied clinical departments (eg, neurology, neurosurgery, orthopedic surgery, neuropathology, head and neck surgery, and ophthalmology), as well as institutional conferences in clinical neurosciences (eg, grand rounds) that are held at least monthly. Residents should be encouraged to attend and participate in local extramural conferences and should attend at least one national meeting or postgraduate course in neuroradiology while in training.

Residents should be encouraged to present the radiological aspects of cases that are discussed during daily work rounds and in clinical conferences related to allied disciplines such as neurosurgery and the neurological sciences. They should also prepare clinically or pathologically proved cases for inclusion in the teaching file.

There must be daily interpretation sessions requiring residents to reach their own diagnostic conclusions, which must then be reviewed by faculty. Diagnostic reports generated by residents should be closely reviewed for content, level of confidence, grammar, and style. Feedback must be provided and the reports must be signed by a neuroradiology staff physician.

The residents are required to maintain documentation (procedure log) of the invasive cases that they have performed. The program director must review the log with the resident at least quarterly.

Residents should be encouraged to participate in the teaching of diagnostic radiology residents and medical students, including the presentation of at least one didactic lecture.

D. Other Required Components

1. Resident participation in research

The residents should learn the fundamentals of experimental design, performance, and interpretation of results. They should participate in clinical, basic biomedical, or health services research projects and should be encouraged to undertake at least one project as principal investigator. They should submit at least one scientific paper or exhibit to a regional or national meeting. The opportunity also must be provided for residents to develop their competence in critical assessment of new imaging modalities and of new procedures in neuroradiology.

2. Duty hours and conditions of work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

3. Interchange with students and residents in other specialties

Neuroradiology residents should be encouraged to participate in the research projects of staff persons and residents in other specialties. They should attend clinical conferences in other specialties and serve as consultants to these conferences. It is desirable that they participate in the clinical teaching of medical students and also in the preclinical curriculum in subjects such as neuroanatomy and neurophysiology.

V. Evaluation of Residents, Faculty, and Program

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

ACGME: February 13, 2001 
Effective: January 1, 2002
Editorial Revision: June 6, 2002

Program Requirements for Residency Education in Nuclear Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which may in some cases exceed the common requirements.
I. Scope and Duration of Training

A. Definition and Scope of the Specialty
Nuclear radiology is defined as a clinical subspecialty of radiology involving imaging by external detection of radionuclides and/or biodistribution by external detection of radionuclides in the body for diagnosis of disease. Residency training programs in nuclear radiology must provide advanced training in the medical uses of radionuclides for in vivo imaging.

A training program in nuclear radiology will be accredited only in those institutions that have an accredited training program in diagnostic radiology.

A program in nuclear radiology will be reviewed and accredited in conjunction with the review and accreditation of the residency program in diagnostic radiology.

B. Duration of Training
Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

II. Institutional Organization
Those aspects of institutional support that pertain to residencies in diagnostic radiology shall also apply to programs in nuclear radiology, eg, administrative support, facilities, and clinical resources.

III. Faculty Qualifications and Responsibilities
The program director is responsible for the instructional program and for supervision of residents. The program director shall be certified by the American Board of Radiology with Special Competence in Nuclear Radiology or by the American Board of Nuclear Medicine or possess suitable equivalent qualifications. It is desirable that faculty members be certified in boards appropriate to those areas in which they are assigned to instruct and supervise residents. They must contribute sufficient time to the program to provide adequate instruction and supervision.

A faculty (nuclear medicine physician)-to-resident ratio of 1:2 should adequately provide for teaching and supervisory responsibilities.

IV. Facilities and Resources
State-of-the-art nuclear imaging equipment should be available for instructional purposes.

V. Educational Program
The educational program must provide for well-balanced and progressive resident participation through examination of a diverse patient population, with continuous teaching and an active research effort in nuclear radiology.

A. Clinical Component
1. The training program shall include graduated study, experience, and responsibility in all facets of nuclear radiological diagnosis, medical nuclear and diagnostic radiological physics, radiobiology, health physics and protection, nuclear medical instrumentation, radiopharmaceutical chemistry and instrumentation, clinical applications of nuclear radiology, and pathology.

2. The program must provide adequate opportunity for a resident to participate in and personally perform a broad range of nuclear radiological procedures.

B. Didactic Components
1. Formal instruction in diagnostic radiologic and medical nuclear physics, radiobiology, and radiopharmaceutical chemistry is required.

2. Appropriate emphasis must be placed on the educational value of teaching rounds and conferences. In addition, there should be frequent interdepartmental teaching conferences.

C. Research
The program should provide an environment in which a resident is encouraged to engage in investigative work with appropriate faculty supervision. Documentation of this environment should be made in the application and indicated by papers published by residents and/or clinical faculty.

D. Teaching File
A teaching file of images referable to all aspects of nuclear radiology must be available for use by residents. This file should be indexed, coded, and currently maintained.

VI. Evaluation
(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

ACGME: February 1990 Effective: July 1, 1997
Editorial Revision: June 6, 2002

Program Requirements for Residency Education in Pediatric Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which may in some cases exceed the common requirements.

I. Scope and Duration of Training

A. Definition and Scope of the Specialty
The training program in the subspecialty of pediatric radiology constitutes a supervised experience in the pediatric applications and interpretation of radiography, computed tomography, ultrasonography, angiography, interventional techniques, nuclear radiology, magnetic resonance, and any other imaging modality customarily included within the specialty of diagnostic radiology.

The program should be structured to enhance substantially the resident's knowledge of the applications of all forms of diagnostic imaging to the unique clinical/pathophysiologic problems of the newborn, infant, child, and adolescent. The fundamentals of radiology, radiologic physics, and radiation protection as they relate to the infant, child, and adolescent should be reviewed during the pediatric radiology training experience. The program must provide residents direct and progressively responsible experience in pediatric imaging as they advance through training. This training must culminate in sufficiently independent responsibility for clinical decision making such that the program is assured that the graduating resident has achieved the ability to execute sound clinical judgment.

B. Duration of Training
Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a
diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

C. Objectives and Goals
The educational program in pediatric radiology shall meet training objectives so that on completion of the program the resident is able to:
1. Understand the developmental and acquired disease processes of the newborn, infant, child, and adolescent which are basic to the practice of pediatric and adolescent medicine.
2. Perform and interpret radiological and imaging studies of the pediatric patient.
3. Supervise and teach the elements of radiography and radiology as they pertain to infants and children.
4. Understand how to design and perform research (clinical, biomedical, educational, health services).

II. Institutional Organization
A program of pediatric radiology training should function whenever feasible in direct association and/or affiliation with an Accreditation Council for Graduate Medical Education (ACGME) accredited program in diagnostic radiology. Pediatric radiology programs may be conducted in either a children's hospital or a general hospital.

III. Faculty Qualifications and Responsibilities
A. Program Director
The program director must have sufficient academic and administrative experience to ensure effective implementation of these program requirements and should have had at least 5 years of participation as an active faculty member in an accredited pediatric radiology program. The program director must be certified by the American Board of Radiology in radiology or diagnostic radiology or possess equivalent qualifications. The program director must have received the Certificate of Added Qualifications in Pediatric Radiology granted by the American Board of Radiology or possess equivalent qualifications. The director must devote sufficient time to the program to fulfill all of the responsibilities inherent in meeting the educational goals of the program. The program director is responsible for establishing the curriculum as well as procedures for evaluation of the resident's competency. Periodic evaluation of the resident with feedback is required. The program director shall select and supervise the trainees and shall select pediatric radiology program faculty members.

B. Faculty
There should be sufficient qualified professional personnel to constitute a teaching faculty. The faculty should comprise no fewer than three experienced radiologists, including the program director, who work full-time in pediatric radiology and its related subspecialty areas and are able to devote adequate time to the program. The minimum faculty requirement may be met by the program director and two other full-time equivalent (ie, total of three or more individuals) faculty members. Although it is desirable that pediatric radiologists supervise special imaging (ie, angiography, interventional radiology, nuclear radiology, computed tomography, magnetic resonance), instances where they are not expert in an imaging technique, other radiologists who are specialists in that imaging method should be part-time on the pediatric radiology faculty. Because such radiologists are usually not broadly experienced in the discipline and practice of pediatric radiology, pediatric radiologists should participate in the interpretation and correlation of the findings of these special imaging examinations.

A ratio of at least two pediatric radiologists for every resident is essential to provide adequate opportunity for teaching and supervision.

IV. Facilities and Resources
A. Space and Equipment
Modern facilities and equipment in adequate space must be available and functioning to accomplish the overall educational program in pediatric radiology. Diagnostic imaging modalities shall include radiography, computed tomography, ultrasonography, radionuclide scintigraphy, angiography, and magnetic resonance imaging. The department must have a minimum of one radiographic/fluoroscopic room, one ultrasound unit, one angiographic room, one CT scanner, one MR unit, and one nuclear radiology gamma camera. All equipment must be up-to-date. There must be justification for continued use of any equipment that is more than 10 years of age.

In general hospitals that treat patients of all ages, pediatric radiology often is a section of the radiology department, similarly, special imaging services of such departments are separate sections. In such cases, there should be recognition within the special imaging sections of the particular needs of the pediatric radiology program. There should be low-dose roentgenographic/fluoroscopic facilities specifically for children. The availability of all special imaging services for pediatric radiology residents is essential.

Laboratory and pathology services must be adequate to permit residents to enhance their educational experience during the diagnostic imaging and care of patients and obtain timely correlation with diagnostic imaging studies.

B. Inpatient and Outpatient Services
The hospital must have sufficient inpatient and outpatient services in general and subspecialty pediatrics to ensure a broad and in-depth exposure to pediatrics. The pediatric clinical services must be part of the teaching program and should require diagnostic imaging input for many of their patients.

C. Library
Learning resources should include access to an institutional and/or departmental library with current journals and textbooks sufficient to cover the specialty of pediatrics and pediatric subspecialties, radiology, and related fields. The library must contain journals and current textbooks on all aspects of pediatric radiology. The institutional library must have a librarian and facilities for electronic database searches. Moreover, the methods of performing such electronic database searches must be taught to residents. A pediatric radiology teaching file must be available for use by pediatric radiology residents. This teaching file should contain a minimum of 500 cases that are indexed, coded, actively maintained, and continually enhanced with new cases. Availability of the American College of Radiology pediatric learning file or its equivalent is desirable; this only partially meets the teaching file requirements.

D. Patient Population
There should be an ACGME-accredited residency in pediatrics, as well as pediatric medical and surgical subspecialty programs, to provide an appropriate patient population and educational resources in the institution. In addition to full-time pediatricians, there should be one or more pediatric surgeons, one or more pediatric pathologists, as well as a broad range of pediatric medical and surgical subspecialists.

The institution's pediatric population must include patients with a diversity of pediatric illnesses from which broad experience can be gained. The number of pediatric radiology residents in a program at any given time should reflect the patient census to ensure each
trainee of an adequate experience. The program must have sufficient volume and variety of patients to ensure that residents gain experience in the full range of pediatric radiologic examinations, procedures, and interpretations. A reasonable experience is no less than 15,000 pediatric radiologic examinations per year per resident.

V. Educational Program

A. Curriculum

The training should consist of didactic and clinical experiences that encompass the scope of pediatric radiology from the neonate to the adolescent. Every organ system should be studied in the contexts of growth and development, congenital malformations, diseases peculiar to infants and children, and diseases beginning in childhood but causing substantial residual impairment in adulthood. The didactic component should promote scholarship, self-instruction, self-evaluation, teaching, and research activity. It should foster the development of analytic skills and judgment. The clinical component should facilitate skillful technical performance of low radiation dose procedures on all organ systems that are examined in the practice of pediatric radiology. The pediatric imaging experience should include both inpatient and outpatient studies.

Residents must have graded responsibility and supervision in the performance of procedures and the perfection of technical and interpretive skills. It is essential that the pediatric radiology trainee be instructed in common pediatric imaging technical procedures and their indications, limitations, judicious utilization, and risks, including radiation dose considerations. The pediatric radiology resident must also be instructed in the risks and benefits of pediatric sedation; this includes an understanding of the physician’s role in the monitoring and management of pediatric patients during and after sedation for diagnostic and therapeutic procedures. Where the program is conducted in a general hospital, the pediatric radiology trainee must have training in imaging examinations of pediatric patients. The scope of a 1-year training program in pediatric radiology shall include all diagnostic imaging applicable to the pediatric patient. The 1-year training program should include no more than 4 weeks’ vacation. The curriculum must include the central nervous, musculoskeletal, cardiopulmonary, gastrointestinal, and genitourinary systems. In each organ system, the effective and appropriate use of imaging modalities, including ultrasound, computed tomography, magnetic resonance, nuclear radiology, and vascular/interventional radiology, should be taught. The resident is responsible for following the imaging workup of the patient and must be substantially involved in the performance and interpretation of examinations that utilize various modalities. Correlation of radiologic findings with the clinical management and outcome aspects of the pediatric patient is essential.

B. Clinical Component

The pediatric radiology training program should provide a minimum number of procedures available per year per resident as follows:

- 300 fluoroscopic procedures
- 300 ultrasound examinations
- 200 body imaging (CT/MR) examinations

The number of these procedures available for the pediatric radiology resident should not have an adverse impact on the education of the diagnostic radiology residents in the same institution.

The pediatric radiology resident must have at least 3 weeks of experience in each of the following specialized areas: pediatric neuroradiology; vascular/interventional radiology; and nuclear radiology. This experience may be obtained through a combination of lectures, conferences, seminars, and involvement as the primary or secondary operator and by observing procedures. Supervised instruction should be provided by physicians with special expertise in those disciplines. It is acceptable to supplement the pediatric experience with adult patients in some specialties, such as vascular and interventional radiology, to enhance teaching. The program must require residents to maintain a logbook and document their training in nuclear radiology, neuroradiology, and vascular/interventional radiology. The logbook should include the patient name, medical record number, and procedure(s) performed. The minimum numbers of procedures per resident performed in these specialized areas of pediatric radiology are as follows:

- 50 pediatric nuclear radiology studies
- 200 neuroimaging studies
- 25 vascular/interventional studies

Residents in pediatric radiology should serve as pediatric radiologic consultants with the supervision and mentoring of faculty pediatric radiologists. The teaching experience should include pediatric- and radiologic-oriented conferences with medical students, residents, medical staff, and health care professionals.

C. Didactic Component

Study of clinical and basic sciences as they relate to radiology and pediatrics shall be a part of the didactic program. Subspecialty conferences, seminars, and academic review activities in pediatric radiology must be regularly scheduled. It is essential that the resident participate in the planning and presenting of conferences. In addition to conferences, study is integrated with the performance and interpretation of roentgenographic and other imaging examinations.

Residents must attend a minimum of 3 departmental conferences per week dedicated to pediatric radiology and participate in 3 or more interdepartmental conferences or rounds per week. When attending the conferences of other specialties, for example, tumor board, morbidity and mortality conference, surgery conference, the pediatric residents should present the radiographic portions of the conferences. The resident must be involved in daily radiology working conferences (daily conferences reviewing radiographs of intensive care units, other inpatient teams, etc). In the course of the 12-month program residents should attend and participate in at least 20 teaching conferences, such as grand rounds, sponsored by pediatric subspecialty departments. A journal club or research club must meet monthly.

D. Resident Policies

1. Supervision

The responsibility or independence given to residents should depend on their knowledge, skills, and experience. Additional personnel must be available within an appropriate time interval to perform or to supervise procedures.

2. Duty Hours and Conditions of Work

Duty hours and night and weekend call for trainees must reflect responsibility for patients and provide for adequate patient care. Residents must not be required regularly to perform excessively difficult or prolonged duties. It is the responsibility of the program director to ensure assignment of reasonable in-hospital duty hours. Residents who are taking night or weekend call must always have assigned faculty who are available for on call coverage.

E. Other Required Components

1. Resident Participation in Research

The training program in pediatric radiology should have a research component that will offer the resident an opportunity to learn the fundamentals of design, performance, interpretation of research studies, and evaluation of investigative methods. Residents should develop competence in critical assessment of in-
Program Requirements for Residency Education in Vascular and Interventional Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which in some cases exceed the common requirements.

I. Scope and Duration of Training

A. Definition and Scope of the Specialty
The unique clinical and invasive nature of practice in vascular and interventional radiology requires special training and skills. The educational program in the subspecialty of vascular and interventional radiology must be organized to provide comprehensive, full-time training and experience in the evaluation and management of patients requiring imaging-guided diagnostic vascular and interventional procedures and a supervised experience in performance of imaging-guided diagnostic methods of treating disease. Vascular and interventional procedures are guided by a number of imaging modalities including fluoroscopy, angiography, computed tomography, ultrasound, magnetic resonance imaging, radionuclide imaging, and other modalities included within the specialty of radiology. The training program must be structured to enhance substantially the resident’s knowledge of the application of all forms of imaging to the performance and interpretation of vascular and interventional procedures.

The program in vascular and interventional radiology must be structured to enhance the resident’s knowledge of the signs and symptoms of disorders amenable to diagnosis and/or treatment by percutaneous techniques. The significance of the symptoms must be understood, as well as the pathophysiology and natural history of the disorders. Residents must know the indications for and contraindications to vascular and interventional procedures and understand the medical and surgical alternatives to those procedures. The vascular and interventional radiologist must have a complete understanding of imaging methods used to guide percutaneous procedures. The resident must become skilled in the technical aspects of percutaneous procedures. The fundamentals of radiation physics, radiation biology, and radiation protection should all be reviewed during the vascular and interventional training experience. In addition, training should provide opportunities for research into new technologies and evaluation of the clinical outcomes of interventional radiology.

B. Duration of Training
Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

C. Faculty/Resident Numbers
The minimum number of residents is one. To ensure an adequate educational experience as well as adequate supervision and evaluation of a resident’s academic progress the faculty-to-resident ratio must not be less than one full-time faculty person for every resident.

II. Program Director/Faculty

A. Program Director
The program director must be certified by the American Board of Radiology in diagnostic radiology or radiology and have a Certificate of Added Qualifications in Vascular and Interventional Radiology from the American Board of Radiology or possess equivalent qualifications.

B. Faculty
There should be sufficient qualified professional personnel to constitute a teaching faculty. The faculty should comprise at least two full-time vascular and interventional radiologists, including the program director. While the expertise of any one faculty member may be limited to a particular aspect of vascular and interventional radiology, the training program must provide experience that includes all aspects of vascular and nonvascular interventional radiology. The faculty must provide didactic teaching and direct supervision of residents’ performance in the clinical patient management, procedural, interpretative, and consultative aspects of vascular and interventional radiology. The faculty must demonstrate commitment to the subspecialty of vascular interventional radiology. Such commitment includes membership in professional societies, publications in the field, and/or a minimum of 30 hours of CME Category 1 credit per year.

(See Program Requirements for the Subspecialties of Diagnostic Radiology for additional program director and faculty requirements.)
III. Facilities and Resources

A. Space and Equipment
Modern imaging/procedure rooms and equipment in adequate space must be available to permit the performance of all vascular and interventional radiologic procedures. Imaging modalities in the department should include fluoroscopy, angiography, computed tomography, ultrasonography, magnetic resonance imaging, and radionuclide scintigraphy. Fluoroscopic equipment should be high resolution and have digital display with postprocedure image processing capability. Rooms in which vascular and interventional procedures are performed must be equipped with physiologic monitoring and resuscitative equipment. Suitable recovery and patient holding areas should be available. Adjacent to or within procedure rooms, there should be facilities for storing catheters, guide wires, contrast materials, embolic agents, and other supplies. There must be adequate space and facilities for image display, image interpretation, and consultation with other clinicians. There must be adequate office space and support space for vascular and interventional radiology faculty or staff and residents.

B. Patient Population
The institution's patient population must have a diversity of illnesses from which a broad experience in vascular and interventional radiology can be obtained. There must also be an adequate variety and number of interventional procedures for each resident. Each resident must document his/her direct participation in a minimum of 500 vascular and interventional procedures that cover the entire range of the specialty. The procedures should be recorded in a personal case log that should be reviewed periodically with the program director. Clinical experience may be supplemented by training affiliations to other institutions.

C. Library
Teaching resources must include a medical library with access to a variety of textbooks and journals in radiology, vascular and interventional radiology, and related fields. A coded vascular and interventional radiology teaching film file is desirable. The resident should have access to computerized literature search facilities.

D. Support Services
Pathology and medical laboratory services and consultation must be regularly and conveniently available to meet the needs of patients, as determined by the medical staff. Services should be available each day throughout the entire 24 hours. At least one qualified medical technologist must be on duty or available at all times. Diagnostic laboratories for the noninvasive assessment of peripheral vascular disease also must be available. Nursing support should be readily available, particularly if conscious sedation might be administered.

E. Research Facilities
The institution should provide laboratory and ancillary facilities to support research projects. These laboratory facilities and research opportunities may be made available to vascular and interventional radiology residents through cooperative arrangements with other departments or institutions.

IV. The Educational Program

A. Clinical Components
The training program curriculum must include didactic and clinical experiences that encompass the full clinical spectrum of vascular and interventional radiology. Residents must have the opportunity to carry out all of the following under close, graded responsibility and supervision: clinical preprocedure evaluation of patients, interpretation of preliminary diagnostic studies, consultation with clinicians on other services, performance of vascular and interventional procedures, generation of procedural reports, and delivery of both short- and long-term follow-up care. The continuity of care must be of sufficient duration to enable the resident to obtain appropriate feedback regarding the management of patients under his/her care.

Both vascular and nonvascular interventional procedures, excluding the intracerebral vascular system, must be included in the training program. Examples of vascular procedures include but are not limited to arteriography, venography, lymphography, angioplasty and related percutaneous revascularization procedures, embolotherapy, transcatheter infusion therapy, intravascular foreign body removal, and percutaneous placement of endovascular prostheses such as stent grafts and inferior vena cava filters and insertion of vascular access devices and catheters. Examples of nonvascular procedures include, but are not limited to, percutaneous imaging-guided biopsies; percutaneous gastroscopy; percutaneous nephrostomy; ureteral stenting and other transcatheter genitourinary procedures for diagnosis and treatment of infections, obstruction, and fistula; percutaneous transhepatic and transhepatic biliary procedures; percutaneous drainage for diagnosis and treatment of infections and other fluid collections; and miscellaneous percutaneous imaging-guided procedures such as ablation of neoplasms and cysts. Residents must have specific clinical time dedicated to the performance and interpretation of vascular ultrasound studies, magnetic resonance angiograms, and CT angiograms.

The responsibility or independence given to residents must depend on an assessment of their knowledge, manual skill, and experience. In supervising residents during vascular and interventional procedures, faculty members should reinforce the understanding gained during residency training of x-ray generators, image intensifiers, film, screen-film combinations, film changers, film processing, ultrasonography, computed tomography, and other imaging modalities. Residents must be provided with instruction in the use of needles, catheters, and guide wires and must be directly supervised and given graduated responsibility in the performance of procedures as competence increases. A thorough understanding of the clinical indications, risks, interpretation, and limitations of vascular and interventional procedures is essential to the practice of vascular and interventional radiology. Residents must be instructed in these areas. Residents should also be instructed in proper use and interpretation of laboratory tests and in methods that are adjunctive to vascular and interventional procedures, such as use of physiologic monitoring devices, noninvasive vascular testing, and noninvasive vascular imaging. There should be specific instruction in the clinical aspects of patient assessment, patient treatment, planning, and patient management related to vascular and interventional radiology. There also should be instruction in the use of analgesics, antibiotics, and other drugs commonly employed in conjunction with these procedures. The residents must be thoroughly familiar with all aspects of administering and monitoring sedation of the conscious patient. They also must have advanced cardiac life support training.

Residents should serve as consultants under the supervision of staff vascular and interventional radiologists. Direct interactions of residents with patients must be closely observed to ensure that appropriate standards of care and concern for patient welfare are strictly maintained. Communication, consultation, and coordination of care with the referring clinical staff and clinical services must be maintained and documented with appropriate notes in the medical record. Reports for the medical record generated by residents should be closely reviewed by faculty for accuracy of content, grammar, style, and level of confidence. The vascular/interventional
residents should also assist and train diagnostic radiology residents in the performance and interpretation of procedures.

B. Didactic Components
There shall be scheduled intradepartmental conferences as well as conferences with related clinical departments in which residents participate on a regular basis. These should include one or more specific weekly departmental conferences and at least one interdisciplinary conference per week at which attendance is required. In particular, interdepartmental conferences with the surgical specialties should be an important teaching component. The resident’s teaching experience should include conferences with medical students, graduate medical staff, and allied health personnel. Scheduled presentations by the resident during these conferences should be encouraged.

Clinical and basic sciences as they relate to radiology and vascular and interventional radiology should be part of the didactic program. This should include but not be limited to the anatomy, physiology, and pathophysiology of the hematological, circulatory, respiratory, gastrointestinal, genitourinary, and musculoskeletal systems. Relevant pharmacology, patient evaluation and management skills, and diagnostic techniques also should be addressed.

There must be documented regular review of all mortality and morbidity related to the performance of interventional procedures. Residents must participate actively in this review, which should be held not less than monthly. Residents should be encouraged to attend and participate in local extramural conferences and should attend at least one national meeting or postgraduate course in interventional radiology while in training. Participation in local or national vascular and interventional radiology societies should be encouraged. Residents should be encouraged to present the radiologic aspects of cases that are discussed in multidisciplinary conferences. They also should prepare clinically or pathologically proven cases for inclusion in the teaching file.

C. Other Required Components
1. Resident participation in research
   The residents should learn the fundamentals of experimental design, performance, and interpretation of results. They should participate in clinical, basic biomedical or health services research projects and should be encouraged to undertake at least one project as principal investigator. They should submit at least one scientific paper or exhibit to a regional or national meeting. The opportunity also must be provided for residents to develop their competence in critical assessment of new imaging modalities and of new procedures in vascular and interventional radiology.

2. Scholarly activity
   (See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning scholarly activity requirements.)

3. Duty hours and conditions of work
   (See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

V. Evaluation
(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

VI. Board Certification
The Residency Review Committee will consider as one measure of a program’s quality the performance of its graduates on the examination of the American Board of Radiology for the Certificate of Added
Program Requirements for Residency Education in Radiation Oncology

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty
Radiation oncology is that branch of clinical medicine concerned with the causes, prevention, and treatment of cancer and certain nonneoplastic conditions utilizing ionizing radiation. Radiation oncologists are an integral part of the multidisciplinary management of the cancer patient and must collaborate closely with physicians in related disciplines and these related physicians' roles in the management of the patient.

The objective of the residency program is to educate and train physicians to be skillful in the practice of radiation oncology and to be caring and compassionate in the treatment of patients. To accomplish this goal, adequate structure, facilities, faculty, patient resources, and educational environment must be provided.

B. Duration and Scope of Education
Resident education in radiation oncology must include 5 years of accredited, clinically oriented graduate medical education. The first year of postgraduate clinical training must be spent in internal medicine, family practice, obstetrics/gynecology, surgery or surgical specialties, pediatrics, a categorical radiation oncology year, or a transitional year program. This clinical experience must then be followed by 4 years focused in radiation oncology. The PG-1 year must include at least 9 months of direct patient care in medical and/or surgical specialties other than radiation oncology.

No fewer than 36 months of the 4-year program must be spent in clinical radiation oncology. In addition, the program must provide a 2-month rotation in medical oncology, to include adult and pediatric patients, and exposure to oncologic pathology and diagnostic imaging by a 1-month rotation for each discipline. The medical oncology requirement may be met by documented attendance at regularly scheduled multidisciplinary conferences (at least 4 hours per month during the clinical rotations). The pathology and diagnostic imaging requirements may be satisfied through multidisciplinary conferences if pathology and imaging material for both pediatric and adult patients are shown and discussed (at least 1 hour per month during the clinical rotations for each discipline). The remaining months must allow for in-depth experience in individually selected areas applicable to clinical radiation oncology, as described in Section V.A.2, Clinical Curriculum. A research component, either clinical or basic laboratory research, is desirable.

II. Institutional Support

A. Sponsoring Institution
One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

1. The administration of the institution sponsoring the program in radiation oncology must provide funding for space, equipment, staff, nonprofessional personnel, and residents. It must assist the program director in teaching and recruiting faculty, as well as in selecting, evaluating, and dismissing residents whose performance is unsatisfactory.

2. Education in radiation oncology must occur in an environment that encourages the exchange of knowledge and experience among residents both in the program and in other oncology specialties within the sponsoring institution. There should be other Accreditation Council for Graduate Medical Education (ACGME)-accredited residency programs, including internal medicine and general surgery, in the institution.

B. Participating Institutions

1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program. The preponderance of the educational experience must take place in the parent institution. Outside institutions may participate on an affiliated or integrated basis.

a. The program may establish an affiliated relationship with another institution for the purpose of limited rotations. Affiliated institutions must provide additional resources and experience and must not be added primarily for the purpose of meeting service needs.

1) The program director must obtain prior approval from the RRC when the outside rotation totals more than 3 months.

2) Arrangements for rotations should not be made with institutions that at such a distance from the parent institution as to make resident attendance at rounds and conferences difficult.

3) Rotations away from the primary and integrated institution may not exceed a total of 6 months over the course of the 4 years of radiation oncology.

b. An institution is considered integrated when the program director (a) appoints the members of the faculty and is involved in the appointment of the chief of service at the integrated institution, (b) determines all rotations and assignments of residents, and (c) is responsible for the overall conduct of the educational program in the integrated institution. There must be a written agreement between the parent institution and the integrated institution stating that these provisions are in effect; this agreement must be approved by the RRC prior to implementation. Rotations to integrated institutions are not limited in duration.

2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved.

3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should include:

a. Identify the faculty who will assume the educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.D. and V.LA of the Program Requirements;

b. outline the educational goals and objectives to be attained by the resident during the assignment and specify the num-
Program Requirements for Residency Education in Radiation Oncology

C. Resident Transfer
To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section V.B., prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Presence of Fellows and Other Students
The presence of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.

IV. Faculty
The program director and faculty are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents, and the maintenance of records related to program accreditation, as well as for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director
1. There must be a single program director responsible for the program. The person designated by this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field, including the ability to organize and direct the teaching program, maintain a quality teaching staff, and provide a significant commitment of time and effort to the residency program.
   b. be certified in Radiation Oncology by the American Board of Radiology or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing and based at the primary teaching site.
   d. be licensed to practice medicine in the state(s) where the institution that sponsors the program is located (certain federal programs are exempted)
   A complete curriculum vitae of the program director shall be filed with the executive director of the RRC at the time of appointment and updated with each review of the program by the RRC.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating
4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Educational and Institutional Requirements.

5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

6. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s) as specified in section II.B. of this document.
   b. Change in the approved resident complement for those specialties that approve resident complement.
   c. Change in the format of the educational program.
   
   On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

C. Faculty Qualifications

1. The physician faculty must:
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified by the American Board of Radiology or possess qualifications judged by the RRC to be acceptable.
   c. be appointed in good standing to the staff of an institution participating in the program.

2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities

1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately the residents in the program.
   a. The program must provide a minimum of four full-time-equivalent faculty radiation oncologists who devote their professional time to the program for the teaching of clinical radiation oncology.
   b. In addition, the faculty must include one full-time radiation biologist or cancer biologist, who must also be on-site, for the teaching of radiation and cancer biology and one full-time faculty medical physicist, who also must be on-site, for the teaching of radiation physics.

2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.

3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E.1.

E. Other Program Personnel

The program must be provided with the additional professional, technical, and clerical personnel needed to support the administrative and educational conduct of the program.

V. The Educational Program

The program design and sequencing of educational experiences will be approved by the R.R.C. as part of the accreditation process.

A. Role of Program Director and Faculty

The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by:

1. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.

2. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.

3. providing residents with direct experience in progressive responsibility for patient management.

B. ACGME Competencies

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

2. Medical knowledge about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

4. Interpersonal and communication skills that result in effective information exchange and collaboration with patients, their families, and other health professionals.

5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.
C. Didactic Components
Conferences and teaching rounds must provide for progressive resident participation. There must be adequate frequency of conferences, with attendance by residents, radiation oncologists, and other staff. Adequate conference room and audiovisual facilities must be provided.

The clinical and basic sciences must be taught through regularly scheduled lectures, case presentations, conferences, and discussions relevant to the practice of radiation oncology. The training program must provide curricula for the teaching of basic sciences essential to training in radiation oncology, including radiation and cancer biology and medical physics. The curriculum in medical physics must include didactic lectures and laboratory demonstrations of radiation safety procedures, calibration of radiation therapy machines, the use of the computer for treatment planning, the construction of treatment aids, and the safe handling of sealed and unsealed radionuclides. The radiation and cancer biology curriculum must include didactic lectures on all aspects of radiation effects on normal and neoplastic tissues and the fundamental biology of the causes, prevention, and treatment of cancer. The program also must familiarize the resident with medical statistics, through an organized program of lectures or conferences; oncologic pathology, with special emphasis on neoplasia and radiation effects; and diagnostic imaging.

There must be didactic instruction in the potential value and limitations of other oncologic disciplines, such as medical oncology (both adult and pediatric), surgical oncology and the various surgical specialties, and gynecologic oncology, which play a role in the management of the patient. This will be accomplished by attendance at multidisciplinary and departmental conferences.

There must be intradepartmental clinical oncology conferences, including new patient conferences, weekly chart reviews, problem case conferences, continuous quality improvement, morbidity and mortality, physics, dosimetry, radiation and cancer biology, and journal review.

D. Clinical Components
1. Clinical Resources
To ensure adequate numbers and variety of patients for resident training, at least 600 patients must receive external beam irradiation yearly in the parent institution or integrated program, and the number of patients treated with external beam irradiation by each resident must be no fewer than 150 per year (determined by the number of patients simulated), or a minimum of 450 during the clinical radiation oncology rotations. A resident should not treat more than 250 patients with external beam irradiation in any 1 year. Only cases for which the resident has primary responsibility may be counted.

2. Clinical Curriculum
The program must provide the resident with the opportunity to gain in-depth knowledge of clinical radiation oncology, including the indications for irradiation and special therapeutic considerations unique to each site and stage of disease. The resident must be trained in standard radiation techniques as well as in the use of treatment aids and treatment planning to optimize the distribution of the radiation dose. The principles of normal tissue tolerance to radiation and tumor dose-response must be taught. The use of combined modality therapy and altered fractionation schemes should be part of the clinical curriculum. Teaching in pain management and palliative care should be provided.

The clinical core curriculum shall include experience with lymphomas and leukemias; gastrointestinal, gynecologic, genitourinary, breast, soft tissue and bone, skin, head and neck, lung, pediatric, and central nervous system tumors; and treatment of benign diseases for which radiation is utilized. In addition, the curriculum must provide instruction in the physics, radiation and cancer biology, and clinical applicability of the following areas: radiosurgery, intraoperative radiation therapy, three-dimensional conformal treatment planning and delivery, radioimmunotherapy, unsealed sources, total body irradiation as used in stem cell transplantation, total skin irradiation, high- and low-dose rate brachytherapy, hyperthermia, kilovoltage irradiation, plaque therapy, particle therapy, intravascular brachytherapy, and any others that may be developed as they apply to the core curriculum.

The resident also must be trained in the use of external beam modalities, including megavoltage irradiation, electron beam, simulation using conventional and/or CT simulators to localize anatomy, and computerized treatment planning. The faculty must ensure that the resident personally performs technical procedures, including treatment setups as well as intracavitary and interstitial placement of radiation sources.

The resident must perform no fewer than five interstitial implants in at least five patients, perform ten intracavitary implants in at least five patients, and observe an additional five interstitial implants in at least five patients and ten intracavitary implants in at least five patients during the course of training.

Residents must treat no fewer than 12 pediatric patients of whom a minimum of 9 have solid tumors.

Follow-up of the irradiated patients by the resident, including pediatric patients, on an inpatient or outpatient basis is a required part of resident training and must be demonstrated by the program to ensure that residents have the opportunity to learn about the problems of recurrent and disseminated tumors and of late aftereffects and complications of radiation therapy.

3. Resident Logs
a. The resident must keep a detailed, well-organized, and accurate log of these procedures for semianual review by the program director.

b. The program director must:
1) Review the logs with all residents at least semianually to ensure accuracy and to verify that the case distribution meets the standards specified.
2) Provide documentation of these discussions for the resident's record maintained by the institution.
3) Submit at the RRC's request the resident's logs of patients irradiated, procedures performed, and observed, and modalities used.

E. Scholarly Activities
1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and
Program Requirements for Residency Education in Radiation Oncology

provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

3. Resident Investigative Project

During their training, residents will be required to complete an investigative project under faculty supervision. This may take the form of biological laboratory research, clinical research, medical physics research, or the retrospective analysis of data from treated patients. The results of such projects shall be suitable for publication in peer-reviewed scholarly journals or presentation at scientific meetings.

F. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to have responsibility for the safety and welfare of patients.

1. Supervision of Residents

a. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.

c. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

2. Duty Hours

a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.

b. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.

c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.

d. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided during all daily duty periods and after in-house call.

3. On-Call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

a. In-house call must occur no more frequently than every third night, averaged over a four-week period.

b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to six additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.

c. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the resident has not previously provided care.

d. At-home call (pager call) is defined as call taken from outside the assigned institution.

1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

4. Moonlighting

a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.

b. The program director must comply with the sponsoring institution’s written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements D.1.1.k.

c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor’s primary clinical site(s), i.e., internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

5. Oversight

a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.

b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

6. Duty Hours Exception

An RRC may grant exceptions for up to 10% of the 80-hour limit, to individual programs based on a sound educational rationale. However, prior permission of the institution’s GMEC is required.

VI. Evaluation

A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include

a. the use of methods that produce an accurate assessment of residents’ competence in patient care, medical knowledge,
practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

b. mechanisms for providing regular and timely performance feedback to residents that includes at least:
   1) written semianual evaluation that is communicated to each resident in a timely manner and
   2) the maintenance of a record of evaluation for each resident that is accessible to the resident.

c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.

2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty Evaluation
The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation
The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The review should include the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

   The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment
   a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
   b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The RRC will use program data for the most recent 5- and 10-year periods and will take into consideration notable improvements or declines during the period considered. Poor performance will be cited if the number of candidates passing both the written and oral board examinations on the first opportunity is consistently at or below the 25th percentile of all programs in the nation.

VII. Experimentation and Innovation
A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

VIII. Board Certification
Residents who plan to seek certification by the American Board of Radiology should communicate with the office of the Board to ascertain the current requirements for acceptance as a candidate for certification.

Editorial revisions: March 4, 2003
ACGME: June 2002  Effective: January 2003
Common Program Requirements: July 1, 2003
Program Requirements for Residency Education in Surgery

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty
The goal of a surgical residency program is to prepare the resident to function as a qualified practitioner of surgery at the high level of performance expected of a board-certified specialist. The education of surgeons for the practice of general surgery encompasses education in basic sciences, training in cognitive and technical skills, development of clinical knowledge, and maturity in the acquisition of surgical judgment. The educational program should include the fundamentals of basic science as applied to clinical surgery, including: the elements of wound healing, homeostasis, hematologic disorders, oncology, shock, circulatory physiology, surgical microbiology, respiratory physiology, gastrointestinal physiology, genitourinary physiology, surgical endocrinology, surgical nutrition, fluid and electrolyte balance, metabolic response to injury including burns, musculoskeletal biomechanics and physiology, immunobiology and transplantation, applied surgical anatomy, and surgical pathology.

B. Duration and Scope of Education
Five years of graduate training in surgery following graduation from a medical school accredited by the Liaison Committee for Medical Education (LCME) is required for the acquisition of the necessary knowledge, technical skill, and judgment. Each resident must be notified in writing of the length of the program prior to admission to the program. All years must be in an accredited program under the guidance of the program director in surgery, regardless of assignments to other disciplines.

II. Institutional Support

A. Sponsoring Institution
One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions (defined as any institution to which residents rotate for an assigned experience).
1. The program should be conducted in institutions accredited by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) or its equivalent, and must be classified as general hospitals. These institutions, by definition, must include facilities and staff for a variety of services, including radiology and pathology.
2. There must be at least one additional residency program, in internal medicine or pediatrics or family practice whose residents rotate through the same integrated institution(s) as the surgery residents.

B. Participating Institutions (defined as any institution to which residents rotate for an assigned experience)
1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC).

3. Program letters of agreement must be developed for each participating and integrated institution that provides an educational experience for a resident that is 1 month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should:
   a. identify the faculty who will assume educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.D and V.A of the Program Requirements;
   b. outline the educational goals and objectives to be attained by the resident during the assignment;
   c. specify the period of resident assignment;
   d. establish the policies and procedures that will govern resident education during the assignment.

4. Integrated Institutions
   a. Institutions may be integrated with the sponsoring institution through an integration agreement that must additionally specify that the program director must
      1) appoint the members of the teaching staff at the integrated institution
      2) appoint the chief or director of the teaching service in the integrated institution
      3) appoint all residents in the program
      4) determine all rotations and assignments of both residents and members of the teaching staff.
   b. As a general rule, integrated institutions must be in close geographic proximity to allow all residents to attend joint conferences, basic science lectures, and morbidity and mortality reviews on a regular documented basis in a central location. If the institutions are geographically so remote that joint conferences cannot be held, an equivalent educational program of lectures and conferences in the integrated institution must be fully documented.

5. Prior approval must be obtained from the RRC for
   a. a portion of the chief year to be spent at a participating institution
   b. participating institutions where each resident will be assigned for 6 months or more, as well as for all integrations
   c. educational assignments requiring 1 year or more in total spent away from the sponsoring or integrated institution(s).

III. Resident Appointment

A. Eligibility Criteria
The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents
The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education, such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.
1. Residency positions must be allocated to one of three groups: categorical, designated preliminary, and nondesignated preliminary.
   a. Categorical residents (C) are accepted into the residency program with the objective to complete the entire surgery program, ie, normally 5 clinical years, assuming satisfactory performance.
   1) At each level, the number of categorical PG1, PG2, PG3, and PG4 positions shall not exceed the number of approved chief residency positions.
   2) Modest variations, not to exceed a 10% increase in the total number of categorical positions, may be permitted on a temporary basis only.
   b. Designated preliminary residents (DP) are accepted for 1, 2, or 3 years prior to continuing their education in another surgical or nonsurgical specialty or subspecialty program.
   1) Letters of commitment must be on file for each of these residents.
   2) The number of designated preliminary positions shall not be specifically limited, as long as the number of residents does not exceed the educational capacity of the surgical program.
   c. Nondesignated preliminary residents (NDP) are those accepted into the general surgical program, ie, for 1 or 2 years, who at the time of recruitment have not determined further residency training.
   1) The number of nondesignated preliminary positions in the PG1 and PG2 years combined shall not exceed 200% of the number of categorical chief residents.
   2) Documentation of these residents' continuation in graduate medical education must be provided.
   3) Exceptions to the number of nondesignated preliminary positions will require not only adequate documentation of continuing in graduate medical education in another program, but will also clear evidence of educational benefit to the overall program.
   d. Both temporary and permanent increases in resident complement must be approved in advance by the RRC. A permanent increase in categorical resident positions may be requested only in conjunction with a site visit. Any increase in the resident complement must be justified in terms of the educational goals of the program.

C. Resident Transfer
To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transfer resident, including an assessment of competence in the six areas described in section V.B prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students
The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.
1. All fellows and other students in both ACGME accredited and non-accredited programs in the sponsoring and integrated institutions that might affect the experience of the general surgery residents must be identified, eg, vascular surgery, oncologic surgery, head and neck surgery, critical care, trauma, endoscopy, gastroenterology, transplantation, pediatric surgery, and endocrine surgery. The relationship of these fellow(s) to the residents in the general surgery program must be detailed.
2. A chief resident and a fellow must not have primary responsibility for the same patients.

IV. Faculty
The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership. The term of appointment, as a normal rule, must be for at least the duration of the program plus 1 year, ie, a minimum of 6 years.

A. Qualifications of the Program Director
1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must:
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field.
   b. be certified in general surgery by the American Board of Surgery or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing and based at the primary teaching site.
   d. be licensed to practice medicine in the state where the institution that sponsors the program is located.
   e. demonstrate scholarly activity in at least 1 of the areas listed in section V.C. 1. a-d. of this document.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
   a. Devoting his/her principal effort to the program's management and administration, as well as to teaching, research, and clinical care limited to the sponsoring or integrated institution.
   b. Designating other well-qualified surgeons to assist in the supervision of the residents so that in addition to the program director for each approved chief residency position, there is at least one additional geographic full-time teaching staff member whose major function is to support the residency program. These key staff members must be appointed for a period long enough to ensure adequate continuity in the supervision of the resident staff.
   c. Assigning clinical rotations and staff appointments of attending surgeons on the teaching services for the sponsoring and all integrated institutions.
   2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).
   3. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.
   4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and
6. Procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.

5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

6. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of participating institution(s) as specified in section II. B of this document.
   b. Change in the approved resident complement for those specialties that approve resident complement.
   c. Change in the format of the educational program.
   On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

C. Faculty Qualifications
   1. The physician faculty must
      a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
      b. be certified in general surgery by the American Board of Surgery or possess qualifications judged by the RRC to be acceptable.
      c. be appointed in good standing to the staff of an institution participating in the program.
   2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities
   1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
   2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
   3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section IV.C.1.

E. Other Program Personnel
   The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program
   The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

A. Role of Program Director and Faculty
   1. The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by
      a. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
      b. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
      c. providing residents with direct experience in progressive responsibility for patient management.

B. ACGME Competencies
   The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate:
   1. Patient Care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health. Surgical residents must:
      a. demonstrate manual dexterity appropriate for their training level.
      b. be able to develop and execute patient care plans appropriate for the resident's level.
   2. Medical Knowledge about established and evolving biomedical, clinical, and cognitive (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care. Surgical residents are expected to:
      a. critically evaluate and demonstrate knowledge of pertinent scientific information.
   3. Practice-Based Learning and Improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care. Surgical residents are expected to:
      a. critique personal practice outcomes.
      b. demonstrate a recognition of the importance of lifelong learning in surgical practice.
   4. Interpersonal and Communication Skills that result in effective information exchange and collaboration with patients, their families, and other health professionals. Surgical residents are expected to:
      a. communicate effectively with other health care professionals.
      b. counsel and educate patients and families.
      c. effectively document practice activities.
   5. Professionalism as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population. Surgical residents are expected to:
      a. maintain high standards of ethical behavior.
      b. demonstrate a commitment to continuity of patient care.
      c. demonstrate sensitivity to age, gender and culture of patients and other health care professionals.
   6. Systems-Based Practice as manifested by actions that demonstrate an awareness of and response to the larger context and system of health care and effectively call on system resources to provide optimal care. Surgical residents are expected to:
      a. practice high quality, cost effective patient care.
b. demonstrate a knowledge of risk-benefit analysis.
c. demonstrate an understanding of the role of different specialists and other health care professionals in overall patient management.

C. Scholarly Activities
1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
   a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
   b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
   c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings; for example, case reports or clinical series.
   d. The scholarship of integration: a spirit of inquiry and scholarship; offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.
   e. Documented leadership in major medical specialty organizations.
   f. Mentorship of junior faculty, residents, and fellows.
2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.
3. Documentation of scholarly activities
   a. While not all members of a teaching staff can be investigators, clinical and/or basic science research must be ongoing in the department of surgery of the sponsoring institution(s). The staff as a whole must document active involvement in all phases of scholarly activity as defined above to be considered adequate.
   b. Adequate documentation of scholarly activities by the program director and the teaching staff at the sponsoring and integrated institutions is required at the time of the site visit. Staff activity at participating institutions cannot account or substitute for the educational environment of the sponsoring and integrated institutions.
   c. Research on the part of residents also is not a substitute for the involvement of the program director and teaching faculty.
4. The participation of residents in clinical and/or laboratory research is encouraged.

D. Resident Duty Hours and the Working Environment
Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents’ time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. Supervision of Residents
   a. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
   b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
   c. Faculty and residents must be educated to recognize the signs of fatigue and adopt policies to prevent and counteract the potential negative effects.
   d. The attending physician has both an ethical and a legal responsibility for the overall care of the individual patient and for the supervision of the resident involved in the care of that patient. Although senior residents require less direction than junior residents, even the most senior must be supervised.
   e. A fellow may not supervise chief residents.
2. Duty Hours
   a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient). Duty hours must be limited to 40 hours per week, averaged over a four-week period, inclusive of scheduled academic activities.
   b. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
   c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
   d. Adequate time for rest and personal activities must be provided between all daily duty periods. This should consist of a 10-hour time period provided between all daily duty periods, and after in-house call.

3. On-Call Activities
The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.
   a. In-house call must occur no more frequently than every third night, averaged over a four-week period.
   b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, maintain continuity of medical and surgical care, transfer care of patients, or conduct outpatient continuity clinics.
   c. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the surgery service or department has not previously provided care. The resident should evaluate the patient before surgery.
   d. At-home call (pager call) is defined as call taken from outside the assigned institution.
5. The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

4. Moonlighting
a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.

b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III. D.1.k.

c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), ie, internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

5. Oversight
a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.

b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

6. Duty Hours Exception
An RRC may grant exceptions for up to 10% of the 80-hour limit, to individual programs based on a sound educational rationale. However, prior permission of the institution's GMEC is required.

E. Educational Components
1. Academic Component: The written course of study should reflect careful planning with evidence of a cyclical presentation of core specialty knowledge, including teaching in critical thinking, design of experiments, and evaluation of data; and technological advances that relate to surgery and the care of patients with surgical diseases.

a. Conferences should be scheduled to permit the residents to attend on a regular basis. Participation by both residents and teaching staff must be documented.

b. The following types of conferences must exist within a program:
   1) A weekly review of all current complications and deaths, including radiological and pathological correlation of surgical specimens and autopsies.
   2) A course or a structured series of conferences to ensure coverage of the basic and clinical sciences fundamental to surgery in general; sole reliance on textbook review is inadequate.

3) Regular, organized, clinical teaching such as Grand Rounds, ward rounds, and clinical conferences.

2. Clinical Component
   Operative skill is essential and can be acquired only through personal experience and training. The program must provide for sufficient operative experience to educate qualified surgeons, taking into account individual capability and rate of progress.

a. The 5-year clinical program should be organized as follows:
   1) No more than 12 months may be devoted to education in a single surgical discipline other than the principal (essential) components of surgery
   2) No more than 6 months may be allocated to nonsurgical clinical disciplines such as internal medicine, pediatrics, gastroenterology, anesthesiology, or surgical pathology
   3) At least 54 months must be clinical surgery, with experience in endoscopy, surgical intensive care, and emergency care included in this category
   4) Thirty-six (36) of the 54 months must include the principal (essential) components of general surgery

b. The volume and variety of the operative experience must ensure a sufficient number and distribution of complex cases, as determined by the RRC, for the achievement of adequate operative skill, surgical balance, and experience for each resident in the

1) principal (essential) components of general surgery, ie, abdomen; alimentary tract, breast, skin and soft tissues, the comprehensive management of trauma, burns, and emergency surgery; endocrine system; head and neck surgery; surgical critical care; and the vascular system

2) secondary components of general surgery, ie, anesthesiology, burn management, cardiothoracic surgery, endoscopy, gynecology, neurosurgery, orthopedics, pediatric surgery, plastic surgery, transplant surgery, and urology

c. A resident is considered to be the surgeon when he or she can document a significant role in the following aspects of management: determination or confirmation of the diagnosis, provision of preoperative care, selection and accomplishment of the appropriate operative procedure, direction of the postoperative care, and accomplishment of sufficient follow-up to be acquainted with both the course of the disease and the outcome of its treatment. Participation in the operation only, without preoperative and postoperative care, is inadequate.

d. Numbers of Operative Cases
   1) While the total number of major operations to be performed by each resident is not specified, the RRC will consider the range of 500 to 1000 major cases as acceptable in aggregate for all 5 years, including 100 to 300 major cases in the chief year.

2) The operative experience for any 1 resident in excess of 450 cases for the chief year or 1,500 cases for all 5 years must be justified by the program director.

e. When operative experience justifies a teaching role, residents should act as teaching assistants and should list such cases for the fourth and fifth years only.

f. The Chief Year
   1) The program must commit the chief clinical year to the principal (essential) components of general surgery at the sponsoring or integrated institution(s). Primary responsibility for surgical specialty cases of patients on a general surgical service is permissible.

2) The majority of the 12 months of the chief year must be served in the final year of the program. To take advantage of a unique educational opportunity in a program during a resident's final year, a portion of the chief year may be
served in the next to the last year, provided it is not earlier than the fourth clinical year and has been approved in advance by the RRC.)

3) Not more than 4 months may be devoted exclusively to any 1 principal (essential) component of general surgery.

4) With prior approval of the RRC, assignment to a pediatric surgical service may be acceptable under the following conditions:
   i. The resident's experience in the principal (essential) components of general surgery is adequate
   ii. The resident is responsible for the preoperative, operative, and postoperative care of the pediatric surgical patient
   iii. The volume and complexity of cases are appropriate for a chief resident.

g. Additional Components

1) Defined experience with a variety of rigid and flexible endoscopic procedures, particularly proctosigmoidoscopy, colonoscopy, esophagogastroduodenoscopy, laparoscopy, and operative choledochoscopy, as well as experiences in other relevant diagnostic and therapeutic techniques including laryngoscopy, bronchoscopy, and fine-needle aspiration.

2) Defined experience with evolving diagnostic and therapeutic methods, such as: laser applications; investigations and manipulations of the distal common bile duct (including sphincterotomy); steroiotoic breast biopsy; sentinel lymph node biopsy techniques; physiologic testing and evaluation of the gastrointestinal tract; non-invasive diagnostic evaluation of the vascular system and invasive vascular interventional techniques; ultrasonography of the head and neck, breast, abdomen (including laparoscopic intra-abdominal); and endorectal ultrasound.

3) Experience in an emergency room and in intensive care units to enable residents to manage patients with severe and complex illnesses and with major injuries requiring critical care.

4) Management of patients (on surgical services) who may or may not require surgical intervention eg, patients with pancreatitis, portal hypertension, multiple trauma, immunosuppression, and to acquire skill in such nonoperative management.

h. Outpatient Responsibilities

Residents must be provided with at least 1 day each week of outpatient experience during assignments in the primary components of surgery. Each resident should have the opportunity to examine patients preoperatively, consult with the attending surgeon, participate in the operation and in the immediate postoperative care until release from the facility, and to see patients personally in an outpatient setting and consult with the attending surgeon regarding follow-up care.

VI. Evaluation of Residents

A. Resident Evaluation

I. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. The evaluations must be related to goals and objectives for each program assignment. This plan should include:
   a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
   b. mechanisms for providing regular and timely performance feedback to residents that includes at least
      1) written semiannual evaluation that is communicated to each resident in a timely manner and
      2) the maintenance of a record of evaluation for each resident that is accessible to the resident.
   c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.

2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the residents performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the residents permanent record maintained by the institution.

3. Although each program is encouraged to develop its own cognitive testing instruments, the American Board of Surgery (ABSITE) Examination is considered a highly desirable test of surgical knowledge. These test results should not be the sole criterion of resident knowledge and should not be used as the sole criterion for promotion to a subsequent PG level.

B. Faculty Evaluation

The performance of the faculty must be evaluated by the program, the program director or designee, no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, ie, at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment
   a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
   b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. The performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. At minimum, for the most recent 5-year period, 90% of the graduates must pass the qualifying and certifying examinations on the first attempt.
VII. Experimentation and Innovation
A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.
B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.
C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

ACGME: June 2000
General Competencies Implementation Date: July 1, 2002
Editorial revisions: ACGME June 2003 Effective: July 1, 2003

Program Requirements for Residency Education in Surgery

I. General Information
A. A residency education program in a subspecialty of general surgery is an educational experience of at least 1 year designed to develop advanced knowledge and skills in a specific clinical area. All educational components of the program should be related to program goals. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
Subspecialty education is a component in the continuum of the education process and must be in addition to the requirements for complete residency education in general surgery. Ordinarily the subspecialty education will follow completion of an accredited general surgery residency program.
B. Residency education programs in the subspecialties of general surgery may be accredited only in institutions that either sponsor a residency education program in general surgery or pediatric surgery accredited by the Accreditation Council for Graduate Medical Education (ACGME) or are integrated by formal agreement into such programs. The subspecialty programs will be approved only as an administratively integrated part of the approved core program in general surgery. Rotations to affiliated institutions can be approved for a period not exceeding 25% of the total program; adequate educational justification for such rotations must be provided to the RRC prior to implementation.
The description and regulations governing affiliated and integrated institutions in the Program Requirements for Residency Education in General Surgery also apply to the subspecialty programs of surgery.
C. Subspecialty programs will not be approved if they have substantial negative impact on the education of the general surgery residents in the core program.

II. Program Director and Teaching Staff
Subspecialty education programs must provide a scholarly environment for acquiring the necessary cognitive and procedural clinical skills essential to the practice of the specific subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program. It is also imperative that appropriate resources and facilities be present. Service obligations must not compromise educational goals and objectives.

A. Program Director
There must be a single program director responsible for the program.
1. Qualifications of the Program Director:
The subspecialty program director must be a surgeon who is qualified to supervise and to educate residents appropriately in the specific subspecialty.
a. The director must either be certified in the subspecialty by the American Board of Surgery or possess equivalent qualifications, as determined by the RRC.
b. The director must have an appointment in good standing to the medical staff of an institution participating in the program.
c. The director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
2. Responsibilities of the Program Director:
It is the responsibility of the subspecialty program director to support the residency education program by devoting his/her principal effort to its management and administration, as well as to teaching, research, and clinical care limited to the integrated institutions. This general responsibility includes the following specifics:
a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
e. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
f. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
g. Preparation of an accurate statistical and narrative description of the program.

B. Teaching Staff
1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching
abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

C. Other Program Personnel
Programs must be provided the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

III. Educational Principles
The principles of education enumerated in the Program Requirements for Residency Education in General Surgery are also applicable to the subspecialty programs.

A. The program directors for both the subspecialty and the core programs, as well as the institution itself, are responsible for ensuring that adequate facilities and resources are available to achieve the educational objectives.

B. A postgraduate residency must provide advanced education so that the residents can acquire special skill and knowledge in a specific subspecialty. This education should consist of a cognitive and a technical component. The cognitive component should emphasize the scholarly attributes of self-instruction, teaching, skilled clinical analysis, sound surgical judgment, and research creativity. The technical component must provide appropriate opportunity for the residents to acquire the operative and other psychomotor skills required for the practice of the subspecialty.

C. The program director must establish an environment that is optimal both for resident education and for patient care, including the responsibility for continuity of care, while assuring that undue stress and fatigue among residents are avoided. It is the program director’s responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not subjected to excessively difficult or prolonged working hours. It is desirable that residents’ work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Different specialties and different rotations may require different working hours and patterns. A distinction must be made between on-call time in the hospital and on-call availability at home vis-a-vis actual hours worked. The ratio of hours worked and on-call time will vary, particularly at the senior levels, and therefore necessitates flexibility.

D. During the on-call hours residents should be provided with adequate sleeping, lounge, and food facilities. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the resident does not spend an inordinate amount of time in nonevaluative activities that can be discharged properly by other personnel.

IV. Educational Components
Subspecialty programs must include the following educational components:

A. A sufficient number of patients must be available to assure appropriate inpatient and outpatient experience for each subspecialty resident, without adversely affecting the experience of residents in the general surgery core program. There must be adequate responsibility for continuity of care, to include prehospital and posthospital experience.

B. Subspecialty conferences, including review of all current complications and deaths; seminars; and clinical and basic science instruction must be regularly scheduled. Active participation of the subspecialty resident in the planning and the production of these meetings is essential.

C. A resident must have the opportunity to provide consultation with faculty supervision. He or she should have clearly defined educational responsibilities for other residents, medical students, and professional personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

D. There must be close interaction between the core residency program in general surgery and the subspecialty program. Lines of responsibility for the general surgery residents and the subspecialty resident must be clearly defined. It is imperative that the educational program for the subspecialty resident not adversely affect the education of the general surgery residents, either in terms of operative experience or patient responsibility. In particular, the following are noted:

1. A subspecialty surgical resident may be a teaching assistant for residents other than general surgery chief residents.

2. Unless explicitly allowed by the Program Requirements for Residency Education in the specific subspecialty of general surgery, a chief resident in general surgery and a subspecialty resident may not have primary responsibility for the same patients.

The subspecialty resident should maintain a close working relationship with residents and fellows in general surgery and in other disciplines such as radiology, pathology, medicine, and pediatrics.

E. A subspecialty program must offer supervised training to assure the acquisition of the necessary preoperative, operative, and postoperative skills integral to the subspecialty discipline. Instruction and experience must be sufficient for the residents to acquire an understanding of the common procedures of the subspecialty, their indications, risks, and limitations.

F. Adequate and appropriate supervision of subspecialty residents must be provided at all times in accord with their level of experience and expertise.

V. Program Research and Scholarly Activity
Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

A. Scholarly Activity
The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity.

This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth exploration of scientific, scholarly, or educational topics in which residents are involved.
Program Requirements for Residency Education in the Subspecialties of General Surgery

I. Introduction

A. Definition and Scope of the Specialty
1. Surgical critical care deals with complex surgical and medical problems in critically ill surgical patients. Institutions sponsoring graduate educational programs in surgical critical care must provide the educational, clinical, and administrative resources to allow residents to develop advanced proficiency in the management of critically ill surgical patients, to develop the qualifications necessary to supervise surgical critical care units, and to conduct scholarly activities in surgical critical care. The educational program must be an integral part of and enhance an accredited core program in general surgery.
2. Completion of at least 3 clinical years in an accredited graduate educational program in the disciplines of general surgery, neurosurgery, urology, or obstetrics and gynecology is a prerequisite. A subspecialty educational program in surgical critical care is in addition to the requirements for critical care education set forth in the Program Requirements for these core programs. There should be an institutional policy governing the educational resources committed to critical care programs and ensuring cooperation of all involved disciplines.
3. Residents in one of the surgical disciplines listed in Section I.A.2 who enter the program prior to completing a residency must have a categorical residency position in their specialty available to them on satisfactory completion of the critical care fellowship.

B. Duration and Scope of Training
1. Graduate education in surgical critical care shall be 12 months, of which 2 months may be elective rotations. Those 12 months must be devoted to advanced educational and clinical activities related to the care of critically ill patients and to the administration of critical care units.
2. A surgical critical care program must include primary educational activities in a surgical critical care unit with pediatric and/or adult patients, located in an institution that has been approved by the Residency Review Committee (RRC) for surgery as an integrated institution (as defined in the Program Requirements for General Surgery) with a core general surgery or pediatric surgery residency program.

VI. Evaluation

A. Residents
Subspecialty program directors must establish clearly defined procedures for regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as surgical judgment.

The program director, with participation of members of the teaching staff, shall:
1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.

The provision of a written final evaluation is required for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

B. Program Director
The subspecialty program director should be evaluated annually by the director of the core general surgery program regarding teaching, scholarly activities including research productivity, patient care activities, and administrative capabilities.
III. Faculty Qualification and Responsibilities

A. Program Director
1. The critical care training program must be under the direction of a surgeon who is certified in surgical critical care by the American Board of Surgery or judged by the RRC to possess appropriate educational qualifications and documented experience in surgical critical care.
2. The program director of the critical care program must be the director or co-director of one or more of the critical care units in which the clinical aspects of the critical care program take place, and he or she must be personally involved in clinical supervision and teaching of general surgery and surgical critical care residents in that unit.
3. The program director shall have administrative responsibility for the surgical critical care educational program and shall appoint all residents and teaching staff to the program and determine their duties.

B. Responsibilities of the Program Director
It is the responsibility of the critical care program director to support the residency education program by devoting his/her principal effort to its management and administration, as well as to teaching, research, and clinical care limited to the integrated institutions. This general responsibility includes the following specifics:
1. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
2. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
3. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
4. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
5. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
6. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
7. Preparation of an accurate statistical and narrative description of the program.

C. Faculty
1. In the teaching environment of the surgical critical care unit, it is recognized that the teaching staff in surgery, medicine, pediatrics, obstetrics and gynecology, anesthesiology, and other disciplines may all be involved in the care of specific patients. Therefore, a collegial relationship must exist between the surgical director of the critical care educational program and the teaching staff to enhance the educational opportunities for all residents and trainees.
2. The teaching staff must be specifically qualified in the care of critically ill surgical patients and must provide the program
director with regular evaluations of the residents. At least one surgeon qualified in surgical critical care must be appointed to the teaching staff for every surgical critical care resident enrolled in the program.

3. The teaching staff must have real and demonstrated interest in teaching and set an example for residents by documented engagement in scholarly pursuits, to include (1) participation in their own continuing education in surgical critical care, (2) participation in regional and national surgical scientific societies, and (3) demonstration of an active interest in research as it pertains to critical care problems.

4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

5. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

D. Other Program Personnel
Programs must be provided the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Working Environment and Hours
A. The program director must establish an environment that is optimal both for resident education and for patient care, including the responsibility for continuity of care, while assuring that undue stress and fatigue among residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not subjected to excessively difficult or prolonged working hours. Residents' work schedules must be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Different specialties and different rotations may require different working hours and patterns. A distinction must be made between on-call time in the hospital and on-call availability at home or at other locations.

B. During the on-call hours, residents should be provided with adequate sleeping, lounge, and food facilities. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the resident does not spend an inordinate amount of time in non-educational activities that can be discharged properly by other personnel.

V. Facilities and Resources
The surgical critical care program must function in a unit that has sufficient numbers of knowledgeable personnel and the necessary equipment to care for critically ill surgical patients.

A. Personnel should include specially trained nurses and technicians who are skilled in critical care instrumentation, respiratory function, and laboratory medicine.

B. The critical care unit must be located in a designated area within the hospital, constructed and designed specifically for the care of critically ill patients.

C. Equipment and personnel in the critical care unit should be centrally concentrated to provide efficient and expeditious operation.

D. There should be a supporting laboratory available to provide complete and prompt laboratory evaluation.

E. The objectives of a surgical critical care program can be achieved only when the program is based within an institution that has an accredited residency program in general surgery. It is desirable for the institution to have accredited residencies in the surgical specialties and in disciplines that particularly relate to surgery, such as internal medicine, radiology, pathology, and anesthesiology.

F. Conveniently located and adequate space for conferences and study is essential.

G. The average daily census for each surgical critical care unit to which the residents are assigned shall permit a resident-to-patient ratio of one resident to five patients. The qualified surgical faculty-to-critical care resident ratio shall be at least one to one. These ratios are sufficient to provide an adequate clinical and supervisory base. When more than one critical care program exists in an institution, it will be the responsibility of the institution to coordinate interdisciplinary requirements and to ensure that each resident meets the Program Requirements for Residency Education in Critical Care in their primary discipline (e.g., medicine, anesthesiology, etc).

H. To provide sufficient breadth in patient exposure, a critical care program that averages a daily census of at least 10 patients is required.

I. The record-keeping system must maintain the records of patients in the critical care unit as retrievable parts of the hospital chart, so they can be available for evaluation.

J. Library
1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.

2. Library services should include the electronic retrieval of information from medical databases.

3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

VI. The Educational Program
A. Curriculum Overview
The program must provide the opportunity for residents to acquire advanced knowledge of the following aspects of critical care, particularly as they relate to the management of patients with hemodynamic instability, multiple system organ failure, and complex coexisting medical problems:

1. Cardiorespiratory resuscitation
2. Physiology, pathophysiology, diagnosis, and therapy of disorders of the cardiovascular, respiratory, gastrointestinal, genitourinary, neurologic, endocrine, musculoskeletal, and immune systems, as well as of infectious diseases
3. Metabolic, nutritional, and endocrine effects of critical illness
4. Hematologic and coagulation disorders
5. Critical obstetric and gynecologic disorders
Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The critical care program director should be evaluated annually by the director of the core general surgery program regarding teaching performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as surgical judgment.

VIII. Evaluation

A. Residents

Critical care program directors must establish clearly defined procedures for regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as surgical judgment.

The program director, with participation of members of the teaching staff, shall:

1. At least semi-annually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a record of evaluation for each resident and have it accessible to the resident and other authorized personnel.

The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

B. Program Director

The critical care program director should be evaluated annually by the director of the core general surgery program regarding teaching, scholarly activities including research productivity, patient care activities, and administrative capabilities.

C. Program

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed by the program director, the core general surgery program director, and the Institutional Review Committee.
Program Requirements for Residency Education in Hand Surgery (Surgery)

I. Introduction

A. Definition of the Specialty
Hand surgery is a surgical subspecialty that deals with congenital and acquired defects of the hand and wrist that compromise the function of the hand. A hand surgery educational program is designed to educate physicians in the art and science of hand surgery and to develop a competent hand surgeon who is capable of independent function. The educational program should provide experience in the repair, resection, and reconstruction of defects of form and function of the hand; in the design, construction, and transfer of flaps and the transplantation of tissues, including microsurgery of multiple tissues; in replantation of upper extremity parts; in surgical and ancillary methods of treatment of tumors; in management of complex wounds; and in the use of alloplastic materials.

B. Scope of Education
1. Prerequisite resident education must be completed in a general surgery, orthopaedic surgery, or plastic surgery program accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The length of the educational program is 1 year.

II. Institutional Organization

A. Sponsoring Institution
The program should have one sponsoring institution that has primary responsibility for the entire program. The sponsoring institution should provide sufficient faculty, financial resources; and clinical, research, and library facilities to meet the educational needs of the residents and to permit the program to comply with the requirements for accreditation.

B. Participating Institutions
1. When multiple institutions participate in the educational program, the commitment of each participating institution must be documented in a written agreement that complies with the ACGME Institutional Requirements.
2. Assignments to participating institutions must be based on an appropriate educational rationale. Assignments that dilute the education of residents or that do not provide proper supervision and coordination of educational activities should not be established or maintained.
3. Assignments to participating institutions that are geographically distant from the sponsoring institution are not desirable. To be justifiable, such assignments must offer special resources or opportunities not otherwise available to the program.
4. The number and location of participating institutions must not preclude the participation of residents and faculty in the educational activities of the hand surgery course of study.

C. Appointment of Residents
1. The total number of residents must be approved in advance by the Residency Review Committee (RRC). The number of residents shall be based primarily on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to resident education.
2. Programs may not graduate more hand surgery residents in any given year than the number of residents approved by the RRC.
3. Any increase, including a temporary increase in resident complement, must receive prior approval of the RRC. Requests for changes in the approved resident complement of a program must include a strong educational rationale.

III. Faculty Qualifications and Responsibilities
The program director and the faculty are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director
A single program director must be responsible for the program.

1. Qualifications of the program director
a. Requisite and documented clinical, educational, and administrative abilities and experience.
b. Licensure to practice medicine in the state where the institution that sponsors the program is located.
c. Certification by the appropriate ABMS Board or suitable equivalent qualifications in the appropriate specialty and a certificate of added qualifications in hand surgery or suitable equivalent qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
d. Appointment in good standing to the medical staff of an institution participating in the program.
e. Frequent changes in leadership or long periods of temporary leadership are undesirable and may adversely affect the accreditation status of the program.

2. Responsibilities of the program director
a. Prepare a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of hand surgery residents at each level of education and for each assignment. This statement must be distributed to hand surgery residents and members of the faculty. It should be readily available for review.
b. Select residents for appointment to the program according to institutional and departmental policies and procedures.
c. Select and supervise the faculty and other program personnel at each participating institution.
d. Supervise residents through explicit written descriptions of supervisory lines of responsibility for the care of patients.

Such guidelines must be communicated to all members of the faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervising physicians.
e. Regularly evaluate residents' knowledge, skills, and overall performance. The program director, with participation of the faculty, must
1. at least quarterly, evaluate the progress of each hand surgery resident in writing, using appropriate criteria and procedures;
2. communicate each evaluation to the resident in a timely manner;
3. advance residents to positions of higher responsibility only on evidence of their satisfactory progressive scholarship and growth;
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
5. provide a final written evaluation to each hand surgery resident who completes the program. The evaluation must include a review of the resident’s performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. Each evaluation should be signed by the resident and program director and be maintained on file by the program director for at least 5 years following completion of the program.

f. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.

g. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.

h. Prepare an accurate statistical and narrative description of the program, as requested by the RRC.

i. Ensure that each resident is provided with a sufficient educational program, including a sufficient volume and variety of operative experience and progressive surgical responsibility.

j. Annually collect, compile, and retain the number and types of hand surgery operative procedures performed in all institutions used for resident education. These data must be provided in the form and format specified by the RRC.

k. Annually collect, compile, and retain a comprehensive record of the operative procedures performed by each hand surgery resident completing the program. This information must be provided in the form and format specified by the RRC. This record must be signed by the hand surgery resident and the program director, attesting to its accuracy.

l. Advise applicants of the prerequisite requirements of the appropriate specialty board.

m. Document the satisfactory completion of prerequisite education before the resident begins the hand surgery program.

n. Notify the executive director of the RRC in writing of any major change in the program that significantly alters the educational experience for the residents, including:
1. changes in program leadership, to include any change in appointment of the program director, section or division head, or department chair; and
2. changes in administrative structure that affect the status of the parent department in the institution.

o. Obtain prior RRC approval for the following changes in the program:
1. the addition or deletion of any participating institution to which residents are assigned for a total of 2 months or longer;
2. any change in the approved resident complement of the program; and
3. any change in the length or format of the program.

B. Faculty

1. The hand surgery faculty must be certified by the one of the sponsoring boards, or possess suitable equivalent qualifications and be certified in hand surgery or possess suitable equivalent qualifications. The majority of the faculty must possess certificates of added qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.

2. There must be a sufficient number of qualified faculty to adequately instruct and supervise hand surgery residents to ensure optimal patient care and resident education. The faculty must be able to devote sufficient time to the program to meet their supervisory and teaching responsibilities.

3. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

4. A faculty member at each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

5. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving these goals. The hand surgery resident should participate in these reviews.

6. The faculty should, at least annually, evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of the faculty, and the quality of resident supervision.

C. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty must be research investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. Scholarship is defined as an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. This activity should include:

1. participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;
2. participation in journal clubs and research conferences;
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations’ meetings and publication in their journals;
4. participation in research, particularly in projects funded following peer review and/or that result in publications or presentations at regional and national scientific meetings;
5. offering of guidance and technical support (eg, research design, statistical analysis) for residents involved in research; and
6. provision of support for resident participation in scholarly activities.

D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.
IV. Facilities and Resources

A. Inpatient Facilities
1. Inpatient facilities should have a sufficient number of beds, support personnel, and proper equipment to ensure quality patient care and education.
2. Operating suite and diagnostic and treatment facilities must contain technologically current equipment.

B. Outpatient Facilities
Appropriately equipped outpatient facilities including support staff, operating suites, and clinic and office space must be available for resident participation in the preoperative evaluation, treatment, and postoperative follow-up of patients for whom the resident has responsibility.

C. Library Facilities
1. The residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.

V. The Educational Program

A. Program Design
1. The program director and faculty must prepare and implement written educational goals for the program.
2. The program design and/or structure must be approved by the RRC as part of the regular review process.

B. Clinical Component
1. Residents must be provided with education in surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pathology, pharmacology, wound healing, microbiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation.
2. A sufficient number and variety of adult and pediatric hand surgery patients must be available for resident education.
3. Generally equivalent and sufficient distribution of operative procedures among the residents in all categories of hand surgery must be demonstrated.
4. Residents should be provided with graduated and progressive patient management responsibility.
5. Because judgment and technical capability to achieve satisfactory surgical results are mandatory qualities for the hand surgeon, education should be provided in the following areas:
   a. Skin repair, including grafts and flaps, multiple tissue flaps, free microscopic tissue transfers, and insertion of tissue expanders
   b. Fingertip injuries
   c. Tendon repair, including flexor tendon repair and graft, implantation of tendon spacer, extensor tendon repair, and tenolysis/tenodesis
   d. Tendon transfer and tendon balancing
   e. Nerve repair, including major and digital, graft, neurolysis, surgical treatment of neuraoma, transpositions, and nerve decompressions
   f. Management of fractures and dislocations, including phalangeal or metacarpal with and without internal fixation; wrist, radius, and ulna with and without internal fixation; and injuries to joint ligaments
   g. Bone grafts
   h. Joint and tendon sheath repairs, including release of contracture, synovectomy, arthroplasty with and without implant, arthrodesis, trigger finger release, and stiff joints that result from rheumatoid or other injury
   i. Pollicization or ray transfer
   j. Foot to hand transfer
   k. Tumors, benign and malignant
   l. Dupuytren's contracture
   m. Replantation, revascularization
   n. Amputations
   o. Fasciotomy, deep incision and drainage for infection, and wound debridement
   p. Congenital deformities, including syndactyly and others
   q. Management of upper extremity vascular disorders and insufficiencies
   r. Foreign body, implant removal
   s. Thermal injuries
   t. Arthroscopy
   u. Upper extremity pain management

C. Didactic Components
1. A comprehensive, organized course of study must be offered, to include educational conferences that are well defined, documented, and regularly held. At minimum, the program must provide a didactic component for clinical education referencing section V.B.1 of these Program Requirements for Residency Education in Hand Surgery.
2. The written course of study should reflect careful planning, with evidence of a cyclical presentation of core specialty knowledge supplemented by the addition of current information, including practice management, ethics, and medicolegal topics as they relate to hand surgery. Conferences must include basic science subjects related to clinical surgery of the hand, such as anatomy, physiology, pathology, genetics, microbiology, and pharmacology. A periodic review of the morbidity and mortality experience of the service must be included.
3. A list of the conferences should be maintained and available for review at the time of the site visit.
4. Conferences should be attended by both the residents and the faculty, and such attendance should be documented.
5. Conferences should be organized by the faculty to ensure that sufficient educational experience is provided. Hand surgery residents assigned to participating institutions other than the sponsoring institution should attend the hand surgery conferences at those sites.
6. Residents should make presentations at conferences and actively participate in conference discussions. Adequate time for resident preparation should be permitted to maximize the educational experience.
7. Hand surgery residents should be encouraged to pursue clinical or basic science research interests.

D. Supervision
1. All patient care services must be supervised by qualified hand surgery faculty. The program director must ensure, direct, and document proper supervision of residents at all times.
2. Residents must be provided with rapid, reliable systems for communicating with faculty at all times.
3. Hand surgery residents may function as intermediate supervisors when documented prior experience makes it appropriate, but faculty supervision must be available.

E. Duty Hours
1. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more than every third
Program Requirements for Residency Education in Pediatric Surgery (Surgery)

I. General Characteristics of Accredited Programs
A. A residency program in pediatric surgery is an educational experience of at least two years designed to develop advanced knowledge and skills in the fundamental areas of surgery related to infants and children. The goal is to prepare residents to function as qualified practitioners of pediatric surgery at the high level of performance expected of board-certified specialists. The educational components of the program, therefore, must be of the highest priority. Residents must be provided adequate time and sufficient facilities for study. While every program carries a commitment of service to patients, the service responsibilities must support and not detract from the educational activities.

B. Inasmuch as pediatric surgery is a discipline of great breadth and is often consultative in nature, the program should be conducted in institutions accredited by the Joint Commission on Accreditation of Healthcare Organizations or its equivalent and classified as general hospitals or children's hospitals. These institutions, by definition, must include facilities and staff for a variety of services, including radiology and pathology. There must be at least one additional residency program in pediatrics whose residents rotate through the same integrated institutions as the pediatric surgical residents.

C. Subspecialty programs will not be approved if they have substantial negative impact on the education of the general surgery residents in the core program.

II. Institutional Organization
A. Requirements of Sponsoring Institution
In addition to the essentials outlined in the institutional requirements, institutions with an approved training program in pediatric surgery must have the following characteristics:

1. There shall be inpatient pediatric surgical admissions adequate to provide educational experience for the program. Intensive care units for both infants and older children are essential.

2. Pediatric surgical outpatient care sessions must meet on a regular basis. They shall include inpatient evaluation of ambulatory patients with surgical conditions as well as both short-term and ongoing follow-up management of these patients.

3. An emergency department in which infants and children can be efficiently managed 24 hours a day is essential. The pediatric surgical staff will ordinarily serve as consultants for this department. The pediatric surgical service must direct the care of all patients with traumatic or thermal injuries involving multiple organ systems.

4. To provide the necessary breadth of experience, an accredited residency training program in pediatrics is required within the primary institution. Residency programs or other equivalent clinical expertise in other specialties, particularly radiology and pathology, are highly desirable.

5. The department of radiology must have one or more staff with training, interest, competence, and experience in the radiologic evaluation of infants and children. The department should be staffed and organized to permit efficient and complete evaluation of patients 24 hours a day. The department should be furnished and equipped to provide up-to-date imaging capability, including such procedures as ultrasonography and computerized scanning. Facilities for nuclear medicine, magnetic resonance imaging, and other imaging modalities may be necessary.

B. The educational effectiveness of a program must be evaluated at least annually. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by hand surgery residents should be utilized in this process.

C. One measure of the quality of a program is the performance of its graduates on the examination for the certificate of added qualifications in hand surgery given by the American Board of Surgery. The RRC may consider this information as part of the overall evaluation of the program.

VI. Evaluation
A. Resident Evaluation
The program director and faculty are responsible for regularly evaluating the residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

B. Faculty Evaluation
1. At least annually, all individual faculty members must be formally evaluated by the program director. Hand surgery residents should be provided with the opportunity to evaluate faculty.

C. Program Evaluation
1. The educational effectiveness of a program must be evaluated at least annually. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by hand surgery residents should be utilized in this process.

2. One measure of the quality of a program is the performance of its graduates on the examination for the certificate of added qualifications in hand surgery given by the American Board of Surgery. The RRC may consider this information as part of the overall evaluation of the program.

VII. Board Certification
Residents who plan to seek hand surgery certification as administered by the American Board of Surgery should communicate with the secretary of the board to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: September 1997 Effective: July 1998

Program Requirements for Residency Education in Pediatric Surgery (Surgery)
imaging, and interventional radiography should be available within the institution.

6. The department of pathology should have one or more staff with special training, interest, competence, and experience in pediatric pathology. The department should provide efficient and expert surgical pathology service, and surgical pathology consultation must be available at all times. The department of pathology must participate in the pediatric surgical education program, including the conduct of appropriate conferences at which the current surgical pathology material is presented and discussed. These conferences must be attended by both staff and residents of the pediatric surgical service.

7. Within the department of anesthesia there must be anesthesiologists with special training, interest, competence, and experience in the anesthesia of infants and children. The number of such anesthesiologists must be consistent with the volume of surgical cases in the pediatric age group.

8. The institutional library must contain a representative and authoritative collection of books and journals on pediatric surgery, pediatrics, general surgery, other surgical specialties, radiology, and the basic sciences. The library shall be managed and supervised by a well-qualified medical librarian. The Index Medicus must be part of the library, and access to computerized literature search facilities is highly desirable.

B. Participating Institutions

An institution that cannot provide sufficient resources and clinical experience within its own facilities may make arrangements with other institutions through formal written agreements to provide additional resources and experience. All such agreements are subject to approval by the RRC, either as indicated below in items 2. and 4. or at the time of program review.

1. Institutions may be affiliated with the parent institution through an affiliation agreement, which must cover the areas specified in the Institutional Requirements. Affiliated institutions must promote the educational goals of the program rather than simply enlarging the program and must not be added primarily for the purpose of meeting service needs.

2. Rotations not to exceed 3 months may be spent at affiliated institutions at the discretion of the program director during the first year of training. These rotations will be evaluated by the RRC for Surgery at the next full review. Rotations outside the parent and affiliated institutions exceeding 3 months may be made only with prior approval of the RRC. In no circumstance may rotations at affiliated institutions exceed a total of 6 months of the 24-month training period.

3. Institutions may be integrated with the parent institution through an integration agreement that must specify—in addition to the institutional requirements—that the program director of the parent institution (1) appoint the members of the teaching staff at the integrated institution, (2) appoint the chief or director of the teaching service in the integrated institution, (3) appoint all residents in the program, and (4) determine all rotations and assignments of both residents and members of the teaching staff. As a general rule, institutions integrated with parent hospitals must be in such close geographic proximity as to allow all residents to attend joint conferences, basic science lectures, and morbidity and mortality review on a regularly documented basis in a central location. If the institutions are geographically so remote that joint conferences cannot be held, an equivalent educational program of lectures and conferences in the integrated institution must be fully documented.

4. Prior approval must be obtained from the RRC for all integrations.

III. Teaching Staff

The staff responsible for the organization and performance of the pediatric surgical program must be well qualified and diversified, so as to represent the many facets of pediatric surgery.

A. Program Director

The program director must be dedicated to and actively engaged in surgical education and must be responsible for the proper conduct of the educational activities of the program. The program director must:

1. Be institutionally based and be appointed for at least the duration of the program plus 1 year.
2. Be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
3. Be qualified in surgery, certified by the American Board of Surgery, and hold a current Certificate of Special Qualifications in Pediatric Surgery or have equivalent qualifications.
4. Be responsible for rotations and staff appointments of attending surgeons on the teaching services.
5. Make resident appointments and assignments and be responsible for the proper conduct of the educational activities, particularly for the supervision and direction of the residents.
6. Provide complete and accurate program information forms and resident operative records to the Residency Review Committee (RRC) so that an appropriate assessment of the program can be made.
7. Prepare a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
8. Designate other well-qualified surgeons to assist in the supervision of the resident staff so that, in addition to the program director, for each approved chief residency position there is at least one geographic full-time teaching staff member whose major function is to support the residency program. These key staff members must be appointed for a period long enough to ensure adequate continuity in the supervision of the resident staff.
9. Provide residents with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
10. Implement fair procedures as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
11. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

B. Other Teaching Staff

1. The teaching staff must include, at a minimum, one other pediatric surgeon who possesses the qualifications listed for the program director in III.A.3.
2. The key staff members must be appointed for a period long enough to ensure continuity in the supervision of the program. They must be formally organized and meet regularly. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program
effectiveness in achieving them. At least one resident representative should participate in these reviews.

3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

4. It is essential that the members of the teaching staff provide exemplary models to the trainees by their dedication to patient care and education. Participation and productivity in scholarly pursuits by the teaching staff is a required attribute of an accredited program.

5. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. Adequate documentation of scholarly activity on the part of the program director and the teaching staff at the parent and integrated institutions must be submitted at the time of the program review.

Documentation of scholarly activity is based on:

a. Participation in continuing surgical education.

b. Participation in regional or national surgical scientific societies.

c. Presentation and publication of scientific studies.

d. Demonstration of an active interest in research as it pertains to their own special surgical interests. The RRC will consider documented involvement in the following as indicators of the commitment of the staff to research:

1. Projects that are funded following peer review
2. Publications in peer-reviewed journals
3. Presentations at national and regional scientific meetings
4. Research protocols that have been approved by appropriate institutional committees or other organizations

While not all members of a teaching staff can be investigators, clinical and/or basic science research must be ongoing in the department of pediatric surgery of the parent and integrated institution(s). Research on the part of residents is not a substitute for the involvement of the program director and teaching staff. The staff as a whole must document active involvement in all phases of scholarly activity as defined above to be considered adequate to conduct a program of graduate education in pediatric surgery.

6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

IV. Duration of Training

A. Before beginning a residency in pediatric surgery, each resident must have satisfactorily completed a program in general surgery accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada. He or she must be admissible to examination by the American Board of Surgery (or its equivalent) or be certified by that board.

B. The residency program in pediatric surgery must be accredited for 2 years, 18 months of which must be devoted to clinical pediatric surgery. The remaining required 6 months may be devoted to related clinical disciplines designed to enhance the educational experience or may be devoted to scholarly activities. The last 12 months of the clinical training must be at the chief pediatric surgical resident level with a high degree of responsibility for patient management, including semi-independent operative experience under appropriate supervision.

V. Scope and Content of Program

A. The residency program must provide advanced education so that the residents can acquire special skill and knowledge in pediatric surgery. This education should consist of a cognitive and a technical component. The cognitive component should emphasize the scholarly attributes of self-instruction, teaching, skilled clinical analysis, sound surgical judgment, and research creativity. The technical component must provide appropriate opportunity for the residents to acquire the operative and other psychomotor skills required for the practice of this subspecialty.

B. The program must provide both clinical experience and education in the fundamental areas of surgery related to infants and children.

1. Residents must be given responsibility for surgical management so that they may attain detailed knowledge of congenital, neoplastic, infectious, and other acquired conditions of the gastrointestinal system and other abdominal organs; of the blood and vascular system; of the integument; of the diaphragm and thorax, exclusive of the heart; of the endocrine glands; of the gonads and reproductive organs; and of the head and neck.

2. In addition, an opportunity for similar experience in traumatic conditions of the abdomen, chest, head and neck, and extremities must be provided. Particularly, the resident must have sufficient experience to become expert in the management of children who have sustained injuries to multiple organs. The resident also must have sufficient opportunity to manage on the surgical service patients who may or may not require surgical intervention and to acquire skill in such nonoperative management.

3. The resident also should have sufficient exposure in endoscopy to become competent in endoscopy of the airway and gastrointestinal tract, including laryngoscopy, bronchoscopy, esophagoscopy, and gastroduodenoscopy. Experiences in lower intestinal endoscopy, laparoscopy, and cystoscopy are desirable as well as the study and performance of new and evolving endoscopic techniques.

4. The resident must gain adequate understanding of the principles and operative experience in the management of the more common problems in urologic surgery.

5. The resident must have the opportunity to gain adequate knowledge of the basic principles of cardiothoracic surgery; gynecology, neurologic surgery, orthopedics, otolaryngology, anesthesia, vascular surgery, transplant surgery, and the management of burns. While rotations on these services are highly desirable, the program may enable the resident to acquire an understanding of the principles of these subspecialties by a structured curriculum that adequately deals with these surgical areas.

6. The resident must gain experience and competence in the complete care of the critically ill infant or child, including the following: (a) cardiopulmonary resuscitation, (b) management of patients on respirators, (c) invasive monitoring techniques and interpretation, (d) nutritional assessment and management, and (e) competence in the recognition and management of clotting and coagulation disorders.

C. The program must provide a course or structured series of conferences to ensure coverage of the basic and clinical sciences fundamental to pediatric surgery, to include but not be limited to embryology; genetics; wound healing; hemostasis and blood
disorders; immunobiology; transplantation; and physiology and pathology of the circulatory, respiratory, gastrointestinal, genitourinary, and endocrine systems. Similarly, the program must provide appropriate education in fluid and electrolyte balance, nutrition, infection, metabolic response to injury, and anesthesiology.

D. The program must incorporate structured educational activities on a regular basis, to include:
1. Teaching rounds with bedside teaching conducted by the surgical staff.
2. Regular teaching conferences, held at least twice monthly, to include pediatric surgical grand rounds, morbidity and mortality conferences, and radiology conferences.
3. Other relevant multidisciplinary conferences, including surgical pathology and tumor conferences.
4. During the senior year, the residents are to be given the opportunity for personally organizing the more formal of the pediatric surgical conferences, including pediatric surgical grand rounds and the mortality and morbidity conferences. They also shall be directly responsible for a significant share of the presentations and discussions at these conferences.

E. The program must provide adequate supervision of the residents. The attending physician has both an ethical and a legal responsibility for the overall care of the individual patient and for the supervision of the resident involved in the care of that patient. Although they require less direction than junior residents, even the most senior residents must be supervised. A chain of command that emphasizes graded authority and increasing responsibility as experience is gained must be established. Judgments on this delegation of responsibility must be made by the attending surgeon, who is ultimately responsible for a patient's care, based on the attending surgeon's direct observation and knowledge of each resident's skills and ability.

To ensure the fulfillment of these responsibilities, the following principles of supervision must be operative within a training program:
1. Supervision of residents must be specified in the bylaws, policies, procedures, rules, and/or regulations of the department.
2. Evidence that adequate supervision exists within a program must be provided to the site visitor at the time of program review in the form of signed notes in the patient charts and/or other such records, as well as through personal interviews of residents.
3. Proper supervision must not conflict with progressively more independent decision making on the part of the resident; thus, the degree of supervision may vary with the clinical circumstances and the training level of the resident. However, to exercise their responsibilities properly, members of the teaching staff always must be immediately available for consultation and support.

F. The residents must participate in outpatient activities, an integral component of the program. In the surgical outpatient facility, the residents must have the opportunity to evaluate patients, make appropriate provisional diagnoses, initiate diagnostic procedures, and form preliminary treatment plans. In addition and of particular importance, residents must have the opportunity for outpatient follow-up care of surgical patients. This care shall include not only the short-term evaluation and progress of patients who have had recent surgical problems or procedures but also the opportunity to see patients on a long-term basis, particularly those who have had operations for major congenital anomalies or neoplasms. An effective mechanism for follow-up must be provided for all patients, whether seen in clinics or private office settings. The program must document a satisfactory mechanism for follow-up care by the residents.

G. The program director must establish an environment that is optimal both for resident education and for patient care, while ensuring that undue stress and fatigue among residents are avoided. It is his or her responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not required to perform excessively difficult or prolonged duties regularly. It is desirable that residents' work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. During these on-call hours residents should be provided with adequate sleeping, lounge, and food facilities. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Support services must be such that residents do not spend an inordinate amount of time in noneducational activities that can be discharged properly by other personnel.

H. To meet the requirements of direct and responsible patient management, it is essential that those patients whose primary problem is surgical be on the pediatric surgical service and be directly managed by the surgical staff. Appropriate consultation with specialists such as neonatologists and intensivists is strongly encouraged. It is emphasized, however, that newborns with surgical conditions, as well as surgical patients requiring intensive care, must be on the pediatric surgical service where the care is the responsibility of the surgical staff.

I. Residents should have significant teaching responsibilities for more junior house officers and medical students assigned to the service and should also share in the development and the presentation of the formal teaching conferences. The resident's effectiveness as a teacher shall be a part of his or her overall evaluation.

J. Residents may be given the opportunity to engage in scholarly activities.

VI. Patient Volume
To be approved for training in pediatric surgery, an institution must provide an adequate number and variety of pediatric surgical patients
A. The general pediatric surgical service should perform a minimum of 800 operations per year.
B. The chief resident must be provided with a broad and varied experience; each is expected to be responsible for at least 250 pediatric surgical operations under supervision during this year.
C. The operative experience of the residents must include a sufficient number of neonatal cases to ensure the opportunity to acquire adequate experience, knowledge, and competence in the conditions falling under this category; there also should be an adequate number of major solid tumor procedures.
D. When previous personal operative experience justifies a teaching role, residents may act as teaching assistants and list such cases in the appropriate manner.

VII. Evaluation
A. The performance of each house officer must be evaluated by the teaching staff at least every 6 months; it is required that input from other departments or services involved in the training of the residents be included in this evaluation. Records documenting the 6-month evaluations must be maintained.
B. Prior to advancement to the senior or chief resident level of supervision and semi-independent patient management and operative experience, a resident must clearly demonstrate acquisition
of basic knowledge in pediatric surgery. An objective test for this purpose is required. While each program may utilize its own testing mechanism, an excellent instrument is the annual In-training Examination in Pediatric Surgery. In addition to measuring the cognitive capability of the resident, the program also must have a system by which to measure the level of the resident's clinical qualifications as he or she progresses through the program. The program must establish a system of evaluation that clearly documents the progress of each resident in meeting the cognitive and clinical goals of the program.

C. A written final evaluation for each resident who completes the program must be provided. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

D. The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents of the teaching staff and the program should be utilized in this process.

E. A program will be judged on the quality of educational experience provided to the residents. One measure of the quality of a program is the performance of its graduates with respect to the American Board of Surgery examinations for Certification of Special Qualification in Pediatric Surgery. Graduates of ACGME-approved programs are expected to complete this process successfully. A program will be judged deficient unless during the most recent 5-year period at least 60% of its graduates pass the qualifying and certifying examinations on the first try.

VIII. Special Information
All questions concerning the examination for Certification of Special Qualifications in Pediatric Surgery should be addressed to the Secretary, American Board of Surgery, Inc.

ACGME: June 1993  Effective: January 1998

Program Requirements for Residency Education in Vascular Surgery (Surgery)

I. Introduction

A. Definition and Scope of the Specialty
1. Graduate training programs in vascular surgery should be designed to provide the educational resources appropriate for the development of proficiency in the diagnosis and treatment of diseases of the arterial, venous, and lymphatic circulatory systems, exclusive of those components intrinsic to the heart and intracranial vessels. The foregoing definition describes what is hereinafter referred to as the vascular system. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.

2. The training of surgeons for the practice of vascular surgery encompasses education in basic sciences, training in cognitive and technical skills, development of clinical knowledge and maturity, and acquisition of surgical judgment regarding the vascular system.

3. The goal of a vascular surgery residency program is to prepare residents to function as a qualified practitioner of vascular surgery at the high level of performance expected of a board-certified specialist; the educational components of the program, therefore, must be of the highest priority. Residents must be provided adequate time and sufficient facilities for study and be assured of a rotation schedule that provides an equivalent educational opportunity for each resident. While every graduate education program carries with it a commitment of service to patients in the institution, the service responsibilities must support and not detract from the educational activities.

B. Types of Programs
Subspecialty education in vascular surgery is a component in the continuum of the education process and must be in addition to the requirements for complete residency education in general surgery. Appropriate education and training in vascular surgery may be attained through two types of programs:

1. A vascular surgery residency that follows the completion of an accredited residency program in general surgery.

2. A vascular surgery residency that is a component of an accredited cardiothoracic surgery program, in which patient material is adequate to fulfill the requirements of both areas of training. Specialized training in vascular surgery as part of an accredited cardiothoracic surgery program is in addition to the 2-year requirement for completion of standard cardiothoracic surgery program.

C. Duration of Training
The vascular surgery program must be of sufficient duration to allow residents to acquire an advanced level of skill in the diagnosis and treatment of vascular diseases. The program shall not be less than 12 months in duration and shall be exclusively devoted to vascular surgery. It shall be in addition to the training required for certification in either general surgery or thoracic surgery. Any program that extends clinical training beyond these minimum requirements must present a clear educational rationale consonant with the program requirements and objectives for residency training. The program director must obtain approval of the RRC prior to implementation and at each subsequent review of the program. Prior to entry into the program, each resident must be notified in writing of the required length of training.

D. Number of Approved Residency Positions
The number of positions in the training program must be approved by the RRC. This number will include all residents who are appointed for a full academic year in the training program. Any request for changes in the resident complement must be justified in terms of the educational goals of the program.

E. Interaction with General Surgery Residents
Lines of responsibility for general surgery residents and vascular surgery residents must be clearly defined when both rotate in the same institution. Ideally, the roles of general and vascular surgery residents should complement each other for a mutual educational benefit in terms of operative experience, patient responsibility, and faculty interaction. The following are noted in particular:

1. A vascular surgery resident may be a teaching assistant for residents other than general surgery chief residents.

2. Although a vascular surgery resident and a chief resident in general surgery may function together on a service with the same junior residents, they may not have primary responsibility for the same patients.

In addition, general surgery and vascular surgery program directors should confer and agree about proposed changes in either
II. Institutional Requirements

A. Sponsoring Institution
1. As much as vascular surgery is a discipline of great breadth and is often consultative in nature, the program should be conducted in institutions accredited by the Joint Commission on Accreditation of Healthcare Organizations or its equivalent and classified as general hospitals. These institutions, which by definition must include facilities and staff for a variety of services, including radiology and pathology, must also have a demonstrated commitment to graduate medical education and research.
2. Residency education programs in vascular surgery may be accredited in institutions that sponsor accredited residency programs in general surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited general surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.

B. Participating Institutions
An institution that cannot provide sufficient resources and clinical experience within its own facilities may make arrangements with other institutions through formal written agreements to provide additional resources and experience. All such agreements are subject to approval by the RRC, for either affiliated or integrated institutions, as indicated below.
1. Institutions may be affiliated with the parent institution through an Affiliation Agreement, which must cover the areas specified in the Institutional Requirements of the ACGME. Affiliated institutions must promote the educational goals of the program rather than simply enlarge the program and must not be added primarily for the purpose of meeting service needs.
2. Rotations to affiliated institutions can be approved for a period not exceeding 3 months; adequate educational justification for such rotations must be provided to the RRC prior to implementation.
3. Institutions may be integrated with the parent institution through an Integration Agreement that must specify—in addition to the Institutional Requirements—that the program director of the parent institution (1) appoint the members of the teaching staff at the integrated institution, (2) appoint the chief or director of the teaching service in the integrated institution, (3) appoint all residents in the program, and (4) determine all rotations and assignments of both residents and members of the teaching staff. As a general rule, institutions integrated with parent hospitals must be in close geographic proximity to allow all residents to attend joint conferences, basic science lectures, and morbidity and mortality reviews on a regular documented basis in a central location. If the institutions are geographically remote that joint conferences cannot be held, an equivalent educational program of lectures and conferences in the integrated institution must be fully documented.

C. Vascular Service
1. The institution, department, or service accredited to conduct a program of graduate education in vascular surgery must be able to provide a sufficient number and variety of vascular surgery patients to ensure that residents have an adequate exposure to a wide spectrum of lesions of the vascular system.
2. To provide an effective training program, a vascular surgery service must be organized as an identifiable unit, even though it is within the framework of a larger administrative entity such as a department of surgery or general surgery or thoracic surgery. It is highly desirable that all patients with vascular disease who are available for teaching purposes be admitted to this unit so that the patients may be centralized and utilized most efficiently for teaching.
3. Privileges on the vascular surgery teaching service should be granted to surgeons only with the understanding that their patients are to be available for coordinated graduate education of residents.

III. Teaching Staff
The establishment of an inquiring and scholarly environment in the parent and integrated institution(s) is the primary responsibility of the teaching staff in a vascular surgery training program. Only in such a milieu can residents develop the facility for critical analysis and further growth potential necessary to a lifetime of self-education after the completion of formal residency training. The teaching staff responsible for the direction and execution of the program must be well qualified to create and maintain such an environment and be of sufficient diversity of interest that the many facets of vascular surgery are represented. There must be a single program director responsible for the program. The program director and teaching staff must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to these goals.

A. Qualifications of the Program Director
1. Documented qualification in vascular surgery, requisite administrative abilities and experience, and dedication to surgical education and scholarship, as evidenced by his or her curriculum vitae.
2. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
3. Certification in vascular surgery by the American Board of Surgery, or suitable equivalent qualifications as determined by the RRC.
4. Appointment in good standing to the medical staff of the parent or one of the integrated institutions participating in the program.
5. Appointment for at least 3 years. Persons appointed or elected for short duration or in an honorary capacity cannot serve as program directors.

B. Responsibilities of the Program Director
1. Support the residency training program by devoting his or her principal effort to its management and administration, as well as to teaching, research, and clinical care limited to the parent or integrated institution(s).
2. Prepare a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
3. Designate other well-qualified surgeons to assist in the supervision of the resident staff, but maintain continuous responsibility and authority for administrative and teaching policies of the service.
4. Be responsible for rotations and staff appointments of attending surgeons on the teaching services in the parent and in all integrated institutions.
5. Select residents for appointment to the program in accordance with institutional and departmental policies and procedures, make resident assignments, and be responsible for the proper conduct of the educational activities; namely, for their...
supervision, direction, and administration in all participating institutions.

6. Provide residents with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.

7. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.

8. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified as further described in Section IV.B.

9. Provide complete and accurate program information forms and resident operative records to the RRC so that an appropriate assessment of the program can be made.

C. Other Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise the residents in the program. In addition to the program director, for each approved residency position there must be at least one geographic full-time teaching staff member whose major function is to support the residency program. These key staff members must be appointed for a period long enough to ensure adequate continuity in the supervision of the resident staff. Surgeons with teaching responsibilities should be certified by the American Board of Surgery or possess suitable equivalent qualifications, as determined by the RRC. At a minimum, one surgeon on the teaching staff, in addition to the program director must be certified in vascular surgery by the American Board of Surgery, or have suitable equivalent qualifications as determined by the RRC. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.

2. The teaching staff must include members with diverse expertise to meet the needs of the training program. All members of the staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. A resident representative should participate in these reviews.

5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

D. Faculty Scholarly Activity

1. Scholarly activity of the faculty at the parent and integrated institutions is of paramount importance to the program. Staff activity at affiliated institutions cannot substitute for this effort. Adequate documentation of scholarly activity on the part of the program director and the teaching staff at the parent and integrated institutions must be submitted at the time of the program review.

2. Documentation of scholarly activity is based on participation in continuing surgical education; participation in regional or national surgical scientific societies; presentation and publication of scientific studies; and demonstration of an active interest in research as it pertains to their own special surgical interests.

3. Commitment of the faculty to research will be judged based on projects that are funded following peer review; publications in peer-reviewed journals; presentations at national and regional scientific meetings; and research protocols that have been approved by appropriate institutional committees or other organizations.

4. While not all members of a teaching staff can be investigators, clinical and/or basic science research must be ongoing in vascular surgery at the parent and integrated institution(s). Research on the part of residents is not a substitute for the involvement of the program director and teaching staff. The staff as a whole must document active involvement in all phases of scholarly activity as defined above if they are to be considered adequate to conduct a program of graduate education in vascular surgery.

E. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Environment and Resources

A. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.

2. Library services should include the electronic retrieval of information from medical databases.

3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

B. Working Environment and Hours

1. Graduate education in vascular surgery requires a commitment to continuity of patient care. This continuity of care must take precedence—without regard to the time of day, day of the week, number of hours already worked, or on-call schedules. At the same time, patients have a right to expect a healthy, alert, responsible, and responsive physician dedicated to delivering effective and appropriate care.

2. The program director must establish an environment that is optimal both for resident education and for patient care, while ensuring that undue stress and fatigue among residents are avoided. It is his or her responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not required to perform excessively difficult or prolonged duties regularly. It is desirable that residents' work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. A distinction must be made between on-call time in the hospital and on-call availability at home and their relation to actual hours worked. The ratio of hours worked to on-call time will...
Program Requirements for Residency Education in Vascular Surgery

Program Requirements for Residency Education in Vascular Surgery. The following are the Program Requirements for Residency Education in Vascular Surgery.

A. Curriculum
1. The curriculum for the vascular surgery program should encompass the entire vascular system as defined in section I.A.1. Clinical, surgical, laboratory, and basic science curricula developed by the Association of Program Directors in Vascular Surgery are useful in this regard. Instruction in each area should be associated with relevant patients whenever possible. However, if direct patient exposure is not possible in some specific areas, instructional materials must be provided to ensure adequate education in all areas.
2. The program must provide instruction and require residents to become knowledgeable in the fundamental sciences, including anatomy, biology, embryology, microbiology, physiology, and pathology as they relate to the pathophysiology, diagnosis, and treatment of vascular lesions.
3. Residents must be provided with progressive senior surgical responsibilities in the total care of vascular surgery patients, including preoperative evaluation, therapeutic decision making, operative experience, and postoperative management. The focus of the program is clinical education; research, laboratory, and nonvascular clinical assignments should be related to this focus.
4. Residents must acquire familiarity with special diagnostic techniques for the management of vascular lesions. It is essential that residents have an acquaintance with the methods and techniques of angiography and competency in the interpretation of angiographic findings. Residents must also have experience in the application, interpretation, and limitations of noninvasive vascular diagnostic techniques.
5. Residents must have the opportunity to provide consultation with faculty supervision. They should have clearly defined educational responsibilities for other residents, medical students, and professional personnel. These teaching experiences should correlate with biometric knowledge and the clinical aspects of vascular surgery.
6. Continuity of primary responsibility for patient care must be taught in a longitudinal way and include ambulatory care; inpatient care; referral and consultation; utilization of community resources.
7. The program must provide teaching in critical thinking, design of experiments, and evaluation of data as well as in technological advances that relate to vascular surgery and the care of patients with vascular diseases. The program must encourage participation by the residents in clinical and/or laboratory research and make appropriate facilities available.

B. Volume and Complexity of Operative Experience
1. Operative skill is essential for surgeons and can be acquired only through personal experience and training. The program must provide sufficient operative experience to train qualified vascular surgeons, taking into account individual capability and rate of progress. A sufficient number and distribution of complex cases, as determined by the RRC, must be provided for the achievement of adequate operative skill and surgical judgment.
2. Residents must be afforded the opportunity to have chief or senior resident responsibilities in the operative management of patients who require the wide range of reconstructive and nonreconstructive vascular procedures within the scope of vascular surgery. This must include experience in endovascular procedures. Chief or senior operative experience is defined as activity in the course of which the resident functions as the operating surgeon or performs the technical portions of the operation. Residents should perform a minimum of 100 major vascular reconstructive procedures that reflect an adequate representation of current trends in the spectrum of surgical care of vascular diseases. Operative experience in excess of 450 total cases, however, must be justified by the program director who must also ensure that the operative experience of individual residents in the same program is comparable.
3. When previous personal operative experience justifies a teaching role, vascular surgery residents may act as teaching assistants for general surgery residents, provided these general surgery residents are not in their chief residency year.
4. A resident is considered to be the surgeon when he or she can document a significant role in all of the following aspects of management: determination or confirmation of the diagnosis, provision of preoperative care, selection and accomplishment of the appropriate operative procedure, direction of the postoperative care, and accomplishment of sufficient follow-up to be acquainted with both the course of the disease and the outcome of its treatment. Participation in the operation only, without preoperative and postoperative care, is inadequate, and such cases will not be approved by the RRC as meeting educational requirements.

C. Supervision
1. The attending physician has both an ethical and a legal responsibility for the overall care of the individual patient and for the supervision of residents involved in the care of that patient. Judgments on the delegation of this responsibility to vascular surgery residents must be made by the attending surgeon who is ultimately responsible for the patient's care; such judgments shall be based on the attending surgeon's direct observation and knowledge of each resident's skills and ability.
2. Supervision of residents must be specified in the bylaws, policies, procedures, rules, and/or regulations of the department, which must not be less demanding than those of the institution.
3. Evidence that adequate supervision exists within a program must be provided to the site visitor at the time of program review in the form of signed notes in the patient charts and/or other such records, as well as through personal interviews of residents.
4. Proper supervision must not conflict with progressively more independent decision making on the part of the residents; thus, the degree of supervision may vary with the clinical circumstances and the experience of each resident. However, to exercise their responsibilities properly, members of the teaching staff always must be immediately available for consultation and support.

D. Outpatient Responsibilities
To be adequate, a program must document both inpatient and outpatient activities. Outpatient activities constitute an essential com-
ponent of adequate experience in continuity of patient care. These activities should be conducted in such a way that residents have an opportunity to examine patients preoperatively, have ample opportunity to consult with the attending surgeon regarding operative care, and have an opportunity to participate in the operation and in the immediate postoperative care until release from the facility. To participate in post-hospital care, residents have the responsibility for seeing patients personally in an outpatient setting and consulting with the attending surgeon regarding follow-up care. As a guideline, approximately 1 day per week should be devoted to these outpatient activities.

E. Educational Conferences
Educational conferences must be adequate in quality and quantity to provide a review of vascular surgery as well as recent advances. The conferences should be scheduled to permit the residents to attend on a regular basis. Participation by both residents and teaching staff must be documented. Active participation by vascular surgery residents in the planning and production of these conferences is essential.

The following types of conferences must exist within a program:
1. At least biweekly review of all current complications and deaths, including radiological and pathological correlation of surgical specimens and autopsies when relevant
2. A course or a structured series of conferences to ensure coverage of the basic and clinical sciences fundamental to vascular surgery; sole reliance on textbook review is inadequate
3. Regular organized clinical teaching, such as ward rounds and clinical conferences
4. A regular review of recent literature, such as a journal club format

VI. Evaluation

A. Evaluation of Residents
1. There must be adequate, ongoing evaluation of the knowledge, competency, attitudes, and performance of the residents. Written evaluation of each resident's knowledge, skills, professional growth and performance, using appropriate criteria and procedures, must be accomplished at least semiannually. This assessment must include cognitive, motor, and interpersonal skills, as well as surgical judgment. Evaluations must be communicated to residents in a timely manner.
2. The program must maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
3. The program director and faculty are responsible for provision of a written evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
4. A system for documentation of residents' experiences must be utilized to monitor the educational experience and to provide documentation for future hospital privileges.

B. Evaluation of the Program and Faculty
The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. All teaching faculty must also be evaluated on a regular basis, including teaching ability, availability, attitudes, scholarly contributions, interpersonal skills, and communication abilities. Written evaluations by residents of the program and faculty should be utilized in this process. Resident feedback should be anonymous if feasible, and under no circumstance should it result in any negative program or faculty response directed toward the residents. In addition, internal review of the program should be conducted by the Institutional Review Committee on a regular basis.

C. Other Evaluation Tools
A program must strive for the highest possible quality of educational experience for the residents; it will be judged on this basis. One measure of the quality of a program is the performance of its graduates with respect to the American Board of Surgery certification process. Graduates of ACGME-accredited programs are expected to complete this process successfully. At a minimum, for the most recent 5-year period, 60% of the graduates must have passed the qualifying and certifying examinations in vascular surgery on their first attempt.

ACGME: June 1999 · Effective: January 2000
Program Requirements for Residency Education in Thoracic Surgery

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty
Thoracic surgery encompasses the operative and perioperative care and the critical care of patients with pathologic conditions within the chest. This includes the surgical care of coronary artery disease; cancers of the lung, esophagus, and chest wall; abnormalities of the great vessels and heart valves; congenital anomalies of the chest and heart; tumors of the mediastinum; diseases of the diaphragm and management of chest injuries.

B. Duration and Scope of Education
1. Before admission to a thoracic surgery residency program, the resident must have documented completion of a general surgery residency program accredited by either the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The length of the educational program required for the acquisition of the necessary knowledge, judgment, and technical skills in the specialty is 2 years. Any program extended beyond these minimum requirements must present a clear educational rationale consistent with these program requirements and must be approved in advance by the RRC.
3. Prior to admission to the program, each resident must be notified in writing of the length of the program.

II. Institutional Support

A. Sponsoring Institution
One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.
1. The sponsoring institution must ensure an administrative and academic structure that provides for educational and financial resources dedicated to the needs of the program, i.e., appointment of teaching faculty and residents, support for program planning and evaluation, ensuring sufficient ancillary personnel, provision for patient safety and the alleviation of resident fatigue.
2. Library services, including electronic retrieval of information, and a collection of appropriate texts and journals should be readily available at all clinical sites.

B. Participating Institutions
1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program. Assignments of four months or more to any participating institution must be prior-approved by the RRC.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties’ needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC). Multiple, abbreviated assignments among several institutions or simultaneous assignments to more than 1 institution are not acceptable.

3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is 1 month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should
   a. identify the faculty who will assume educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.D, V.A, and V.D. of these Program Requirements;
   b. outline the educational goals and objectives to be attained by the resident during the assignment;
   c. specify the period of resident assignment;
   d. establish the policies and procedures that will govern resident education during the assignment.

4. Integrated Institutions
A formal, written integration agreement is required that specifies, in addition to the points under II.B.3 above, that the program director:
   a. appoints the members of the teaching staff at the integrated institution,
   b. appoints the chief or director of the teaching service in the integrated institution,
   c. appoints all residents in the program, and
   d. determines all rotations and assignments of both residents and members of the teaching staff

III. Resident Appointment

A. Eligibility Criteria
The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents
The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education, such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching. A minimum of 1 thoracic surgery resident must be appointed in each year to provide for sufficient peer interaction.

C. Resident Transfer
To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section V.B., prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education. Such verification must include documentation of the resident's operative experience.
D. Appointment of Fellows and Other Students
The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.

IV. Faculty
The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director
1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field.
   b. be certified in Thoracic Surgery by the American Board of Thoracic Surgery or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing and based at the primary teaching site.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).
3. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair, or any additional program change that may significantly alter the educational experience for the residents, including integration with another institution.
4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.
5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.
6. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. the addition or deletion of major participating institution(s) or integration, as specified in section II.B.2 of this document.
   b. change in the approved resident complement.
   c. change in the format of the educational program.
   On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

C. Faculty Qualifications
1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified in Thoracic Surgery by the American Board of Thoracic Surgery or possess qualifications judged by the RRC to be acceptable.
   c. be appointed in good standing to the staff of an institution participating in the program.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities
1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities, including documented participation in the undergraduate curriculum. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.C.
4. One designated cardiothoracic faculty member should be responsible for coordinating multidisciplinary clinical conferences and organizing instruction and research in general thoracic surgery.

E. Other Program Personnel
The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program
The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

A. Role of Program Director and Faculty
1. The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by
   a. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
   b. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core spe-
Program Requirements for Residency Education in Thoracic Surgery

Specialty knowledge supplemented by the addition of current information.

1. **Patient care** that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

   Residents are expected to: develop and execute patient care plans, demonstrate technical ability, use information technology, and evaluate diagnostic studies.

2. **Medical knowledge** about established and evolving biomedical, clinical, and cognitive (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

   residents are expected to: know current medical information, and critically evaluate scientific information.

3. **Practice-based learning and improvement** that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

   residents are expected to: demonstrate the ability to practice lifelong learning, analyze personal practice outcomes, and use information technology to optimize patient care.

4. **Interpersonal and communication skills** that result in effective information exchange and collaboration with patients, their families, and other health professionals.

   residents are expected to: communicate with other health care professionals, counsel and educate patients and families, maintain appropriate records documenting practice activities and outcomes, and to function as a team member and/or leader.

5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

   residents are expected to: maintain high standards of ethical behavior; demonstrate continuity of care, i.e., preoperative, operative and postoperative; demonstrate sensitivity to age, gender, culture and other differences; and demonstrate honesty, dependability and commitment.

6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

   residents are expected to: practice cost-effective care without compromising quality, promote disease prevention, demonstrate risk-benefit analysis, and know how different practice systems operate to deliver care.

C. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:

   a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
   b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
   c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings of, for example, case reports or clinical series.
   d. Active participation of the teaching staff in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

3. Although a protected research assignment is not permitted during the program, resident participation in scholarly activities should be encouraged.

D. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. **Supervision of Residents**

   a. All patient care must be supervised by qualified faculty.

      The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

   b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.

   c. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

2. **Duty Hours**

   a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.

   b. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.

   c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.

   d. Adequate time for rest and personal activities must be provided. This should consist of a 16-hour time period between all daily duty periods, and after in-house call.
3. On-Call Activities
The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

a. In-house call must occur no more frequently than every third night, averaged over a four-week period.

b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, maintain continuity of medical and surgical care, transfer care of patients, or conduct outpatient continuity clinics.

c. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the surgery service or department has not previously provided care. The resident should evaluate the patient before participating in surgery.

d. At-home call (pager call) is defined as call taken from outside the assigned institution.

1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

4. Moonlighting
a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program. Because the program of thoracic surgery education is demanding, moonlighting is strongly discouraged.

b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III.D.1.k.

c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), ie, internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

5. Oversight
a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.

b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

6. Duty Hours Exception

An RRC may grant exceptions for up to 10% of the 80-hour limit, to individual programs based on a sound educational rationale. However, prior permission of the institution's GMEC is required.

E. Education Component

1. Academic component: The educational program must be designed to provide a broad academic experience in pulmonary, esophageal, mediastinal, chest wall, diaphragmatic, and cardiovascular disorders in all age groups.

   a. The program director is responsible for providing separate and regularly-scheduled teaching conferences, mortality and morbidity conferences, rounds, and other educational activities in which both the thoracic surgery faculty and the residents attend and participate.

   b. Conferences should be under the direction of qualified thoracic surgeons and other faculty in related disciplines.

   c. Records of attendance must be kept and must be available for review by the site visitor.

2. Clinical component: The program director is responsible for providing an organized written plan and a block diagram for the clinical assignments to the various services and institutions in the program.

   a. The objectives for each assignment should be written, well defined, and distributed to the residents and the faculty.

   b. The clinical assignments should be carefully structured to ensure that graded levels of responsibility, continuity in patient care, a balance between education and service, and progressive clinical experiences are achieved for each resident.

   c. The resident must have the opportunity, under supervision, to:

      1) provide preoperative management, including the selection and timing of operative intervention and the selection of appropriate operative procedures;

      2) provide postoperative management of thoracic and cardiovascular surgical patients;

      3) provide critical care of patients with thoracic and cardiovascular surgical disorders, including trauma patients, whether or not operative intervention is required;

      4) correlate the pathologic and diagnostic aspects of cardiothoracic disorders demonstrating skill in diagnostic procedures, ie, bronchoscopy and esophagoscopy; and to interpret appropriate imaging studies, ie, ultrasound, computed tomography, roentgenographic, radionuclide, cardiac catheterization, pulmonary function, and esophageal function studies; and

      5) demonstrate knowledge in the use of cardiac and respiratory support devices.

   d. The minimum operative experience of each resident must include:

      1) an annual average of 125 major operations from those listed on the program information forms,

      2) an adequate distribution of categories and complexity of procedures to ensure each resident a balanced and equivalent operative experience,

      3) the categories of procedures must include but are not limited to: the lungs, pleura, and chest wall; esophagus, mediastinum, and diaphragm; thoracic aorta and great vessels; congenital heart anomalies, valvular heart diseases, and myocardial revascularization,

      4) additional experiences should include: cardiac pacemaker implantation; mediastinoscopy, pleuroscopy, and flexible and rigid esophagoscopy and bronchoscopy.

NB: The program director and residents should note that the ABTS may have specific guidelines for adequate operative experience.
Program Requirements for Residency Education in Thoracic Surgery

e. Credit for operative experience may be documented when the resident:
   1) participated in the diagnosis, preoperative planning, and selection of the operation for the patient;
   2) performed those technical manipulations that constituted the essential parts of the patient's operation;
   3) was substantially involved in postoperative care; and
   4) was supervised by responsible faculty/teaching staff.

f. Assignments to nonsurgical areas, i.e., cardiac catheterization, and esophageal or pulmonary function labs, may not exceed a total of 3 months during the clinical program and may not occur in the chief year.

g. The chief year must be spent in integrated institutions for the program. Exceptions require advance approval by the RRC. During this year, the resident must assume senior responsibility for the pre-, intra-, and post-operative care of patients with thoracic and cardiovascular disease.

3. Outpatient responsibilities constitute an essential component for providing adequate experience in continuity of patient care.
   a. The resident should have an opportunity to examine the patient preoperatively, to consult with the attending surgeon regarding operative care, and to participate in the surgery and postoperative care.
   b. Outpatient care activities include resident responsibility for seeing the patient personally in an outpatient setting and, as a minimum in some cases only, consulting with the attending surgeon regarding the follow-up care rendered to the patient in the doctor's office.
   c. The policies and procedures governing pre-hospital and post-hospital involvement of the residents must be documented. Documentation of this process must be available to the site visitor at the time of program review.

4. Permission for performing an autopsy should be sought in all deaths, to include the appropriate review of autopsy material by teaching staff and residents.

VI. Evaluation

A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include:
   a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
   b. mechanisms for providing regular and timely performance feedback to residents that include at least
      1) written semiannual evaluation that is communicated to each resident in a timely manner and
      2) the maintenance of a record of evaluation for each resident that is accessible to the resident.
   c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.

2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty Evaluation

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process. Because of the small resident cohort in each program, assurance that the content of resident evaluations does not adversely affect resident progression is required.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment
   a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
   b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.

VII.

Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

A. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

B. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

C. The sponsoring institution and program are jointly responsible for the quality of education offered to the resident during the duration of such a project.

Addition of Common Requirements: Effective July 1, 2003
Minor revision: August 2001  ACUOME: September 2001
Competencies Effective: July 1, 2002
Editorial revision: January 2003  Effective: July 1, 2003
Program Requirements for Residency Education in Urology

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition of the Specialty
Urology is the medical and surgical specialty involving disorders of the genitourinary tract, including the adrenal gland. Specialists in this discipline must demonstrate the knowledge, skill, and understanding of the pertinent basic medical sciences. Residency programs must educate physicians in the prevention of urologic disease, and in the diagnosis, medical and surgical treatment, and reconstruction of neoplasms, deformities, and injuries.

B. Duration and Scope of Education
Each program must document the following sequence of requirements in the 60-month program of postgraduate medical education: 12 months of general surgery in a program accredited by the ACGME that comprises the pre-urology year, to be followed by 36 months of clinical urology that includes the final 12 months of chief residency with appropriate clinical responsibility, under supervision, and in institutions approved as a part of the urology residency program. The additional 12 months of education must be comprised of general surgery or urology or in fields directly related to urology.

II. Institutional Support

A. Sponsoring Institution
One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions
1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.

2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties’ needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC).

a. The RRC considers four participating institutions or fewer as optimal to promote educational and peer activities. Due to the importance of peer interaction, experiences outside the sponsoring institution should not be assigned to a single resident.

b. Assignments to institutions distant from the sponsoring institution are to be considered an exception; such affiliations must be justified and must provide educational experiences otherwise not available in the program.

c. A single resident should not be assigned to a participating institution unless special resources or opportunities are offered at that institution that are not available otherwise in the educational program.

3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the director, letters are not necessary. The agreements should:

a. identify the faculty who will assume educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.D and V.A of the Program Requirements;

b. outline the educational goals and objectives to be attained by the resident during the assignment;

c. specify the period of resident assignment;

d. establish the policies and procedures that will govern resident education during the assignment.

4. There must be adequate space and equipment for the educational program, including meeting rooms and classrooms with audiovisual and other educational aids; office space for staff; diagnostic, therapeutic, and research facilities; and resident access to outpatient facilities, clinic, and office space for preoperative evaluation and postoperative follow-up. Library services should include the electronic retrieval of information from medical databases.

a. Technologically current diagnostic and treatment facilities such as, cystoscopy, imaging with biopsy, imaging with percutaneous access to the kidney, ultrasound with biopsy, endourology, laparoscopy, laser, and urodynamics equipment should be present. The use of video imaging for educational purposes is desirable.

b. An extracorporeal shock wave lithotripsy facility must be available for resident education in the treatment of urinary calculi.

III. Resident Appointment

A. Eligibility Criteria
The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents
The RRC for Urology will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education, such as the quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.

Programs may not graduate more residents in any given year than the number of residents approved by the RRC. Any change in the number of residents by year or any change in the total number of residents, whether permanent or temporary, must receive prior approval of the RRC. Requests for changes in the resident complement of a program must include a strong educational rationale. A vacancy in a resident complement, if filled, must be at the same level in which the vacancy occurs, unless otherwise approved by the RRC.

C. Resident Transfer
To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section V.B, prior to acceptance into the program. A program director is required to provide verification of residency education for any
residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students
1. The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed urology residents.
2. Any program with fellows must submit a clear statement of the areas of education, clinical responsibilities, and duration of the educational program. This impact statement must be supplied to the RRC at the time of the site visit. A log, grouped by procedure, that details the operative experience of the fellow must be submitted with the urology resident logs at the time of the site visit.

IV. Faculty
The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director
1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must:
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field.
   b. be certified in the specialty by the American Board of Urology, or possess qualifications judged to be acceptable by the RRC.
   c. be appointed in good standing and based at the primary teaching site.

B. Responsibilities of the Program Director
1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).
3. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.
4. Grievance procedures and due process: the program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievance and due process in compliance with the Institutional Requirements.
5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions and performance or learning and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.
6. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s) as specified in section II.B.2 of this document.
   b. Change in the approved resident complement.
   c. Change in the format of the educational program.
   On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.
7. Compiling annually an accurate statistical and narrative description of the program as requested by the RRC. The log must include a comprehensive record of the number and types of operative procedures performed by each resident completing the program and all of the procedures in which the resident was either surgeon or assistant surgeon, and it must be signed by both the resident and the program director as a statement of its accuracy. The log must include ambulatory or outpatient procedures performed by the resident in office practice or ambulatory facilities. This information must be provided in the format and form specified by the RRC.
8. Prior to admission, the program director must notify each resident in writing of the required length of the educational program. The required length of the educational program may not be changed without mutual agreement with the resident unless there is a significant break in his or her educational program or the resident requires remedial education. All changes to the length of the educational program for any resident must be approved in advance by the RRC.

C. Faculty Qualifications
1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified in the specialty by the American Board of Urology or possess qualifications judged by the RRC to be acceptable.
   c. be appointed in good standing to the staff of an institution participating in the program.
   d. To provide the greatest depth of knowledge in a variety of subjects, the faculty should possess special knowledge in all of the urological domains: extracorporeal shock wave lithotripsy, impotence, infertility, female urology; geriatric urology, infectious disease; laparoscopy, neurourology; obstructive disease; oncology; pediatric urology; renovascular disease; sexual dysfunction, renal transplantation; trauma; and urodynamics.
   e. Besides the program director, there must be a minimum of two clinical urology faculty committed fully to the educational objectives of the residency program who devote sufficient time to the supervision and teaching of the residents. A faculty-to-resident ratio of at least 1.2 in the total program is required. The program director may be counted as one of the faculty in determining the ratio. The program director must notify the RRC if the number of clinical urology faculty members drop below 2, or if the ratio falls below 1.2 and remains below that level longer than 1 year.
   f. There must be a qualified urologist (the local site director) appointed by and responsible to the program director in each geographically separate institution. This urologist must be responsible for the education of the residents and must supervise the educational activities of the urology faculty in that institution. The urology director at each participating institu-
tion must have the majority of his or her clinical responsibilities based at that institution.

2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities
1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.C.1

E. Other Program Personnel
The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program
The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

A. Role of Program Director and Faculty
1. The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by:
   a. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
   b. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
   c. providing residents with direct experience in progressive responsibility for patient management.

B. ACGME Competencies
The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:
1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. Medical knowledge about established and evolving biomedical, clinical, and cognitive (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.
4. Interpersonal and communication skills that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Scholarly Activities
1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
   a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
   b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
   c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
   d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.
2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

D. Resident Duty Hours and the Working Environment
Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.
1. Supervision of Residents
   a. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
   b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
   c. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.
2. Duty Hours

Program Requirements for Residency Education in Urology
Program Requirements for Residency Education in Urology

a. Duty hours are defined as all clinical and academic activities related to the residency program, ie, patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.

b. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.

c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a four-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.

d. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

3. On-Call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

a. In-house call must occur no more frequently than every third night, averaged over a four-week period.

b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, maintain continuity of medical and surgical care, transfer care of patients, or conduct outpatient continuity clinics.

c. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the resident has not previously provided care.

d. At-home call (pager call) is defined as call taken from outside the assigned institution.

1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

4. Moonlighting

a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.

b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III. D. l.k.

c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), ie, internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

5. Oversight

a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.

b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

6. Duty Hours Exception

An RRC may grant exceptions for up to 10% of the 80-hour limit, to individual programs based on a sound educational rationale. However, prior permission of the institution's GMEC is required.

E. Didactic Component

1. The didactic conferences must include a combined morbidity and mortality conference for all participating hospitals, urological imaging, urological pathology, and journal review.

2. Urologic core knowledge must include: adrenal disease and endocrinology, andrology, calculus disease, endourology, extracorporeal shock wave lithotripsy, impotence, infertility, female urology; geriatric urology, infectious disease; laparoscopy, neurourology; obstructive disease; onology: pediatric urology, renovascular disease; sexual dysfunction, renal transplantation; trauma; and urodynamics.

3. A list of the conferences must be maintained and available for review at the time of the site visit. The list should include the names of those attending, the subjects discussed, and the principal speaker.

4. Conferences must be well attended by both residents and faculty, and such attendance should be documented. A faculty member must supervise each conference.

F. Clinical Component

1. A sufficient number and variety of inpatient and ambulatory adult and pediatric patients with urologic disease must be available for resident education.

2. Generally equivalent and adequate distribution of operative urologic procedures among the residents must be demonstrated. Significantly unequal experience in volume and/or complexity of operative procedures among the residents demonstrates noncompliance with these requirements.

3. Graded responsibility: The responsibility given to residents in patient care should depend upon each resident's knowledge, problem-solving ability, manual skills, experience, and the severity and complexity of each patient's status.

4. Progressive patient management: The program must provide the residents with experience in direct and progressively responsible patient management as they advance through the program. The resident should have responsibility under supervision for the total care of the patient, including initial evaluation, establishment of diagnosis, selection of appropriate therapy, implementation of therapy, and management of complications.

5. Continuity of patient care: The resident must participate in the continuity of patient care through preoperative and postoperative clinics and inpatient contact. When residents participate in preoperative and postoperative care in a clinic or private office setting, the program director must ensure that the resident functions with an appropriate degree of responsibility.

462
VI. Evaluation

A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include:
   a. the use of methods that produce an accurate assessment of residents’ competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
   b. mechanisms for providing regular and timely performance feedback to residents that includes at least
      1) written semiannual evaluation that is communicated to each resident in a timely manner and
      2) the maintenance of a record of evaluation for each resident that is accessible to the resident
   c. a process involving use of assessment results to achieve progressive results in residents’ competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.

2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident’s performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident’s permanent record maintained by the institution.

B. Faculty Evaluation

The performance of the faculty must be evaluated by the program no less frequently than at the mid-point of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual, written, confidential evaluations by the residents must be included in this process.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, ie, at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents’ confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment
   a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
   b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.

VII. Experimentation and Innovation

A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

C. The sponsoring institution and the program are jointly responsible for the quality of education offered to residents for the duration of such a project.

ACGME: June 1996 Effective: July 1997
Editorial Revision: January 2000
General Competencies: July 1, 2001
Common Program Requirements: July 1, 2003

Program Requirements for Residency Education in Pediatric Urology (Urology)

I. Scope of Education

A. Subspecialty education in pediatric urology involves all aspects of congenital anomalies, childhood-acquired urologic problems such as tumors and trauma, and overlapping problems of adolescence. The subspecialty education in pediatric urology must provide an experience of sufficient level for the pediatric urology resident to acquire advanced skills in the management of congenital anomalies and pediatric urologic problems.

B. Duration of Education

To be accredited, pediatric urology programs must contain 1 continuous clinical year taken subsequent to the completion of an accredited residency in urology.

II. Institutional Organization

A pediatric urology educational program can be provided only in conjunction with an Accreditation Council for Graduate Medical Education (ACGME)-accredited urology residency program. The institution sponsoring the pediatric urology program must provide a sufficient volume and variety of pediatric urology experience to meet the needs of the pediatric urology resident without compromising the quality of resident education in general urology. The pediatric urology program must be centered at a children’s hospital or a medical center with pediatric medical, surgical, and radiologic subspecialties. The sponsoring institution of the pediatric urology program may seek a complementary affiliation with other institutions that offer significant educational opportunities to the residency program.

III. Faculty Qualifications and Responsibilities

The program director and faculty are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.
A. Program Director
There must be a single program director responsible for the program. The program director should be based at the institution where the education occurs and must be dedicated to, and actively engaged in, pediatric urology education.

1. Qualifications of the program director
   a. Requisite and documented clinical, educational, and administrative abilities and experience in all aspects of pediatric urology
   b. Licensure to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)
   c. Certification by the American Board of Urology or suitable equivalent qualifications and qualifications and experience in the practice of pediatric urology
   d. Appointment in good standing to the medical staff of an institution participating in the program

2. Responsibilities of the program director
   a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and faculty members. It should be readily available for review.
   b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
   c. Selection and supervision of the faculty and other program personnel at each institution participating in the program.
   d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
   e. Regular evaluation of residents’ knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
   f. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
   g. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.
   h. Preparation of an accurate statistical and narrative description of the program as requested by the review committee.

B. Faculty
1. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all pediatric urology residents in the program. Members of the faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The faculty must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The faculty should evaluate at least annually the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of supervision of residents.

C. Other Program Personnel
Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Faculties and Resources
A. To be considered for accreditation, the institution should have the following resources available for resident education: a broad spectrum of urologic diseases; a sufficient volume and broad variety of pediatric urology surgical procedures consisting of 200 major, 500 intermediate, and 100 minor procedures per year; and 2,000 pediatric urologic outpatient visits per year, including urology subspecialty clinics. Representative examples of these classifications include:
   - Minor: circumcision, meatalotomy, diagnostic endoscopy, percutaneous aspiration or tube insertion; Intermediate: therapeutic endoscopy, inguinal surgery > 2 years, distal hypospadias (no urethroplasty), diagnostic laparoscopy; Major: all abdominal surgery, flank surgery, hypospadias, laparoscopic surgery, valve ablation, inguinal surgery < 2 years.

B. Diagnostic facilities should include body imaging equipment suitable for the care of pediatric patients.

C. Program research and scholarly activity
Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

1. Scholarly activity
   a. active participation of the faculty in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

b. participation in journal clubs and research conferences.

c. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations’ meetings and publications in their journals.

d. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
C. Pediatric Urology Resident Duty Hours

The same resident duty hours and supervision requirements apply to pediatric urology residents as provided in the Program Requirements for Residency Education in Urology.

VI. Evaluation

The pediatric urology program must have an ongoing assessment of the following components of the educational program: resident performance, faculty performance, and program objectives.

A. Pediatric Urology Resident Evaluation

The program director, with participation of members of the faculty, shall

1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. communicate each evaluation to the resident in a timely manner.
3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident’s performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident’s permanent record maintained by the institution.

B. Program and Faculty Evaluation

The educational effectiveness of the program and faculty must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Confidential, written evaluations by residents should be utilized in this process.

VII. Board Certification

Individuals should communicate with the Executive Secretary of the American Board of Urology regarding the status of requirements for certification.

ACGME: September 1998 Effective: January 1999
**Program Requirements for the Transitional Year**

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Purpose of a Transitional Year

The objective of the transitional year is to provide a well-balanced program of graduate medical education in multiple clinical disciplines designed to facilitate the choice of and/or preparation for a specific specialty. The transitional year is not meant to be a complete graduate education program in preparation for the practice of medicine.

The transitional year must be designed to fulfill the educational needs of medical school graduates who

1. have chosen a career specialty for which the categorical program in graduate medical education has, as a prerequisite, 1 year of fundamental clinical education, which may also contain certain specific experiences for development of desired skills; or
2. have not yet made a career choice or specialty selection and desire or need to acquire at least 1 year of fundamental clinical education, which may also contain certain nonclinical research.

3. are planning to complete graduate education program in preparation for the practice of medicine.

B. Duration and Content of Program

1. The duration of the transitional year program must be 1 year (12 calendar months).
2. At least 24 weeks of each resident's curriculum must be provided by a discipline or disciplines that offer fundamental clinical skills, that is, emergency medicine, family practice, internal medicine, obstetrics/gynecology, pediatrics or surgery.
3. Other rotations should be a minimum of 4 weeks in duration to ensure reasonable continuity of education and patient care.

II. Institutional Support

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

1. The transitional year program must be offered by an institution and its affiliate(s) conducting two or more Accreditation Council for Graduate Medical Education (ACGME)-accredited residency programs, in good standing. Two of these accredited programs must be designated as sponsors of the transitional year program. One of the sponsors must be in a discipline that provides fundamental clinical skills training. Those disciplines considered to provide these experiences are emergency medicine, family practice, internal medicine, obstetrics/gynecology, pediatrics, and surgery. (See V.D.2, Skill Development)
2. Together the sponsors must provide at least 25% of each resident's clinical experience.
3. The program director or a designee from each of the sponsors must participate in the organization of the didactic curriculum components of the program.

B. Participating Institutions

1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved.
3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should
   a. identify the faculty who will assume the educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.D. and VI.A of the Program Requirements;
   b. outline the educational goals and objectives to be attained by the resident during the assignment;
   c. specify the period of resident assignment;
   d. establish the policies that will govern resident education during the assignment.

C. Institutional Coordination Committee

1. An institutional coordination committee (ICC) must be appointed and have major responsibility for conducting and monitoring the activities of the transitional year program. The ICC may be a freestanding committee or may be a subcommittee of the Graduate Medical Education Committee (GMEC). The ICC should be convened by the parent institution at least four times a year. The membership of this committee should be composed of but not limited to the transitional year program director, the program directors (or designees) of disciplines regularly included in the curriculum, the program directors (or designees) of each program sponsor, a resident member nominated by his or her peers, and the chief executive officer (CEO) (or designee in hospital administration) of the parent institution. The CEO or the designee must not be the transitional year program director.
2. The responsibilities of the committee must include the following:
   a. To recommend to the governing body of the sponsoring institution policies that establish the educational content of the transitional year and the allocation of resources for the effective conduct of the program.
   b. To ensure that the quality of medical care provided by transitional year residents is equivalent to that expected of first-year residents in other ACGME-accredited programs within the institution.
   c. To monitor the impact of the transitional year program on the categorical residents' programs to ensure that there is no compromise of the educational resources. This includes monitoring the adequacy of the number of patients, variety of
Illnesses, educational materials, teaching/attending physicians, and financial support.

d. To review at least twice a year the evaluations of the transitional year residents’ performance and the residents’ assessment of the components of the transitional year, including the faculty.

e. To ensure that the educational opportunities provided transitional year residents are within acceptable standards of medical care and are equivalent to those provided first-year residents in the categorical programs in which the transitional year residents participate.

f. To ensure that the quality of education provided by the nonaccredited components of the program is reasonably comparable to that provided to the first-year residents in accredited programs.

g. To approve the curriculum of each transitional year resident, which has been planned with the transitional year program director in accordance with the individual needs of the residents and the Program Requirements of the Transitional Year.

h. To ensure that the transitional year program undergoes a periodic internal review in accordance with the general institutional requirements.

i. To maintain records documenting the committee’s activities for each of the above requirements and to have copies of these records available for transmission to the Transitional Year Review Committee.

j. To review ACGME letters of accreditation for program sponsors and to monitor areas of noncompliance.

D. Support Facilities/Departments

1. Pathology, radiology and nuclear medicine facilities must exist in the parent and affiliated institutions. These disciplines must be directed by qualified physicians who are committed to medical education and to providing competent instruction to the transitional year residents when patients require these diagnostic and/or therapeutic modalities.

2. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On site libraries and/or collections of texts and journals must be readily available during nights and weekends.

III. Resident Appointment

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements and select the residents for appointment to the program in accordance with institutional policies and procedures.

B. Number of Residents

The Transitional Year Review Committee will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. A program should have at least four residents in training to foster a sense of identity for the transitional year residents and to provide appropriate peer interaction during all phases of the transitional year program. Program applications will be reviewed for assurance that there is an appropriate balance between the number of transitional year residents in training and the educational resources available to them.

2. Any proposed change in the number of transitional year residents must receive prior approval by the Transitional Year Review Committee. Programs that consistently fail to fill the designated number of approved positions may be asked to reduce the number offered, but to no fewer than four residents.

3. Residents who have successfully completed 12 months of transitional year training are not eligible to receive additional credit for subsequent rotations taken.

C. Resident Transfer

To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section V.B., prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.

IV. Faculty

The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide continuity of leadership for a minimum of 3 years.

A. Qualifications of the Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution. The process by which the program director of the transitional year program is appointed must be consistent with the policies for the appointment of other program directors in the sponsoring institution.

2. The program director must

a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field, including the ability to devote the time required for program development, implementation, administration, and supervision.

b. be certified by a specialty board or possess qualifications judged to be acceptable by the Transitional Year Review Committee.

c. be appointed in good standing and based at the primary teaching site.

d. be licensed to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempt.)

B. Responsibilities of the Program Director

1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program.
This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

2. Preparing an accurate statistical and narrative description of the program as requested by the Transitional Year Review Committee as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).

3. Promptly notifying the executive director of the Transitional Year Review Committee, using ADS, of a change in program director as well as of changes in the accreditation status of sponsoring programs when they occur.

4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.

5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

6. Obtaining prior approval of the Transitional Year Review Committee for changes in the program that may significantly alter the educational experience of the residents, for example:
   a. The addition or deletion of major participating institution(s) as specified in section II.B. of this document.
   b. Change in the approved resident complement for those specialties that approve resident complement.
   c. Change in the format of the educational program.

   On review of a proposal for a major change in a program, the Transitional Year Review Committee may determine that a site visit is necessary.

7. Maintaining records of (1) all residents appointed to the transitional year program; (2) the transitional year objectives, curriculum content offered by the program, and the curriculum undertaken by each resident; (3) the performance evaluations; (4) the residents' subsequent training or other professional activities.

   Tracking of graduates must be accomplished either until the transitional year graduate enters a formal medical educational program or for at least 5 years following graduation. A record of these graduates must be available for review.

C. Faculty Qualifications

1. The physician faculty must
   a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
   b. be certified by a specialty board or possess qualifications judged to be acceptable by the Transitional Year Review Committee.
   c. be appointed in good standing to the staff of an institution participating in the program.

2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities

1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately the residents in the program. The teaching and supervision of transitional year residents must be the same as that provided residents in the participating categorical programs.

2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.

3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E.1.

E. Other Program Personnel

The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program

The program design and sequencing of educational experiences will be approved by the R.R.C. as part of the accreditation process.

A. Role of Program Director and Faculty

The program director, with assistance of the faculty, must coordinate the educational experiences within the separate categorical programs and participating disciplines. He/she is responsible for developing and implementing the academic and clinical program of resident education by

1. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.

2. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.

3. providing residents with direct experience in progressive responsibility for patient management.

4. counseling transitional year residents in the development of a curriculum appropriate to their individual learning needs and career goals.

B. ACGME Competencies

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

2. Medical knowledge about established and evolving biomedical, clinical, and cognate (eg, epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.
4. _Interpersonal and communication skills_ that result in effective information exchange and collaboration with patients, their families, and other health professionals.

5. _Professionalism_, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. _Systems-based practice_, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. _Didactic Components_

1. The curriculum should include a broad range of clinical and biomedical problems and discussions of moral, ethical, legal, social, and economic issues.

2. All disciplines participating in the transitional year program must provide planned educational experiences for transitional year residents which should include:
   - morbidity and mortality conferences,
   - journal review,
   - seminars,
   - presentation of specialty topics, and
   - grand rounds.

   Attendance should be monitored and documented.

D. _Clinical Components_

1. The transitional year program must be designed to meet the educational needs of the residents. Service obligations of the sponsoring institution must be secondary to the transitional year educational objectives.

2. _Skill Development_
   a. The development of mature clinical judgment requires that residents, properly supervised, be given responsibility for patient care commensurate with their ability. Residents must be given the responsibility for decision making and for direct patient care in all settings, subject to review and approval by senior residents and attending physicians, to include the planning of care, and the writing of orders, progress notes and relevant records.
   b. To acquire fundamental clinical skills, the transitional year resident should have developed the following competencies before completion of the transitional year:
      1) obtain a complete medical history
      2) perform a complete physical examination
      3) define a patient's problems
      4) develop a rational plan for diagnosis, and
      5) implement therapy based on the etiology, pathogenesis, and clinical manifestations of various diseases.
   c. Educational experiences must ensure development not only of cognitive and procedural/technical skills but also of humane qualities that enhance interactions between the physician and the patients/patients' families.

3. _Electives_
   a. The transitional year resident must have no fewer than 8 weeks of electives, which may not include vacation time. Elective rotations should be determined by the educational needs of the individual resident.
   b. A maximum of 8 weeks may be designated for nonclinical patient care experience, eg, research, administration, and computer science.

4. _Emergency Medicine_
   a. The transitional year residents must have at least a 4-week rotation (minimum of 140 hours) in emergency medicine under the supervision of qualified teaching staff within the sponsoring or an affiliated institution.

b. The transitional year residents must have the opportunity to participate in the evaluation and management of the care of all types of patients who present to an institution's emergency department.

5. _Ambulatory Care_
   a. The transitional year residents must have at least 140 hours of documented experience in ambulatory care other than that acquired in the emergency department. This experience may consist of a 1-month block or be divided into lesser periods of time to ensure a total of 140 hours.
   b. Outpatient experience must be obtained from ambulatory experiences provided by family practice, internal medicine, obstetrics/gynecology, pediatrics, and surgery at the sponsoring or affiliated institution(s)/sites.

6. _Outside Rotations_

   Rotations may be taken away from the institution and its affiliates provided that there is educational justification for the outside rotations and that the following policies are met:
   a. No more than 8 weeks of transitional year rotations may be taken away from the institution and its affiliates.
   b. Outside required rotations must be taken in an ACGME-accredited program.
   c. Outside rotations not part of ACGME-accredited programs must be designated as electives. The program director must provide a complete description of the experience, to include curriculum objectives, resident responsibilities, and the faculty assigned for supervision.
   d. Outside rotations must be evaluated by the residents, and the performance of each resident must be evaluated by the respective faculty. Evaluations are to be reviewed and kept on file by the program director.
   e. The program director must give consideration to the resident's liability coverage and state licensing requirements prior to approving the rotation.

E. _Scholarly Activities_

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
   a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
   b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
   c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
   d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, eg, research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.

2. Adequate resources for scholarly activities for faculty and residents must be available, eg, sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.
F. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. Supervision of Residents
   a. All patient care must be supervised by qualified faculty.
      The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
      1) At least 24 weeks of each transitional year resident's rotation must be on clinical services where the transitional year resident works directly with more-senior residents who are supervised by attending faculty in ACGME-accredited programs.
      2) The responsibility or independence given to the transitional year residents by the supervising physician for the care of patients should depend on the residents' knowledge, manual skills, experience, the complexity of the patients' illnesses, and the risk of procedures that residents perform.
   b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
   c. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

2. Duty Hours
   a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.
   b. Duty hours are limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
   c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
   d. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

3. On-Call Activities
   The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.
   a. In-house call must occur no more frequently than every third night, averaged over a four-week period.
   b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to six additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinical, and maintain continuity of medical and surgical care as defined in Specialty and Subspecialty Program Requirements.
   c. No new patients, as defined in Specialty and Subspecialty Program Requirements, may be accepted after 24 hours of continuous duty.
   d. At-home call (pager call) is defined as call taken from outside the assigned institution.
      1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
      2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
      3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

4. Moonlighting
   a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
   b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III. D.1.k.
   c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), i.e., internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

5. Oversight
   a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.
   b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

6. Duty Hours Exception
   The Transitional Year Review Committee will not grant exceptions for up to 10% of the 80-hour limit, to individual programs.

VI. Evaluation

A. Resident Evaluation
   1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include:
      a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
b. mechanisms for providing regular and timely performance feedback to residents by the faculty of the participating discipline on each resident's completion of a rotation in that discipline that includes at least
1) a written evaluation at least three times a year that is communicated to each resident in a timely manner and
2) the maintenance of a record of evaluation for each resident that is accessible to the resident.
c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.

2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty Evaluation
The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation
The educational effectiveness of a program must be evaluated at least annually in a systematic manner.
1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

2. Outcome assessment
a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
c. If more than 20% of the transitional year graduates, when averaged over 5 years, do not enter a Graduate Medical Education program, such will be considered as evidence that a program is not achieving its essential objectives and may be cause for an adverse accreditation action.

VII. Experimentation and Innovation
A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.
Section III
Accredited Graduate Medical Education Programs

Introduction
This section of the Directory contains a list of graduate medical education (GME) programs accredited by the Accreditation Council for Graduate Medical Education (ACGME).

Programs are listed by specialty under the state and city of the sponsoring institution (refer to sample, below). Listed under the program name is the institution that sponsors the residency program, followed by the major participating institution(s), if any, which are recognized by at least one ACGME Residency Review Committee (RRC) as providing a major portion of required GME. Hospitals and other institutions that provide rotations of less than one-sixth of the program length or less than a total of 6 months are not listed in the Directory.

Listings contain the program director’s name and program address, telephone and fax numbers, and e-mail address. Additional information on each program includes the ACGME-accredited length of the program and number of ACGME approved/offered positions. (Note: The published program length reflects the length approved by the RRC. The program may require or offer additional years; these data are included in FREIDA Online, at www.ama-assn.org/go/freida, and the GME Library on CD-ROM.)

The program identification number appears at the bottom of each listing; the first three digits of this number indicate the specialty/subspecialty code (see “Specialties/Subspecialties with ACGME Program Requirements,” p 475) and the next two the state code.

Sample Listing
Title of the Program
Sponsor: The program’s sponsoring institution
The program’s major participating institution(s) (if any)
Prgm Director: Name
Address
City, state, zip code
Telephone number, fax number
E-mail address
Length: Program length
ACGME Approved/Offered Positions:
Program ID: 000-00-00-000

The Role of the ACGME
The population of programs listed in Section III is set by the ACGME, which shares with the AMA information about accreditation actions and other changes through regular electronic data transfers.

The Directory, as the official list of ACGME-accredited programs, generally reflects accreditation actions completed by December of the previous year. The data published in this edition were transferred from the ACGME to the AMA on January 20, 2004. Readers are reminded that accreditation actions and related changes can alter the ACGME program population on a daily basis and that the Directory serves only as a “snapshot” of this population at a given moment. For updated information on ACGME-accredited programs, consult the ACGME Web site at www.acgme.org.

Preventive Medicine Programs
The preventive medicine programs listed in Section III include programs that offer areas of specialization in aerospace medicine, general preventive medicine, occupational medicine, and public health and general preventive medicine.
Introduction

Transitional Year Programs
Transitional Year programs are available for physicians seeking broad clinical experience before entering GME in their chosen field or for physicians who have not yet decided on a medical specialty.

Combined Specialty Programs
Combined specialty programs (listed in Appendix A) have been approved by each respective specialty board; resident physicians completing these programs are eligible for board certification. Neither the ACGME nor the Residency Review Committees accredit combined programs; they accredit each specialty program separately. Information in the combined program list was provided by specialty boards and through the National GME Census. Applicants to combined specialty programs are encouraged to review requirements for admission to the certification process of each board in Appendix B of the Directory.

Restricted-entry GME Programs

US Armed Services Programs
In most cases, only persons enrolled in the US Armed Services are eligible for appointment to residency positions at US Army, Navy, and Air Force hospitals and teaching institutions. These programs are identified in Section III with the text US Armed Services Program.

Centers for Disease Control and Prevention Programs
GME programs at the Centers for Disease Control and Prevention (CDC) are usually open only to CDC physicians.

Programs on Probation
The Directory may include programs that are on probation. For information on a program's current accreditation status, contact the ACGME, 515 N State St/Ste 2000, Chicago, IL 60610; 312 464-4920; 312 464-4098 Fax; www.acgme.org.

Disclaimer
It is the AMA's understanding that all institutions listed in the Graduate Medical Education Directory are required by law to include the phrase "EEO, M/F/D/V" on any information distributed for public view.

Parker J Palmer Award
In February 2001, the ACGME established the Parker J. Palmer Courage to Teach Award to recognize outstanding GME program directors. Criteria for selection include a demonstrated commitment to education with evidence of successful mentoring, program development, and improvement. The ACGME will recognize ten outstanding program directors each year with the award. For more information, see www.acgme.org.

Sources for Additional Information
The Graduate Medical Education Directory Companion: An Insider's Guide to Selecting a Residency Program, which is published annually, and FREIDA Online (Fellowship and Residency Electronic Interactive Database Access), an Internet database available through the AMA home page at www.ama-assn.org/go/freida, are two additional sources of information on GME programs.
