GRADUATE MEDICAL EDUCATION IN THE UNITED STATES

ANNUAL REPORT AND DIRECTORY OF APPROVED INTERNSHIPS AND RESIDENCIES IN THE UNITED STATES;
ANNUAL REPORT ON APPROVED TECHNICAL SCHOOLS IN THE UNITED STATES, AND RÉSUMÉ OF
CHANGES IN THE REQUIREMENTS OF EXAMINING BOARDS IN THE MEDICAL SPECIALTIES
PREPARED BY THE COUNCIL ON MEDICAL EDUCATION AND HOSPITALS OF
THE AMERICAN MEDICAL ASSOCIATION

Arthur N. Springall, M.D., John Hinman, M.D., and Willard V. Thompson, M.D.

ANNUAL REPORT

The Council on Medical Education and Hospitals presents this 30th Annual Report on Internships and Residencies, which consists of statistical data and other information on training programs for interns and residents conducted in hospitals approved by the Council. All hospitals listed are located in the continental United States or in its territories and possessions (the Canal Zone, Hawaii, and Puerto Rico). The report is composed of descriptive material; statistical tables and graphs; information on the National Intern Matching Program, the Internship Review Committee, the revised "Essentials of an Approved Internship," the Residency Review Committees, and the Sears Roebuck Foundation; a brief report on foreign medical school graduates serving internships and residencies in approved hospitals; and the plan for future evaluation of the qualifications of foreign physicians who wish to come to this country for further medical training.

Each hospital approved for intern and/or resident training furnished detailed information regarding its training programs, and the material presented is based on this submitted information. The statistical data in the tables represent the intern and resident situations as of Sept. 1, 1955. Consequently, these figures are in some instances at variance with those presented in the lists of approved services, as the latter refer to appointments for the year beginning July 1, 1957.

Specially arranged lists of hospitals offering approved internships and residencies are published following the report. The first listing of hospitals includes those approved for the training of interns, listed according to location. As in previous years, information also includes the number of hospital beds, the number of annual admissions, the autopsy rate, the length of the program, the stipend, and the number and types of intern positions offered. A subsequent classification lists these hospitals according to types of internships.

In the residency section, the hospitals approved for resident training are listed according to medical specialties, giving statistical data, names of chiefs of services and additional pertinent information similar to that included in the internship section. Following this listing, hospitals approved for resident training are listed by state and city, giving the specialties for which each is approved.

Miss Mary A. McGovern and Mrs. Helen Neitzel were responsible for much of the detail work in the preparation of the list of approved internships and residencies and the staff of the Bureau of Economic Research were responsible for the IBM statistical tabulations.

This Annual Report and the lists referred to are reprinted as the Directory of Approved Internships and Residencies. The Council will furnish copies of this directory upon request.

The Council acknowledges the cooperation and assistance of medical staffs and hospital administrators, who have made the publication of this report possible by furnishing the statistical data on which it is based. The following organizations collaborated in approving residency programs:

- Advisory Board for Medical Specialties
- American Academy of General Practice
- American Board of Anesthesiology
- American Board of Dermatology
- American Board of Internal Medicine
 - Subspecialty Board on Allergy
 - Subspecialty Board on Cardiovascular Disease
 - Subspecialty Board on Gastroenterology
 - Subspecialty Board on Pulmonary Diseases
- American Board of Neurological Surgery
- American Board of Obstetrics and Gynecology
- American Board of Ophthalmology
- American Board of Orthopedic Surgery
- American Board of Otolaryngology
- American Board of Pathology
- American Board of Pediatrics
 - Subspecialty Board on Allergy
- American Board of Physical Medicine and Rehabilitation
- American Board of Plastic Surgery
- American Board of Preventive Medicine
- American Board of Proctology
- American Board of Psychiatry and Neurology
- American Board of Radiology
- American Board of Surgery
- American Board of Urology
- Board of Thoracic Surgery
- American College of Physicians
- American College of Surgeons

The Annual Report furnishes information on medical education at the internship and residency levels to medical students, medical educators, hospital administrators, and the entire medical profession. It is hoped that this information will also be of assistance to physicians beginning their professional careers who desire to further their medical education.

INTERNSHIPS

The number of hospitals approved for intern training and the number of approved internships are indicated in table 1. There were 867 approved hospitals offering 11,616 positions for the intern year beginning July 1, 1955, as compared with 850 approved hospitals

and 11,048 positions for the previous year, representing an increase of 17 hospitals (2%) and 568 internships (5%). The increase in the number of approved hospitals for the past 10 years is 14% (103 hospitals) and 3,077 internships (35%). Last year, the average number of interns per hospital was 12.9, as compared with the present figure of 13.3.

Hospitals outside the continental United States that are approved for intern training are represented by one in the Canal Zone; four in Hawaii; and seven in Puerto Rico.

In 1956, there were 6,845 graduates of approved American medical schools. When this figure is compared with the number of intern positions offered, there is a disparity of about 4,500 between the number of approved internships and the number of American graduates available to fill these positions. As stated later in this report, almost half of these vacancies were filled by graduates of foreign medical schools on Sept. 1, 1955. The number of vacant internships for the reported year is comparable to the number reported for the previous year, as indicated later in this report.

TABLE 1—Approved Hospitals and Internships, 1947-1956

Yr. of Publication	No. of Hospitals	No. of Internships*
1947.....	764	8,539
1948.....	807	9,118
1949.....	807	9,124
1950.....	799	9,398
1951.....	828	10,044
1952.....	865	11,467

1954.....	844	10,624
1955.....	850	11,048
1956.....	867	11,616

*U. S. Army and U. S. Navy hospitals and those outside the United States not included in 1947 figures.

Since the Council published its first list of approved hospitals in 1914, there has been an increase of 44% in the number of approved hospitals and an increase of 275% in the number of approved internships.

Internships, by Type of Service

Table 2 gives a breakdown of approved internships by type of service, including the number and the percentage reported filled and vacant on Sept. 1, 1955. The total number of internships offered was 11,616. The total number of approved hospitals was 867; these hospitals offered 1,080 approved intern training programs. For the past three years, the percentage of rotating, straight, and mixed internships offered has not varied appreciably, with 89% rotating, 10% straight, and 1% mixed (fig. 1). Rotating services include both rotating general and rotating with emphasis on a particular service. Straight internships include straight service assignments to internal medicine, surgery, pediatrics, obstetrics-gynecology, and pathology. Mixed internships include services on which assignments are made to two or three of the four major services.

There is a slight increase (1%) in the over-all number of intern positions filled this year as compared to last year. Rotating internships were 83% filled on Sept. 1, 1955, straight internships 83%, and mixed internships 84%. These figures do not vary greatly from those quoted for the preceding year. Intern positions in ob-

stetrics-gynecology increased from 40% to 60%, those in pathology from 57% to 64%. The number of vacant internships increased from 1,982 for the previous year to 2,013 for 1955. The number of filled positions increased from 9,066 (1954) to 9,603 (1955). The increased number of internships filled is attributed to an

increase of foreign medical school graduates serving as interns, including both foreign medical school graduates having temporary visas and those having permanent visas.

In the revised "Essentials of an Approved Internship," adopted by the House of Delegates on Dec. 1, 1955, straight internships in pathology were continued. Approval for straight internships in obstetrics-gynecology has been discontinued, effective June 30, 1957. Two resolutions were introduced into the House of Delegates at the June, 1956, Annual Session in Chicago

Fig. 1. Types of approved internships, 1953-1956.

favoring the rotating internship. The Reference Committee on Medical Education and Hospitals made the following report concerning these resolutions:

The Reference Committee believes that there is a growing body of opinion within the profession in favor of a rotating internship. It also recognizes the difficulties involved and the dangers to some established education programs were action taken precipitously to disapprove straight internships, which are about 10% of the total number now approved. It recommends the following substitute resolution for resolutions 11 and 38:

"Resolved, 1. That the Council on Medical Education and Hospitals be requested to increase its efforts to encourage rotating internships rather than straight internships in all hospitals approved for the latter.

"2. That a report of the results of this effort be submitted annually."

This portion of the report of the Reference Committee was adopted by the House of Delegates. The problem of the straight internship is not one that can be solved easily. It will require careful analysis and study over a period of time by medical educators, hospital administrators, and the professional staffs of hospitals.

Internships, by Type of Hospital Control

In table 3 the distribution of internships according to hospital control is indicated. Federal hospitals offered 603 (5%) of the 11,616 approved internships; nonfederal governmental hospitals offered 3,591 (31%)

TABLE 3.—Number of Internships, by Type of Hospital Control, 1955-1956

of the available internships; nongovernmental institutions offered 7,350 (63%) positions; and 72 internships (less than 1%) were offered by proprietary hospitals.

The group of federal hospitals had the highest occupancy rate for interns, 93%, on Sept. 1, 1955. The Army hospitals and the Navy hospitals had a full complement, and the Public Health Service had a 99% occupancy rate. The nonfederal governmental hospitals had 91% of their positions filled; county hospitals had the highest rate in this group, 94%. The rate for the nongovernmental hospitals was 78% and for the proprietary hospitals was 79%.

The federal hospitals showed an increase in occupancy rate of 4% over the rate for the previous year. There was a 1% increase for the nonfederal governmental hospitals and an increase of 12% for the proprietary hospitals. The rate for the nongovernmental hospitals remained at the same figure as quoted for 1954.

The average number of internships filled for federal hospitals was 13.4 per hospital; for nonfederal governmental hospitals, 25.0; for nongovernmental hospitals,

8.4; and for proprietary hospitals 5.5. The average numbers of intern positions offered per hospital, considering all hospitals, was 13.3; the average number of interns on duty per hospital was 11.1.

In 1953, 8,275 internships were filled (78%); in 1954, 9,066 positions were filled (82%); and in 1955, 9,603 positions were filled (83%).

Internships, by Medical School Affiliation and Bed Capacity

The classification of hospitals into the categories of "major teaching," "minor teaching," and "nonaffiliated" is used in this report and in the following list of approved internships. These classifications are based on the degree to which medical schools utilize the hospitals for undergraduate medical education. A "major teaching" hospital is considered by the school as being a major unit in its undergraduate clinical clerkship program. A "minor teaching" hospital is one that is utilized to a limited extent for undergraduate instruction. A "nonaffiliated" hospital is one that is not designated by a medical school as participating in such a program. Based on this classification, a statistical analysis of approved internships is presented in table 4.

TABLE 4.—Number of Internships, by Medical School Affiliation and Bed Capacity, 1955-1956

Classification	No. of Approved Hospitals	No. of Internships		
		Filled Sept. 1, 1955	Vacant Sept. 1, 1955	Percentage Filled

300-499.....	21	237	67	78
500-over.....	10	216	32	89
Totals.....	66	650	193	77
Grand totals.....	867	9,603	2,013	83

Major teaching hospitals (147) constituted 17% of the approved hospitals for the past year and offered 4,255 internships with an occupancy rate of 89%. Minor teaching hospitals (66), 8% of the approved hospitals, offered 843 internships, of which number 77% were filled. Nonaffiliated hospitals (654) were 75% of the total number of approved hospitals; 79% of the 6,518 positions offered by this group were filled on Sept. 1, 1955.

The rate of occupancy for approved hospitals was highest in the major teaching group, the rate being 89%. This figure was 4% higher than that for last year. The rates for the minor teaching and nonaffiliated hospitals were 77% and 79% respectively.

A study of the occupancy rate for these three groups of hospitals indicates that there is a definite trend for the larger hospitals to have a higher occupancy rate

than the smaller hospitals. The combined occupancy rate for hospitals of less than 200 beds in all groups was 76%; that for hospitals of 500 beds or more in all groups was 90%. The trend in all three groups of hospitals in these classifications was that, as the size of the hospital increased, the occupancy rate increased.

Internships, by Census Region and State

A breakdown by states and regions of the internships filled and vacant on Sept. 1, 1955, is shown in table 5. As compared with those of last year, there is no great change for any region. The highest regional figure for occupancy was in those hospitals outside the continental United States; the Canal Zone, Hawaii, and Puerto Rico, which had 96% of their intern positions filled. In the United States, the Pacific region with 87% again had the highest rate, although the New England and the Middle Atlantic regions had rates of 86% and 85% respectively. The lowest rate occurred in the East South Central region, the rate being 73%, a slight increase over last year's rate. Individual states having 90% occupancy or better were South Carolina, Connecticut, Vermont, Ohio, New York, New Jersey, District of Columbia, Louisiana, Arizona, Washington, Canal Zone (100%), Hawaii, and Puerto Rico. States with rates below 50% were North Dakota and Montana.

As could be expected from a study of the population of the United States, one-fourth of the approved hospitals are located in New York, New Jersey, and Pennsylvania. One-fourth of the filled internships occur in these states. Pennsylvania ranks lowest in rate of occupancy for the Middle Atlantic states, with 71%. As indicated previously, the occupancy rate for internships shows a 1% increase over last year. On Sept. 1, 1955, no approved internships were offered in Idaho, New Mexico, Nevada, and Wyoming.

Internship Stipends

There has been an increase in the average monthly cash stipend paid the intern in both affiliated and non-affiliated hospitals. The average monthly stipend paid by the affiliated hospital for 1954 was \$87; the figure for 1955 is \$121, an increase of \$34. For 1954, the stipend paid by the nonaffiliated hospital was \$136, as compared with \$169 for 1955.

Eighty-five per cent of the affiliated hospitals furnish full maintenance in addition to the stipend; 15% offer partial maintenance; 60% give additional perquisites such as uniforms and bonuses. Only three hospitals do not pay a cash stipend.

In the group of nonaffiliated hospitals, 88% furnish full maintenance, 10% partial maintenance. Twenty-one hospitals do not offer maintenance; more than half of the hospitals in this group reported additional perquisites for the interns. (All federal hospitals have been excluded from data regarding stipends.)

Figure 2 compares the range of stipends paid by affiliated and nonaffiliated hospitals. Although the average stipend paid by the affiliated hospital is \$38 less than that paid by the nonaffiliated hospital, the occu-

pancy rate for the former was about 10% higher than for the latter. From this fact, it is logical to conclude that financial consideration is not the decisive factor in choosing an internship. The letters FM and PM following the stipend quoted in the list of approved internships refer to "full maintenance" and "partial maintenance."

PERCENTAGE OF HOSPITALS

Fig. 2. Monthly internship stipends, with federal hospitals excluded. Solid line indicates nonaffiliated hospitals (206), dashed line affiliated hospitals (200). Abscissa gives upper level of stipend range.

Autopsy Rates

It is a specific requirement for internship approval that hospitals maintain a minimum autopsy rate on hospital deaths of 25%. If an approved hospital does not maintain a 25% rate for two consecutive years, approval may be withdrawn. The autopsy rate is considered an accurate index of the interest of the medical staff and the hospital administration in scientific medical progress. Hospitals that consistently maintain a high autopsy rate display a sincere interest in medical education.

Table 6 lists the 20 federal hospitals and the 20 non-federal hospitals conducting internships during the past year that had the highest autopsy rates for the reported period (1955). These hospitals are to be commended for their excellent work in this connection.

Fifteen hospitals (2%) had autopsy rates of less than the required 25%. These hospitals have been advised of their failure to meet the requirement and will be required to raise the rate for the next reporting period in order to qualify for continued approval.

National Intern Matching Program

The National Intern Matching Program has completed five years of successful operation as the agency through which medical school graduates receive appointments as interns in hospitals approved for such training by the Council on Medical Education and Hospitals. The primary function of the Program is to serve as a central clearing agency for medical students and hospitals; its aim is to provide an orderly method for giving effect to students' preferences regarding hospitals and hospitals' choice of students in the appointment of interns. This mechanical plan of matching interns and hospitals has proved more efficient than any other plan previously used and gives complete freedom of choice to both students and hospitals.

The policies under which the program operates are determined by organizations interested in internships. In addition to the Council on Medical Education and

Hospitals, these organizations are the American Hospital Association, the Association of American Medical Colleges, the American Protestant Hospital Association, the Catholic Hospital Association, and the Student American Medical Association. The policy-making body of the National Intern Matching Program is composed of representatives from these groups, liaison representatives from the Federal Services, and a student representative.

Hospitals eligible to participate in the program must be approved by the Council on Medical Education and Hospitals. Students eligible to join the program are those seeking first-year internships in these hospitals. Each student is provided with a Directory of Partici-

pating Hospitals, and each hospital receives a Directory of Participating Students. Students apply where they wish, to as many hospitals as they desire. Hospitals are free to interview any participating student and use their own interview and evaluation techniques. Upon completion of interview, each student submits to the Program office a ranking list showing the hospitals to which he has applied in order of preference. Hospitals also submit ranking lists of students who have applied to them. These lists, together with the intern quotas for each hospital, form the basis of the matching operation. Hospitals are matched with those students ranked highest on their list to the limit of their quota, unless those students prefer another hospital which also has given them a high ranking. Thus each student receives the highest choice hospital on his list that has a place for him. It is the individual responsibility of student and hospital to determine what will be acceptable to them prior to submitting ranking lists. The Program covers internships beginning between April 1 and Dec. 31. Lists are received by the National Intern Matching Program in January; the actual matching begins in February; and results are announced the middle of March.

Participation in the fifth program, completed in March 1956, included 98% of all hospitals approved by the Council and 97% of all United States medical school seniors. Of the 6,821 students in the program, 6,588 (97%) were matched. Of the 233 unmatched students, more than 100 applied to only one or two hospitals, thereby reducing their chances of being matched. Of the students matched, 74% received their first choice, 15% their second choice, 6% their third choice, and 5% their fourth choice or lower.

There were 11,459 positions offered by the 821 participating hospitals; 17% of these hospitals completely filled their quotas, 53% partially filled them, and 30% of these hospitals had no interns matched to them.

During the past year, hospital and student participation was at the highest level in the history of the program. Indications are that participation in the Program for 1957-1958 will equal and probably surpass previous years.

Internship Review Committee

The Internship Review Committee was established in 1954 and is composed of representatives of organizations concerned with and interested in intern training programs. In addition to the representatives of the Council on Medical Education and Hospitals, there is a representative from the Association of American Medical Colleges; the American Hospital Association; the Federation of State Medical Boards of the United States; and the American Academy of General Practice.

The purposes of the Committee are (1) to review reports of surveys of intern training programs and make recommendation to the Council for approval or disapproval; (2) to recommend to the Council such revisions of the requirements for intern education as are considered appropriate; and (3) to recommend to the Council such revisions in policy concerning all aspects of intern education as are considered appropriate.

In its period of operation, the Committee has become increasingly aware of the necessity for reasonable flexibility in the interpretation of the requirements for internship approval and of the advisability of giving a hospital an opportunity to bring its deficient program of training up to standard before approval is withdrawn. When a hospital does not measure up to the requirements for approval, it is warned that its approved status is in jeopardy and advised regarding the specific corrections that should be made. Sufficient time for correction of these deficiencies is permitted before approval is actually withdrawn. This policy serves to emphasize the consultant attitude of the Committee and of the Council in respect to training programs.

The Committee is functioning effectively and is filling a real need in its work. It is currently doing a great deal to maintain and improve the standards of intern education and is continually working toward this objective.

Revised Essentials of an Approved Internship

The House of Delegates adopted the revised "Essentials of an Approved Internship" as presented by the Council on Dec. 1, 1955. This revision incorporated the changes and recommendations made by the Ad Hoc Committee on Internships. The principal changes made were 1. The "one-fourth rule" will be applied. 2. Straight internships in pathology will be approved. 3. Stress was placed upon the educational function of the internship as being primary.

The "one-fourth rule" states: "A hospital which for two successive years does not obtain one-fourth of its stated complement of interns may be disapproved for intern training." Early in January, 1956, a copy of the revised Essentials was sent to the Administrator and to the Chairman of the Intern Committee in each hospital approved for the training of interns; attention was called to the "one-fourth rule" in the covering letter. In May, 1956, the following interpretation was given by the Council staff to this rule:

1. All interns serving in a hospital are considered in computing the percentage of quota filled; this includes graduates of both American and foreign medical schools.

2. The percentage of the quota filled will be calculated on the basis of (a) the quota published in the 1955 Internship and Residency Number of THE JOURNAL, (b) the number of interns on duty on Sept. 1, 1956, as reported by the hospital. (Similar statistics will furnish the basis for computing the percentage of quota filled in following years.)

3. If an approved hospital fails to meet the requirements of the "one-fourth rule," a letter of warning will be sent to the hospital the first year; if it does not fill the required percentage for two successive years, approval may be withdrawn.

4. Intern quotas may be changed upon written request to the Council.

5. Application of the "one-fourth rule" will obtain beginning in January, 1958. Any approved hospital that does not fill one-fourth of its intern quota for the two successive years 1956-1957 and 1957-1958 may have its internship approval removed at that time.

In the revised Essentials it is specifically pointed out that if the primary function of the internship is not educational, approval is in jeopardy.

Interns and Residents from Foreign Countries

The Institute of International Education conducted a survey in September, 1955, of foreign medical school graduates serving internships and residencies in hospitals approved for this training by the Council on Medical Education and Hospitals.¹ These foreign physicians came from 84 countries and were nonimmigrants, expecting to return to their own countries on completion of their medical training.

There were 6,033 foreign physicians reported by McCormack and Feraru¹ in this study serving as members of the house staffs of approved hospitals, an increase of 20% over the figures determined in a similar survey in September, 1954. Of this number, 1,859 were interns and 4,174 were residents. The six countries having the largest representation were: the Philippine Islands, 1,065; Canada, 584; Mexico, 489; Germany, 364; Turkey, 320; and Italy, 260. These six countries were listed in the same order in last year's survey.

One-fourth (1,533) of these foreign physicians were located in New York. There were 485 in Ohio; 415 in Pennsylvania; 398 in New Jersey; 371 in Massachusetts; and 359 in Illinois. The two largest groups receiving resident training were in general medicine and general surgery; obstetrics-gynecology and pathology ranked third and fourth, respectively, in numbers.

The present policy of the Council is that graduates of foreign medical schools may be appointed to the intern and resident staff of a hospital without jeopardizing the approved status of the hospital. However, following the adoption of the report of the Cooperating Committee on Evaluation of Graduates of Foreign Medical Schools by the House of Delegates at the Annual Session in June, 1956, in Chicago, plans are now being crystallized for evaluation of foreign physicians coming to the United States to serve internships and residencies. The proposed program of evaluation is outlined in the Report of the Council on Medical Education and Hospitals.² The emphasis in this program is placed on the evaluation of the medical qualifications of the individual foreign-trained physician who wishes to come to the United States. The program is designed to establish two principal criteria in regard to each foreign-trained physician: (1) that he is a graduate of a bona fide medical school; and (2) that, as nearly as can be measured, he has reached a level of educational attainment comparable to that of students in American schools at the time of graduation. These criteria are to be established by evaluation of the physician's medical credentials in view of predetermined minimal standards and examination of the physician for factual knowledge of medicine.

It is believed that implementation of this proposed program will afford hospitals needed assurance in regard to the medical qualifications of foreign-trained physicians seeking positions as interns and residents. It is anticipated that this program will be in effect in one year.

THE SEARS ROEBUCK FOUNDATION

Physicians completing their graduate training and who may require financial assistance in initiating the establishment of medical practice units in areas considered medically deficient will be interested in investigating the program financed by the Sears Roebuck Foundation. This Foundation has made two grants of \$125,000 to a revolving assistance fund administered by a Medical Advisory Board appointed by the Trustees of the American Medical Association. These grants are dispersed by the Board in the form of 10-year, nonsecured, supplemental loans ranging from \$1,000 to \$25,000. Interest ranges from zero to 6%, depending on the rapidity of payment. All loans are designed to make up the difference between what can be raised through normal lending agencies and the total amount needed. All funds collected in the form of interest and principal go into the revolving fund, thereby making the program self-perpetuating and providing the "seed" principal of growth and expansion at the same time. It is estimated that, within 10 years, this fund will amount to over \$2,000,000 because of this growth factor, which will do much to meet the needs of medical distribution.

The purpose of the plan is to encourage physicians to locate in communities where their services are most urgently needed. Because of the limited funds available at this time, all loans are competitive, thereby insuring that loans reach communities and physicians with the greatest need. Preference is given to physicians—specialists or general practitioners—who desire to go to rural or rapidly growing suburban areas where medical care is inadequate.

All applications are reviewed by the territorial or area Medical Advisory Board members, where they are approved or rejected. If approved, they are then presented to the entire Board, where all applications approved by the various area Advisory Boards are reviewed and final decisions made. The Board reviews applications on the following grounds:

1. Professional qualifications.
2. Availability and quality of medical service in the community. (Loans are intended primarily to create units, but consideration is also given to improving and expanding existing units.)
3. Soundness of the plan for providing medical care.
4. Financial initiative of applicant, thus insuring that loans are supplemental.
5. No loan will be granted for the purpose of refinancing existing debt or to be used for cost of living while establishing practice.

This statement regarding the Sears Roebuck Foundation is presented in this issue of *THE JOURNAL* for the information of medical school and hospital administrators, officials of local and state medical societies, and others whose advice is sought by young physicians in regard to sources of financial assistance. Physicians interested in applying for the Sears Roebuck assistance should contact their school, hospital, or county or state medical society for applications and more detailed information.

RESIDENCIES

Residency training in the United States continues to expand. The Council now approves residencies in 30 specialties and subspecialties, aviation medicine having been added in the past year. These programs are conducted in 1,202 general or special hospitals. Resi-

* Full training including children's orthopedics.
 † Full training without children's orthopedics.
 ‡ Less than full training.
 § Surgery A includes programs leading to certification by the American Board of Surgery.
 || Surgery B includes programs approved as offering training in general surgery in preparation for a residency in a surgical specialty.

dency Review Committees, composed of representatives of the Council and the appropriate American Board, have been organized in dermatology, neurological surgery, ophthalmology, orthopedic surgery, pediatrics, physical medicine, preventive medicine, proctology, psychiatry, radiology, and urology. Residency Review Committees in surgery, plastic surgery, and otolaryngology include representatives of the American College of Surgeons, and the American College of Physicians is represented on the Committee for internal medicine. In four specialties, anesthesiology, obstetrics-gynecology, pathology, and thoracic surgery, the Council approved programs in concurrence with the board concerned with each organization taking unilateral action.

The following section of the report presents statistical data on the number of residencies by type of hospital control and by bed capacities of the hospital in which the training is conducted. The number of residencies filled and vacant represent the situation as of Sept. 1, 1955. The total number of residency appoint-

ments available increased from 25,486 reported last year to 26,516 this year, an increase of 4.5%. The number of residents serving rose from 20,494 to 21,425, also about 4.5%. The percentage of residencies filled was 81%, or almost exactly the same as it had been for the two years immediately preceding. These figures seem to indicate that although the number of residency positions increased the rate of increase was smaller than that of the previous year, when 1,858 positions were added, an increase of 8%.

Number of Residencies, by Specialties

Table 7 presents a breakdown by specialties of the number of approved programs, the number of first-year appointments filled and vacant as of Sept. 1, 1955, and the total number of appointments filled and vacant for the same date. There were 5,043 separate residency programs conducted last year, and they offered a total of 26,516 appointments, including 11,328 at the first-year level.

The number of hospitals approved for training varied from one offering training in occupational medicine to 609 offering training in internal medicine. Eight specialties—internal medicine, obstetrics and gynecology, pathology, pediatrics, psychiatry, radiology, and surgery—accounted for more than three-fourths of all residencies offered, with 20,245 positions out of a total of 26,516. There were less than 100 appointments in each of the following specialties: allergy, 35; cardiovascular disease, 81; contagious disease, 10; gastroenterology, 63; malignant diseases, 29; plastic surgery, 91; proctology, 29; occupational medicine, 2.

The percentage range of first-year residencies filled varied from 36.2% of those in physical medicine to 91.1% of those in obstetrics. Similarly, for appointments at all levels, the percentage filled in physical medicine was the lowest, 43.4%, while those in straight gynecology had the highest occupancy rate, 95.6%.

Of those specialties constituting the majority of residencies offered, pathology, as last year, showed the lowest occupancy rate for all years 64.5% (first-year through fourth-year appointments), while surgery showed the highest, 90.7%. Specialties in which more than 25% of residencies were vacant included the following: allergy, general practice, neurology, pathology, physical medicine, proctology, psychiatry, and pulmonary disease. It should be noted that a relatively high number of appointments were offered in both pathology and psychiatry.

The percentage of first-year positions filled, 79.5%, was approximately the same as those filled at all levels, 80.8%.

In summary, the increase of residency appointments, both absolute and percentage-wise, was less in 1955-1956 than in 1954-1955, and the percentages of occupancy at all levels remained approximately the same.

Residencies, by Type of Hospital Control

A breakdown of residency appointment by type of hospital control is presented in table 8. Residency programs were offered in 120 federal hospitals, 315 other governmental (nonfederal) hospitals, 737 nongovernment institutions, and 30 proprietary hospitals. The total number of residency appointments was about

equally divided between governmental and nongovernmental hospitals, with those in the former category offering 13,108 residencies and those in the latter, 13,408.

The Veterans Administration accounted for about three-fourths of the total, with 3,067 residency positions offered out of 4,065 for all federal hospitals. The occupancy rate for all federal hospitals, including the Veterans Administration, was 73.2%, slightly below that for the nation as a whole. Comparable figures for last year showed 72% of residencies in federal hospitals

trolled institutions. If first-year appointments only are considered, the disparity in occupancy rates between federal and all other hospitals is even more marked. The United States Army reported 56% of their first-year appointments filled, the United States Navy 60%, the United States Air Force 60%, the Veterans Administration 67.7%, the United States Public Health Service 92.1%, and other federal hospitals 90.3%. The rates for other governmental (nonfederal) hospitals did not vary so widely, ranging from 80.3% for state-controlled institutions to 86.1% for those that were county-con-

Grand totals.....	1,202	5,043	9,005	2,323	79.5	21,425	5,091	80.8

filled, and 80% for all hospitals. Considering appointments in all categories, the occupancy rate varied from 53.8% in United States Air Force hospitals to 87.3% in city-controlled hospitals. Since only three hospitals, offering only 20 programs with 89 available positions, are included in the category "other federal," it does not seem statistically sound to compare the percentage of positions filled, 94.4%, with those of the larger groups of government hospitals. Considering appointments in all categories, the occupancy rate varied from 56% in United States Army hospitals to 87.3% in city-con-

trolled. The total number of residencies offered by federal institutions did not change appreciably, although there was a slight decrease, with a slight increase in occupancy rate.

Number of Residencies, by Hospital Bed Capacities

Excluding hospitals of less than 100 beds, the hospitals offering residency training are, roughly speaking, about equally divided into four categories: 100 to 199 bed capacity, 200 to 299, 300 to 499, and over 500 beds (table 9). The number of residencies in these hospi-

tals, however, varied greatly, with those of 100 to 199 beds offering 1,611 positions, or approximately 6% of the total, and those with over 500 beds having 13,553 positions, or 52% of the total. Hospitals with 200 to 299 and 300 to 499 beds offered an additional 10,762 residencies, or 40% of the total. Hospitals of less than 100 beds and programs in institutions of undesignated bed capacities accounted for the remaining 2%.

Hospitals of less than 100 beds are usually of special type, providing services in one or two specialties, often for only one or two years. They include hospitals for children's orthopedic surgery; eye, ear, nose, and throat; obstetrics; pediatrics; special fields of psychiatry; and similar specialized fields. In these hospitals the admission rate approximates that for a service in a larger general hospital.

While the average number of residencies per hospital may not be too important, it is of some significance in considering the distribution of residents. The averages are as follows: 100 to 199 beds, 7.4 residents per hospital; 200 to 299 beds, 11.5 residents; 300 to 499 beds, 24 residents; and 500 and over, 46 residents per hospital. Since the total number of beds for all hospitals in each category has not been computed, the average number per resident cannot be accurately given. Using the mean number of beds for each category, however, it can be estimated that the number of beds per resident varies from 17 in the 300 to 499 group to 22 in 200 to 299 category. A further variable in considering these rough estimates is, of course, the specialty itself; the number of beds that would be adequate for an obstetric service, for example, would be insufficient to support a program in orthopedic surgery.

On the basis of these incomplete data it appears that the number of residencies is generally in proportion to the size of the hospital. This generalization does not, of course, eliminate the possibility that in individual hospitals the resident may be "overloaded" or the hospital may have a disproportionately large resident staff. It does show, however, that there is, on the average, a reasonable number of beds per resident in the majority of hospitals approved for residency training.

RÉSUMÉ

This report on internships and residencies has presented factual information concerning internships and residencies in hospitals approved by the Council, including an analysis of nine statistical tables and two graphs. Information is also given on the activities of the review committees for internships and residencies; the National Intern Matching Program; the Essentials of an Approved Internship; stipends for interns; autopsy rates; and a brief review of the situation regarding house staff positions occupied by foreign medical school graduates and plans for evaluation of their qualifications. A short statement is included regarding the Sears Roebuck Foundation.

On Sept. 1, 1955, 6,123 intern and resident training programs were sponsored by 1,373 hospitals. Of this total number of hospitals, 171 were approved for the training of interns only, 506 were approved for the training of residents only, and 696 were approved for the training of both interns and residents. Since 1954,

there has been an increase of 5% in the number of internships offered, from 11,048 to 11,616. During the same period, there has been a similar increase of 4% in the number of approved residencies, from 25,486 to 26,516.

The percentage of intern positions filled was 83%, as compared with 82% for the year 1954. The occupancy rate for residencies was 81%, as compared with 80% for the previous year. On Sept. 1, 1955, there were 9,603 interns and 21,425 residents on duty in hospitals approved by the Council, a total of 31,028 interns and residents. Fourteen per cent of American physicians are serving as interns and residents in approved hospitals.

It is pointed out that, although the problem of evaluating the qualifications of foreign medical school graduates is presently of great importance, the plan for evaluation of the foreign physician coming to this country for further medical training is expected to become effective within a period of one year. It is anticipated that this program, when in operation, will accomplish much toward the solution of the problems of foreign-trained physicians.

The lists of approved internships and residencies are up to date as of Sept. 1, 1956. It is the sincere hope of the Council that this report will be of value and assistance to those interested in medical education at the internship and residency levels.

ANNUAL REPORT ON APPROVED TECHNICAL SCHOOLS Medical Record Librarians

Background.—In 1942, the American Association of Medical Record Librarians requested the American Medical Association to evaluate educational programs in medical record library science. The Council formulated standards that were adopted by the House of Delegates of the American Medical Association in June, 1943. Subsequent revisions in standards were made in 1945 and 1949. The first list of 10 approved schools was published in 1944.

With the work done in close collaboration with the committee on education and registration and the education director of the American Association of Medical Record Librarians, who conducts periodic surveys, training programs and new applications are reviewed and recommendatory action is submitted to the Council for final action on approval.

Significant studies in medical record library science to assist the continued development of the field have been initiated during the past year by the American Association of Medical Record Librarians.

Present Status.—At the present time there are 29 schools approved for training medical record librarians, or an increase of 4 schools since Oct. 8, 1955. The 134 students enrolled in the senior class of degree programs and in certificate programs in 1955 represented a total of 19 more students than were in training the previous year. The training capacity of the schools increased 12% to a total of 269 students during the same one-year period. Similarly, the number of graduates during 1955 was 134, which represents an encouraging increase of almost 18% over 1954.

Depending upon the students' previous education, both degree and certificate recognition are available following satisfactory completion of the required educational program in medical record library science. Among the 20 certificate programs of one year's duration, 15 require two years of college or an R.N. degree, one accepts only students with two years of college, and 4 require a degree prior to admission. Nine schools offer a four-year educational program that lead to a degree and admit qualified high school graduates. In addition there are two degree programs of 12 months' duration that admit qualified students who have completed three years of preparatory college education. Since two schools offer both degree and certificate courses, there are 20 certificates and 11 degree courses available in the 29 approved schools. Only three schools are not conducted by or in affiliation with a college or university.

The beginning dates for courses are predominately in September, several begin in the winter, and a few in June or July. Tuition ranges from \$125 to \$600, and one school requires none.

Application for approval should be made to the Council on Medical Education and Hospitals of the American Medical Association, 535 N. Dearborn St., Chicago 10. Inquiries regarding the registration of qualified medical record librarians should be addressed to the American Association of Medical Record Librarians, 510 N. Dearborn St., Chicago 10.

Medical Record Technicians

Background.—To alleviate the acute shortage of trained personnel in medical record library science, the American Association of Medical Record Librarians recommended that consideration be given to the establishment of additional training programs for students directly out of high school. In cooperation with the committee on education and registration of the American Association of Medical Record Librarians, the Council developed standards that were approved by the House of Delegates of the American Medical Association in December, 1953. These standards are prepared for the training of the medical record technician who, working under the supervision of a qualified medical record librarian or a medical record committee, performs the technical tasks associated with the maintenance and custody of medical records.

As in the case of schools for medical record librarians, the Council evaluates educational programs and new applications and surveys schools in close collaboration with the American Association of Medical Record Librarians. The training of medical record technicians should be conducted in acceptable general hospitals having a minimum of 4,000 annual admissions. These admissions should include an adequate distribution of patients in the various clinical services commonly found in general hospitals. Candidates for admission to an approved school should be proficient in typing and preferably also in shorthand. They should have completed the requirements for high school graduation or should have passed a college entrance examination for admission to an accredited college or university. The minimum length of training is nine months and should include theoretical instruction

in anatomy, medical terminology, and medical records, with additional practical training in admitting and discharge procedures, indexing, preparation of reports, and other activities associated with the medical record department.

Present Status.—There are eight schools approved by the Council for training medical records technicians. These schools report a training capacity for 50 students with an enrollment of 35 in 1955. Qualified high school graduates are accepted for courses of from 9 to 12 months' duration. There were 28 graduates in 1955.

Application for approval should be made to the Council on Medical Education and Hospitals of the American Medical Association, 535 N. Dearborn St., Chicago 10. Special forms will be supplied for this purpose, and, when the required information has been received, the proposed training program will be reviewed in collaboration with the Committee on Education and Registration of the American Association of Medical Record Librarians. The institutions applying for Council approval will, in all instances, receive full information and every possible assistance in the planning and development of training programs in accordance with present standards. There continues to be an acute shortage of qualified medical record librarians and medical record technicians. Excellent opportunities exist for graduating students. Inquiries on career opportunities and the registration of qualified medical record personnel should be addressed to the American Association of Medical Record Librarians, 510 North Dearborn St., Chicago 10.

Medical Technologists

Background.—In 1928 the American Society of Clinical Pathologists established its board of registry of medical technologists in an effort to elevate educational standards for medical technologists. Realizing the need for survey visits to schools, the society requested the Council on Medical Education and Hospitals of the American Medical Association to aid in the study of training programs in 1933. Essentials of an acceptable school were formulated by the Council with the cooperation of the society and ratified by the House of Delegates of the American Medical Association in May, 1936. The first list of 96 schools approved by the Council was published in *THE JOURNAL* on August 29, 1936.

In its efforts to assist hospitals in the development of training programs, the Council has continuously cooperated with the American Society of Clinical Pathologists, the board of schools of medical technology, and the board of registry of the society. The board of schools was established by the society in 1949 to serve in an advisory capacity to the Council in matters relating to standards and the evaluation of educational programs. Revisions of the standards occurred in 1941, 1943, 1947, 1949, and 1953. In 1956, the requirement for training in electrocardiographic technique was deleted from the curriculum in the "Essentials of an Acceptable School of Medical Technology." The Board and Council encourage that such training be continued when the pathologist-director considers it advisable.

The board of schools assists the Council in the evaluation of new applications and annual reevaluations of approved schools. A survey program is carried out by regional surveyors appointed by the board of schools. These pathologists visit all new schools and, in addition, periodically revisit approved schools. An extensive resurvey of existing educational program is actively in progress by pathologists appointed by the Board who make an invaluable contribution to the program in experience and time. The recommendations of the Board on new applications and existing schools of medical technology are submitted to the Council for its consideration.

Present Status.—There are 618 schools presently approved by the Council, or an increase of 4% over the 593 approved as of Oct. 8, 1955. This is a net increase of 25 training programs, representing 36 newly approved schools and 11 that have been discontinued or disapproved. The 1955 student enrollment has risen 17% to 2,790, as compared with the 2,384 reported for 1954. The occupancy rate in 1955 was 62% in programs having a training capacity for 4,532 students. The number of graduates continues to increase. There were 1,956 in 1954 and 2,078 in 1955. It should be noted that the increases in student enrollment, occupancy rate, and number of graduates reflects the concerted recruitment efforts of the many persons associated with the College of American Pathologists, American Society of Clinical Pathologists, American Society of Medical Technologists, and the National Committee for Careers in Medical Technology, sponsored by these organizations, as well as the recruitment activities of the faculties of approved schools and affiliated colleges and universities.

The admission requirement to an approved school of medical technology is two years of college education, including certain required courses, in a college or university accredited by a recognized association. Eighty-one per cent or 500 training programs base admission on this minimum requirement; 71 (11%) require three years of preclinical college education; and 47, or 8%, require a degree for admission.

There has been an increase in the number of hospital schools that have affiliated with colleges and universities. Such affiliations are encouraged, since they assist in the development of well-organized training programs suitably integrated with the college curriculum and also serve as a continuing source of students. A total of 423 hospital schools (68%) have established college or university affiliations. College credit is granted for the hospital training in 385 schools. If properly integrated, a degree is available upon completion of three years of college education and one year of hospital training. While the preparatory collegiate education is longer in duration, it is the hospital course that is directly concerned with the technical training of medical technologists. The hospital should assume full responsibility for the 12-month course. Active liaison with the college is recommended through regularly scheduled meetings of a jointly constituted advisory or coordinating committee. At present only 45% of schools so coordinate.

The minimum duration of the hospital course acceptable for approval is 12 months. There are now 542

schools, or 88%, providing a course of 12 months' duration. The remaining 76 schools (12%) offer programs of from 12½ to 36 months.

Tuition is required by 157 (25%) and a minimal breakage fee by 79, or 13%, of the schools. Students receive a stipend in 256 (43%). Room and board are offered in 171 (28%), board, often consisting of lunches only, in 142 (24%), and 3 schools offer room only. The remaining 297 (48%) offer neither room nor board.

There were eight states in which schools graduated 75 or more students in 1955. Table 10 presents some aspects of the educational activity in the schools of these eight states, arranged in order of number of schools.

All states, the District of Columbia, the Canal Zone, Hawaii, and Puerto Rico have approved schools.

Application for approval of a school for the training of medical technologists should be made to the Council on Medical Education and Hospitals of the American Medical Association, 535 N. Dearborn St., Chicago 10. Forms will be supplied for this purpose on request and should be completed by the director of the laboratory requesting this approval. Inquiries regarding the

TABLE 10.—*Educational Activity in Schools of Eight States Graduating Seventy-Five or More Students in 1955*

State	Schools	No. Enrollment	Capacity	Graduates

registration of qualified medical technologists should be addressed to the Board of Registry of Medical Technologists, 611 W. Howard St., Post Office Box 1209, Muncie, Ind.

Occupational Therapists

Background.—In 1933, the American Occupational Therapy Association requested the House of Delegates of the American Medical Association to undertake a survey of educational programs for occupational therapists. The Board of Trustees instructed the Council on Medical Education and Hospitals to develop standards and survey existing schools. The "Essentials of an Acceptable School of Occupational Therapy" were first published in THE JOURNAL, May 4, 1935. The first list of six approved schools appeared in 1938. The Essentials were revised in 1938 and 1949 in cooperation with the advisory groups to the Council on Medical Education and Hospitals at that time.

These groups were the Council on Physical Medicine and Rehabilitation of the American Medical Association and the American Occupational Therapy Association. In 1955, the Council on Physical Medicine and Rehabilitation became the Council on Medical Physics, and, although close liaison continues, it no longer functions in an advisory capacity on occupational therapy educational matters. New applications are reviewed by physician advisory groups and the American Occupational Therapy Association, surveys

are conducted, and recommendatory action is submitted to the Council on Medical Education and Hospitals for action.

Increased attention is being given to procedures for more frequent periodic reevaluation of existing educational programs. Joint physician-therapist survey teams are being planned in close cooperation with the American Occupational Therapy Association to assure continuing liaison with the schools. The American Occupational Therapy Association, with the assistance of other organizations, has foresightedly initiated conferences and basic studies with which to better plan for the needed expansion in the field.

Present Status.—There are currently 30 schools approved by the Council for training occupational therapists. Since the U. S. Army occupational therapy course has been put on a stand-by basis and is not listed as an active program, there were 29 schools accepting students in 1955. All data are based on reports from the 29 active schools. These institutions reported 1955 enrollments as follows: senior class degree (460); postdegree certificate (134); nondegree certificate (5); master's degree (19); and 477 students in their clinical year. Student capacity for these several courses is 731 for the senior class degree, 235 for the postdegree and nondegree certificate, approximately 72 for the master's degree, and not limited in the clinical year. It is encouraging to note that the total enrollment of 618 and a student capacity of more than 1,038, exclusive of the clinical year, reflect gradual but continuing increases in the number of students in training and the training potential of these 29 approved schools. Graduates numbered 551 as compared with 489 in 1954 which continues the upward trend over the past several years. It should be noted that three schools in the process of reorganization or organized within the past several years reported no graduates but can be expected to graduate students in the near future.

Both certificate and degree recognition are available in occupational therapy, depending upon the type and integration of the student's preparatory collegiate training prior to his entering the professional curriculum. Certificate programs, generally of 18-24 months' duration, are offered by 19 schools that, in all but one instance, require a degree for admission. Educational programs of four to five years that lead to a degree are available in 23 schools that will admit qualified high school graduates. Four schools offer degree programs of approximately two years' duration to qualified applicants with two years of preparatory collegiate education. Interested undergraduate students are encouraged to contact individual schools, however, to determine the specific requirements of a given school for admission to its certificate or degree course in occupational therapy. Tuition varies in accord with university fees. The majority of courses begin in February and September.

Application by schools for approval of an educational program in occupational therapy should be made to the Council on Medical Education and Hospitals of the American Medical Association, 535 N. Dearborn St., Chicago 10. Forms will be supplied for this purpose on request. They should be completed

by the administrator of the institution requesting approval. Inquiries regarding career opportunities in the field of occupational therapy and the registration of qualified therapists should be addressed to the American Occupational Therapy Association, 250 W. 57th St., New York 19.

Physical Therapists

Background.—From 1928 to 1936 the approval of educational programs in this field was sponsored by the American Physical Therapy Association. On request of that association, the Council developed standards that were adopted by the House of Delegates and published with the first list of approved schools in 1936. The Council, in cooperation with its advisory groups, the Council on Physical Medicine and Rehabilitation of the American Medical Association and the American Physical Therapy Association, has periodically submitted revised standards to the House of Delegates, which were adopted in 1943, 1949, and 1955. The most recent revision is the result of four years of intensive discussion and study. In 1955, the Council on Physical Medicine and Rehabilitation became the Council on Medical Physics, with which there continues close liaison on matters pertaining to physical therapy but which no longer functions in an advisory capacity on physical therapy education. Applications of new schools are reviewed in collaboration with two groups, the recently appointed Advisory Committee on Physical Therapy Education of the Council on Medical Education and Hospitals, and the American Physical Therapy Association. The Advisory Committee on Physical Therapy Education consists of nine physician members representing the fields of physical medicine and rehabilitation, orthopedic surgery, psychiatry and neurology, internal medicine, pediatrics, general surgery, and medical education. In addition, there are three physical therapists, two nominated by the American Physical Therapy Association and one nominated by the American Registry of Physical Therapists. Surveys of new and existing schools are conducted by joint physician-therapist teams and recommendatory action submitted by the advisory groups to the Council for action. Active liaison with the medical directors, therapist educational administrators, and other members of the teaching faculties in approved schools is being implemented through more frequent periodic surveys.

Present Status.—There are, at present, 37 schools approved by the Council for training physical therapists, or an additional two schools since Oct. 8, 1955. The student training capacity for the senior class of degree programs and in certificate programs was 1,068 on the basis of 1955 annual reports. In addition, there was an estimated training capacity for at least 86 master's degree students. The 1955 enrollment for senior degree and certificate students was 748 students, or 70% occupancy. Intensive recruitment continues the upward trend in enrollment noted over the past several years. The number of degree and certificate graduates has increased significantly to 710, as compared to 609 in 1954. Unfortunately, data are not available on the increasing number of graduates in the master's degree programs offered in nine schools.

Certificate and/or degree recognition in physical therapy is available depending upon the students' preparatory education prior to entering the professional curriculum. Most schools offer both degree and certificate programs, although seven offer only the certificate program and seven others only the degree program.

Certificate programs in 30 schools vary in length from 12 to 34 months and admit students with two or more years of college or those who have graduated from a nationally accredited school of nursing after a three-year course. Many of the 30 degree programs of four years' duration admit qualified students directly out of high school. Degree recognition in physical therapy is offered to qualified students with two to three years of collegiate education upon satisfactory completion of degree programs of shorter duration. Since admission requirements vary in individual schools, interested high school students and those with two or more years of college or who have graduated from a nationally accredited professional school of nursing should contact the individual school of their choice for specific requirements. The tuition in all teaching centers closely parallels college fees. Most courses begin in February or early fall.

Application for approval should be made to the Council on Medical Education and Hospitals of the American Medical Association, 535 N. Dearborn St., Chicago 10. Forms will be supplied for this purpose on request. They should be completed by the administrator of the institution requesting this approval. Inquiries regarding voluntary registration of qualified therapists should be addressed to the American Registry of Physical Therapists, 30 N. Michigan Ave., Chicago 2. Information on requirements for state registration or licensure is available from the Board of Examiners of the states concerned. Inquiries regarding careers in the field of physical therapy should be addressed to the American Physical Therapy Association, 1790 Broadway, New York 19.

X-Ray Technicians

Background.—Prior to 1944, the approval of schools of x-ray technology had been carried on as a function of the American Registry of X-Ray Technicians. In 1943, the Council on Medical Education and Hospitals of the American Medical Association undertook the evaluation of educational programs for x-ray technicians at the request of the registry, which is sponsored by the American College of Radiology and the American Society of X-Ray Technicians. With the assistance of the college and the registry, standards were developed and adopted by the House of Delegates of the American Medical Association in June, 1944, and December, 1955. The most recent revision of the standards has been developed in close cooperation with the advisory groups and incorporates a suggested basic curriculum, which is presented as a guide. Particularly encouraged is progressive training in therapy to afford students at least one month's practical experience intramurally or through affiliation.

The Council has been ably assisted by the American College of Radiology, the American Registry of X-Ray Technicians, and the American Society of X-Ray Technicians. Schools making application for approval are surveyed by state and regional councilors appointed by the American College of Radiology. Approved schools are also periodically resurveyed by radiologists appointed by the college, and these radiologists are currently revisiting approved schools. Their generous contribution of time and experience are a major asset in the program. All data are reviewed by the advisory committee to the American Society of X-Ray Technicians of the American College of Radiology and recommendations submitted to the Council for consideration.

Present Status.—At present there are 456 schools approved by the Council on Medical Education and Hospitals for training x-ray technicians. This represents a net increase of 34 schools, or an increase of 8% over the number approved as of Oct. 8, 1955. There has been a 307% increase in the number of approved schools since the first published list of 112 in 1945. Enrollment has increased 302, or 12%, to a total of 2,915 students during the last year, in which total training capacity has risen to 3,555 from 3,184, or an increase of 11%. The number of graduates in 1955 was 1,822 as compared with 1,523 in 1945, a 20% increase.

The minimum admission requirement is high school graduation or the passing of a standard equivalency test. A total of 433 schools (95%) admit students directly out of high school, 13 schools (3%) require one year of college, 9 schools (2%) require two years of college, and one school accepts only R.N.'s. Of the above 456 schools, 3 will accept an applicant with either an R.N. or two years of college and, as noted, one school accepts R.N.'s only.

The length of training in 241 (53%) is 24 months, 12 months in 144 (32%), 18 months in 69, or 15%, and 36 months in two schools. Tuition is required by 172 (38%) of approved schools and 60% pay students a stipend. There are collegiate affiliations established in 168 schools (37%). College credit is granted for training satisfactorily completed in the hospital training program in 14%, or 66 schools.

There are 40 approved schools in Illinois, 34 in Pennsylvania, 29 in Ohio, 25 in Texas, 24 in California, 21 in Michigan, 20 in New York, 19 in Missouri, 18 in Massachusetts, 16 each in Minnesota and Wisconsin, and 12 or fewer in all but one of the remaining states, the District of Columbia, and Hawaii. One state does not have a school.

Applications for approval of schools of x-ray technology should be submitted to the Council on Medical Education and Hospitals of the American Medical Association, 535 N. Dearborn St., Chicago 10. Inquiries regarding registration of qualified x-ray technicians should be addressed to the American Registry of X-Ray Technicians, Metropolitan Building, Minneapolis 1.

APPROVED INTERNSHIPS

Council on Medical Education and Hospitals of the American Medical Association
535 North Dearborn Street, Chicago 10

Revised to September 1, 1956

HOSPITALS, 862, INTERNSHIPS, 12,013

The following general hospitals, investigated and approved by the Council on Medical Education and Hospitals, are considered in position to furnish acceptable intern training in accordance with standards adopted by the American Medical Association. Three types of internships are approved by the Council—rotating, mixed, and straight:

1. A rotating internship is defined as one that provides supervised experience in internal medicine, surgery, pediatrics, obstetrics, and their related subspecialties, together with experience in laboratory and radiologic diagnosis.
2. A mixed internship is defined as one that provides supervised experience in two or more, but not in all, of the clinical divisions named.
3. A straight internship is defined as one that provides supervised experience in a single department, although it may include limited opportunity for work in a related subspecialty. Straight internships are now approved in internal medicine, surgery, pediatrics and pathology.

Hospitals approved for internships that are used by medical schools for undergraduate clinical clerkships on inpatient services have been identified in the following lists by the symbols X and x. Hospitals have been identified with symbol X when a medical school has indicated that the hospital is a major unit in the school's teaching program. Hospitals have been identified with the symbol x when a medical school has indicated that the hospital is used to a limited extent in the school's teaching program. Certain internships in hospitals designated as teaching hospitals may not provide for assignments to teaching services. Other internships may provide for only a portion of the internship period being spent on teaching services. Prospective interns desiring specific information concerning internship assignments to teaching services in a hospital are advised to communicate with the dean of the medical school with which the hospital is affiliated. Medical school affiliations are indicated by footnotes 10 to 89 placed immediately after the symbol X or x. The list of medical schools appears on page 312. The plus (+) sign indicates additional approval for residencies in specialties, as shown in the Council's list of Approved Residencies and Fellowships. The beginning stipends for Federal hospitals have not been listed; they are established in accordance with government pay tables. When applying for internships in Air Force, Army, Navy or Public Health Service hospitals, applications should be directed to the medical departments of the Air Force, Army, Navy, or the United States Public Health Service and not to the individual hospitals. Although applications are made to the service rather than to the individual hospitals, all of the services ask students to list three hospitals in order of preference. Every possible effort is made to place successful candidates in accordance with their desires. Because of the needs of the service it should be understood that students may, in some instances, be assigned to other hospitals than those for which they have indicated a preference.

Hospitals listed below (pages 291 to 311) make first year internship appointments through the National Intern Matching Program, Inc. The number and type of internships as listed represent appointments for the intern year 1957-1958.

Hospitals designated with an asterisk (*) in this listing do not participate in the National Intern Matching Program, sponsored by the American Medical Association, the American Hospital Association, the Association of American Medical Colleges, and other cooperating organizations. Abbreviations and other references will be found on pages 312 and 313.

HOSPITALS APPROVED FOR INTERNSHIPS IN THE DOMINION OF CANADA

The following list of hospitals that conform to the standards of the Canadian Medical Association is published for the information of graduates interested in an internship appointment in a Canadian hospital. Hospitals that are unqualifiedly approved as conforming to the standards of the Canadian Medical Association may be considered as offering internships equivalent in educational value to those in hospitals approved for intern training by the Council.

This list, revised to Sept. 1, 1955, was furnished by the Canadian Medical Association. (Sept. 1, 1956, revision not yet available.)

Name of Hospital	Location	Name of Hospital	Location	Name of Hospital	Location
St. John's General Hospital	St. John's, Nfld.	Sherbrooke Hospital	Sherbrooke, Que.	Grace Hospital	Windsor, Ont.
Camp Hill Hospital	Halifax, N. S.	Hospital General de Verdun	Verdun, Que.	Hotel Dieu de St. Joseph	Windsor, Ont.

APPROVED RESIDENCIES AND FELLOWSHIPS

Council on Medical Education and Hospitals of the American Medical Association

535 North Dearborn Street, Chicago 10

Revised to September 1, 1956

Hospitals, 1,211; Assistant Residencies and Fellowships, 27,835

The following services are approved by the Council on Medical Education and Hospitals as meeting the requirements of the Essentials of Approved Residencies and Fellowships. In those specialties in which certifying boards have been established approval is extended in concurrence with the Board concerned as indicated. The number of years of training for which approval as been granted is indicated in the column, "Length of Approved Program (years)." Residencies in which this designation does not appear have been approved without specifying the number of years for which they are accredited. The beginning stipends for Federal hospitals have not been listed; they are established in accordance with government pay tables.

INDEX TO LIST

12. NEUROLOGY

Residency programs in the following hospitals have been approved for THREE years of training by the Council and the American Board of Psychiatry and Neurology, through the Residency Review Committee for Psychiatry and Neurology, as offering acceptable training in the specialty.

Applicants intending to qualify for examination by the American Board of Psychiatry and Neurology, Inc., should refer to the Board requirements that the candidate have had at least two of the three years of his training in a program approved at the two or three year level—see summary of requirements, American Board of Psychiatry and Neurology, Inc., page 410.

Residency programs in the following hospitals have been approved by the Council and the American Board of Ophthalmology through the Residency Review Committee for Ophthalmology, as offering training of ONE year's duration. It should be noted that beginning July 1, 1957 only those hospitals which either intramurally or through affiliation are able to provide at least two years of clinical training in the specialty, will continue to be approved. These residency programs will be reviewed prior to July 1, 1957 relative to their qualifying for continued approval.

15. ORTHOPEDIC SURGERY

Type of training acceptable to Board: A—Adult orthopedics; C—Children's orthopedics; F—Fractures. Residency programs in the following hospitals have been approved by the Council and the American Board of Orthopedic Surgery, through the Residency Review Committee for Orthopedic Surgery, as offering acceptable training in adult orthopedics, children's orthopedics, and fractures. Training in the basic sciences is given either as an integral part of these services or as a separate course. Services collaborating in an integral plan of training are designated by a program number, a list of which is found on pages 349 and 350. Residents completing their training in these hospitals are eligible for full certification by the American Board of Orthopedic Surgery, including children's orthopedic surgery.

Residency programs in the following hospitals have been approved by the Council and the American Board of Orthopedic Surgery, through the Residency Review Committee for Orthopedic Surgery, as offering acceptable training in adult orthopedics and fractures. Training in the basic sciences is given as an integral part of these services or as a separate course. Services collaborating in an integral plan of training are designated by a program number, a list of which is found on pages 349 and 350.

Residents completing their training in these hospitals are eligible for limited certification by the American Board of Orthopedic Surgery, not to include children's orthopedic surgery.

17. PATHOLOGY

Residency programs in the following hospitals have been approved by the Council and the American Board of Pathology. Services which have been evaluated on the basis of training in the two categories, pathologic anatomy and clinical pathology, are designated as follows: a—pathologic anatomy only; c—clinical pathology only; p—pathologic anatomy and clinical pathology. Training in hospitals which are not so designated in this list will be evaluated by the Board on an individual basis at the time of application for certification.

			Clark-Skumania	90,600*	..
			Tacoma-Pierce	301,700*	..

* Estimated.

(a) Excludes Alameda, Berkeley, and Oakland cities with full-time health officers, and Albany with part-time officer.

(b) Excludes the city of Wilmington.

(c) To those planning to work in state; transportation costs only to others.

(d) Excludes Berwyn, Chicago, Evanston, Oak Park, Stickney Township, and Winnetka (including Glencoe, Kenilworth, Northbrook, and remainder of New Trier Township), all with full-time health officers.

(e) Assistance can be arranged for securing the MPH degree in the midst of, or after completion of, residency experience. Appointments normally are limited to those training for service in Illinois.

(f) Arrangements for remuneration made on an individual basis.

(g) Arrangements for remuneration made upon determination of field of interest and location desired.

(h) Training is given in a combination of one county, one union health, and seven municipal health departments and in the divisions of the State Department of Health.

(i) Assistance can be arranged for securing the MPH degree after successful completion of residency experience. Appointments will be limited to those training for service in Oregon.

(j) Excludes Detroit and Dearborn, each with full-time health officers.

(k) To those training for service in Minnesota only.

(l) Training is given in any one of 10 city health departments, 16 county health departments, or 15 district offices within the state.

(m) Training to be with Michigan Department of Health, with field experience in local health departments.

(n) Includes training at Montefiore Hospital.

22. PROCTOLOGY

Residency programs in the following hospitals have been approved by the Council and the American Board of Proctology, through the Residency Review Committee for Proctology, as offering acceptable training in the specialty.

25. RADIOLOGY

Residency programs in the following hospitals have been approved by the Council and the American Board of Radiology, through the Residency Review Committee for Radiology. As indicated in the column "Type of Training," approval has been extended in diagnostic roentgenology (D.R.); roentgenology (Roent.), including diagnostic and therapeutic; therapeutic radiology (Ther. Rad.); and Radiology (Rad.), including roentgenology and therapeutic radiology. After June 30, 1957, the Residency Review Committee for Radiology will not approve services which are not part of programs providing full training in all branches of the specialty. Some of the programs listed below as approved in limited fields do, through affiliation, offer three years of training in Radiology. This listing is now being revised. Until the revised list is published, prospective applicants are advised to correspond directly with the individual hospitals relative to affiliate training.

Hospitals, 414; Assistant Residencies and Residencies, 1,672

28. UROLOGY

Residency programs in the following hospitals have been approved by the Council and the American Board of Urology, through the Residency Review Committee for Urology, as offering training of three years', two years' or one year's duration. It should be noted that beginning July 1, 1957 only those hospitals which, either intramurally or through affiliation, are able to provide full training in the specialty will continue to be approved. Those hospitals which have residency programs approved for one or two years of training will be reviewed prior to July 1, 1957 relative to their qualifying for continued approval.

NUMERICAL AND OTHER REFERENCES

1. Appointments available to women applicants.
2. Appointments available to women applicants only.
3. Appointments available to graduates of foreign medical schools. Many of the hospitals which have indicated that they will accept graduates of medical schools outside the United States and Canada have special requirements that must be met before appointment is made, such as requirement of United States citizenship as a prerequisite for appointment to residency positions in federal hospitals. Details of these requirements can be secured directly from the hospitals concerned. It is also suggested that applicants from foreign schools communicate with the secretary of the appropriate state board of medical examiners regarding licensure requirements.
8. Includes fellowships.
9. Hospitals which through affiliations approved by the Residency Review Committee for Radiology offer complete three years of training in Radiology.

APPROVED EXAMINING BOARDS IN MEDICAL SPECIALTIES

ADVISORY BOARD FOR MEDICAL SPECIALTIES

B. R. Kirklin, Secretary-Treasurer
Rochester, Minn.

(Upon the recommendation of the Liaison Committee of the Council on Medical Education and Hospitals and the Advisory Board for Medical Specialties, the Council publishes herewith the pertinent changes made by specialty boards in the previous year, including the membership of each board. The complete requirements for certification by each specialty board were published in THE JOURNAL of the American Medical Association, [159:441-483 (Oct. 1) 1955]. Reference is made following the membership of each specialty board to this issue of THE JOURNAL. The Liaison Committee considered it advisable that a résumé of the Advisory Board for Medical Specialties be published, including the names of its members and their organization affiliation.)

The Advisory Board for Medical Specialties was organized in 1933-1934 to coordinate graduate medical education and certification of medical specialists in the United States and Canada. A few specialty boards had been functioning actively and successfully for a number of years prior to the organization of the Advisory Board for Medical Specialties. Their purposes were, primarily, to establish minimum standards of graduate education and training requirements for physicians representing themselves to the public as being specialists, with certification by the boards of candidates after they had been able successfully to pass the boards' examinations. Secondly, these boards hoped to improve the general standards of graduate medical education and facilities for special training.

It was soon recognized that some formal and official plan of organization must be established. It was clearly essential that an examining board must have the official sanction of the national societies in its given specialty as well as that of its section of the American Medical Association, but there was, at that time, nothing to prevent unofficial groups from organizing examining boards and using the title American board. In order to avoid duplication of effort as well as to coordinate the work of the several boards and other interested groups into a concise and homogenous plan for betterment, it was deemed advisable to create an advisory board to give consideration to those problems common to all and to represent all organizations concerned.

The Advisory Board is composed of two representatives from each of the approved examining boards in the medical specialties and such other national organizations as are interested in the education, examination, and certification of medical specialists. These representatives are duly elected to this body.

The number of organizations comprising the Advisory Board for Medical Specialties remains the same; namely, 18 specialty boards and 4 other organizations interested in graduate medical education. The total voting membership is still 44. The organizations and their representatives are as follows:

CURRENT MEMBERSHIP IN THE ADVISORY BOARD FOR MEDICAL SPECIALTIES 1956-1957

The Association of American Medical Colleges

JOHN B. YOUMANS STANLEY E. DORST

The American Hospital Association

ALBERT W. SNOKE ROBIN C. BUERKI

The Federation of State Medical Boards of the U. S. A.

REPRESENTATIVES OF THE ADVISORY COUNCIL ON MEDICAL EDUCATION

ERNEST L. STEBBINS, American Board of Preventive Medicine

FREDERICK A. FIGI, American Board of Plastic Surgery

Examining and certifying boards in 19 specialties have been approved by the Council on Medical Education and Hospitals of the American Medical Association and the Advisory Board for Medical Specialties on the basis of minimal standards governing accreditation of specialty boards as formulated by the Council.

The primary purposes of the boards are (1) to conduct investigations and examinations to determine the competence of voluntary candidates for certificates issued by the respective boards, (2) to grant and issue certificates of qualification to candidates successful in demonstrating their proficiency, (3) to stimulate the development of adequate training facilities, (4) to aid in evaluating residencies and fellowships under consideration by the Council on Medical Education and Hospitals of the American Medical Association, and (5) to advise physicians desiring certification as to the course of study and training to be pursued.

The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, or a license to practice medicine or a specialty. The boards do not purport in any way to interfere with or limit the professional activities of any licensed physician, nor do they desire to interfere with any practitioners of medicine in any of their regular or legitimate duties.

Two boards certify candidates in subspecialties. The American Board of Internal Medicine certifies in allergy, cardiovascular disease, gastroenterology, and pulmonary diseases. The American Board of Pediatrics certifies in allergy. Certification in the primary field is a requirement for certification in the subspecialties. The Board of Thoracic Surgery, which is organized as an affiliate board of the American Board of Surgery, requires certification in surgery as a prerequisite to certification in thoracic surgery.

Certificates in special divisions of their specialty are conferred by six boards. The American Board of Obstetrics and Gynecology will issue certificates in obstetrics or gynecology only. The American Board of Otolaryngology grants a limited certificate in endoscopy. The American Board of Pathology issues certificates in pathological anatomy, clinical pathology, a combination of these two fields, pathological anatomy and clinical microbiology, clinical microbiology and clinical chemistry, clinical bacteriology, neuropathology, clinical microbiology, hematology, and clinical chemistry. The American Board of Preventive Medicine issues certificates in public health, aviation medicine, and occupational medicine. The American Board of Psychiatry and Neurology issues separate certificates in psychiatry and in neurology, or a combined certificate for those qualified in both fields. This board also issues supplementary certificates in psychiatry and in neurology. The American Board of Radiology issues certificates in radiology, roentgenology, therapeutic radiology, diagnostic roentgenology, therapeutic roentgenology, radium therapy, radiological physics, x-ray and radium physics, and medical nuclear physics.

Each of the boards has published a booklet containing a list of its officers and a brief statement of its organization, purposes, and the qualifications that determine eligibility for certification. The major changes necessary to bring the requirements, as published in THE JOURNAL (159:441-483 [Oct. 1] 1955), up to date are specified for each specialty board.

There is included in this section a specific statement from each of the boards regarding allowances of credit for service in the armed forces.

Table 1 contains a list of the approved specialty boards, the year of activation, and the total number of candidates certified to June 30, 1956. Data are also presented regarding the number of physicians certified in the subspecialties and those granted special certification by the boards in obstetrics and gynecology, otolaryngology, pathology, preventive medicine, psychiatry and neurology, and radiology.

A total of 60,644 physicians were reported certified by the 19 specialty boards on July 1, 1955. During the period July 1, 1955 through June 30, 1956, 3,083 certificates were issued, bringing the total to 63,727 physicians who have been certified as of June 30, 1956.

During the past year, 76 physicians were certified in the subspecialties, bringing the total to 1,423.

Table 2 indicates the number of physicians certified each year for the past 15 years by all specialty boards. The total number certified on June 30, 1956 is 63,727.

The seventh edition of the "Directory of Medical Specialists," compiled by the Advisory Board for Medical Specialties and pub-

* Independent Board established in 1949.

lished in 1955 by the A. N. Marquis Company, Chicago, contains biographic information on the educational background of each living specialist, including those retired from practice, certified by an American board.

Credit for Military Service

At the suggestion of the Joint Committee on Medical Education in Time of National Emergency, the Advisory Board for Medical Specialties conducted a survey to determine the amount of credit for service in the armed forces that would be given toward specialty board certification. The inquiry addressed to the boards contained the following questions:

Will your specialty board give preference to those candidates wishing to be examined before going overseas or entering military service?

How much, if any, credit toward your training and/or experience requirements will your board allow candidates while in military service?

In reply to the first question all boards answered in the affirmative. The specialty boards have not lowered their requirements because of military emergency, but all boards except one have indicated they will grant some credit for military service. The specialty boards have indicated such allowances as follows:

TABLE 2.—Annual Specialty Board Certification, 1941-1956

Year (Ended March)	No. of Boards In Existence	No. Certified	Cumulated Totals
1941	15	2,085	17,938
1942	15	1,756	19,694
1943	15	2,172	21,866
1944	15	1,578	23,444
1945	15	1,308	24,752

1953 (June 30)	19	4,022	52,486
1954 (June 30)	19	4,133	56,619
1955 (June 30)	19	3,843	60,644
1956 (June 30)	19	3,083	63,727

* One board, the American Board of Proctology, did not certify any candidates during this period.

Anesthesiology.—No formal training credit is granted for military service unless the physician is assigned to a service hospital with an approved residency training program. Practice time will, however, be granted for military service if the physician is assigned to the anesthesiology service.

Dermatology.—Students in training who have served as physicians in the Army, Navy, or U. S. Public Health Service may submit a supplementary application, obtainable from the executive secretary, for possible credit toward experience. This application is not obligatory, but if submitted it must be done prior to or at the time of filing application for examination. It will not be considered until the preliminary registration has been filed. Since the application must be circulated through a committee whose members may be widely separated, several months are often required for a decision. Full-time dermatological military service may be credited in some part toward training, at the discretion of the board, provided it was under the direct supervision of a recognized specialist and provided a significant portion of approved training was completed before the service concerned. The board strongly urges that the candidate supplement his military service by further approved dermatological training before examination. Medical service in the armed forces not credited as training may be credited in part toward the two years of additional dermatological experience required for certification, the amount of credit depending on the circumstances.

Internal Medicine.—Active duty as a commissioned officer in the armed forces of the United States from June 1, 1950, to July 1, 1954, may be applied as one year of residency credit or one year of practice credit regardless of assignment. Service beyond one year during this interval may only be applied as practice credit on certification by former chiefs of service that assignments of candidates were in the field of internal medicine on a full-time basis in the care of clinical patients largely on their own responsibility. Active duty in the armed forces as a commissioned officer after July 1, 1954, may not be applied as residency credit

unless the candidate has served officially as a resident in a hospital approved for residency training by the Council on Medical Education in internal medicine or in the medical subspecialties recognized by this board. Active duty in the armed forces as a commissioned officer after July 1, 1954, may be applied as practice credit for one year or more on certification by present or former chiefs of service that assignments were in the field of internal medicine on a full-time basis, in the care of clinical patients largely on one's own responsibility. The requirements governing residency credit and practice credit for active duty in the armed forces from Dec. 8, 1941, to Jan. 1, 1947, will remain the same as those governing credit from June 1, 1950, to July 1, 1954, as outlined above.

Neurological Surgery.—The board makes no specific statement regarding military service. This matter is taken up individually with each applicant.

Obstetrics and Gynecology.—Credit will be given for time spent in an obstetric-gynecologic service in an Army or a Navy hospital under supervision on the same basis as a preceptorship, if these departments are supervised by diplomates of the board or recognized obstetricians-gynecologists. Full residency credit may be obtained if such hospital is approved for residency training. The board will review and give consideration to each individual case. Special request must be made for such credits.

Ophthalmology.—No stated credit. Each case is decided according to the time the candidate has spent assigned to a military hospital in ophthalmology and on other factors.

Orthopedic Surgery.—Up to one year of residency credit is given. Each case is determined on its own merits.

Otolaryngology.—Credit is given, but each case is determined on its own merits.

Pathology.—Allows liberal credit toward training when assigned to department of pathology, but candidates must first have had a minimum of one year residency in an approved civilian department of pathology.

Pediatrics.—One year of credit, regardless of assignment, toward two-year practice requirement.

Physical Medicine and Rehabilitation.—Credit is given, but each case is determined on its own merits.

Plastic Surgery.—Credit is given on individual basis, considered on candidate's merits.

Preventive Medicine.—Credit for training and experience in public health or aviation medicine while in military service will be considered on an individual basis, depending on the type of service.

Proctology.—At present no credit is granted for military service.

Psychiatry and Neurology.—For military duty after Jan. 1, 1954, only experience credit will be granted for full-time psychiatric and/or neurological duties. Training credit will be granted for residency assignments in regularly approved training programs.

Radiology.—Maximum of one year's credit if assigned to full time radiological duties.

Surgery.—If a candidate has served in a government hospital or hospitals fully approved for residency training, such training will be acceptable to the board. Military credit may be extended to those candidates who have served in nonapproved hospitals provided that the candidate has had a satisfactory surgical assignment with adequate and diversified clinical material and provided further that his work in surgery is carried out under the supervision of a surgeon acceptable to the board. Any credit extended in the latter category will be considered preceptorship credit and not residency credit.

Thoracic Surgery.—Credit for military service will be decided on an individual basis.

Urology.—No credit for training but credit for one year of practice requirement if training was complete when entering service.

Medical Officer's Professional Training Record.—The surgeons general of the armed services have distributed a booklet prepared with the assistance of the Council and the Advisory Board for Medical Specialties that is designed to help prospective candidates for certification to maintain an accurate account of work done in the military service. This record will constitute part of the credentials to be submitted to the board on application for certification. The booklet has been printed by the Office of the Secretary of Defense and is distributed by the offices of the surgeons general to the personnel of their departments. It is highly

important that prospective applicants obtain a copy of the "Medical Officer's Professional Training Record" and that they submit their credentials for evaluation by the respective specialty board.

The major changes in requirements for certification are under Certification, paragraph 2: Requirements: Substitute following (1) and (2) under A:

2. Requirements

A. Each applicant, before he shall become eligible for certification in anesthesiology, must:

1. Have graduated from an approved medical school in the United States or Canada or have successfully completed the examinations of the National Board of Medical Examiners. Applicants must have completed an internship of not less than one year in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association, or its equivalent. Graduates of class B medical schools are not eligible to take the board examinations.

2. Establish in a manner satisfactory to the board that (a) he is a physician duly licensed by law to practice medicine, (b) he is of high ethical and professional standing, and (c) he has received adequate special training in anesthesiology.

Under Certification, paragraph 3, Examinations, Insert following paragraph B:

The expense of surveying and/or giving practical examinations outside of the United States will be borne by the candidate. The approximate amount of such funds to be paid by the candidate will be determined by the Secretary and must be paid in United States currency to the American Board of Anesthesiology in advance.

The major changes in requirements for certification are

CHANGE IN INSTITUTIONAL STATUS

ADD: (With change of directorship of dermatological training, reapplication for approval is necessary before the institution is appraised by the joint Residency Review Committee for Dermatology.)

PRECEPTORS

ADD: Applications for preceptorship are submitted with the "Plan of Supervised Work" form. Approved preceptors, in conjunction with the director of training of the institution in which the candidate spends half his training time, submit an "Annual Graduate Training" form on each trainee. The preceptee files a "Preceptorship Evaluation" form following this training.

The major changes in requirements for certification are

PREREQUISITES

(Applicable to applicants who start residencies in ophthalmology after Dec. 31, 1956.)

Individuals who have completed three years of formal ophthalmological training (residency and basic science courses) may apply for the written qualifying test after completion of 12 months of practice or 12 months of institutional work, a total of 48 months. All other individuals (with less formal training) may apply for the written test after 60 months in ophthalmology or 72 months of combined ophthalmology and otolaryngology. A basic course is recognized as equivalent in time to residency training. All time requirements must be completed by the date of the written test.

GENERAL REQUIREMENTS FOR ALL CANDIDATES

Substitute following for No. 7:

7. Licensure in the state, province, or country where the candidate practices

FEEES

For original written test, \$100 payable with application.
 For original clinical examination, \$50 payable on successful completion of the written.
 Repeating written test, \$65.
 Repeating clinical examination, \$65.
 Single conditions, \$25.
 Two or more conditions, \$35.

AMERICAN BOARD OF ORTHOPAEDIC SURGERY

DONALD E. KING, San Francisco, President
 WILLIMA M. ROBERTS, Gastonia, N. C., Vice-President

Advisory Council to the Board

WILLIAM T. GREEN, Boston
 HUGH SMITH, Memphis, Tenn.
 FRANCIS M. MCKEEVER, Los Angeles
 HAROLD A. SOFIELD, Oak Park, Ill.

REFERENCE: J. A. M. A. 159:459-461 (Oct. 1) 1955.

The major requirement changes for certification are

REQUIREMENTS OF PRECEPTORSHIP TRAINING

1. Candidates in preceptorship training, or possessing signed contracts prior to Jan. 1, 1957, will receive training credit for the entire period during which their contracts are in force. No new contracts will be accepted by the board for preceptorship training after Jan. 1, 1957.

4. Deleted: "If facilities and instruction in the related basic sciences are not available, the candidate must spend a minimum of six months as a student in an institution approved for basic science training in orthopaedic surgery."

5. Deleted: "The candidate must train as a full-time assistant to the preceptor and may not maintain a separate office or engage in individual practice."

MILITARY SERVICE

3. "Applicants who served in military hospitals not approved by the Council for resident orthopaedic training whose service is judged by the board to have been equal to that of approved resident orthopaedic training may be granted a maximum of one year of resident orthopaedic training."

4. No applicant may be granted more than one year of resident training credit for military service in installations not approved by the Council for resident orthopaedic training.

AMERICAN BOARD OF OTOLARYNGOLOGY

GENERAL REQUIREMENTS

The following requirement is deleted: 1. A candidate must be a citizen of the United States or the Dominion of Canada.

REEXAMINATION

Candidates who have failed in the examination may be accepted for reexamination upon recommendation of the Credentials Committee. Satisfactory evidence of further study and progress will be required. A new application must be filed. The fee for reexamination for such candidate is \$150.

AMERICAN BOARD OF PATHOLOGY

SHIELDS WARREN, Boston, President
 WILLIAM B. WARTMAN, Chicago, Vice-President
 ROGER D. BAKER, Durham, N. C.

SPECIAL REQUIREMENTS IN PUBLIC HEALTH

1. Successful completion (after internship) of at least one academic year of graduate study leading to the degree of Master of Public Health or an equivalent degree or diploma; or training or study deemed by the board to be substantially equivalent to such graduate study.

2. Residency (after internship) of at least two years of field experience in general public health practice, which included planned instruction, observation, and active participation in a comprehensive, organized public health program, one year of which may be an approved clinical residency in a field directly related to public health.

3. A period (after internship) of not less than three years, in addition to 1 and 2 above, of special training in or teaching or practice of public health.

4. Limitation of practice to full-time teaching or practice of public health as a specialty.

The major changes in requirements for certification are

Special Professional Qualifications.—They shall have completed:

2. Three years of approved general surgical residency and one year of approved proctologic residency by special arrangement with the board; or

3. Three years of approved general surgical residency and two years of approved proctologic precepteeship by special arrangements with the board; or

4. Two years of approved general surgical residency and three years of approved proctologic precepteeship.

EXAMINATIONS

Seventy-five per cent is the passing grade on all examinations. Examination papers are identified only by numbers and the examiners do not know the identity of the examinees.

Part 1.—This consists of a comprehensive written examination in the basic sciences, including anatomy, physiology, pathology, bacteriology, and biochemistry. The examination is held in the fall of the year simultaneously in several cities of the United States. Upon approval of the American Board of Proctology, candidates who have passed part 1 of the examinations of the American Board of Surgery and who have completed required training in proctology may not be required to take part 1 of the examinations of the American Board of Proctology.

Part 2.—This is a practical examination that is held in the community in which the candidate conducts his professional activities. (It may be omitted at the discretion of the board, in which case the candidate will be notified by the secretary.) It is

endeavored to arrange the examination at a time suitable to both the candidate and the examiner. The examination includes inspection of: 1. surgical operations, 2. hospital rounds, 3. hospital and office records, 4. office practice.

Part 3.—This consists of comprehensive written and oral examinations on the theory and practice of proctology, and includes roentgenologic interpretation. The examination is usually held in the fall of the year in one designated city of the United States. The candidate is not admitted to part 3 of the examinations until he has completed the requirements of part 2. The oral portion of the examination is conducted by members of the board or its designated examiners. An attempt is made to ascertain the candidate's knowledge of current proctologic literature, his knowledge of the basic sciences, and the extent of his clinical experience and other qualifications.

REEXAMINATION

A candidate who fails may be reexamined after one year has elapsed. The act of filing an application for reexamination is the candidate's responsibility. Candidates who have failed a reexamination may petition the board for another examination after two years have elapsed. Acceptable evidence of additional preparation shall be submitted with this petition.

FEES AND DUES

Fees.—Application fee. A fee of \$25 shall accompany the application.

Examination fee. A fee of \$150 is due and payable when the candidate is notified that he has been approved for examination.

Reexamination fee. A fee of \$50 is due and payable when the candidate is notified that he has been approved for reexamination.

Reexamination in Part 2.—Candidates for reexamination in part 2 may be held responsible for payment of expenses incurred by the board in conducting the reexamination. No fee shall be returned to the candidate without board approval. All fees shall be made payable to the American Board of Proctology and shall be sent to the secretary.

Dues.—Each diplomate is required to pay annual dues in the amount of \$10 to the board for a period of 10 years following certification. Fees and dues are utilized to defray expenses incurred by board activities.

REFERENCE: J. A. M. A. 159:476-478 (Oct. 1) 1955.

The major changes in requirements for certification are: Specialized Training: All applicants who wish to qualify for examination for certification in psychiatry or neurology under the regulations relating to training credit and who began training on or after July 1, 1956, must show that at least 24 months of their residency training have been secured in residency training programs approved for at least two years of residency training in the specialty in which they seek certification.

TRAINING IN THE ARMED FORCES

Delete first paragraph.

PAYMENT OF FEES

The candidate upon filing his application shall accompany it with an application fee of \$50, which is not returnable. If a preliminary written examination has been decreed, an additional \$25 fee will be required at the time of the applicant's acceptance. When notified by the secretary that he is accepted for the oral and practical examination, the candidate shall send to the secretary an examination fee of \$75. A candidate who has been

certified in either psychiatry or neurology and who has been admitted to supplementary examination for the other certificate shall pay an additional examination fee of \$75.

A candidate who has failed in one examination is eligible for reexamination within one year upon payment of a reexamination fee of \$75. After the year has elapsed, he must submit a new application and pay new application and examination fees. If he fails the reexamination, he may, after two years have elapsed, submit a new application and \$50 fee, present evidence of further training, and pay an examination fee of \$75.

A candidate who fails in one or two subjects is eligible for reexamination in those subjects within one year upon payment of a reexamination fee of \$50. After the year has elapsed he must submit a new application and pay new application and examination fees and repeat the entire examination. If he fails the reexamination, he may apply again for the complete examination after two years upon submission of evidence of further training and upon payment of an application fee of \$50. If admitted to the examination, he must pay a new examination fee of \$75.

Any candidate who finds himself unable to attend an examination to which he has been admitted and does not notify the secretary at least three months before the date of the examination will forfeit his examination fee. Any candidate who fails to appear for examination within a period of three (3) years following the date of notification of eligibility for examination shall be required to submit a new application and pay the attendant fee. If a candidate dies before his certificate is issued, all fees will be returned to his estate.

The major changes in requirements for certification are

CERTIFICATES

Change the second paragraph to read: 2. A certificate to the effect that the applicant has been found qualified to practice radiology in one or more of the following special fields: (a) diagnostic roentgenology (b) therapeutic radiology.

Substitute: 3. Certification in Nuclear Medicine. Certification in the handling and uses of radioactive isotopes is now offered to those candidates applying in Radiology or Therapeutic Radiology. After June 30, 1957, all candidates for Radiology or Therapeutic Radiology will be urged to seek certification in this field. As of June 30, 1960, it will be mandatory. A suitable medallion will be issued to those certified in Nuclear Medicine until June 30, 1960, after which date the certificate in Radiology or Therapeutic Radiology will include Nuclear Medicine.

DEFINITIONS

Delete: 2. Roentgenology is that branch of radiology that deals with diagnostic and therapeutic application of roentgen rays.

The major changes in requirements for certification are

Under group 1 there is a change in regard to candidates who complete only four years of a hospital residency program that is for a period longer than four years. It now reads: "If the hospital residency training is for a longer period than four years the candidate who completes only four years and does not assume the responsibilities of a senior year cannot be considered in the group 1 category. Such a candidate must complete a senior year in a hospital approved for four years or submit his qualifications to the examination committee of the board for their decision concerning further training requirements."

Also under group 2 it is stated: "Credit will not be granted for separate periods of time devoted exclusively to research or a preclinical discipline, although the day-to-day integration of these disciplines with clinical surgery is highly desirable. The program must have included three years of clinical surgery and the final year must have been spent in the capacity of senior or chief resident in general surgery."

THE STUDENT AMERICAN MEDICAL ASSOCIATION LOOKS AT INTERNSHIPS

During the course of the past year, the Student American Medical Association conducted a survey of interns with respect to the question: "Is the Intern Year Worthwhile—or Should It Be Abolished?" An analysis of a 41% return on an internship evaluation questionnaire sent to 1,450 interns representing a geographical cross section of the United States was presented at the annual meeting of the Student American Medical Association held in Chicago last May. Eighty-five per cent of the respondents were in rotating internships, 8% in straight, and 4% in mixed. This distribution according to type of internship correlates fairly well with the 89% rotating, 10% straight, and 1% mixed service representing the total of 11,616 approved internships offered last year. While the interpretation of a sampling of any group on matters of interest and concern to the group must be made with care and in its proper perspective, this particular questionnaire highlighted certain points of interest to all concerned with this phase of medical education.

Over 90% of those replying to the questionnaire felt that the internship year should be continued; while a small number suggested that a fifth year of medical school might advantageously replace it. The vast majority of the interns indicated that they did not believe the internship program in their institution was being handled with the primary purpose of teaching and that few hospitals, private or public, are offering internships designed to give adequate preparation for general practice. Private hospitals showed a much smaller percentage of satisfied interns and in this study were graded as offering poorer internships as compared to the teaching and large municipal institutions. In general, the amount of publicity a hospital receives often appeared to be in inverse proportion to the quality of the internship offered.

A large majority of the questionnaire responses indicated that the interns felt they were receiving less than the minimum time desirable under the supervision or instruction of full-time staff personnel. About two-thirds of the group felt that they were allowed adequate responsibility to gain over-all medical experience but that their total responsibilities were in excess of the degree of supervision and teaching offered to them. About 3% of the respondents felt that

the intern year they were experiencing was a "farce and a waste of time" because they were doing essentially nonprofessional "scut-work."

The concern of interns over the financial problems associated with this phase of education beyond medical school was reflected in numerous ways through the questionnaire responses. For instance, over 95% of the returns from those in military internships reported favorably. Although these individuals indicated some restrictions in the type of training offered, this was offset by their freedom from financial worry, since they received the highest intern stipends. There was an almost unanimous expression to the effect that the intern pay scale is inadequate with respect to the benefits their services offer to the institutions in which they work and which they feel are not adequately counterbalanced by the educational experiences gained.

In this current report on internships and residencies it will be noted that there has been an increased recognition of the financial problems encountered during the intern year and that in recent years most hospitals have materially augmented intern stipends. Medical students recognize the importance of sound internship experiences and where finances permit will still select the internships in an institution where the teaching and supervision are known to be outstanding, even though stipends may be minimal. In recent years, many social and economic readjustments have taken place in the setting of medical education. Large numbers of medical students are married today and may have families at the time they begin internship. Many of them are already under financial burdens undertaken to complete their medical school courses and in seeking their required graduate education find it necessary to give undue weight to stipends accompanying internship appointments. This essentially means that it has become possible, in some instances, for institutions to compete for interns through the medium of attractive stipends rather than placing primary emphasis on the educational opportunity and experience that they have to offer. This could be at least partially offset if all hospitals conducting approved internships offered basic stipends in keeping with the changing economic scene.

However, in the long run, it is the experience of the intern in obtaining the supervised graduate educational experience he needs that will determine whether an institution continues to attract intern staff personnel, regardless of the remuneration it may offer. The oncoming senior medical students have their "ears to the ground," just as did those of us who graduated many years ago, and learn from their friends who are interning whether the hospital administration and staff are concerned with internships solely from the standpoint of service or whether education and service are properly balanced. As the years roll by and service needs increase, some responsible staff members seem to forget this simple fact and fail to heed it or to adequately interpret it to hospital administrators. The question as to whether internships are worthwhile becomes a direct challenge to the professional staff and administration of every hospital accepting medical school graduates for such experiences.

PROGRESS TOWARD "FULL TRAINING" REQUIREMENTS FOR RESIDENCY APPROVAL

Increasingly in recent years, attention and thought have been given to full training requirements by physicians who develop and direct residency programs in hospitals and by the examining boards in the medical specialties, colleges, and the Council, which participate in residency approvals (*THE JOURNAL*, September 24, 1955, page 378). Thought has been centered on how a resident upon entering a training period of several years' duration can be assured of continuity in supervision and increasing, graded responsibility. As a result of these considerations, residency review committees in several specialties have adopted policies intended to encourage educational continuity.

The same principle is applicable in all of these policies; namely, that hospitals, to qualify for continued approval, are required to provide "full training" in the specialty, either independently or in collaboration with other hospitals through integration of their programs. Approval for residency training in anesthesiology, general surgery, otolaryngology, and plastic surgery, as well as in medical subspecialties, allergy, cardiovascular diseases, gastroenterology, and pulmonary diseases has for some time been limited to hospitals offering full training, either independently or in collaboration with other hospitals. Announcement of adoption of this policy relating to residency programs in pediatrics appeared in *THE JOURNAL*, April 10, 1954, page 1303. Similar statements relating to residency programs in orthopedic surgery, radiology, and urology were published in *THE JOURNAL*, September 24, 1955, pages 382 and 383. In this issue (page 430) there is an announcement on the future policy relative to approval of residency training in ophthalmology. These policies, which have been adopted to preclude the possibility of a resident taking his training in two or three isolated programs with no assurance of continuity of supervised experience or progression of responsibility, are considered educationally sound.

ANNUAL REPORT ON INTERNSHIPS AND RESIDENCIES

The 30th Annual Report on Internships and Residencies published in this issue of *THE JOURNAL* presents a compilation of statistical data and information on graduate training programs for the past year and listings of hospitals approved by the Council on Medical Education and Hospitals for the training of interns and residents for the year beginning July 1, 1957. The report is based on information furnished by each hospital approved for the training of interns and/or residents in specialties and includes an analysis of the statistical tables regarding these phases of medical education.

As has been the case for several years, there was a slight increase in the number of hospitals approved for intern training and in the number of intern positions available. As of September 1, 1955, 867 hospitals were approved for 11,616 internships. Eighty-three per cent

of the available positions were filled. The distribution of internships by type remained stable: rotating 89%, straight 10%, and mixed 1%. There was an appreciable increase in the stipend for interns during the year; the average cash stipend paid by affiliated hospitals was \$121 per month; that paid by nonaffiliated hospitals was \$169 per month.

There has been an increase of 1,030 residency positions during the year to 26,516. The occupancy rate on September 1, 1955, increased from 80% (1954) to 81%. The increased occupancy rate for both internships and residencies is attributed to the fact that there are in excess of 6,000 foreign medical school graduates serving in these positions. Resident training programs are approved in 30 fields of medicine and surgery. In 1955, there were 31,028 interns and residents on duty in approved hospitals—one out of seven physicians in this country is taking graduate medical training.

On September 1, 1955, a total of 6,123 intern and resident training programs were sponsored by 1,373 hospitals. Of this total number of hospitals, 171 were approved for intern training only; 506 were approved for the training of residents only; and 696 were approved for the training of both interns and residents.

The report includes a brief explanation of the National Intern Matching Program and the results of its 1956 operations; an explanation of the changes made in the revised "Essentials of an Approved Internship," including an interpretation of the "one-fourth rule"; information concerning the internship and the residency review committees; the plan for evaluation of foreign medical school graduates, as developed by the cooperating committee; and a statement regarding the Sears-Roebuck Foundation.

It is the sincere hope of the Council that this report will be helpful to medical students, recent medical school graduates, medical educators, and all others who are interested in medical education at the internship and residency levels.

EXPENDITURES FOR HOSPITALS AND PHYSICIANS

For the first time, the annual personal consumption expenditures of the American people for hospital services exceeded those for physicians' services. According to the July, 1956, issue of the *Survey of Current Business*,¹ personal consumption expenditures for hospital services during 1955 were 3,130 million dollars as compared with 3,070 million for physician services. Although the difference in the two amounts is not very great and both are subject to subsequent revision, these data mark 1955 as a turning point in the history of medical economics. In 1929 the estimates by the Department of Commerce of personal consumption expenditures were 959 million dollars for physician services and 403 million for hospital services; in the period 1935-1939 the average annual amounts were 821 mil-

1. National Income and Product of the United States 1955, *Surv. Current Business* 36: 21 (July) 1956.

2. Expenditures for Hospitals and Physicians, publication M-106, Bureau of Medical Economic Research, American Medical Association, Chicago, 1956.

lion and 448 million; they rose to 2,435 million and 1,975 million in 1950. In other words, the physicians' share of "the medical care dollar" declined from 33 cents in 1929 to 27.2 in 1955, whereas the hospitals' share rose from 14 to 27.8 cents. Those who are disturbed about the increases in the outlays for medical care, while praising its high quality, should realize that personal consumption expenditures for the services of physicians are no longer the largest in the American family budget for medical care. Although these data, by definition, exclude expenditures by all units of government for medical care, it can now be stated that the hospital has attained its majority in the realm of medical economics. More persons are hospital patients and more babies are born in hospitals; and the range of hospital services has expanded. Without the great growth of hospital services, the rapid health progress of the past several decades could not have been achieved.

Another reason for the ascendancy of personal consumption expenditures for hospital services is the more rapid rise in hospital prices than in physician fees. According to the Consumer Price Index and its many subindexes published by the United States Bureau of Labor Statistics, physicians' fees in 1955 were 65.8% above the 1935-1939 level as compared with increases of 237.7% in the index of hospital room rates and 91.4% in the over-all Consumer Price Index. In obtaining personnel and supplies the hospital has practically no protection against the forces of inflation; these forces, combined with the ever-increasing demand for hospital services, account for the extremely rapid rise in hospital room rates.²

IDENTIFICATION OF THE NEWBORN INFANT

Mix-ups involving two or more babies are quite rare in hospital nurseries, but they still can happen. In one state alone in a period of 18 months eight mix-ups or alleged mix-ups occurred. When such a mix-up, alleged or actual, does occur, a torrent of unfavorable publicity is unloosed and the parents concerned may be haunted by a lifetime doubt about their child. The confusion sometimes arises because two mothers in a hospital at the same time have the same surname; it sometimes arises because a single identification becomes detached from the baby; or it may even arise because parents get to wondering after they leave the hospital how the attendants maintained the identity of the babies. Sometimes the confusion is easily straightened out, and sometimes it leads to giving the wrong baby a harmless prescription; only rarely does it lead to an actual exchange of babies. The American Hospital Association has long been aware of this problem, and, because it has been found that photographs, footprints, handprints, and fingerprints are adjuncts but cannot yet be considered reliable as the sole means of identifying the newborn infant, the association has urged the adoption of a standard operating procedure that if applied would reduce mix-ups to the vanishing point.

The main features of this procedure are as follows: 1. Each baby should be marked in the delivery room with two items of identification. 2. The identification items should show the mother's full name, date and time of birth, and some correlation with the mother, such as her fingerprint or number. 3. Each time the baby comes to the mother, the mother should be informed that it is her responsibility to identify her baby by the marking. 4. When the baby and mother are discharged, one of the bands should be removed, preferably by the mother, and, after the mother has properly identified her baby, the removed identification should then be pasted to the baby's chart. The mother should acknowledge in writing that this is how her baby was marked and that she identified it as hers. The leaflet that gives the full procedure in detail has been available since December, 1949. Once established as a routine, this procedure, far from being a burden, would prevent a type of mistake that would otherwise be easy to make but that is nonetheless inexcusable.

MUNICIPAL SWIMMING POOLS

It is generally felt that the healthful benefits derived from a properly constructed and operated municipal swimming pool far outweigh the possible hazards. Our disgraceful record of accidents as the leading cause of death among the youth of our country obligates our communities to teach our children to swim and play safely; drownings number in the thousands annually. A supervised program at a municipal pool can do its part during the vacation periods of the year. Possible health and disease hazards are minimal where preventive measures are incorporated into the design and operation of the pool. The question of overemphasis on high diving is a real one. It should always be kept in mind that the primary purpose of the pool is for teaching children to swim and gain healthful exercise in the sun and fresh air.

According to the joint committee on swimming pools and bathing places of the American Public Health Association, about 300 sq. ft. of pool surface (10-ft. diameter) should be reserved for each diving board or platform. No platform or board at a public pool should be higher than 10 ft. above the water level. For a diving board elevated 9 or 10 ft. above the water, it is recommended that the minimum depth of the pool be 10 ft.

The types of accidents associated with high diving in properly designed pools are largely slips and falls on the board or platform and diving on top of swimmers below. These may be brought to a minimum by proper construction and supervision. Touching the bottom with any force seldom occurs in pools conforming to minimum depth requirements. A faultily executed dive from a high board may be expected to result in minor sprains and bruises. It is felt by some that excessive diving may lead to nasal and aural involvements, and the use of protective caps over ears or rubber plugs and nose clips is recommended.
