The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educa-

tional experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic Components

a. Programs must provide instruction and give trainees the opportunity to gain experience and competence in the interpretation of laboratory data as part of patient care decision making and patient care consultation. The program must also provide structured instruction and experience in the administration, management, and direction of a medical microbiology laboratory, including quality assurance, safety, regulations, and the use of laboratory and hospital information systems. All trainees must also participate in medical microbiology conferences, journal clubs and rounds, teaching, and scholarly activity.

b. The program should provide regular administrative meetings, seminars, and conferences in medical microbiology, in pathology, and in the clinical and epidemiologic aspects of infectious diseases.

c. Instruction should include, but not be limited to, training in medical bacteriology, mycobacteriology, mycology, virology, parasitology, immunology, molecular testing related to infectious diseases, public health microbiology (including epidemiologic typing as related to infection control), and antimicrobial testing.

2. Clinical components

a. The training program must provide opportunities for fellows to develop knowledge and skills related to the selection, collection and transport of specimens, processing of specimens, direct microscopic examination of clinical materials, examination of cultures, identification of microorganisms by all appropriate methodologies (including morphologic, immunologic, and molecular techniques), supplemented with stock cultures of infrequently encountered and medically important microorganisms, microscopic slides, photographs and seminar material.

- b. In depth knowledge of specimen collection, transport and processing, microscopic examination of specimens, histopathologic and clinical correlation of microbiologic data, activity and pharmacokinetics of antimicrobial agents, principles and interpretation of antimicrobial susceptibility testing and antimicrobial assays are important educational objectives.
- c. Fellows must develop knowledge and skills relating to principles of disinfection and sterilization, hospital infection control, infection control committee functions and responsibilities, microbiologic safety, quality control, workload accounting, budgeting, personnel supervision, and epidemiology as related to hospital and public health issues.
- d. Educational experiences should include opportunities to observe patients of all ages with a wide variety of infectious diseases through interaction with physicians from other clinical services.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner.

1. Patient care

Fellows must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.

2. Medical knowledge

Fellows must demonstrate knowledge about established and evolving biomedical, clinical and cognate (e.g. epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.

3. Practice-based learning and improvement

Fellows must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.

4. Interpersonal and communication skills

Fellows must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.

5. Professionalism

Fellows must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice

Fellows must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation**A. Fellow****1. Formative Evaluation**

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

ACGME: September 2003 Effective: July 2004
Editorial Revision: June 2004

Program Requirements for Graduate Medical Education in Molecular Genetic Pathology (Pathology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition of the Subspecialty

Molecular Genetic Pathology (MGP) is the subspecialty of Medical Genetics and Pathology in which the principles, theory, and technologies of molecular biology and molecular genetics are used to make or confirm clinical diagnoses of Mendelian genetic disorders, disorders of human development, infectious diseases and malignancies, to assess the natural history of those disorders, and to provide the primary physician with information by which to improve the ability to provide optimal care for individuals affected with these disorders. Molecular Genetic Pathology includes a body of knowledge and techniques necessary to study diseases associated with alterations in genes, provides information about gene structure, function, and alteration, and applies laboratory techniques for the diagnosis, treatment, and prognosis of individuals with these disorders.

B. Duration and Scope of Education

Educational programs in molecular genetic pathology must be 1 year in length and provide a structured educational experience for qualified physicians seeking to acquire additional competence in all current aspects of the discipline including basic science, diagnostic laboratory procedures, laboratory management, and consultation. Programs must be designed to teach trainees to integrate molecular genetic pathology into medical consultations with clinicians in the diagnosis and care of patients.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. Postgraduate fellowships in molecular genetic pathology will be accredited in institutions that also sponsor ACGME-accredited residencies in medical genetics and pathology. Requests for exceptions to this policy will be reviewed on a case by case basis.
3. The molecular genetic pathology program must be jointly sponsored by the Department of Pathology and the Department of Medical Genetics. Further, the sponsoring institution must ensure that activity is supported by other disciplines, including internal medicine, pediatrics, and obstetrics-gynecology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in by the American Board of Medical Genetics (in clinical Medical Genetics) or the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC and certification in Molecular Genetic Pathology or possess qualifications judged to be acceptable by the Residency Review Committees.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;

(3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in by the American Board of Medical Genetics or the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. A sufficient volume and variety of current specimens from adult and pediatric patients must be available to provide MGP fellows a broad exposure to consultation regarding medical genetic testing for congenital and acquired diseases without diluting the ed-

ucational experience of fellows in affiliated Pathology and Medical Genetics residencies.

3. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
4. Fellows must have ready access to a major medical library. Library services should include electronic retrieval of information from national medical databases.
5. Fellows must have ready on-site access to appropriate texts and journals in each institution participating in the program.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. MGP fellows should have completed training in an ACGME accredited residency in either Medical Genetics or Pathology, or be a physician who is certified by the American Board of Medical Genetics.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.
2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

1. The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.
2. Programs should be structured so that fellows are involved in MGP throughout the year. The program must include didactic instruction and practical experience with the molecular biology

and the biochemistry of nucleic acids and proteins including structure, function, replication mechanisms, in vitro synthesis, and the roles of DNA and various RNA classes and proteins in cellular biology. Programs should instruct fellows in an understanding of the mechanism of regulation of gene expression in prokaryotes and eukaryotes, and the biochemical mechanisms of mutations. The program should instruct fellows in the detailed knowledge of disease processes at the molecular level and the methods used for their detection. These diseases include but are not limited to: solid tumors, leukemia-lymphomas, infectious diseases, inherited Mendelian diseases, non-Mendelian and acquired genetic diseases (e.g., mitochondrial disorders, triplet repeats, expansion disorders, cytogenetic aberrations, and imprinting disorders). In addition, fellows should be instructed in tissue typing/identity testing and the principles of linkage analysis. The program should instruct fellows in their role as a consultant and the application of molecular techniques and interpretation of results with regard to diagnosis, prognosis, treatment and recurrence risk in patient care decision making.

3. Fellows must maintain a logbook of MGP cases in which they were involved in sufficient detail to ascertain the fellows' involvement in establishing the primary diagnosis and the transmittal of this information. A "case" is defined as the complete laboratory evaluation of an individual or an individual specimen (e.g., for tumor specimens). If a family study is involved, the entire family is considered as a single case. Completion of the case will involve appropriate communication of the results (e.g., written report, verbal communication to referring physician and/or counseling of the individual/family). The logbook should contain sufficient information to demonstrate experience with the breadth of techniques and variety of diseases necessary to direct an MGP diagnostic laboratory service.
4. The program must provide a sufficient volume and variety of MGP specimens and other educational material for the fellow to acquire the qualifications of a consultant in MGP. The fellow must be instructed to create and must keep a logbook of each accession in which they are involved.
5. Fellows must gain experience as consultants in clinical decision making in collaboration with professionals from related disciplines and in the cost-effective use of molecular genetic pathology testing.
6. The program must provide the fellow with the experience required to set up and to operate a MGP laboratory and to supervise and train laboratory personnel in other advanced techniques as they are developed.
7. MGP fellows who are pathologists must participate in the diagnosis, management, and treatment of patients with genetic disorders and in the counseling of the patient and the family. MGP fellows who are medical geneticists must have exposure to autopsy and surgical pathology. This experience should emphasize contemporary diagnostic techniques and require involvement in autopsies, surgical pathology, the review of slide sets of diseases relevant to Molecular Genetic Pathology, and other relevant pathology activities.
8. There must be regularly scheduled inter-departmental MGP conferences as well as intra-departmental conferences, lectures, seminars, journal clubs and other structured educational activities. Both teaching staff and fellows must attend and actively participate in these sessions on a regular basis.
9. Instruction should include the use of study sets and files of usual and unusual cases and other educational materials.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their fellows to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.

2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.

2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of ac-

tion, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification in Molecular Genetic Pathology should communicate with the office of their respective office regarding the full requirements for certification.

*ACGME: June 2001 Effective: June 2001
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Neuropathology (Pathology)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

- A. Neuropathology is the branch of medicine dealing with morphological and other aspects of disease of the nervous system.
- B. The educational program must be 2 years in length and provide a structured educational experience in all current aspects of the discipline, including basic science, laboratory management, and patient care consultation.

II. Institutions

A. Sponsoring Institution

1. **One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.**
2. A neuropathology program should be administratively attached to an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in anatomic and clinical pathology or anatomic pathology.
3. Institutions sponsoring a neuropathology training program should have additional accredited residency training programs which include neurology, neurosurgery, and neuroradiology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC. If the program director is not certified, the teaching staff must include at least one faculty member certified by the American Board of Pathology in neuropathology.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The director must have at least 3 years active participation as a neuropathologist following completion of training.
 - e) The director must be licensed to practice medicine in the state where the institution that sponsors the program is located.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.

c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.

d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:

- (1) the addition or deletion of a participating institution;
- (2) a change in the format of the educational program;
- (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.

3. Qualifications of the physician faculty are as follows:

- a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
- b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
- c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

2. Appropriate laboratory space, facilities, and personnel should be available for the conduct of special neuropathologic procedures, including but not limited to ultrastructural, histochemical, immunopathologic, and molecular-biologic techniques.

3. Indexes of usual and unusual cases, course and seminar materials, microscopic slide collections augmented by photographs, and museum specimens sufficient for the study of conditions and diseases not frequently encountered in routine necropsy and surgical specimens should be readily available to the program for educational purposes.

E. Library

1. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.

2. Library services should include the electronic retrieval of information from medical databases.

3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills,

and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic components

- a. Fellows should regularly participate in basic neuroscience activities, teaching conferences in neuropathology, and joint conferences with the pathology department and clinical services involved in the diagnosis and management of neurological disorders.
- b. Programs must be designed to teach neuropathology fellows to integrate neuropathologic information into medical consultations with clinicians in the diagnosis and management of patients.
- c. Fellows should be provided with exposure to neuro-oncology and neurogenetics.

2. Clinical components

- a. Fellows must actively participate in the evaluation of a comprehensive body of pathological lesions of the central nervous system, peripheral nervous system, and neuromuscular systems.
- b. Each fellow should have the opportunity to develop competence in morphologic assessment of diseases of muscle and peripheral nerves, including morphometric analysis and teased nerve fiber preparations, and to study neoplasms and related lesions of peripheral nerves and the sympathetic and parasympathetic nervous systems.
- c. The program must assure that each fellow has the opportunity to perform at least 200 necropsies that include examination of the nervous system (these may include brains seen in consultation, brains from complete autopsies, or brain only autopsies).
- d. The program must assure that each fellow has the opportunity to examine at least 300 neurosurgical specimens (including consultations) from the brain, spinal cord, pituitary gland, and eyes (including neoplastic, degenerative, infectious, and immune disorders of significance in the treatment and management of pediatric and adult patients).
- e. The program must assure that each fellow has the opportunity to perform at least 50 intraoperative neurosurgical consultations.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner.

1. Patient care

Fellows must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.

2. Medical knowledge

Fellows must demonstrate knowledge about established and evolving biomedical, clinical and cognate (e.g. epidemiologi-

cal and social-behavioral) sciences and the application of this knowledge to pathology.

3. Practice-based learning and improvement

Fellows must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.

4. Interpersonal and communication skills

Fellows must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.

5. Professionalism

Fellows must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice

Fellows must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: September 2003 Effective: July 2004
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Pediatric Pathology (Pathology)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Pediatric pathology is that practice of pathology concerned with the study and diagnosis of human disease manifested in the embryo, fetus, infant, child, and adolescent.

B. Duration and Scope of Education

1. Graduate medical education programs in pediatric pathology must provide an organized educational experience for qualified physicians seeking to acquire advanced competence in the diagnosis of childhood diseases.
2. Programs will be accredited to offer 1 year of organized education in pediatric pathology, which must include formal education in diagnostic pediatric pathology and placental and fetal pathology as well as management and quality assessment issues germane to the pediatric laboratory environment.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. A pediatric pathology program should be administratively attached to an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in anatomic and clinical pathology or anatomic pathology.
3. To facilitate peer interchange and augment the breadth of the educational experiences, institutions providing programs in pediatric pathology must be affiliated with accredited specialty training programs in pediatrics, obstetrics, surgery, and radiology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC. If the program director is not certified, the teaching staff must include at least one faculty member certified by the American Board of Pathology in pediatric pathology.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The director must have at least 3 years active participation as a pediatric pathologist following completion of training.
 - e) The director must be licensed to practice medicine in the state where the institution that sponsors the program is located.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.

- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

1. Additional necessary professional, technical, and clerical personnel must be provided to support the program.

2. The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. The program must have access to an adequate volume and variety of pediatric pathology material. The material and files must be indexed to permit appropriate retrieval. There must be mechanisms to facilitate correlation with anatomical material.
3. There must be adequate equipment, laboratory facilities, offices, meeting rooms, classrooms, and space to support service, teaching, educational, and research activities.
4. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.

E. Library

1. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Fellows should have completed at least two years of training in an ACGME-accredited pathology residency prior to appointment to a pediatric pathology program.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic Components

- The educational experiences may be provided through separate, exclusive rotations or by rotations that combine more than one area or by other means.
- Lectures, tutorials, seminars, and conferences with clinical services, including pediatric surgery, pediatric hematology, pediatric oncology, medical microbiology, medical genetics, pediatric radiology, obstetrics, and pediatrics, must be regularly scheduled and held.
- Instruction should include the use of study sets of usual and unusual cases and other educational materials.

2. Clinical Components

- The education in pediatric pathology must include general and systemic aspects of autopsy and surgical pathology (including embryo-fetal, perinatal, and placental pathology as well as pediatric aspects of dermatopathology, gynecological and obstetrical pathology, forensic pathology, and neuropathology), immunopathologic and histochemical techniques, cytopathology, ultrastructural pathology, cytogenetics, molecular biologic techniques including diagnostic techniques for metabolic diseases, and other advanced diagnostic techniques as they relate to pediatric pathology.
- While the quality of an educational program is not based on the volume of teaching material alone, programs must have sufficient volume and variety of materials available for educational purposes to ensure the opportunity for:
 - The participation in at least 40 pediatric autopsies per fellow during the program. This experience must include general pediatric, metabolic, forensic, perinatal, and stillborn autopsies. It is highly desirable that this experience also include embryo-fetal autopsies.
 - Examination of at least 2000 pediatric surgical pathology specimens per fellow during the program. This material must be from an adequate mix of cases, including obstetrics-related materials (placentas and abortions) and cytology.
 - The performance of at least 50 intraoperative consultations (frozen sections, smears) per fellow during the program.
- The number and variety of laboratory tests utilized in the program should be sufficient to give each fellow experience in the range of laboratory examinations typically available and useful in the diagnoses and following of both common and unusual pediatric diagnostic problems, including metabolic, prenatal, genetic, neoplastic, and other diseases of the pediatric population.
- Programs must provide instruction and experience in the major aspects of a hospital laboratory as it relates to diagnosis in pediatric pathology, including fellow participation in interpretation of laboratory data as part of pediatric patient-care con-

sultation, conferences, rounds, laboratory management, quality assurance, data processing, teaching, and scholarly activity.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner.

1. Patient care

Fellows must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.

2. Medical knowledge

Fellows must demonstrate knowledge about established and evolving biomedical, clinical and cognate (e.g. epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.

3. Practice-based learning and improvement

Fellows must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.

4. Interpersonal and communication skills

Fellows must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.

5. Professionalism

Fellows must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice

Fellows must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

- All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
- Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
- Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation**A. Fellow****1. Formative Evaluation**

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effec-

tiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

ACGME: September 2003 Effective: July 2004
Editorial Revision: June 2004

Program Requirements for Residency Education in Pediatrics

I. Introduction

A. Scope of Training

Programs must provide residents with a broad exposure to the health care of children and substantial experience in the management of diverse pathologic conditions. This must include experience in child health supervision and those conditions commonly encountered in primary care practice. It must also include experience with a wide range of acute and chronic medical conditions of pediatrics in both the inpatient and ambulatory settings.

Preventive health care, ethical issues, and discussions of the cost of diagnostic tests, procedures, and therapies should be a part of all rotations.

Throughout the 3 years of training, emphasis must be placed on enhancement of residents' competence in the medical interview, physical examination, and communication and interpersonal skills.

B. Duration and Levels of Training

Programs must provide a progressive educational experience with increasing patient care responsibility over a 3-year period. The first year (PL-1) should include an introduction to the basic experiences on which the rest of the training will be based. During the last 24 months of training the program must require at least 5 months of supervising the activities of more junior residents within the approved educational settings. The supervisory responsibilities must involve both inpatient and outpatient experience.

C. Goal of the Residency

The goal of residency training in pediatrics is to provide educational experiences that prepare residents to be competent general pediatricians able to provide comprehensive, coordinated care to a broad range of pediatric patients. The residents' educational experiences must emphasize the competencies and skills needed to practice general pediatrics of high quality in the community. In addition, residents must become sufficiently familiar with the fields of subspecialty pediatrics to enable them to participate as team members in the care of patients with chronic and complex disorders.

Residents must be given the opportunity to function with other members of the health care team in both inpatient and ambulatory settings to become proficient as leaders in the organization and management of patient care.

II. Institutional Organization

A. Sponsoring Institution

There must be one sponsoring institution for each residency, as mandated by the Institutional Requirements. This entity must be identified at the time of each review of the residency.

B. Participating Institutions

1. Single or Multiple institutions

An accredited program may be independent or may occur in two or more institutions that develop formal agreements and conjoint responsibilities to provide complementary facilities, teaching staff, and teaching sessions. When affiliated institutions are utilized and a single program director assumes responsibility for the entire residency, including the appointment of all residents, the determination of all rotations, and the assignment of both residents and members of the teaching staff, the affiliated institution may be proposed as integrated. Ordinarily one hospital may not be an integrated part of more than one pediatric residency.

The Residency Review Committee (RRC) must approve the designation of a participating hospital as integrated. In making its determination the RRC will consider the proximity of the hospital to the primary teaching site and the duration of rotations planned. Normally, at least 3 months of required experience should occur at a hospital that is designated as integrated. A significant increase in the time spent at an integrated hospital should receive prior approval from the RRC. Within a single program some participating hospitals may qualify as integrated, while others are merely affiliated.

2. Agreements with Participating Institutions

When a residency program relies on other institutions to provide some components of the curriculum, the arrangement between the institutions must be designed to meet the educational needs of the residents and must be described in a written document that is signed by the appropriate persons from the respective institutions. These agreements must relate specifically to the residency program in pediatrics and must be current at the time of the site visit. Copies of these written arrangements, specifying administrative, organizational, and educational relationships, must be submitted with the program information forms at the time of each evaluation by the RRC.

C. Appointment of Residents

The development of a satisfactory program requires careful selection of applicants for appointment to the residency. When appointing residents, the program director must adhere to the criteria for resident eligibility that are specified in the Institutional Requirements. To determine the appropriate level of training for a resident who is transferring from another ACGME-accredited pediatrics program, the program director must receive written verification of the previous educational experiences in a pediatric residency and a statement regarding the performance evaluation of the transferring resident prior to accepting that resident into the program. The program director is also required to provide verification of training, if requested to do so, for any residents who may leave the program prior to completion of training.

III. Faculty Qualifications and Responsibilities

The chief of pediatrics/department chair must have overall responsibility for all educational programs that are carried on within the Department of Pediatrics, including those in the subspecialties. All program descriptions submitted to the RRC from this department must bear this person's signature, in addition to that of the program director, indicating that the chief/chair has reviewed and approved the materials submitted.

The program director and teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

There must be a single program director responsible for the program. The RRC must be notified immediately in writing of a change in leadership of the program. Continuity of leadership over a period of years is important for the stability of a residency program. Frequent changes in leadership or long periods of temporary leadership usually have an adverse effect on an educational program and will be cause for serious concern.

1. Qualifications

- a. **Experience/Ability:** The director of the residency program must have demonstrated ability as a clinician, medical educator, and administrator and have an understanding of, and commitment to, general pediatric education.

- b. **Licensure:** The director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
- c. **Board Certification:** The director must be currently certified by the American Board of Pediatrics or must possess appropriate educational qualifications. The adequacy of alternate qualifications will be determined by the RRC.
- d. **Medical Staff Appointment:** The director must hold an appointment in good standing to the medical staff of an institution participating in the residency.

2. Responsibilities

The program director must devote sufficient time to the residency program to provide continuity of leadership and to fulfill the administrative and teaching responsibilities inherent in achieving the educational goals of the program.

The responsibilities of the director include the following:

- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment, and distribution of the statement to residents and members of the teaching staff.
- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. Supervision of residents.
- e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- f. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- g. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Training situations that consistently produce undesirable stress on residents must be evaluated and modified. The director should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents.
- h. Program directors are required to provide accurate and complete statistical and narrative information as requested by the RRC for these evaluations.
- i. Notification of the RRC of major changes in the program.

B. Faculty

The teaching staff must have sufficient background and expertise to ensure that the educational goals, objectives, and/or curricular content can be met. They must be actively involved in the establishment of educational goals and objectives for the resident experiences in which they participate and in the evaluation of both the residents and the program.

1. Sufficient Numbers and Diversity

There must be a sufficient number of pediatric teaching staff who function as general pediatrician and subspecialist role models for the residents and who contribute adequate time to the program to meet the educational needs of the residents.

Within the primary hospital and/or integrated participating hospitals there must be teaching staff with expertise in the area of general pediatrics who will serve as teachers, researchers, and role models for general pediatrics. Hospital-based as well as community-based general pediatricians should participate actively in the program as leaders of formal teaching sessions, as outpatient

preceptors, and as attending physicians on the general inpatient services. The number of general pediatricians actively involved in the teaching program must be sufficient to enable each resident to establish close working relationships that foster role-modeling. Where teaching staff participate on a part-time basis, there must be evidence of sufficient involvement and continuity in teaching. These physicians should have a continuing time commitment to direct patient care to maintain their clinical skills.

There must be teaching staff with training and/or experience in behavioral and developmental pediatrics, as well as teaching staff with training and/or experience in adolescent medicine. Within the primary hospital and/or integrated participating hospitals, there also must be teaching staff in at least four of the pediatric subspecialties listed in Section V.C.3 from which the four required 1-month rotations must be chosen. These subspecialists must function as integral parts of the clinical and didactic components of the program in both outpatient and inpatient settings.

A surgeon having significant experience with pediatric patients must play a major role in the residents' education with respect to surgical diagnoses and preoperative and postoperative care. A pathologist and a radiologist who have significant experience with pediatric problems and who interact regularly with the pediatric residents are essential.

2. Commitment to Education

The faculty must demonstrate a commitment to the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. A measure of the commitment of the teaching staff to the program is the degree to which patients under their care are available for resident education.

3. Participating Institutions

Where multiple hospitals participate, a member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

4. Qualifications

All of the physician teaching staff must be currently board-certified and have achieved subspecialty certification where appropriate or must possess appropriate educational qualifications. Each time the program is evaluated by the RRC it is the responsibility of the program director to provide evidence of appropriate qualifications for teaching staff who lack board certification. The RRC will judge the adequacy of alternate qualifications.

C. Other Program Personnel

Teaching by other health professionals such as nurses, pharmacists, social workers, child life specialists, physical and occupational therapists, speech and hearing pathologists, respiratory therapists, psychologists, and nutritionists is highly desirable.

D. Support Staff

Additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program must be provided.

IV. Facilities and Resources

A. Inpatient and Outpatient Facilities

The inpatient and outpatient facilities must be adequate in size and variety and must have the appropriate equipment necessary for a broad educational experience in pediatrics.

There must be an appropriately equipped and staffed emergency facility for the care of pediatric patients. The program must also have an intensive care facility that is appropriately equipped and staffed for the care of a sufficient number of seriously ill pediatric patients to provide adequate experience for the number of residents in the program.

B. Medical Library

Residents must have ready access to a major medical library, either at the institution where they are located or through arrangement with convenient nearby institutions. These library services should include the electronic retrieval of information from medical databases. There must also be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

C. Patient Population

Programs must provide residents with patient care experience in both inpatient and outpatient settings. A sufficient number, variety, and complexity of patients, ranging in age from infancy through young adulthood, must be present. A deficient or excessive patient load may jeopardize the accreditation status of the program.

V. Educational Program

The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate:

- Patient Care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
- Medical Knowledge about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
- Practice-Based Learning and Improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
- Interpersonal and Communication Skills that result in effective information exchange and teaming with patients, their families, and other health professionals
- Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
- Systems-Based Practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value

A. Curriculum, Goals, and Objectives

Each program must describe a core curriculum that complies with the RRC's requirements and is participated in by all residents. Programs that utilize multiple hospitals or that offer more than one track must provide evidence of a unified educational experience for each resident. Where multiple tracks exist within one program, each track must comply with the requirements, and residents in all tracks must have a minimum of 18 months of training in common. The provisions of the Institutional Requirements also must be met for accreditation.

Written goals and objectives and a method of evaluation must exist for each curricular component. The residency curriculum must be a structured educational experience that reflects an

appropriate balance between clinical and didactic elements. The curriculum should be competency-based and focus on skill attainment and skill maintenance. It should emphasize attitudes and skills necessary for lifelong learning.

1. Resident Assignments

Assignments to affiliated institutions must be designed to fulfill the educational goals and objectives of the program and must not be made primarily to meet service needs.

While no limit is placed on the duration of rotations to institutions that are integrated with the primary hospital's pediatric program (although the duration must have RRC approval), rotations to participating institutions that are not integrated with the primary hospital may not exceed a total of 9 months during the 3 years of training. No more than 3 months of these outside rotations may be in institutions that do not have their own pediatric residencies.

Rotations to other programs should enrich but not replace core experiences. When residents rotate to an institution that has its own accredited pediatric residency, the rotating residents must be fully absorbed into the prevailing pattern of instruction and patient care at the same level as the pediatric residents of that affiliated institution.

Residency programs that offer training to residents from other pediatric residencies must provide instruction and experience equivalent to that given to their own residents. They should enter into agreement with other programs only if they are prepared to absorb those residents into the prevailing pattern of education and patient care.

2. Approval of Changes

The program design or format must be approved by the RRC as part of the regular review process. Major changes in the content or format of a program that are proposed between regular reviews and/or the addition or deletion of a participating institution that provides 6 months or more of training require RRC approval before implementation. The RRC may determine that a site visit is required before a decision is made on such proposals.

B. General Pediatrics

In keeping with the commitment to general pediatrics, a minimum of 50% of clinical training should be devoted to ambulatory experiences. This may include all assignments in the continuity practice, emergency and acute care, and community-based experiences, as well as the ambulatory portion of normal/term newborn, subspecialty, behavior/development, and adolescent experiences.

1. Inpatient Experience

General inpatient pediatrics must constitute at least 5 months of a resident's overall experience, exclusive of intensive care rotations. It must be structured to provide the resident with a concentrated exposure and continuity of involvement to ensure a primary role in patient care. The inpatient care experience must be designed to develop resident competency in managing patients with diverse illnesses of such complexity and severity as to require in-hospital care but not care in a critical care unit. This can be achieved most effectively through block rotations. An experience that is integrated with other educational activities will be considered acceptable if the program can demonstrate that the educational goals and objectives are met and that the primary role of the resident in the ongoing care of patients is ensured.

The experience must be structured to enable residents to develop

- a. an understanding of which patients require in-hospital care and why, including medical, psychosocial, and environmental considerations;

- b. skills in determining which patients can be managed in a general inpatient setting and which require higher levels of care and expertise in a critical care unit;
- c. skills and competence in the evaluation, diagnosis, management, and appropriate disposition of pediatric patients in the hospital setting;
- d. skills in working with an organized inpatient health care team, including nursing, child life therapy, social services, physical therapy, occupational therapy, and discharge planning; and
- e. skills in the appropriate utilization of consultants and selection of studies in the care of pediatric patients in the hospital setting.

The program must ensure that each resident has the opportunity for independent evaluation and development of a differential diagnosis, planning diagnostic studies, formulating and implementing therapeutic options, and planning for discharge of patients under their care. It is not an appropriate educational experience if the above are all accomplished by attending physicians without the pediatric inpatient resident's involvement.

The resident must be given progressive responsibility under close faculty supervision within a team that fosters peer and supervisory interchange. The availability of consultative resources appropriate to the patient base must be ensured, while allowing the resident to participate in the full spectrum of patient care from admission through discharge.

Regularly scheduled teaching/attending rounds that include all patients for whom the resident is responsible must be conducted by qualified teachers who are immediately available for consultation and who are supported by consultants in subspecialty areas appropriate to the patient population. Rounds should be targeted to the knowledge and skills required of a general pediatrician in an inpatient setting and should emphasize the appropriate utilization of subspecialist colleagues. The correlation of basic pathophysiologic principles with the disease process should be stressed. Rounds that focus on the educational objectives of inpatient care must be held at least three times per week and may not be replaced by rounds that are primarily work-oriented.

The patient load for residents at all levels of training should allow time for close and effective management and detailed study of patients, yet should challenge the resident with diverse and complex problems at increasing levels of responsibility. A first-year resident should be responsible for approximately six to ten inpatients, depending on the average length of stay and the nature and severity of the illness. Second- and third-year residents may be involved in the care of more patients in a supervisory capacity, but this number should not exceed 30 in most situations.

The patient population available for resident education on the inpatient service must be of sufficient number, age distribution, and variety of complex and diverse pathology to assure the residents of adequate experience with infants, children, and adolescents who have acute and chronic illnesses, as well as with those with life-threatening conditions. Although there is increasing emphasis on outpatient care for a broad spectrum of pediatric illness, resident experience that is limited to the ambulatory setting will not be considered adequate for patient groups that require inpatient care as part of their ongoing treatment.

The comprehensive curriculum should include but not be limited to the following core content and should emphasize the pathophysiologic correlates of the clinical situations:

- a. Interviewing techniques with specific emphasis on behavioral, psychosocial, environmental, and family unit correlates of disease

- b. Physical examination, both general and system-specific, as a tool in initial diagnosis and subsequent patient monitoring
- c. Utilization of appropriate members of the health care team to ensure comprehensive yet cost-effective care of the patient and the family
- d. Diagnosis and management of acute episodic medical illness including but not limited to meningitis, sepsis, dehydration, pneumonia, diarrhea, renal failure, seizure, coma, hypotension, hypertension, and respiratory illnesses
- e. Diagnosis and management of acute problems associated with chronic diseases including but not limited to diabetic ketoacidosis, status asthmaticus, status epilepticus, oncologic therapy and complications, congenital heart disease, cystic fibrosis, chronic renal disease, gastrointestinal disorders, hepatic failure, metabolic disorders, and neurologic disorders
- f. Pediatric aspects of the management of surgical patients, both preoperatively and postoperatively, including interaction with the surgical team
- g. Principles of discharge planning to ensure efficient transition and continuity of care

Residents on the inpatient service must be supervised by pediatric faculty who have extensive experience in and knowledge of the care of pediatric patients with illnesses of sufficient severity to warrant hospitalization. The utilization of general pediatricians in this role is encouraged, provided that consultative services from pediatric subspecialists and other specialists appropriate to the patient population are readily available.

2. Emergency and Acute Illness Experience (See also Section V.G.2, paragraph 7)

The experience in emergency and acute illness must constitute of a minimum of 4 months. Two of these months should be in emergency medicine; at least 1 of these months must be a block rotation in an emergency department that serves as the receiving point for EMS transport and ambulance traffic and is the access point for seriously injured and acutely ill pediatric patients in the service area. This may be either a pediatric emergency department or a combined pediatric/adult emergency department. Assignment to an acute care center or walk-in clinic to which patients are triaged from the emergency department will not fulfill this requirement.

The remaining required experience may be in the emergency department or, if patients are available in sufficient numbers, in another setting where acutely ill pediatric patients are seen. Optional sites may include walk-in clinics, acute care centers, and/or community-based primary care practice settings. Preferably, this experience would be as a block rotation, but integration into other longitudinal experiences is acceptable if the required duration and the educational goals and objectives can be met and appropriate supervision ensured.

The experience must be designed to develop resident competence in managing unselected and unscheduled patients with acute illness and injury of varying degrees of severity, from very minor to life-threatening.

Specific objectives of this experience must include but not be limited to development skills in the following:

- a. Evaluation and care of patients with acute illnesses or injuries of varying degrees of severity
- b. Resuscitation, stabilization, and triage of patients after initial evaluation
- c. Interaction with other professionals involved in emergency care in the emergency department, including the trauma team; emergency physicians; specialists in surgery, anesthesia, radiology, and relevant pediatric and surgical subspecialties; dentists; and others as appropriate

- d. Participation with the emergency medical system in the provision of prehospital care for acutely ill or injured patients, including access to appropriate transport systems and triage

The program director must ensure that the pediatric residents have first-contact evaluation of pediatric patients and continuous on-site supervision. It is not a sufficient educational experience if the pediatric resident functions only on a consultative basis or deals only with a preselected patient population. Residents in these settings must have on-site supervision by members of the pediatric teaching staff or by other attending staff who have extensive experience in and knowledge of the care of acute pediatric illnesses and injuries.

The resident should have the opportunity to work on a multidisciplinary clinical team to learn the role of the general pediatrician in such a setting. A system for patient outcome feedback to the resident should be established. The resident's performance must be evaluated on a regular basis by staff directly involved in the acute and emergency care experience, and appropriate feedback must be provided to the resident and to the program director.

Although they may be called on to care for some adult patients to ensure adequate volume and diversity, the pediatric residents' major responsibility must be for an appropriate range of pediatric patients. Programs that share the emergency and acute illness patient base with other training programs, such as emergency medicine, pediatric emergency medicine, and family practice, must document that a sufficient and appropriately diverse pediatric patient population is available to the pediatric residency program.

The comprehensive experience for all residents should include but not be limited to the following disorders and should emphasize the pathophysiologic correlates of the clinical situations:

- a. Acute major and minor medical problems such as respiratory infection, respiratory failure, cardiopulmonary arrest (including sudden infant death syndrome, or SIDS), dehydration, coma, seizures, diabetic ketoacidosis, asthma, skin disorders, pyelonephritis, sepsis, shock, fever, and childhood exanthems
- b. Acute major and minor surgical problems such as appendicitis, bowel obstruction, burns, foreign body inhalation and ingestion, abscess drainage, and head trauma
- c. Poisonings and ingestion
- d. Physical and sexual abuse
- e. Minor trauma (including splinting, casting, and suturing)
- f. Major trauma (including active participation with the trauma team)
- g. Participation in prehospital management and transport
- h. Acute psychiatric, behavioral, and psychosocial problems
- i. Admission or discharge planning, including communication with the personal physician

3. Continuity Experience

The program must provide adequate continuity experience for all residents to allow them the opportunity to develop an understanding of and appreciation for the longitudinal nature of general pediatric care, including aspects of physical and emotional growth and development, health promotion/disease prevention, management of chronic and acute medical conditions, family and environmental impacts, and practice management. Residents must assume responsibility for the continuing care of a group of patients throughout their training. Inherent in the principle of continuity of care is that patients are seen on a regular and continuing basis, rather than on a single occasion. Isolated block experiences will not satisfy this requirement.

The continuity of care experience must include participation in a setting that is structured and designed to emulate the prac-

tice of general pediatrics and that is conducive to efficient processing and management of patients. This setting may be an office-based practice, an institutional-based continuity clinic, or a community-based center. Ideally, residents should participate in the care of their patients through any hospitalization, assess them during acute illnesses, and be available to facilitate other services, such as school-related evaluations and specialty referrals.

Residents must devote at least ½ day per week to their continuity experience throughout the 3 years, and an additional ½ day session per week is suggested. This experience must receive priority over other responsibilities, and may be interrupted only for vacations and outside rotations located at too great a distance to allow residents to return. The periods of interruption may not exceed 2 months in any 1 year or 3 consecutive months at any time.

The program must ensure that residents are exposed to a continuity patient population sufficient in number and of adequate variety to meet the educational objectives. It must include well patients as well as those with complex and chronic problems. Patients initially managed in the normal newborn nursery, emergency department, inpatient service, intensive care unit (pediatric and neonatal), subspecialty clinics, and other sites may be enrolled in the residents' panels. Guidelines for numbers of continuity panel patients seen per half-day experience are three to six patients per resident in the PL-1 year, four to eight patients in the PL-2 year, and five to ten patients in the PL-3 year. Acceptable minimum numbers for each resident's patient panel are approximately 50 patients for each PL-1 resident and approximately 100 patients for each PL-2 and PL-3 resident.

The curriculum should emphasize the generalist approach to common office-based pediatric issues including anticipatory guidance from birth through young adulthood, developmental and behavioral issues, and immunization practices and health promotion, as well as the care of children with chronic conditions. The resident must learn to serve as the coordinator of comprehensive primary care for children with complex and multiple health-related problems and to function as part of a health care team. Subspecialty consultants and allied health personnel must be available to residents in the care of their continuity patients.

The number of teaching staff in the continuity clinic must be sufficient to ensure an appropriate educational experience for all residents present. Teaching staff who serve as attendings in the continuity clinic must have expertise in the area of general pediatrics and be able to function as role models in general pediatrics. They must be actively involved in direct patient care to maintain their expertise and credibility. These and other competing responsibilities, however, must not compromise their availability for supervision and consultation with the residents.

Record maintenance must be designed to allow verification of the adequacy of each resident's experience.

4. Normal/Term Newborn Experience

There must be the equivalent of at least 1 month in the care of normal/term newborns. This may not be part of a neonatal intensive care unit (NICU) rotation but it may be combined with another experience over a longer period of time if an equivalent duration is demonstrated and the educational goals of both experiences can be met. Preferably, this rotation should take place in the first year of training to provide an experience on which more advanced training will be based, and it should be supervised primarily by general pediatric faculty. This experience should include longitudinal follow-up of selected infants discharged from the nursery. The experience should also include at least the following:

- a. Recognition and appropriate intervention for high-risk infants

- b. Distinguishing well from ill infants
 - c. Performance of physical examination on newborn infants, which includes assessment of gestational age and the appropriateness of intrauterine growth
 - d. Identification of common anomalies, birth defects, and syndromes, including counseling the parents
 - e. Provision of routine newborn care
 - f. Recognition and treatment of common physiologic deviations in the newborn
 - g. Identification and management of infants of mothers with substance abuse and/or sexually transmitted diseases (STDs) or other infections
 - h. Routine newborn screening and appropriate follow-up of infants with positive test results
 - i. Preventive measures including immunization schedules and safety issues, such as counseling parents on the importance of infant safety seats and knowledge of normal infant nutrition, including breast feeding, as well as knowledge of normal newborn growth and development
 - j. Discharge planning
5. Community Experiences

There must be structured educational experiences that prepare residents for the role of advocate for the health of children within the community. These should include both didactic and experiential components that may be integrated into other parts of the curriculum, e.g., continuity, adolescent behavior/development, or they may be designed as distinct longitudinal or block rotations.

Residents must be supervised by pediatricians and other health professionals experienced in the relevant content areas. The curriculum should include but not be limited to the following subjects:

- a. Community-oriented care with focus on the health needs of all children within a community, particularly underserved populations
- b. The multicultural dimensions of health care
- c. Environmental toxicants and their effect on child health
- d. The role of the pediatrician within school and day care settings
- e. The role of the pediatrician in the legislative process
- f. The role of the pediatrician in disease and injury prevention
- g. The role of the pediatrician in the regional emergency medical system for children

These experiences should utilize settings within the community, such as

- a. community-based primary care practice settings;
- b. community health resources and organizations, including governmental and voluntary agencies, e.g., local and state public health departments, services for children with disabilities, Head Start;
- c. schools and day-care settings, including elementary school through college;
- d. home-care services for children with special health care needs; and
- e. facilities for incarcerated youth.

C. Subspecialty Education

Education in the various subspecialties of pediatrics must be a vital part of the training of general pediatricians. Although it is not possible for each resident to rotate through every subspecialty, it is required that all residents be exposed to the specialized knowledge and methods of the major pediatric subspecialties through longitudinal experiences on the general inpatient and intensive care services and in outpatient settings. Residents should be taught when

to seek consultation, when to refer to the subspecialist, and how to manage chronic illness as a team member with the subspecialist.

The curriculum must be designed to teach each resident the knowledge and skills appropriate for a general pediatrician, including the management of psychosocial problems affecting children with complex chronic disorders and their families. The experiences should include appropriate reading assignments and subspecialty conferences and familiarizing the residents with the techniques and skills used by the subspecialist.

All subspecialty rotations must have an adequate number, variety, and complexity of patients to provide each resident with an appropriately broad experience in the subspecialty. Outpatient experiences should be integrated into all subspecialty rotations to provide an opportunity for residents to develop the skills needed to manage patients with complex illnesses in a primary care practice.

The resident must be given appropriate patient care responsibilities with an opportunity to evaluate and formulate management plans for subspecialty patients. In the outpatient subspecialty clinics and with appropriate supervision by a subspecialist, the resident should function as the physician of first contact. Experiences in which the resident is solely an observer will not fulfill this requirement.

Subspecialty faculty must be directly involved in the supervision of residents and be readily available for consultation on a continuing basis. The supervision must be provided by pediatricians who are currently certified by the appropriate subboard of the American Board of Pediatrics or by other specialists who care for pediatric patients and who are certified by a specialty board approved by the American Board of Medical Specialties. In the absence of such certification, documentation of suitable equivalent qualifications must be provided. The acceptability of alternate qualifications will be determined by the RRC.

1. Intensive Care Experience (NICU and PICU)

The intensive care experiences must provide the opportunity for residents to deal with the special needs of critically ill patients and their families. Intensive care experience must be for a minimum of 4 and a maximum of 6 months and must include at least 3 block months of neonatal intensive care (Level II or III) and 1 block month of pediatric intensive care. Night and weekend responsibilities in the NICU, when the residents are on other rotations, will be included in the allowable maximum period of intensive care experience, with 200 hours being considered the equivalent of 1 month.

Programs with 1 month of PICU and 4 block months of neonatal intensive care experience may allow an additional 200 hours of night and weekend responsibilities while the residents are on other rotations. Programs with 3 block months may have 400 hours of additional call. Programs with 5 block months may have no additional NICU call.

To provide additional experience for those who may need it for future practice, 1 additional elective block month in the NICU may be allowed for individual residents after completion of the required NICU experience in the program. As is the case with any block month, it may include call.

The curricula in neonatal and pediatric intensive care must be structured to familiarize the resident with the special multidisciplinary and multiorgan implications of fluid, electrolyte, and metabolic disorders; trauma, nutrition, and cardiorespiratory management; infection control; and recognition and management of congenital anomalies in pediatric patients. It also must be designed to teach the following:

- a. Recognition and management of isolated and multiorgan system failure and assessment of its reversibility

- b. Understanding of the variations in organ system dysfunction by age of patient
 - c. Integration of clinical assessment and laboratory data to formulate management and therapeutic plans for critically ill patients
 - d. Invasive and noninvasive techniques for monitoring and supporting pulmonary, cardiovascular, cerebral, and metabolic functions
 - e. Participation in decision making in the admitting, discharge, and transfer of patients in the intensive care units
 - f. Resuscitation, stabilization, and transportation of patients to the ICUs and within the hospital
 - g. Understanding of the appropriate roles of the generalist pediatrician and the intensivist/neonatologist in these settings
 - h. Participation in preoperative and postoperative management of surgical patients, including understanding the appropriate roles of the general pediatric practitioner and the intensivist in this setting
 - i. Participation, during the neonatal intensive care experience, in perinatal diagnostic and management discussions
 - j. Resuscitation and care of newborns in the delivery room
 - k. Evaluation and management, during the pediatric intensive care experience, of patients following traumatic injury
2. Adolescent Medicine

The program must provide all residents with experience in adolescent medicine that will enable them to recognize normal and abnormal growth and development in adolescent patients. This experience must be supervised by faculty having training and/or experience in adolescent medicine.

The experience must include, as a minimum, a 1-month block rotation to ensure a focused experience in the area of adolescent medicine. The program must also provide the resident with an integrated experience that incorporates adolescent issues into ambulatory and inpatient experiences throughout the 3 years, e.g., inpatient unit, community settings, continuity clinic, or subspecialty rotations.

It must include instruction and experience in at least the following:

- a. Normal pubertal growth and development and the associated physiologic and anatomic changes
 - b. Health promotion, disease prevention, and anticipatory guidance of adolescents
 - c. Common adolescent health problems, including chronic illness, sports-related issues, motor vehicle safety, and the effects of violence in conflict resolution
 - d. Interviewing the adolescent patient with attention to confidentiality, consent, and cultural background
 - e. Psychosocial issues, such as peer and family relations, depression, eating disorders, substance abuse, suicide, and school performance
 - f. Male and female reproductive health, including sexuality, pregnancy, contraception, and STDs
3. Developmental/ Behavioral Pediatrics
- The program must provide all residents with an adequate experience in developmental/behavioral pediatrics to ensure that the resident recognizes normal and abnormal behavior and understands child development from infancy through young adulthood. The program must educate the residents in the intrinsic and extrinsic factors that influence behavior to enable them to differentiate behavior that can and should be managed by the general pediatrician from behavior that warrants referral to other specialists. Clinical and didactic components of behavioral, psychosocial, and developmental pediatrics should be integrated

into the general educational program and into each patient encounter, when possible.

The experience must be supervised by faculty with training and/or experience in the developmental/behavioral aspects of pediatrics.

The experience must include, as a minimum, a 1-month block rotation to ensure a focused experience in developmental/behavioral pediatrics. The program also must provide an integrated experience that incorporates developmental/behavioral issues into ambulatory and inpatient experiences throughout the 3 years, e.g., inpatient unit, community setting, continuity clinic, and subspecialty rotations. The program must include formal instruction in at least the following components to enable the residents to develop appropriate skills:

- a. Normal and abnormal child behavior and development, including cognitive, language, motor, social, and emotional components
- b. Family structure, adoption, and foster care
- c. Interviewing parents and children
- d. Psychosocial and developmental screening techniques
- e. Behavioral counseling and referral
- f. Management strategies for children with developmental disabilities or special needs
- g. Needs of children at risk, e.g., those in poverty, from fragmented families, or victims of child abuse/neglect
- h. Impact of chronic diseases, terminal conditions, and death on patients and their families

4. Additional Required Subspecialty Experience

Excluding the adolescent medicine, developmental/behavioral pediatrics, and intensive care experiences, the time committed by any resident to subspecialty rotations must be a minimum of 6 months. During the 3 years of training no more than 3 block months, or its equivalent, may be spent by a resident in any one of the subspecialties in the lists below. Subspecialty research electives that involve no clinical activities need not be included in the calculation of a resident's subspecialty months.

The program must require that each resident complete a minimum of four different 1-month block rotations taken from the following list of pediatric subspecialties:

Allergy/Immunology	Gastroenterology
Infectious Disease	Genetics
Cardiology	Hematology/Oncology
Nephrology	Pulmonology
Endocrinology/Metabolism	Rheumatology
Neurology	

At least two of the four subspecialty rotations must be taken at the primary teaching site and/or integrated hospitals. Two of these subspecialties may be combined over a 2-month block if the outpatient and inpatient experiences of the two disciplines can be successfully integrated.

Additional subspecialty experiences needed to comply with the minimum requirements may be scheduled either as block assignments or as part of rotations in the outpatient department or inpatient services. The daytime equivalent of a block month is 140 hours. These may be selected from the list above or from the following list:

Child Psychiatry	Otolaryngology
Dermatology	Pediatric Radiology
Ophthalmology	Pediatric Surgery
Orthopaedics & Sports Medicine	

Two subspecialty areas from this second list may be combined over a 1- or 2-month period to provide a more effective educational experience.

D. Additional Curricular Requirements

Departmental conferences, seminars, teaching rounds, and other structured educational experiences must be conducted on a regular basis sufficiently often to fulfill educational goals. Reasonable requirements for resident attendance should be established, and resident and staff attendance should be monitored and documented. In addition to providing instruction in topics relevant to general pediatrics and to the subspecialty disciplines, there must be a structured curriculum in each of the following areas:

1. Medical ethics, including but not limited to the ethical principles of medical practice and the ethical aspects of
 - a. the relationship of the physician to patients, e.g., initiating and discontinuing the treatment relationship, confidentiality, consent, and issues of life-sustaining treatments
 - b. the relationship of the physician to other physicians and to society, e.g., the impaired physician, peer review, conflicts of interest, resource allocation, institutional ethics committees, and ethical issues in research
2. Quality assessment, quality improvement, risk management, and cost effectiveness in medicine
3. Health care organization, financing, and practice management, with instruction in
 - a. the organization and financing of health care services for children at the local, state, and national levels, including an understanding of the role of the pediatrician in the legislative process
 - b. the organization and financing of office practice, including personnel and business management, scheduling, billing and coding procedures, and maintenance of an appropriate patient record system.
4. Medical information sciences, emphasizing the skills necessary to prepare the resident for continued self-learning and including instruction in
 - a. basic computer skills, techniques for electronic retrieval of the medical literature, and the use of electronic information networks
 - b. the critical evaluation of the medical literature, study design, and the applicability of clinical studies to patient care
 - c. clinical decision theory and its application to clinical practice.

E. Development of Procedural Skills

The program must teach residents, in both hospital and ambulatory settings, those procedural skills appropriate for a general pediatrician. These educational experiences should be graduated so that residents build and maintain skills throughout the training program.

1. Each program must provide sufficient training in and monitor resident development of at least the following skills:
 - a. Basic and advanced life support
 - b. Endotracheal intubation
 - c. Placement of intraosseous and intravenous lines
 - d. Arterial puncture
 - e. Venipuncture
 - f. Umbilical artery and vein catheter placement
 - g. Lumbar puncture
 - h. Bladder catheterization
 - i. Thoracentesis
 - j. Chest tube placement
 - k. Gynecologic evaluation of prepubertal and postpubertal females
 - l. Wound care and suturing of lacerations
 - m. Subcutaneous, intradermal, and intramuscular injections
 - n. Developmental screening test.

Each program must have a formal system for documenting resident experience and for monitoring resident compliance with the

documentation process. Documentation of skills, e.g., procedure logs, must be maintained by the program in the resident files. Supervision and documentation of skills must be by faculty or others with documented competence in the procedures. Residents should be informed about the procedures they are expected to learn and must receive feedback on their proficiency as part of the evaluation process.

2. In addition, programs should provide exposure to the following procedures or skills:
 - a. Circumcision
 - b. Conscious sedation
 - c. Tympanometry and audiometry interpretation
 - d. Vision screening
 - e. Hearing screening
 - f. Simple removal of foreign bodies, e.g., from ears or nose
 - g. Inhalation medications
 - h. Incision and drainage of superficial abscesses
 - i. Suprapubic tap
 - j. Reduction and splinting of simple dislocations
 - k. Pain medicine.

All residents should maintain certification in pediatric advanced life support (PALS) and neonatal advanced cardiac life support or in equivalent lifesaving systems.

F. Elective Experiences

Electives are intended to enrich the educational experience of residents in conformity with their needs, interests, and/or future professional plans. Electives must be well-constructed, purposeful, and effective learning experiences, with written goals and objectives. The choice of electives must be made with the advice and approval of the program director.

G. Resident Policies

1. Supervision of Residents

The supervision of residents must be accomplished through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians. On-call schedules for teaching staff must be structured to ensure that supervision is readily available to residents on duty.

Residents must be supervised by teaching staff in a way that will allow them to assume progressively increasing responsibility for patient care according to their level of training, their ability, and their experience. The level of responsibility accorded to each resident must be determined by the teaching staff.

2. Duty Hours and Conditions of Work

Residency training is a full-time responsibility. The program director should monitor the effects of outside activities, including moonlighting in or outside the primary hospital, to ensure that the quality of patient care and the educational experience, as outlined in the agreement between the institution and the residents, is not compromised. Formal written policies on outside professional activities must be provided to the residents and should be available to the RRC, if requested.

Clinical duties must not be so pressing or consuming that they preclude ample time for educational activities, other important phases of the training program, or personal needs.

It is equally important that the residents have a keen sense of personal responsibility for patient care. Residents should be taught that their obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week. The resident should not be relieved of duty until the

proper care and welfare of the patients have been ensured by the presence of a suitable professional replacement.

On-call duty should occur with a monthly average of every third to fourth night for inpatient rotations requiring call. Call may be less frequent for outpatient or elective rotations. The call expected is in-house call for services with acutely ill patients, i.e., inpatient and intensive care. Call on other rotations or electives may be in-house or by phone. There should also be a resident backup call schedule or alternate plan to provide coverage in the event that the assigned resident is unable to fulfill the assignment.

Call-free rotations should not occur on regular inpatient services where such a schedule would compromise the concept of continuity of care and interfere with the educational experience, e.g., teaching rounds. Call-free rotations should not exceed 4 months during the 3 years of training.

The purposes of night call are to provide patient care, assume clinical responsibility, teach and supervise, and accumulate clinical experience including skill maintenance. Night and weekend duties must be sufficient to permit implementation of the concept of continuity of patient care.

The schedule should be designed to provide a monthly average of at least 1 day out of 7 without assigned duties in the program. Emergency department shifts should not exceed 12 hours, with consecutive shifts separated by at least 8 hours. Night float rotations must not occur so frequently in the program as to interfere with the educational experience for the residents.

3. Resident Complement/Peer Interchange

Because peer interchange is a very important component of the learning process, each program is expected to recruit and retain a sufficient number of qualified residents to fulfill the need for peer interaction among those training in pediatrics. The number of residents from other specialties or programs who rotate on the pediatric service must not dilute the experience and peer interaction of the pediatric residents.

There must be a sufficient number of residents at each level to provide appropriate peer interaction including frequent and meaningful discussion during all phases of the training program, e.g., neonatal, outpatient, inpatient, and emergency services. Residents at more than one level of training must interact in the care of inpatients. To achieve this, a program should offer a minimum total of 12 resident positions, i.e., four at each level, exclusive of subspecialty residents. Except for periods of transition, the same number of positions should be offered in each of the 3 years of training. The RRC will consider the presence of residents from combined pediatrics programs, e.g., medicine/pediatrics or pediatrics/emergency medicine, when it evaluates the adequacy of the resident complement and of peer interaction. An inability to recruit the required minimum number of residents and/or a high rate of resident attrition from a program over a period of years will be a cause of concern to the RRC.

H. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, which should include the following:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;

2. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals;
3. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings;
4. Provision of guidance and technical support for residents involved in research, e.g., research design, statistical analysis; and
5. Provision of support for resident participation in scholarly activities.

There should be evidence of clinical investigation and research that is designed to provide an environment of inquiry and scholarship in which the residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. This must include

1. a journal club and research conferences in which members of the teaching faculty participate and
2. opportunity to participate in scholarly activities, which may include clinical investigation and/or basic research.

VI. Evaluation

The program director is responsible for developing and implementing formal mechanisms for evaluation, as described below.

A. Evaluation of Residents

The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include:

1. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice
2. mechanisms for providing regular and timely performance feedback to residents
3. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance

Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.

The program must have formal mechanisms for monitoring and documenting each resident's acquisition of fundamental knowledge and clinical skills and his or her overall performance prior to progression to the level of supervised semi-independent patient management. The supervising faculty must evaluate each resident in writing at the completion of each rotation. The resident should be evaluated on the acquisition of knowledge, skills, and attitudes, and should receive formal feedback about these evaluations at least twice a year. The program should advance residents to positions of higher responsibility only on the basis of evidence of satisfactory performance, progressive scholarship, and professional growth.

Written documentation of regular periodic evaluation of each resident must be maintained and must be available for review by the site visitor. Evaluations must include noncognitive areas such as interpersonal and communication skills, attitudes, and professional behavior, as well as moral and ethical characteristics.

Program directors are required to keep accurate documentation of the general and subspecialty experience of each resident in the program and to submit this information to the RRC if it is requested. The exact nature of the general and subspecialty experiences of residents at other institutions and evaluation of their performance must be documented in the residents' files.

It is essential that residents participate in existing national examinations. The annual In-Training Examination of the American

Board of Pediatrics is one example of an objective test that can be utilized by the programs. An analysis of the results of these testing programs should be used by the faculty to identify the cognitive strengths and weaknesses of individual residents and weaknesses in the teaching program and to develop remedial activity, if warranted.

The program director and faculty are responsible for provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record that is maintained by the institution.

The program must demonstrate that it has developed an effective plan for accomplishing this and that specific performance measures are used in each resident's evaluation. These must include, at a minimum, the assessment of the resident's competence in patient care, clinical science, practice-based learning and improvement, interpersonal skills and communication, professionalism, and systems-based practice.

B. Evaluation of Faculty

Teaching faculty must be evaluated at least annually. Documentation of faculty evaluation should include teaching ability and commitment as well as clinical knowledge. There must be a formal mechanism by which residents participate in this evaluation in a confidential manner.

C. Evaluation of the Program

The teaching staff must be organized and have regular, documented meetings to review program goals and objectives, the program's effectiveness in achieving them, and the needs of the residents. At least one resident representative should participate in these reviews. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be addressed.

The residency program should use resident performance and outcome assessment results in their evaluation of the educational effectiveness of the residency program.

The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

This evaluation should include an assessment of the balance between the educational and service components of the residency. In addition, the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, and the quality of supervision of the residents should be evaluated. Written evaluation by residents should be utilized in the process.

As part of the evaluation of the effectiveness of the program, the director must monitor the performance by the program's graduates on the certifying examination of the American Board of Pediatrics. Information gained from the results should be used to improve the program.

VII. Board Certification

One measure of the quality of a residency program is the performance of its graduates on the certifying examinations of the American Board of Pediatrics. In its evaluation of residency programs, the RRC will take into consideration the information provided by the American Board of Pediatrics regarding resident performance on the certifying examinations during the most recent 3 to 5 years. A

program will be judged deficient if, over a period of years, the rate of those passing the examination on their first attempt is less than 50% and/or if fewer than 75% of those completing the program take the certifying examination.

Residents who plan to seek certification by the American Board of Pediatrics should communicate with the president of the board to obtain the latest information regarding certification.

ACGME: September 26, 2000 Effective: July 1, 2001

Program Requirements for Residency Education in the Subspecialties of Pediatrics

I. Introduction

In addition to complying with the requirements in this document, each program must comply with the program requirements for the respective subspecialty, which may exceed the minimum requirements set forth here.

An accredited pediatric subspecialty program must exist in conjunction with and be an integral part of a core pediatric residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME).

Interaction of the subspecialty residents and faculty with the residents in the core pediatrics residency program is required. [Note: Those in accredited subspecialty programs are called *residents* or *subspecialty residents*. The term *fellow* is not used.] Lines of responsibility for the pediatric residents and the subspecialty residents must be clearly defined. The presence of the subspecialty program should not adversely affect the education of the pediatric residents.

II. Institutional Organization

A. Sponsoring Organization

The pediatric subspecialty program must be sponsored by the same institution that sponsors the related core pediatrics program.

B. Single or Multiple Institutions

An accredited program may occur in one or more institutions. If training occurs in more than one institution, there must be formal agreements that describe conjoint responsibilities to provide complementary facilities, teaching staff, and teaching sessions. An institution that provides 6 months or more of the inpatient and/or outpatient training requires approval by the Residency Review Committee (RRC).

When a program relies on other institutions to provide some components of the curriculum, the arrangement between the institutions must be designed to meet the educational needs of the subspecialty residents and must be described in a written document that is signed by the appropriate persons from the respective institutions. These agreements must relate specifically to the subspecialty program and must be current, no more than 5 years old, at the time of the site visit.

Copies of these written arrangements, specifying administrative, organizational, and educational relationships, must accompany an application for initial accreditation. At the time of subsequent reviews these documents need not be submitted but must be available for review by the site visitor.

C. Appointment of Subspecialty Residents

Prerequisite training for entry into a pediatric subspecialty program should include the satisfactory completion of an ACGME-accredited pediatric residency or other training judged suitable by the program director. [Note: Candidates who do not meet this criterion must be advised by the program director to consult the American Board of Pediatrics or other appropriate board regarding their eligibility for subspecialty certification.]

To determine the appropriate level of training for a subspecialty resident transferring from another ACGME-accredited pediatric subspecialty program, the program director must receive from the director of that program written verification of the subspecialty resident's educational experiences in the subspecialty and a statement regarding his/her performance.

III. Duration and Scope of Training

A. Length of Training

Unless specified otherwise in the program requirements for a subspecialty, pediatric subspecialty programs must provide 2 years of training. [Note: If a third year is offered, it must be described when the program is reviewed by the RRC. Those residents who plan to seek certification by the subboard should consult the American Board of Pediatrics regarding the criteria for eligibility, including length of training, with the exception of sports medicine, which is 1 year.]

B. Scope of Training

Each subspecialty program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of the patients and provides subspecialty residents adequate training in the diagnosis and management of these subspecialty patients. This must include progressive clinical, technical, and consultative experiences that will enable the subspecialty resident to develop expertise as a consultant in the subspecialty.

The subspecialty program also must develop in its subspecialty residents a commitment to lifelong learning and must emphasize scholarship, self-instruction, development of critical analysis of clinical problems, and the ability to make appropriate decisions. Progressive acquisition of skill in investigative efforts related to the subspecialty is essential.

The program must provide the subspecialty residents with instruction and opportunities to ensure effective interaction with patients, their patients' families, professional associates, and others in carrying out their responsibilities as physicians in the specialty. They must be taught how to create and sustain a therapeutic relationship with patients and how to work effectively as members or leaders of patient care teams or other groups in which they participate as researcher, educator, health advocate, or manager.

IV. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program. These activities include, but are not limited to, the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of subspecialty residents and the maintenance of records related to program accreditation.

A. Program Director

There must be a single program director based at the primary teaching site who is fully committed to the program and devotes sufficient time to ensure achievement of the educational goals and objectives. The RRC must be promptly notified in writing of a change in the leadership of the program.

1. Qualifications

The director must

- a. document possession of the requisite clinical, educational, investigative, and administrative abilities and experience.
- b. be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
- c. be currently certified by the relevant subboard of the American Board of Pediatrics or possess appropriate educational qualifications judged by the RRC to be acceptable.
- d. have an appointment in good standing to the medical staff of an institution participating in the program.

2. Responsibilities

The program director is responsible for the following:

- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of the subspecialty residents at each level of training and for each major rotation or other program assignment, and distribution of this statement to subspecialty residents and members of the teaching staff. It should be readily available for review.
- b. Selection of subspecialty residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. Supervision of subspecialty residents through explicit written guidelines describing supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Subspecialty residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and subspecialty resident complaints or grievances.
- f. Monitoring subspecialty resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services related to subspecialty residents. Training situations that consistently produce undesirable stress on subspecialty residents must be evaluated and modified.
- g. Monitoring and documenting the procedural skills of the subspecialty residents.

B. Teaching Staff

There must be sufficient numbers of teaching staff who devote adequate time to the educational program to enable it to meet its goals and objectives. In addition to the subspecialty program director, there must be at least one other member of the teaching staff who is qualified in the subspecialty. In some of the subspecialties, two or more additional subspecialists are required. Specific details are included in the requirements for each pediatric subspecialty.

If the program is conducted at more than one institution, a member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

Appropriate teaching and consultant faculty in the full range of pediatric subspecialties and in other related disciplines also must be available. The other related disciplines should include medical genetics, child neurology, child and adolescent psychiatry, as well as pediatric surgery and surgical subspecialties as appropriate to

the subspecialty. An anesthesiologist, pathologist, and a radiologist who have significant experience with pediatric problems and who interact regularly with the subspecialty residents are essential.

All of the members of the physician teaching staff should be currently certified by the appropriate member board of ABMS. Pediatric subspecialists should be certified in their subspecialty by the American Board of Pediatrics. Where this is not the case, evidence of appropriate educational qualifications must be provided. The RRC will determine the acceptability of such qualifications.

All members of the teaching staff must demonstrate a strong interest in the education of subspecialty residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. They must devote adequate time to each of these endeavors.

C. Other Professional Personnel

Programs must have access to the additional professional, technical, and clerical personnel needed to support the administrative and educational conduct of the program appropriate to the subspecialty. The professional personnel should include nutritionists, social workers, respiratory therapists, pharmacists, subspecialty nurses, physical and occupational therapists, child life therapists, and speech therapists with pediatric focus and experience, as appropriate to the subspecialty.

V. Facilities and Resources

The sponsoring institution is responsible for ensuring that the subspecialty program has adequate facilities and resources to achieve the educational objectives.

A. Inpatient and Outpatient Facilities

Adequate inpatient and outpatient facilities, as specified in the requirements for each subspecialty, must be available. These must be of sufficient size and be appropriately staffed and equipped to meet the educational needs of the subspecialty program.

B. Support Services

Support services must include clinical laboratories, intensive care, nutrition, occupational and physical therapy, pathology, pharmacology, mental health, diagnostic imaging, respiratory therapy, and social services.

C. Patient Population

Patients should range in age from newborn through young adulthood, as appropriate. Adequate numbers of pediatric subspecialty inpatients and outpatients, both new and follow-up, must be available to provide a broad experience for the subspecialty residents. The program must maintain an appropriate balance among the number and variety of patients, the number of preceptors, and the number of subspecialty residents in the program.

D. Library Facilities and Computer Access

Subspecialty residents must have access to an on-site library or collection of appropriate texts and journals in each participating institution or must have access to electronic databases and other data processing applications.

E. Resources for Research and Scholarly Activities

There must be adequate resources for scholarly activity, research, and critical analysis. These must include adequate laboratory space, equipment, financial support, and computer services.

VI. Educational Program

The subspecialty program must provide advanced training to allow the subspecialty residents to acquire expertise as a consultant in

the subspecialty. The formal curriculum must be reflected in the goals and objectives.

A subspecialty program must provide an environment in which high standards of professionalism and a commitment to continued improvement are evident. The values of professionalism must be fostered in the subspecialty residents throughout their training. These values include placing the needs of one's patients ahead of one's self-interest, being responsive to the needs of society, continuing a commitment to scholarship and to high standards of related research, and enhancing the ability of all colleagues in the medical profession to discharge their responsibilities optimally.

A. Program Design

The program design and structure must be approved by the RRC as part of the regular review process.

B. Clinical Skills

A subspecialty program must offer supervised training to ensure the acquisition of the necessary clinical skills used in the subspecialty and the development of sound judgment and decision-making skills that affect patient treatment and management. Residents must regularly participate in clinical quality improvement activities.

Subspecialty residents must be provided with adequate and appropriate faculty supervision in accord with their level of experience and expertise.

C. Diagnostic Tests and Procedures

The program must offer supervised experience in interpreting the results of laboratory tests and diagnostic procedures for use in patient care. Instruction and experience must be sufficient for the subspecialty residents to acquire the necessary procedural skills and develop an understanding of their indications, risks, and limitations. Each resident's experience in such procedures must be documented by the program director.

D. Curriculum

There must be a formally structured educational program in the clinical and basic sciences related to the subspecialty that utilizes lectures, seminars, and practical experience. Subspecialty conferences must be regularly scheduled and should involve active participation by the subspecialty resident in the planning and implementation of these meetings.

The curriculum should involve basic and fundamental disciplines related to each subspecialty and should include the following, as appropriate: anatomy, physiology, biochemistry, embryology, pathology, microbiology, pharmacology, immunology, genetics, and nutrition/metabolism.

This curriculum should include the pathophysiology of disease, reviews of recent advances in clinical medicine and biomedical research, conferences dealing with complications and death, as well as instruction in the scientific, ethical, and legal implications of confidentiality and of informed consent.

There should be instruction in the ways in which sociocultural factors affect patients and their families.

Bioethics, biostatistics, epidemiology and population medicine, outcome analysis, and the economics of health care must also be included in the formal curriculum. The latter must involve training and education in current health care management issues, such as cost-effective patient care, practice management, quality improvement, and clinical outcomes.

E. Teaching Experience

Subspecialty residents must be given the opportunity to teach and to assume some departmental administrative responsibilities.

Subspecialty residents should develop an understanding of the appropriate role of the pediatric generalist in subspecialty care and

participate in the residency and continuing education activities. They must participate actively in conferences, lectures, and clinical experiences for general pediatric residents and other trainees. These teaching experiences should include oral presentations and correlation of basic biomedical knowledge with the clinical aspects of the subspecialty. The program should provide instruction in curriculum design and in the development of teaching material for the subspecialty residents.

F. Subspecialty Resident Policies

The program director must establish an environment that is optimal for both subspecialty resident education and patient care, including the responsibility for continuity of care, while ensuring that undue stress and fatigue among subspecialty residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that subspecialty residents are not subjected to excessively difficult or prolonged working hours. Subspecialty residents' work schedules must be designed so that they have at least 1 day out of 7, averaged monthly, free of program responsibilities. They should be on call in the hospital no more often than every third night. Call from home may not be so frequent as to infringe on a reasonable amount of personal time.

During in-house call subspecialty residents must be provided with adequate sleeping, shower and lavatory, lounge, and food facilities. Adequate backup must be available so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the subspecialty resident does not spend an inordinate amount of time in noneducational activities that should be discharged properly by other personnel.

G. Research and Scholarly Activity

Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. As part of the academic environment of each accredited subspecialty program, an active research component, involving both faculty and subspecialty residents, is required. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the program director and the teaching staff. Recent productivity by the program faculty and by the subspecialty residents will be assessed.

Participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship must be demonstrated.

1. Faculty Research/Scholarly Activity

The teaching staff must provide evidence of a commitment to and productivity in research in the pediatric subspecialty area. This research must be ongoing in clinical and/or basic aspects of the pediatric subspecialty field. The RRC will consider the following as indicative of the commitment of the teaching staff to research:

- a. Projects funded by agencies requiring peer review
- b. Publications in peer-reviewed journals
- c. Presentations at national, regional, or international scientific meetings
- d. Research protocols approved by the local Institutional Review Board and implemented.

2. Research Program for Subspecialty Residents

Subspecialty residents must be instructed in the scientific and ethical bases of clinical research, including study design, modeling and methodology, statistical concepts, and data collection and analysis. The institution must provide the support necessary for a subspecialty resident to participate in such scholarly activities.

Research experience must begin in the first year and continue for the entire period of training to allow adequate time for the

development of research skills, completion of research projects and presentation of results to the medical community. Each subspecialty resident must actively participate in the design, conduct, evaluation, and preparation for publication of a clinical or laboratory research project in his/her subspecialty area.

Subspecialty residents also should have experience and be given guidance in the critical evaluation of pertinent medical literature, the process of grant application, preparation of scientific articles, and medical writing. In addition, they should be required to conduct research seminars and prepare reports of their research activities. These efforts should be reviewed and evaluated by supervising faculty.

VII. Evaluation

There must be formal mechanisms for the assessment of subspecialty resident performance, faculty performance, and program objectives. The same evaluation mechanisms used in the related pediatrics residency program must be adapted for and implemented in all of the pediatric subspecialty programs that function with it. These must be in compliance with the specific guidelines provided below.

A. Evaluation of Subspecialty Residents

The program must have formal mechanisms by which the knowledge, skills, and professional growth of the subspecialty residents are evaluated at least semiannually. This assessment must specify how the acquisition of requisite skills for subspecialty competence is accomplished.

A written record of these evaluations must be maintained, must be formally reviewed with the subspecialty resident at least semiannually, and must be accessible to authorized personnel. Subspecialty residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.

The program director, in consultation with the teaching staff, must provide a written final evaluation for each subspecialty resident who completes the program. This evaluation must include a review of the subspecialty resident's performance during the final period of training. Verification that the subspecialty resident has demonstrated sufficient professional ability and acquisition of appropriate clinical and procedural skills to practice competently and independently in the pediatric subspecialty should be provided. This final evaluation should be part of the subspecialty resident's permanent record that is to be maintained by the institution.

B. Evaluation of Faculty

Teaching faculty must be evaluated at least annually. Documentation of faculty evaluation must include assessment of their teaching ability and commitment to teaching, their clinical knowledge, and their active participation in scholarly activity. There must be a formal mechanism by which residents in both the core and subspecialty programs participate confidentially in these evaluations. Faculty should receive formal feedback from these evaluations.

C. Evaluation of the Program

The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. They should periodically evaluate the use of the resources available to the program. Written evaluations by subspecialty residents should be used in this process. Specifically, the contribution of the participating institutions, the financial and administrative support of the program, the volume and variety of patients available for educational purposes, the performance of the teaching staff, and the quality of supervision of

subspecialty residents should be considered in the evaluation. Information gained from these evaluations should be used to implement improvements in the program.

Annual review and evaluation of the program in relation to the educational goals, the quality of the curriculum, the needs of the subspecialty residents, and the clinical and research responsibilities of the faculty must be documented. At least one subspecialty resident representative should participate in the periodic and annual reviews.

VIII. Evaluation by the RRC

Each subspecialty program will be evaluated by the RRC at regular intervals, usually in conjunction with a review of the related core pediatrics program. During the interval between regular reviews, approval of the RRC should be obtained before implementation of major changes in the program.

The program director is responsible for submitting complete and accurate information on the program to the RRC. Upon review of this information, the RRC will judge the degree of compliance with the published standards.

One measure of the quality of a training program is the performance of its graduates on the certifying examination of the subboard. In its evaluation of these programs, the RRC will take into consideration the information provided by the American Board of Pediatrics. A program will be judged deficient if, for the most recent 5- to 10-year period, fewer than 75% of those completing the program take the certifying examination. A subspecialty program director will be expected to supply this information at the time of each RRC review.

ACGME: September 1999 Effective: July 2000

Program Requirements for Residency Education in Adolescent Medicine (Pediatrics)

Introduction

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs in adolescent medicine also must comply with the following requirements.

I. Scope and Duration of Training

Programs in adolescent medicine must provide training in and include an appropriate balance among clinical, didactic, and research activities. They must provide education in the broad and diverse knowledge base of this multidisciplinary field that focuses on the unique physical, psychological, and social characteristics of adolescents, their health-care problems and needs.

Adolescence links childhood with the adult years, covering the period from the start of puberty to early adulthood, programs in adolescent medicine must, therefore, integrate the relevant areas of pediatrics and the pediatric subspecialties with family practice, general internal medicine, psychiatry, obstetrics/gynecology, sports medicine, dermatology, and surgery and with related fields such as clinical pharmacology/toxicology, law, psychology, social work, education, nutrition, juvenile justice, sociology, and public health.

II. Faculty

Appropriate physician and nonphysician faculty in numbers sufficient for the size of the program must be available to provide ongoing teaching and supervision of the subspecialty residents. In addition to the program director, there must be at least one other physician who possesses appropriate qualifications in adolescent medicine, as described in the Program Requirements for Residency Education in the Subspecialties of Pediatrics.

In addition to the full range of pediatric subspecialists, consultant faculty in the following areas must be available to the program:

- A. Child/adolescent psychiatry
- B. Child neurology
- C. Obstetrics/gynecology
- D. General surgery
- E. Orthopedic surgery
- F. Sports medicine
- G. Dermatology

In addition, personnel from the following categories should be available:

- A. Psychology
- B. Social work
- C. Public and private school systems
- D. Education
- E. Public health
- F. Chemical dependency
- G. Nutrition
- H. Clinical pharmacology

III. Facilities/Training Sites

The facilities and settings used by the program must be adequate for the program to accomplish the educational goals, and must include access to the following:

- A. An inpatient medical service
- B. An outpatient service
- C. Clinical consultation
- D. Additional clinical settings should include a school-based clinic, a summer camp, a crisis center, juvenile justice facilities, a college health program and a community health center, psychiatric, drug and alcohol facilities, and a family plan program.

IV. Curriculum

A. Core Knowledge Areas

The program must provide adequate instruction and clinical experience for all of the adolescent medicine residents to enable them to gain sufficient knowledge of and skill in the following:

1. Physical, physiologic, and psychosocial changes associated with pubertal maturation and its disorders
2. Organ-specific conditions frequently encountered during the teenage years
3. The effects of adolescence on preexisting conditions
4. Mental illnesses of adolescence (including psychopharmacology and psychophysiological disorders)
5. Family dynamics, conflicts, and problems
6. Adolescent parenthood
7. Disorders of cognition, learning, attention, and education
8. Social and emotional development of the adolescent, including cultural/ethnic diversity
9. Chronic handicapping conditions
10. Disorders of the endocrine system and metabolism
11. Sexuality, including sexual identity, development, and sexual health problems
12. Sexually transmitted diseases (prevention and treatment)

13. Reproductive health issues of males and females (e.g., menstrual disorders, gynecomastia, contraception, pregnancy, fertility)
14. Nutrition, including normal needs, health problems and deficiencies, and nutritional needs of special populations
15. Health promotion, disease prevention, screening, and immunizations
16. Infectious diseases, including epidemiology, microbiology, and treatment
17. Pharmacology and toxicity
18. Substance abuse, including alcohol and tobacco
19. Eating disorders, e.g., obesity, anorexia nervosa, and bulimia
20. Social/environmental morbidities including physical and sexual abuse, risk-taking behaviors, injuries, sexual assault, and violence
21. Juvenile justice
22. Sports medicine
23. Legal and ethical issues including advocacy
24. Interviewing/short-term counseling skills for teens and their parents
25. Public health issues including demographics, social epidemiology, population-based interventions, and adolescent health promotion
26. Financing adolescent health care in public, private, and academic managed care environments

B. Clinical and Continuity Experience

The program must provide on-site clinical supervision of the subspecialty residents in a manner that allows them to assume graded responsibility for both the provision of clinical services and the supervision of other learners during the years of training.

The subspecialty resident must be given the opportunity to assume continuing responsibility for both acute and chronic health problems of adolescents in both inpatient and outpatient settings and to provide direct and consultative care to adolescents of various ages and socioeconomic and racial backgrounds in a variety of hospital and community settings. It is essential that the adolescent medicine resident have an outpatient continuity experience to include at least ½ day per week in an adolescent medicine setting.

C. Didactic Sessions

Conferences must emphasize the core knowledge and skill areas enumerated above. In addition, clinical conferences must include discussion of the basic clinical sciences. Health education, current health-care legislation, biomedical ethics, and preventive measures should also be addressed. Faculty must be available to provide instruction in interdisciplinary patient management and case conferences.

D. Administrative Instruction

Adolescent medicine residents must be exposed to formal sessions on the organization and leadership of, and membership in, a comprehensive health-care team. This must include utilization of the services of all relevant health-care professionals, including those in social services, nursing, education, mental health, and community resources.

The subspecialty resident must be provided with instruction and experience in the administrative aspects of an adolescent health care program, e.g., knowledge of staffing needs, program management, continuous quality improvement, the organization and financing of health-care services, preparation of grant proposals, and planning for program development in a variety of settings.

ACGME: September 1997 Effective: September 1997

Program Requirements for Residency Education in Developmental-Behavioral Pediatrics (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs in developmental-behavioral pediatrics also must comply with the following requirements, which may in some cases exceed the general subspecialty requirements.

I. Duration and Scope of Training

Developmental-behavioral pediatrics is the specialty within pediatrics that focuses on (1) understanding the complex developmental processes of infants, children, adolescents, young adults, and their families in the context of their families and communities; (2) understanding the biological, psychological, and social influences on development in the emotional, social, motor, language, and cognitive domains; (3) mechanisms for primary and secondary prevention of disorders in behavior and development; and (4) identification and treatment of disorders of behavior and development throughout childhood and adolescence.

An accredited program in developmental-behavioral pediatrics must be 3 years in duration. A progressive educational experience is required, which must include responsibility for patient care, the development of clinical proficiency, involvement in community or community-based activities, and the development of skills in teaching, program development, research, and child advocacy. Subspecialty residents must participate in clinical training activities, including direct and indirect patient care activities, consultations, observations, teaching conferences, clinical supervision, and related activities.

The goal of education in this subspecialty is to understand and foster optimal cognitive, social, and emotional functioning of the patients and their families. This can be achieved only through close collaboration with several medical and nonmedical disciplines that address a similarly broad goal through their own unique and complementary perspectives.

II. Faculty

The program director and the teaching staff are responsible for the general administration of the program. These activities include, but are not limited to, the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of subspecialty residents and the maintenance of records related to program accreditation.

A. Program Director

(See general requirements that pertain to all pediatric subspecialties for general description, qualifications, and responsibilities of the Program Director)

B. Developmental-Behavioral Specialists

In addition to the program director, there must be at least one other physician faculty member who is board certified or appropriately qualified in the subspecialty of developmental-behavioral pediatrics. Additional subspecialty faculty may be required, depending on the number of subspecialty residents appointed to the program. These subspecialists in developmental-behavioral pediatrics must devote sufficient time to the program to meet its administrative and educational needs and to ensure continuity of teaching.

C. Core-related Disciplines

Additional physician and nonphysician faculty from appropriate disciplines must be available in numbers sufficient to provide ongoing teaching and supervision of the subspecialty residents in the full breadth of this subspecialty. In addition to the full range of pediatric subspecialists, consultant faculty from child and adolescent psychiatry, child neurology, pediatric physical medicine and rehabilitation and/or neurodevelopmental disabilities, and psychology (developmental, clinical, educational, or pediatric) must be available to the program. Formal linkages should be established to ensure their participation in instruction and clinical supervision.

D. Other Related Disciplines

Programs must have access to the additional professional and technical personnel needed to support the clinical and educational conduct of the program.

1. Clinicians from these related disciplines must be available to the program: occupational therapy, physical therapy, social work, and speech and language pathology.
2. Personnel from the following disciplines should be available to the program: audiology, nutrition, pharmacology, education, nursing, and public health.

III. Facilities and Resources

The facilities must be adequate for the program to accomplish its educational goals. In addition to the facilities and resources that are required for all pediatric subspecialty programs, there must be

- A. outpatient facilities for developmental-behavioral clinical services. These must include clinical services for children from infancy through adolescence with or at risk for developmental delays and disabilities, behavioral difficulties, learning problems, and chronic physical health conditions. These facilities should provide a patient base with the conditions described under Core Knowledge;
- B. collaboration with general pediatrics services to provide opportunities for consultation and teaching; and
- C. established linkages with selected community-based facilities that serve children and families, such as child care programs; early intervention programs; schools; and community agencies that serve children who have visual impairments, hearing impairments, or serious developmental, physical, and/or emotional disabilities.

IV. Educational Program

The program must provide instruction, research opportunities, and clinical experience in developmental-behavioral pediatrics to enable all subspecialty residents to diagnose and treat patients with developmental-behavioral disorders. The program must include a formal educational program with activities pertaining to the knowledge and skills required in the clinical care of patients, as well as instruction and experience in teaching, in program development and administration, and in child advocacy, all of which must occur with appropriate supervision.

A. Core Knowledge

The education of a developmental-behavioral specialist must include an understanding of theories of the process of normal development from infancy through young adulthood, in addition to a structured curriculum that includes the following:

1. Biological mechanisms of behavior and development, e.g., development and functional organization of the central nervous system, neurophysiology, genetics, and biological risk factors
2. Family and social/cultural factors that contribute to children's development and family functioning

3. Variations in temperament and adaptive styles
4. Adaptations to general health problems and their treatments, e.g., acute illnesses, chronic illnesses, physical disabilities, hospitalization
5. Developmental and behavioral aspects of a wide variety of childhood conditions, e.g., perinatal conditions, chromosomal/genetic disorders, metabolic, neurologic, sensory, endocrine, and cardiac disorders
6. Cognitive disabilities
7. Language and learning disorders
8. Motor disabilities, e.g., cerebral palsy, myelodysplasia, dystrophies
9. Autistic spectrum disorders, e.g., autism, Asperger's syndrome
10. Attention disorders
11. Externalizing conditions, e.g., aggressive behavior, conduct disorder, oppositional defiant disorder
12. Internalizing behaviors, e.g., anxiety, mood, and obsessive disorders, suicidal behavior
13. Substance use/abuse, e.g., tobacco, alcohol, illicit drugs
14. Child abuse and neglect, e.g., physical, sexual, factitious
15. Somatoform conditions
16. Sleep problems
17. Feeding/eating difficulties, e.g., obesity, failure to thrive, anorexia, bulimia
18. Elimination problems, e.g., encopresis, enuresis
19. Variations and difficulties in sexual development, e.g., sexual orientation, gender identity, deviance
20. Atypical behaviors, e.g., tic disorders, self-injurious behavior, repetitive behaviors
21. Complementary and alternative therapies

B. Clinical

The clinical training must be under the supervision of developmental-behavioral pediatricians. Clinical training must include participation in interdisciplinary activities involving physicians of various disciplines, various nonmedical professionals, and families.

The three major areas of patient care activity that must be emphasized are patient assessment, patient management, and consultation, as outlined below.

1. Assessment skills

Acquiring appropriate skills for competency in patient assessment is of prime importance and must include the following for children from infancy through adolescence:

- a. Developmental screening and surveillance techniques
- b. Behavioral screening and surveillance techniques
- c. Interviewing and assessment of family history and functioning
- d. Neurodevelopmental assessment
- e. Assessment of behavioral adjustment and temperament
- f. Psychiatric interviewing and diagnosis
- g. Understanding of the major diagnostic classification schemas: DC 0-3, DSM-IV, DSM-PC [Note: Various systems of classification have been developed to describe systematically the range of disorders of behavior and development that are encountered regularly by professionals who care for children and adolescents. The *Diagnostic Statistical Manual*, fourth edition (DSM-IV) was developed by the American Psychiatric Association. The American Academy of Pediatrics, in collaboration with several collaborating professional organizations, created the *DSM for Primary Care, Child and Adolescent Version* (DSM-PC) to emphasize the contextual nature and the process of development of many of the disorders seen in the course of pediatric care. The DC 0-3 system was developed to focus attention on the critical development of infants in the first 3 years of life.]

In developing competence in patient assessment, the subspecialty residents must learn the importance of understanding and integrating evaluations by other disciplines. The subspecialty residents must gain understanding of the scope and range of evaluations performed by all disciplines listed in Sections II.C and II.D.1 above.

2. Patient management

The program must provide training for the subspecialty residents to develop competence in providing anticipatory guidance, consultation and referral, individual and family counseling, behavioral treatment methods, developmental interventions, and psychopharmacotherapy. They must also become familiar with the therapeutic modalities used by the other disciplines listed in Sections II.C and II.D.1, to be able to recommend them and/or apply them in their clinical activities. They must also be familiar with the early intervention and educational systems. Finally, they should be familiar with complementary and alternative therapies for developmental and behavioral disorders.

The program must enable subspecialty residents to provide longitudinal care to children and families of diverse ethnic, racial, and socioeconomic status groups. Subspecialty residents should follow a sufficient number of children to appreciate the range of psychosocial impacts and stresses on children and families and the effectiveness of therapeutic programs.

In addition to required skills in management of all conditions referred to above (IV.A), the development of skills in one or more of the following is desirable: pain medicine, biofeedback and hypnosis, and psycho-educational group involving parents and children.

3. Consultation and referral

The curriculum must include instruction and experience in providing consultation to primary care providers, pediatric subspecialists, schools, and other community organizations. Included as well must be the development of skills for multidisciplinary collaboration with both physician and other professional colleagues, including the process of making referrals to appropriate specialists (physicians and nonphysicians).

C. Policy and Leadership Skills

The subspecialty residents must acquire adequate knowledge of, and have experience with, health care systems, community resources, support services, and the structure and administration of educational programs for children with and without special educational needs. Program faculty must provide instruction in legislative processes (local, state, and national), health care policy, child advocacy organizations, and the legal and judicial systems for children and families.

V. Research

(See general requirements that pertain to all pediatric subspecialties)

VI. Evaluation

(See general requirements that pertain to all pediatric subspecialties for evaluation of residents, including evaluation of core competencies, faculty, and the program)

ACGME: June 2002 Effective: January 2003

Program Requirements for Residency Education in Neonatal-Perinatal Medicine (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs must comply with the following requirements, which may exceed the common requirements.

I. Scope of Training

The purpose of an accredited program in neonatal-perinatal medicine is to provide residents with the background to understand the physiology and altered structure and function of the fetus and the neonate and to diagnose and manage problems of the neonate.

To ensure an appropriate educational environment, an accredited program in neonatal-perinatal medicine must be affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency program in obstetrics and gynecology, within the same geographic location, that has board certified maternal-fetal medicine specialists.

The program must emphasize the fundamentals of clinical diagnosis and management of problems seen in the continuum of development from the prenatal through the intrapartum and neonatal periods, including longitudinal follow-up.

II. Faculty

A. Neonatologists

In order to ensure appropriate education and to provide adequate supervision, four hospital-based neonatologists devoting full-time to the program.

B. Other Physician Teaching and Consultant Faculty

In addition to having the full range of pediatric subspecialists available for teaching and consultation, each program must have

1. a pediatric cardiologist
2. a pediatric surgeon
3. a cardiovascular surgeon skilled in pediatric cardiovascular surgery as a consultant and teacher
4. a pediatrician skilled in infectious diseases
5. a pediatrician skilled in neurodevelopment
6. a neurosurgeon skilled in pediatric neurosurgery as a consultant and teacher
7. an obstetrician skilled in maternal-fetal medicine
8. an ophthalmologist skilled in pediatric ophthalmologic disease and treatment
9. a pediatric orthopaedic surgeon
10. a pediatric otorhinolaryngologist
11. a pediatric urologist

Consultant faculty from other related disciplines also must be available.

C. Other Professional Personnel

The following program staff are essential: respiratory therapists skilled in the care of the neonate, an ultrasonographer well versed in perinatal ultrasonic techniques, and an echocardiographic technician skilled in neonatal echocardiography.

The nursing staff must be sufficient to meet appropriate standards of care. This implies leadership by nurses skilled in neonatal and obstetrical intensive care. Medical social workers qualified in maternal-child health also must be available.

III. Facilities/Resources

A specially designed neonatal intensive care unit must be located in the primary teaching site. Facilities and equipment in that unit must meet the generally accepted standards of modern intensive care units and laboratories, and must be available on a 24-hour-a-day basis.

These must include but are not limited to the following:

1. Microchemical laboratory
2. Blood gas laboratory
3. Perinatal diagnostic laboratory
4. Radiology and ultrasound imaging facilities
5. Diagnostic bacteriology and virology laboratory
6. Hematology laboratory
7. Blood bank
8. Electrocardiographic and electroencephalographic laboratories
9. Computed tomography and/or magnetic resonance imaging facilities
10. Echocardiography capability
11. Screening laboratory for inborn errors of metabolism

In addition, access to the following should be available within a reasonable period of time at the primary teaching site or nearby:

1. Clinical toxicology laboratory
2. Nuclear medicine facilities
3. Cytogenetics laboratory

IV. Educational Program

Programs must provide experience and instruction that is adequate to enable the neonatal-perinatal residents to develop special competence in the management of critically ill neonates. In addition to the general principles of critical care this should include but not be limited to techniques of neonatal resuscitation, venous and arterial access, endotracheal intubation, preparation for transport, ventilatory support, continuous monitoring, temperature control, and nutritional support.

The program also must provide instruction in the psychosocial implications of disorders of the fetus, neonate, and young infant, as well as in the family dynamics surrounding the birth and care of a sick neonate. The subspecialty residents also should be involved in a regional program that involves outreach education, patient consultation, and transport of ill neonates.

Each resident must be taught to identify the high-risk pregnancy and must become familiar with the methods used to evaluate fetal well-being and maturation. Each resident must become familiar with factors that may compromise the fetus during the intrapartum period and recognize the signs of fetal distress. In addition, each resident must participate in the longitudinal follow-up of high-risk neonates.

A. Patient Population

The program must provide the patient care experiences necessary for the subspecialty residents to acquire skill in delivery room stabilization and resuscitation of critically ill neonates. To accomplish this, there must be a sufficient number and variety of high-risk obstetrical patients to ensure that the residents become knowledgeable in identifying high-risk pregnancies and evaluating fetal well-being and maturation.

Also, an adequate number of critically ill neonates with a variety of disorders must be available.

Each resident must participate in the care of a sufficient number of neonates who require ventilatory assistance to become skilled in their management. Similarly, each resident should participate in the care of an adequate number of neonatal patients who require major surgery, including cardiac surgery, to become skilled in the diagnosis and management of these neonates.

B. Outpatient Experience

A sufficient number of discharged infants must be available in a continuity clinic to assure appropriate outpatient experience for each subspecialty resident. These experiences should enable residents to become skilled in the longitudinal follow-up, evaluation, and management of such patients and to become aware of the socioeconomic impact and the psychosocial stress that such infants may place on a family.

C. Neonatal Data Base

A neonatal database of all patient admissions, diagnoses, and outcomes must be available for resident education. Experience in tabulating and evaluating institutional and regional fetal and neonatal morbidity and mortality data should be provided. There also should be instruction and experience in techniques of collation and critical interpretation of data pertaining to immediate outcome and sequelae of various diseases, for which the presence of a statistician is desirable. This experience should be closely related to the evaluations of various modalities of therapy used in these disorders.

D. Curriculum

The program must include instruction in related basic sciences. Seminars, conferences, and courses must be offered in the basic disciplines related to pregnancy, the fetus, and the neonate. This should include maternal physiological, biochemical, and pharmacological influences on the fetus; fetal physiology; fetal development; placental function (placental circulation, gas exchange, growth); physiological and biochemical adaptation to birth; cellular, molecular, and developmental biology and pathology relevant to diseases of the neonate; psychology of pregnancy and maternal-infant interaction; breast feeding and lactation; growth and nutrition; and genetics.

Residents should participate in regularly scheduled multidisciplinary conferences, such as sessions that review perinatal mortality, morbidity, and patient care, as well as in case conferences and current literature and research conferences.

ACGME: September 1999 Effective: July 2000

Program Requirements for Residency Education in Pediatric Cardiology (Pediatrics)

Programs must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics and with the following requirements. The specialty requirements may exceed the common requirements.

I. Duration and Scope of Training

An accredited program in pediatric cardiology must be 3 years in duration. The purpose of a training program is to provide the pediatric cardiology residents with the foundation for understanding normal and abnormal cardiovascular conditions, with a focus on the pathophysiologic basis of cardiovascular disease, and to prepare them to provide optimal care and consultation for pediatric patients with cardiovascular disease.

An accredited program must include properly balanced, well-organized, and progressive responsibility for the care and study of patients on inpatient services, in intensive care units, and in ambulatory centers.

II. Faculty

A. Pediatric Cardiologists

There must be at least four pediatric cardiologists who provide sufficient time to the program to ensure its educational and research quality and to provide adequate supervision of cardiology residents. They must be certified in pediatric cardiology by the American Board of Pediatrics or have equivalent qualifications.

B. Other Physician Teaching and Consultant Faculty

Appropriate pediatric intensive care personnel must be available for the special and constant care needed by patients in the PICU. Residents also must be provided access to scientists who are actively engaged in cardiovascular research.

Staff from other disciplines, including cardiovascular radiology, cardiothoracic surgery, adult cardiology, anesthesiology, pathology, and genetics, should be readily available.

Special staff expertise should be available in electrophysiology, exercise physiology, invasive and interventional cardiac catheterization procedures, preventive cardiology, and echo cardiography, including transesophageal, Doppler, and fetal ultrasonography.

Residents should be taught to work with and utilize the special skills of pediatric cardiovascular nurses, intensive care nurses, catheterization laboratory technicians, operating room personnel, social workers, and psychologists.

III. Facilities and Resources

It is preferable that all facilities be within the primary institution. Where a special facility is shared by several local institutions in the interest of cost and efficiency, the program director may arrange for a resident to rotate to that facility.

A. Inpatient Service/Outpatient Services

Facilities should include space in an ambulatory setting for optimal evaluation and care of outpatients and an inpatient area with a full array of pediatric and related services staffed by pediatric faculty and residents.

An active inpatient pediatric cardiology service is essential to the educational program. It should provide all the diagnostic and treatment services characteristic of a comprehensive children's facility.

There must be an intensive care unit in each center in which patients with heart disease are cared for under the supervision of the training program staff and are available to the residents. In these units there must be preoperative and postoperative patients with heart disease, as well as appropriate personnel and equipment to allow provision of the special and constant care needed by these patients.

B. Cardiac Data Base

Clinical data, including inpatients, outpatients, and patients undergoing catheterization and/or surgery, should be cross-indexed to allow rapid evaluation and analysis of the assembled information, including age, diagnosis, and outcome morbidity and mortality.

C. Support Facilities

The following facilities must be available:

1. Diagnostic imaging facilities and nuclear cardiology
2. Diagnostic and interventional cardiac catheterization laboratory facilities
3. A graphics laboratory with facilities for recording the standard electrocardiogram and 2-D and Doppler echocardiograms
4. Laboratories to perform routine analyses of blood and urine to determine blood gas values, to perform blood chemistry and blood clotting studies, and to cross-match blood
5. An operating room designed for pediatric patients who require cardiopulmonary extracorporeal circulation and equipped with

- appropriate monitoring devices, defibrillators, and cardiac pacing devices
6. A blood bank closely affiliated with the center that is equipped to meet the demands of cardiac surgery
 7. Access to a clinical cardiac electrophysiologic laboratory for invasive intracardiac electrophysiologic studies and catheter ablation.

IV. Educational Program

A. Clinical Experience

1. Patient Population

The experience must encompass age groups from the fetus and newborn through young adulthood, and must include exposure to adults with heart disease, particularly congenital and rheumatic disease. The resident must be exposed to pathologic conditions ranging from mild to those requiring extensive or continued intensive care. There must be both pre- and post-surgical and medical experience with a broad spectrum of congenital and acquired heart disease and in chronic, acute, and emergency situations.

Patients admitted to the inpatient service should be under the direct or indirect supervision of the subspecialty program staff and must be available to the residents.

An accredited program must have an annual patient population, including patients less than 1 year of age, that is sufficient in number to enable each resident to become skilled in the following techniques.

Training in history taking and physical examination must be the cornerstone of the training program. This must include family history that is a critical aspect of the evaluation of pediatric patients with suspected cardiovascular disease. Programs must include training in at least the following fundamental skills:

a. Noninvasive techniques

The program must provide education in clinical diagnosis with special emphasis on roentgenology, electrocardiography, echocardiography, exercise testing, ambulatory electrocardiography, and magnetic resonance imaging. Each resident must perform and interpret a minimum of 300 pediatric echocardiography studies.

The program also must provide sufficient experience for residents to acquire skill in the interpretation of electrocardiograms, ambulatory ECG monitoring studies, and exercise stress testing with ECG monitoring.

b. Invasive techniques

Experience and instruction must be provided in the techniques and understanding of the indications for and limitations of diagnostic cardiac catheterization, selective angiography, electrophysiologic testing, therapeutic catheterizations, and pacemaker implantation. During the 3 years of training each subspecialty resident must participate in a minimum of 100 catheterizations and 10 pediatric intracardiac electrophysiologic studies.

c. Resuscitation techniques

Experience and instruction in the techniques, indications, and interpretation of pericardiocentesis, thoracentesis, cardiopulmonary resuscitation, mechanical ventilation cardioversion, and temporary pacing are required.

d. Technical and other skills

The residents must be taught the use of relevant electronic equipment, recording devices, and other equipment necessary to perform cardiac catheterization, echocardiography, ambulatory ECG monitoring, and electrophysiologic studies. In addition, the program must instruct the residents in the fundamentals of radiation safety.

2. Preoperative and Postoperative Care

Participation in the care of preoperative and postoperative care of patients having both closed and open cardiac surgery, in close cooperation with the cardiothoracic surgical staff, is required. Residents must have sufficient exposure to or instruction in current surgical techniques, mechanical ventilation, methods of cardiopulmonary bypass, and hypothermia to develop adequate understanding of these surgical techniques. The resident should be instructed in the management of postoperative patients and postoperative complications, both immediate and delayed. Opportunity for long-term follow-up observations of both preoperative and postoperative patients must be provided.

Residents should participate in consultations or conferences in which the medical and surgical staffs evaluate the results of surgery and the patient's cardiac status before discharge from the hospital.

3. Pediatric Cardiology Clinic

There must be a regularly scheduled pediatric cardiology clinic that is supervised by one or more members of the cardiology staff. Time and space in this clinic must be available for residents to provide continuity and follow-up care for all patients under their care.

4. Other Clinical Experiences

The program must provide instruction and clinical experience with rheumatic heart disease, collagen vascular diseases, infective endocarditis, Kawasaki disease, and other infectious and metabolic conditions. Instruction should also include clinical experience in assessing the genetic basis of heart disease. Residents should be instructed in the etiologic and risk factors in hypertensive and atherosclerotic heart disease, including hyperlipidemic states, and should gain experience in the prevention, diagnosis, and management of patients with these cardiovascular problems.

B. Curriculum

The program should offer courses, seminars, workshops, or laboratory experience to provide appropriate background in basic and fundamental disciplines related to the heart and cardiovascular system.

The resident must receive instruction in cardiovascular pathology, including examination of specimens demonstrating the various types of congenital cardiovascular anomalies. Conferences involving current pathological material must be held regularly and must be closely correlated with clinical experience.

There must be instruction in embryology and anatomy of the normal heart and vascular system and potential deviations from normal. Normal and abnormal cardiovascular and cardiopulmonary physiology and metabolism should be taught, as well as fundamentals of cardiovascular pharmacology, including mechanisms of drug action, therapeutic indications, and side effects.

Conferences must be held on clinical diagnosis and therapy on a regular basis, including quality assurance evaluation, cardiovascular research, and clinical morphologic correlations.

Multidisciplinary conferences should include physiology, pharmacology, neonatology, cardiovascular radiology, cardiothoracic surgery, and adult cardiology.

ACGME: September 1999 Effective: July 2000

Program Requirements for Residency Education in Pediatric Critical Care Medicine (Pediatrics)

Programs must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics and with the following requirements. These specialty requirements may exceed the common requirements.

If there is more than one ACGME program in critical care medicine in the institution, there should be an institutional policy governing the educational resources committed to these programs and ensuring cooperation of all involved disciplines.

I. Scope of Training

The purpose of an accredited program in pediatric critical care medicine is to provide subspecialty residents with an understanding of the pathophysiology of acute, life-threatening disease and injury. To achieve this, the program must emphasize the fundamentals of clinical diagnosis, patient assessment, and clinical management.

The program must provide the subspecialty residents with the opportunity to augment their knowledge of advanced multisystem life support as well as their leadership skills in patient care, teaching, and research in the subspecialty.

These programs must be organized and conducted in a manner that ensures optimum patient care while providing residents with the opportunity to become skilled clinicians, competent teachers, and knowledgeable investigators familiar with and capable of administering a critical care unit.

II. Faculty

A. Pediatric Critical Care Medicine Specialists

To ensure the educational and research quality of the program, and to provide adequate supervision of residents, there must be at least four members of the teaching staff who have knowledge of and experience in the care of acute pediatric illness and injuries. Two of these must be certified in pediatric critical care medicine or have equivalent qualifications in pediatric critical care medicine.

B. Other Physician Teaching and Consultant Faculty

An accredited program also is required to have consultants in each of the following:

1. Pediatric cardiology
2. Pediatric pulmonology
3. Neonatology
4. Pediatric gastroenterology
5. Pediatric infectious diseases
6. Pediatric nephrology
7. Pediatric neurology
8. Pediatric hematology/oncology
9. Pediatric surgery
10. Pediatric cardiovascular surgery

C. Other Professional Personnel

The following other personnel are essential contributors to a program in that they enhance the subspecialty resident's understanding of the multidisciplinary nature of pediatric intensive care: respiratory therapy staff, critical care nursing staff, social workers and support staff, pediatric nutritionist, pediatric pharmacist, physical and occupational therapist, child life therapist, and speech therapist.

The presence of a bioengineer, statistician and/or epidemiologist, and an ethicist is highly desirable.

III. Facilities/Resources

At the primary teaching site there must be a specially designed pediatric critical care unit in which the program is based. Facilities and equipment in and related to that unit must meet the generally accepted standards of modern intensive care units (ICUs) and must be available on a 24-hour-a-day basis. These must include but are not limited to the following:

1. Microchemistry laboratory
2. Blood gas laboratory
3. Hematology laboratory
4. Diagnostic bacteriology and virology laboratories
5. Blood bank
6. Facilities for special radiographic imaging, including computerized axial tomography, radionuclide scanning, angiography, magnetic resonance imaging, and ultrasonography
7. Cardiac catheterization facility
8. Pulmonary function testing laboratory
9. Capabilities for portable use, including radiology and echocardiography
10. Screening laboratory for inborn errors of metabolism

In addition, access to the following should be available within a reasonable period of time at the primary teaching site or nearby:

1. Clinical toxicology laboratory
2. Nuclear medicine facilities

IV. Educational Program

A. Clinical Experience

The subspecialty residents must have the opportunity to acquire the knowledge and skills required to diagnose and manage patients with acute life-threatening problems. This must include but not be limited to the development of special competence in such areas as cardiopulmonary resuscitation; stabilization for transport; trauma; triage; ventilatory, circulatory, and neurologic support; management of renal and hepatic failure, poisoning, and complicated hematological, infectious, and immune problems; continuous monitoring; and nutritional support.

Though clinical training in pediatric critical care medicine must include direct patient care responsibilities, a graduated experience also must enable the subspecialty resident to assume supervisory and teaching roles.

B. Patient Population

An adequate number and variety of pediatric ICU patients must be available to enable the subspecialty resident to develop competence in the management of such patients, including those requiring preoperative and postoperative care. In the case of a patient on the surgical service, the pediatric critical care resident should collaborate with the surgeon managing the care of the patient.

To meet the educational objectives of an accredited program, the average daily census in the ICU should be at least six patients per pediatric critical care resident assigned to the service.

The pediatric patients available to the residents should include patients with solid organ transplantations, at least 50 cases per year of patients who have sustained severe trauma, at least 100 cases per year of patients who have undergone cardiovascular surgery, and at least 150 cases per year of patients who have major neurologic or neurosurgical problems.

The number of patients requiring mechanical ventilation must be sufficient to provide each resident with adequate opportunity to become skilled in their management.

C. Procedural Experience

The patients must be sufficiently ill and the cases sufficiently complex that adequate opportunities exist for residents to become pro-

ficient in critical care procedures. These include but are not limited to peripheral arterial and venous catheterization, central venous catheterization, endotracheal intubation, thoracostomy tube placement, and sedation of conscious patients. Furthermore, there should be sufficient exposure to the use of pulmonary artery catheters and intracranial monitoring to ensure understanding of their uses and limitations. The program director must monitor and document the development of clinical competence in the performance of necessary procedural skills.

D. Curriculum

The curriculum should include instruction in collation and critical interpretation of patient care data. Interpretation of laboratory studies essential to the care of the critically ill pediatric patient also must be included. The program must teach pharmacologic principles and provide opportunity for the subspecialty residents to apply them to the critically ill patient. Instruction in biomedical instrumentation must be offered to familiarize the resident with current and developing technology.

Subspecialty residents must participate in regularly scheduled multidisciplinary conferences such as morbidity and mortality review and case conferences.

E. Other Critical Care Unit Experiences

Some of the residents' clinical experience may take place in other critical care settings, for example, with anesthesiologists, in a medical ICU, in a burn unit, in a neonatal ICU, and/or in a surgical ICU. Electives in these units may be included in the clinical experience, but they should not replace time in the pediatric ICU. The time spent in these other critical care settings should be no more than 4 months.

ACGME: September 1999 Effective: July 2000

Program Requirements for Residency Education in Pediatric Emergency Medicine (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics or Emergency Medicine, programs in pediatric emergency medicine must comply with the following requirements.

I. Introduction

The goal of a residency program in pediatric emergency medicine is to produce physicians who are clinically proficient in the practice of pediatric emergency medicine, especially in the management of the acutely ill or injured child, in the setting of an emergency department that is approved as a 911 receiving facility or its equivalent and has an emergency medical services system.

A program in pediatric emergency medicine must be administered by, and be an integral part of, an ACGME-accredited program in either emergency medicine or pediatrics and must be associated with an ACGME-accredited residency program in the corresponding discipline.

There must be written agreements between the director of the program in pediatric emergency medicine and the directors of the participating residencies in pediatrics and emergency medicine specifying the experiences that will compose this subspecialty program. These agreements should address appropriate curriculum content, supervision of the resident, amount and distribution of

clinical and nonclinical time, conferences, clinical performance criteria, and mechanisms for resolving performance problems.

Prerequisite training should include satisfactory completion of an ACGME-accredited residency program in either emergency medicine or pediatrics.

II. Duration and Scope of Training

A training period of 2 years is required for all subspecialty residents. [Note: For those planning to seek certification from the American Board of Pediatrics, 3 years of training is required.]

[Note: If a third year is offered, it must be described when the program is reviewed by the Residency Review Committee. Those planning to seek certification should consult with the appropriate certifying board regarding the criteria for eligibility, including duration of training.]

The educational program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of the patients and their families while providing residents the opportunity to become skilled clinicians, competent teachers, and knowledgeable investigators. The program must emphasize the fundamentals of assessment, diagnosis, and management. Residents also should be exposed to the academic debate, intensive research review, and the interaction between and among the specialties of pediatrics and emergency medicine.

III. Curriculum

The residents in pediatric emergency medicine must participate in the care of pediatric patients of all ages, from infancy through young adulthood, with a broad spectrum of illnesses and injuries of all severities. At least 12 months of the clinical experience must be obtained seeing children in an emergency department where children, ages 21 years of age or less, are treated for the full spectrum of illnesses and injuries. To provide adequate exposure for selected problems, additional experience with anesthesiologists, intensivists, neurologists, psychiatrists, pre-hospital care providers, orthopedists, surgeons, toxicologists, traumatologists, who have training and experience in the care of children and adolescents, and other specialists must be available.

Specialty-specific content must include at least 4 months of training in the reciprocal specialty from which the resident enters the training program. Additional elective months of reciprocal training should be scheduled when deemed appropriate by the program director on the basis of the background of the resident and his/her progress in acquiring the essential skills of a pediatric emergency specialist.

For the emergency medicine graduate, the reciprocal time must include time spent in pediatric subspecialty and ambulatory clinics, inpatient management, neonatal management, and pediatric critical care in an ACGME-accredited residency program in pediatrics.

For the pediatric graduate, this must include 4 months in an adult emergency department that is part of an ACGME-accredited residency program in emergency medicine. One month of that experience may occur off site as approved by the ACGME-accredited program in emergency medicine, in EMS, adult trauma, or toxicology.

Additional experiences may be necessary for residents from both core specialties. For example, adolescents have unique aspects of disease and injury. Experience with blunt and penetrating trauma, and with significant gynecologic and obstetrical emergencies, as well as psychiatric emergencies of the adolescent, must be a part of a resident's training if previous experience in these areas was not adequate. These experiences should be in settings best suited for the resident's training.

The core content must include training in EMS, administration, ethics, legal issues, and procedures. It must also include but not be limited to structured opportunities to develop special competence in such areas as cardiopulmonary resuscitation; trauma; disaster and environmental medicine; transport; triage; sedation; monitoring (biomedical instrumentation); emergencies arising from toxicologic, obstetric, gynecologic, allergic/immunologic, cardiovascular, congenital, dermatologic, dental, endocrine/metabolic, gastrointestinal, hematologic/oncologic, infectious, musculoskeletal, neurologic, ophthalmic, psychosocial, and pulmonary causes; renal/genitourinary and surgical disorders; and physical and sexual abuse.

In addition to achieving an understanding of the pathophysiology, epidemiology, and management of these problems, the resident must learn how to evaluate the patient with an undifferentiated chief complaint such as abdominal pain. The resident must be taught to arrive at a diagnosis, whether it falls in areas traditionally designated medical or surgical, e.g., appendicitis, ectopic pregnancy, intussusception, sickle cell anemia; to perform the evaluation rapidly in accordance with any pathophysiologic disturbances in the patient; and to proceed with an appropriate life-saving therapy, such as endotracheal intubation or thoracostomy or administration of antibiotics, before arriving at a definitive diagnosis.

The resident must learn the skills necessary to prioritize and manage the emergency care of multiple patients. Finally, the resident must have supervised experience in a range of technical/procedural skills, as they apply to pediatric patients of all ages.

The resident must be given increasing responsibilities for patient care as she or he progresses through the program. In the final year of training, the resident must be given the opportunities to demonstrate the skills appropriate to a supervisor, teacher, and a decision maker in pediatric emergencies.

There must be an emphasis on developing a compassionate understanding of the stress associated with sudden illness, injury, and death so that the resident may be responsive to the emotional needs of the patients, their families, and the staff of the emergency department. Discussion and appreciation of the many ethical issues involved in pediatric emergency medicine should be part of the educational program.

Residents should be exposed to formal sessions on organizing teaching programs, medical writing, and oral presentation. Residents should have the opportunity to develop teaching skills by conducting lectures, seminars, and clinical conferences and by preparing written reports and teaching materials. These efforts must be reviewed and evaluated by the supervising faculty in light of competency based objectives developed by the program. The resident must receive instruction and experience in the administrative and management skills necessary to oversee a division or department.

IV. Conferences

There should be opportunities to participate in regularly scheduled, multidisciplinary conferences that include lectures, morbidity and mortality conferences, case conferences, general reviews, and research seminars. The program must include instruction in or other educational exposure to related basic sciences, including physiology, growth and development, pathophysiology, and epidemiology, and prevention of pediatric illnesses and injuries.

The program also should provide education on physician wellness and stress management.

V. Teaching Staff

There must be at least four members of the teaching staff who have experience and knowledge of the care of acute pediatric illness and injuries to provide adequate supervision of residents and to ensure

the educational and research quality of the program. Two of the faculty must be certified in pediatric emergency medicine or have equivalent qualifications. For a subspecialty program that functions as an integral part of a pediatric residency program, there must be adequate exposure to faculty who are certified by the American Board of Emergency Medicine. Conversely, for a subspecialty program based in an emergency medicine residency program, there must be adequate exposure to faculty certified by the American Board of Pediatrics.

The availability of consultant and collaborative faculty in related medical and surgical disciplines, as referred to in Section III, must be ensured.

The pediatric emergency medicine faculty must have an active role in curriculum development and in the supervision and evaluation of the subspecialty residents.

VI. Patient Population

A sufficient number of patients must be available to provide adequate opportunity for subspecialty residents to acquire competence in the management of the full spectrum of acutely ill and injured children, adolescents, and young adults. The subspecialty residents must provide the initial evaluation of and treatment to all types of patients.

To meet the educational objectives of the program and to provide both the pediatric and subspecialty residents with an adequate experience to acquire competence in clinical management, there should be a minimum of 15,000 pediatric patient visits per year in the primary emergency department that is used for the program. Patient acuity and the total number of trainees will be considered in assessing the adequacy of the patient population. These must include a sufficient number of patients with major and minor trauma, airway insufficiency, ingestions, obstetric and gynecologic disorders, psychosocial disturbances, and emergent problems from all pediatric medical and surgical subspecialties.

Subspecialty residents should not serve as the only care givers for children seen in the emergency department. They should provide supervision and consultation to other residents who are assigned to the emergency department and will be caring for patients. These subspecialty residents must, however, have the opportunity to manage multiple patients at the same time, to learn the skills necessary to prioritize the evaluation and treatment of these patients. In addition, the program must provide the pediatric emergency medicine residents the opportunity to assume leadership responsibility for the pediatric emergency department.

VII. Facilities

There must be an acute care facility that receives patients via ambulance from the prehospital setting, is equipped to handle trauma, and that has a full range of services associated with residencies in pediatrics and emergency medicine. This facility should be accredited by the Joint Commission on Accreditation of Healthcare Organizations.

The emergency department must be adequately staffed, have appropriate bedside monitoring capability, and be capable of resuscitating medical and trauma patients. Facilities and equipment must meet the generally accepted standards of a modern emergency department and be available within the institution on a 24-hour-a-day basis.

The institution should have comprehensive radiologic and laboratory support systems and readily available operative suites and intensive care unit beds.

VIII. Board Certification

Residents seeking certification in the subspecialty of pediatric emergency medicine should consult their primary specialty board, i.e., the American Board of Pediatrics or the American Board of Emergency Medicine, regarding the criteria for eligibility for certification in this subspecialty.

ACGME: June 1998 Effective: June 1998

Program Requirements for Residency Education in Pediatric Endocrinology (Pediatrics)

Programs must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics and with the following requirements. The specialty requirements may exceed the common requirements.

I. Scope of Training

The purpose of the program must be to provide the residents with the background to diagnose and manage endocrine diseases and to understand the physiology of hormonal regulation in infancy, childhood, adolescence, and young adulthood.

The program must emphasize fundamentals of clinical diagnosis, with special emphasis on history taking, physical examination, and interpretation of pertinent laboratory data.

II. Faculty

A. Pediatric Endocrinology Specialists

A program must have at least two qualified pediatric endocrinologists, inclusive of the program director, and must ensure access to the full range of pediatric subspecialists.

B. Other Physician Teaching and Consultant Faculty

In addition, appropriate consultant faculty and staff must be available in related disciplines, including surgery, obstetrics/gynecology, internal medicine, child and adolescent psychiatry, nephrology, neurology, neurosurgery, radiology, nuclear medicine, ophthalmology, urology, genetics, and diabetes education.

III. Facilities/Resources

A. Outpatient and Inpatient

Facilities should include space in an ambulatory setting for optimal evaluation and care of outpatients and an inpatient area with a full array of pediatric and related services staffed by pediatric residents and faculty.

B. Laboratory/Support Services

Modern facilities and services, including inpatient, ambulatory care, and laboratory resources, must be available and functioning. Specifically, there must be a complete chemistry laboratory; facilities for radioimmunoassay and karyotyping; nuclear, ultrasonic, and radiologic imaging services that can conduct studies for all types of endocrine disease; a dietary service; endocrine surgical services; and a pathology laboratory for the interpretations of surgical and cytologic specimens, including immunohistologic studies. In addition, there should be a close working relationship with dietary and/or nutrition services.

IV. Educational Program

A. Clinical and Continuity Experience

An adequate number of patients with endocrine disorders, including diabetes, who range in age from newborn through young adulthood, must be available to the training program.

The program must provide a sufficiently diversified and complex endocrine outpatient experience and adequate experience with inpatient management. In particular, the pediatric endocrinology residents must have continuing responsibility for care of patients with diabetes mellitus and other chronic endocrine disorders.

Residents must learn through patient care about normal and abnormal hormonal regulation. The interaction of endocrine pathology and psychosocial problems must be addressed.

The clinical experience must include but not be limited to the following:

1. Short stature, including constitutional delay
2. Disorders of anterior pituitary hormone physiology, including growth hormone deficiency
3. Disorders of posterior pituitary hormone physiology, including diabetes insipidus
4. Disorders of hypothalamic hormonal regulation
5. Disorders of thyroid hormone physiology
6. Diagnosis and management of endocrine neoplasia
7. Disorders of the adrenal gland physiology
8. Disorders of androgen and estrogen metabolism, including adolescent reproductive endocrinology
9. Disorders of sexual differentiation and development
10. Disorders of calcium, phosphorus, and vitamin D metabolism
11. Disorders of parathyroid gland physiology
12. Disorders of fluid and electrolyte balance
13. Disorders of carbohydrate metabolism, including diabetes mellitus and hypoglycemia
14. Disorders of nutrition, including eating disorders

B. Laboratory Experience

The residents must be instructed in the proper use of laboratory techniques for measurement of hormones in body fluids. They must be taught to recognize the limitations and pitfalls of interpretation of laboratory results. All residents should be instructed in proper interpretation of endocrine stimulation and suppression tests, including the normal variations that occur in laboratory results at different ages and times of day. Residents should be provided with a background that will enable them to utilize current diagnostic procedures of endocrinology that involve radiology, including ultrasonography, CT scanning and MRI, and nuclear medicine.

C. Curriculum

The training program must include instruction in related clinical and basic sciences. These include endocrine physiology, pathology, and biochemistry; embryology of endocrine and related systems with emphasis on sexual differentiation; genetics, including laboratory methods, cytogenetics, and enzymology; and aspects of immunology pertinent to understanding endocrine disease and the use of immunoassays.

In addition, regular conferences reviewing patient management must be scheduled and attendance required of the subspecialty residents.

ACGME: September 1999 Effective: July 2000

Program Requirements for Residency Education in Pediatric Gastroenterology (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs must comply with the following requirements, which may in some cases exceed the general subspecialty requirements.

I. Introduction

The principal goal of a training program should be the development of competent subspecialists. The program must provide the resident in gastroenterology with the background and experience to diagnose and manage patients with acute and chronic diseases of the digestive system (esophagus, stomach, intestines, hepatobiliary system, and pancreas) and with nutritional disorders, including those that are life-threatening, and to conduct research in this specialized field. The resident must be guided in developing clinical judgment and skills as well as in acquiring medical knowledge, humanistic qualities, and professional attitudes and behaviors that are appropriate for the pediatric gastroenterologist.

II. Duration and Scope of Training

An accredited program in pediatric gastroenterology must provide 3 years of progressive educational experience that includes the development of procedural skills, responsibility for patient care, and participation in research.

III. Faculty

There must be at least three pediatric gastroenterologists on the teaching staff; in addition, consultant and collaborative faculty in the following related pediatric disciplines must be readily available to the program: neonatology, hematology, immunology, genetics, and infectious disease.

IV. Facilities and Resources

The following must be available to the program:

- A. Space in an ambulatory setting for optimal evaluation and care of outpatients.
- B. An inpatient area staffed by pediatric residents and faculty with a full array of pediatric and related services, including pediatric surgery and child and adolescent psychiatry and/or psychology.
- C. Full support services, including nuclear medicine, physical/occupational therapy, social services, pathology, nutrition, and feeding therapy.
- D. Pediatric intensive care unit.
- E. Neonatal intensive care unit.
- F. Access to a gastrointestinal function laboratory capable of measuring intestinal absorptive function, esophageal function, pancreatic function, and nutritional parameters in pediatric patients, plus a laboratory that can either perform or access specialized serological, parasitological, immunological, metabolic, and toxicological studies applicable to gastrointestinal and hepatobiliary disorders.
- G. Fully equipped and staffed procedure facilities that include diagnostic and therapeutic endoscopic instruments as well as equipment for measuring gastrointestinal motility. The staff must be skilled in the care of pediatric patients. There must be appropriate equipment for patients ranging in age from the neonate to the young adult.

V. Educational Program

The educational program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of the patients and their families.

A. Breadth of Experience

To develop the residents' competence in clinical diagnosis, medical management of patients, and the correlation of pathophysiology with clinical disorders, the program must emphasize developmental gastrointestinal physiology in infants, children, adolescents, and young adults.

There must be training in the selection, performance, and evaluation of procedures for morphological, physiological, immunological, microbiological, and psychosocial assessment of gastrointestinal and hepatobiliary diseases and nutritional disorders.

Residents must have experience in a variety of diagnostic tests and therapeutic procedures, e.g., the use of imaging techniques, tests of digestive system function, histological interpretation of biopsy specimens, and assessment of nutritional status and pancreatic function. The program must stress the role of the subspecialist as a consultant and promote skills necessary to communicate effectively with the referring physician. In recognition of the importance of outpatient medicine to the practice of pediatric gastroenterology and nutrition, all trainees must spend at least 1/2 day per week for the entire period of training in an ambulatory care clinic in which both new and established patients are seen.

B. Clinical Experience

1. Patient population

The patient population available to the program must have sufficiently varied and complex diseases and be of a volume sufficient to ensure that the residents have the opportunity to become clinically competent in the management of common as well as uncommon gastrointestinal, hepatobiliary, and pancreatic diseases and nutritional disorders in patients ranging from infancy through young adulthood.

Residents must have ongoing responsibility for the continuing care of patients with chronic gastrointestinal problems and must have sufficient opportunities to provide consultation on a wide variety of patients to become familiar with the gastrointestinal manifestations of a broad spectrum of pediatric illnesses.

This clinical experience must involve the management of patients with gastrointestinal and nutritional diseases and disorders, including but not limited to those listed below in V.B.2 as well as familiarity with the principles of evaluation and follow-up care of patients requiring liver transplantation and those with small bowel disease.

2. Diseases/Disorders

- a. Growth failure and malnutrition including an understanding of nutritional assessment and parenteral and enteral nutrition support
- b. Malabsorption (celiac disease, cystic fibrosis, pancreatic insufficiency, etc.)
- c. Gastrointestinal allergy
- d. Peptic ulcer disease
- e. Jaundice
- f. Hepatobiliary disease
- g. Digestive tract anomalies
- h. Chronic inflammatory bowel disease
- i. Functional bowel disorders
- j. Other gastrointestinal disorders, such as gastrointestinal infections; gastrointestinal problems in the immune-compromised host, including graft versus-host (GVH) disease; motility disorders; infectious and metabolic liver diseases; and pancreatitis

- k. Gastrointestinal complications of eating disorders, such as, obesity, bulimia, and anorexia

3. Procedures

Residents must receive training in the following:

- a. Diagnostic colonoscopy (with and without biopsy) and therapeutic colonoscopy with snare polypectomy
- b. Diagnostic upper gastrointestinal endoscopy (including biopsy) and therapeutic upper gastrointestinal endoscopy
- c. Esophageal pH monitoring
- d. Diagnostic and therapeutic flexible sigmoidoscopy
- e. Paracentesis
- f. Percutaneous liver biopsy
- g. Rectal biopsy
- h. Removal of foreign bodies from the gastrointestinal tract
- i. Small bowel biopsy

In addition, residents should have training in the following:

- a. Anorectal manometry
- b. Breath hydrogen analysis
- c. Dilatation of esophagus
- d. Therapeutic upper panendoscopy (sclerosis of esophageal varices)
- e. Esophageal manometry
- f. Pancreatic stimulation test
- g. Placement of percutaneous gastrostomy
- h. Endoscopic placement of feeding tubes

Residents must also be familiar with the basic principles, indications, and risks of advanced endoscopic procedures, such as endoscopic retrograde cholangiopancreatography (ERCP), endoscopic ultrasonography, endoscopic laser therapy, esophageal endoscopic stent placement, and endoscopic esophageal fundoplication.

The residents' understanding of the indications, risks, and benefits of diagnostic and therapeutic procedures, as well as development of skills in their performance must be documented and included in the regular resident evaluations.

C. Didactic and Laboratory Experience

The program must have a well-developed formally structured curriculum, including courses, workshops, seminars, and laboratory experience, that provides an appropriate background for residents in the basic and fundamental disciplines related to the digestive system, such as embryology, physiology, pharmacology, nutrition, pathology, biochemistry, molecular biology, immunopathology, and genetics. Training in the evaluation of the psychosocial aspects of chronic gastrointestinal disease as they affect the child and competence in counseling chronically ill patients and their families should be components of the training program. Health education, biomedical ethics, and preventive measures for digestive disease also should be emphasized.

Interdisciplinary conferences with pediatric radiology, pediatric pathology, and pediatric surgery should be held at least quarterly.

ACGME: February 2002 Effective: July 2002

Program Requirements for Residency Education in Pediatric Hematology/Oncology (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs must comply with the following requirements, which may exceed the common requirements.

I. Scope of Training

An accredited program in pediatric hematology/oncology must provide the educational environment for the subspecialty resident to develop an understanding of the pathophysiology of pediatric hematologic and oncologic disorders and competence in the clinical diagnosis and management of these disorders. There must be training in the selection, performance, and evaluation of procedures necessary for appropriate assessment of these disorders.

The program must emphasize the fundamentals of clinical diagnosis, with special emphasis on history taking and physical examination, and must provide sufficient clinical experience with both inpatients and outpatients who have hematologic and oncologic disorders to allow residents to develop skill in diagnosing and managing both common and unusual problems.

II. Faculty

A. Pediatric Hematology/Oncology Specialists

At least four pediatric hematologists/oncologists must be based at the primary teaching site and must devote sufficient time to the program to ensure adequate teaching and to provide critical evaluation of the progress and competence of the subspecialty residents.

B. Other Physician Teaching and Consultant Faculty

In addition to the full range of pediatric subspecialists, appropriate consultants must be available in related disciplines, including radiation oncology, gynecology, neuro-oncology, pain control, and physical medicine and rehabilitation.

III. Facilities/Resources

A. Outpatient and Inpatient

Space in an ambulatory setting must be provided for optimal evaluation and care of patients, including facilities for outpatient chemotherapy and transfusions. An inpatient area with a full array of pediatric and related services staffed by pediatric residents and faculty also must be present.

B. Laboratories

The program also must have access to specialized laboratories capable of assaying red-blood-cell enzymes, identifying unusual hemoglobins, performing human lymphocyte antigen typing, immunophenotyping leukemic blast cells, performing flow cytometry, performing cytogenetic analysis, and identifying complex congenital and/or acquired hemostatic abnormalities.

The principal training institution also should have available the diagnostic services of radiology, including full-body magnetic resonance imaging, nuclear medicine, computerized tomography, sonography, angiography, clinical chemistry, microbiology, immunology, and cytogenetics.

IV. Educational Program

A. Patient Population

Adequate numbers of patients with hematologic and oncologic disorders, ranging in age from newborn through young adult, must be available to the training program. Each subspecialty resident must have continuing responsibility for the care of patients with malignant disease and chronic hematologic problems.

An accredited program should have at least 60 patients with newly diagnosed oncologic disease each year. A program having fewer such patients must specifically demonstrate that it is able to provide the breadth of experience required for the number of subspecialty residents in the program.

To become familiar with the hematologic manifestations of a broad spectrum of pediatric illnesses, each subspecialty residents must provide consultation for a sufficient variety of patients. A program without a sizable population of patients with nononcologic hematologic disorders, such as one based in a cancer center, must demonstrate how residents will gain exposure to sickle cell disease, hemophilia, and other acute and chronic hematologic problems.

B. Clinical Experience

The clinical experience must involve patients who have a broad variety of hematologic-oncologic problems that should include but not be limited to the following categories:

1. Hematologic disorders of the newborn
2. Hemoglobinopathies, including the thalassemia syndromes
3. Inherited and acquired disorders of the red-blood-cell membrane and of red-blood-cell metabolism
4. Autoimmune disorders including hemolytic anemia
5. Nutritional anemia
6. Inherited and acquired disorders of white blood cells
7. Hemophilia, von Willebrand's disease, and other inherited and acquired coagulopathies
8. Platelet disorders, including idiopathic thrombocytopenic purpura (ITP) and acquired and inherited platelet function defects
9. Congenital and acquired thrombotic disorders
10. Congenital and acquired immunodeficiencies
11. Leukemias, both acute and chronic
12. Lymphomas
13. Solid tumors of organs, soft tissue, bone, and central nervous system
14. Bone marrow failure
15. Transfusion medicine and use of blood products
16. Management of the patient undergoing long-term transfusion therapy
17. Bone marrow reconstitution including use of allogeneic peripheral blood stem cells and umbilical cord blood
18. Graft-versus-host disease

The subspecialty residents must become familiar with all aspects of chemotherapy as well as the pertinent aspects of surgical therapy and radiotherapy in managing patients with malignant diseases. They also must be taught the diagnosis, management of complications, and treatment of infections in the compromised host and indications and procedures for transfusion of blood components, including apheresis, plateletpheresis, and stem cell harvest and infusion. The program also should instruct the subspecialty residents in the methods of physiologic support of the cancer patient, including parenteral nutrition, control of nausea, and management of pain.

The pediatric oncology component of the program must include education in the staging and classification of tumors, the application of multimodal therapy, the epidemiology and etiology of childhood cancer, how to make appropriate observations, and how to keep accurate patient data. The experience should include learning to function as a member of a multidisciplinary team serving patients with cancer and chronic hematologic disorders.

The subspecialty resident should participate in the activities of the tumor board and in the provision of comprehensive care to the child with cancer and should have experience in support of the patient, family, and staff in dealing with terminal illness. Residents should be guided in the development of skills in communication and counseling, including the recognition and management of psychosocial problems in pediatric patients.

C. Laboratory Experience and Diagnostic Procedures

Appropriate educational experiences in the laboratories, including blood bank and tissue pathology, should be included. There must be instruction in the proper use of laboratory techniques for diagnosis, with recognition of the limitations of the various methods and the pitfalls in interpretation of laboratory results. This should include the normal variations in laboratory data that occur at different ages and the influence of medications, toxins, and systemic disease on hematologic values.

Subspecialty residents must be provided with a background that will enable them to utilize the current diagnostic procedures of hematology and oncology. These include (a) the performance and interpretation of bone marrow aspiration and biopsy, (b) lumbar puncture with evaluation of cerebrospinal fluid, (c) microscopic interpretation of peripheral blood films, and (d) interpretation of all hematologic laboratory diagnostic tests.

D. Curriculum

The training program should provide instruction in the related basic sciences, including the structure and function of hemoglobin and iron metabolism, the phagocytic system, splenic function, cell kinetics, immunology, coagulation, genetics, the principles of radiation therapy, the characteristics of malignant cells, tissue typing, blood groups, pharmacology of chemotherapeutic agents, molecular biology, microbiology and anti-infective agents in the compromised host, and nutrition.

Within the research conferences and clinical experiences, the residents must be exposed to the concept of multi-institutional collaborative research as exemplified by the pediatric oncology cooperative groups.

ACGME: September 1999 Effective: July 2000

Program Requirements for Residency Education in Pediatric Infectious Diseases (Pediatrics)

I. Introduction

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs in pediatric infectious diseases also must comply with the following requirements, which may in some cases exceed the general subspecialty requirements.

II. Scope of Training

A period of 3 years of progressive educational experience is required to provide subspecialty residents with the background and experience that will enable them to provide optimal care and consultation to pediatric patients with infectious diseases. To achieve this, the clinical and technical training must include properly balanced, well-organized, and progressive teaching, research, and consultative experiences. The educational program also must encompass basic concepts in immunology, epidemiology, clinical pharmacology, and infection control as they relate to patient care and training in the prevention of infectious diseases.

III. Faculty

A. Pediatric Infectious Diseases

Supervision of subspecialty residents must be provided by members of the teaching staff who are skilled in medical education and re-

search, as well as in care of patients, and can devote adequate time to these endeavors. The supervising faculty must include teaching staff who are active and competent in pediatric infectious diseases and who are available to ensure proper education and patient care as appropriate. There must be at least two pediatric infectious diseases teaching staff to ensure adequate time for administrative, clinical, and research activities involved in the education of subspecialty residents. Clinical supervision must be on a 24-hour-a-day, 7-day-a-week basis.

B. Other Physician Teaching and Consultant Faculty

Consultant faculty in related disciplines must also be available at the institution where the training occurs, including

1. allergy-immunology
2. dermatology
3. microbiology

Consultants in clinical and laboratory aspects of mycology, virology, parasitology, and clinical pharmacology also should be available.

IV. Facilities/Resources

Facilities and resources available to the program for the required clinical experiences must include at least the following:

A. Outpatient and Inpatient Facilities

The following facilities must be available at the primary teaching site:

1. An ambulatory facility for appropriate evaluation and care of patients from the newborn period to early adulthood.
2. An inpatient facility with full pediatric (including adolescent) and related services that are staffed by pediatric residents and faculty and that includes
 - a. facilities for isolation of patients with infectious diseases;
 - b. pediatric and neonatal intensive care units; and
 - c. support services including radiology, hematology, nuclear medicine, and pathology.

B. Laboratories

There must be access to clinical microbiology laboratories that include techniques for identification of bacteria, mycobacteria, fungi, viruses, rickettsiae, chlamydiae, and parasites in tissues and body fluids.

C. Other

There must be an infection control program with a physician leader who has knowledge of epidemiology of pediatric infectious diseases, written protocols for prevention of infection and its spread, an active surveillance system, and an interventional plan for outbreak control.

V. Educational Program

A. Patient Population

An adequate number and variety of patients with infectious diseases, ranging in age from newborn through young adulthood, must be available to the educational program and to each subspecialty resident. This patient population must include inpatients, outpatients, and patients with chronic diseases.

The program must ensure that each subspecialty resident provides consultation for an appropriate variety of patients in order to become familiar with the manifestations of a broad spectrum of infectious diseases. Such experiences must encompass longitudinal care, which provides the opportunity for observation of the course of illness and the benefits and risks of therapy.

The clinical population must include but not be limited to patients with the following conditions:

1. Primary immunodeficiency
2. Prematurity, low-birth-weight infants
3. HIV disease
4. Immunosuppression secondary to malignancies and to chemotherapeutic or immunosuppressive agents
5. Postoperative patients

B. Clinical Experience

Clinical experience in the application and interpretation of diagnostic tests and indications, risks, and interpretation of the results of therapeutic procedures must be provided for all subspecialty residents in the program. This must involve experience with outpatients and inpatients having infectious diseases such as:

1. Upper respiratory tract infections
2. Lower respiratory tract infections
3. Central nervous system infections
4. Urinary tract infections
5. Cardiovascular infections
6. Bone and joint infections
7. Skin/soft tissue/muscle infections
8. Gastrointestinal tract/intra-abdominal infections
9. Hepatic/biliary infections
10. Ocular infections
11. Reproductive tract infections
12. Sexually transmitted diseases
13. Foreign-body and catheter-related infections
14. HIV infection
15. Nosocomial infections
16. Surgical and traumatic wound infections
17. Congenital infections

C. Curriculum

The program must have a well-developed, formally structured curriculum that is designed to

1. provide subspecialty residents with the information and experience necessary to diagnose and manage pediatric patients with a wide variety of acute and chronic infectious diseases, including disorders of host defense;
2. prepare the subspecialty resident to understand and manage the principles of disease control, prevention of nosocomial infections, emerging pathogens, immunization programs, and/or vaccine-preventable diseases;
3. teach basic epidemiologic and biostatistical methods and their application to clinical research and patient care;
4. teach the subspecialty resident the functions and appropriate utilization of diagnostic microbiology, immunology, virology, mycology, and parasitology laboratories;
5. prepare the subspecialty residents to conduct research in the broad area of pediatric infectious diseases; and
6. ensure acquisition of appropriate teaching skills that can be used in the area of pediatric infectious diseases.

The educational program must include training in

1. the appropriate use of antimicrobial agents in a variety of clinical settings, their mechanisms of action, pharmacokinetics, and potential adverse reactions;
2. microbiological and immunologic factors that determine the outcome of the interaction between host and microbe;
3. microbiology laboratory techniques, including culture techniques, rapid diagnostic methods, and molecular methods for identification of bacteria, mycobacteria, fungi, viruses, rickettsiae, chlamydiae, and parasites in clinical specimens;
4. the effects of underlying disease states and immunosuppressive therapies on host response to infectious agents;
5. mechanisms of protection against infection, e.g., active or passive immunization and immunomodulating agents;

6. clinical pharmacology of antimicrobial agents including drug interactions, adverse reactions, dose adjustments for abnormal physiology, and principles of pharmacokinetics and pharmacodynamics;
7. methods of determining activity of antimicrobial agents and techniques to determine their concentrations in blood and other body fluids;
8. indications for diagnostic procedures and the interpretation of results. For example, bronchoscopy, thoracentesis, arthrocentesis, lumbar puncture, and aspiration of abscess cavities and soft tissues;
9. the sensitivity, specificity, efficacy, benefits, and risks of contemporary technologies, such as those for rapid microbiologic diagnosis and for diagnostic imaging;
10. the principles and practice of hospital epidemiology and infection control;
11. the understanding of adverse events attributed to specific immunizations and immunomodulators;
12. public health issues pertinent to pediatric infectious diseases.

ACGME: February 2002 Effective: July 2002

Program Requirements for Residency Education in Pediatric Nephrology (Pediatrics)

Programs must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics and with the following specialty requirements. The specialty requirements may exceed the common requirements.

I. Scope of Training

The purpose of the training program must be to provide the subspecialty resident with the capability and experience to diagnose and manage renal diseases and to understand the physiology of fluid and electrolyte and acid-base regulation.

The training program must be designed to develop the physician's competence in clinical diagnosis, pathophysiology, and medical treatment of disorders of the kidneys; urologic abnormalities; hypertension; and disorders of body fluid physiology in newborns, infants, children, adolescents, and young adults. This experience should include the therapy of acute renal failure and end stage renal disease, including hemodialysis, continuous hemofiltration, peritoneal dialysis, and renal transplantation. Training and experience in selection, performance, and evaluation of procedures, including the renal biopsy, that are necessary for morphologic and physiologic assessment of renal disease must be included.

There should also be training in the evaluation of psychosocial aspects of life-threatening and chronic diseases as they affect the patient and the family and in counseling both acutely and chronically ill patients and their families.

The resident also should be provided with instruction and experience in the operational aspects of a pediatric nephrology service, including the dialysis facility. Knowledge of the staffing needs, unit management, preparation of grant proposals, quality improvement programs, appropriate communications with the referring physicians, and planning for program development should be acquired during training.

II. Faculty

A program must have at least two qualified pediatric nephrologists and ensure access to the full range of pediatric subspecialists. In addition, appropriate consultant faculty and staff must be available in related disciplines, including, but not limited to, pediatric urology, pediatric surgery, pathology, radiology, immunology, psychiatry, and organ transplantation.

III. Facilities/Resources

Inpatient, ambulatory care, and laboratory facilities that are necessary to accomplish the overall educational program must be available and functioning. Specifically, there must be facilities for renal replacement therapy and renal biopsy. The following must also be available: a radiology service that can provide modern renal-related procedures, a diagnostic radionuclide laboratory, biochemistry and serologic laboratories; a nutrition support service; and relevant social and psychological services. Surgery, urology, psychiatry, pathology, and radiologic services must be available.

IV. Educational Program

A. Patient Population

The primary teaching site must have at least 5 pediatric kidney transplants per year or have a formal written agreement with another institution that ensures nephrology residents will have adequate experience with renal transplantation.

The training program should be of sufficient size to ensure adequate exposure of residents to patients with acute renal failure and a chronic dialysis patient population, including patients that utilize home dialysis treatment modalities, to ensure adequate training in chronic dialysis.

The training program must afford the residents the opportunity to care for patients with renal and other disorders in the intensive care unit setting.

Adequate numbers of patients with a wide variety and complexity of renal disorders must be available to the training program. It is important that the residents have continuing responsibility for the care of outpatients throughout their training.

B. Clinical Experience

The residents must have formal instruction, clinical experience, or opportunities to acquire expertise in the prevention, evaluation, and management of the following:

1. Perinatal and neonatal conditions, including genetic disorders and congenital anomalies of the genitourinary tract
2. Hypertension
3. Acute renal failure
4. Chronic renal failure
5. New end-stage renal disease
6. Urinary tract infections
7. Renal transplantation
8. Neoplasms of the kidney
9. Fluid and electrolyte and acid base disorders
10. Acute and chronic glomerular diseases
11. Renal tubular disorders
12. Nephrolithiasis
13. Voiding dysfunction and urologic disorders
14. Renal dysplasia and cystic disease of the kidney
15. Inherited renal disorders

Special Experiences

In addition, residents must have experience in the following:

1. Evaluation and selection of transplant candidates
2. Preoperative evaluation and preparation of transplant recipients

3. Recognition and medical management of surgical and nonsurgical complications of transplantation
4. Dialysis therapy. Each resident should have exposure to dialysis and extracorporeal therapies, which includes
 - a. Evaluation and selection of patients for continuous renal replacement therapies.
 - b. Long-term follow-up with patients undergoing chronic dialysis.
 - c. Understanding of the principles and practices of both hemodialysis and peritoneal access.
 - d. Understanding of the special nutritional requirements of hemodialysis of patients.

C. Technical Experiences

Residents must be given sufficient experience with indications, contraindications, complications, and interpretation of results in the following areas to enable them to develop appropriate expertise:

1. Urinalysis
2. Percutaneous biopsy of both native and transplanted kidneys
3. Peritoneal dialysis
4. Acute and chronic dialysis and hemofiltration
5. Renal ultrasound

D. Curriculum

The program must offer instruction through courses, workshops, seminars, and laboratory experience to provide appropriate background for residents in diagnostic techniques and in the basic and fundamental disciplines related to the kidney. These should include immunopathology, cell biology, molecular biology, magnetic resonance imaging, computed tomography, ultrasound, and nuclear medicine.

ACGME: September 1999 Effective: July 2000

Program Requirements for Residency Education in Pediatric Pulmonology (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs must comply with the following requirements, which may exceed the common requirements.

I. Scope of Training

The purpose of an accredited program is to provide the resident with the background to diagnose and manage pediatric patients with acute and chronic respiratory disorders, including those that are life-threatening, and to prepare the resident to conduct research in this field. The program should emphasize normal pulmonary physiology in pediatric patients and correlation of pathophysiology with clinical disorders. It must require research and provide opportunity for the development of teaching skills on the part of the residents. This educational program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of patients and their families.

The training program must be designed to develop the subspecialty resident's competence in the clinical diagnosis, pathophysiology, and medical treatment of respiratory disorders in pediatric patients. There must be training in the selection, performance, and evaluation of procedures necessary for morphologic and physiologic assessment of pulmonary diseases.

II. Faculty/Personnel

A. Pediatric Pulmonology Specialists

There must be at least two qualified pediatric pulmonologists who provide sufficient time to the program to ensure its educational and research quality and to provide adequate supervision of pulmonology residents. These staff must be certified in pediatric pulmonology by the American Board of Pediatrics or have equivalent qualifications.

B. Other Physician Teaching and Consultant Faculty

In addition to having the full range of pediatric subspecialists, the program must have consultant faculty in related disciplines at the institution where the training takes place. These must include faculty with special expertise in the following areas:

- Pediatric surgery and cardiothoracic surgery
- Allergy/immunology
- Pediatric otolaryngology
- Pediatric radiology
- Pediatric anesthesiology
- Pediatric pathology

In addition, consultants should be available in the following areas:

- Genetics
- Pediatric neurology
- Developmental and behavioral pediatrics
- Pediatric psychiatry

C. Other Professional Personnel

The following other professional staff are essential contributors to a program in that they enhance the subspecialty resident's understanding of the multidisciplinary nature of pediatric pulmonology: pediatric respiratory therapy staff, pulmonology nursing staff, social workers and support staff, pediatric nutritionist and registered dietitian, pediatric pharmacist, physical and occupational therapist, child life therapist, and speech therapist.

III. Facilities/Resources

An accredited program must have adequate facilities to support the educational activities.

A. Inpatient and Outpatient

There must be an inpatient area with full pediatric and related services, including a pediatric intensive care unit and neonatal intensive care unit, staffed by pediatric residents and faculty. The inpatient unit also must be capable of meeting the specific needs of young adults with cystic fibrosis, including a transition to adult pulmonologists where appropriate.

Adequate space in an ambulatory setting must be available for optimal evaluation and care of patients.

B. Laboratory and Support Services

Full support services, including radiology, laboratory, nuclear medicine, and pathology, must be available at the primary teaching site. At this site there also must be a pediatric pulmonary function laboratory capable of measuring lung volumes, including body plethysmography, flows, gas exchange, bronchoprovocation studies, and polysomnography.

A suite in which flexible bronchoscopy examinations in pediatric age patients can be performed must be present at the primary site or available through affiliation with another institution.

C. Research Resources

Adequate resources for research and/or clinical studies, including statistical consultation, laboratory space, and computer services, must be available.

IV. Educational Program

A. Patient Population

An adequate number and variety of patients with pulmonary disorders who range in age from newborn through young adulthood must be available. The patient population must be sufficiently varied and frequently encountered so as to ensure that the pediatric pulmonology resident has the opportunity to become clinically competent in its management.

B. Clinical and Continuity Experience

There should be sufficient opportunity for the subspecialty residents to provide consultation on a variety of patients to enable them to become familiar with the pulmonary manifestations of a broad spectrum of pediatric illnesses. It is particularly important that they have continuing responsibility for the care of patients with chronic pulmonary problems.

The clinical experience must include but not be limited to the following categories:

1. Asthma and allergic disorders affecting the pulmonary system
2. Bronchopulmonary dysplasia
3. Cystic fibrosis
4. Lower respiratory tract infections
5. Newborn respiratory diseases
6. Pulmonary intensive care
7. Sleep disordered breathing, such as apnea
8. Airway appliances and chronic ventilatory assistance
9. Aspiration syndromes
10. Anomalies of the respiratory system, including upper airway obstruction
11. Chronic suppurative lung disease
12. Respiratory infections in the immunocompromised host
13. Other diseases such as pulmonary hypertension, interstitial lung disease, hemosiderosis, carbon monoxide poisoning, and acute lung injuries

C. Diagnostic Tests and Procedures

Clinical experience in the interpretation of a variety of diagnostic tests and the performance of therapeutic procedures must be part of the training, including tests of pulmonary function and evaluation of respiration during sleep. The subspecialty resident must have the opportunity to become proficient in bronchoscopy, thoracentesis, and techniques of chest physiotherapy and pulmonary rehabilitation. Training must include consultative experience in pulmonary intensive care and must provide the opportunity for the subspecialty residents to develop an understanding of how a patient's critical respiratory problems affect other critical organ systems.

D. Curriculum

The program must offer instruction through courses, workshops, seminars, and laboratory experience to provide an appropriate experience for residents in the basic and fundamental disciplines related to the lung, including allergy and immunology, and immunopathology. Training must be provided in the evaluation of the psychosocial aspects of chronic pulmonary disease as they affect the pediatric patient and his or her family.

The program also must provide opportunities for and instruct the subspecialty residents in the development of competence in counseling chronically ill patients and their families. Health education and preventive measures related to pulmonary disease also should be emphasized.

E. Teaching and Administrative Experience

The subspecialty resident must be provided with instruction and experience in operational aspects of a pediatric pulmonology facility,

including staffing needs, unit management, and planning for program development.

ACGME: September 1999 Effective: July 2000

Program Requirements for Residency Education in Pediatric Rheumatology (Pediatrics)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics, programs in pediatric rheumatology must comply with the following requirements, which may in some cases exceed the general subspecialty requirements.

I. Introduction

The purpose of a program in pediatric rheumatology is to provide subspecialty residents in pediatric rheumatology with the background to diagnose and manage patients with acute and chronic rheumatic and musculoskeletal diseases, including those that are life-threatening, and to help them develop investigative skills related to this specialized field.

II. Duration and Scope of Training

An accredited program in pediatric rheumatology must provide 3 years of training to allow sufficient time for the subspecialty residents to develop expertise in the long-term continuity of care that is required for the patients and to understand the natural history of the diseases. Continuity of care for a panel of patients throughout the 3 years is required.

III. Faculty

A. Pediatric Rheumatologists

There must be at least two pediatric rheumatologists in the program to ensure adequate time for the administrative, clinical, and research activities involved in educating the subspecialty residents.

B. Other Physician Teaching and Consultant Faculty

Consultant and collaborative faculty in related disciplines, particularly pediatric orthopedics, must be available at the institution where training takes place. There must be pediatric subspecialists available in cardiology, gastroenterology, hematology/oncology, immunology, infectious disease, and nephrology, as well as specialists who have expertise with pediatric patients in at least the following areas: dermatology, ophthalmology, pathology, and physical medicine and rehabilitation. Collaboration with basic science departments and with internal medicine rheumatology programs is encouraged.

C. Other Personnel

Staff from allied health disciplines, including registered physical and occupational therapists, must be available. The presence of a nurse specialist, a pediatric social worker, and a nutritionist is highly recommended.

IV. Facilities and Resources

There must be full support services, including nuclear medicine and access to pediatric rehabilitation services, electromyography laboratory and clinical immunology laboratory.

V. Educational Program

A. Breadth of Experience

The program must provide subspecialty residents with a thorough knowledge of normal growth and development with emphasis on the musculoskeletal system, as well as the correlation of pathophysiology with clinical diseases. The program should ensure the availability of all facilities and personnel necessary for the complete care of infant, child, adolescent, and young adult patients with rheumatic diseases. A patient population of sufficient size must be available to ensure training of both the general pediatric residents and the rheumatology residents.

The program must ensure that each subspecialty resident has the opportunity to provide continuing responsibility for both acute and chronic rheumatic diseases in order to observe the natural history of the disease process and effectiveness of therapeutic programs. Continuing responsibility for the care of patients with chronic rheumatic diseases is of particular importance.

B. Clinical Experience

The clinical component of the program must provide broadly based experience with a variety of rheumatic and musculoskeletal diseases and must be designed to develop the subspecialty resident's understanding of the pathophysiology of various rheumatic diseases and to promote competence in the clinical diagnosis and medical management of these disorders. There must be training in the selection, performance, and evaluation of procedures necessary for pathologic, physiologic, immunologic, microbiologic, and psychosocial assessment of rheumatic and musculoskeletal diseases.

1. Diagnostic tests and procedures

The program must provide sufficient experience for the residents to acquire skill in

- a. Therapeutic injection of diarthrodial joints;
- b. Nailfold capillary microscopy;
- c. Use of nonsteroidal anti-inflammatory drugs, disease-modifying drugs, biologic response modifiers, glucocorticoids, cytotoxic drugs, and infectious/post-infectious therapy.

2. The program must provide sufficient training for the residents to become proficient in the following:

- a. Diagnostic aspiration of joints and interpretation of analysis of joint synovial fluid
- b. Prescription of physical therapy, occupational therapy, splints, and other therapeutic modalities
- c. Bone and joint imaging
- d. Evaluation for surgical intervention, including participation in both preoperative and postoperative patient management
- e. Interpretation and utilization of laboratory tests as they relate to rheumatic disorders
- f. Understanding the indications for electromyographic (EMG) and nerve conduction studies
- g. Performing biopsies of tissues relevant to rheumatic diseases
- h. Slit lamp examination of the eye

3. Patient population

The patient population must be sufficiently varied and the volume sufficiently large to assure the subspecialty resident of the opportunity to become clinically competent in the management of common as well as uncommon rheumatic disorders. The patient population must be characterized by ample diversity of rheumatic diseases including but not limited to the following categories:

- a. Infectious/post-infectious such as acute rheumatic fever and Lyme disease
- b. Juvenile rheumatoid arthritis
- c. Kawasaki disease

- d. Systemic lupus erythematosus
- e. Scleroderma
- f. Dermatomyositis/polymyositis
- g. Henoch-Schönlein purpura
- h. Other vasculitic disorders, e.g., Wegners and Polyarteritis nodosa
- i. Nonarticular rheumatic diseases including reflex neurovascular dystrophy and fibromyalgia
- j. Infections of bones and joints
- k. Neonates with consequences of maternal rheumatic diseases or medications for rheumatic diseases
- l. Spondyloarthropathies, psoriasis, and other HLA B27-related disorders
- m. Malignancies of bone and muscle
- n. Disorders of collagen and connective tissue
- o. Rheumatic aspects of immunocompromised (congenital or acquired) children
- p. Rheumatic aspects of systemic diseases such as endocrine, metabolic, gastrointestinal and infectious diseases, skeletal dysplasias, and other systemic diseases
- q. Sports injuries, including over use syndromes
- r. Avascular necrosis, including Legg-Perthes syndrome
- s. Osteochondritis syndromes

C. There should be sufficient opportunity for the subspecialty resident to provide consultation for wide variety of patients with rheumatic complaints common in the spectrum of other childhood diseases.

D. Curriculum

1. Basic sciences and conferences

The program must emphasize anatomy, immunology, physiology, biochemistry, genetics, and molecular biology of the musculoskeletal system in the developing child and the young adult.

2. Didactic and laboratory experience

The program must have a well-developed, formally structured curriculum, including courses, workshops, seminars, and laboratory experience that provides an appropriate background for subspecialty residents in the basic and fundamental disciplines related to the musculoskeletal system and rheumatic disease, e.g., anatomy, biochemistry, embryology, genetics, immunology, molecular biology, pathology, pharmacology, and physiology. Instruction and experience in rehabilitative and psychosocial aspects of chronic rheumatic diseases as they affect the child are essential. Experience in counseling chronically ill patients and their families must be a component of the training program. Health education, current health care legislation, biomedical ethics, and preventive measures also should be emphasized.

3. Health care team

The subspecialty residents must be exposed to formal sessions on organization and leadership of a comprehensive health care team and the utilization of the services of all relevant allied health professionals, including those in social services, rehabilitation, education, and mental health. There also must be education in the use of community resources in the care of children with rheumatic diseases.

ACGME: February 2002 Effective: July 2002

Program Requirements for Residency Education in Pediatric Sports Medicine (Pediatrics)

I. Introduction

In addition to complying with the requirements below, each program must comply with the Program Requirements for Residency Education in the Subspecialties of Pediatrics.

II. Scope and Duration of Training

An educational program in sports medicine must be organized to provide a well-supervised experience at a level sufficient for the resident to acquire the competence of a physician with added qualifications in this field. It shall be 12 months in duration.

The practice of sports medicine is the application of the physician's knowledge, skills, and attitudes to those engaged in sports and exercise. Thus, the program must provide training in the development of the clinical competencies needed to diagnose and manage medical illnesses and injuries related to sports and exercise, for example, first-degree sprains, strains, and contusions, including appropriate referrals of, for example, fractures, dislocations, and third-degree sprains. Clinical experience must include injury prevention, preparticipation evaluation, management of acute and chronic illness or injury, and rehabilitation as applied to a broad spectrum of undifferentiated patients. There must be experience functioning as a team physician and in the promotion of physical fitness and wellness.

The program should emphasize physiology and biomechanics; principles of nutrition; pathology and pathophysiology of illness and injury; pharmacology; effects of therapeutic, performance-enhancing, and mood-altering drugs; psychological aspects of exercise, performance, and competition; ethical principles; and medical-legal aspects of exercise and sports.

III. Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program.

The teaching staff must include orthopedic surgeons who are engaged in the operative management of sports injuries and other conditions and who are readily available to teach and provide consultation to the residents. Teaching staff from the disciplines of nutrition, pharmacology, pathology, exercise physiology, physical therapy, behavioral science, physical medicine and rehabilitation, and clinical imaging also should be available to assist in the educational program. Coaches and athletic trainers should also be included.

IV. Facilities and Resources

The program must include the following:

A. Patient Population

A patient population, unlimited by age or gender and adequate in number and variety to meet the needs of the training program, must be available. The program director must ensure that residents are accorded meaningful patient responsibility with the supervision of a faculty member at all facilities and sites.

B. Sports Medicine Clinic

There must be an identifiable clinic that offers continuing care to patients who seek consultation regarding sports- or exercise-related health problems. Nonsurgical residents must be supervised by a

physician who has qualifications in sports medicine and is certified by the American Board of Emergency Medicine, the American Board of Family Practice, the American Board of Internal Medicine, or the American Board of Pediatrics or who possesses suitable equivalent qualifications.

Adequate up-to-date diagnostic imaging and rehabilitation services must be readily available and accessible to clinic patients. Consultation in medical and surgical subspecialties, physical therapy, nursing, nutrition, and pharmacology must be available. The opportunity to render continuing care and to organize recommendations from other specialties and disciplines is mandatory and will require that medical records include information pertinent to the assessment and management of patients with health problems related to sports and exercise.

C. Sporting Events/Team Sports/Mass-Participation Events

The program must have access to sporting events, team sports, and mass-participation events during which the resident can have meaningful patient responsibility.

D. Acute-Care Facility

There must be an acute-care hospital, with a full range of services, associated with and in proximity to the sponsoring residency. This facility must be readily accessible to patients served by the program.

V. Educational Program

The curriculum must provide the educational experiences necessary for the residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of physicians in the care of patients with health problems related to sports and exercise.

Didactic as well as clinical learning opportunities must be provided as part of the required curriculum for all residents. Conferences or seminars/workshops in sports medicine should be specifically designed for the residents to augment the clinical experiences.

All educational activities must be adequately supervised, while allowing the resident to assume progressive responsibility for patient care. The clinical activities in sports medicine should represent a minimum of 50% of the time in the program. The remainder of the time should be spent in didactic, teaching, and/or research activities and the primary care or emergency medicine ambulatory facility.

Residents must spend 1/2 day per week maintaining their skills in their primary specialty.

Participation in the following must be required of all residents:

A. Preparticipation Evaluation of the Athlete

The program must ensure that all sports medicine residents are involved in the development and conduct of preparticipation examination programs.

B. Acute Care

The resident must have appropriate authority and responsibility to participate meaningfully in the medical care that is provided to acute-care patients (see Scope and Duration of Training, above). In addition, the program should arrange for residents to observe representative inpatient and outpatient operative orthopedic procedures.

C. Sports Medicine Clinic Experience

The resident must attend patients in a continuing, comprehensive manner, providing consultation for health problems related to sports and exercise. The resident shall spend at least 1 day per week for 10 months of the training period in this activity.

If patients are hospitalized, the resident should follow them during their inpatient stay and resume outpatient care following the hospitalization. Consultation with other physicians and professionals in other disciplines should be encouraged.

D. On-Site Sports Care

The resident should participate in planning and implementation of all aspects of medical care at various sporting events. The program must ensure that supervised sports medicine residents provide on-site care and management to participants in these events.

In addition, the resident must participate in the provision of comprehensive and continuing care to a sports team. Preferably, the experience should include several teams that engage in seasonal sports.

E. Mass-Participation Sports Events

The resident should participate in the planning and implementation of the provision of medical coverage for at least one mass-participation event. The program must ensure that its residents have experience that includes providing medical consultation, direct patient care, event planning, protection of participants, coordination with local emergency medical systems, and other medical aspects of those events.

VI. Specific Knowledge and Skills

A. Clinical

The program must provide educational experiences for the residents to develop clinical competence in the overall field of sports medicine.

The curriculum must include but not be limited to the following content and skill areas:

1. Anatomy, physiology, and biomechanics of exercise
2. Basic nutritional principles and their application to exercise
3. Psychological aspects of exercise, performance, and competition
4. Guidelines for evaluation prior to participation in exercise and sport
5. Physical conditioning requirements for various activities
6. Special considerations related to age, gender, and disability
7. Pathology and pathophysiology of illness and injury as they relate to exercise
8. Effects of disease, e.g., diabetes, cardiac conditions, arthritis, on exercise and the use of exercise in the care of medical problems
9. Prevention, evaluation, management, and rehabilitation of injuries
10. Understanding pharmacology and effects of therapeutic, performance-enhancing, and mood-altering drugs
11. Promotion of physical fitness and healthy lifestyles
12. Functioning as a team physician
13. Ethical principles as applied to exercise and sports
14. Medical-legal aspects of exercise and sports
15. Environmental effects on exercise
16. Growth and development related to exercise

B. Patient Education/Teaching

The program must provide the experiences necessary for the residents to develop and demonstrate competence in patient education regarding sports and exercise. They must have experience teaching others, e.g., nurses, allied health personnel, medical students, residents, coaches, athletes, other professionals, and members of patients' families. There must also be relevant experience working in a community sports medicine network involving parents, coaches, certified athletic trainers, allied medical personnel, residents, and physicians.

ACGME: June 2000 Effective: June 2000

Program Requirements for Graduate Medical Education in Sleep Medicine (Pediatrics)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Sleep medicine is a discipline of medical practice in which sleep disorders are assessed, monitored, treated, and prevented by using a combination of techniques (clinical evaluation, physiologic testing, imaging, and intervention) and medication. Specialists in sleep medicine are expected to:

1. participate in an interdisciplinary care of patients of all ages that incorporates aspects of psychiatry, neurology, internal medicine, epidemiology, surgery, pediatrics and basic science;
2. acquire detailed knowledge of the sleep and respiratory control centers, physiology, and neurobiology underlying sleep and wakefulness;
3. diagnose and manage sleep disorder patients in outpatient and inpatient settings.

B. Duration and Scope of Education

1. All prerequisite fellowship education must be taken within programs accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The ACGME recognizes the following educational formats for entry into sleep medicine fellowships:
 - a) Fellows must complete 12 months of sleep fellowship education after the successful completion of one of the following prerequisite educational programs:
 - (1) 3 years of internal medicine; or
 - (2) 3 years of pediatrics
 - (3) 4 years of psychiatry;
 - (4) 4 years of neurology; or
 - (5) 5 years of otolaryngology.
3. Training must be separate and distinct from all training required for certification in internal medicine, pediatrics, pulmonology, psychiatry, neurology, and otolaryngology, and include as well as didactic and clinical experience in the care of patients with sleep disorders in both inpatient and outpatient settings.
4. Training should provide clinical exposure to the following disciplines as related to sleep disorders:
 - Cardiology
 - Neurology
 - Otolaryngology
 - Oral Maxillofacial Surgery
 - Pediatrics
 - Pulmonary Medicine
 - Psychiatry
 - Psychology, including Neuropsychology
5. Relation of the Subspecialty to Core Programs

Fellowship programs in the subspecialty of sleep medicine may only be accredited in institutions where the sponsoring specialty has an ACGME-accredited residency program. The sponsoring program may be in internal medicine, psychiatry, pediatrics, neurology, or otolaryngology.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions. There is a limit of one accredited sleep medicine program per sponsoring institution.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

C. Institutional Facilities and Resources

1. Patient Population
 - a) There must be an adequate number and variety of patients of all ages in both inpatient and outpatient settings to expose fellows to the board spectrum of sleep disorders. This should include experience across the major categories of sleep disorders, including: apnea and other sleep-related breathing disorders; parasomnias; circadian rhythm disorders; insomnia; narcolepsy and related excessive daytime sleepiness disorders; and sleep problems related to other factors and diseases such as medications, and psychiatric and medical disorders.
 - a) Inpatient experience should include evaluation of a sufficient number of sleep disorder patients. Experience should include longitudinal management of patients for whom the fellow is the primary physician but acting under the supervision of a faculty member.
2. Facilities
 - a) The facility should be appropriately equipped, and have a minimum of two fully-equipped polysomnography bedrooms and support space.
 - b) There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with audiovisual and other educational aids, office space for staff and fellows, pertinent library materials, and diagnostic, therapeutic, and research facilities.
3. Institutional Resources
 - a) The sponsoring institution must provide sufficient institutional resources—including GME staff, space, equipment, supplies, and time—to allow for effective oversight of its programs accredited by the ACGME.
 - b) In addition, there must be sufficient institutional resources to ensure that the programs accredited by the ACGME are implemented and developed effectively and in compliance with both the program and institutional requirements.
 - c) The American Academy of Sleep Medicine or an equivalent body should accredit for the use of both adults and children

the sleep laboratories and other related facilities and equipment.

4. Library
 - a) Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
 - b) Library services should include the electronic retrieval of information from medical databases.
 - c) There must be access to an on-site library or to a collection of appropriate texts and journals in each institution that participates in a fellowship program. On-site libraries and/or collections of texts and journals, or access to the electronic retrieval of these materials, must be readily available during nights and weekends.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program; he or she must be fully committed to the fellowship program, and devote sufficient time to provide leadership and supervision to the program and its fellows. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified by the specialty board in sleep medicine or be certified in sleep medicine by an ABMS Member Board, or possess qualifications judged to be acceptable by the sponsoring RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;

- (2) a change in the format of the educational program;
- (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.

- a) The program that provides training in sleep medicine must have at least two core faculty, including the director, who are specialists in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, or Otolaryngology and who are certified in sleep medicine by the specialty board in sleep medicine or by the applicable ABMS board, or who possess qualifications judged acceptable by the sponsoring RRC.
- b) For programs with more than four fellows, a ratio of one core faculty to every two fellows must be maintained.

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.

- a) Appropriate expertise in the areas defined in Section I.B. above must be present between the director and faculty. The RRC recognizes that expertise in sleep medicine is available from physicians who are board certified in many medical specialties, particularly in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, and Otolaryngology; the RRC actively encourages multidisciplinary cooperation in the training of fellows.
- b) There must be designated faculty available to participate in consultation and teaching from the following disciplines as they relate to sleep medicine and the management of sleep disorders:
 - Cardiology
 - Neurology
 - Otolaryngology
 - Oral Maxillofacial Surgery
 - Pediatrics
 - Pulmonary Medicine
 - Psychiatry
 - Psychology including neuropsychology

3. Qualifications of the physician faculty are as follows:

- a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
- b) The physician faculty must be certified by the applicable ABMS Board, or possess qualifications judged to be acceptable by the RRC.
- c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;

c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another fellowship program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of fellowship education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

E. Fellow/Patient Ratio

The number of patients must be sufficient to provide a sound educational program. The program director must ensure an adequate number and variety of patients, with particular attention to balance in the age and gender of patients, as well as in patients with short- and long-term sleep disorders, inpatients, and outpatients.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The fellowship program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their fellows to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Program

1. Fellows must have formal instruction in, and demonstrate comprehensive knowledge of:
 - a) Major theories in sleep medicine, together with a thorough grounding in the generally accepted facts and basic sleep mechanisms.
 - b) Biological, psychological, social, economic, ethnic, and familial factors, which significantly influence the evaluation and treatment of sleep disorders.
 - c) Etiologies, prevalence, diagnosis, and treatment of all of the sleep disorders in the current nosology of sleep medicine.

- d) The use, reliability, and validity of the generally accepted techniques for diagnostic assessment.
 - e) Medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g., the relationship between hypertension and snoring)
 - f) The nature of the interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies
 - g) Administration and interpretation of psychological tests
 - h) Financing and regulation of sleep medicine.
 - i) Medical ethics and its application in sleep medicine.
 - j) Legal aspects of sleep medicine.
 - k) Research methods in the clinical and basic sciences related to sleep medicine.
- 1) Technical skills including:
 - (1) skills necessary to perform polysomnographies from preparation and hookup of the patient to the completion of the study, including multiple sleep latency and maintenance of wakefulness tests.
 - (2) Scoring and interpretation of polysomnograms and recognition of artifacts, including full montages with additional EEG leads for seizure detection
 - (3) Consultative skills in sleep medicine in a variety of medical, surgical, and psychiatric settings

2. The Curriculum

The curriculum must include instruction in the following:

- a) Fundamental mechanisms of sleep
- b) Etiopathogenic characterization of sleep disorders
- c) Clinical manifestations of sleep disorders
- d) Diagnostic strategies in sleep disorders
- e) Treatment strategies in sleep disorders
- f) Epidemiological issues
- g) Airway anatomy

3. Seminars and Conferences

- a) The training program must conduct a monthly, multidisciplinary teaching conference and a monthly journal club organized by the faculty on topics that cover the scope of sleep medicine.
- b) The training program must conduct seminars and core conferences, that include didactic instruction in the following; this instruction must be relevant for pediatric and adult patients:
 - (1) Basic neurological sleep mechanisms
 - (2) Chronobiological mechanisms
 - (3) Respiratory physiology during sleep and pathophysiology
 - (4) Cardiovascular physiology during sleep and pathophysiology
 - (5) Endocrine physiology during sleep and pathophysiology
 - (6) Gastrointestinal physiology during sleep and pathophysiology
 - (7) Ontogeny of sleep
 - (8) Sleep across the life span
 - (9) Operation of polysomnographic monitoring equipment
 - (10) Polysomnographic troubleshooting
 - (11) Ambulatory monitoring methodology
 - (12) Polysomnogram interpretation
 - (13) SIDs and related respiratory distress
 - (14) Nosology for sleep disorders: The International Classification of Sleep Disorders
 - (15) Evaluation of patients presenting with excessive sleepiness
 - (16) Evaluation of patients presenting with difficulty initiating or maintaining sleep

- (17) Evaluation of patients presenting with parasomnias
- (18) Biological rhythm disorders
- (19) Pediatric and neonatal sleep medicine
- (20) Treatment approaches for obstructive sleep apnea, to include nasal CPAP, bilevel PAP, upper airway surgery, oral appliances, and position training
- (21) Treatment approaches for insomnia, to include cognitive-behavioral therapies and pharmacological therapy
- (22) Treatment approaches for narcolepsy and idiopathic CNS hypersomnolence
- (23) Treatment approaches for parasomnias
- (24) Treatment of circadian rhythm disorders
- (25) Pharmacology of sleep (i.e. medication effects on sleep)

F. Clinical Components

I. Clinical Skills

Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the management of sleep disorders in all age groups including following:

- a) interviewing
- b) clear and accurate history taking
- c) performing competent physical, neurological, and mental status examinations
- d) recording of findings completely and systematically
- e) relating history and clinical findings to the relevant medical, neurologic, psychiatric, and social issues associated with etiology and treatment
- f) formulating a differential diagnosis for all conditions in the current standard nosology, taking into consideration all relevant data.
- g) diagnosing medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions
- h) formulating appropriate treatment plans and making appropriate referrals
- i) providing continuous care for a variety of patients from different age groups, seen regularly and frequently over an extended time, in a variety of treatment modalities; being able to relate to patients and their families, as well as other members of the health care team, with compassion, respect, and professional integrity
- j) Certification in cardiopulmonary resuscitation

2. Clinical Training

- a) Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the following:
 - (1) The observation, evaluation, and management of patients of all ages with a wide variety of sleep disorders
 - (2) The integration of information obtained from patient history, physical examination, physiologic recordings, imaging studies, psychometric testing, pulmonary function testing, and biochemical and molecular tests results to arrive at an accurate and timely diagnosis and treatment plan.
 - (3) The indications for and potential pitfalls and limitations of diagnostic tests and the interpretation of the results in the context of the clinical situation. These diagnostic tests must include the following: polysomnography, multiple sleep latency testing, maintenance of wakefulness testing, actigraphy, and portable monitoring related to sleep disorders, imaging studies, magnetic resonance imaging, scoring and interpretation of polysomnograms and recognition of artifacts, including montages with additional EEG leads for seizure detection, and psychological and psychometric tests as they relate to sleep disorders.

- (4) The development and execution of plans for evaluation and treatment, including the appropriate technical skills necessary to perform polysomnography from preparation and hookup of the patient to the completion of the study, including multiple sleep latency tests, maintenance of wakefulness tests, and other diagnostic studies
- (5) The critical appraisal of the professional and scientific literature and application of new contributions to management and care of patients.

- b. Fellows must have formal instruction and clinical experience in systems-based skills that include working in outpatient and inpatient settings and effectively utilizing health care resources, including pathology and radiology services.

- (1) Clinical experiences that provide for basic and advanced training and education, as well as professional development
- (2) Opportunities to formulate a clinical diagnosis and to order and use laboratory data to clinically evaluate a patient's condition and to support outpatient and inpatient diagnostic evaluations
- (3) Progressive experience for training that includes caring for a sufficient number of sleep disorder patients to achieve competence in the assessment of patients with a wide range of sleep medicine disorders
- (4) Experience with medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g. the relationship between hypertension and snoring); ability to diagnose medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions; to formulate appropriate treatment plans; and to make appropriate referrals.
- (5) Experience with interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies; competence in sleep medicine consultation in a variety of medical, surgical and psychiatric settings.
- (6) Experience in sleep disorders center administration, especially leadership of interdisciplinary teams.
- (7) Supervised experience in teaching sleep medicine to students in the health professions.
- (8) Trainees should make regular patient management rounds and record reviews with the attending faculty.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

- 1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the fellowship program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period.

In-house call is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because fellowship education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.

3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the fellowship program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance. Fellows' evaluation by faculty must be made at least once every two months so that areas of weakness and strength may be communicated to the fellows.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle,

and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMCEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the fellowship program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the fellowship program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification in Sleep Medicine by the American Board of Medical Specialties should communicate with the office of the board regarding the full requirements for certification.

Approved by ACGME: June 2004 Effective: June 2004

Program Requirements for Residency Education in Physical Medicine and Rehabilitation

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

Preface

The program requirements set forth here are to be considered common to all specialties, and are complete only when supplemented, where indicated and individually, by each specialty.

I. Introduction

A. Definition and Scope of Physical Medicine and Rehabilitation

Physical medicine and rehabilitation (PM&R), also referred to as physiatry, is a medical specialty concerned with diagnosis, evaluation, and management of persons of all ages with physical and/or cognitive impairments and disability. This specialty involves diagnosis and treatment of patients with painful or functionally limiting conditions, the management of comorbidities and coimpairments, diagnostic and therapeutic injection procedures, electrodiagnostic medicine and emphasis on the prevention of complications of disability from secondary conditions.

Physiatrists are trained in the diagnosis and management of impairments of the neurologic, musculoskeletal (including sports and occupational aspects) and other organ systems and the long-term management of patients with disabling conditions. Physiatrists provide leadership to multidisciplinary teams concerned with maximal restoration or development of physical, psychological, social, occupational and vocational functions in persons whose abilities have been limited by disease, trauma, congenital disorders or pain to enable people to achieve their maximum functional abilities.

B. Duration and Scope of Education

1. a. Four years of graduate medical education are necessary to complete training for a physician seeking specialization in this field, three years of which must be physical medicine and rehabilitation training. Of these three years no more than six months can be elective. No more than one month of this elective time may be taken in a non-ACGME accredited program, unless prior approval is given by the RRC.
- b. One year of the four years of training is to develop fundamental clinical skills. This year of training in fundamental clinical skills must consist of an accredited Transitional Year or include six months or more inpatient responsibility in accredited training in family practice, internal medicine, obstetrics-gynecology, pediatrics, or surgery, or any combination of these patient care experiences. The remaining months of this year may include any combination of accredited specialties or subspecialties.

Accredited training in any of the specialties or subspecialties selected must be for a period of at least four weeks. No more than eight weeks may be in non-direct patient care experiences. Training in fundamental clinical skills must be completed within the first two years of the four year training program.
2. Training programs may choose either to provide three years of physical medicine and rehabilitation training and appoint residents at the PG-2 level contingent on satisfactory completion of

one year's accredited training in fundamental clinical skills or to provide four years of training to include twelve (12) months of these fundamental clinical skills in areas other than physical medicine and rehabilitation.

3. a. A training program of three years duration is responsible for the thirty-six months of physical medicine and rehabilitation training and responsible for assuring that residents appointed at the PG-2 level have received satisfactory training in fundamental clinical skills.
- b. A training program of four years duration is responsible for the quality of the integrated educational experience for the entire training program, including twelve (12) months of training in fundamental clinical skills in areas other than physical medicine and rehabilitation.

II. Institutional Support

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

1. Physical medicine and rehabilitation must be organized as an identifiable specialty within the sponsoring institution.
2. Programs that cosponsor combined training in PM&R and another specialty must so inform the RRC. Residents in such training must be informed of the necessary requirements of the specialty boards in question.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives, and should provide resources not otherwise available to the program. The participation or change in participation by any institution which provides three months or more of training must be reported within 30 days to the RRC and approved by the RRC. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution that provides an educational experience for a resident that is one month in duration or longer. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
3. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved.
4. Institutions sponsoring or participating in residency training in physical medicine and rehabilitation should be appropriately accredited by the Joint Commission on Accreditation of Healthcare Organizations for rehabilitation or the Commission on Accreditation of Rehabilitation Facilities. If the institution is not so ac-

credited, reasons why accreditation was not sought or was denied must be explained, and the inclusion of the institution in resident education must be justified.

5. The sponsoring institution must notify the RRC promptly of any major changes in leadership, governance, affiliation or fiscal arrangements that affect the educational program. The RRC may schedule a site visit when notified of such changes.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities and experience in his or her field, including at least four (4) years of recent post-residency experience as a clinician, administrator, and educator in PM&R.
 - b. The program director must be certified in the specialty by the American Board of Physical Medicine and Rehabilitation or possess qualifications as a physiatrist judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. The program director must have the professional ability, enthusiasm and sense of responsibility to achieve and maintain high quality of the training program.
 - e. The program director must have the authority and time needed to participate with other institutional program directors in maintaining the quality of all training programs.
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:

- 1) the addition or deletion of a participating institution;
- 2) a change in the format of the educational program;
- 3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

5. The program director must notify in writing the Executive Director of the RRC within 30 days of any major change in the program that may significantly alter the educational experience for the residents, including but not limited to:
 - a. a copy of the newly appointed program director's curriculum vitae, including details of his/her experience and qualifications in graduate medical education,
 - b. significant changes in the complement of medical faculty,
 - c. changes in the resident complement, as defined in section IV. B., below,
 - d. changes in administrative structure, such as a change in the hierarchical status of the program/department within the institution,
 - e. changes in the length of training (whether 3 or 4 years),
 - f. changes in participation by any institution which provides three months or more of training, and
 - g. significant changes in any institution (see section II. B. 5, above).

Upon such notification, the RRC may schedule a site visit of the program.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must participate regularly and systematically in the training program, both clinical and didactic, must be readily available for consultations to the resident, and be available during clinical crises. Part-time faculty should have specific, regular teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Physical Medicine and Rehabilitation or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
 - d. Non-physiatric medical faculty must be appropriately certified or possess appropriate educational qualifications.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical

series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

1. Professional staff in the disciplines of nursing, occupational therapy, orthotics and prosthetics, physical therapy, psychology, rehabilitation nursing, social service, speech-language pathology, recreational services, and vocational counseling, who are appropriately credentialed should be integrated into both the didactic and clinical experience of the resident whenever relevant.
2. The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

D. Facilities and Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. It is necessary to have beds assigned to the physical medicine and rehabilitation service, grouped in one or more geographic area(s). A minimum census of eight (8) physical medicine and rehabilitation inpatients should be available for each full-time equivalent resident assigned to an acute or subacute inpatient rehabilitation service.
2. There must be adequate equipment and space available to carry out a comprehensive training program in physical medicine and rehabilitation. There must be specific equipment for physical medicine interventions, and residents must have actual experience with this equipment. Equipment must be suitable for all age groups with special attention to modified equipment for the pediatric and geriatric patient. These include radiant, conductive and convective heat sources, other thermotherapy and hydrotherapy devices, exercise equipment, ambulatory aids, wheelchairs, and special devices for the impaired driver, electrodiagnostic and EMG equipment, urodynamic laboratory instruments, and simple splinting apparatuses. The occupational therapy area must be adequately equipped to give the residents experience in activities of daily living, and the evaluation of and training in devices to improve skills in activities of daily living. Psychometric and vocational and social evaluation facilities and test instruments must be adequate to expose the resident to the broad spectrum of their prescription and their use and interpretation in the common practice of rehabilitation medicine. Adequate office space should be available for the faculty and residents, to participate in both clinical examination of patients and in self-study.
3. The sponsoring institution must provide an adequate, available professional library with suitable basic textbooks and journals pertinent to general medicine and surgery as well as the specialty of physical medicine and rehabilitation. Loan capabilities with other main or lending libraries should be available. Also,

there must be access to an on-site library or collection of appropriate texts and journals in each institution participating in the residency program. Library services should include the electronic retrieval of information from medical databases. On-site libraries and/or collections of texts and journals must be readily available to residents during evening hours and weekends.

4. Basic teaching aids such as computers, slide projectors, and videotape facilities are essential. Reasonable access to these items on nights and weekends for residents and staff must be available. Adequate space must be available for seminars, lectures, and other teaching experiences. There must be facilities for team conferences and specialty care clinics, such as orthotics, prosthetics, children's handicaps and the like.
5. Facilities must be accessible to persons with disabilities.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. The program must select residents in accordance with institutional and departmental policies and procedures.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. In order to ensure the stimulating educational atmosphere that a peer group provides, residents should be enrolled in a training program at all times. All training programs should have at least two (2) residents per year in each year of training, with an approximately equal distribution of these residents. In addition, each training program should provide educational experiences which bring together all of the residents of the training program at frequent and regular intervals.
2. Failure to recruit any new residents for two consecutive years will result in Residency Review Committee review and possible adverse action. Also, the program must demonstrate the ability over time to retain qualified residents by consistently graduating at the end of residency at least 80% of the residents enrolled at the beginning of residency.
3. The program director will establish the maximum number of resident positions that can be supported by the educational resources for the program, subject to the approval of the RRC. The program director must report any change in the number of resident positions offered.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. The program also must accept responsibility for completion of the resident's training and fulfillment of educational goals and objectives leading to eligibility for board certification. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

Physical medicine and rehabilitation residents must have interaction with residents and faculty from other specialties and/or medical students in order to provide opportunities for peer interaction and teaching.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

Resident Participation

1. The curiosity and creativity of all residents must be stimulated. They must be involved in the critical appraisal of current literature.
2. Residents should have the opportunity to participate in structured, supervised research training. It is desirable that each resident produce a peer-reviewed publication during the residency program. A program director may elect to offer a special research or academic track for selected residents. This may take the form of an elective or research rotation, usually not to exceed six months, within the 36 months of physical medicine and rehabilitation residency training.

D. ACGME Competencies

(N.B.: Section V. D. does not apply to certain subspecialties)

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;

The training program must provide the opportunity for the graduate to develop the attitudes and psychomotor skills required to:

- a. modify history taking technique to include data critical to the recognition of functional abilities, and physical and psychosocial impairments which may cause functional disabilities,

- b. perform the general and specific psychiatric examinations, including electromyography, nerve conduction studies, and other procedures common to the practice of physical medicine and rehabilitation,
 - c. make sound clinical judgments, and
 - d. design and monitor rehabilitation treatment programs to minimize and prevent impairment and maximize functional abilities.
2. **Medical Knowledge about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;**
 - a. This must include knowledge about the diagnosis, pathogenesis, treatment, prevention, and rehabilitation of those neuromusculoskeletal, neurobehavioral, cardiovascular, pulmonary, and other system disorders common to this specialty in patients of both sexes and all ages.
 - b. The program must include education in the principles of bioethics as applied to medical care, and the residents must participate in decision-making involving ethical issues that arise in the diagnosis and management of their patients.
 3. **Practice-based learning and improvement that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;**

The training program must stress the importance of self-evaluation, continuing medical education, and continued professional development after graduation.
 4. **Interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;**

The training program must provide the opportunity for the resident to develop the necessary written and verbal communication skills essential to the efficient practice of psychiatry.
 5. **Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;**
 - a. Physician accountability
 - 1) The educational program must have mentors, role-model clinicians, and an environment that demonstrates the values of professionalism, such as placing the needs of the patient first, maintaining a commitment to scholarship, helping colleagues meet their responsibilities, maintaining a commitment to continued improvement, and being responsive to society's healthcare needs.
 - 2) Residents should participate in community service, professional organizations, or institutional committee activities.
 - b. Humanistic qualities

Physicians must have the welfare of their patients as their primary professional concern. The residents and faculty members, therefore must demonstrate humanistic qualities that foster the formation of appropriate patient/physician relationships. These qualities include integrity, respect, compassion, professional responsibility, courtesy, sensitivity to patient needs for comfort and encouragement, and an appropriate professional attitude and behavior toward colleagues. The written curriculum must emphasize the importance of humanistic qualities throughout the residency.
 - c. Professional ethics

The training program must foster a commitment to professional ethics in residents that is demonstrated by a spirit of collegiality and a high standard of moral behavior within the clinical setting in the care of patients, in the education of residents, in conducting research, and in interacting with funding organizations.
 6. **Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.**
 - a. Residents must receive instruction in the social and economic impact of medical decisions on patients and society and the need to be the primary advocate for patients' needs.
 - b. All residents must receive formal instruction regarding the principles, objectives and process of performance improvement and program evaluation, risk management and cost effectiveness in medicine.
 - c. The training program must provide the opportunity for the graduate to be able to coordinate effectively and efficiently an interdisciplinary team of allied rehabilitation professionals for the maximum benefit of the patient by:
 - 1) an understanding of each allied health professional's role,
 - 2) the ability to write adequately detailed prescriptions based on functional goals for psychiatric management, and
 - 3) the development of management and leadership skills.
- #### D. Didactic Components
1. Formal education must have a high priority. Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out and attended on a regularly scheduled basis. It must expose residents to topics appropriate to their level of training. Systematically organized formal instruction (prepared lectures, seminars, assigned reading, etc.) must be an essential part of the residency. Clinical case conferences, such as those for radiology, neuromuscular disease and EMG, clinical PM&R and pain medicine, and journal clubs are desirable adjuncts to an organized didactic curriculum. Active participation by the faculty in the didactic program is required.
 2. The curriculum must include adequate and systematic training in basic sciences relevant to physical medicine and rehabilitation such as anatomy, physiology, pathology and pathophysiology of the neuromusculoskeletal, cardiovascular and pulmonary systems, kinesiology and biomechanics, functional anatomy, electrodiagnostic medicine, fundamental research design and methodologies, and instrumentation related to the field. This instrumentation should pertain to physiologic responses to the various physical modalities and therapeutic exercises, and the procedures commonly employed by psychiatry. This training should be correlated with clinical training but should, when appropriate, include basic science faculty. An accessible anatomy laboratory for dissection is highly desirable.
 3. The training program must provide adequate and supervised experience in medical administration and teaching methodology.
 4. Bedside teaching rounds on hospitalized physical medicine and rehabilitation patients must be made by residents with faculty at least five times per week.
- #### F. Clinical Components
1. The clinical portion of the curriculum must include a sufficient variety, depth, and number of clinical experiences. However, clinical activities must not compromise the educational requirements of the training program.
 2. The training program must include at least 12 months with direct responsibility for complete management of hospitalized patients on the physical medicine and rehabilitation service. Residents must spend at least 12 months of their training in the care of outpatients, including a significant experience in the care of musculoskeletal problems.
 3. The program must ensure, with each year of training, that each resident has increasing responsibility in patient care, leadership,

teaching and administration. Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and demonstrates additional competencies. The program director must establish written guidelines for appropriate supervision of more junior residents by more senior residents and of all residents by attending physicians with attention to the acuity, complexity and severity of patient illness. Supervision must include faculty review of a clearly written patient history and physical examination and a meaningful continuous record of the patient's illness, background, management strategies, as well as lucid presentations of the case summary.

4. Provision must be made for the resident to review personally pertinent laboratory, roentgenographic and other imaging materials for the patient. Opportunity to observe directly and participate in the various therapies in the treatment areas must occur regularly throughout the residency program, including the proper use and function of equipment and tests.
5. The residents must have the opportunity to observe and gain fundamental understanding of orthotics and prosthetics, including fitting and manufacturing, through documented arrangements made with appropriate orthotic-prosthetic facilities.
6. The residents must have the opportunity to observe and gain fundamental understanding of the types of patients served, referral patterns and services available in the continuum of rehabilitation care in community rehabilitation facilities. These include subacute units and skilled nursing facilities, sheltered workshops and other vocational facilities, schools for persons with multiple handicaps, including deafness and blindness, independent living facilities for individuals with severe physical impairments, day hospitals, and home health care services, and community re-entry services. Some introduction to these options for care may be made by on-site visits to some of these facilities as well as didactic lectures. Residents should be encouraged to interact with health care consumer groups and organizations.
7. The clinical curriculum must be written and implemented for the comprehensive development of measurable competencies for each resident in the following areas:
 - a. history and physical examination pertinent to physical medicine and rehabilitation,
 - b. assessment of neurological, musculoskeletal and cardiovascular-pulmonary systems,
 - c. determining disability evaluations and impairment ratings,
 - d. data gathering and interpreting of psychosocial and vocational factors,
 - e. performance of electromyography, nerve conduction and somatosensory evoked potential studies, and other electrodiagnostic studies. In general, involvement in approximately 200 electrodiagnostic consultations per resident, under appropriate supervision, represents an adequate number.
 - f. therapeutic and diagnostic injection techniques,
 - g. prescriptions for orthotics, prosthetics, wheelchairs and ambulatory devices, special beds and other assistive devices,
 - h. Written prescriptions with specific details appropriate to the patient for therapeutic modalities, therapeutic exercises and testing performed by physical therapists, occupational therapists, speech/language pathologists. It is necessary to provide for an understanding and coordination of psychologic and vocational interventions and tests.
 - i. familiarity with the safety, maintenance, as well as the actual use, of medical equipment common to the various therapy areas and laboratories,
 - j. a formal experience in evaluation and application of cardiac and pulmonary rehabilitation as related to psychiatric responsibilities,

- k. the rehabilitation of children,
 - l. collaboration with other medical professionals and members of the allied health team, including management techniques consistent with the resident's team leadership role, and the treatment program management role of the physiatrist,
 - m. geriatric rehabilitation,
 - n. prevention of injury, illness and disability
 - o. counseling of patients and family members, including end of life care,
 - p. the importance of personal, social and cultural factors in the disease process and clinical management,
 - q. the principles of pharmacology as they relate to the indications for and complications of drugs utilized in PM&R, and
 - r. experience in the continuing care of patients with long-term disabilities through appropriate follow-up care.
8. The resident must have opportunities for progressive responsibility in diagnosing, assessing, and managing the conditions commonly encountered by the physiatrist in the rehabilitative management of patients of all ages of at least the following:
- a. acute musculoskeletal pain syndromes, including sports and occupational injuries,
 - b. chronic pain medicine,
 - c. congenital or acquired myopathies, peripheral neuropathies, motor neuron and motor system diseases,
 - d. rehabilitative care of traumatic brain injury,
 - e. hereditary, developmental and acquired central nervous system disorders, including cerebral palsy, stroke, myelomeningocele, and multiple sclerosis,
 - f. rehabilitative care of spinal cord trauma and diseases, including management of bladder and bowel dysfunction and pressure ulcer prevention and treatment,
 - g. rehabilitative care of amputations for both congenital and acquired conditions,
 - h. sexual dysfunction common to the physically impaired,
 - i. postfracture care and rehabilitation of postoperative joint arthroplasty,
 - j. pulmonary, cardiac, oncologic, infectious, immunosuppressive and other common medical conditions seen in patients with physical disabilities,
 - k. diseases, impairments and functional limitations seen in the geriatric population,
 - l. rheumatologic disorders treated by the physiatrist,
 - m. acute and chronic medical conditions, comorbidities and complications commonly seen and managed in the psychiatric patient,
 - n. medical conditioning, reconditioning and fitness, and
 - o. soft tissue disorders such as burns, ulcers and wound care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be pro-

vided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care. Didactic activities may include observation of diagnostic and therapeutic procedures.
3. No new patients may be accepted after 24 hours of continuous duty.
4. At-home call (or pager call) is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not inter-

fere with the ability of the resident to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations

should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation should communicate with the office of the board regarding the full requirements for certification.

Policies and Procedures for Residency Education in the Subspecialties of Physical Medicine and Rehabilitation

- A. The initial application for a subspecialty program will not require an on-site survey, but will require submission of all application materials and information signed by the director of the subspecialty program and the director of the accredited sponsoring program in a relevant core specialty such as anesthesiology, emergency medicine, family practice, internal medicine, neurological surgery, neurology, orthopaedic surgery, pediatrics, physical medicine and rehabilitation, plastic surgery, surgery, or urology. The Residency Review Committee for Physical Medicine and

Rehabilitation (RRC) will take initial action based on a "paper review" of the program, namely, a review without survey.

- B. Subsequent review of subspecialty programs will be in conjunction with the survey and review of the core program. A separate set of forms will have to be completed by the subspecialty program director. In special cases determined by the RRC, the subspecialty program will be surveyed and reviewed separately. The RRC will also entertain interim requests and, on occasion, ask for interim progress reports.
- C. The RRC will designate programs as being accredited or not accredited. No further delineation of accreditation categories will be utilized. The accreditation of a program will be directly tied to that of the core. If the core program is subsequently accredited on a probationary basis, this is simultaneously a warning to the related subspecialty program that accreditation is in jeopardy. Withdrawal of accreditation of the core program will result in a simultaneous loss of accreditation of the subspecialty program.
- D. If the core program remains in good standing but the RRC judges the subspecialty program to be in noncompliance with the applicable program requirements, a warning will be issued. If these areas of noncompliance are not corrected, accreditation may be withdrawn from the subspecialty program. The Procedures for Proposed Adverse Action and for Appeal of Adverse Actions may be utilized by programs from which the accreditation has been withdrawn in an action separate from withdrawal of accreditation of the core program.
- E. Inquiries about accreditation of subspecialty programs should be directed to the Executive Secretary of the Residency Review Committee for Physical Medicine and Rehabilitation.

Program Requirements for Residency Education in Pain Medicine (Physical Medicine and Rehabilitation)

I. Scope and Duration of Training

A. Definition and Scope of the Specialty

Pain medicine is a discipline within the practice of medicine that specializes in the management of patients suffering from acute, chronic, and cancer pain. The management of acute and chronic pain syndromes is a complex matter involving many areas of interest and medical disciplines. Clinical and investigative efforts are vital to the progress of the specialty.

B. Duration of Training

Subspecialty training in pain medicine shall consist of 12 months of full-time training, beginning after satisfactory completion of a core residency program. At least 9 of the 12 months of training must be in clinical pain medicine. The remainder may be in clinical activities or research relevant to pain medicine. Assignments must not be made to activities not directly related to pain medicine.

II. Institutional Organization

A. Relationship to Core Program

Accreditation of a subspecialty program in pain medicine will be granted only when the program is in direct association with a core residency program in physical medicine and rehabilitation accredited by the Accreditation Council for Graduate Medical Education

(ACGME). If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the pain medicine program is conducted. Rotations outside the institution in which the pain medicine program is based should not exceed 4 months.

B. Appointment of Residents

Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed increase in the number of residents must receive prior approval by the Residency Review Committee (RRC). Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.

C. Institutional Policy: Resources

Because pain medicine is a multidisciplinary approach to a common problem, there should be an institutional policy governing the educational resources committed to pain medicine that ensures cooperation of all involved disciplines.

III. Program Director/Faculty

A. Program Director

The program director must be a psychiatrist who has been certified in pain medicine by the American Board of Physical Medicine and Rehabilitation or who has appropriate educational qualifications in pain medicine as determined by the RRC. The program director should have appropriate experience in pain medicine as a clinician, administrator and educator.

The subspecialty program director has responsibility for the teaching program in pain medicine subject to the approval of the director of the core residency program.

B. Medical Director

The medical director of the pain medicine service may be someone other than the subspecialty program director. Recognizing the institutional and multidisciplinary nature of pain medicine, the primary specialty of the medical director is not as important as the provision that such an individual represent the best-qualified person within the institution.

C. Faculty

Qualified physicians with expertise in pain medicine must have a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty residents in pain medicine must possess expertise in the care of patients with acute, chronic, and cancer pain problems. Such expertise frequently crosses specialty boundaries. Thus, the program is encouraged to include faculty from American Board of Medical Specialties (ABMS)-recognized medical specialties other than physical medicine and rehabilitation. Where appropriate, supervision and teaching by faculty in these and other disciplines should be incorporated into the teaching program for subspecialty residents in pain medicine.

At least three faculty with expertise in pain medicine should be involved in teaching pain medicine residents, and these should equal two or more full-time equivalents. A ratio of one full-time equivalent faculty member to two subspecialty residents shall be maintained.

IV. Facilities and Resources

A. Space and Equipment

A pain medicine center (clinic) must be located within a hospital/medical office complex and must be designed specifically for the management of patient pain. Space for research and teaching conferences in pain medicine must be available.

Appropriate monitoring and life-support equipment must be immediately available wherever invasive pain medicine procedures are performed.

There must be appropriate on-call facilities for male and female residents and faculty.

B. Support Services

The following functions and support must be available:

1. Appropriate laboratory facilities
2. Appropriate radiologic imaging facilities
3. Psychiatric/psychological services, including behavioral modification
4. Physical and/or occupational therapy
5. Social services
6. Medical record keeping
7. Other services including vocational, nursing, pharmacy, dietary, pastoral, and end of life care, as well as liaison with hospice and abuse services
8. Appropriate electrodiagnostic facilities

C. Patient Population

For each resident in the subspecialty of pain medicine each year, there must be a minimum of 200 new patients. A minimum of 15% of the resident's experience should be spent in managing each of the three types of pain problems: acute pain, chronic pain, and cancer pain.

There must be ready access to consultation from other disciplines involved in pain medicine.

D. Library

There must be a departmental library with adequate material relevant to pain medicine. This may be supplemented but not replaced by private faculty book collections and hospital or institutional libraries. There must be adequate computer facilities available for each resident, including literature search engines and Internet services.

V. The Educational Program

A. Educational Environment

An accredited program in pain medicine must provide education, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated and prepared to apply acquired knowledge and talents independently.

B. Clinical Components

There should be exposure to a wide variety of clinical pain problems. Such exposure is necessary for the development of broad clinical skills and knowledge required for a specialist in pain medicine. Subspecialty training in pain medicine must include experience in the management of both inpatients and outpatients.

The resident must become familiar with theory, benefits, indications, and practical applications of the following procedures and techniques:

1. A broad range of peripheral nerve block procedures
2. Epidural and subarachnoid injections
3. Joint and bursal sac injections
4. Cryotherapeutic techniques

5. Epidural, subarachnoid, or peripheral neurolysis
6. Electrical stimulation techniques
7. Implanted epidural and intrathecal catheters, ports, and infusion pumps
8. Acupuncture and acupressure
9. Behavioral modification and biofeedback
10. Rehabilitative and restorative therapies
11. Hypnosis, stress management, and relaxation techniques
12. Trigeminal ganglionectomy
13. Peripheral neurectomy and neurolysis
14. Sympathectomy techniques
15. Management of chronic headache
16. Alternative pain therapies
17. Neurosurgical ablative techniques
18. Prevention, recognition, and management of local anesthetic overdose, including airway management and resuscitation
19. Recognition and management of therapies, side effects and complications of pharmacologic agents used in pain medicine

In addition to the above skills, the pain medicine resident must have significant experience in providing concise written and verbal consultation to other services, including evidence-based differential diagnosis, planning, potential complications of treatment(s), prognosis, and follow-up.

C. Didactic Components

The pain medicine curriculum must include the following topics in lectures and reading:

1. Anatomy and physiology of the pain projection system
2. Epidemiology, economic impact, and sociology of pain disorders
3. Pharmacology of opiates, nonnarcotic analgesics, nonsteroidal anti-inflammatory agents, and other medications commonly used in pain medicine
4. Pharmacology of centrally acting drugs used in pain medicine
5. Measurement and assessment of pain and function
6. Principles of neural stimulation
7. Indications and limitations of diagnostic testing, including electrodiagnostic evaluation
8. Nerve blocks in pain medicine
9. Neuroablative procedures
10. Behavioral, cognitive, and supportive psychotherapeutic treatment principles, including rehabilitation and the role of team management
11. Principles and techniques of acute pain medicine
12. Principles and techniques of cancer pain medicine, including death and dying, and the ethical principles involved in hospital, hospice, and home care
13. Principles and techniques of management of other chronic pain problems
14. Principles of physical therapy, occupational therapy, and rehabilitation of the patient with chronic pain
15. Principles of multidisciplinary approaches to pain medicine
16. Management of pain in children
17. Management of pain in the elderly
18. Principles and ethics of pain research in humans and animals
19. Organization and management of a pain medicine center
20. Continuing quality improvement, utilization review, and program evaluation
21. Disability assessment and rehabilitation management
22. Assessment and management of musculoskeletal conditions

D. Pain Center Management

Subspecialty residents in pain medicine must gain experience in the management of a pain center (clinic) with regards to appointment and training of nonphysician personnel, establishment of policies relating to management of pain problems, coordination of the

activities of the pain center with other inpatient and outpatient services, and basic economics of pain-related health-care delivery.

E. Resident Teaching

The subspecialty resident in pain medicine must become experienced in teaching principles of pain medicine to resident physicians, medical students, and other health-care professionals.

F. Conferences

Pain medicine conferences must be held regularly. These should include morbidity and mortality conferences, journal reviews, and research seminars. Active participation in the planning and presentation of these conferences by the pain medicine resident and faculty is essential. Attendance at multidisciplinary conferences is encouraged.

VI. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and physical medicine and rehabilitation pain medicine training must be conducted in centers where there is active research activity both in clinical and basic neuroscience fields. This activity should include the following:

- A. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
- B. Participation in journal clubs and research conferences.
- C. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
- D. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
- E. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
- F. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activities. The goal for the resident should be at least one scientific presentation, abstract or publication.

VII. Evaluation

- A. Faculty responsible for teaching subspecialty residents in physical medicine and rehabilitation pain medicine must provide critical evaluations of each resident's progress and competence to the physical medicine and rehabilitation pain medicine program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in physical medicine and rehabilitation pain medicine must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.
- B. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in physical medicine and rehabilitation pain medicine should be involved in continuous quality improvement, utilization review, and risk management.

VIII. Board Certification

The record of its graduates in obtaining certification in pain medicine by ABMS certifying bodies represents one measure of the quality of a program. The RRC will consider this information as part of the overall evaluation of the program.

ACGME: June 2000 Effective: June 2000

Program Requirements for Residency Education in Pediatric Rehabilitation Medicine (Physical Medicine and Rehabilitation)

I. Introduction

A. Definition

Pediatric rehabilitation medicine (PRM) is the subspecialty that utilizes an interdisciplinary approach to address the prevention, diagnosis, treatment, and management of congenital and childhood-onset physical impairments including related or secondary medical, physical, functional, cognitive, psychosocial, and vocational limitations or conditions. Rehabilitation management of children with physical impairments requires the identification of functional capabilities and the selection of the best rehabilitation intervention strategies, with an understanding both of the life course of the disability and of the continuum of care.

B. Program Design

The director and teaching staff of a program must prepare and comply with written educational goals for the program.

All educational components of a residency program should be related to the program goals.

1. The Residency Review Committee (RRC) for Physical Medicine and Rehabilitation must approve the program design as part of the regular review process.
2. Participation by any institution providing 3 months or more of training must be approved by the RRC.

C. Duration of Training

1. Training in PRM shall be 24 months in duration if it begins after satisfactory completion of an Accreditation Council for Graduate Medical Education (ACGME)-approved residency training program in physical medicine and rehabilitation (PM&R). The program must assure that the resident acquires knowledge and skills in general pediatrics, normal childhood development, normal neonatal development, and adolescent medicine including psychosocial issues.
2. Training in PRM shall be 12 months in duration if it begins after satisfactory completion of ACGME-approved combined or consecutive residency training in both PM&R and pediatrics.

D. Program Goals and Objectives

1. Goals

An approved subspecialty program must be designed to provide an educational experience to ensure that its graduates possess the advanced knowledge and competencies necessary to practice this subspecialty.

2. Objectives

The program must provide the resident opportunities to develop a specific set of attitudes, knowledge, and psychomotor skills in pediatric rehabilitation conditions to ensure his or her ability to

enhance the quality of care available to those individuals and their families. The resident must become competent in:

1. Defining aspects of growth and development in the context of children and adults with congenital and childhood onset disabilities, throughout the life course.
2. Identifying age-appropriate assessment and measurement tools to evaluate functional status or outcomes of interventions.
3. Managing common medical issues in pediatric rehabilitation.
4. Describing principles and techniques for general pediatric rehabilitative therapeutic management.
5. Evaluating and prescribing age-appropriate assistive devices and technologies to enhance function.
6. Understanding and performing pediatric rehabilitation procedures.
7. Outlining the clinical course of and functional prognosis for common pediatric disabilities.
8. Identifying interventions to assist children, adults, and their families to participate successfully in age-appropriate education and other activities.
9. Advocating for care needs, systems of care, and research to enhance the care and function of children and adults with congenital or childhood onset disabilities.
10. Providing consultation to psychiatrists, pediatricians, and other clinicians regarding PRM issues.
11. Participating in instruction and conducting research in PRM.
12. Applying principles of management and administration.

II. Administration and Organization

A. Sponsoring Institution

1. The institution sponsoring the PRM program must be a center for care of persons with pediatric rehabilitative diagnoses or affiliated with such a center. Affiliation with an accredited medical school is desirable. The Joint Commission on Accreditation of Healthcare Organizations-Rehabilitation Section or the Commission on Accreditation of Rehabilitation Facilities should accredit the institution.
2. Accreditation of a subspecialty program in PRM will be granted only when the program is affiliated with an ACGME-accredited residency program in PM&R.
3. There must be close cooperation between the core residency program and the subspecialty program. The lines of responsibility between residents in the core program and the subspecialty program must be clearly delineated.
4. The sponsoring institution should exercise the necessary administrative management of the training program.
5. There should be an institutional policy, reviewed at the time of regular institutional or internal review, governing the educational resources committed to the PRM program to ensure cooperation of all involved disciplines.
6. The institution must provide for financial resources that include, but are not limited to, salaries, fringe benefits, and opportunities for residents' continuing education.

B. Participating Institutions

Participating institutions should be in the same geographic location and conveniently and safely accessible to residents.

C. Appointment of Residents

1. The program shall establish written policies and procedures regarding selection and appointment of residents. There should be at least one resident in the program at all times.

2. The program shall have and implement written policies and procedures, based on the clinical and educational resources available, for determining the number of resident positions.
3. The program shall have and implement written policies and procedures, based on the clinical and educational resources available, regarding changes in resident complement or filling vacant positions.
4. The applicant must be licensed for unrestricted practice in a state or province of the United States or Canada.

III. Faculty Qualifications and Responsibilities

The program director and the teaching staff are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the Program Director
 - a. Documented qualifications as a clinician, administrator, and educator in the field of PRM.
 - b. Board certification in PRM or appropriate educational qualifications as determined by the RRC.
 - c. Licensure to practice medicine in the state where the sponsoring institution is located. (Certain federal programs are exempted.)
 - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the Program Director
 - a. Sufficient time devoted to provide continuous leadership to the program as well supervision of the residents.
 - b. Active participation in research and scholarly activities in PRM.
 - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
 - d. Selection of residents for appointment to and assignment in the program in accordance with institutional and departmental policies and procedures.
 - e. Selection, assignment, and supervision of teaching staff and other program personnel at each institution participating in the program.
 - f. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communications and interaction with supervisory physicians.
 - g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
 - h. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for the timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
 - i. Preparation of an accurate statistical report and narrative description of the program as required by the RRC. Adequate

data collection and analysis is necessary for overall program evaluation and total quality management. Data regarding resident and faculty performance should be gathered, analyzed, and maintained.

- j. Notification to the RRC of any major programmatic changes. The RRC must be notified immediately of any change in the program directorship.

B. Number and Qualifications of Faculty

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director there must be at least one other faculty member with expertise in PRM who is dedicated to the program.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities in the field of PRM, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities in the field of PRM.
3. The faculty should be board certified in PRM or possess appropriate educational qualifications as determined by the RRC.
4. A member of the teaching staff of each participating institution must be designated to assume the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative must participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each participating institution, the financial and administrative support of the program, the volume and variety of the patients available to the program for educational purposes, the performance of other members of the teaching staff, and the quality of supervision of the residents.

C. Other Program Personnel

Programs must be provided the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Facilities and Resources

A. Institutional Facilities

Education in PRM should include experience in both inpatient and outpatient facilities. The sponsoring and participating institutions must operate or have access to a service delivery system dedicated to the care of persons with pediatric rehabilitative disorders. Necessary resources include

1. Inpatient pediatric rehabilitation beds,
2. A designated outpatient clinic or examination area for persons with pediatric rehabilitative disorders,
3. Transitional services for home care, community entry, schooling, etc.

B. Specific Facilities and Resources

1. The sponsoring institution must have available the equipment, electrodiagnostic devices, radiology services, laboratory services, and clinical facilities necessary to provide appropriate care to persons with pediatric rehabilitative disorders. Facilities for

teaching services must be available as well as a medical records system that allows for efficient case retrieval.

2. The sponsoring institution must have available specialty consulting services essential to the care of persons with pediatric rehabilitative disorders. These services include anesthesia, emergency medicine, family medicine, genetics, neurological surgery, neurology, orthopedic surgery, pathology, pediatrics (including the relevant subspecialties), plastic surgery, psychiatry, radiology, surgery, urology, and other relevant health care professionals.
3. Availability of home care and specialized schooling.

C. Library

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Residents must have access to computer and audiovisual capabilities and electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the residency program. These must be readily available during nights and weekends.

D. Patient Population

The patient population must be of sufficient size and diversity of pediatric age groups to provide the resident with the opportunity to care for an adequate number of persons in all pediatric rehabilitative diagnostic categories in both inpatient and outpatient settings.

V. Educational Program

A. Clinical Components

1. The clinical component of the curriculum must include a sufficient variety, depth, and volume of clinical experiences. The educational program should take into consideration the resident's documented past educational and patient care experiences. The training program must provide for the resident to spend a significant amount of time with responsibility for the direct care of hospitalized as well as non-hospitalized patients. Residents must devote at least 1/3 of their clinical experience to the care of hospitalized patients and at least 1/3 to non-hospitalized patients.
2. The educational program must be designed so that residents may attain knowledge and competency in the following areas of PRM:
 - a. Normal growth and development, including physical growth, developmental skills attainment (language and communication skills, physical skills, cognitive skills, emotional skills and maturity, academic achievement/learning skills), transitional issues, metabolic status, biomechanics, the effects of musculoskeletal development on function, sexuality, avocational interest development, wellness and health promotion, and aging issues for adults with congenital or childhood onset disabilities.
 - b. Applications, efficacy, and selection of PRM assessment tools, including enabling/disabling process, general health measures, developmental attainment measures, general functional measures, and specific outcomes measures.
 - c. Identification and management of common pediatric rehabilitation medical conditions and complications, including nutrition, bowel management, bladder management, gastroesophageal reflux, skin protection, pulmonary hygiene and protection, sensory impairments, sleep disorders, spasticity, DVT prophylaxis, congenital and acquired lymphedema, feeding disorders, swallowing dysfunction, seizure management, and behavioral problems.

- d. Principles and techniques for general pediatric rehabilitative therapeutic management, including early intervention, age-appropriate functional training, programs of therapy, play (avocation), therapeutic exercise, electrical stimulation and other modalities, communication strategies, oral motor interventions, discharge planning, educational and vocational planning, transitional planning, adjustment to disability support, and prevention strategies.
 - e. Evaluation and prescription for assistive devices technology, including orthotics, prosthetics, wheelchairs and positioning, ADL aids, interfaces and environmental controls, augmentative/alternative communication, environmental accessibility, electrical stimulation, and dynamic splinting.
 - f. Principles and techniques of PRM procedures, including spasticity management and electrodiagnosis.
 - g. Interpretation of diagnostic studies commonly ordered in PRM.
 - h. Rehabilitation management of musculoskeletal disorders and trauma, including sports injuries.
 - i. Rehabilitation management of cerebral palsy.
 - j. Rehabilitation management of spinal dysraphism and other congenital anomalies.
 - k. Rehabilitation management of pediatric spinal cord injury.
 - l. Rehabilitation management of pediatric traumatic brain injury.
 - m. Rehabilitation management of limb deficiency/amputation.
 - n. Rehabilitation management of neuromuscular disorders.
 - o. Rehabilitation management of rheumatologic and connective tissue disorders, including but not limited to specific conditions, such as juvenile rheumatoid arthritis, spondyloarthropathies, dermatomyositis, and lyme disease.
 - p. Pediatric rehabilitation management of burns.
 - q. Rehabilitation management of peripheral nerve injuries.
 - r. Administration, including principles of organizational behaviors and leadership, quality assurance, cost efficiency, knowledge of health care systems, community resources, and support services regulations pertaining to service provision (external reviews, inpatient services, outpatient services, home care, school based programs and capabilities), skills for effective advocacy, medical legal aspects (child protective services, guardianship, liability), professionalism, and ethics.
 - s. Psychological, social, and behavioral aspects of rehabilitation management, including family-centered care.
 - t. Requesting of appropriate medical/surgical consultations from other specialties.
3. The program should be designed so that the resident has an opportunity to follow individual patients longitudinally as well as the ability to encounter a wide variety of patient problems.
 4. The program should be designed so that the resident has an opportunity to develop a management style compatible with an interdisciplinary team process.

B. Didactic Components

1. Basic science content should include a didactic curriculum taught by faculty and a self-directed learning program to address the theoretical and clinical principles that form the fundamentals for managing patients with pediatric medicine disorders. Pathophysiology, discussion and knowledge of clinical manifestations, and management problems should constitute the major topics for study.
2. Presentation of specialty content should include faculty in anesthesiology, emergency medicine, family medicine, genetics, neurology, neurosurgery, orthopedic surgery, pediatrics (including the relevant subspecialties), plastic surgery, psychiatry, radiol-

ogy, surgery, and urology taking an active role in providing instruction in the areas of their practices relevant to PRM.

3. Conferences

- a. Required conferences should include case-oriented multidisciplinary conferences, journal clubs, and quality management seminars relevant to clinical care in PRM.
- b. Conferences must be of sufficient quality and frequency to provide in-depth coverage of the major topics in PRM over 1 year.
- c. There must be documentation of staff and resident attendance at conferences.
- d. Educational activities must be carried out under the direct supervision of faculty members.

C. Resident Policies

1. Supervision

- a. The level of supervision of the residents should be determined by the program director based on formal and informal evaluations.
- b. The program director should assign a member of the faculty as supervisor to each resident. Written objectives for each clinical rotation must be provided to each resident.
- c. The supervisor is responsible for the educational experience according to the written plan developed at the beginning of the training. The supervisor must meet regularly with the program director and resident for appropriate monitoring and feedback.

2. Duty hours

While the actual number of hours worked by a subspecialty resident may vary, the resident should have sufficient off-duty time to avoid undue fatigue and stress. The resident should be allowed to spend, on average, at least 1 full day out of 7 away from the hospital, and should be assigned on-call duty in the hospital no more frequently than an average of every third night. The program director is responsible for monitoring, in accord with written policies, on-duty assignments as well as activities outside the program.

3. Graded responsibility

Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and demonstrates additional competencies. The program should be flexible but sufficiently structured to allow for such graded responsibility.

4. Peer interaction

The resident must have the opportunity to meet and share experience with residents in the core program and in other specialties. It is desirable for the resident to interact with peers in primary care and relevant subspecialties. Residents should have the opportunity to teach other residents, medical students, and other health care professionals.

5. Presence of other learners

Rotation to the PRM program by residents from other specialties or subspecialties as well as medical students is desirable.

D. Other Program Components

1. Research and scholarly activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuous professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of the teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity that includes:

- a. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
- b. Participation in journal clubs and research conferences.
- c. Active participation in regional or national conferences and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
- d. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at national regional scientific meetings.
- e. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
- f. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activity. The goal for the resident should be at least one scientific presentation, abstract, or publication.

2. Management

Within the interdisciplinary PRM care team, the resident should be taught and should understand and apply principles of organizational and group behavior, leadership and management styles, evaluation and modification of performance, labor management issues, cost accounting containment, and quality assurance techniques. The resident should gain an understanding and some proficiency in the areas of budget planning and presentation, preparation of management briefings, information systems, and external reviews such as those by the Commission for the Accreditation of Rehabilitation Facilities.

3. Teaching by the resident

The resident should have the opportunity to:

- a. Teach other hospital personnel and health care providers, patients, and patient support systems about the rehabilitation and longitudinal needs in PRM.
- b. Teach medical students, residents, and other health care professionals.
- c. Understand and utilize learning theory, including assessment of learning needs, development of objectives and curriculum plans, effective use of audiovisual aids and other teaching materials, and evaluation of teaching outcomes.
- d. Provide instruction to patients and families.
- e. Participate in educational activities within the interdisciplinary PRM care team.

VI. Evaluation

Evaluation is an essential component of the program. The program director and faculty must have a plan that addresses the evaluation of residents, faculty, and the program. Well-designed evaluation combined with feedback improves the program and focuses the learning process.

A. Residents

1. Policy and principles

- a. Evaluation should be based on the program objectives and on the objectives of the resident's individualized program. These include resident knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- b. Evaluation must be carried out semi-annually and should be followed by extensive feedback to the resident. Remedial objectives may be established.

- c. Residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
 - d. A permanent record of evaluation should be maintained for each resident and it should be accessible to the resident and other authorized personnel.
2. The following areas should be evaluated:
 - a. Acquisition of competencies outlined in V.A.2
 - b. Problem solving skills
 - c. Interpersonal relationship skills
 - d. Ability to access, retrieve, and critically evaluate the literature
 - e. Information management
 - f. Quality and cost-effectiveness measures of patient care
 - g. Research and other scholarly accomplishments
 3. A written final evaluation must be provided for each resident who completes the program. The evaluation must include a review of resident performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice completely independently. This final evaluation should be part of the permanent record maintained by the institution.
- B. The educational effectiveness of the program must be evaluated annually and in a systematic manner. In particular, the quality of the curriculum and the extent to which the resident has met the educational goals must be assessed. Written, confidential evaluations by residents should be utilized in this process. Resident satisfaction at the completion of training should also be assessed.
- C. The faculty must be evaluated at least annually. This should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Written confidential resident evaluations must be included in this process.
- D. One measure of the quality of a program is the performance of its residents on the examinations of the American Board of Physical Medicine and Rehabilitation for subspecialty certification in PRM.

VII. Board Certification

Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation in pediatric rehabilitation medicine should communicate with the executive director of the ABPMR to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: June 2002 Effective: June 11, 2002

Program Requirements for Residency Education in Spinal Cord Injury Medicine (Physical Medicine and Rehabilitation)

I. Introduction

A. Definition

1. Spinal Cord Injury Medicine (SCIM) addresses the prevention, diagnosis, treatment and management of traumatic spinal cord injury (SCI) and nontraumatic myelopathies, including the prevention, diagnosis and treatment of related medical, physical,

psychosocial and vocational disabilities and complications during the lifetime of the patient.

2. The management of persons with spinal cord dysfunction (SCD) requires a team and interspecialty approach with contributions from several medical and surgical specialties as well as other health care professionals. The specialist in SCIM should serve as the team leader after the patient is medically and surgically stabilized. When the spinal cord dysfunction is due to an active process or a chronic degenerative disorder, the management of the patient's primary disease is the responsibility of a physician in the appropriate discipline.

B. Duration and Scope of Education

1. Training in SCIM shall be 12 months in duration beginning after satisfactory completion of an approved residency program in a specialty relevant to SCIM, such as anesthesiology, emergency medicine, family practice, internal medicine, neurological surgery, neurology, orthopaedic surgery, pediatrics, physical medicine and rehabilitation, plastic surgery, surgery, or urology.
2. The program must provide for individuals to acquire, within the interdisciplinary spinal cord injury team, knowledge of emergency care and knowledge and skills in the following areas:
 - a. post-initial care,
 - b. initial and ongoing medical rehabilitation,
 - c. discharge planning,
 - d. lifelong care, and
 - e. scholarly activity in support of these skills.
3. Any program that extends training beyond the 12-month minimum requirement must present a clear educational rationale consonant with the program requirements and objectives for subspecialty training. The program director must obtain approval of the Residency Review Committee (RRC) prior to implementation and at each subsequent review of the program. Prior to entry in the program, each resident must be notified in writing of the required length of training.

C. Program Goals and Objectives

The director and teaching staff of a program must prepare and comply with written educational goals for the program.

1. Goals: An approved subspecialty program must be designed to provide an educational experience to ensure that its graduates possess the advanced knowledge and competencies necessary to practice this subspecialty.
2. Objectives: The program must provide the resident opportunities to develop a unique set of attitudes, knowledge, and psychomotor skills because SCD affects multiple organ systems of the body and its treatment involves many specialty areas of expertise.
 - a. The resident must be given the opportunity to gain knowledge of:
 - 1) the impact of SCD on the various organ systems,
 - 2) the natural history, pharmacologic management, and evolution of organ system functioning after SCD and the interaction among the various organ systems,
 - 3) the impact of aging and longstanding injury on organ system decline,
 - 4) the prevention and treatment of secondary complications of SCD, and
 - 5) the maximal functions possible based on the characteristics and level of SCD and how to achieve them.
 - b. The resident must be given the opportunity to become proficient in:
 - 1) coordination in the post-initial care setting of the impact and timing of treatment of each organ system's dysfunction so that an optimum treatment effect can be obtained,

- 2) planning of the most efficient and effective treatment approaches for acquisition of skills and knowledge by the patient so that he/she may acquire the highest level of functioning, and
- 3) promotion of patient education about all aspects of SCD in order to promote patient independence and patient recognition of illness.

The program must prepare the person trained as a SCIM specialist to implement, over the course of the individual patient's lifetime, a health maintenance and disease prevention program with early recognition and effective treatment of complications related to SCD, and must promote awareness of the impact of aging on SCD.

D. Program Design

All educational components of a residency program should be related to program goals.

1. The program design and/or structure must be approved by the appropriate review committee as part of the regular review process.
2. Participation by any institution providing more than 3 months of training must be approved by the RRC.

II. Institutional Organization

A. Sponsoring Institution

1. The institution sponsoring the SCIM program must be a center for care of persons with SCD or affiliated with such a center. Affiliation with an accredited medical school is desirable. The institution should be accredited by the Joint Commission on Accreditation of Health Care Organizations-Rehabilitation Section (JCAHO-Rehab) or the Commission on Accreditation of Rehabilitation Facilities (CARF).
2. Accreditation of a subspecialty program in SCIM will be granted only when the program is administratively attached to an ACGME-accredited residency program in a relevant specialty.
3. There must be close cooperation between the core specialty training program and the subspecialty program. The lines of responsibility between resident staffs in the core program and the subspecialty program must be clearly delineated.
4. The sponsoring institution should exercise the necessary administrative management of the training program.
5. There should be an institutional policy, reviewed at the time of regular institutional or internal review, governing the educational resources committed to the SCIM program, assuring cooperation of all involved disciplines.
6. The institution must provide for the financial resources including, but not limited to, salaries, fringe benefits, and opportunities for continuing medical education of residents.

B. Participating Institutions

It is highly desirable for participating institutions to be in the same geographic location and conveniently and safely accessible to residents.

C. Appointment of Residents

1. The program shall establish written policies and procedures regarding selection and appointment of residents. The resident complement should be appropriate to the available clinical and educational resources, including faculty. It is highly desirable to have at least one resident in the program at all times.
2. The program shall have and implement written policies and procedures, based on the educational resources available, for determining the number of resident positions.

3. The program shall have and implement written policies and procedures, based on the educational resources available, regarding change in resident complement or filling vacant positions.
4. The applicant must be licensed for unrestricted practice in a state or province of the United States or Canada.

III. Faculty Qualifications and Responsibilities

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include:
 - a. Documented qualifications as a clinician, administrator, and educator in the field of SCIM.
 - b. Board certification in a specialty or subspecialty related to the care of persons with SCD and subspecialty certification in SCIM or suitable equivalent qualifications.
 - c. Licensure to practice medicine in the state where the institution that sponsors the program is located.
 - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
 - a. Sufficient time devoted to provide continuous leadership to the program as well as supervision of the residents.
 - b. Active participation in research and scholarly activities in SCIM.
 - c. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
 - d. Selection of residents for appointment to and assignment in the program in accordance with institutional and departmental policies and procedures.
 - e. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program. The program director should assign faculty and perform annual evaluations of their performance.
 - f. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
 - g. Regular evaluation of the resident's knowledge, skills, and competence, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall:

- 1) At least semi-annually evaluate the knowledge, skills, competence, and professional growth of the resident, using appropriate criteria and procedures.
- 2) Communicate each evaluation to the resident in a timely manner.
- 3) Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.

- 4) Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- h. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- i. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- j. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning, and drug or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- k. Preparation of an accurate statistical and narrative description of the program as requested by the RRC. Adequate data collection and analysis is necessary for overall program evaluation and total quality management. The program director should gather, analyze, and maintain data regarding resident and faculty performance.
 - l. Gathering and analyzing initial, discharge and follow-up data regarding the functional outcomes of persons served.
 - m. Notification to the RRC of major programmatic changes. The RRC must be notified immediately of any change in program directorship.

B. Number and Qualifications of Faculty

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director, there must be at least one other faculty member with expertise in SCIM who is dedicated to the program.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities in the field of SCIM, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. The faculty should actively participate in teaching, research and scholarly activity in the field of SCIM.
3. The faculty should be Board-certified in a specialty or subspecialty related to the care of persons with SCD or possess suitable equivalent qualifications.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

C. Other Program Personnel

Programs must be provided the additional professional, technical and clerical personnel needed to support the administration and educational conduct of the program.

IV. Facilities and Resources

A. Institutional Facilities

Education in SCIM should include experience in both inpatient and outpatient facilities. The sponsoring and participating institutions must operate or have access to a service delivery system dedicated to the care of persons with SCD. Necessary resources include:

1. an emergency department that treats patients with SCI,
2. an accredited acute care hospital,
3. a dedicated inpatient rehabilitation unit,
4. a designated outpatient clinic for persons with SCD, and
5. availability of home care and independent living programs.

B. Specific Facilities and Resources

1. The sponsoring institution must have available the equipment, diagnostic imaging devices, electrodiagnostic devices, laboratory services, a urodynamic laboratory, and clinical facilities necessary to provide appropriate care to persons with spinal cord dysfunction. Medical library facilities and facilities for teaching experiences must be available, along with a medical records system that allows for efficient case retrieval.
2. The sponsoring institutions must have available specialty consultant services in anesthesia, emergency medicine, family practice, internal medicine (including the relevant subspecialties), neurological surgery, neurology, orthopedic surgery, pathology, pediatrics, physical medicine and rehabilitation, plastic surgery, psychiatry, radiology, surgery, and urology.

C. Library

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Residents must have regular access, including nights and weekends, to computer and audiovisual capabilities and electronic retrieval of information from medical information databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

D. Patient Population

The patient population must be of sufficient size and diversity of age so as to provide the resident with the opportunity to care for an adequate number of persons with new SCD, to care for persons re-admitted to the hospital with intercurrent illness, and to care for appropriate numbers of outpatients. There should be a minimum census of eight patients per resident.

V. Educational Program

A. Clinical Components

1. The clinical portion of the curriculum must include a sufficient variety, depth, and volume of clinical experiences. The educational program should take into consideration the resident's documented past educational and patient care experiences. The training program must provide for the resident to spend a significant amount of time in responsibility for the direct care of hospitalized as well as non-hospitalized patients. Residents must devote at least one third of their clinical experience to the care of

hospitalized patients and at least one third to non-hospitalized patients.

2. The educational program must be designed for the resident to attain the following knowledge and competencies within the interspecialty and interdisciplinary care team:

a. Initial Care

1. Understand the organization and interdisciplinary practices of the Emergency Medical Services system relating to the prehospital and initial Emergency Department care of spinal cord injured patients as well as their concomitant and associated injuries. This is not meant to interfere with the independent decision making of the attending physician during the initial care.
2. Understand the techniques of appropriate spinal immobilization in order to protect patients from additional neurological damage.
3. Be able to perform a comprehensive neurologic assessment and determine the appropriate injury level of the patient.
4. Understand the supportive role of SCIM to neurological surgery, orthopedic surgery, emergency medicine, and other appropriate physicians in initial care sites, including intensive and critical care units.
5. Understand and assist in the management of the abnormalities and complications in other body systems resulting from SCI, especially the following: pulmonary, genitourinary, endocrine, metabolic, vascular, cardiac, gastrointestinal, musculoskeletal and integumentary.

b. Post-Initial Care

1. Understand how the stability of the spine is evaluated and know the various options for treatment of fractures/dislocations at all vertebral levels.
2. Understand the optimal coordination of services of the various physicians and other health professionals in the prevention and treatment of complications in each organ system.
3. Develop the skills to initiate and direct appropriate rehabilitation programming in the early hospital phase of treatment.
4. Understand the relationship between the extent and level of SCI on the patient's ultimate residual functional capacity and be able to inform and counsel the patient, the family, and other health specialists on a timely basis about the impact of the disability.
5. Through lectures and appropriate clinical assignments under the integrated services of pediatricians and specialists in SCIM, understand special needs and problems that children and adolescents with SCI may have in areas such as behavior, bladder and bowel and skin care, growth and development, immunizations, mobility, nutrition, pediatrics, self-care, recreation, and schooling. Also understand the special needs of parents and others in relating to and assisting young patients with these problems.

c. Initial and Ongoing Medical Rehabilitation

1. Coordinate the transition from post-initial care to rehabilitation and assume primary management responsibility.
2. Establish short and long term rehabilitation goals and coordinate the implementation of the rehabilitation program to meet such goals.
3. Monitor the evolution of neural dysfunction in order to recognize conditions that may require additional evaluation, consultation, or modification of treatment.
4. After post-initial care, in conjunction with the interspecialty SCI team, participate in the management of SCI following either operative or nonoperative stabiliza-

tion, including activity restrictions and appropriate orthotic support.

5. Understand the collaborative role of integral members of the SCI care team.
6. Recognize, diagnose and coordinate treatment for respiratory complications such as tracheostomies, airway obstruction, atelectasis, pneumonia, and tracheal stenosis, as well as for mechanical methods of respiration including both fixed and portable equipment. The resident should be able to manage patients with high quadriplegia and respirator-dependent patients, including weaning them from the respirator, and evaluating indications and contraindications of phrenic nerve pacing, motorized wheelchairs, portable respirators, environmental control systems, home modifications, etc.
7. Recognize, diagnose and treat orthostatic hypotension and other cardiovascular abnormalities during initial mobilization of the patient.
8. Evaluate and manage skin problems utilizing various techniques of prevention such as the proper use of specialized beds, other surfaces, cushions, and wheelchairs, to manage pressure ulcers effectively; and, in consultation with surgical colleagues, determine the indications for various surgical procedures including resection of bone and the development of flaps and other techniques for soft tissue coverage. The resident should also develop an understanding of the pre- and post-operative management of these patients.
9. With appropriate consultation, identify the risk of infection and coordinate treatment and infection control including the judicious use of antimicrobials.
10. Coordinate and implement management of the neurogenic bowel.
11. Understand management of the neurogenic bladder and sexual dysfunction and that the role of urologists is pivotal in the diagnosis and management of bladder dysfunction, urinary tract infection, urinary calculi, sexual dysfunction, obstructive uropathy with or without stones, infertility and problems of ejaculation; such specialists should be utilized early in the care of these patients.
12. Diagnose and treat, with appropriate consultation, complications such as deep vein thrombosis, pulmonary embolus, autonomic hyperreflexia, substance abuse, pain, spasticity, depression, and the sequelae of associated illnesses and pre-existing diseases.
13. Recognize pharmacologic alterations associated with SCI, including changes in pharmacokinetics, pharmacodynamics, drug interactions, over-medication, and compliance.
14. Diagnose and manage the psychological dysfunction associated with SCI.
15. Perform a functional assessment based on neurological, musculoskeletal and cardiopulmonary examinations and psychosocial and prevocational evaluations.
16. Determine functional goals for self-care, mobility, and vocational and avocational activities based on the level and completeness of the lesion.
17. If appropriate, prescribe motor retraining and conditioning activities, orthoses, and the adaptive equipment needed to meet the rehabilitation goals.
18. Anticipate the approximate length of stay, cost of hospitalization, equipment needs, etc., with the involvement of the patient, the patient's support persons and appropriate agencies.

19. Identify the indications for and the use of clinical neurophysiologic testing to assess the extent of neuropraxia, denervation, reinnervation, phrenic nerve function, and spinal cord function.
 20. Identify the indications and use of functional electrical stimulation (FES) as applied to the management of spinal cord impairment.
 21. Understand the kinesiology of upper extremity function and the use of muscle substitution patterns in retraining; the value, indications and contraindications of tendon and muscle transfers and other operative procedures that would enhance function.
 22. Within the interdisciplinary and interspecialty SCI teams, understand the concepts of muscle and tendon transfer, and of other operative procedures that enhance extremity function, and manage the post-operative retraining, when indicated.
 23. Prescribe appropriate motor vehicle modifications to promote independence in mobility and transportation.
 24. Understand group process and team dynamics, and coordinate the activities of the interdisciplinary team through daily rounds, staff conferences, and patient and family educational and training sessions in order to maximize the goals established by the patient and team.
 25. Understand the training and capabilities of rehabilitation nurses, social workers, psychologists, physical therapists, occupational therapists, prosthetists, orthotists, speech/language pathologists and recreational and vocational counselors; recognize the professional role and contributions of the various allied health professions individually and collectively; encourage their full participation in patient care management while maintaining medical responsibility; and appreciate that a team effort, with as much continuity as practical, will produce a more satisfying outcome and experience for the patient, family and team members.
 26. Conduct a problem-oriented conference and set goals with the participation of the allied health staff.
- d. Discharge Planning
1. Determine when the rehabilitation goals have been achieved, finalize the discharge plan, and arrange for the appropriate level of care to match the patient's needs.
 2. Participate in family meetings/discharge planning conferences, with focus upon community integration and adjustment to disability.
 3. Organize and conduct programs of patient and family education.
 4. In concert with appropriate disciplines and other team members, manage the psychological effects of the impairment in order to prevent their interference with the reintegration and re-entry to the community.
 5. Use the full range of community resources to facilitate the transition to the community.
 6. Understand the needs for personal care attendants, architectural modifications, and community follow-up care.
- e. Follow-Up Phase—Sustaining Care
1. Recognize, diagnose and treat intercurrent disease in conjunction with the proper consultants. There should be special emphasis on the prevention and management of these diseases in patients at various levels of SCI.
 2. Diagnose and coordinate the treatment of the complications associated with chronic SCI including pressure sores, spasticity, pain, urinary calculi, urinary tract infection, fractures, post-traumatic syringomyelia, and progressive respiratory decline.
3. Set up a program of regular follow-up, evaluation, and preventive health care to keep the person at his/her maximum health and rehabilitation status, and coordinate this care with the patient's personal community physician.
 4. Direct to or establish the patient in a program of vocational rehabilitation, if appropriate.
 5. Appreciate that the ultimate goal is to return and maintain the person with SCI as a satisfied and productive member of society.
 6. Understand the prevention and management of complications associated with long-standing disability, the effects of aging with a disability, and the provision of long-term follow-up services.
 7. Coordinate and manage an SCI home care program.
 8. Develop and maintain as needed a professional relationship with primary care physicians and be available to assist in the provision of care for specific health care issues, including follow-up examinations and management of complex issues of SCI care.
 9. In all phases of care, understand and define the ethical and legal issues especially pertinent to SCI, including diminished competence and the right to refuse treatment.
3. The program should be designed so that the resident has an opportunity to follow individual patients longitudinally as well as the ability to encounter a wide variety of patient problems.
 4. The program should be designed so that the resident has an opportunity to develop a management style compatible with the interdisciplinary team process.
- B. Didactic Components**
1. Basic science content. There should be a didactic curriculum taught by faculty and a self-directed learning program to address the theoretical and clinical principles that form the fundamentals for care of patients with SCD. Pathophysiology, discussion and knowledge of clinical manifestations, and management principles about the care of such patients should constitute the major topics for study.
 2. Specialty content. Specialists in anesthesiology, emergency medicine, internal medicine (including the relevant subspecialties), neurology, neurosurgery, orthopedic surgery, pediatrics, physical medicine and rehabilitation, plastic surgery, psychiatry, radiology, surgery, and urology should take an active role in the didactic curriculum, providing instruction in the areas of their practices relevant to SCD.
 3. Conferences
 - a. Required conferences should include case-oriented multidisciplinary conferences, journal club, and quality management seminars relevant to clinical care on the spinal cord program.
 - b. Conferences must be of sufficient quality and frequency to provide in-depth coverage of the major topics in SCIM over 1 year.
 - c. There must be documentation of staff and resident attendance.
 - d. Educational activities must be carried out under the direct supervision of faculty members.
- C. Resident Policies**
1. Supervision
 - a. The level of supervision of the residents should be determined by the program director based on formal and informal evaluations.

- b. The program director should assign a member of the faculty as supervisor to each resident. Written objectives for each clinical rotation must be provided to the resident.
 - c. The supervisor is responsible for the educational experience according to the written plan developed at the beginning of the training. The supervisor must meet regularly with the program director and resident for appropriate monitoring and feedback.
2. Duty hours. While the actual number of hours worked by a subspecialty resident may vary, the resident should have sufficient off-duty time to avoid undue fatigue and stress. The resident should be allowed to spend, on average, at least 1 full day out of 7 away from the hospital, and should be assigned on-call duty in the hospital no more frequently than an average of every third night. The program director is responsible for monitoring, according to written policies, on-duty assignments as well as activities outside the program.
 3. Graded responsibility. Clinical experiences should allow for progressive responsibility with lesser degrees of supervision as the resident advances and demonstrates additional competencies. The program should be flexible but sufficiently structured to allow for such graded responsibility.
 4. Peer interaction. The resident must have opportunity to meet and share experience with residents in the core program and in other specialties. It is desirable for the resident to interact with peers in primary care and relevant subspecialties. Residents should have the opportunity to teach other residents, medical students, and other health care professionals.
 5. Presence of other learners/fellows. Rotation to the SCIM program by residents from other specialties or subspecialties as well as medical students is desirable.

D. Other Program Components

1. Research and Scholarly Activity. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:
 - a. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
 - b. Participation in journal clubs and research conferences.
 - c. Active participation in regional or national professional and scientific societies, particularly through presentations at meetings and publications in journals.
 - d. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
 - e. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
 - f. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activities. The goal for the resident should be at least one scientific presentation, abstract, or publication.
2. Management. Within the interspecialty and interdisciplinary SCIM care team, the resident should be taught and should under-

stand and apply principles of organizational and group behavior, leadership and management styles, evaluation and modification of performance, labor-management issues, cost accounting and containment, and quality assurance techniques. The resident should gain an understanding and some proficiency in the areas of budget planning and presentation, preparation of management briefings, information systems, and external reviews such as the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) and the Commission on Accreditation of Rehabilitation Facilities (CARF).

3. Teaching by the resident. The resident should have the opportunity to:
 - a. teach local medical communities and the general public about prevention of SCI;
 - b. teach prehospital personnel and other health care providers how to stabilize patients with SCI and institute a rational protocol for their prehospital care;
 - c. teach other hospital personnel and health care providers, patients, and care givers about the rehabilitation needs and long-term care of patients with SCI;
 - d. teach medical students, medical residents and other health professionals;
 - e. understand and utilize learning theory, including assessment of learning needs, development of objectives and curriculum plans, effective use of audiovisual and other teaching materials and evaluation of teaching outcomes;
 - f. provide instruction to patients and families; and
 - g. participate in educational activities within the interspecialty and interdisciplinary SCIM care team.

VI. Evaluation

Evaluation is an essential component of the program. The program director and faculty must have a plan that addresses the evaluation of residents, faculty, and the program. Well-designed evaluation, combined with feedback, improves the program and focuses the learning process.

A. Residents

1. Policy and Principles
 - a. Evaluation should be based on the program objectives and on the objectives of the resident's individualized program.
 - b. Evaluation must be carried out semi-annually and should be followed by extensive feedback to the resident. Remedial objectives may be established.
2. The following areas should be evaluated:
 - a. acquisition of described competencies,
 - b. problem-solving skills,
 - c. interpersonal relationship skills,
 - d. ability to access, retrieve, and critically evaluate the literature,
 - e. information management,
 - f. quality and cost-effectiveness measures of patient care, and
 - g. research and other scholarly accomplishments.

B. Faculty and Program

1. Faculty evaluation by residents should be on a semi-annual basis.
2. Areas to be evaluated are:
 - a. clinical skills and competencies,
 - b. teaching skills,
 - c. scholarly activity,
 - d. leadership skills, and
 - e. interpersonal skills.
3. The educational effectiveness of the program must be evaluated annually and in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals

have been met by the residents must be assessed. Written, confidential evaluations by residents should be utilized in this process. Resident satisfaction at the completion of training should also be assessed.

4. One measure of the quality of a program is the performance of its residents on the examinations of the American Board of Physical Medicine and Rehabilitation for special qualifications in SCIM.

VII. Board Certification

Residents who plan to seek certification by the American Board of Physical Medicine and Rehabilitation in Spinal Cord Injury Medicine should communicate with the Executive Director of the ABPMR to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: February 2002 Effective: July 2002

Program Requirements for Residency Education in Plastic Surgery

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

- A. Education in the specialty of plastic surgery deals with the resection, repair, replacement, and reconstruction of defects of form and function of the integument and its underlying anatomic systems, including the craniofacial structures, the oropharynx, the trunk, the extremities, the breast, and the perineum. It includes aesthetic (cosmetic) surgery of structures with undesirable form. Special knowledge and skill in the design and transfer of flaps, in the transplantation of tissues, and in the replantation of structures are vital to these ends, as is skill in excisional surgery, in management of complex wounds, and in the use of alloplastic materials. Residency education in plastic surgery is designed to educate and train physicians broadly in the art and science of plastic and reconstructive surgery and to develop a competent and responsible plastic surgeon with high moral and ethical character capable of functioning as an independent surgeon. A variety of educational plans will produce the desired result.
- B. The RRC accredits *independent* plastic surgery programs of 2 or 3 years or *integrated* programs of 5 or 6 years. All prerequisite residency education must be taken within programs accredited by the ACGME, the Royal College of Physicians and Surgeons of Canada, or the American Dental Association.
 1. Independent format: residents complete 2 or 3 years of concentrated plastic surgery education, with 12 months of chief responsibility, after successful completion of one of the following prerequisite curricula:
 - a. A minimum of 3 years of clinical education with progressive responsibility in a general surgery program. A transitional year or rotating internships may not be used to fulfill this requirement.
 - b. A neurological surgery, orthopaedic surgery, otolaryngology, or urology residency;
 - c. An educational program in oral and maxillofacial surgery approved by the American Dental Association (ADA) is an alternate pathway for prerequisite education prior to a plastic surgery residency. This pathway is available only to those individuals holding the DMD/MD or DDS/MD degree. This education also must include a minimum of 24 months of progressive responsibility on surgical rotations under the direction of the general surgery program director after receipt of the MD degree. Rotations in general surgery during medical school, prior to receiving the MD degree, will not be considered as fulfilling any part of the 24-month minimum requirement.
 2. Integrated format: residents complete 5 or 6 years of ACGME-accredited plastic surgery education following receipt of an MD or DO degree from an institution accredited by the Liaison Committee on Medical Education (LCME) or the American Osteopathic Association (AOA). Graduates of schools of medicine from countries other than the United States or Canada must present evidence of final certification by the Education Commission for Foreign Medical Graduates (ECFMG).

- a. The integrated curriculum must contain 5 or 6 years of clinical surgical education under the authority and direction of the plastic surgery program director.
 - b. Of these 5 or 6 years, 24 months must be concentrated plastic surgery education with no less than 12 months of chief responsibility on the clinical service of plastic surgery. Residents must complete the last 24 months of their education in the same plastic surgery program.
 - c. Additional clinical experiences appropriate to plastic surgery education should be provided in anesthesiology, burn management, critical care medicine, emergency medicine, cardiothoracic surgery, general surgery, neurological surgery, oncologic surgery, orthopedic surgery, otolaryngology, pediatric surgery, trauma management, and vascular surgery.
3. Prior to entry into the program, each resident must be notified in writing of the required program length.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions. The sponsoring institution must provide sufficient faculty, financial resources, and academic and library support to enable the program to comply with the requirements for accreditation.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
3. The addition or deletion of participating institutions providing 1/6 or more of a resident's clinical education must be prior-approved by the RRC.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environ-

ment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:

- a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Plastic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
- a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
 - e. The program director must annually compile a comprehensive record of the number and type of operative procedures performed by each resident completing the program. This record must include all of the procedures in which the plastic surgery resident was either surgeon or assistant during the plastic surgery program. The operative log must be provided as requested in the format and form specified by the RRC and it must be signed by both the resident and the program director as a statement of its accuracy. These records must be maintained by the program director.
 - f. The program director must advise resident applicants of the prerequisite requirements of the American Board of Plastic Surgery.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:

- a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Plastic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
- a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.
- Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
- a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. The program director must have documentation on file of the satisfactory completion of prerequisite education before the candidate begins plastic surgery residency education.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. Programs may not enroll more residents at any level or in total than the number of residents approved by the RRC.
2. Any increase in resident complement, including a temporary increase, must be approved in advance by the RRC. This also in-

cludes a temporary increase in resident complement when a resident's education must be extended for remedial reasons.

3. Vacant positions in either program format must be filled at the same level as the vacancy. If the program director wishes to fill a vacancy with a resident at another level, this request for a temporary increase in resident complement also requires advance approval from the RRC.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education. Although residents may transfer from one program to another, they may not change from one format education to another, i.e., integrated to independent format or vice versa, without advance approval of the RRC.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents. The addition of fellows or other students requires a clear statement of the areas of education, clinical responsibilities, duration of the education, and the impact of these fellows/other students on the education of the plastic surgery residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Component

The scope of plastic surgery is so broad that a well-organized, comprehensive, and an effective educational curriculum is necessary to ensure that all residents obtain experience in all the various areas of the specialty.

- a. The faculty should organize the conferences which allow discussion of topics selected to broaden knowledge in the wide field of plastic surgery and to evaluate current information.
- b. Conferences must include the pertinent basic science subjects, such as anatomy, physiology, pathology, embryology, radiation biology, genetics, microbiology, pharmacology, and also practice management, ethics, and medico-legal topics.
- c. Periodic review of the morbidity and mortality experiences of the service must be documented.

- d. The residents must participate and present educational material at conferences. Adequate time for preparation should be permitted, both to maximize the educational experience for the residents and to emphasize the importance of the experience.
 - e. The attendance of faculty and residents at conferences should be documented.
2. Clinical Component
- Knowledge of surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pharmacology, wound healing, surgical pathology and microbiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation are fundamental to the specialty. The judgment and technical capability for achieving satisfactory surgical results are mandatory qualities for the plastic surgeon.
- a. Specific clinical experience should be provided in the following areas:
 - 1) Congenital defects of the head and neck, including clefts of the lip and palate, and craniofacial surgery.
 - 2) Neoplasms of the head and neck, including the oropharynx, and endoscopy.
 - 3) Craniomaxillofacial trauma, including fractures.
 - 4) Aesthetic (cosmetic) surgery of the head and neck, trunk, and extremities.
 - 5) Plastic surgery of the breast.
 - 6) Surgery of the hand/upper extremities.
 - 7) Plastic surgery of the lower extremities.
 - 8) Plastic surgery of congenital and acquired defects of the trunk and genitalia.
 - 9) Burn management, acute and reconstructive.
 - 10) Microsurgical techniques applicable to plastic surgery.
 - 11) Reconstruction by tissue transfer, including flaps and grafts.
 - 12) Surgery of benign and malignant lesions of the skin and soft tissues.
 - b. The sponsoring and participating institutions of the program must have an adequate number and variety of adult and pediatric surgical patients for resident education. Experience in all 12 categories of surgical experience is important and must not be limited by excessive clinical responsibility in any one or several categories or by excessive nonclinical activities.
 - c. Generally equivalent and adequate distribution of categories and cases among the residents must be demonstrated.
 - d. Resident experience in patient management should demonstrate graduated and progressive responsibility.
 - e. Experience in a well-organized and well-supervised outpatient clinic operating in relation to an inpatient service used in the program is required. This experience must include:
 - 1) the opportunity to see patients, establish provisional diagnoses, and initiate preliminary plans prior to the patients' treatment;
 - 2) an opportunity for follow-up care so that the results of surgical care may be evaluated by the responsible residents; and
 - 3) supervision under appropriate faculty supervision.
 - f. Experience in office practice procedures and management is strongly suggested. If residents participate in preoperative and postoperative care in a private office, the program director must ensure that the resident functions with an appropriate degree of responsibility with adequate supervision.
 - g. Recognizing the comprehensive nature of the specialty of plastic surgery, there should be clinical resources for the education of plastic surgery residents in anesthesiology, burn management, emergency medicine, cardiothoracic surgery,

general surgery, neurological surgery, orthopedic surgery, otolaryngology, pediatric surgery, surgical critical care, surgical oncology, trauma management, and vascular surgery.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement*
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities

such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.

2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the resident has not previously provided care.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These

policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.

2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.
- d. a policy for annual advancement of a resident must be developed and implemented.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must con-

duct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

ACGME: February 1994 Effective: January 1995

Editorial Revision: January 2000

Competency Revision Effective: July 2002

Editorial Revision: July 2004

Program Requirements for Residency Education in Craniofacial Surgery (Plastic Surgery)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition of the Specialty

1. Craniofacial surgery is a subspecialty of plastic surgery that includes the in-depth study and reconstructive treatment of disorders of the soft and hard tissues of the face and cranial areas, such as congenital anomalies and posttraumatic and other acquired conditions. Although craniofacial surgery includes combined intracranial and extracranial surgery, the broad scope of the subspecialty is applicable to other procedures in the craniofacial region. Surgeons trained in craniofacial surgery should be able to manage any hard or soft-tissue reconstruction problem of the craniofacial region.
2. The team approach to many problems may be appropriate, resulting in the integration of other specialties into the craniofacial team. In addition to plastic surgery, these specialties should include neurological surgery, ophthalmology, otolaryngology, oral surgery, and orthodontics.

3. The primary goals of a craniofacial surgery educational program are to provide a broad education in the art and science of the specialty, and sufficient experience for surgeons to acquire competency as specialists in the field.

B. Duration and Scope of Education

1. The length of the educational program in craniofacial surgery is one year. Before entry into the program, each prospective craniofacial surgery resident must be notified in writing of the length of the program.
2. Admission to a craniofacial surgery educational program is open to those who have satisfactorily completed an accredited plastic surgery residency program or to other appropriately-qualified surgeons.
3. The craniofacial surgery program should be associated with an accredited program in plastic surgery; exceptions must be educationally justified. The educational relationship should demonstrate the use of shared resources to include, for example, faculty, educational conferences, patient management, and other institutional resources.

C. Program Goals and Objectives

1. Although educational programs in craniofacial surgery may differ in format and objectives, each program must demonstrate that residents are provided with the opportunity to obtain the knowledge, skills, clinical judgment, and attitudes essential to the practice of craniofacial surgery.
2. The craniofacial surgery resident must be provided with progressive senior surgical responsibility in the four essential phases of total patient care: preoperative evaluation, therapeutic decision making, operative experience, and postoperative management.
3. The craniofacial surgery resident must be provided with sufficient knowledge of the sciences of embryology, anatomy, physiology, and pathology as these relate to the diagnosis and treatment of diseases of the craniofacial areas. Education in the diagnosis and management of disease and deformity involving the jaws, teeth, and occlusion must also be included in the program.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions. The sponsoring institution must provide sufficient resources to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and

- d) state the policies and procedures that will govern resident education during the assignment.
3. Participation by any institution that provides 2 months or more of the educational program must be approved in advance by the Residency Review Committee (RRC) for Plastic Surgery.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented clinical, educational, and administrative abilities and experience in craniofacial surgery.
 - b) The program director must be certified in the specialty by the American Board of Plastic Surgery, and hold certification in the subspecialty, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The program director must be licensed to practice medicine in the state where the sponsoring institution is located.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System. Each resident's operative experience must be submitted annually.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.
 On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e) The program director must notify the Executive Director of the RRC of any changes that might substantially alter the educational experience (e.g., a change in program director or changes in participating institutions).

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications in craniofacial surgery to instruct and supervise adequately all residents in the program. Members of the faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities. The required faculty/resident ratio is 1/1.

A member of the faculty of each participating institution must be designated as the local program director to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Plastic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

Written lines of responsibility describing the clinical responsibilities of and relationship between craniofacial surgery residents and plastic surgery residents must be supplied to the RRC at the time of the review.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. The educational program should contain the following components: clinical, basic science, and research conferences; monthly morbidity and mortality sessions; other conferences focused specifically on craniofacial surgery. Conferences must be conducted regularly and as scheduled, and the topics of each must be linked to the goals and objectives for the course of study.
2. Basic Science

- a) normal and abnormal embryology and fetal development of the head and neck, with special emphasis on the development of the cranium, the maxillary and mandibular complex, the mechanisms of clefting, and the development of the temporomandibular joint and surrounding musculature;
 - b) normal growth and development of the cranium and face, with special attention to dental development and occlusion and to the consequences of congenital anomalies, trauma, surgery, and radiation;
 - c) dental radiographs, cephalometric analysis, and study models; construction of splints and their use in craniofacial and maxillofacial surgery;
 - d) interpretation of sophisticated diagnostic imaging modalities used in craniofacial surgery, such as computed tomography, magnetic resonance imaging, and arteriography;
 - e) standards of beauty and normalcy as they relate to the face, and an understanding of the relationship of cephalometric values to soft-tissue features;
 - f) bone healing, including primary healing, malunion, nonunion, osteomyelitis, and the physiology and methods of bone grafting;
 - g) use of alloplastic materials used for reconstruction; and
 - h) congenital, developmental, and secondary deformities of the head and face, including the embryology, pathogenesis, anatomy, natural history, and course of the disease following treatment.
3. Congenital Anomalies and Disorders
The foundation of this subspecialty is the treatment of congenital craniofacial anomalies. Because such treatment can be applied to a variety of acquired deformities, the program must include in-depth training, education, and participation in the diagnosis, planning, operative treatment, and postoperative care of craniofacial problems including but not necessarily limited to:
 - a) craniosynostosis;
 - b) congenital and developmental deformities of the face that may be related to craniosynostosis, including midface hypoplasia and facial asymmetries;
 - c) syndromal malformations of the face, such as Treacher Collins, hemifacial microsomia;
 - d) congenital orbital dysmorphologies, including orbitofacial clefts and hypertelorism;
 - e) facial cleft deformities;
 - f) atrophic and hypertrophic disorders, such as Romberg's disease, bone dysplasia;
 - g) craniofacial manifestations of systemic disorders, such as neurofibromatosis and vascular malformations and lymphatic disorders;
 - h) posttraumatic complex skull and facial deformities;
 - i) congenital and acquired disorders of the facial skeleton and occlusal relationships; and
 - j) craniofacial concepts in the exposure and/or reconstruction in cranial base oncologic surgery.
 4. Clinical Activities
The clinical education should include active participation in an integrated craniofacial team with sufficient patient volume to provide an exposure to diverse craniofacial problems. In addition to plastic surgery, the craniofacial team should include neurological surgery, ophthalmology, otolaryngology, dentistry, and orthodontics. Clinical activities should include:
 - a) education, training, and participation in the surgical methods of craniofacial surgery, including rigid fixation of skull facial bones and training in the fabrication of dental splints;
 - b) preoperative assessment and decision making regarding methods and timing of intervention in craniofacial disorders;

- c) management of craniofacial patients from the preoperative through the postoperative stages; and
 - d) knowledge of critical care in the postoperative management of craniofacial patients.
5. Education and experience in the following areas are desirable:
 - a) diagnostic methods and treatment techniques of temporomandibular joint disorders;
 - b) aesthetic contour deformities, such as masseteric hypertrophy and frontal cranial remodeling;
 - c) elective orthognathic surgery for orthodontic problems;
 - d) surgical correction of congenital clefts of the lip and palate, with emphasis on both primary and late repairs and revisions; and
 - e) reconstructive management of defects after ablative surgery for malignancy about the maxillofacial region, including pedicle and free flap surgery and bone grafting techniques.
 6. Operative Experience
 - a) A program of graduate education in craniofacial surgery must provide a sufficient number and variety of surgical experiences to ensure that residents receive sufficient exposure to a wide range of diseases and injuries to the soft and hard tissues of the craniofacial region.
 - b) The resident must be allowed senior responsibility as the operating surgeon while performing critical portions of the surgery in the operative management of a range of common craniofacial surgery procedures.
 - c) The craniofacial surgery resident is not a substitute for faculty, and should not act on a regular basis as a teaching assistant to the chief resident in plastic surgery. If the craniofacial surgery resident and the plastic surgery resident share operative experience, only one surgeon may receive credit as surgeon for the experience.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(NB: Section V. D. does not apply to this subspecialty.)

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

The RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be or-

ganized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Plastic Surgery should communicate with the office of the board regarding the full requirements for certification.

Approved/effective ACGME: September 1997

Editorial revision: January 1, 2000

Minor revision: September 2001

Common Program Requirements editorial revisions: July 2004

Program Requirements for Residency Education in Hand Surgery (Plastic Surgery)

I. Introduction

A. Definition of the Specialty

Hand surgery is a surgical subspecialty that deals with congenital and acquired defects of the hand and wrist that compromise the function of the hand. A hand surgery educational program is designed to educate physicians in the art and science of hand surgery and to develop a competent hand surgeon who is capable of independent function. The educational program should provide experience in the repair, resection, and reconstruction of defects of form and function of the hand; in the design, construction, and transfer of flaps and the transplantation of tissues, including microsurgery of multiple tissues; in replantation of upper extremity parts; in surgical and ancillary methods of treatment of tumors; in management of complex wounds; and in the use of alloplastic materials.

B. Scope of Education

1. Prerequisite resident education must be completed in a general surgery, orthopaedic surgery, or plastic surgery program accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The length of the educational program is 1 year.

II. Institutional Organization**A. Sponsoring Institution**

The educational program should have one sponsoring institution that has primary responsibility for the entire program. The sponsoring institution should provide sufficient faculty; financial resources; and clinical, research, and library facilities to meet the educational needs of the residents and to permit the program to comply with the requirements for accreditation.

B. Participating Institutions

1. When multiple institutions participate in the educational program, the commitment of each participating institution must be documented in a written agreement that complies with the ACGME Institutional Requirements.
2. Assignments to participating institutions must be based on an appropriate educational rationale. Assignments that dilute the education of residents or that do not provide proper supervision and coordination of educational activities should not be established or maintained.
3. Assignments to participating institutions that are geographically distant from the sponsoring institution are not desirable. To be justifiable, such assignments must offer special resources or opportunities not otherwise available to the program.
4. The number and location of participating institutions must not preclude the participation of residents and faculty in the educational activities of the hand surgery course of study.

C. Appointment of Residents

1. The total number of residents must be approved in advance by the Residency Review Committee (RRC). The number of residents shall be based primarily on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to resident education.
2. Programs may not graduate more hand surgery residents in any given year than the number of residents approved by the RRC.
3. Any increase, including a temporary increase in resident complement, must receive prior approval of the RRC. Requests for changes in the approved resident complement of a program must include a strong educational rationale.

III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

A single program director must be responsible for the program.

1. Qualifications of the program director
 - a. Requisite and documented clinical, educational, and administrative abilities and experience.
 - b. Licensure to practice medicine in the state where the institution that sponsors the program is located.

- c. Certification by the appropriate ABMS Board or suitable equivalent qualifications in the appropriate specialty and a certificate of added qualifications in hand surgery or suitable equivalent qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
 - d. Appointment in good standing to the medical staff of an institution participating in the program.
 - e. Frequent changes in leadership or long periods of temporary leadership are undesirable and may adversely affect the accreditation status of the program.
2. Responsibilities of the program director
 - a. Prepare a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of hand surgery residents at each level of education and for each assignment. This statement must be distributed to hand surgery residents and members of the faculty. It should be readily available for review.
 - b. Select residents for appointment to the program according to institutional and departmental policies and procedures.
 - c. Select and supervise the faculty and other program personnel at each participating institution.
 - d. Supervise residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervising physicians.
 - e. Regularly evaluate residents' knowledge, skills, and overall performance. The program director, with participation of the faculty, must
 1. at least quarterly, evaluate the progress of each hand surgery resident in writing, using appropriate criteria and procedures;
 2. communicate each evaluation to the resident in a timely manner;
 3. advance residents to positions of higher responsibility only on evidence of their satisfactory progressive scholarship and growth;
 4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
 5. provide a final written evaluation to each hand surgery resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. Each evaluation should be signed by the resident and program director and be maintained on file by the program director for at least 5 years following completion of the program.
 - f. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
 - g. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.
 - h. Prepare an accurate statistical and narrative description of the program, as requested by the RRC.

- i. Ensure that each resident is provided with a sufficient educational program, including a sufficient volume and variety of operative experience and progressive surgical responsibility.
- j. Annually collect, compile, and retain the number and types of hand surgery operative procedures performed in all institutions used for resident education. These data must be provided in the form and format specified by the RRC.
- k. Annually collect, compile, and retain a comprehensive record of the operative procedures performed by each hand surgery resident completing the program. This information must be provided in the form and format specified by the RRC. This record must be signed by the hand surgery resident and the program director, attesting to its accuracy.
- l. Advise applicants of the prerequisite requirements of the appropriate specialty board.
- m. Document the satisfactory completion of prerequisite education before the resident begins the hand surgery program.
- n. Notify the executive director of the RRC in writing of any major change in the program that significantly alters the educational experience for the residents, including
 1. changes in program leadership, to include any change in appointment of the program director, section or division head, or department chair, and
 2. changes in administrative structure that affect the status of the parent department in the institution.
- o. Obtain prior RRC approval for the following changes in the program:
 1. the addition or deletion of any participating institution to which residents are assigned for a total of 2 months or longer;
 2. any change in the approved resident complement of the program; and
 3. any change in the length or format of the program.

B. Faculty

1. The hand surgery faculty must be certified by the one of the sponsoring boards, or possess suitable equivalent qualifications and be certified in hand surgery or possess suitable equivalent qualifications. The majority of the faculty must possess certificates of added qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
2. There must be a sufficient number of qualified faculty to adequately instruct and supervise hand surgery residents to ensure optimal patient care and resident education. The faculty must be able to devote sufficient time to the program to meet their supervisory and teaching responsibilities.
3. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A faculty member at each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving these goals. The hand surgery resident should participate in these reviews.
6. The faculty should, at least annually, evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of the faculty, and the quality of resident supervision.

C. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty must be research investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. Scholarship is defined as an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. This activity should include

1. participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;
2. participation in journal clubs and research conferences;
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals;
4. participation in research, particularly in projects funded following peer review and/or that result in publications or presentations at regional and national scientific meetings;
5. offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research; and
6. provision of support for resident participation in scholarly activities.

D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Facilities and Resources

A. Inpatient Facilities

1. Inpatient facilities should have a sufficient number of beds, support personnel, and proper equipment to ensure quality patient care and education.
2. Operating suite and diagnostic and treatment facilities must contain technologically current equipment.

B. Outpatient Facilities

Appropriately equipped outpatient facilities including support staff, operating suites, and clinic and office space must be available for resident participation in the preoperative evaluation, treatment, and postoperative follow-up of patients for whom the resident has responsibility.

C. Library Facilities

1. The residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.

V. Educational Program

A. Program Design

1. The program director and faculty must prepare and implement written educational goals for the program.
2. The program design and/or structure must be approved by the RRC as part of the regular review process.

B. Clinical Component

1. Residents must be provided with education in surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pathology, pharmacology, wound healing, mi-

crobiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation.

2. A sufficient number and variety of adult and pediatric hand surgery patients must be available for resident education.
3. Generally equivalent and sufficient distribution of operative procedures among the residents in all categories of hand surgery must be demonstrated.
4. Residents should be provided with graduated and progressive patient management responsibility.
5. Because judgment and technical capability to achieve satisfactory surgical results are mandatory qualities for the hand surgeon, education should be provided in the following areas:
 - a. Skin repair, including grafts and flaps, multiple tissue flaps, free microscopic tissue transfers, and insertion of tissue expanders
 - b. Fingertip injuries
 - c. Tendon repair, including flexor tendon repair and graft, implantation of tendon spacer, extensor tendon repair, and tenolysis/tenodesis
 - d. Tendon transfer and tendon balancing
 - e. Nerve repair, including major and digital, graft, neurolysis, surgical treatment of neuroma, transpositions, and nerve decompressions
 - f. Management of fractures and dislocations, including phalangeal or metacarpal with and without internal fixation; wrist, radius, and ulna with and without internal fixation; and injuries to joint ligaments
 - g. Bone grafts
 - h. Joint and tendon sheath repairs, including release of contracture, synovectomy, arthroplasty with and without implant, arthrodesis, trigger finger release, and stiff joints that result from rheumatoid or other injury
 - i. Pollicization or ray transfer
 - j. Foot to hand transfer
 - k. Tumors, benign and malignant
 - l. Dupuytren's contracture
 - m. Replantation, revascularization
 - n. Amputations
 - o. Fasciotomy, deep incision and drainage for infection, and wound débridement
 - p. Congenital deformities, including syndactyly and others
 - q. Management of upper extremity vascular disorders and insufficiencies
 - r. Foreign body, implant removal
 - s. Thermal injuries
 - t. Arthroscopy
 - u. Upper extremity pain medicine

C. Didactic Components

1. A comprehensive, organized course of study must be offered, to include educational conferences that are well defined, documented, and regularly held. At minimum, the program must provide a didactic component for clinical education referencing section V.B.1 of these Program Requirements for Residency Education in Hand Surgery.
2. The written course of study should reflect careful planning, with evidence of a cyclical presentation of core specialty knowledge supplemented by the addition of current information, including practice management, ethics, and medicolegal topics as they relate to hand surgery.

Conferences must include basic science subjects related to clinical surgery of the hand, such as anatomy, physiology, pathology, genetics, microbiology, and pharmacology. A periodic review of the morbidity and mortality experience of the service must be included.

3. A list of the conferences should be maintained and available for review at the time of the site visit.
4. Conferences should be attended by both the residents and the faculty, and such attendance should be documented.
5. Conferences should be organized by the faculty to ensure that sufficient educational experience is provided. Hand surgery residents assigned to participating institutions other than the sponsoring institution should attend the hand surgery conferences at those sites.
6. Residents should make presentations at conferences and actively participate in conference discussions. Adequate time for resident preparation should be permitted to maximize the educational experience.
7. Hand surgery residents should be encouraged to pursue clinical or basic science research interests.

D. Supervision

1. All patient care services must be supervised by qualified hand surgery faculty. The program director must ensure, direct, and document proper supervision of residents at all times.
2. Residents must be provided with rapid, reliable systems for communicating with faculty at all times.
3. Hand surgery residents may function as intermediate supervisors when documented prior experience makes it appropriate, but faculty supervision must be available.

E. Duty Hours

1. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. The ratio of hours worked to on-call time will vary, particularly at senior levels, and flexibility will be necessary.
2. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.
3. Sufficient support services must be provided to ensure that residents are not required to spend excessive time in noneducational activities that can be discharged properly by other personnel.
4. The hand surgery residency is a full-time responsibility. Activities outside the educational program must not interfere with resident performance in the educational program as determined by the program director and must not interfere with resident opportunity for rest, relaxation, and study.

F. Appointment of Other Residents

1. The appointment of other residents for hand surgery education must not dilute or detract from the educational opportunities of hand surgery residents.
2. The appointment of other residents to the hand surgery service requires a clear statement of the areas of education, clinical responsibilities, and duration of the education. This statement must be supplied to the RRC at the time the program is reviewed.
3. If such residents so appointed will, in the judgment of the RRC, detract from the education of the hand surgery residents, the accreditation status of the program may be adversely affected.

VI. Evaluation

A. Resident Evaluation

The program director and faculty are responsible for regularly evaluating the residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

B. Faculty Evaluation

1. At least annually, all individual faculty members must be formally evaluated by the program director. Hand surgery residents should be provided with the opportunity to evaluate faculty.
2. A mechanism for sharing the results of such evaluations with the faculty that preserves resident confidentiality in the evaluation process must be employed.
3. The program should demonstrate that such evaluations are used in improving the program.

C. Program Evaluation

1. The educational effectiveness of a program must be evaluated at least annually. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by hand surgery residents should be utilized in this process.
2. One measure of the quality of a program is the performance of its graduates on the examination for the certificate of added qualifications in hand surgery given by one of the sponsoring boards. The RRC may consider this information as part of the overall evaluation of the program.

VII. Board Certification

Residents who plan to seek hand surgery certification as administered by the American Board of Plastic Surgery should communicate with the secretary of the board to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: September 1997 Effective: July 1998

Program Requirements for Residency Education in Preventive Medicine

(Documentation and performance measures are included to assist program directors in the development and administration of preventive medicine residency training programs. Documentation and performance measures are not program requirements.)

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

Preface

The program requirements set forth here are to be considered common to all specialties, and are complete only when supplemented, where indicated and individually, by each specialty.

I. Introduction

A. Definition

Preventive Medicine is the specialty of medical practice that focuses on the health of individuals, communities, and defined populations. Its goal is to protect, promote, and maintain health and well-being and to prevent disease, disability, and death. Preventive medicine specialists have core competencies in biostatistics, epidemiology, environmental and occupational medicine, planning and evaluation of health services, management of health care organizations, research into causes of disease and injury in population groups, and the practice of prevention in clinical medicine. They apply knowledge and skills gained from the medical, social, economic, and behavioral sciences. Preventive medicine has three specialty areas with common core knowledge, skills, and competencies that emphasize different populations, environments, or practice settings: aerospace medicine, occupational medicine, and public health and general preventive medicine.

1. **Aerospace medicine** focuses on the health of the operating crews and passengers of air and space vehicles, together with the support personnel who are required to operate such vehicles. Segments of this population often work and live in remote, isolated, and sometimes closed environments under conditions of physical and psychological stress.
2. **Occupational medicine** focuses on the health of workers including the ability to perform work; the physical, chemical, biological, and social environments of the workplace; and the health outcomes of environmental exposures. Practitioners in this field diagnose, treat, and prevent morbid conditions caused by environmental exposures and stressors. They recognize that work and the environment in which work is performed can have favorable or adverse effects upon the health of workers as well as of other populations; that the nature or circumstances of work can be arranged to protect worker health; and that health and well-being at the workplace are promoted when workers' physical attributes or limitations are accommodated in job placement.
3. **Public health and general preventive medicine** focuses on promoting health, preventing disease, and managing the health of communities and defined populations. These practitioners combine population-based public health skills with knowledge of primary, secondary, and tertiary prevention-oriented clinical practice in a wide variety of settings.

B. Objectives and Components of the Residency Educational Process

The objective of preventive medicine is to develop in physicians the competencies requisite to the practice of preventive medicine in the recognized specialty areas. The main components of the residency educational process are

1. definition of specific educational goals in terms of competencies, skills, and knowledge, expressed in behavioral, measurable terms;
2. assessment of the incoming resident relative to the specific educational goals;
3. design and provision of educational experiences through which specific educational goals may be achieved;
4. documentation of provision of educational experiences and the attainment of educational goals in terms of interim and overall outcome performance measures; and
5. use of periodic performance measures to determine the quality of the educational experience and the clinical competence of the individual resident, as well as the quality of the program.

C. Duration and Scope of Education

1. An accredited residency program in preventive medicine must provide 36 months of training
2. The educational program must include the following core components:
 - a. A 12 month clinical phase leading to the acquisition of clinical competencies as specified in III.E.
 - b. A total of 24 months in
 - 1) An academic phase leading to the acquisition of academic competencies as specified in III.F, and an MPH or other appropriate post-graduate degree.
 - 2) A minimum of 12 months in a practicum phase leading to the acquisition of core preventive medicine and specialty (i.e. aerospace, occupational, or public health) competencies as specified in III.G. through III.J.

Programs with a status of full accreditation may pursue combined training programs. Programs seeking to integrate preventive medicine training with other Accreditation Council for Graduate Medical Education (ACGME)-accredited training (combined programs) must meet all preventive medicine requirements. Programs must also meet all requirements as specified by both certifying boards of the integrated residencies.

II. Institutions

A. Sponsoring Institutions

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

The sponsoring institution must maintain office and laboratory space and access to computer facilities. A collection of basic reference texts and periodicals in preventive medicine and public health must be maintained. Residents must be provided with office facilities and support services during assigned duty hours. Funds must be provided for residents for travel to appropriate professional meetings.

Documentation Requirement: Facilities and support are documented at the time of the site visit.

Measure: Facilities and support are provided.

1. For programs offering training in basic clinical competencies
The institution's Graduate Medical Education Committee (GMEC) should approve the program. In addition to the preventive medicine residency, there must be at least one

ACGME-accredited residency at the same institution that provides direct patient care.

Documentation Requirement: The program has on file and available to the program director documentation of an ACGME-accredited residency program that provides direct patient care.

Measure: The program has on file and available to the site visitor current documentation of approval of the clinical year by the institution's GMEC.

Measure: Records documenting GMEC review and approval of clinical year.

2. For programs offering training in core preventive medicine knowledge (academic phase)

Core preventive medicine knowledge is offered through a course of study leading to the degree of Master of Public Health or other appropriate postgraduate degree. The MPH or other appropriate postgraduate degree must be accredited by the CEPH or other appropriate postgraduate accrediting body.

The sponsoring institution must provide an environment of inquiry and scholarship in which residents have structured research opportunities to participate in the development of new knowledge.

Documentation Requirement: Accreditation documentation. A description of the sponsoring institution must include a statement of its research activities and how participation in these is available to the resident.

Measure: Research opportunities are available to the resident. The accreditation is documented.

3. For programs offering training in competencies of preventive medicine practice (practicum phase)
 - a. Aerospace medicine
 - 1) The year of acquisition of competencies in aerospace medicine practice must be accomplished in an institutional setting where operational aeromedical problems are routinely encountered and aerospace life support systems are under active study and development.
 - 2) Laboratory facilities should be equipped to provide simulated environments in which the effects of and adaptation to extreme conditions of temperature, barometric pressure, acceleration, weightlessness, and psychological stress can be studied.
 - b. Occupational medicine

Acquisition of practice competencies in occupational medicine must be accomplished in institutions that provide comprehensive occupational health services to defined work groups, including regular and frequent presence in the work sites served.
 - c. Public health and general preventive medicine

The sponsoring institution may be an academically affiliated institution, an academically affiliated health care organization, or a government public health agency.

 - 1) If the sponsoring institution is an academic institution or an academically affiliated health care organization, it should have resources for developing a comprehensive graduate program in preventive medicine. An affiliation must be established with a governmental public health agency to ensure appropriate public health practice and research opportunities.
 - 2) If the sponsoring institution is a health agency, it should offer a comprehensive experience in community or public health. To ensure an appropriate didactic component, affiliations must be established with a medical school or a school of public health.

Documentation Requirement: Affiliation agreements are current and provided to the RRC and site visitor.

Measure: Appropriate affiliation agreements clearly documenting these requirements.

4. Support departments

The support departments of the sponsoring institutions, such as medical records and the medical library, must contribute to the education of residents in accordance with the *Essentials of Accredited Residencies in Graduate Medical Education*.

Documentation Requirement: The site visitor report must address the availability of medical records and medical reference materials.

Measure: Medical records and medical reference materials are available to the resident and faculty.

5. JCAHO accreditation

The Joint Commission on Accreditation of Healthcare Organizations (JCAHO) must accredit all participating hospitals.

Documentation Requirement: Programs must have on file and readily available for site visitor inspection a copy of current accreditation of all participating hospitals by JCAHO.

Measure: Required documents are current.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:

- a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
- b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
- c. specify the duration and content of the educational experience; and
- d. state the policies and procedures that will govern resident education during the assignment.

C. Participating Institutions and Training Sites

1. Individual phases or parts of the training program may be offered at participating institutions; the participating institutions must meet all requirements of the Institutional Requirements.

The participating institution must provide experiences through which the appropriate knowledge, skills, and competency may be acquired consistent with the overall educational objectives of the residency.

A faculty or staff member at each participating institution or training site must be designated to assume responsibility for the following:

- a. The day-to-day activities of the program at that institution.
- b. Supervision of residents to achieve the objectives of the educational goals of the residency and educational plans of the residents as appropriate to the participating institution.
- c. Direct supervision of residents to ensure applicable patient care and practicum experiences through explicit written descriptions of supervisory lines of responsibility. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.

d. The responsible faculty or staff member and the residents assigned to the participating institution must coordinate all activities with the program director.

2. The reciprocal commitments of the residency program and the participating institutions must be explicit in a written agreement or contract, to include the following:

- a. The educational objectives of the affiliation experience, and the knowledge, skills, and competency experiences to be provided.
- b. The scope of the affiliation with placement locations noted.
- c. The resources, including space, support services, and clinical facilities of the affiliate, that will be available to the residents.
- d. The duties and responsibilities the residents will have in the affiliate.
- e. The relationship that will exist between residents and staff of the residency program and the affiliate.
- f. The supervisory relationship and identified supervisor, who shall be qualified by certification or equivalent experience in the area, as determined by the program director. There must be active participation by the residents at the affiliated site, and resident supervision on-site must be performed by a physician or appropriately qualified health professional. Supervisors must directly assess clinical development.
- g. Procedures for academic discipline and handling of resident complaints or grievances.

Documentation Requirement: Copies of these written agreements or contracts must be provided to the RRC in advance of a site visit.

Measure: Written agreements or contracts demonstrate that each affiliated institution can provide a well-planned, relevant educational opportunity for the resident. The program director and the supervisor at the participating institution must sign these agreements.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).

2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:

- a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
- b. The program director must be certified in the specialty by the American Board of Preventive Medicine (ABPM) in the appropriate specialty area of preventive medicine, or possess qualifications judged to be acceptable by the RRC.
- c. The program director must be appointed in good standing to the medical staff of an institution participating in the program and based at the primary teaching site.
- d. Clinical, educational, and administrative experience

- e. License to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)

Documentation Requirement: The curriculum vitae (CV) of the program director must be submitted in advance of a site visit, when program directors change, and on the request of the RRC.

Measure: Documentation in the CV that the requirements are met.

4. Responsibilities of the program director are as follows:

The program director is responsible for and must be able to demonstrate the provision of the following:

- a. **The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.**
- b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d. **The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:**
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e. Supervision of residents to achieve the objectives of the educational goals of the residency and educational plans of the residents.
- f. Counseling of residents in the academic phase in the selection of assignments, services, or elective courses that will assist the resident in achieving the skills and knowledge needed in the resident's practicum experiences and intended fields of practice in preventive medicine.
- g. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- h. Selection, development, and supervision of the faculty and other program personnel at each institution participating in the program.
- i. Supervision of residents for applicable patient care and practicum experiences through explicit written descriptions of supervisory lines of responsibility. Patient care responsibilities include gradual assumption of clinical responsibility under direct supervision for a variety of clinical problems and preventive encounters. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- j. Provision of information that describes the program's accreditation status, educational objectives, and structure to each applicant, or in the event of a major change to each resident.

- k. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.

- l. Review of the interinstitutional agreements with participating institutions annually and for scheduling updates as needed to ensure currency.
- m. General administration of the program, including those activities related to the instruction, supervision, counseling, evaluation, and advancement of residents.
- n. Maintenance of records related to program accreditation.
- o. Preparation and submission of documentation required by the RRC.

Documentation Requirement: Written plans, policies, evaluations, and other applicable program communications (e.g., letters, memos).

Measure: Program files contain the required documentation.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
 2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member, through provision of appropriate knowledge, skills, direct clinical supervision, or competencies. Faculty must also demonstrate a commitment to their own continuing education and participation in scholarly activities.
 3. **Qualifications of the physician faculty are as follows:**
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Preventive Medicine, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
 - d. Faculty and/or practicum supervisors must be assigned to provide the knowledge, skills, direct clinical supervision, and competencies as outlined in the educational goals of the program, and specific assignments must be indicated in each resident's educational plan. Faculty must have documented qualifications to provide the appropriate knowledge, skill, or competency to which they are assigned.
- Documentation Requirement:* A matrix must be provided showing faculty assignments to provide appropriate knowledge, skills, and competencies. CVs must demonstrate appropriate qualifications.
- Measure:* Program files contain matrices and CVs that document faculty qualifications appropriate to provide the knowledge, skill, or competency to which they are assigned.
4. **The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:**
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical

cal series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include the following:

- d. Active participation in regional or national professional and scientific societies, particularly through presentation at the organizations' meetings and publication in their journals. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
- e. Active participation in the review of residents and of planning and review of the residency program.

Documentation Requirement: Minutes of planning meetings; logs of journal club, rounds, or case conference attendance; membership on thesis committees; updated CVs for faculty and staff that document continuing education, meeting attendance, and publications.

Measure: Program documents attesting to faculty contributions to program planning, review, and resident education.

5. **Qualifications of the nonphysician faculty are as follows:**
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g. sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Facilities and General Support

The residency program and its affiliates must maintain adequate facilities, including office and laboratory space and access to computer facilities. Residents should have convenient access to the Internet and other online resources, and when available, the electronic medical information system of participating health care institutions.

A collection of basic reference texts and periodicals in preventive medicine and public health shall be maintained. Access to support services must be provided. Residents must be provided with adequate office facilities during assigned duty hours. All residents must be provided funds for travel to designated professional meetings.

Documentation Requirement: The program must supply in advance of a site visit a description of facilities and general support available to the resident.

Measure: The facilities and general support adequately support resident education.

2. Library

Residents must have ready access to medical reference materials, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases and an on-site reference librarian. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

Documentation Requirement: A description of availability of medical reference materials to residents must be supplied prior to a site visit.

Measure: the resident has the ability to access adequate medical reference materials, e.g., reference texts and journal articles.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

Resident Qualifications

1. Entering the clinical phase

Residents entering the clinical phase must meet one of the eligibility requirements as outlined in the Institutional Requirements section II.A.1. In addition, residents must have completed steps I and II of the United States Medical Licensing Examination (USMLE) or, prior to 1996, its equivalent.

2. Entering either the academic or practicum phases

The entering resident must have completed training in an ACGME-accredited clinical year (12 months) with a minimum of 6 months of direct patient care. Direct patient care is the provision of preventive, diagnostic, and therapeutic interventions to patients. (Hereinafter patient care is defined as the provision of preventive, diagnostic, and therapeutic intervention to patients.)

3. Entering the practicum phase only

a. The entering resident must have completed an

ACGME-accredited clinical year and have an MPH or other appropriate postgraduate degree. The MPH or other appropriate postgraduate degree must be accredited by the Council on Education in Public Health (CEPH) or other appropriate postgraduate accrediting body.

b. If the resident has not been awarded an MPH or other appropriate postgraduate degree, then knowledge of each of the four core subjects - biostatistics, epidemiology, environmental and occupational health, and health services organization and administration - must have been obtained through at least 40 contact hours for each course in an academic setting. The resident must complete the accredited MPH, or other appropriate postgraduate degree, prior to the end of the residency program.

c. The entering resident must have completed training in an ACGME-accredited clinical year (12 months) with a minimum of 6 months of direct patient care. Direct patient care is the provision of preventive, diagnostic and therapeutic interventions to patients.

Documentation Requirement: The program must maintain and make available for site visitor inspection a file for each resident (the resident file) that contains copies of certificates and academic institution records to document the specified requirements. Copies of these documents must be submitted to the RRC on request.

Measure: Resident files contain the appropriate documentation.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum**A. Program Design/Residency Design****1. Format**

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

Educational goals overview

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

Documentation Requirement: The written overview statement outlining the educational goals of the program with respect to knowledge, skills, and competencies of residents to be acquired during the training period must be supplied in advance of a planned site visit.

Measure: Overview statement covers core and appropriate specialty area goals and competencies. Content is preventive medicine. Depth and breadth are commensurate with the selected specialty area. Indicates how the knowledge, skills, and competencies are to be met.

3. Identification of specialty area

Residency programs must identify the specialty area of preventive medicine of the residency, the period of desired length of accreditation (1, 2, or 3 years), and the planned number of residents in each year.

Documentation Requirement: The appropriate form must be completed and supplied in advance of a planned site visit.

Measure: Accurately completed form.

4. Change in training period

The length of residency training for a particular resident may be extended by the program director if that resident needs additional training. If the extension is for only 6 months or less, the program director must notify the Residency Review Committee (RRC) of the extension and must describe the proposed curriculum for that resident and the measures taken to minimize the impact on other residents. Any changes in rotation schedules should be included in the notification. Approval must be ob-

tained in advance from the RRC if the extension is greater than 6 months.

5. Program schedule

Prepare a written schedule of activities for each resident during the accredited length of the residency that demonstrates the provision of knowledge, skills, and competencies, including directly supervised clinical care, outlined in the educational goals. The residency program must specify a minimum set of competencies that each resident must acquire prior to completion of the program. This statement must be distributed to residents and members of the teaching staff.

Documentation Requirement: The written schedule must be submitted in advance of a planned site visit.

Measure: The statement provides a coherent approach to provision of an overall resident experience that will create the opportunity for the resident to acquire the knowledge, skills, and core and specialty area competencies during the accredited length of the residency.

6. Resident support

Salaries and benefits of individual residents must comply with the institutional requirements for funding of residents.

7. Grievance process

The program must ensure that all training sites have a grievance process that is in compliance with the Institutional Requirements (Institutional Agreements and Conditions of Resident Employment). A written statement describing the grievance process for each training site must be available for review at the time of the site visit.

Documentation Requirement: Appropriate policies included in institutional agreements for all training sites.

Measure: Policies are accurate and comply with the Institutional Requirements.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(N.B.: Section V.D. does not apply to certain subspecialties)

The acquisition of basic clinical competencies will require an ACGME-accredited clinical year (12 months) with 6 months of direct patient care. The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner (These competencies may also be acquired during academic and practicum training of the residency program and should be incorporated where applicable). Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

- 1. Patient care** that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
- 2. Medical Knowledge** about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
- 3. Practice-based learning and improvement** that involves the investigation and evaluation of care for their patients, the ap-

praisal and assimilation of scientific evidence, and improvements in patient care;

4. **Interpersonal and communication skills** that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

Documentation Requirement: Resident schedules and incoming resident assessment.

Measure: Resident schedules, incoming resident assessment, and program files document rotations and activities that verify a total of 12 months of clinical experience.

E. Competencies, Skills, and Knowledge

1. The program director and teaching staff must prepare a list of specific competencies, skills, and knowledge that they are prepared to deliver to residents through the training program. Competency acquisition must be evaluated through the use of clearly defined performance indicators.
2. Residents in the same program may be in different "tracks" that have a different method or approach to training. Programs are encouraged to seek innovative ways to deliver and fund GME; however, the entire program will be assessed by the RRC—no tracks can be accredited separately.

Documentation Requirement: The program must submit a cross-referenced list of specific competencies, skills, and knowledge, including faculty assignments, available through the program. Performance indicators for the assessment of competency acquisition must be specified and tracked for each resident.

Measure: The content is preventive medicine. Depth and breadth are adequate and commensurate with the selected specialty area. Performance indicators are specified and documented for the competencies.

F. Educational Courses, Rotations, and Activities

The program director and teaching staff must prepare a matrix of educational courses, rotations, supervised clinical experiences, and other educational activities available through the residency by which a resident will have the opportunity to acquire the specific competencies, skills, and knowledge. This matrix must be cross-referenced to the knowledge, skills, and competencies. Ongoing activities that provide an opportunity for group faculty-resident interaction, such as weekly didactic series, journal club, and grand rounds, are essential.

Documentation Requirement: A list of courses, rotations, and activities cross-referenced to the list of competencies, skills, and knowledge must demonstrate how educational objectives are met. Descriptions of each course, rotation, and activity must be submitted to the RRC prior to a site visit. The institution providing each course, rotation, or activity must be specified.

Measure: The cross-referenced list documents that the program provides courses, rotations, and activities corresponding to the program's knowledge, skills, and competencies list.

G. Incoming Resident Assessment

Each incoming resident must be assessed as to his/her knowledge, skills, and competencies in relationship to the educational goals for the residency program. This assessment may take the form of a self-assessment, an in-service exam, a structured interview, or other

method that assesses knowledge, skills, and competencies. This assessment is used by the program director and faculty to guide the development of an individualized educational plan for each resident.

Documentation Requirement: The program must have a written assessment (self-assessment, in-service exam, structured interview, or other method) of incoming resident skills, knowledge, and competencies in the program files.

Measure: The assessment is specific to the educational objectives for the residency program and must be included in the educational plan for each resident.

H. Educational Plan

1. The residents, in collaboration with the program director and teaching staff, must prepare a written educational plan that directs the acquisition of a core set of competencies, skills, and knowledge appropriate to the objectives of individual residents, based on the residents' assessments. The educational plan will detail the courses, rotations, and activities to which they will be assigned to achieve the designated skills, knowledge, and competencies during their residencies.

Documentation Requirement: The program must have a written educational plan on file for each resident prior to a site visit.

Measure: The educational plan documents each resident's baseline skill, knowledge, and competency inventory; the resident's individual educational objectives; and the courses, rotations, and activities schedules that will provide the opportunity for each resident to meet the educational objectives.

2. The assigned activities must be organized into a structured schedule prior to each year of residency experience. A record of courses, rotations, and activities attended must be completed at the close of each year.

Residencies that offer 2- or 3-year programs may create schedules that concurrently integrate courses, rotations, and activities that incorporate the following criteria:

- a. Adequate time is available to complete each objective.
- b. The sequential acquisition of knowledge, skills, and competencies is clinical, academic/didactic, practicum.
- c. The practicum experiences may be concurrent with academic experiences, but may not precede didactic experiences.
- d. Resident hours on duty in a clinical setting shall be scheduled and monitored to avoid excessive stress and fatigue. Residents must have a keen sense of personal responsibility for continuing patient care and must recognize that their obligation to patients is not automatically discharged at any given hour of the day or any particular day of the week.
- e. Resident care in the clinical setting must be directly supervised.
- f. In no case should a resident go off duty until the proper care and welfare of patients have been addressed and, if applicable, until responsibilities to the community and public have been fulfilled.
- g. Duty hours and night and weekend call for residents must reflect the responsibility for patients and provide for adequate patient care.
- h. Residents must not be required regularly to perform excessively difficult or prolonged duties. When averaged over any 4-week period, residents should spend no more than 80 hours per week in all duties. Residents at all levels should, on average, have the opportunity to spend at least 1 day out of 7 free of hospital duties and should be on call no more often than every third night. There should be adequate opportunity to rest and sleep when on call for 24 hours or more. There should be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Patient care quality and

education continuity must be ensured through assignment of progressive responsibility.

Documentation Requirement: The program must submit the educational plans for all current residents and the final completed schedules for residents who have completed the program since the prior site visit.

Measure: Resident schedules show progressive responsibility.

Current residents: Documents the learning goals for an individual resident in terms of competencies, knowledge, and skills. Documents creation of a schedule that includes courses, rotations, and activities conducive to the accomplishment of the learning plan.

Former residents: Documents completion of an educational program in preventive medicine.

I. Academic Competencies-Preventive Medicine Knowledge Content Areas

1. Core knowledge content areas

The program must address in adequate depth and breadth the following competencies, skills, and knowledge that underlie the practice of preventive medicine:

- a. Health services administration
- b. Biostatistics
- c. Epidemiology
- d. Clinical preventive medicine
- e. Behavioral aspects of health
- f. Environmental health

2. Aerospace medicine knowledge content areas

- a. History of aerospace medicine
- b. The flight environment
- c. Clinical aerospace medicine
- d. Operational aerospace medicine
- e. Management and administration

3. Occupational medicine knowledge content areas

- a. Disability management and work fitness
- b. Workplace health and surveillance
- c. Hazard recognition, evaluation, and control
- d. Clinical occupational medicine
- e. Regulations and government agencies
- f. Environmental health and risk assessment
- g. Health promotion and clinical prevention
- h. Management and administration
- i. Toxicology

4. Public health and general preventive medicine

The knowledge content areas for public health and general preventive medicine, while similar to those of the core content areas, emphasize more in-depth knowledge in each area.

- a. Health services administration, public health practice, and managerial medicine
- b. Environmental health
- c. Biostatistics
- d. Epidemiology
- e. Clinical preventive medicine

Documentation Requirement: Resident schedules, resident academic records, rotation and course descriptions, academic transcripts.

Measure: The academic courses cover the knowledge areas listed above.

J. Preventive Medicine Competencies

The attainment of advanced preventive medicine practice competencies requires a sequence of continued learning and supervised application of the knowledge, skills, and attitudes of preventive medicine in the specialty area. The resident must assume progressive responsibility for patients and/or the clinical and administra-

tive management of populations or communities during the course of training.

The resident shall acquire the following core preventive medicine competencies:

1. Communication, program, and needs assessment
 - a. Communicate clearly to multiple professional and lay target groups, in both written and oral presentations, the level of risk from hazards and the rationale for interventions
 - b. Conduct program and needs assessments and prioritize activities using objective, measurable criteria such as epidemiological impact and cost-effectiveness
2. Computer applications relevant to preventive medicine

Residents shall be able to use computers for word processing, reference retrieval, statistical analysis, graphic display, database management, and communication.
3. Interpretation of relevant laws and regulations

Residents shall be able to identify and review relevant laws and regulations germane to the resident's specialty area and assignments.
4. Identification of ethical, social, and cultural issues relating to public health and preventive medicine contexts

Residents shall be able to recognize ethical, cultural, and social issues related to a particular issue and develop interventions and programs that acknowledge and appropriately address the issues.
5. Identification of organizational and decision-making processes

Residents shall be able to identify organizational decision-making structures, stakeholders, style, and processes.
6. Identification and coordination of resources to improve the community's health

Residents shall be able to assess program and community resources, develop a plan for appropriate resources, and integrate resources for program implementation.
7. Epidemiology and biostatistics, including the ability to
 - a. characterize the health of a community
 - b. design and conduct an epidemiological study,
 - c. design and operate a surveillance system,
 - d. select and conduct appropriate statistical analyses,
 - e. design and conduct an outbreak or cluster investigation, and
 - f. translate epidemiological findings into a recommendation for a specific intervention.
8. Management and administration, including the ability to
 - a. assess data and formulate policy for a given health issue,
 - b. develop and implement a plan to address a specific health problem,
 - c. conduct an evaluation or quality assessment based on process and outcome performance measures, and
 - d. manage the human and financial resources for the operation of a program or project
9. Clinical preventive medicine, including the ability to
 - a. develop, deliver, and implement, under supervision, appropriate clinical services for both individuals and populations and
 - b. evaluate the effectiveness of clinical services for both individuals and populations.
10. Occupational and environmental health, including opportunities for residents to be able to assess and respond to individual and population risks for occupational and environmental disorders.

Documentation Requirement: Resident schedules, rotation descriptions, interinstitutional agreements.

Measure: Adequate depth and breadth is provided.

K. Aerospace Medicine Competencies

Specialty training for the physician in aerospace medicine must provide for the attainment of competencies relevant to the diagnosis, prevention, and treatment of disorders associated with the

unique aerospace environments and with the adaptive systems designed to enhance performance and support life under such conditions.

1. Manage the health status of individuals working in all aspects of the aerospace environment
 - a. Adequate supervised time in direct clinical care of aerospace medical problems must be provided to assure competency in managing aerospace and general medical problems in aerospace personnel.
 - b. The resident is expected to develop and apply medical standards and grant exceptions and to facilitate prevention, early diagnosis, and treatment of health hazards.
 - c. *For programs with a training track in space medicine:* The resident is expected to perform all activities of a crew surgeon for a space flight, develop and apply medical care standards and programs, evaluate the physiologic effects of spaceflight on crewmembers, and conduct and evaluate longitudinal studies on astronauts.
2. Promote aerospace passenger health, safety and comfort
The resident is expected to acquire skills to educate passengers and physicians about the hazards of flight with certain medical conditions and to serve as passenger advocates to promote flight safety.
3. Facilitate optimum care of patients transported in the aerospace environment
The resident is expected to identify appropriate patients for aeromedical transport and to provide guidance for safe aeromedical transport of patients with common medical problems.
4. Apply human factors/ergonomic concepts to the aerospace environment
The resident will acquire skills to advise in the development of air and space flight equipment, biomedical equipment, and vehicles for flight and space flight; techniques for enhancing performance; and techniques of crew resource management.
5. Promote aerospace operational safety and mishap prevention
The resident will acquire skills to provide appropriate safety information and education and to conduct the medical aspects of any mishap investigation, including recommendations to prevent recurrences.
6. Interpret, integrate, and/or perform aeromedical research
The resident will acquire skills to effectively conduct aeromedical research into health, safety, human factors, and biomedical engineering aspects of the flight environment.

Documentation Requirement: Resident schedules, rotation descriptions, interinstitutional agreements.

Measure: Adequate depth and breadth is provided.

L. Occupational Medicine Competencies

Residents must be able to perform the following tasks.

1. Manage the health status of individuals who work in diverse work settings.
 - a. Adequate supervised time in direct clinical care of workers, from numerous employers and employed in more than one work setting, must be provided to ensure competency in mitigating and managing medical problems of workers.
 - b. Residents must be able to assess safe/unsafe work practices and to safeguard employees and others, based on clinic and worksite experience.
2. Monitor/survey workforces and interpret monitoring/surveillance data for prevention of disease in workplaces and to enhance the health and productivity of workers

Active participation in several surveillance or monitoring programs, for different types of workforces, is required to learn principles of administration and maintenance of practical workforce

and environmental public health programs. Residents must plan at least one such program.

3. Manage worker insurance documentation and paperwork, for work-related injuries that may arise in numerous work settings
Residents should first learn worker insurance competencies under direct supervision of faculty and demonstrate competency to "open," direct, and "close" injury/illness cases.
4. Recognize outbreak events of public health significance, as they appear in clinical or consultation settings
 - a. Residents should understand the concept of sentinel events, and know how to assemble/work with a team of fellow professionals who can evaluate and identify worksite public health causes of injury and illness.
 - b. Residents must be able to recognize and evaluate potentially hazardous workplace and environmental conditions, and recommend controls or programs to reduce exposures, and to enhance the health and productivity of workers.
 - c. Reliance on toxicologic and risk assessment principles in the evaluation of hazards must be demonstrated.
5. Report outcome findings of clinical and surveillance evaluations to affected workers as ethically required; advise management concerning summary (rather than individual) results or trends of public health significance

Documentation Requirement: Resident schedules, rotation descriptions, interinstitutional agreements.

Measure: Competencies, skills and knowledge relevant to preventive intervention in the workplace are addressed in workplace settings. The resident has the opportunity to demonstrate constructive participation in comprehensive programs to prevent occupational injury and illness and maintain worker health. Clinic settings demonstrate bridging from clinical activities to effective preventive intervention in the workplace.

M. Public Health and General Preventive Medicine Competencies

Residents in public health and general preventive medicine must attain competencies in public health, clinical preventive medicine (as appropriate to the specific program), epidemiology, health administration, and managerial medicine.

1. Public health practice
At least 1 month must be spent in a rotation at a governmental public health agency and must include participation in at least one of the following essential public health services:
 - a. Monitoring health status to identify community health problems
 - b. Diagnosing and investigating health problems and health hazards in the community
 - c. Informing and educating populations about health issues
 - d. Mobilizing community partnerships to identify and solve health problems
 - e. Developing policies and plans to support individual and community health efforts
 - f. Enforcing laws and regulations that protect health and ensure safety
 - g. Linking people to needed personal health services and ensuring the provision of health care when otherwise unavailable
 - h. Ensuring a competent public health and personal health care workforce
 - i. Evaluating the effectiveness, accessibility, and quality of personal and population-based health services
 - j. Conducting research for innovative solutions to health problems
2. Clinical preventive medicine

- a. Residents shall acquire an understanding of primary, secondary, and tertiary preventive approaches to individual and population-based disease prevention and health promotion.
 - b. Residents shall be able to develop, implement, and evaluate the effectiveness of appropriate clinical preventive services for both individuals and populations.
3. Epidemiology
Residents shall design and conduct health and clinical outcomes studies.
 4. Health administration
 - a. Residents shall design and use management information systems.
 - b. Residents shall plan, manage, and evaluate health services to improve the health of a defined population using quality improvement and assurance systems.
Documentation Requirement: Resident schedules, rotation descriptions, interinstitutional agreements.
Measure: The resident demonstrates competency in public health agency administration and public health program planning and implementation, as well as managerial medicine competencies.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMCC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMCC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

The program director and faculty must annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of supervision of residents.

D. Courses, Rotations, and Activities

1. Written method of evaluation. The program will evaluate in writing the provision of and individual resident participation in assigned courses, rotations, and activities. The method will evaluate achievement of competency, skill, and knowledge objectives from the perspectives of both the resident and the faculty.

Documentation Requirement: The program will submit a written description prior to the site visit of the method by which the program director and the resident will document resident participation in assigned courses, rotations, and activities as well as acquisition of skills and knowledge and demonstration of competencies.

Measure: Evaluation method provides for documentation by the supervisor and the resident of resident participation in learning experiences, the skills and knowledge acquired, and the competencies demonstrated.

2. Faculty and residents will use the evaluation method to evaluate the courses, rotations, and activities of each resident on at least a semiannual basis.

Documentation Requirement: The program will maintain and make readily available to site visitors copies of evaluations by both the residents and the faculty of courses, rotations, and activities for the prior 5 years. Evaluation of residents in the academic phase will be the responsibility of the sponsoring institution and will include a transcript or equivalent document provided to each resident. The evaluations for each resident must be available for review by the individual resident.

Measure: Documents for each resident for each experience that learning opportunities were provided, skills and knowledge were acquired, and competencies were demonstrated.

E. Summary Resident Evaluation

The program director, with participation of the faculty, shall evaluate resident progress toward educational goals in writing at least semiannually. Where progress toward educational goals deviates significantly from the educational plan, counseling or corrective actions must be documented. Fair procedures, as established by the sponsoring institution, and in compliance with the ACGME Institutional Requirements regarding academic discipline and resident complaints or grievances, must be implemented.

Faculty should monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

The evaluations must be reviewed with the resident formally and in a timely manner. Where appropriate, interim evaluation is encouraged.

Documentation Requirement: These evaluations must be on file for the prior 5 years and readily available to the site visitor.

Measure: Documents that the resident has been supplied feedback on progress against plan on acquisition of knowledge, skills, and demonstration of competencies. Final evaluation documents completion of learning plan.

F. Program Evaluation**1. Residents**

Residents shall annually provide a confidential written evaluation of the educational program based on completion of a written questionnaire. This evaluation shall be provided to the program director. An additional confidential evaluation shall be provided to the chair of the residency advisory committee (RAC).

Documentation Requirement: Confidential written evaluations by each resident of the program must be maintained on file for the prior 5 years, be noted in the RAC minutes, and be readily available to the site visitor.

Measure: Documents that each resident has provided annual feedback to the program on the program structure, factors considered conducive to acquisition of skills and knowledge and demonstration of competencies, activities planned but not provided, and suggestions for program enhancement.

2. Faculty-Residency Advisory Committee

The RAC shall consist of faculty, external members, practicum supervisors, and at least one resident representative. A majority of the members must have their primary affiliation outside the sponsoring institution. Members must be certified in preventive medicine or knowledgeable about specialty training in preventive medicine. The RAC chair must be a physician. The program director must serve in an ex-officio capacity.

The RAC must meet at least semiannually.

The mission of the RAC is to promote a residency training experience that is aligned with preventive medicine practice. The RAC, as an external body, complements the graduate medical education committee (GMEC), which serves to evaluate and support the residency from within the sponsoring institution.

The functions of the RAC are to advise and assist the program director to

- a. develop and update a written residency mission statement that describes goals and objectives;
- b. develop educational experiences and practicum rotations;
- c. provide new or emerging knowledge, skills, or competencies that may influence the content or conduct of preventive medicine education;
- d. review the GMEC review of the residency program;
- e. review confidential and written resident evaluations of the program and make recommendations for changes;
- f. review the program director evaluation of individual residents; and
- g. provide an annual report to the institution through the chair of the committee.

Documentation Requirement: Minutes document the functions of the RAC.

Measure: Minutes are available in the program files that document the activity of the RAC and faculty/member participation.

G. Resident Progression and Program Completion

The program director and faculty must document completion of courses, rotations, and activities and must certify that residents completing the program have fulfilled all established requirements of their educational plan. This final evaluation must be part of the resident's permanent record and must be maintained by the institution.

Although a person may have entered a practicum phase with an incomplete academic phase, that person may not be certified as having completed the practicum phase in the absence of a transcript certifying that all the requirements for the Master of Public Health or other appropriate postgraduate degree have been completed.

Documentation Requirement: This documentation must be readily available for site visitor review.

Measure: Documents status in and/or completion of the educational plan by each resident. Documents that a resident completing the practicum has achieved the planned competencies.

H. Resident Summary

The residency must maintain a database of all residents participating in the program and their professional status for 5 years.

1. The program must monitor the percentage of entering residents who take the certifying examination of the American Board of Preventive Medicine (ABPM). A minimum of 50% of entering residents must take the certifying exam averaged over any 5-year period.
2. Of those residents taking the certifying examination, a minimum of 50% must pass the certifying examination averaged over any 5-year period.

Documentation Requirement: Prior to the site visit the program must provide documentation of the residents participating in the program, their professional status, the percentage taking the certifying examination, and the percentage passing the certifying examination.

Measure: 50% of entering residents must take the certifying examination of the ABPM, and of those taking the examination, 50% must pass.

I. Institutional Report of Program Director

The program director and the chair of the RAC must provide to the director of graduate medical education, or equivalent, at the institution an annual written report of the residency quality. The program director and the chair of the RAC must provide a written plan of corrective actions for any recommendations received from the director of graduate medical education.

Documentation Requirement: Reports and plans for corrective actions written since the prior site visit must be readily available to the site visitor.

Measure: Recommendations are acted upon by the residency program director.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Preventive Medicine should communicate with the office of the board regarding the full requirements for certification.

ACGME: September 2000 Effective: July 2001
Editorial Revision (Common Program Requirements): December 2004

Program Requirements for Residency Education in Medical Toxicology (Preventive Medicine)

I. Introduction

A. Definition and Description of the Subspecialty

1. Medical toxicology is a clinical specialty that includes the monitoring, prevention, evaluation and treatment of injury and illness due to occupational and environmental exposures, pharmaceutical agents, as well as unintentional and intentional poisoning in all age groups. A medical toxicology residency must be organized to provide residents with experience in the clinical practice of medical toxicology for all age groups and to provide a sound basis for the development of physician practitioners, educators, researchers, and administrators capable of practicing medical toxicology in academic and clinical settings.
2. Residencies in medical toxicology must teach the basic skills and knowledge that constitute the foundations of medical toxicology practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. It is expected that the resident will develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render the resident capable of independent practice in medical toxicology.
3. Programs must provide a broad education in medical toxicology to prepare the resident to function as a specialist capable of providing comprehensive patient care.

B. Duration and Scope of Education

1. Prerequisite training for entry into a medical toxicology program should include the satisfactory completion of an ACGME-accredited residency. [Note: Candidates who do not meet this criterion should consult the American Board of Emergency Medicine, or the American Board of Preventive Medicine regarding their eligibility for subspecialty certification.]
2. The length of the educational program is 24 months. The program must be associated with an ACGME-accredited residency program in emergency medicine, or preventive medicine.
3. Prior to entry into the program, each resident must be notified in writing of the required length of the program.

II. Institutional Organization

A. Sponsoring Institution

1. The sponsoring institution must provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation. It is highly desirable that the program structure include the participation of a medical school, a school of public health, and a school of pharmacy or department of pharmacology.
2. Programs in medical toxicology should be based at a primary hospital (hereafter referred to as the primary clinical site). The majority of the didactic and clinical experiences should take place at the primary clinical site.
3. The following services must be organized and provided at the primary clinical site:
 - a. An emergency service for both adult and pediatric patients, adult and pediatric inpatient facilities, and adult and pediatric intensive care facilities

- b. Renal dialysis services with 24-hour availability
 - c. Toxicology laboratory services with 24-hour availability
 - d. Inpatient and outpatient facilities with staff who consult the toxicology service
 - e. It is desirable that hyperbaric oxygen therapy is available
4. The program must develop an institutional affiliation to provide residents with clinical experiences not provided at the primary clinical site, other than those listed in II.A.3.a-d.

B. Participating Institutions

1. All participating institutions must provide appropriate support services to ensure an adequate educational experience. This includes support personnel in all categories and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.
2. The program must develop an institutional affiliation with a clinical facility to provide residents with clinical experience in critical care areas should this experience not be provided at the sponsoring institution.
 - a. Approval of participating institutions will be based on the presence of sufficient opportunities for residents to manage, either as primary physicians or consultants, the entire course of critically poisoned patients in both the pediatric and adult categories.
 - b. Institutional resources must be available to support the provision of clinical experience in adult and pediatric critical care areas for residents without prior experience of at least 1 month in an adult intensive care unit and 1 month in a pediatric intensive care unit.
 - c. Programs using multiple participating institutions must ensure the provision of a unified educational experience for the residents. Each participating institution must offer significant educational opportunities to the overall program that do not duplicate experiences otherwise available within the program. An acceptable educational rationale must be provided for each participating institution.
 - d. Participating institutions must not be geographically distant from the sponsoring institution unless special resources are provided that are not available at the primary clinical site.
 - e. The number and geographic distribution of participating institutions must not preclude all residents' participation in conferences and other educational exercises.
 - f. A letter of agreement with each institution participating in the program must be developed to include
 1. the educational objectives and the method to accomplish and to evaluate each objective;
 2. the resources and facilities in the institution(s) that will be available to each resident, including but not limited to library resources;
 3. the resident's duties and responsibilities and duty hours for the assignment; and
 4. the relationship that will exist between medical toxicology residents and residents and faculty in other programs.

C. Library

Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions. Reference material specific to the content of the subspecialty must be available in either text or electronic retrieval form.

D. Appointment of Residents

The Residency Review Committee (RRC) will approve the number of medical toxicology residents in the program. Approval will be based on the number, qualifications, and scholarly activity of the

faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources available to the program.

III. Faculty Qualifications and Responsibilities

- A. In addition to the qualifications and responsibilities of the program director and faculty described in the Program Requirements for Residency Education in the Subspecialties of Emergency Medicine or the Program Requirements for Residency Education in Preventive Medicine, there must be a minimum of two medical toxicology faculty who each devote a minimum of 5 hours per week of direct teaching time to the residents and whose medical practice makes them available to the residents for consultations on cases.
- B. The program director and faculty must be certified in medical toxicology or possess suitable equivalent qualifications as determined by the RRC.
- C. Consultants from appropriate medical subspecialties including those with special expertise in disaster and mass casualty incident management, hyperbaric medicine, immunology, industrial hygiene, occupational toxicology, pulmonary medicine, biostatistics, epidemiology, public health, botany, cardiology, dermatology, gastroenterology, nephrology, ophthalmology, pathology, pharmacology, surgical subspecialty, zoology, hazardous materials and mass exposure to toxins, laboratory toxicology, forensic toxicology and environmental toxicology, and nonmedical specialties, such as botany, herpetology, and mycology should be available for consultation and academic lectures.

IV. The Educational Program

- A. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC.
- B. The curriculum must include the following academic and clinical content:
 1. The clinical manifestations, differential diagnosis, and management of poisoning
 2. The biochemistry of metabolic processes, the pharmacology, pharmacokinetics, and teratogenesis, toxicity, and interactions of therapeutic drugs
 3. The biochemistry of toxins, kinetics, metabolism, mechanisms of acute and chronic injury, and carcinogenesis
 4. Experimental design and statistical analysis of data as related to laboratory, clinical, and epidemiologic research
 5. Laboratory techniques in toxicology
 6. Occupational toxicology, including acute and chronic workplace exposure to intoxicants and basic concepts of the workplace and industrial hygiene
 7. Prevention of poisoning, including prevention of occupational exposures by intervention methodologies, that take into account the epidemiology, environmental factors, and the role of regulation and legislation in prevention
 8. Environmental toxicology, including identification of hazardous materials and the basic principles of management of large-scale environmental contamination and mass exposures
 9. The function, management, and financing of poison control centers
 10. Oral and written communication skills and teaching techniques
 11. Principles of epidemiology and risk communication, analytical laboratory techniques, and research methodologies in toxicology

C. Clinical Experience

Residents must have a minimum of 12 months of clinical experience as the primary or consulting physician responsible for providing direct/bedside patient evaluation, management, screening, and preventive services.

Residents must be provided with experience in evaluating and managing patients with workplace and environmental exposures and must have experience in workplace evaluation, as well as in an occupational medicine or toxicology clinic.

- D. Residents must have opportunities to evaluate and manage patients with acute and long-term workplace and environmental toxic exposures. Clinical training should include experience in an industrial setting or an occupational medicine clinic or access to occupational medicine patients in a referral setting. The resident should also have the opportunity to evaluate and manage intoxicated patients in both industrial and referral setting, including responsibility for providing bedside evaluation, management, screening, and preventive services for a minimum of 12 months or its full-time equivalent.

E. Regional Poison Information Center

1. The program must provide residents with educational experiences in a regional poison control center certified by the American Association of Poison Control Centers or its equivalent. It is highly desirable that the poison control center be in physical proximity to the primary clinical site.
2. Each resident must have 12 months' experience with a referral population of poisoned patients under the supervision of a physician who is certified in medical toxicology or who possesses suitable equivalent qualifications as determined by the RRC.
3. The poison control center should have at least 1,500 calls annually that require physician telephone consultation or intervention.

F. Planned Educational Conferences

Each program must offer to its residents an average of at least 5 hours per week of planned educational experiences (not including change-of-shift reports). These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administrative seminars, and research methods. They may include but are not limited to problem-based learning, laboratory research, and computer-based instruction, as well as joint conferences cosponsored with other disciplines.

G. Additional Educational Experiences

The program curriculum must include pharmacology, pharmacokinetics, and drug interactions. This must be accomplished by (1) an affiliation with a school of pharmacy or department of pharmacology that provides regular didactic experience and consultation to residents or (2) the presence of a Doctor of Pharmacology or PhD pharmacologist as a participating member of the teaching faculty.

H. Additional Clinical Experiences

The program should provide the opportunity for the residents to maintain their primary board skills during training, but it may not require that residents provide more than 12 hours per week of clinical practice not related to medical toxicology as a condition of the educational program.

I. Communication and Teaching Experience

Residents must have progressive experience and responsibility for the teaching of medical toxicology to health care professionals. Residents in the second year of training should participate in the teaching and supervision of first-year residents and should be responsible for regular contributions to formal didactic experiences within the training program, in other academic depart-

ments in the institution(s), and in the community. Research leading to publication should be encouraged.

V. Board Certification

Those planning to seek a subspecialty certificate from their primary board should communicate with the administrative officer of the board to ascertain the full requirements.

ACGME: June 1998 Effective: June 1998

Program Requirements for Residency Education in Undersea and Hyperbaric Medicine (Preventive Medicine)

I. Introduction

A. Definition and Scope of the Specialty

1. The subspecialty of Undersea and Hyperbaric Medicine is a discipline that deals with the prevention of injury and illness due to exposure to environments in which the ambient pressure is increased, such as in diving or hyperbaric chamber exposure, and the therapeutic use of high environmental pressure and the delivery of oxygen under high pressure to treat disease. The scope of the subspecialty emphasizes the occupational, environmental, safety, and clinical aspects of diving, hyperbaric chamber operations, compressed air work and hyperbaric oxygen therapy. A program in undersea and hyperbaric medicine must provide a broad educational experience and a sound basis for the development of physician practitioners, educators, researchers, and administrators capable of practicing in academic and clinical settings.
2. Training in undersea and hyperbaric medicine must teach the basic skills and knowledge that constitute the foundations of undersea and hyperbaric medicine practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. It is expected that the resident will develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render the resident capable of independent practice in undersea and hyperbaric medicine.
3. Programs must offer a broad education in undersea and hyperbaric medicine to prepare the resident to function as a specialist capable of providing comprehensive patient care.

B. Duration and Scope of Education

1. The length of the educational program must be 12 months. The program must be associated with an ACGME-accredited residency program in emergency medicine or preventive medicine.
2. Prior to entry into the program, each prospective resident must be notified in writing of the required length of the program.

II. Institutional Organization

- A. The sponsoring institution must provide sufficient faculty, financial resources, clinical, research, and library facilities to meet the educational needs of the residents and enable the program to comply with the requirements for accreditation. It is highly desirable that the program structure include the participation of a medical school.
- B. The program should be based at a primary hospital (hereafter referred to as the primary clinical site). More of the didactic and

clinical experiences should take place at the primary clinical site than at any other single site. Educationally justified exceptions to this requirement will be considered.

- C. The following services must be organized and provided at the primary clinical site:

1. Twenty-four hour availability of hyperbaric medicine services, with at least 100 consultations and 1000 patient treatments per year
2. An emergency service for both adult and pediatric patients, adult and pediatric inpatient facilities, and adult and pediatric surgical and intensive care facilities
3. Inpatient and outpatient facilities with staff who consult the hyperbaric medicine service

- D. Participating Institutions

1. All participating institutions must provide appropriate support services to ensure an adequate educational experience. This includes support personnel and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.
 2. The program must develop an institutional affiliation with a clinical facility to provide residents with clinical experience in critical care areas should this experience not be provided at the sponsoring institution.
 3. Approval of participating institutions will be based on the presence of sufficient opportunities for residents to manage, as appropriate, either as primary physicians or consultants, the entire course of therapy, including critically ill patients in both adult and pediatric categories.
 4. Programs using multiple participating institutions must ensure the provision of a unified educational experience for the residents. Each participating institution must offer significant educational opportunities to the overall program that do not duplicate experiences otherwise available within the program. An acceptable educational rationale must be provided for each participating institution.
 5. Participating institutions must not be geographically distant from the sponsoring institution unless special resources are provided that are not available at the primary clinical site.
 6. The number and geographic distribution of participating institutions must not preclude all residents' participation in conferences and other educational exercises.
 7. A letter of agreement with each institution participating in the program must be developed to include:
 - a. The educational objectives and the method to accomplish and to evaluate each objective;
 - b. The resources and facilities in the institution(s) that will be available to each resident, including but not limited to library resources;
 - c. The resident's duties, responsibilities, and duty hours for the assignment; and
 - d. The relationship that will exist between undersea and hyperbaric medicine residents and the faculty in other programs.
 8. Participation by any institution that provides 3 months or more of education in a program must be approved by the RRC.
- E. Appointment of Subspecialty Residents
 1. The Residency Review Committee (RRC) will approve the number of undersea and hyperbaric medicine residents in the program. Approval will be based on the number, qualifications, and scholarly activity of the faculty; the volume and variety of the patient population available for education purposes; and the institutional resources available to the program.
 2. Prerequisite training for entry to an undersea and hyperbaric medicine program is contingent upon completion of an

ACGME-accredited residency program involving a minimum of 12 months of preventive, primary, surgical, and/or critical care training.

F. Resident Policies

1. Supervision

- a. All patient care services must be supervised by appropriately qualified faculty.
- b. The program director must ensure, direct, and document proper supervision of residents at all times.
- c. Residents must be provided with rapid, reliable systems for communicating with faculty. Supervising faculty with appropriate experience for the severity and complexity of patient conditions and treatments must be available at all times.

2. Duty hours and conditions of work

It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on-call in the hospital no more often than every third night.

III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director

- a. Licensure to practice medicine in the state where the institution that sponsors the program is located.
- b. Certification in undersea and hyperbaric medicine by the American Board of Emergency Medicine or the American Board of Preventive Medicine or possess appropriate educational qualifications as determined by the RRC.
- c. Appointment in good standing to the medical staff of an institution participating in the program.

2. Responsibilities of the program director

- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and faculty. It should be readily available for review.
- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the faculty and other program personnel at each institution participating in the program.
- d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
- e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- f. The program director, with participation of the faculty, shall
 - 1) at least quarterly evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
 - 2) communicate each evaluation to the resident in a timely manner;

- 3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
- 4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
- 5) provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- h. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Preparation of an accurate statistical and narrative description of the program as requested by a review committee.
- j. Notification of the RRC regarding major programmatic changes.

B. Faculty

- 1. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all the residents in the program at each participating institution. The faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director, one additional faculty member must possess certification by the American Board of Emergency Medicine or the American Board of Preventive Medicine in undersea and hyperbaric medicine or possess appropriate educational qualifications as determined by the RRC.
- 2. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
- 3. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all of the faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity.
- 4. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
- 5. Consultants from appropriate medical subspecialties should be available for consultation and didactic teaching, including those with experience and understanding of such fields of medicine as preventive medicine, infectious disease, orthopaedics, vascular surgery, plastic surgery, anesthesiology, critical care, emergency medicine, ophthalmology, oral surgery, podiatry, pulmonary medicine, otolaryngology, rehabilitative medicine, and other disci-

plines as they pertain to the comprehensive treatment of the clinical hyperbaric patient.

C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. The Educational Program

The program director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency should be related to the program goals. Clinical, basic science, and research conferences as well as seminars and critical literature review activities pertaining to the subspecialty must be conducted regularly and as scheduled. The program design and/or structure must be approved by the RRC.

A. The curriculum must include the following academic and clinical content

1. History of undersea and hyperbaric medicine
 2. Decompression theory and physiology, including theory and application of decompression tables
 3. Oxygen physiology in normobaric, hyperbaric and hypobaric environments; oxygen toxicity
 4. Pathophysiology of decompression illness and arterial gas embolism, including iatrogenic gas embolism
 5. Diving operations and human performance in the hypo/hyperbaric environments
 6. Medical examination/standards for divers and personnel working in hypo/hyperbaric environments
 7. Effects of hyperbaric oxygenation on infectious disease
 8. Principles of treatment of toxic gas exposures, such as carbon monoxide poisoning
 9. Effects of hyperbaric oxygenation on irradiated tissues and ischemic wounds
 10. Tissue oxygen measurement
 11. Multiplace and monoplace hyperbaric chamber operations, including safety considerations, management of critically ill patients in the hyperbaric environment, clinical monitoring, and mechanical ventilation
 12. Evaluation of the patient for clinical hyperbaric treatment, including contraindications and side effects
 13. Hazards of standard electrical therapies in hyperbaric environment, e.g., electrical defibrillation and precautions
 14. Emergency procedures for both monoplace and multiplace installations
 15. Saturation diving covering air quality standards and life support requirements, including the physiology and practical (medical) issues associated with heliox, trimix, and hydrogen/oxygen/helium mixtures
 16. Systems management, including administrative aspects of chamber operations, such as billing issues, quality assurance, and peer review
- B. Residents must have a minimum of 10 months of clinical experience as the primary or consulting physician responsible for providing direct/bedside patient evaluation and management. A maximum of 2 elective months can be offered in appropriate related areas.
- C. Residents must have opportunities to evaluate and manage patients with both acute and non-emergency indications for hyperbaric oxygen therapy. The resident should have the opportunity to evaluate and manage 100 or more patients, including responsibility for providing bedside evaluation and management. This experience should be organized for a minimum of 10 months or its full-time equivalent and cover IV.C.1 through IV.C.8. Up to 2 months of elective time may be allowed for additional training in

areas of relevance to undersea and hyperbaric medicine, such as critical care, surgery, submarine medicine, toxicology, or radiation oncology. Competencies that will be attained at the end of the 12-month training period must include:

1. Assessment of prospective divers for fitness to dive
2. Assessment of hyperbaric chamber personnel for fitness to participate as a tender in a multiplace hyperbaric chamber
3. Assessment of patients with suspected decompression sickness or iatrogenic gas embolism and prescription of treatment
4. Assessment of patients with specific problem wounds with respect to indications for hyperbaric oxygen therapy, fitness for hyperbaric treatment, and prescription of treatment
5. Assessment and management of patients with complications of hyperbaric therapy
6. Management of critically ill patients in the hyperbaric environment
7. Knowledge of the indications for hyperbaric oxygen therapy
8. Assessment of patients with toxic gas exposure (e.g., carbon monoxide)

D. Planned Educational Conferences

Each program must offer to its residents an average of at least 5 hours per week of planned educational experiences (not including change-of-shift reports). These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administrative seminars, and research methods. They may include but are not limited to problem-based learning, laboratory research, and computer-based instruction, as well as joint conferences cosponsored with other disciplines.

E. Additional Clinical and Educational Experiences

The program should provide the opportunity for the residents to maintain their primary board skills during training, but it may not require that residents provide more than 12 hours per week of clinical practice not related to hyperbaric medicine as a condition of the educational program.

F. Teaching and Research Experience

Residents must have progressive experience and responsibility for the teaching of undersea and hyperbaric medicine to health care trainees and professionals, including medical students, interns, residents, and nurses. Residents should participate in the formal didactic teaching program. Research leading to publication should be encouraged.

V. Facilities and Resources

A. Space and Equipment

Adequate space must be available for faculty to perform their educational, research, and administrative functions. A library containing hyperbaric texts and journals must be readily available. Adequate conference and teaching space must be available for didactic and case conferences.

B. Inpatient, Ambulatory Care, Laboratory, and Other Clinical Facilities

A hyperbaric chamber must be available that is capable of treatment of the full range of conditions amenable to hyperbaric oxygen therapy. A full service clinical laboratory must be available at all times that is capable of measurement of chemist, blood indices, and microbiology of patients needing hyperbaric therapy. Radiologic services must be available within the institution at all times. Inpatient and outpatient facilities, including intensive care units capable of addressing the needs of patients with respiratory poisons, gas forming infections, wound healing problems, gas embolism, and other conditions requiring hyperbaric treatment, must be available.

C. Patient Population

There shall be sufficient patients of all ages and both sexes with medical and surgical conditions requiring hyperbaric therapy. Patients with necrotizing infections, carbon monoxide and cyanide poisoning, diving problems, gas embolism, and osteomyelitis must be present in the patient population.

D. Support Services

Support services must include physical therapy, social services, occupational medicine, and psychologic and psychological testing services.

VI. Certification

Those planning to seek a subspecialty certificate from their primary board should communicate with the administrative officer of the Board to ascertain the full requirements.

ACGME: February 2002 Effective: February 2002

Program Requirements for Residency Training in Psychiatry

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction**A. Definition**

An approved residency program in psychiatry must provide an educational experience designed to ensure that its graduates will possess sound clinical judgment, requisite skills, and a high order of knowledge about the diagnosis, treatment, and prevention of all psychiatric disorders, together with other common medical and neurological disorders that relate to the practice of psychiatry. Although residents cannot be expected to achieve the highest possible degree of expertise in all of the diagnostic and treatment procedures used in psychiatry in 4 years of training, those individuals who satisfactorily complete residency programs in psychiatry must be competent to render effective professional care to patients. They must, furthermore, have a keen awareness of their own strengths and limitations, and of the necessity for continuing their own professional development. The didactic and clinical program must be of sufficient breadth and depth to provide residents with a thorough and well-balanced presentation of psychological, sociocultural, and neurobiological observations, theories and knowledge of major diagnostic and therapeutic procedures in the field of psychiatry. The program must also provide the education and training necessary to understand the major psychiatric literature, to evaluate the reliability and validity of scientific studies, and to incorporate appropriately new knowledge into the practice of medicine.

Programs are expected to operate in accordance with the AMA Principles of Ethics with Special Annotations for Psychiatry, and to ensure that the application and teaching of these principles are an integral part of the educational process.

B. Duration and Scope of Education**1. Admission Requirements**

Physicians may enter psychiatry programs at either the first-year or second-year postgraduate level. Physicians may enter programs at the second-year postgraduate level only after successful completion of one of the following:

- a) one clinical year of training in a program in internal medicine, family practice, or pediatrics accredited by the Accreditation Council for Graduate Medical Education (ACGME);
 - b) A transitional year program accredited by the ACGME;
 - c) one year of an ACGME-accredited residency in a clinical specialty requiring comprehensive and continuous patient care;
- For physicians entering at the PG-2 level, the PG-1 year may be credited toward the 48-month requirement

2. Length of the Program

- a) A complete psychiatry residency is 48 months. Twelve of these months may be spent in an ACGME-approved child and adolescent psychiatry residency. Accreditation by the ACGME is required for all years of the training program. Programs may not permit residents to use vacation time or other benefit time to advance the date of graduation from training. Although residency is best completed on a full-time basis; part-time training at no less than half time is permissible to accommodate residents with personal commitments (e.g., child care).
- b) Any program that alters the length of training beyond these minimum requirements must present a clear educational rationale consistent with the Program Requirements and objec-

- tives for residency training. The program director must obtain the approval of the sponsoring institution and the Residency Review Committee (RRC) prior to implementation and at each subsequent review of the program.
- c) Prior to entry into the program, each resident must be notified in writing of the required length of training for which the program is accredited. The required length of training for a particular resident may not be changed without mutual agreement during his or her program, unless there is a break in the resident's training or unless the resident requires remedial training.
 - d) Programs should meet all of the Program Requirements of Residency Training in Psychiatry. Under rare and unusual circumstances, programs of either one-year or 2-year duration may be approved, even though they do not meet all of the above requirements for psychiatry. Such one- or 2-year programs will be approved only if they provide some highly specialized educational and/or research programs. Also, such programs will be approved only if they ensure that residents will complete the didactic and clinical requirements outlined in the Program Requirements.
3. Program Format by Year of Training
- a) First Year of Training

A psychiatric first postgraduate-year must include at least 4 months in internal medicine, family practice, and/or pediatrics. This training must be in a clinical setting which provides comprehensive and continuous patient care.

 - (1) Neurology rotations may not be used to fulfill this 4-month requirement.
 - (2) One month, but no more, of this requirement may be fulfilled by an emergency medicine or intensive care rotation, provided the experience is predominantly with medical evaluation and treatment and not surgical procedures.
 - (3) A psychiatric first postgraduate-year should not include more than 6 months in psychiatry, and must not include more than 8 months in psychiatry.
 - (4) A minimum of 2 months of neurology, or its full-time equivalent on a part-time basis, is required prior to completion of training. It is highly desirable that this experience occur during a psychiatric first postgraduate-year, and it may include a maximum of one month of supervised inpatient or outpatient child neurology.
 - (5) The program director of the Department of Psychiatry must maintain contact with residents during the first postgraduate-year while they are on services other than psychiatry.
 - b) Second through Fourth Years of Training

Although some of the training described below may be offered in the first postgraduate-year, all must be completed prior to graduation from the program.

 - (1) The program must have an explicitly-described educational curriculum which covers the broad spectrum of clinical psychiatry as outlined in Section V B 1 a) through m).
 - (2) The formal didactic instruction must include regularly-scheduled lectures, teaching rounds, seminars, clinical conferences, and required-reading assignments covering the topics identified in Section V.
 - (3) There must be an educationally-sound balance among time spent in direct patient care, clinical and didactic teaching, and supervision. Formal educational activity shall have high priority in the allotment of the resident's time and energies. Service needs and clinical responsibilities must not prevent the resident from obtaining the requisite didactic educational activities and formal instruction.

- (4) Planned Educational Experiences. Each program must offer its residents planned and sufficient educational experiences. These educational experiences should include presentations based on a defined curriculum, journal review, administrative seminars, and research methods. They may include, but are not limited to, problem-based learning, laboratories, and computer-based instruction, as well as joint conferences cosponsored with other disciplines. The program should ensure that residents are relieved of non-emergent clinical duties in order to attend these planned educational experiences. Although release from some off-service rotations may not be possible, the program should require that each resident participate in at least 70% of the planned psychiatry educational experiences offered (excluding vacations). Attendance must be monitored and documented.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

- 1. Programs should be conducted under the sponsorship of an institution that meets the Institutional Requirements that apply to residency programs in all specialties, as outlined in the *Essentials of Accredited Residencies*.
- 2. The administration of the sponsoring institution(s) should be understanding of and sympathetic to the attainment of educational goals, and should evidence its willingness and ability to support these goals philosophically and financially. The latter includes a commitment by the institution and by the program that embraces appropriate compensation for faculty and residents, adequate offices and educational facilities, support services, and opportunities for research.

B. Participating Institutions

- 1. **Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.**
- 2. **Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:**
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.
- 3. It is important that each affiliated institution demonstrate significant commitment to the overall program. The educational rationale for including each institution within the program must be stated. The number and distribution of participating training sites must not preclude satisfactory participation by residents in teaching and didactic exercises. Geographic proximity will be one factor in evaluating program cohesion, continuity, and *critical mass*. Affiliated training-sites will be evaluated on the basis of whether they contribute to a well-integrated educational program, with respect to both didactic and clinical experiences.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
The program director must devote at least one-half of his or her time to the administration and operation of the educational program, including didactic, supervisory, and clinical teaching activities. Programs with multiple institutions, many residents, and/or large clinical populations will require additional time.
2. The program director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents, as well as the maintenance of records related to program accreditation, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership. Frequent changes in leadership or long periods of temporary leadership usually have a negative effect on an educational program, and may adversely affect the accreditation status of the program.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise as well as documented educational, clinical, and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Psychiatry and Neurology, or possess appropriate educational qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site, and must be licensed to practice medicine in the state where the institution that sponsors the program is located (certain federal programs are exempted).
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents, in order to determine if an adequate educational environment exists to support these changes and if the program's clinical and ac-

ademic resources are adequate to support these changes.

Such changes, for example, include:

- (1) the addition or deletion of a participating institution;
- (2) a change in the format of the educational program, or the addition of any rotation of 6 months' full-time equivalent or longer;
- (3) a change in the approved resident complement for those specialties that approve resident complement;
- (4) any change in the total length of the program.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e) The program director must make resident appointments and assignments in accordance with institutional and departmental policies and procedures.
- f) The program director must supervise residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
- g) The program director must regularly evaluate residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- h) The program director must provide written information to applicants and residents regarding financial compensation, liability coverage, and the policies regarding vacations, sick leave, parental leave, and other special leaves.
- i) The program director must monitor residents' stress, including physical or emotional conditions which inhibit performance or learning, as well as drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents.
Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- j) The program director must maintain a permanent record of evaluation for each resident that is accessible to the resident and other authorized personnel. These records will be made available on review of the program.
- k) The program director will notify the Executive Director of the RRC in writing within 60 days of any major change in the program that may significantly alter the educational experience for the residents, including:
 - (1) changes in leadership of the department or the program;
 - (2) changes in administrative structure, such as an alteration in the hierarchical status of the program/department within the institution; and
 - (3) changes in the resident complement that would bring the number of residents below the required critical mass of 3 residents per year for 2 consecutive years.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, commitment to their own continuing medical education, participation in scholarly activities, and must support the goals and objectives of the educational program of which they are a member.
 - a) The residency must be staffed by a sufficiently-wide variety and appropriate number of capable psychiatrists and other

mental health professionals with documented qualifications to achieve the goals and objectives of the training program.

b) A written record of the educational responsibilities of all staff and faculty members (whether full-time or part-time) who participate directly in the education of residents is essential. This record should include the qualifications and experience of each faculty member, and the nature, as well as the frequency, duration, and site, of the teaching activity.

3. Qualifications of the physician faculty are as follows:

a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.

b) The physician faculty must be certified in the specialty by the American Board of Psychiatry and Neurology, or possess qualifications judged to be acceptable by the RRC.

c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

a) the scholarship of *discovery*, as evidenced by participation in clinical and/or basic research, peer-reviewed funding or by publication of original research in a peer-reviewed journal, monograph or book;

b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;

c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

There must be evidence of scholarly activity among the faculty psychiatrists. Although not all members of a faculty need to be investigators, scholarly activities should be present on a continuous basis. There should also be evidence of participation in a spectrum of academic and professional activities within the institution, as well as within local and national associations.

5. Qualifications of the nonphysician faculty are as follows:

a) Nonphysician faculty must be appropriately qualified in their field.

b) Nonphysician faculty must possess appropriate institutional appointments.

6. The faculty must participate regularly and systematically in the training program, and must be readily available for consultation whenever a resident is faced with a major therapeutic or diagnostic problem.

7. The faculty psychiatrists should actively participate in the planning, organization, and presentation of conferences as well as in clinical teaching and supervision.

8. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

9. The teaching staff must be organized, and have regular documented meetings to review program goals and objectives as well

as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. All programs must have adequate patient populations for each mode of required training and, minimally, must include organized clinical services in inpatient, outpatient, emergency, consultation/liaison, and child and adolescent psychiatry.

2. Training programs must have available to them adequate inpatient and outpatient facilities and other suitable clinical placements where the residents can meet the educational objectives of the program. The program should specify the facilities in which the goals and objectives are to be implemented.

3. All residents must have available to them offices adequate in size and decor to allow them to interview patients and accomplish their duties in a professional manner. The facility must also provide adequate and specifically-designated areas in which residents can perform basic physical examination and other necessary diagnostic procedures and treatment interventions.

4. Other Educational Resources

a) The administration of the facility where the program is located must provide ample space and equipment for educational activities. There must be adequate space and equipment specifically designated for seminars, lectures, and other teaching exercises.

b) The program must have available audiovisual equipment and teaching material such as films, audio cassettes, and videotapes, as well as the capability to record and play back educational videotapes.

c) Residents must have ready-access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases.

d) There must be access to an on-site library and/or to an electronic collection of appropriate texts and journals. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends. This library should provide:

(1) a substantial number of current basic textbooks in psychiatry, neurology and general medicine;

(2) a number of the major journals in psychiatry, neurology, and medicine sufficient for an excellent educational program;

(3) the capability to obtain textbooks and journals on loan from major medical libraries;

(4) the capability to perform MEDLINE or other medical information searches (or ready-access to a library that has this capacity); and

(5) access to the internet.

e) Each clinical service must have a mechanism that ensures that charts are appropriately maintained and readily accessible for regular review for supervisory and educational purposes. Randomly-selected charts will be reviewed at the time of survey.

E. Chair of Psychiatry

The chair of psychiatry must be a physician, and must either be certified by the American Board of Psychiatry and Neurology or judged by the RRC to possess appropriate educational qualifications.

F. Education Policy Committee

The director of the residency program should have an educational policy committee composed of members of the psychiatry program teaching staff that includes representation from the residents as well as a member of the teaching staff from each ACGME-approved subspecialty residency that may be affiliated with the psychiatry residency. There should be a written description of the committee, including its responsibility to the sponsoring department or institution and to the program director. This committee should participate actively in:

1. planning, developing, implementing, and evaluating all significant features of the residency program, including the selection of residents (unless there is a separate residency selection committee);
2. determining curriculum goals and objectives; and
3. evaluating both the teaching staff and the residents.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

1. The program director is responsible for maintaining a process for selecting resident physicians who are personally and professionally suited for training in psychiatry. It is highly desirable that each program have a residency selection committee to advise the program director.
2. All programs should state specifically and as clearly as possible the objectives and competencies required for successful completion of the program. These objectives and criteria should be made available to residency applicants.
3. The residency program director must accept only those applicants whose qualifications for residency include sufficient command of English to facilitate accurate, unimpeded communication with patients and teachers.
4. All programs should state specifically and as clearly as possible the objectives and competencies required for successful completion of the program. These objectives and criteria should be made available to residency applicants.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. In order to promote an educationally-sound, intellectually-stimulating atmosphere of effective and graded responsibility, programs must maintain a critical mass of at least 3 residents at each level of training. Programs that fall below this prescribed critical mass will be reviewed, and if this deficiency is not corrected, they may be cited for noncompliance, except when the number of PG-4 residents is below critical mass owing to residents entering child and adolescent psychiatry training.
2. Programs in which the number of residents exceeds the resources of patient population, faculty, or facilities for adequate training will be found deficient on the basis of size.
3. Any permanent change in the number of approved positions requires prior approval by the RRC (Programs seeking interim ap-

proval of a permanent increase in the number of approved resident positions should contact the Executive Director of the RRC). Prior approval is not required for temporary changes in resident numbers owing to makeup or remedial time for currently-enrolled residents, or to fill vacancies. Approval of permanent increases above the approved range of residents will require documentation that didactic and clinical training, including supervision, will not be compromised.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

1. The program must document the procedures used to select residents. Application records must contain complete information from medical schools and graduate medical education programs. A documented procedure must be in place for evaluating the credentials, clinical training experiences, past performance, and professional integrity of residents transferring from one program to another, including from a general psychiatry to a child and adolescent psychiatry program. This procedure must include solicitation and documentation of relevant information from the training directors of the previous programs participated in by the transferring resident. This documentation must specify all clinical and didactic experiences for which the resident has been given credit. Those residents selected at the second postgraduate-year or above must have satisfied the training objectives cited above for reaching that level of training.
2. A transferring resident's educational program must be sufficiently individualized so that he/she will have met all the educational and clinical experiences of the program, as accredited, prior to graduation.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments. All educational components of a residency program should be related to program goals.

a) Objectives of Training

(1) First Year

The training obtained during the first postgraduate-year should provide residents with medical skills most relevant to psychiatric practice. These include being able to:

- (a) perform a complete initial history and physical examination, including appropriate diagnostic studies;

- (b) diagnose common medical and surgical disorders, and to formulate appropriate initial treatment plans;
- (c) provide limited, but appropriate, continuous care of patients with medical illnesses, and to make appropriate referrals;
- (d) be especially conversant with medical disorders displaying symptoms likely to be regarded as psychiatric, and with psychiatric disorders displaying symptoms likely to be regarded as medical;
- (e) be especially cognizant of the nature of the interactions between psychiatric treatments and medical and surgical treatments; and
- (f) be able to relate to patients and their families, as well as other members of the healthcare team with compassion, respect, and professional integrity.

(2) Second Through Fourth Years

The program must provide a well-planned, high-quality curriculum that includes specific, assessable objectives for program components as well as criteria for graduation. These must be stated in writing and provided to each resident and faculty member. Residents must be taught to conceptualize all illnesses in terms of biological, psychological, and sociocultural factors that determine normal and abnormal behavior. They must be educated to gather and organize data, integrate these data within a comprehensive formulation of the problem to support a well-reasoned differential diagnosis, formulate a treatment plan, and implement treatment and follow-up care as required. The program must provide residents with sufficient opportunities to develop knowledge, clinical skills, sensitivity to cultural diversity, and professional principles.

(a) The didactic curriculum should include:

- i) critical appraisals of the major theories and viewpoints in psychiatry, together with a thorough grounding in the generally accepted clinical facts;
- ii) presentation of the biological, psychological, sociocultural, economic, ethnic, gender, religious/spiritual, sexual orientation, and family factors that significantly influence physical and psychological development throughout the life cycle;
- iii) presentation of the etiologies, prevalence, diagnosis, treatment, and prevention of all major psychiatric disorders in the current standard diagnostic statistical manual, including the biological, psychological, sociocultural, and iatrogenic factors that affect the long-term course and treatment of psychiatric disorders and conditions;
- iv) comprehension of the diagnosis and treatment of neurologic disorders commonly encountered in psychiatric practice, such as neoplasms, dementia, headaches, traumatic brain injury, infectious diseases, movement disorders, multiple sclerosis, Parkinson's disease, seizure disorders, stroke, intractable pain, and other related disorders;
- v) the use, reliability, and validity of the generally-accepted diagnostic techniques, including physical examination of the patient, laboratory testing, imaging, neurophysiologic and neuropsychological testing, and psychological testing;
- vi) the financing and regulation of psychiatric practice, including information about the structure of

- public and private organizations that influence mental health care;
- vii) medical ethics as applied to psychiatric practice;
- viii) the history of psychiatry and its relationship to the evolution of medicine;
- ix) the legal aspects of psychiatric practice;
- x) when and how to refer; and
- xi) research methods in the clinical and behavioral sciences related to psychiatry.

b) Clinical training should provide sufficient experiences in:

- i) the elements of clinical diagnosis with all age groups (of both sexes, to include some ethnic minorities), such as interviewing; clear and accurate history taking; physical, neurological, and mental status examination; and complete and systematic recording of findings;
- ii) relating history and clinical findings to the relevant biological, psychological, behavioral, and sociocultural issues associated with etiology and treatment;
- iii) formulating a differential diagnosis and treatment plan for all psychiatric disorders in the current standard nomenclature, taking into consideration all relevant data;
- iv) the major types of therapy, including short- and long-term individual psychotherapy, psychodynamic psychotherapy, family/couples therapy, group therapy, cognitive and behavior therapy, crisis intervention, drug and alcohol detoxification, and pharmacological regimens, including concurrent use of medications and psychotherapy;
- v) electroconvulsive therapy, a somatic therapy that is viewed as so important that its absence must be justified (Examples of other somatic therapies include biofeedback and phototherapy.);
- vi) providing continuous care for a variety of patients from different age groups, seen regularly and frequently for an extended time, in a variety of treatment modalities;
- vii) psychiatric consultation in a variety of medical and surgical settings;
- viii) providing care and treatment for the chronically-mentally ill with appropriate psychopharmacologic, psychotherapeutic, and social rehabilitative interventions;
- ix) psychiatric administration, especially leadership of interdisciplinary teams, including supervised experience in utilization review, quality assurance and performance improvement;
- x) providing psychiatric care to patients who are receiving treatment from nonmedical therapists and coordinating such treatment;
- xi) knowledge of the indications for and limitations of the more common psychological and neuropsychological tests;
- xii) critically appraising the professional and scientific literature; and
- xiii) teaching psychiatry to medical students, residents, and others in the health professions.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also pro-

vide residents with direct experience in progressive responsibility for patient management.

1. Clinical Experience

Carefully-supervised clinical care of patients is the core of an adequate program. The clinical services must be so organized that residents have major responsibility for the care of a significant proportion of all patients assigned to them, and have sufficient and ongoing high-quality supervision. The number of patients for which residents have primary responsibility at any one time must be adequate enough to permit them to provide each patient with appropriate treatment, and to have sufficient time for other aspects of their educational program. At the same time, the total number must be large enough to provide an adequate depth and variety of clinical experiences. The amount and type of patient care responsibility a resident assumes must increase as the resident advances in training. Each resident must have major responsibility for the diagnosis and treatment of a reasonable number and adequate variety of patients with both acute and chronic illnesses representing the major psychotic and nonpsychotic categories of psychiatric diagnoses/conditions. Adequate experience in the diagnosis and management of the medical and neurological disorders encountered in psychiatric practice also must be ensured. Each resident must have supervised experience in the evaluation and treatment of patients of different ages throughout the life cycle and from a variety of ethnic, racial, sociocultural, and economic backgrounds. It is desirable that residents have didactic learning and supervised experiences in the delivery of psychiatric services in the public sector and in managed care health systems. The clinical experiences are to be designed to develop the requisite skills as outlined in Section V A 2 a) (2) (b) above. Specific clinical experiences must include the following:

- a) **Neurology:** Two months of supervised clinical experience in the diagnosis and treatment of patients with neurological disorders/conditions. This 2-month experience (or its equivalent if done on a part-time basis) may occur in an inpatient, outpatient, or consultation/liaison setting. A maximum of one month of child neurology may be used toward the 2-month requirement. The 2-month training experience must provide opportunities to conduct initial evaluations, to participate in the subsequent diagnostic process, and to follow patients during the treatment and/or evolution of their neurological disorders/conditions. The training in neurology should have sufficient didactic and clinical experience for residents to develop expertise in the diagnosis of those neurological disorders/conditions that might reasonably be expected to be encountered in psychiatric practice and which must be considered in the differential diagnosis of psychiatric disorders/conditions.
- b) **Inpatient:** Significant responsibility for the assessment, diagnosis, and treatment of an appropriate number and variety of general psychiatric inpatients for a period of not less than 9 months, but no more than 18 months (or its full-time equivalent if done on a part-time basis). In general, it is highly desirable that the minimum general inpatient experience be 12 months, although it is recognized that in some settings other training opportunities might lead to the absolute minimum of 9 months. The experience must provide residents with sufficient opportunities to develop competence in the intensive biopsychosocial assessment and management of patients with acute mental disorders/conditions. It is recognized that the setting in which this care occurs may vary according to the health care delivery system. Rotations on specialized clinical services such as addiction psychiatry, adolescent psychiatry,

forensic psychiatry, geriatric psychiatry, research units, and day and/or partial hospitalization may not totally substitute for the general psychiatric inpatient experience. These may be included to meet the required minimum experiences, with adequate documentation to demonstrate that the experience on such specialized units is with acutely-ill patients, and is comparable in breadth, depth, and experience to training on general inpatient psychiatric units. Up to 3 months of rotations on specialized clinical services as noted above may be applied to the minimum 9-month requirement. However, no portion of this experience may be counted to meet the timed requirement in child and adolescent psychiatry. Experience in any special unit used to provide inpatient psychiatry must be under the direction and supervision of a psychiatrist.

- c) **Outpatient:** An organized, continuous, and supervised clinical experience in the assessment, diagnosis, and treatment of outpatients of at least one year (or its full-time equivalent if done on a part-time basis) that emphasizes a developmental and biopsychosocial approach to outpatient treatment. At least 80% of this experience must be with adult patients. A minimum of 20% of the overall experience (clinical time and patient volume) must be continuous and followed for a duration of at least one year. The outpatient requirement must include experience with a wide variety of disorders, patients, and treatment modalities, with experience in both brief and long-term care of patients, using individual psychotherapy (including psychodynamic, cognitive, behavioral, supportive, brief), and biological treatments and psychosocial rehabilitation approaches to outpatient treatment. Long-term psychotherapy experience must include a sufficient number of patients, seen at least weekly for at least one year, under supervision. Other long-term treatment experiences should include patients with differing disorders and patients who are chronically mentally ill. No portion of this experience may be counted to meet the timed requirements in child and adolescent psychiatry.
- d) **Child and Adolescent Psychiatry:** An organized clinical experience under the supervision of child and adolescent psychiatrists in the evaluation, diagnosis, and treatment of children, adolescents, and their families. Such experiences should be no less than 2 months full-time equivalent and involve a sufficient number and variety of patients, by both age and psychopathology, treated with a variety of interventional modalities. Residents should have experiences in determining the developmental status and needs for intervention with the children of some of their adult patients, and in consulting with these patients regarding the referral of their children for psychiatric services. Residents must have patient care responsibility under the supervision of child and adolescent psychiatrists who are certified in child and adolescent psychiatry by the American Board of Psychiatry and Neurology, or who possess appropriate educational qualifications. This 2-month experience may be provided in a variety of settings (e.g., outpatient). Although adolescent inpatient units may be used to satisfy a portion of this requirement, rotations to student health services may not.
- e) **Consultation/Liaison:** Supervised psychiatric consultation/liaison responsibility for a minimum of 2 months full-time equivalent, involving adult patients on other medical and surgical services. On-call experiences may be a part of this training. Up to one month of pediatric consultation/liaison psychiatry may be credited toward the 2-month requirement.
- f) **Emergency Psychiatry:** Supervised responsibility on an organized, 24-hour psychiatric emergency service that is responsi-

ble for evaluation, crisis management, and triage of psychiatric patients. Instruction and experience should be provided in the evaluation and management of suicidal patients. A psychiatric emergency service that is a part of, or works with, other medical emergency services is desirable because of the opportunities for collaboration and educational exchange with colleagues in other specialties. There must be organized instruction and supervised clinical opportunities available to residents in emergency psychiatry that lead to the development of knowledge and skills in the emergency evaluation, crisis management, and triage of patients. This should include the assessment and management of patients who are a danger to themselves or others, the evaluation and reduction of risk to caregivers, and knowledge of relevant issues in forensic psychiatry. There should be sufficient continued contact with patients to enable the resident to evaluate the effectiveness of clinical interventions. Although on-call experiences may be a part of this training, such experiences alone will not be sufficient to constitute adequate training in emergency psychiatry. A portion of this experience may occur in ambulatory urgent-care settings, but must be separate and distinct from the 12 months of training designated for the outpatient requirement.

- g) Community Psychiatry: Supervised responsibility for the care of persistently- and chronically-ill patients in the public sector, (e.g., community mental health centers and public hospitals and agencies, or other community-based settings). Experiential settings may include residential treatment centers, community mental health agencies, vocational rehabilitation centers, and senior citizen agencies. Opportunities should exist to consult with, learn about, and use community resources and services in planning patient care, and to work collaboratively with case managers, crisis teams, and other mental health professionals.
- h) Geriatric Psychiatry: One-month FTE-supervised clinical management of geriatric patients with a variety of psychiatric disorders, including familiarity with long-term care in a variety of settings. This may be fulfilled as part of the inpatient or outpatient requirement.
- i) Addiction Psychiatry: One-month FTE-supervised evaluation and clinical management of patients within inpatient and/or outpatient settings, and familiarity with rehabilitation and self-help groups. This may be fulfilled as part of the inpatient or outpatient requirement.
- j) Forensic Psychiatry: Experience under the supervision of a psychiatrist in evaluation of patients with forensic problems.
- k) Supervised clinical experience in the evaluation and treatment of couples, families, and groups.
- l) Psychological Testing: Supervised experience with the more common psychological test procedures, including neuropsychological assessment, in a number of cases sufficient to give the resident an understanding of the clinical usefulness of these procedures and of the correlation of psychological test findings with clinical data. Under the supervision and guidance of a qualified clinical psychologist, residents should have experience with the interpretation of the psychological tests most commonly used, some of which experience should be with their own patients.
- m) Supervised, active collaboration with psychologists, psychiatric nurses, social workers, and other professional and paraprofessional mental health personnel in the treatment of patients.

2. Didactic Components

The didactic and clinical curriculum must be of sufficient breadth and depth to provide residents with a thorough, well-balanced presentation of the generally-accepted theories, schools of thought, and major diagnostic and therapeutic procedures in the field of psychiatry.

- a) The curriculum must include a significant number of interdisciplinary clinical conferences and didactic seminars for residents in which psychiatric faculty members collaborate with neurologists, internists, and colleagues from other medical specialties and mental health disciplines.
 - b) Clinical training must include adequate, regularly scheduled, individual supervision. Each resident must have at least 2 hours of individual supervision weekly, in addition to teaching conferences and rounds, except when on non-psychiatric rotations.
 - c) Didactic instruction must be systematically organized, thoughtfully integrated, based on sound educational principles, and include prepared lectures, seminars, and assigned readings that are carried out on a regularly-scheduled basis. In a progressive fashion, it should expose residents to topics appropriate to their level of training, as outlined in Section V A 2. Staff meetings, clinical case conferences, journal clubs, and lectures by visiting professors are desirable adjuncts, but must not be used as substitutes for an organized didactic curriculum.
 - d) The curriculum must include adequate and systematic instruction in neurobiology; psychopharmacology, and other clinical sciences relevant to psychiatry, child and adult development; major psychological theories, including learning theory, psychodynamic theory, and appropriate material from the sociocultural and behavioral sciences such as sociology and anthropology. The curriculum should address development, psychopathology, and topics relevant to treatment modalities employed with patients with severe psychiatric disorders/conditions.
 - e) The residency program should provide its residents with instruction about American culture and subcultures, particularly those found in the patient community associated with the training program. This instruction should include such issues as gender, race, ethnicity, socioeconomic status, religion/spirituality, and sexual orientation. Many physicians may not be sufficiently familiar with attitudes, values, and social norms prevalent among various groups of contemporary Americans. Therefore, the curriculum should contain enough instruction about these issues to enable residents to render competent care to patients from various cultural and ethnic backgrounds. Understanding cultural diversity is an essential characteristic of good clinical care. The program must devote sufficient didactic training to residents whose cultural backgrounds are different from those of their patients, and provide a suitable educational program for them as well.
 - f) Didactic exercises must include resident presentation and discussion of clinical case material at conferences attended by faculty and fellow residents. This training should involve experiences in integrative case formulation that includes neurobiological, phenomenological, psychological, and sociocultural issues involved in the diagnosis and management of cases presented.
- ### 3. Clinical Records
- Clinical records must reflect the residents' ability to:
- a) record an adequate history and perform mental status, physical, and neurological examinations;
 - b) organize a comprehensive differential diagnosis and discussion of relevant psychological and sociocultural issues;

- c) proceed with appropriate laboratory and other diagnostic procedures;
- d) develop and implement an appropriate treatment plan followed by regular and relevant progress notes; and
- e) prepare an adequate discharge summary and plan.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

1. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.
2. The program must promote an atmosphere of scholarly inquiry, including the provision of access to ongoing research activity in psychiatry. Residents must be taught the design and interpretation of research studies, including the responsible use of informed consent, research methodology, and interpretation of data. The program must teach expertise in the critical assessment of new therapies and developments that are described in the literature. Residents must be advised and supervised by faculty members qualified in the conduct of research. Programs must have a plan to foster the development of skills for residents who are interested in conducting psychiatric research. This plan should include opportunities for conducting research under the supervision of a mentor and training in the principles and methods of research.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Other Required Components

1. Progressive Responsibility
Under supervision, resident clinical experience in patient management should demonstrate graduated and progressive responsibility.
2. Teaching Opportunities

Residents must be instructed in appropriate methods of teaching, and have ample opportunity to teach students in the health professions.

3. Electives
All programs should provide residents an opportunity to pursue individually chosen electives.
4. Record of Clinical Experience
There must be a record maintained of specific cases treated by residents, in a manner that does not identify patients, but which illustrates each resident's clinical experience in the program. This record must demonstrate that each resident has met the educational requirements of the program with regard to variety of patients, diagnoses, and treatment modalities. In the case of transferring residents, the records should include the experiences in the prior as well as the current program. This record must be reviewed periodically with the program director or a designee, and must be made available to the surveyor of the program.

F. Resident Policies

1. The program should not allow on-call schedules and activities outside the residency that interfere with education, clinical performance, or clinical patient care responsibilities.
2. Each resident must be given a copy of the *Essentials of Accredited Residencies* at the beginning of training.
3. Readily available procedures for assisting the resident to obtain appropriate help for significant personal or professional problems should be in place.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.

3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if un-

expected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident. These will be made available on review of the program. Regular, systematic, documented evaluation of the knowledge, skills, and professional growth of each resident, using appropriate criteria and procedures, must be maintained, including complete records of evaluations containing explicit statements on the resident's progress toward meeting educational objectives and his or her major strengths and weaknesses. Each evaluation should be communicated to the resident in an ongoing and timely manner.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.
- d) The program must demonstrate that residents have achieved competency in at least the following forms of treatment:
 - (1) brief therapy;
 - (2) cognitive-behavioral therapy;
 - (3) combined psychotherapy and psychopharmacology;
 - (4) psychodynamic therapy; and
 - (5) supportive therapy.
- e) The program must provide documented evidence to demonstrate that the proficiency/competence of each resident is assessed using techniques that may include supervisory reports, videotapes, oral examinations, case reports, patient care observations, or other methods.
- f) The program must provide opportunity for and document regularly scheduled meetings between the resident and the program director or designated faculty members. These meetings should be of sufficient frequency, length and depth to ensure that the residents are continually aware of the quality of their progress toward attainment of professional goals and objectives. These evaluation sessions should be held at least semiannually and preferably more frequently. The program should give residents opportunities to assess the program and the faculty in a manner that ensures resident confidentiality. Provision should be made for remediation in cases of unsatisfactory performance.

- g) The program must formally examine the cognitive knowledge of each resident at least annually in the PG-2 through PG-4 years, and conduct an organized examination of clinical skills at least twice during the 4 years of training. In a timely manner, the program must develop specific remedial plans for residents who do not perform satisfactorily. Residents must not advance to the next year of training, or graduate from the program, unless the outcome from the remedial plan results in the attainment of educational and clinical goals established for the program.
- h) Residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional, educational, and clinical growth.
- i) A written set of due-process procedures must be in place for resolving problems that occur when a resident's performance fails to meet required standards. These procedures must conform to those policies and procedures adopted by the sponsoring institution for the provision of due process to all residents training in sponsored programs, and must include the criteria for any adverse action, such as placing a resident on probation, or for terminating a resident whose performance is unsatisfactory. The procedures should be fair to the residents, to patients under their care, and to the training program. A copy should be provided to the residents at the beginning of training.
- j) Upon any resident's departure from a program (including by graduation), the program director must prepare a letter describing the nature and length of the rotations for which the resident has been given credit. If a resident departs the program without receiving full credit for all educational experiences, the reasons for withholding credit must be specified in the letter. The resident must be given the letter, and a copy must be retained in the resident's permanent file.
- k) When a resident leaves the program (including by graduation), the program director will affirm in the training record that there is no documented evidence of unethical or unprofessional behavior, nor any serious question regarding clinical competence. Where there is such evidence, it will be comprehensively recorded, along with the responses of the trainee. The evaluation should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
- l) For residents transferring to child and adolescent psychiatry, it is essential that the program director document the nature and length of the rotations for which the resident has been given credit and include a listing of any remaining requirements needed to successfully complete the general psychiatry program. The resident must be informed that eligibility for certification by the American Board of Psychiatry and Neurology is not possible unless all general psychiatry program requirements are met, even if the resident completes the requirements for training in child and adolescent psychiatry. A copy of this notification must be provided to the resident and a copy included in the resident's permanent file.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.
3. Programs must demonstrate that they have an ongoing mechanism to evaluate the effectiveness of their didactic and clinical teaching.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Inquiries Concerning Accreditation and Certification

- A. All inquiries concerning the accreditation of psychiatry residencies should be addressed to Executive Director, Residency Review Committee for Psychiatry, 515 N. State St. / Ste 2000, Chicago, IL 60610.
- B. All inquiries as to whether a physician is qualified to be admitted for examination for certification in psychiatry should be addressed to Executive Vice President, American Board of Psychiatry and Neurology, 500 Lake Cook Rd / Ste 335, Deerfield, IL 60015.

*ACGME: February 2000 Effective: January 2001
Minor Revision: ACGME: September 2004
Effective: November 12, 2004*

Program Requirements for Residency Education in Addiction Psychiatry (Psychiatry)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition of the Subspecialty

Addiction psychiatry is the psychiatry subspecialty that focuses on the prevention, evaluation, and treatment of Substance-related Disorders as well as related education and research. In addition, the addiction psychiatrist will be fully trained in techniques required in the treatment of the larger group of patients with dual diagnoses of addictive disorders and other psychiatric disorders.

B. Duration and Scope of Education

1. The training period in addiction psychiatry must be 12 months. Any program that extends training beyond these minimum requirements must present a clear educational rationale consonant with the special requirements and objectives for residency training in addiction psychiatry.
2. Training in addiction psychiatry that occurred during the general residency training will not be credited toward the one-year requirement.
3. Training is best accomplished on a full-time basis. If it is undertaken on a part-time basis, the 12-month program must be completed within a two-year period.
4. Prior to entry, each addiction psychiatry resident must be notified in writing of the required length of training for which the program is accredited. The required length of training may not be changed without mutual agreement unless there is a break in training or the resident requires remedial training.

C. Educational Goals and Objectives

1. The program must offer advanced training such that the knowledge, skills, clinical judgment, and attitudes essential to the practice of addiction psychiatry at the consultant level are provided.
2. Clinical experience must include the opportunity to evaluate and follow a variety of patients of both sexes, including adolescents, adults, and geriatric age groups spanning a broad range of diagnoses as enumerated in Program Requirements V.B.3. Residents must provide both primary and consultative care in both inpatient (including intensive care) and outpatient settings for patients with a wide variety of types of Substance-related Disorders. Where the primary site of training is devoted to the care of patients with only a particular form of Substance-related Disorders, appropriate affiliations must be arranged to ensure that adequate exposure is provided to a sufficient number and variety of patients with Substance-related Disorders.
3. Programs must be based on a structured written curriculum with well-defined goals and objectives. Clinical, basic science, and research conferences as well as seminars and critical literature review activities pertaining to Substance-related Disorders must be conducted regularly and as scheduled. The curriculum must include sufficient didactic content so that the graduates will have a comprehensive understanding of the pharmacology of all commonly abused substances, as well as the actions of pharmacological agents used to treat these conditions. Clinical experience and

didactics should be integrated to provide appropriate progressive learning.

4. Training must focus on the biopsychosocial and functional concepts of diagnosis and treatment as applied to inpatient, outpatient, and other treatment settings. Iatrogenic aspects of illness, as well as cultural, ethnic, racial, socioeconomic, ethical, and legal considerations that may affect or interact with the psychiatric care of these patients must be included in the program.
5. The program should present the epidemiology of Substance-related Disorders, such as cultural, ethnic, racial, gender, sexual orientation, socioeconomic, and familial factors affecting the availability and use of addicting substances.

II. Institutions

A. Sponsoring Institution

1. **One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.**
2. The program must be administratively attached to and sponsored by a core residency program in psychiatry that holds full accreditation from the ACGME. The program must function in close relationship to the general psychiatry residency.
3. The program must take place in facilities approved by the appropriate state licensing agencies and, where appropriate, by the Joint Commission on Accreditation of Healthcare Organizations.

B. Participating Institutions

1. **Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives.** The number of and distance between participating institutions shall not impair training and participation in conferences and other organized educational aspects of the program. **When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.**
2. **Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:**
 - a. **identify the faculty who will assume both educational and supervisory responsibilities for residents**
 - b. **specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;**
 - c. **specify the duration and content of the educational experience; and**
 - d. **state the policies and procedures that will govern resident education during the assignment.**
3. **Presence of Other Training Programs**
The addiction psychiatry program should provide peer interaction between its residents and those of other medical/surgical specialties. To achieve this goal an ACGME-accredited training program in at least one nonpsychiatric specialty, such as neurology, internal medicine, or family medicine should be present within the participating institutions of the program. Peer interaction among the residents should occur in the course of clinical and/or didactic work, but is most satisfactory when organized around joint patient evaluation and/or care.

III. Program Personnel and Resources

A. Program Director

1. **There must be a single program director responsible for the program. The person designated with this authority is ac-**

countable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).

2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a. The program director must be an active clinician and possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of addiction psychiatry, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. devote sufficient time to the program to ensure implementation and achievement of the educational goals and objectives.
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement
 On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
 - e. Supervising the recruitment, selection, and appointment process for applicants, including compliance with appropriate credentialing policies and procedures in accordance with institutional and departmental policies and procedures. The director must receive documentation from the prior general psychiatry program in order to verify satisfactory completion of all educational and ethical requirements for graduation, before appointment to the program.
 - f. Ensuring the provision of written descriptions of departmental policies regarding salary and benefits, due process, sickness and other leaves, on-call responsibilities, and vacation time to all residents upon appointment to the program. All residents

must be provided with written descriptions of the malpractice coverage provided for each clinical assignment.

- g. Monitoring the progress of each addiction psychiatry resident, including the maintenance of a training record that documents completion of all required components of the program as well as evaluations of residents' clinical and didactic work by supervisors and teachers. This record shall include a patient log which shall document for each addiction psychiatry resident that he/she has completed all clinical experiences required by the Program Requirements and the educational objectives of the program.
- h. Maintaining all other training records including those related to appointment, departmental processes regarding due process, sickness and other leaves, on-call responsibilities, and vacation time.
- i. Assuring the opportunity for residents to achieve the cognitive knowledge, interpersonal skills, professional attitudes, and practical experience required of an addiction psychiatrist providing acute and chronic care for the patient with Substance-related Disorders.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. In addition to the program director, there must be at least one other faculty member certified by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of addiction psychiatry. Programs with large patient populations, multiple institutions, and large resident complements will be expected to have the number of physician faculty appropriate to the program's size and structure.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of addiction psychiatry, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.
 Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that

promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. **Qualifications of the nonphysician faculty are as follows:**
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

1. Additional necessary professional, technical, and clerical personnel must be provided to support the program.
2. Addiction psychiatry residents must be provided with meaningful patient care experiences as part of an interdisciplinary care team. The resident should work in settings that include representatives from clinical disciplines such as social work, psychology, psychiatric nursing, occupational therapy, pharmacy, and nutrition, as well as clinicians in anesthesia (including pain medicine), emergency medicine, family practice, geriatrics, internal medicine, neurology, obstetrics-gynecology, surgical specialties, and pediatrics/adolescent medicine as appropriate for the care of the patient. In addition, residents should work with other staff such as substance abuse counselors and, where appropriate, with teachers.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

All elements of the program must be located in designated facilities based on written affiliation agreements between the participating institutions and the administration of the program.

1. **Inpatient Care Facility:** The sponsor of the program must be a part of, or affiliated with, at least one acute care general hospital with a full range of services, including medical and surgical services, intensive care units, emergency services, diagnostic laboratory, and imaging services. If the acute care hospital is specialized and does not itself have the full spectrum of services described above, the program must document that it has access for training purposes to other affiliated acute care facilities that have the services not present at the specialized facility.
2. **Partial Hospitalization and Day Treatment:** Programs must have access to a partial hospitalization and/or day treatment program (such as an intensive outpatient program). Such programs may be located in community-based institutions or within the sponsoring department of psychiatry in its acute care hospital. Exposure to self-help and other community programs (such as 12-step programs widely used by patients with Substance-related Disorders) must be provided.
3. **Ambulatory Care Service:** The program must provide experience in a multidisciplinary ambulatory care facility such as a methadone maintenance clinic, an alcohol treatment clinic, or other specialized outpatient program.
4. **Library:** Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
 - a. Library services should include computer support for electronic retrieval of information from medical databases.
 - b. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the training program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

5. **Ancillary Support Services:** At all participating facilities, there must be appropriate support services to ensure an adequate educational experience. This includes support personnel in all categories including clerical and laboratory and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. The addiction psychiatry resident must have satisfactorily completed an ACGME accredited general psychiatry residency prior to entering the program.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching. Any permanent changes in resident complement will require prior approval by the RRC.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents. At the same time, the presence of residents in addiction psychiatry must not dilute or otherwise detract from the didactic or clinical experience available to general psychiatry residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Curriculum Content

The field of addiction psychiatry requires knowledge of pharmacology, psychiatry, general medicine, as well as an understanding

of the interaction of these disciplines. Programs must include both direct experiences in clinical care as well as formal didactic conferences. Instruction and experience must include the performance of the mental status examination, a neuropsychiatric evaluation instrument such as the Mini-Mental Status Examination, community and environmental assessments, family and caregiver assessments, medical assessments, and physical and psychological functional assessments. These skills comprise the basis for the formal assessment of the addicted patient using a synthesis of clinical findings, historical and current information, as well as data from laboratory and other special studies.

- a. Residents must acquire knowledge and skills in the following areas:
 - 1) Knowledge of the signs and symptoms of the use and abuse of all of the major categories of substances enumerated in V.B.3.b, as well as knowledge of the types of treatment required for each.
 - 2) Knowledge of the signs of withdrawal from these major categories of substances, knowledge and experience with the range of options for treatment of the withdrawal syndromes, and the complications commonly associated with such withdrawal.
 - 3) Knowledge of the signs and symptoms of overdose; the medical and psychiatric sequelae of overdose, and experience in providing proper treatment of overdose.
 - 4) Management of detoxification: Inpatient management of Substance-related Disorders. Experience in working collaboratively with specialists in the emergency department and intensive care units in the diagnosis and management of acute overdose symptoms.
 - 5) Knowledge of the signs and symptoms of the social and psychological problems as well as the medical and psychiatric disorders which often accompany the chronic use and abuse of the major categories of substances.
 - 6) Experience in the use of psychoactive medications in the treatment of psychiatric disorders often accompanying the major categories of Substance-related Disorders.
 - 7) Experience in the use of techniques required for confrontation of and intervention with a chronic substance abuser, and in dealing with the defense mechanisms that cause the patient to resist entry into treatment.
 - 8) Experience in the use of the various psychotherapeutic modalities involved in the ongoing management of the chronic substance abusing patient, including individual psychotherapies (e.g., cognitive-behavioral therapy), couples therapy, family therapy, group therapy, motivational enhancement therapy, and relapse prevention therapy.
 - 9) Experience in working collaboratively with other mental health providers and allied health professionals, including nurses, social workers, psychologists, nurse practitioners, counselors, pharmacists, and others who participate in the care of patients with Substance-related Disorders.
 - 10) Knowledge and understanding of the special problems of the pregnant woman with Substance-related Disorders and of the babies born to these women.
 - 11) Knowledge of family systems and dynamics relevant to the etiology, diagnosis, and treatment of Substance-related Disorders.
 - 12) Knowledge of the genetic vulnerabilities, risk and protective factors, epidemiology, and prevention of Substance-related Disorders.
 - 13) Familiarity with the major medical journals and professional-scientific organizations dealing with research on the

understanding and treatment of Substance-related Disorders.

- 14) Critical analysis of research reports, as presented in journal clubs and seminars.
 - 15) Experience in teaching and supervising clinical trainees in the care of patients with Substance-related Disorders.
 - 16) Understanding of the current economic aspects of providing psychiatric and other healthcare services to the addicted patient.
 - 17) Knowledge of quality assurance measures and cost effectiveness of various treatment modalities for Substance-related Disorders.
2. Conferences
Conferences in addiction psychiatry, such as grand rounds, case conferences, reading seminars, and journal clubs, should be specifically designed to complement the clinical experiences. Regular attendance by residents and faculty should be documented.
 3. Clinical Experiences
The number and variety of new and follow-up patients spanning the life cycle from adolescence to old age must be sufficient to ensure an adequate outpatient and inpatient experience as specified in I.C.2. The spectrum of patients should include diverse socioeconomic, educational, and cultural backgrounds.
The training program must include the following clinical components:
 - a. Evaluation, consultation, and treatment of:
 - 1) Patients with primary Substance-related Disorders and their families.
 - 2) Medical and surgical patients in the emergency department, intensive care units, and general wards of the hospital with acute and chronic Substance-related Disorders, including acute intoxication and overdose.
 - 3) Psychiatric inpatients and outpatients with chemical dependencies and co-morbid psychopathology to include a broad range of psychiatric diagnoses, such as affective disorders, psychotic disorders, organic disorders, personality disorders, and anxiety disorders as well as patients suffering from medical conditions commonly associated with Substance-related Disorders such as hepatitis and HIV/AIDS.
 - 4) Medication dependent patients with chronic medical disorders/conditions (such as patients with chronic pain).
 - b. Exposure to patients with Substance-related Disorders related to the following substances:
 - 1) alcohol
 - 2) opioids
 - 3) cocaine and other stimulants
 - 4) cannabis and hallucinogens
 - 5) benzodiazepines
 - 6) other substances of abuse, including sedatives, hypnotics or anxiolytics
 - 7) miscellaneous/unusual, e.g., nutmeg, designer drugs, organic solvents/inhalants
 - c. Treatment by the resident of a minimum of 5 addicted outpatients with a variety of diagnoses requiring individual treatment for at least 6 months.
 - d. Rotations should provide residents with experience in evaluating acute and chronic patients in inpatient and outpatient settings. There should be an identifiable structured educational experience in neuropsychiatry relevant to the practice of addiction psychiatry that includes both didactic and clinical training methods. The curriculum should emphasize functional assessment, signs and symptoms of neuropsychiatric impairment associated with Substance-related Disorders, and

the identification of physical illnesses and iatrogenic factors that can alter mental status, and behavior.

- e. The program must provide specific experiences in consultation to acute and chronic medically ill patients with substance related disorders who are being treated on emergency, intensive care, medical and/or surgical services of a general hospital. Supervision of addiction psychiatry residents in their clinical evaluation of such patients, as well as in their consultative role, is essential. The program should provide residents with the opportunity to function at the level of a specialist consultant to primary care physicians and to intensive care specialists.
- f. Experience in working with multidisciplinary teams as a consultant and as a team leader, including the integration of recommendations and decisions from consulting medical specialists and other professionals in related health disciplines.
- g. Experience in working with patients who are participating in self-help programs.
- h. Experience with opiate replacement therapy.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must

recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Supervision must include observation, assessment, and demonstration of the residents' knowledge and skills in clinical evaluation, technical proficiency, and professional attitudes. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.
4. Each resident must have a minimum of two hours of individual supervision weekly, of which one hour may be group supervision.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

- b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.
5. Moonlighting
- a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
 - b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
 - c. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.
6. Oversight
- a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
 - b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.
7. Duty Hours Exceptions
- An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.
8. Presence of Other Training Programs
- The addiction psychiatry program should provide peer interaction between its residents and those of other medical/surgical specialties. To achieve this goal an ACGME-accredited training program in at least one nonpsychiatric specialty, such as neurology, internal medicine, or family medicine should be present within the participating institutions of the program. Peer interaction among the residents should occur in the course of clinical and/or didactic work, but is most satisfactory when organized around joint patient evaluation and/or care.
9. Resident Teaching Experiences
- The program should provide appropriate experiences designed to develop administrative and teaching skills for the addiction psychiatry residents. As the residents progress through the program, they should have the opportunity to teach personnel such as other residents, medical students, and other allied health professionals.
- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
 - b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations and written quarterly evaluations of the residents by all supervisors and the directors of clinical components of training. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
 - c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.
2. Final Evaluation
- The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.
- B. Faculty**
- The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.
- C. Program**
- The educational effectiveness of a program must be evaluated at least annually in a systematic manner.
1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
 2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by

the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Board Certification

Residents who plan to seek certification by the American Board of Psychiatry and Neurology in the subspecialty of addiction psychiatry should communicate with the office of the Executive Vice President/Secretary of the Board regarding the full requirements for certification, to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: February 2003 Effective: July 2003

Editorial Revision (Common Program Requirements)

January 2005

Program Requirements for Residency Education in Child and Adolescent Psychiatry (Psychiatry)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition

Child and adolescent psychiatry is a specialty of medical practice within psychiatry. The goal of residency training in child and adolescent psychiatry is to produce specialists in the delivery of skilled and comprehensive medical care of children and adolescents suffering from psychiatric disorders. The child and adolescent psychiatrist must have a thorough understanding of the development, assessment, treatment, and prevention of psychopathology as it appears from infancy through adulthood. He or she also should have the skills to serve as an effective consultant to primary care physicians, nonpsychiatrist mental health providers, schools, community agencies, and other programs serving children and adolescents.

Approved residencies in child and adolescent psychiatry must offer well-supervised and well-balanced clinical experiences with a continuum of care, which may include inpatients, day hospital patients, outpatients, and consultees, and must also provide a formal educational experience. The residency must provide a combination of didactic and clinical work that is both broad enough to ensure knowledge of the full spectrum of disorders of childhood and adolescence, and intensive enough to ensure thorough diagnostic, treatment, and consultative skills. Diagnostic and therapeutic experiences must be provided in sufficient number and depth with pre-school, grade school, and adolescent patients of both sexes and their families for the resident to understand the breadth of clinical problems the he or she will study and treat.

B. Duration and Scope of Training

1. In addition to the postgraduate first-year and a minimum of 2 years of accredited training in general psychiatry, 2 years of training in a child and adolescent psychiatry program accredited by the Accreditation Council for Graduate Medical Education (ACGME) is required.
2. To achieve greater flexibility in the sequence of residency training and to assist in recruitment, the 2-year child and adolescent psychiatry training experience may be initiated immediately fol-

lowing, or at any point beyond, the PGY-1 level in the psychiatry residency sequence. Training is best done full time, and it must be done in no more than two blocks. If done in two blocks, the blocks must not be more than 5 years apart, and the shorter block must not be less than 6 months long. At the discretion of the program director, training credit for part-time status may be given, as long as the training is half-time or more and is completed in 4 years or less.

3. In general, training in child and adolescent psychiatry obtained as part of the curriculum for general psychiatry training may not count toward residency training in child and adolescent psychiatry. However, certain clinical experiences with children, adolescents, and families taken as part of the child and adolescent psychiatry training program, limited to 1 month of child neurology, 1 month of pediatric consultation/liaison, 3 months of child and adolescent inpatient experience, 1 month of addiction psychiatry, up to 20% of outpatient experience as described in Section V B 1 c) of the Program Requirements for Psychiatry, and forensic psychiatry and community psychiatry experience may be designed to fulfill the Program Requirements in general psychiatry and child and adolescent psychiatry, if these experiences are limited to child and adolescent psychiatry patients, up to a maximum of 12 months. The program director must document areas for which credit is given in both programs. These experiences may not be used to reduce the total length of time devoted to training in child and adolescent psychiatry, which must remain at 2 years.

Prior to entry into the program, each resident must be notified in writing of the required length of training for which the program is accredited. The required length of training for a particular resident may not be changed during his or her program without mutual agreement, unless there is an interruption in his or her training or the resident requires remedial training.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions. The administration of the sponsoring institution(s) should understand the educational goals, and should evidence its willingness and ability to support these goals financially as well as philosophically.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.
3. It is important that each affiliated institution offer significant educational opportunities to the overall program. The number and distribution of participating training sites must not preclude sat-

isfactory participation by residents in teaching and training exercises. Geographic proximity will be one factor in evaluating program cohesion, continuity, and "critical mass." Affiliated training sites will be evaluated on the basis of whether they contribute to a well-integrated educational program with respect to both didactic and clinical experiences.

- C. In addition, each training program accredited for child and adolescent psychiatry must have a formal educational affiliation agreement with a general psychiatry residency program that is accredited for at least 3 years of training. The written agreement of such affiliation must be signed by the residency directors of both programs, and copies must be submitted for review by the Residency Review Committee (RRC).

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.

2. The program director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation and resident progress and performance, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:

- a) The program director must possess the requisite specialty expertise as well as documented educational, clinical, and administrative abilities.
- b) The program director must be certified in child and adolescent psychiatry by the American Board of Psychiatry and Neurology, or possess qualifications judged to be acceptable by the Residency Review Committee.
- c) The program director must be appointed in good standing and based at the primary teaching site, and must be licensed to practice medicine in the state where the institution that sponsors the program is located (certain federal programs are exempted).

4. Responsibilities of the program director are as follows:

- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, in consultation with the chair of division chief, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

The program director is responsible for selecting residents, planning the curriculum, evaluating individual resident progress, and maintaining records of these endeavors. The program director shall provide residents with the goals of training, their responsibilities, and the evaluation procedures.

- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually

both program and resident records through the ACGME's Accreditation Data System.

- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.

- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents, in order to determine if an adequate educational environment exists to support these changes and if the program's clinical and academic resources are adequate to support these changes. Such changes, for example, include:

- (1) the addition or deletion of a participating institution, to which residents are assigned half-time or more for 6 months or longer for the full-time equivalent of at least 4 months;
- (2) a change in the format of the educational program;
- (3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e) The program director must devote at least half-time to the training program, including teaching activities.
- f) The program director must select residents for appointment to the program in procedures.
- g) The program director must supervise residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
- h) The program director must implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- i) The program director must monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- j) The program director must provide an annual written evaluation of the quality of teaching and supervision of each of the teaching faculty.
- k) The program director must provide written information regarding financial compensation, liability coverage, and the policies regarding vacations, sick leave, and family leave, as well as other special leaves to residents and applicants who are interviewed.
- l) The program director must notify the executive director of the RRC in writing within 30 days of any major change in the program that may significantly alter the educational experience for the residents, including:
 - (1) changes in leadership of the department of the program;
 - (2) changes in administrative structure, such as an alteration in the status of the program/department within the institution;
 - (3) a reduction in any year of the critical mass of residents below four in the training program; and
 - (4) a reduction in the number of faculty below 3 full-time equivalent positions for more than 1 year.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty and other mental health professionals with sufficient breadth and depth of documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Psychiatry and Neurology, or possess appropriate educational qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.
6. The faculty must include a total of at least 3 full-time-equivalent, fully-trained child and adolescent psychiatrists who devote substantial time to the residency program, 2 of whom must be certified in child and adolescent psychiatry by the American Board of Psychiatry and Neurology or judged by the RRC to possess appropriate educational qualifications.
7. Psychiatric faculty must participate regularly and systematically in the training program. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
8. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day

activities of the program at that institution, with overall coordination by the program director.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Training programs must have adequate facilities and affiliations to meet the educational objectives of the program. Ample office space with readily accessible play materials must be available for each resident to see patients.
2. Space for physical and neurological examinations and appropriate medical equipment must be readily available. Access to laboratory testing also must be readily available.
3. There must be adequate space and equipment specifically designated for seminars, lectures, and other educational activities. The program must have available such basic teaching aids such as videotaping equipment or one-way mirrors.
4. The sponsoring institution must provide residents with ready access to a library that contains a substantial number of current basic textbooks and major journals in psychiatry, child and adolescent psychiatry, neurology, pediatrics, and general medicine, sufficient for an excellent educational program. The library must be capable of obtaining textbooks and journals on loan from major medical libraries and of carrying out MEDLINE and other medical information searches (or accessing a library that has this capacity), and it must be reasonably available to residents on weekends and during evening hours.

E. Head of Child and Adolescent Psychiatry

1. The head of the department, division, or section of child and adolescent psychiatry should be a fully-trained child and adolescent psychiatrist with documented clinical, educational, and administrative abilities and experience, and should be certified in child and adolescent psychiatry by the American Board of Psychiatry and Neurology or judged by the RRC to possess appropriate educational qualifications.
2. The head of child and adolescent psychiatry must be appointed to and in good standing with the medical staff of an institution participating in the program.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

The residency program director must accept only those applicants whose qualifications of residency include sufficient command of English to permit accurate and unimpeded communication.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

A program must have at least 4 residents in the 2-year training program. (This may not include those residents who participate in a triple board training format.) Peer interaction and the need for group discussion in seminars and conferences are crucial.

The number of residents from other graduate medical education programs and mental health disciplines who participate in the child and adolescent psychiatry educational curriculum should not be so great as to compromise the educational resources of the child and adolescent psychiatry residency.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

The program must document the procedures used to select residents in accordance with institutional and departmental policies and procedures. Application records must document information from graduate medical education programs. A documented procedure must be in place for checking the credentials, the clinical training experiences, and the past performance and professional integrity of residents transferring from one program to another, including from a general psychiatry program to a child and adolescent psychiatry program. This procedure must include solicitation and documentation of relevant information from the training directors of the previous programs participated in by the transferring resident.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and applicants who are interviewed, and must be reviewed with residents prior to their assignments.

All educational components of a residency program should be related to program goals. There must be sufficient stable leadership, faculty, clinical facilities, and affiliations to provide a consistent educational experience.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management. The program must have an explicitly-described educational curriculum composed of formal didactic instruction and a program of graduated learning and supervised clinical experience through the 2 years that is distributed to residents and faculty. The latter is to be marked by progressive responsibility for the diagnosis and treatment of preschool and grade school children, adolescents, and their families.

Educational quality must have the highest priority in the allotment of the residents' time and energy. The clinical responsibilities of residents must not infringe unduly on didactic activities.

The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Clinical Experience

- a) Clinical instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis.
- b) Goals that include knowledge, skill, and attitude objectives must be specified for each clinical rotation.
- c) Each resident must have responsibility for the evaluation and treatment of a sufficient number and adequate variety of patients representing the full spectrum of psychiatric illnesses in children and adolescents, including developmental and substance use disorders. The number of patients for whom residents have primary responsibility at any one time must permit them to provide each patient with appropriate treatment, as well as to have sufficient time for other aspects of their educational program. The depth and variety of clinical experiences must be adequate.
- d) Clinical records, recorded by the child and adolescent psychiatry residents, should document an adequate individual and family history, mental status, physical and neurological examinations when appropriate, supplementary medical and psychological data, and integration of these data into a formulation, differential diagnosis, and comprehensive treatment plan.
- e) Opportunities for the development of both conceptual understanding of and clinical skills in the major treatment modalities with children and adolescents, which include brief and long-term individual therapy, family therapy, group therapy, crisis intervention, supportive therapy, psychodynamic psychotherapy, cognitive-behavioral therapy, and pharmacotherapy must be provided. There must be opportunities for residents to be involved in providing continuous care for a variety of patients from different age groups, seen regularly and frequently for an extended time, in a variety of treatment modalities. Residents should have some experience with continuity of patient care across clinical programs providing different levels of care. Care for outpatients must include work with some child and adolescent patients for at least one year's duration.
- f) Residents must have an opportunity to evaluate and treat patients from diverse cultural backgrounds and varied socioeconomic levels.
- g) Training must include supervised, active collaboration with other professional mental health personnel, pediatricians, teachers, and other school personnel in the evaluation and treatment of patients.
- h) There must be teaching about the appropriate uses and limitations of psychological tests. Residents should have the opportunity to observe some of their patients being tested.
- i) There must be an organized teaching and clinical experience in pediatric neurology, mental retardation, and other developmental disorders.
- j) Residents must have experiences in the initial management of psychiatric emergencies in children and adolescents. This experience may occur in a variety of settings.
- k) Experience with acutely- and severely-disturbed children or young adolescents is an essential part of training. This experience must occur in settings with an organized treatment program, such as inpatient units, residential treatment facilities, partial hospitalization programs, and/or day treatment pro-

grams. This experience must be the full-time equivalent of not fewer than 4 or more than 10 months. The resident must be actively involved with the diagnostic assessment, treatment planning, and treatment provision for these acutely and severely disturbed patients.

- l) Residents must have experience as consultants in situations in which they do not primarily engage in treatment, but use their specialized knowledge and skills to assist others to function better in their roles. Training and experience in consultation to facilities serving children, adolescents, and their families must include:
 - (1) supervised consultation experience with an adequate number of pediatric patients in outpatient and/or inpatient medical facilities;
 - (2) supervised formal observation and/or consultation experiences in schools;
 - (3) supervised training and experience in legal issues relevant to child and adolescent psychiatry, which may include forensic consultation, court testimony, and/or interaction with a juvenile justice system; and
 - (4) training and experience in supervised consultation to community systems of care and their treatment components.
- m) Residents must have experience in administrative decision-making processes and practice management involving health care delivery and interactions with health care systems.

2. Didactic Curriculum

- a) Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis. Goals that include knowledge and attitude objectives must be specified for each course or seminar. Systematically-organized formal instruction (prepared lectures, seminars, assigned reading, etc.) must be integral to the residency. Staff meetings, clinical case conferences, journal clubs, and grand rounds are important adjuncts, but they must not be used as substitutes for an organized didactic curriculum.
- b) Emphasis on development is an essential part of training in child and adolescent psychiatry. The teaching of developmental knowledge and the integration of neurobiological, phenomenological, psychological, and sociocultural issues into a comprehensive formulation of clinical problems are essential. Teaching about normal development should include observation of and interaction with normal children of various ages.
- c) The didactic and clinical curriculum must be of sufficient breadth and depth to provide residents with a thorough, well-balanced presentation of the generally-accepted observations and theories, as well as the major diagnostic, therapeutic, and preventive procedures in the field of child and adolescent psychiatry.
- d) The curriculum must include adequate and systematic instruction in basic neurobiological, psychological, and clinical sciences relevant to psychiatry and in the application of developmental psychological and sociocultural theories relevant to the understanding of psychopathology. It must provide teaching about the full range of psychopathology in children and adolescents, including the etiology, epidemiology, diagnosis, treatment, and prevention of the major psychiatric conditions that affect children and adolescents.
- e) The curriculum must also include teaching in the ethical practice of child and adolescent psychiatry. There must as well be

instruction in diversity and cultural issues pertinent to children and adolescents.

- f) Residents must receive instruction in the recognition and management of domestic and community violence as it affects children and adolescents. This includes physical and sexual abuse as well as neglect.
- g) The opportunity for residents to be involved in research or scholarly activity must be available.
- h) The curriculum must include an adequate number of interdisciplinary clinical conferences and didactic seminars for residents, where faculty psychiatrists collaborate in teaching with colleagues from other medical specialties and mental health disciplines.
- i) There should be instruction in the principles and practice of utilization review, quality assurance, and performance improvement.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. Although not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states, and the application of current knowledge to practice;
2. participation in journal clubs and research conferences;
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals;
4. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings;
5. the offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research;
6. the provision of support for resident participation in scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. **Patient care** that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. **Medical Knowledge** about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. **Practice-based learning and improvement** that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;

4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Other Required Components

Teaching Opportunities

Opportunities for residents to teach community groups, medical students, and/or other residents should be available.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

Each resident must have at least 2 hours of individual supervision weekly, in addition to teaching conferences and rounds. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

5. The program should carefully monitor any professional activity outside the residency, and ensure that it does not interfere with education, performance, or clinical responsibility. The program should carefully monitor all on-call schedules and hours within and outside residency to prevent undue interference with education, performance, or clinical responsibility.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.

a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

The program will maintain records of all evaluations required in this section, and these will be made available on review of the program.

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance. The program director, with participation of members of the teaching staff, must regularly evaluate residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

3. The program must provide an opportunity for the resident and the program director or designated faculty members to meet regularly. These meetings, which must be documented, should be of sufficient frequency, length, and depth to ensure that the residents are continually aware of the quality of their progress toward attainment of program goals. At least semiannually, the program director must evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures. Provision should be made for remediation in cases of unsatisfactory performance.
4. Residents must be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
5. In addition to periodic assessments, an annual evaluation procedure is required, which must include a written examination of the knowledge base as well as a formal documented clinical skills examination.
6. Programs must develop at least one written core competency for its residents in each of the following areas:
 - a) Clinical science
 - b) Interpersonal skills and communication
 - c) Patient care
 - d) Practice-based learning and improvement
 - e) Professionalism and ethical behavior
 - f) Systems-based care

- c) Patient care
- d) Practice-based learning and improvement
- e) Professionalism and ethical behavior
- f) Systems-based care

The program must provide documented evidence to demonstrate that the proficiency and competence of each resident is assessed, using techniques that may include supervisory reports, videotapes, oral examinations, case reports, patient care observations, or other methods.

7. Evaluation must include a review of the resident's performance during the final period of training, and should verify that the resident has demonstrated sufficient professional ability to practice competently, ethically, and independently, based on the program's defined core competencies.
8. At the time of the resident's graduation or departure from the program, the program director will affirm in the training record whether there is documented evidence of unethical behavior, unprofessional behavior, or clinical incompetence. Where there is such evidence, it must be comprehensively recorded, along with the responses of the resident. This final evaluation should be part of the resident's permanent record maintained by the institution.
9. A written set of due-process procedures must be in place for resolving problems that occur if a resident's performance fails to meet required standards. These must include the criteria for any adverse action, such as placing a resident on probation, or for terminating a resident whose performance is unsatisfactory. The procedures should be fair to the resident, patients under care, and the training program. A copy should be provided to the residents at the beginning of training.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

The program director is responsible for the evaluation of faculty teaching and supervision. This must include an annual confidential written assessment of faculty members by the residents, a summary of which must be provided to faculty.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner. In particular, the quality of the overall educational program and the extent to which the educational goals have been met by residents must be assessed. Confidential written evaluations by residents must be utilized in this process. The teaching staff must annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and

the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Inquiries Concerning Accreditation and Certification

- A. All inquiries concerning the accreditation of child and adolescent psychiatry residency programs should be addressed to the Executive Director, Residency Review Committee for Psychiatry, 515 N. State St., Ste 2000, Chicago, IL 60610.
- B. All inquiries as to whether an individual physician is qualified to be admitted for examination for certification in psychiatry should be addressed to Executive Vice President, American Board of Psychiatry and Neurology, 500 Lake Cook Rd., Ste 335, Deerfield, IL 60015.

ACGME: February 2000 Effective: January 2001
Minor Revision: ACGME: September 2004
Effective: November 12, 2004

Program Requirements for Residency Education in Forensic Psychiatry (Psychiatry)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition of the Subspecialty

Forensic psychiatry is the psychiatry subspecialty that focuses on interrelationships between psychiatry and the law (civil, criminal, and administrative law), that include

1. the psychiatric evaluation of individuals involved with the legal system, or consultations on behalf of the third parties such as employers or insurance companies;
2. the specialized psychiatric treatment required by those who have been incarcerated in jails, prisons, or special forensic psychiatric hospitals;

3. active involvement in the area of legal regulation of general psychiatric practice; and
4. related education and research efforts.

B. Duration and Scope of Education

1. The training period in forensic psychiatry must be 12 months.
2. Training in forensic psychiatry that occurs during the general residency training will not be credited toward the one-year requirement.
3. Training is best accomplished on a full-time basis. If it is undertaken on a part-time basis, the 12-month program must be completed within a 2-year period.
4. Prior to entry, each forensic psychiatry resident must be notified in writing of the required length of training for which the program is accredited and the requirements for satisfactory completion of the program. Neither the required length of training for a particular individual nor the graduation requirements may be changed without mutual agreement during his or her program unless there is a break in his or her training or the individual requires remedial training.

C. Educational Goals and Objectives

1. The program must offer advanced training that affords sufficient opportunities for the resident to develop the knowledge, skills, clinical judgment, and attitudes essential to the practice of forensic psychiatry.
2. Clinical experience must include experiences in the following three areas:
 - a. forensic evaluation of a variety of subjects of both genders, including adolescent, adult, and geriatric age groups, who represent a broad range of mental disorders and circumstances, in both civil and criminal contexts;
 - b. consultation to general psychiatric services on issues related to the legal regulation of psychiatric practice, such as civil commitment, confidentiality, refusal of treatment, decision-making competence, guardianship, etc.;
 - c. treatment of persons involved in the criminal justice system. Appropriate affiliations must be arranged to ensure that adequate exposure to a sufficient number and variety of experiences is provided.
3. Programs must be based on a structured written curriculum with well-defined goals and objectives. Clinical case conferences and seminars dealing with topics such as law, ethics, the relevant basic and social sciences, and research must be conducted regularly and as scheduled. The curriculum must include sufficient didactic content so that graduates will be knowledgeable about the content outlined in V.B.1.a-e.
4. Training must focus on the social and legal context for forensic work, both civil and criminal. Instruction should take into account the sociocultural, ethnic, economic, and ethical considerations that affect mentally ill persons who come into contact with the legal system.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.
2. The program must be administratively attached to and sponsored by a core residency program in psychiatry that holds full accreditation from the ACGME.

3. The program must take place in facilities approved by state licensing agencies and, where appropriate, the Joint Commission on the Accreditation of Healthcare Organizations.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. The number of and distance between participating institutions should not be so great as to interfere with training and participation in conferences and other organized educational aspects of the program. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. Frequent changes in leadership or long periods of temporary leadership are undesirable and may adversely affect the accreditation status of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of forensic psychiatry, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. be an active clinician and must devote sufficient time to the program to ensure implementation of the educational goals and objectives.
 - e. participate in scholarly activities appropriate to the subspecialty such as local, regional, and national specialty societies; research; presentations; and publication.
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that par-

ticipate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

- b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
- e. Selecting residents for appointment to the program in accordance with institutional and departmental policies and procedures. The director must receive documentation from the general psychiatry program completed by an applicant to verify satisfactory completion of all educational and ethical requirements for graduation before the applicant is appointed to the program. Agreements with applicants made prior to the completion of the general residency must be contingent on this requirement.
- f. Monitoring the progress of each forensic psychiatry resident, including the maintenance of a training record that documents completion of all required components of the program as well as evaluations of residents' clinical and didactic work by supervisors and teachers. This record shall include a patient log that shall document that each resident has completed all clinical experiences required by the Program Requirements and the educational objectives of the program.
- g. Ensuring the provision of written descriptions of departmental policies regarding salary and benefits, due process, sickness and other leaves, on-call responsibilities, and vacation time to all residents on their appointment to the program. All residents must be provided with written descriptions of the malpractice coverage provided for each clinical assignment.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.

- b. The physician faculty must be certified in the specialty by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of forensic psychiatry, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
 - d. be additionally qualified by experience in forensic psychiatry to provide the expertise needed to fulfill the didactic, clinical, and research goals of the program.
 - e. include at least one certified child and adolescent psychiatrist.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
- a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.
- Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
- a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.
6. Programs with large patient populations, multiple institutions, and large resident complements will be expected to have additional faculty appropriate to their program's size and structure.
7. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director. The director of forensic psychiatry training at each participating institution shall be appointed by or with the concurrence of the forensic psychiatry program director.
8. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
9. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.
- C. Other Program Personnel**
- 1. Additional necessary professional, technical, and clerical personnel must be provided to support the program.
 - 2. In addition to the faculty psychiatrists, the faculty must include a lawyer and a forensic psychologist.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

- 1. All elements of the program must be located in designated facilities based on written affiliation agreements and must include experiences in the following three venues:
 - a. Facilities in which forensic psychiatric evaluations are performed on subjects with a broad variety of psychiatric disorders, where residents can learn evaluation techniques. These may include court clinics, inpatient forensic units, outpatient forensic clinics, and private practices.
 - b. Facilities that provide general psychiatric services to patients with a broad variety of psychiatric disorders, where residents can learn consultation regarding legal issues in psychiatric practice. These may include inpatient and outpatient facilities or may be specialized facilities that provide psychiatric care to correctional populations.
 - c. Facilities that treat persons in the correctional system, where residents can learn about the specialized treatment issues raised by these populations and settings. These may include prisons, jails, hospital-based correctional units, halfway facilities, rehabilitation programs, community probation programs, forensic - clinics, juvenile detention facilities, and maximum security forensic hospital facilities. Appropriate support services to ensure an adequate educational experience at all participating institutions must be available, including support personnel and a physically safe environment in which residents may carry out their clinical and educational functions.
- 2. Library
 - a. Residents must have ready access to a major medical library or on-line access to relevant medical and legal materials at the institution where the residents are located or through arrangement with convenient nearby institutions.
 - b. Library services should include the electronic retrieval of information from medical databases.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. The forensic psychiatry resident must have satisfactorily completed an ACGME accredited general psychiatry residency prior to entering the program. An excessively high rate of resident attrition from a program will be a cause of concern to the RRC.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching. Any permanent changes in resident complement require prior approval by the RRC.

C. Resident Transfer

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents. At the same time, the presence of residents in forensic psychiatry must not dilute or otherwise detract from the didactic or clinical experience available to general psychiatry residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Curriculum

The didactic curriculum must include the following components:

- a. A psychiatric curriculum that includes the
 - 1) history of forensic psychiatry;
 - 2) roles and responsibilities of forensic psychiatrists;
 - 3) assessment of competency to stand trial, criminal responsibility, amnesia, testamentary capacity, and civil competency;
 - 4) issues involved in the assessment of dangerousness;
 - 5) assessment of the accused sexual offender;
 - 6) evaluation and treatment of incarcerated individuals;
 - 7) ethical, administrative, and legal issues in forensic psychiatry;
 - 8) legal regulation of psychiatric practice;
 - 9) writing of a forensic report; and
 - 10) eyewitness testimony.
- b. A law curriculum that covers issues in the legal system related to forensic psychiatry, such as
 - 1) fundamentals of law, statutes, and administrative regulations;
 - 2) the structure of federal and state court systems;
 - 3) use of a law library or on-line legal reference services;
 - 4) theory and practice of sentencing of the convicted offender;
 - 5) basic civil procedure;
 - 6) basic criminal procedure;
 - 7) jurisdiction;
 - 8) responsibility;
 - 9) tort law;
 - 10) children's rights;
 - 11) family law;
 - 12) confessions;
 - 13) structure and function of juvenile systems; and
 - 14) structure and function of correctional systems.
- c. A civil law curriculum that includes issues such as
 - 1) conservators and guardianships;
 - 2) child custody determinations;

- 3) parental competence and termination of parental rights;
- 4) child abuse/neglect
- 5) psychiatric disability determinations;
- 6) testamentary capacity;
- 7) psychiatric malpractice;
- 8) personal injury litigation; and
- 9) developmental disability law, i.e., individualized educational needs and the right to the least restrictive environment for education.

d. A criminal law curriculum that includes issues such as

- 1) competence to stand trial;
- 2) competence to enter a plea;
- 3) testimonial capacity;
- 4) voluntariness of confessions;
- 5) insanity defense(s);
- 6) diminished capacity;
- 7) evaluations in aid of sentencing;
- 8) safe release of persons acquitted by reason of insanity; and
- 9) competence to be executed.

e. Conferences in forensic psychiatry, such as grand rounds, case conferences, readings seminars, and journal clubs, should be specifically designed to augment the clinical experiences. Regular attendance by the residents and the faculty should be documented.

2. Forensic experiences

- a. Forensic experiences must provide residents with sufficient opportunity for the psychiatric evaluation of individuals involving
 - 1) criminal behavior
 - 2) criminal responsibility and competency to stand trial,
 - 3) sexual misconduct,
 - 4) dangerousness, and
 - 5) civil law and regulation of psychiatry issues.
- b. Residents also must have experience in the review of written records, including clinical and legal documents, and in the preparation of written reports and/or testimony in a diversity of cases, for example:
 - 1) aiding the court in the sentencing of criminal offenders,
 - 2) domestic relations cases,
 - 3) personal injury cases,
 - 4) allegations of sexual abuse, and
 - 5) other cases involving ethical issues and legal regulation, such as involuntary hospitalization, confidentiality, right to treatment, right to refuse treatment, informed consent, and professional liability.
- c. Residents must have supervised experience in testifying in court or in mock trial simulations.
- d. Residents must have supervised training in the relevance of legal documents, such as police reports, court testimony, polygraphs, hypnosis, narcoanalysis, psychological and neuropsychological testing, brain-imaging techniques, and other procedures relevant to assessments and treatment in forensic psychiatry.
- e. Consultative experiences must provide residents with an opportunity to interact with clinicians regarding legal issues that arise in psychiatric practice. This can occur in inpatient or outpatient settings and should include patients from diverse socioeconomic, educational, ethnic, and cultural backgrounds, with a variety of diagnoses. Residents should have the opportunity to consult with clinicians regarding civil commitment and dangerousness, confidentiality, decision-making competence, guardianship, and refusal of treatment.
- f. Clinical placement must provide residents with experience in the evaluation and management of acutely and chronically ill

patients in correctional systems such as prisons, jails, community programs, and secure forensic facilities. There also must be experience in working with other professionals and personnel in both forensic and community settings. A sufficient number and variety of patients, ranging from adolescence to old age and of diverse backgrounds, should be provided to ensure an adequate experience. Residents must have at least 6 months' experience in the management of patients in correctional systems.

- g. Direct clinical work with children under the age of 14 years should be limited to residents who have previously completed ACGME-approved training in child and adolescent psychiatry or to residents who are under the supervision of a board certified child and adolescent psychiatrist or an individual who possesses qualifications judged to be acceptable by the RRC.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate

supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.
4. Each resident must have a minimum of two hours of individual supervision weekly, of which one hour must be individual and one hour may be group supervision.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

G. Presence of Other Training Programs

The forensic psychiatry program should provide peer interaction between its residents and those of other specialties. To achieve this goal, an accredited training program in at least one nonpsychiatric medical specialty should be present within the program's participating institutions. Peer interaction among the residents should occur in the course of clinical and/or didactic work, but it is most satisfactory when organized around joint patient evaluation and/or care. In addition, peer interaction with students in related fields, such as law, psychology, and social work, is highly desirable.

H. Resident Administrative and Teaching Experiences

The program should provide appropriate experience designed to develop the administrative and teaching skills of forensic psychiatry residents. As residents progress through the program, they should have the opportunity to teach personnel such as other residents, mental health professionals, and students.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations, and quarterly written evaluations of

the residents by all supervisors and the directors of clinical components of training. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.

- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Board Certification

Residents who plan to seek certification by the American Board of Psychiatry and Neurology in the subspecialty of forensic psychia-

try should communicate with the office of the Executive Vice President of the Board regarding the full requirements for certification to ascertain the current requirements for acceptance as a candidate for certification.

*ACGME: February 2003 Effective: June 2003
Editorial Revision (Common Program Requirements)
January 2005*

Program Requirements for Residency Education in Geriatric Psychiatry (Psychiatry)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition of the Subspecialty

Geriatric psychiatry is that area of psychiatry which focuses on prevention, diagnosis, evaluation, and treatment of mental disorders and signs/symptoms seen in older adult patients. An educational program in geriatric psychiatry must be organized to provide professional knowledge, skill, and opportunities to develop competencies through a well-supervised clinical experience.

B. Duration and Scope of Education

1. The training period in geriatric psychiatry must be 12 months. Any program that extends the length of the program beyond 12 months must present an educational rationale consistent with the Program Requirements and the objectives for resident education.
2. Training in geriatric psychiatry that occurred during general residency training will not be counted toward meeting the one-year requirement.
3. Training is best accomplished on a full-time basis. If it is undertaken on a part-time basis, the 12-month program must be completed within a two-year period.
4. Prior to entry in the program, each geriatric psychiatry resident must be notified in writing of the required length of training for which the program is accredited. The required length of training for a particular individual may not be changed without mutual agreement during his/her program unless there is a break in his/her training or the individual requires remedial training.

C. Educational Goals and Objectives

1. The goal of residency training in geriatric psychiatry is to produce specialists in the delivery of skilled and comprehensive psychiatric medical care of older adults suffering from psychiatric and neuropsychiatric disorders. Geriatric psychiatry programs must also provide advanced training for the resident to function as an effective consultant in the subspecialty. Programs must emphasize scholarship, self-instruction, development of critical analysis of clinical problems, and the ability to make appropriate decisions.
2. Clinical experience must include opportunities to assess and manage elderly inpatients and ambulatory patients of both sexes with a wide variety of psychiatric problems. Geriatric psychiatry residents must be given the opportunity to provide both primary and consultative care for patients in both inpatient and outpatient settings in order to understand the interaction of normal

aging and disease as well as to gain mastery in assessment, therapy, and management.

3. The program must include training in the biological and psychosocial aspects of normal aging; the psychiatric impact of acute and chronic physical illnesses; and the biological and psychosocial aspects of the pathology of primary psychiatric disturbances beginning in or continuing into older age.
4. There must be a focus on multidimensional biopsychosocial concepts of treatment and management as applied both in inpatient facilities (acute and long-term care) and in the community or home settings. There must also be emphasis on the medical and iatrogenic aspects of illness as well as on sociocultural, ethnic, economic, ethical, and legal considerations that may affect psychiatric management.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.
2. The program must be administratively attached to and sponsored by a core residency program in psychiatry that holds full accreditation from the ACGME. The program must function in close relationship with the general psychiatry residency.
3. The program must take place in facilities approved by the appropriate state licensing agencies and, where appropriate, by the Joint Commission on Accreditation of Healthcare Organizations.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program

director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:

- a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Psychiatry and Neurology (ABPN) in the subspecialty of geriatric psychiatry, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
- 4. Responsibilities of the program director are as follows:**
- a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e. Supervising the recruitment and appointment process for applicants, including compliance with appropriate credentialing policies and procedures in accordance with institutional and departmental policies and procedures. No applicants should be appointed to the program without written documentation of completion of a general psychiatry residency from the prior program director that verifies satisfactory completion of all educational and ethical requirements for graduation.
- f. Monitoring the progress of each geriatric psychiatry resident, including the maintenance of a training record that documents completion of all required components of the program as well as the evaluations of performance by supervisors and teachers. This record shall include a patient log that must document that each resident has completed all clinical experiences required by the Program Requirements and the educational objectives of the program.
- g. Assuring that residents are provided written descriptions of the departmental policies regarding due process, sickness and other leaves, on-call responsibilities, and vacation time upon appointment to the program. All residents must be provided with written descriptions of the professional liability coverage provided for each clinical assignment.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct

and supervise adequately all residents in the program. In addition to the program director, there must be at least one other faculty member who is certified by the American Board of Psychiatry and Neurology in the subspecialty of geriatric psychiatry or possess qualifications judged by the RRC to be acceptable.

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Psychiatry and Neurology in the subspecialty of geriatric psychiatry, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

1. Additional necessary professional, technical, and clerical personnel must be provided to support the program.
2. Geriatric Care Team

Geriatric psychiatry residents must be provided with meaningful patient care experiences as part of an interdisciplinary care team.

 - a. In addition to geriatric psychiatry, the Geriatric Care Team should include representatives from related clinical disciplines such as psychology, social work, psychiatric nursing, activity or occupational therapy, physical therapy, pharmacy, and nutrition.
 - b. A variety of individuals representing disciplines within medicine, such as family practice, internal medicine (including their geriatric subspecialties), neurology, and physical medicine and rehabilitation, should be available for participation

on the Geriatric Care Team as needed for patient care and teaching purposes.

- c. It is highly desirable that geriatric psychiatry residents have access to professionals representing allied disciplines (such as ethics, law, and pastoral care) as needed for patient care and teaching purposes.
- d. Geriatric psychiatry residents should be provided with opportunities to participate as members of medical geriatric teams in institutions where such teams are present.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. **An Acute Care Hospital:** The psychiatry department sponsoring the program must be a part of or affiliated with at least one acute care general hospital that has the full range of services usually ascribed to such a facility, including both medical and surgical services, intensive care units, emergency department, diagnostic laboratory and imaging services, and pathology department. If the acute care hospital is specialized (such as in geriatric or psychiatric care) and does not itself have the full spectrum of services described above, the program must document that it has access for training purposes to other affiliated acute care facilities that have the remaining general services not present at the specialized facility.
2. **A Long-Term Care Facility:** Inclusion of at least one long-term care facility is an essential component of the geriatric psychiatry program. Such facilities may be either discrete institutions separate from an acute care hospital or formally designated units or services within an acute care hospital. Suitable training sites include both nonpsychiatric facilities (such as a nursing facility or chronic care hospital) and psychiatric facilities.
3. **An Ambulatory Care Service:** The ambulatory care service must be designed to render care in a multidisciplinary environment such as a geriatric clinic, psychiatric outpatient department, or community mental health center where nonpsychiatric medical specialists are also available.
4. **Ancillary Support Services:** At all participating facilities, there must be sufficient administrative support to ensure adequate teaching facilities, appropriate office space, support personnel, and teaching resources.
5. **Library:** Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
 - a. Library services should include the electronic retrieval of information from medical databases.
 - b. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. The geriatric psychiatry resident must have satisfactorily completed an ACGME accredited general psychiatry residency prior to entering the program.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources

for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching. Any permanent changes in the resident complement will require prior approval by the Residency Review Committee.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents. At the same time, the presence of residents in geriatric psychiatry must not substantially dilute or otherwise detract from the didactic or clinical experience available to general psychiatry residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Components

a. The program curriculum must address, as a minimum, the following content and skill areas:

- (1) The current scientific understanding of aging and longevity, including theories of aging, epidemiology and natural history of aging, and diseases of the aged. This includes specific knowledge of: the effects of biologic aging on human physiology with emphasis on altered pharmacokinetics, pharmacodynamics, and sensory acuity in the elderly; the differences and gradations between normal and abnormal age changes with particular reference to such areas as memory and cognition, affective stability, personality and behavioral patterns, and sexuality. There must be an understanding of successful and maladaptive responses to stressors frequently encountered in older adults such as retirement, widowhood, role changes, interpersonal and health status losses, financial reverses, environmental relocations, and increased dependency.
- (2) The relevance of cultural and ethnic differences, and the special problems of disadvantaged minority groups, as

- these bear upon distinguishing and treating abnormal and maladaptive clinical changes as well as the use of psychosocial support services.
- (3) The epidemiology, diagnosis, and treatment of all major psychiatric disorders seen in the elderly. Such disorders, seen alone and in combination, typically include but are not limited to: affective disorders, dementias, delirium, late-onset psychoses, medical presentations of psychiatric disorders, iatrogenesis, adjustment disorders, anxiety disorders, sleep disorders, sexual disorders, substance-related disorders, personality disorders, and continuation of psychiatric illnesses that began earlier in life.
 - (4) The performance of mental status examination, including structured cognitive assessment, community and environmental assessment, family and caregiver assessment, medical assessment, and functional assessment. Such skills form the basis for formal multidimensional geriatric assessment using the appropriate synthesis of clinical findings and historical as well as current information acquired from the patient and/or relevant others (such as family members, care givers, and other health care professionals). The multidimensional assessment is essential to short term and long-term diagnostic and treatment planning; training must be provided in formulating these various assessments into an appropriate and coherent treatment plan.
 - (5) The formal and informal administrative leadership of the mental health care team, including skills in communicating treatment plans to the patient and the family.
 - (6) The selection and use of clinical laboratory tests; radiologic and other imaging procedures; and polysomnographic, electrophysiologic, and neuropsychologic tests as well as making appropriate referrals to and consultations with other health care specialists.
 - (7) The initiation and flexible guidance of treatment with the need for ongoing monitoring of changes in mental and physical health status and medical regimens. Residents should be taught to recognize and manage psychiatric comorbid disorders (for example, dementia and depression) as well as the management of other disturbances often seen in the elderly such as agitation, wandering, changes in sleep patterns, and aggressiveness.
 - (8) The recognition of the stressful impact of psychiatric illness on caregivers. Attention should be placed on the appropriate guidance of and protection of caregivers as well as the assessment of their emotional state and ability to function.
 - (9) Recognition and assessment of elder abuse and appropriate intervention strategies.
 - (10) The appropriate use of community or home health services, respite care, and the need for institutional long-term care.
 - (11) The management of the care of elderly persons with emotional or behavioral disorders, including the awareness of appropriate modifications in techniques and goals in applying the various psychotherapies (with individual, group, and family focuses) and behavioral strategies.
 - (12) The indications, side effects, and therapeutic limitations of psychoactive drugs and the pharmacologic alterations associated with aging, including changes in pharmacokinetics, pharmacodynamics, drug interactions, appropriate medication management and strategies to recognize and correct medication noncompliance. Attention should be given to the psychiatric manifestations of iatrogenic influences such as the multiple medications frequently taken by the elderly.
 - (13) The use of nonpharmacologic approaches with particular reference to applications and limitations of behavioral therapeutic strategies, physical restraints, and the appropriate use and application of electroconvulsive therapy in the elderly.
 - (14) The appropriate use of psychodynamic understanding of developmental problems, conflict, and adjustment difficulties in the elderly which may complicate the clinical presentation and influence the doctor-patient relationship or treatment planning.
 - (15) The appropriate use of psychotherapies as applied to the elderly.
 - (16) The ethical and legal issues especially pertinent to geriatric psychiatry, including competence, guardianship, right to refuse treatment, wills, informed consent, elder abuse, the withholding of medical treatments, and federal legislative guidelines governing psychotropic drug prescription in nursing homes.
 - (17) The current economic aspects of supporting services, including but not limited to Title III of the Older Americans Act, Medicare, Medicaid, and cost containment.
 - (18) The research methodologies related to geriatric psychiatry, including biostatistics, clinical epidemiology, medical information sciences, decision analysis, critical literature review, and research design (including cross-sectional and longitudinal methods).
- b. Conferences
Conferences in geriatric psychiatry, such as grand rounds, case conferences, readings seminars, and journal club should be specifically designed to augment the clinical experiences. Regular attendance by the residents and the faculty should be documented.
2. Clinical Components
 - a. Patient Population
There must be sufficient number and variety of patients in all institutions where training takes place to accomplish the educational goals. This should include not only the spectrum of psychiatric diagnoses, but also experience with a diversity of patients by sex, socioeconomic, educational, and cultural backgrounds.
 - b. The training program must include the following clinical components:
 - (1) Longitudinal Care Experience
All geriatric psychiatry residents should have the opportunity at a senior level of responsibility to follow and treat a sufficient number of patients requiring continuing care. This experience should be of sufficient duration for the resident to understand the problems and learn the skills associated with longitudinal management and treatment. Emphasis during this experience should be placed on approaches to consultation, diagnosis, and treatment of the acutely and chronically ill elderly in a diversity of care settings, both medical and psychiatric, including those with less technologically sophisticated environments. Training should include clinical experience in geriatric psychopharmacology; electroconvulsive therapy (ECT); the use of relevant individual and group psychotherapies; the use of activity therapies; the psychosocial impact of institutionalization; family dynamics in the context of aging, including intergenerational issues; teaching nonmental health professionals about mental health in the

aged; the bioethical dilemmas encountered when treating illness in the very old; and working within facilities that may have limitations, such as a decreased staff-patient ratio.

(2) Geriatric Psychiatry Consultation Experience

Attaining skills as a consultant is an essential part of training. Consultation experiences should be formally available on the nonpsychiatric services of an acute care hospital. They should include consultation to inpatient, outpatient, and emergency services. There should also be consultative experience in chronic care facilities. Familiarity with the organizational and administrative aspects of home health care services should be provided. Exposure to outreach services and crisis intervention services in both community and home settings should be provided.

(3) Other Medical Specialty Experience

There should be an identifiable, structured educational experience in neurology, physical medicine and rehabilitation, geriatric medicine or geriatric family practice, and palliative care relative to the practice of psychiatry that includes both didactic and clinical training methods. The curriculum should address functional assessment, altered signs and symptoms of physical illness that occur in the elderly, and the identification of physical illnesses and iatrogenic factors that can alter mental status and behavior.

c. Additional Educational Environment

The program must provide opportunities for the geriatric psychiatry resident to render continuing care and to exercise leadership responsibilities in organizing recommendations from the mental health team as well as in integrating recommendations and input from primary care physicians, consulting medical specialists, and representatives of other allied disciplines.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call ef-

fectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.
4. Each resident shall have a minimum of two hours of individual supervision weekly, of which one hour may be group supervision.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.

4. **At-home call (or pager call)** is defined as a call taken from outside the assigned institution.
- The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

- Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
- The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
- Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

- Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
- Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

G. Presence of Other Training Programs:

The program should provide peer interaction between its geriatric psychiatry residents and those of other medical specialties. To achieve this goal, there should be an ACGME-accredited training program in at least one relevant nonpsychiatric specialty such as neurology, internal medicine, family practice, geriatric medicine, or physical medicine and rehabilitation within the participating institutions of the geriatric psychiatry program. Peer interaction among the residents should occur in the course of clinical and/or didactic work but is most satisfactory when organized around joint patient evaluation and/or care.

H. Resident Teaching Experiences:

The program should provide appropriate experiences designed to develop the administrative and teaching skills of the geriatric psychiatry residents. As the geriatric psychiatry residents progress through the program, they should have the opportunity to teach

personnel such as other residents, medical students, nurses and allied health professionals.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations of the knowledge, skills and professional growth of the residents using appropriate criteria and procedures. More frequent evaluations should be scheduled and documented if necessary. In addition, residents should be evaluated quarterly by all supervisors and the directors of clinical components of training should be completed. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

- Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
- The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates

on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Psychiatry and Neurology in the subspecialty of geriatric psychiatry should communicate with the office of the Executive Vice President/Secretary of the Board regarding the full requirements for certification to ascertain the current requirements for acceptance as a candidate for certification.

*ACGME: February 2003 Effective: July 2003
Editorial Revision (Common Program Requirements)
January 2005*

Program Requirements for Residency Education in Pain Medicine (Psychiatry)

I. Scope and Duration of Training

A. Definition and Scope of the Specialty

Pain medicine is a discipline within the practice of medicine that specializes in the management of patients suffering from acute, chronic, and cancer pain. The management of acute and chronic pain syndromes is a complex matter involving many areas of interest and medical disciplines. Clinical and investigative efforts are vital to the progress of the specialty.

B. Duration of Training

Subspecialty training in pain medicine shall consist of 12 months of full-time training, beginning after satisfactory completion of a core residency program. At least 9 of the 12 months of training must be in clinical pain medicine. The remainder may be in clinical activities or research relevant to pain medicine. Assignments must not be made to activities not directly related to pain medicine.

II. Institutional Organization

A. Relationship to Core Program

Accreditation of a subspecialty program in pain medicine will be granted only when the program is in direct association with a core residency program in psychiatry accredited by the Accreditation Council for Graduate Medical Education (ACGME). If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in

which the pain medicine program is conducted. Rotations outside the institution in which the pain medicine program is based should not exceed 4 months.

B. Appointment of Residents

Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed increase in the number of residents must receive prior approval by the Residency Review Committee (RRC). Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.

C. Institutional Policy: Resources

Because pain medicine is a multidisciplinary approach to a common problem, there should be an institutional policy governing the educational resources committed to pain medicine that ensures cooperation of all involved disciplines.

III. Program Director/Faculty

A. Program Director

The program director must be a psychiatrist who has been certified in pain medicine by the American Board of Psychiatry and Neurology or possess appropriate educational qualifications as judged by the RRC. The program director should have appropriate experience in pain medicine as a clinician, administrator, and educator.

The subspecialty program director has responsibility for the teaching program in pain medicine subject to the approval of the director of the core residency program.

B. Medical Director

The medical director of the pain medicine service may be someone other than the subspecialty program director. Recognizing the institutional and multidisciplinary nature of pain medicine, the primary specialty of the medical director is not as important as the provision that such an individual represent the best-qualified person within the institution.

C. Faculty

Qualified physicians with expertise in pain medicine must have a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty residents in pain medicine must possess expertise in the care of patients with acute, chronic, and cancer pain problems. Such expertise frequently crosses specialty boundaries. Thus, the program is encouraged to include faculty from American Board of Medical Specialties (ABMS)-recognized medical specialties other than psychiatry. Where appropriate, supervision and teaching by faculty in these and other disciplines should be incorporated into the teaching program for subspecialty residents in pain medicine.

At least three faculty with expertise in pain medicine should be involved in teaching pain medicine residents, and these should equal two or more full-time equivalents. A ratio of at least one full-time equivalent faculty member to two subspecialty residents shall be maintained.

IV. Facilities and Resources

A. Space and Equipment

A pain medicine center (clinic) must be located within a hospital/medical office complex and must be designed specifically for the management of patient pain. Space for research and teaching conferences in pain medicine must be available.

Appropriate monitoring and life-support equipment must be immediately available wherever invasive pain medicine procedures are performed.

There must be appropriate on-call facilities for male and female residents and faculty.

B. Support Services

The following functions and support must be available:

1. Appropriate laboratory facilities
2. Appropriate radiologic imaging facilities
3. Psychiatric/psychological services, including behavioral modification
4. Physical and/or occupational therapy
5. Social services
6. Medical record keeping
7. Other services including vocational, nursing, pharmacy, dietary, pastoral, and end-of-life care, as well as liaison with hospice and abuse services
8. Appropriate electrodiagnostic facilities

C. Patient Population

For each resident in the subspecialty of pain medicine each year, there must be a minimum of 200 new patients. A minimum of 15% of the resident's experience should be spent in managing each of the three types of pain problems: acute pain, chronic pain, and cancer pain.

There must be ready access to consultation from other disciplines involved in pain medicine.

D. Library

There must be a departmental library with adequate material relevant to pain medicine. This may be supplemented but not replaced by private faculty book collections and hospital or institutional libraries. There must be adequate computer facilities available for each resident, including literature search engines and Internet services.

V. The Educational Program

A. Educational Environment

An accredited program in pain medicine must provide education, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated and prepared to apply acquired knowledge and talents independently.

B. Clinical Components

There should be exposure to a wide variety of clinical pain problems. Such exposure is necessary for the development of broad clinical skills and knowledge required for a specialist in pain medicine. Subspecialty training in pain medicine must include experience in the management of both inpatients and outpatients.

The resident must become familiar with theory, benefits, indications, and practical applications of the following procedures and techniques:

1. A broad range of peripheral nerve block procedures
2. Epidural and subarachnoid injections
3. Joint and bursal sac injections
4. Cryotherapeutic techniques
5. Epidural, subarachnoid, or peripheral neurolysis
6. Electrical stimulation techniques
7. Implanted epidural and intrathecal catheters, ports, and infusion pumps
8. Acupuncture and acupressure
9. Behavioral modification and biofeedback
10. Rehabilitative and restorative therapies

11. Hypnosis, stress management, and relaxation techniques
12. Trigeminal rhizolysis
13. Peripheral neurectomy and neurolysis
14. Sympathectomy techniques
15. Management of chronic headache
16. Alternative pain therapies
17. Neurosurgical ablative techniques
18. Prevention, recognition, and management of local anesthetic overdose, including airway management and resuscitation
19. Recognition and management of therapies, side effects, and complications of pharmacologic agents used in pain medicine

In addition to the above skills, the pain medicine resident must have significant experience in providing concise written and verbal consultation to other services, including evidence-based differential diagnosis, planning, potential complications of treatment(s), prognosis, and follow-up.

C. Didactic Components

The pain medicine curriculum must include the following topics in lectures and reading:

1. Anatomy and physiology of the pain projection system
2. Epidemiology, economic impact, and sociology of pain disorders
3. Pharmacology of opiates, nonnarcotic analgesics, nonsteroidal anti-inflammatory agents, and other medications commonly used in pain medicine
4. Pharmacology of centrally acting drugs used in pain medicine
5. Measurement and assessment of pain and function
6. Principles of neural stimulation
7. Indications and limitations of diagnostic testing, including electrodiagnostic evaluation
8. Nerve blocks in pain medicine
9. Neuroablative procedures
10. Behavioral, cognitive, and supportive psychotherapeutic treatment principles, including rehabilitation and the role of team management
11. Principles and techniques of acute pain medicine
12. Principles and techniques of cancer pain medicine, including death and dying, and the ethical principles involved in hospital, hospice, and home care
13. Principles and techniques of management of other chronic pain problems
14. Principles of physical therapy, occupational therapy, and rehabilitation of the patient with chronic pain
15. Principles of multidisciplinary approaches to pain medicine
16. Management of pain in children
17. Management of pain in the elderly
18. Principles and ethics of pain research in humans and animals
19. Organization and management of a pain medicine center
20. Continuing quality improvement, utilization review, and program evaluation
21. Disability assessment and rehabilitation management
22. Assessment and management of musculoskeletal conditions
23. Psychological screening tools to evaluate pain disorders
24. History and physical examination skills, including indications/contraindications and interpretation of diagnostic studies relating to pain disorders

D. Pain Center Management

Subspecialty residents in pain medicine must gain experience in the management of a pain center (clinic) with regards to appointment and training of nonphysician personnel, establishment of policies relating to management of pain problems, coordination of the activities of the pain center with other inpatient and outpatient services, and basic economics of pain-related health-care delivery.

E. Resident Teaching

The subspecialty resident in pain medicine must become experienced in teaching principles of pain medicine to resident physicians, medical students, and other health-care professionals.

F. Conferences

Pain medicine conferences must be held regularly. These should include morbidity and mortality conferences, journal reviews, and research seminars. Active participation in the planning and presentation of these conferences by the pain medicine resident and faculty is essential. Attendance at multidisciplinary conferences is encouraged.

VI. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and psychiatry pain medicine training must be conducted in centers where there is active research activity both in clinical and basic neuroscience fields. This activity should include the following:

- A. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
- B. Participation in journal clubs and research conferences.
- C. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
- D. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
- E. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
- F. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activities. The goal for the resident should be at least one scientific presentation, abstract, or publication.

VII. Evaluation

- A. Faculty responsible for teaching subspecialty residents in psychiatry pain medicine must provide critical evaluations of each resident's progress and competence to the psychiatry pain medicine program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in psychiatry pain medicine must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.
- B. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in psychiatry pain medicine should be involved in continuous quality improvement, utilization review, and risk management.

VIII. Board Certification

The record of its graduates in obtaining certification in pain medicine by ABMS certifying bodies represents one measure of the qual-

ity of a program. The RRC will consider this information as part of the overall evaluation of the program.

ACGME: June 2000 Effective: June 2000

Program Requirements for Residency Education in Psychosomatic Medicine (Psychiatry)

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction**A. Definition and Scope of the Specialty**

Psychosomatic Medicine is the discipline encompassing the study and practice of psychiatric disorders in patients with medical, surgical, obstetrical and neurological conditions, particularly for patients with complex and/or chronic conditions. Physicians specializing in psychosomatic medicine have expertise in the diagnosis and treatment of psychiatric disorders in complex medically ill patients. The practice of psychosomatic medicine requires comprehensive knowledge of patients with acute or chronic medical, neurological, or surgical illness in which psychiatric morbidity affects their medical care and/or quality of life; patients with somatoform disorder or with psychological factors in which psychiatric morbidity affects a physical condition; and patients with a psychiatric disorder that is the direct consequence of a primary medical condition.

B. Duration and Scope of Education

1. An accredited residency program in psychosomatic medicine must provide 12 months of supervised graduate education.
2. To be eligible for accreditation, the subspecialty program must function as an integral part of an accredited residency program in psychiatry. There must be a reporting relationship, to ensure compliance with the ACGME accreditation standards, from the program director of the subspecialty program to the program director of the parent psychiatry residency program.
3. Prior to entry into the program, each resident must be notified in writing of the required length of training.

II. Institutional Support**A. Sponsoring Institution**

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and ed-

educational and peer activities. Exceptions must be justified and prior-approved.

3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should
 - a. identify the faculty who will assume the educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.D. and VI.A of the Program Requirements;
 - b. outline the educational outcomes to be attained by the resident during the assignment;
 - c. specify the period of resident assignment;
 - d. establish the policies that will govern resident education during the assignment.

III. Resident Appointment

A. Eligibility Criteria

1. The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.
2. Subspecialty training in psychosomatic medicine is a voluntary component in the continuum of the educational process; such training should take place on satisfactory completion of an ACGME-accredited program in psychiatry.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfer

To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

1. The appointment of other residents requires a clear statement of the areas of training, clinical responsibilities, and duration of the special education. This statement must be supplied to the Residency Review Committee at the time the program is site visited.
2. The appointment of fellows and other specialty residents or students for special education must not dilute or detract from the educational opportunities of the regularly appointed psychosomatic residents. If such residents/trainees so appointed will, in the judgment of the Residency Review Committee, detract from the education of the regularly appointed psychosomatic residents, the accreditation status of the program may be adversely affected.

IV. Faculty

The program director and faculty are responsible for the general administration of the program and for the establishment

and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must
 - a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field.
 - b. be certified in psychosomatic medicine by the American Board of Psychiatry and Neurology or possess qualifications judged to be acceptable by the RRC.
 - c. be appointed in good standing and based at the primary teaching site.

B. Responsibilities of the Program Director

1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. Preparing an accurate statistical and narrative description of the program as requested by the RRC as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).
3. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.
4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.
5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.
6. Obtaining prior approval of the RRC for changes in the program that may significantly alter the educational experience of the residents, for example:
 - a. The addition or deletion of major participating institution(s) as specified in section II.B. of this document.
 - b. Change in the approved resident complement for those specialties that approve resident complement.
 - c. Change in the format of the educational program. On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

C. Faculty Qualifications

1. The physician faculty must
 - a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.

- b. be certified in psychosomatic medicine by the American Board of Psychiatry and Neurology or possess qualifications judged by the RRC to be acceptable.
 - c. be appointed in good standing to the staff of an institution participating in the program.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities

1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately the residents in the program. In addition to the program director, there must be a minimum of one additional physician faculty member who meets the requirements in IV.C. above.
2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E.1.

E. Other Program Personnel

The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program

The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process. The educational program must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes that are essential for practice of the subspecialty.

A. Role of Program Director and Faculty

The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by

1. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
2. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
3. providing residents with direct experience in progressive responsibility for patient management. The responsibility given to residents in patient care should depend upon each resident's knowledge, problem-solving ability, manual skills, experience, and the severity and complexity of each patient's illness.

B. ACGME Competencies

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.
4. *Interpersonal and communication skills* that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Components of the Educational Program

1. Curriculum

The training program must provide opportunities for residents to acquire advanced clinical knowledge and skills in the field of psychosomatic medicine. This objective must be accomplished by a combination of supervised clinical experiences and formal didactic conferences. The curriculum must assure residents the opportunity to acquire the cognitive knowledge, interpersonal skills, professional attitudes, and practical experience required of a psychiatrist with added qualifications in psychosomatic medicine. All major dimensions of the curriculum must be structured educational experiences guided by written goals and objectives as well as by specified teaching and evaluation methods. Educational experiences must be planned and faculty must attend and meaningfully participate.

2. Didactic experiences in psychosomatic medicine must provide residents with sufficient opportunity to develop knowledge, skill and proficiency involving
 - a. the nature and extent of psychiatric morbidity in medical illness and its treatments,
 - b. the impact of comorbid psychiatric disorders on the course of medical illness,
 - c. understanding of how and why patients respond to illness,
 - d. knowledge of appropriate treatment interventions for co-existing psychiatric disorders in the medically ill
 - e. psychological and psychiatric effects of new medical or surgical therapies,
 - f. the epidemiology of psychiatric illness and its treatment in medical disease, and
 - g. knowledge of the nature and factors that influence the physician/patient relationship.

D. Clinical Components

1. Patient Population

There must be an adequate number of patients representing both sexes with a wide variety of clinical problems to provide a patient population sufficient to meet the educational needs of the residents. The number of critically ill patients available for the residents at the primary clinical site should be sufficient to meet the educational goals of the program.

2. Clinical experiences in psychosomatic medicine must provide residents with sufficient opportunity for the psychiatric evaluation of individuals involving
 - a. psychiatric complications of medical illnesses,
 - b. psychiatric complications of medical treatments, especially medications, new surgical or medical procedures, transplantation, and a range of experimental therapies,
 - c. typical and atypical presentations of psychiatric disorders that are due to medical, neurological, and surgical illnesses,
 - d. evaluation and management of delirium, dementia, and secondary ("organic") psychiatric disorders,
 - e. evaluation and management of somatoform disorders, and chronic pain,
 - f. assessment of capacity to give informed consent for medical and surgical procedures in the presence of cognitive impairment
 - g. provision of non-pharmacologic interventions, including cognitive-behavioral psychotherapy, interpersonal psychotherapy, as well as focused, short-term psychotherapy in patients suffering the effects of complex medical disorders or their treatments,
 - h. indications for, and use of, psychotropics in specific medical, neurological, obstetrical, and surgical conditions,
 - i. interactions between psychotropic medications and the full-range of medications used for a variety of medical and surgical conditions,
 - j. collaboration with other physicians, and other members of the multidisciplinary treatment team,
 - k. teaching other physicians and other members of the multidisciplinary team how to recognize and respond to various psychiatric disorders,
 - l. leading an integrated psychosocial health care team in the medical setting.
3. Residents must participate in continuity of patient care.
4. A written statement defining the role of related disciplines must be in place outlining requirements for multidisciplinary care and resident interactions with other specialties.

E. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
 - a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
 - b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
 - c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
 - d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.
2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

F. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. Supervision of Residents

- a. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty. Supervision of the residents by psychosomatic faculty members must be available at all times.
- b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
- c. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

2. Duty Hours

- a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.
- b. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
- c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
- d. Adequate time for rest and personal activities must be provided. This should consist of a 10 hour time period provided between all daily duty periods and after in-house call.

3. On-Call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

- a. In-house call must occur no more frequently than every third night, averaged over a four-week period.
- b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to six additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical care.
- c. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the resident has not previously provided care.
- d. At-home call (pager call) is defined as call taken from outside the assigned institution.

- 1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable per-

sonal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

- 2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - 3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.
4. Moonlighting
- a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
 - b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III. D.1.k.
 - c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), i.e., internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.
5. Oversight
- a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.
 - b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

VI. Evaluation

A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include
 - a. the use of methods that produce an accurate assessment of residents' competence.
 - b. mechanisms for providing regular and timely performance feedback to residents that includes at least
 - 1) written semiannual evaluation that is communicated to each resident in a timely manner and
 - 2) the maintenance of a record of evaluation for each resident that is accessible to the resident.
 - c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.
2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institu-

tion. The final evaluation of each resident must document proficiency in the following outcome areas:

- a. knowledge of abnormal behavior and psychiatric illnesses that occur among medical, neurological, obstetrics-gynecology, and surgical patients,
- b. knowledge of biological, psychological and social factors that influence the development, course and outcome of medical/surgical diseases,
- c. ability to diagnose and treat psychiatric disturbances that occur among the physically ill, including the administration of psychotropic medications to seriously ill patients,
- d. understanding of pharmacology, including the psychopharmacology of the medically ill, with emphasis on, and psychiatric side effects of, non-psychotropic medications and the interactions of psychotropic medications with other medications on the central nervous system,
- e. ability to provide consultation in medical and surgical settings,
- f. facilitative skills necessary to enhance the care of psychiatric disturbances among the physically ill through cooperative interaction with other physicians and allied health professionals,
- g. ability to effectively supervise medical students and residents performing consultations and to teach medical and surgical colleagues about psychiatric complications of physical illness,
- h. participation in the development of new knowledge, evaluation of research findings, and the continuing acquisition of new knowledge, through the development of good habits of inquiry,
- i. knowledge of the organizational and administrative skills needed to finance, staff, and manage a psychosomatic medicine service.

B. Faculty Evaluation

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.
2. Outcome assessment
 - a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
 - b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. When averaged over any five-year period, a minimum of 80% of all program graduates must successfully complete the examinations of the American Board of Psychiatry and Neurology.

VII. Experimentation and Innovation

A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

VIII. Board Certification

Residents who plan to seek certification by the American Board of Psychiatry and Neurology should communicate with the Executive Vice President of the Board to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: June 2003 Effective: June 2003

Program Requirements for Graduate Medical Education in Sleep Medicine (Psychiatry)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Sleep medicine is a discipline of medical practice in which sleep disorders are assessed, monitored, treated, and prevented by using a combination of techniques (clinical evaluation, physiologic testing, imaging, and intervention) and medication. Specialists in sleep medicine are expected to:

1. participate in an interdisciplinary care of patients of all ages that incorporates aspects of psychiatry, neurology, internal medicine, epidemiology, surgery, pediatrics and basic science;
2. acquire detailed knowledge of the sleep and respiratory control centers, physiology, and neurobiology underlying sleep and wakefulness;
3. diagnose and manage sleep disorder patients in outpatient and inpatient settings.

B. Duration and Scope of Education

1. All prerequisite fellowship education must be taken within programs accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The ACGME recognizes the following educational formats for entry into sleep medicine fellowships:

a) Fellows must complete 12 months of sleep fellowship education after the successful completion of one of the following prerequisite educational programs:

- (1) 3 years of internal medicine; or
- (2) 3 years of pediatrics
- (3) 4 years of psychiatry;
- (4) 4 years of neurology; or
- (5) 5 years of otolaryngology.

3. Training must be separate and distinct from all training required for certification in internal medicine, pediatrics, pulmonology, psychiatry, neurology, and otolaryngology, and include as well as didactic and clinical experience in the care of patients with sleep disorders in both inpatient and outpatient settings.

4. Training should provide clinical exposure to the following disciplines as related to sleep disorders:

- Cardiology
- Neurology
- Otolaryngology
- Oral Maxillofacial Surgery
- Pediatrics
- Pulmonary Medicine
- Psychiatry
- Psychology, including Neuropsychology

5. Relation of the Subspecialty to Core Programs

Fellowship programs in the subspecialty of sleep medicine may only be accredited in institutions where the sponsoring specialty has an ACGME-accredited residency program. The sponsoring program may be in internal medicine, psychiatry, pediatrics, neurology, or otolaryngology.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions. There is a limit of one accredited sleep medicine program per sponsoring institution.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:

- a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
- b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
- c) specify the duration and content of the educational experience; and
- d) state the policies and procedures that will govern fellow education during the assignment.

C. Institutional Facilities and Resources

1. Patient Population

- a) There must be an adequate number and variety of patients of all ages in both inpatient and outpatient settings to expose fellows to the board spectrum of sleep disorders. This should include experience across the major categories of sleep disorders, including: apnea and other sleep-related breathing

- disorders; parasomnias; circadian rhythm disorders; insomnia; narcolepsy and related excessive daytime sleepiness disorders; and sleep problems related to other factors and diseases such as medications, and psychiatric and medical disorders.
- b) Inpatient experience should include evaluation of a sufficient number of sleep disorder patients. Experience should include longitudinal management of patients for whom the fellow is the primary physician but acting under the supervision of a faculty member.
2. Facilities
- a) The facility should be appropriately equipped, and have a minimum of two fully-equipped polysomnography bedrooms and support space.
- b) There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with audiovisual and other educational aids, office space for staff and fellows, pertinent library materials, and diagnostic, therapeutic, and research facilities.
3. Institutional Resources
- a) The sponsoring institution must provide sufficient institutional resources—including GME staff, space, equipment, supplies, and time—to allow for effective oversight of its programs accredited by the ACGME.
- b) In addition, there must be sufficient institutional resources to ensure that the programs accredited by the ACGME are implemented and developed effectively and in compliance with both the program and institutional requirements.
- c) The American Academy of Sleep Medicine or an equivalent body should accredit for the use of both adults and children the sleep laboratories and other related facilities and equipment.
4. Library
- a) Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
- b) Library services should include the electronic retrieval of information from medical databases.
- c) There must be access to an on-site library or to a collection of appropriate texts and journals in each institution that participates in a fellowship program. On-site libraries and/or collections of texts and journals, or access to the electronic retrieval of these materials, must be readily available during nights and weekends.
- a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
- b) The program director must be certified by the specialty board in sleep medicine or be certified in sleep medicine by an ABMS Member Board, or possess qualifications judged to be acceptable by the sponsoring RRC.
- c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
- (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.
- On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program; he or she must be fully committed to the fellowship program, and devote sufficient time to provide leadership and supervision to the program and its fellows. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
 - a) The program that provides training in sleep medicine must have at least two core faculty, including the director, who are specialists in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, or Otolaryngology and who are certified in sleep medicine by the specialty board in sleep medicine or by the applicable ABMS board, or who possess qualifications judged acceptable by the sponsoring RRC.
 - b) For programs with more than four fellows, a ratio of one core faculty to every two fellows must be maintained.
 2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
 - a) Appropriate expertise in the areas defined in Section I.B. above must be present between the director and faculty. The RRC recognizes that expertise in sleep medicine is available from physicians who are board certified in many medical specialties, particularly in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, and Otolaryngology; the RRC actively encourages multidisciplinary cooperation in the training of fellows.

b) There must be designated faculty available to participate in consultation and teaching from the following disciplines as they relate to sleep medicine and the management of sleep disorders:

Cardiology
Neurology
Otolaryngology
Oral Maxillofacial Surgery
Pediatrics
Pulmonary Medicine
Psychiatry
Psychology including neuropsychology

3. Qualifications of the physician faculty are as follows:

a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.

b) The physician faculty must be certified by the applicable ABMS Board, or possess qualifications judged to be acceptable by the RRC.

c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;

b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;

c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

a) Nonphysician faculty must be appropriately qualified in their field.

b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another fellowship program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of fellowship education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

E. Fellow/Patient Ratio

The number of patients must be sufficient to provide a sound educational program. The program director must ensure an adequate number and variety of patients, with particular attention to balance in the age and gender of patients, as well as in patients with short- and long-term sleep disorders, inpatients, and outpatients.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The fellowship program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their fellows to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;

2. **Medical Knowledge** about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. **Practice-based learning and improvement** that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. **Interpersonal and communication skills** that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Program

1. Fellows must have formal instruction in, and demonstrate comprehensive knowledge of:
 - a) Major theories in sleep medicine, together with a thorough grounding in the generally accepted facts and basic sleep mechanisms.
 - b) Biological, psychological, social, economic, ethnic, and familial factors, which significantly influence the evaluation and treatment of sleep disorders.
 - c) Etiologies, prevalence, diagnosis, and treatment of all of the sleep disorders in the current nosology of sleep medicine.
 - d) The use, reliability, and validity of the generally accepted techniques for diagnostic assessment.
 - e) Medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g., the relationship between hypertension and snoring)
 - f) The nature of the interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies
 - g) Administration and interpretation of psychological tests
 - h) Financing and regulation of sleep medicine.
 - i) Medical ethics and its application in sleep medicine.
 - j) Legal aspects of sleep medicine.
 - k) Research methods in the clinical and basic sciences related to sleep medicine.
 - l) Technical skills including:
 - (1) skills necessary to perform polysomnographies from preparation and hookup of the patient to the completion of the study, including multiple sleep latency and maintenance of wakefulness tests.
 - (2) Scoring and interpretation of polysomnograms and recognition of artifacts, including full montages with additional EEG leads for seizure detection
 - (3) Consultative skills in sleep medicine in a variety of medical, surgical, and psychiatric settings
2. The Curriculum

The curriculum must include instruction in the following:

 - a) Fundamental mechanisms of sleep
 - b) Etiopathogenic characterization of sleep disorders
 - c) Clinical manifestations of sleep disorders
 - d) Diagnostic strategies in sleep disorders
 - e) Treatment strategies in sleep disorders
 - f) Epidemiological issues
 - g) Airway anatomy

3. Seminars and Conferences

- a) The training program must conduct a monthly, multidisciplinary teaching conference and a monthly journal club organized by the faculty on topics that cover the scope of sleep medicine.
- b) The training program must conduct seminars and core conferences, that include didactic instruction in the following; this instruction must be relevant for pediatric and adult patients:
 - (1) Basic neurological sleep mechanisms
 - (2) Chronobiological mechanisms
 - (3) Respiratory physiology during sleep and pathophysiology
 - (4) Cardiovascular physiology during sleep and pathophysiology
 - (5) Endocrine physiology during sleep and pathophysiology
 - (6) Gastrointestinal physiology during sleep and pathophysiology
 - (7) Ontogeny of sleep
 - (8) Sleep across the life span
 - (9) Operation of polysomnographic monitoring equipment
 - (10) Polysomnographic troubleshooting
 - (11) Ambulatory monitoring methodology
 - (12) Polysomnogram interpretation
 - (13) SIDs and related respiratory distress
 - (14) Nosology for sleep disorders: The International Classification of Sleep Disorders
 - (15) Evaluation of patients presenting with excessive sleepiness
 - (16) Evaluation of patients presenting with difficulty initiating or maintaining sleep
 - (17) Evaluation of patients presenting with parasomnias
 - (18) Biological rhythm disorders
 - (19) Pediatric and neonatal sleep medicine
 - (20) Treatment approaches for obstructive sleep apnea, to include nasal CPAP, bilevel PAP, upper airway surgery, oral appliances, and position training
 - (21) Treatment approaches for insomnia, to include cognitive-behavioral therapies and pharmacological therapy
 - (22) Treatment approaches for narcolepsy and idiopathic CNS hypersomnolence
 - (23) Treatment approaches for parasomnias
 - (24) Treatment of circadian rhythm disorders
 - (25) Pharmacology of sleep (i.e. medication effects on sleep)

F. Clinical Components

1. Clinical Skills

Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the management of sleep disorders in all age groups including following:

 - a) interviewing
 - b) clear and accurate history taking
 - c) performing competent physical, neurological, and mental status examinations
 - d) recording of findings completely and systematically
 - e) relating history and clinical findings to the relevant medical, neurologic, psychiatric, and social issues associated with etiology and treatment
 - f) formulating a differential diagnosis for all conditions in the current standard nosology, taking into consideration all relevant data.
 - g) diagnosing medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions
 - h) formulating appropriate treatment plans and making appropriate referrals

- i) providing continuous care for a variety of patients from different age groups, seen regularly and frequently over an extended time, in a variety of treatment modalities; being able to relate to patients and their families, as well as other members of the health care team, with compassion, respect, and professional integrity
 - j) Certification in cardiopulmonary resuscitation
2. Clinical Training
- a) Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the following:
 - (1) The observation, evaluation, and management of patients of all ages with a wide variety of sleep disorders
 - (2) The integration of information obtained from patient history, physical examination, physiologic recordings, imaging studies, psychometric testing, pulmonary function testing, and biochemical and molecular tests results to arrive at an accurate and timely diagnosis and treatment plan.
 - (3) The indications for and potential pitfalls and limitations of diagnostic tests and the interpretation of the results in the context of the clinical situation. These diagnostic tests must include the following: polysomnography, multiple sleep latency testing, maintenance of wakefulness testing, actigraphy, and portable monitoring related to sleep disorders, imaging studies, magnetic resonance imaging, scoring and interpretation of polysomnograms and recognition of artifacts, including montages with additional EEG leads for seizure detection, and psychological and psychometric tests as they relate to sleep disorders.
 - (4) The development and execution of plans for evaluation and treatment, including the appropriate technical skills necessary to perform polysomnography from preparation and hookup of the patient to the completion of the study, including multiple sleep latency tests, maintenance of wakefulness tests, and other diagnostic studies
 - (5) The critical appraisal of the professional and scientific literature and application of new contributions to management and care of patients.
 - b. Fellows must have formal instruction and clinical experience in systems-based skills that include working in outpatient and inpatient settings and effectively utilizing health care resources, including pathology and radiology services.
 - (1) Clinical experiences that provide for basic and advanced training and education, as well as professional development
 - (2) Opportunities to formulate a clinical diagnosis and to order and use laboratory data to clinically evaluate a patient's condition and to support outpatient and inpatient diagnostic evaluations
 - (3) Progressive experience for training that includes caring for a sufficient number of sleep disorder patients to achieve competence in the assessment of patients with a wide range of sleep medicine disorders
 - (4) Experience with medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g., the relationship between hypertension and snoring); ability to diagnose medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions; to formulate appropriate treatment plans; and to make appropriate referrals.
 - (5) Experience with interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major

types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies; competence in sleep medicine consultation in a variety of medical, surgical and psychiatric settings.

- (6) Experience in sleep disorders center administration, especially leadership of interdisciplinary teams.
- (7) Supervised experience in teaching sleep medicine to students in the health professions.
- (8) Trainees should make regular patient management rounds and record reviews with the attending faculty.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the fellowship program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up

to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.

3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because fellowship education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the fellowship program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance. Fellows' evaluation by faculty must be made at least once every two months so that areas of weakness and strength may be communicated to the fellows.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the fellowship program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the fellowship program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program

are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification in Sleep Medicine by the American Board of Medical Specialties should communicate with the office of the board regarding the full requirements for certification.

Approved by ACGME: June 2004 Effective: June 2004

Program Requirements for Graduate Medical Education in Diagnostic Radiology

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

Preface

The program requirements set forth here are to be considered common to all specialties, and are complete only when supplemented, where indicated and individually, by each specialty.

I. Introduction

A. Definition and Scope of the Specialty

Diagnostic radiology encompasses a variety of diagnostic and image-guided therapeutic techniques, including all aspects of radiological diagnosis, nuclear radiology, diagnostic ultrasound, magnetic resonance, computed tomography, interventional procedures, and the use of other forms of radiant energy. The residency program in diagnostic radiology shall offer a quality graduate medical educational experience of adequate scope and depth in all of these associated diagnostic disciplines.

B. Duration and Scope of Education

Resident education in diagnostic radiology must include 5 years of clinically oriented graduate medical education, of which 4 years must be in diagnostic radiology. The clinical year must consist of Accreditation Council for Graduate Medical Education (ACGME), Royal College of Physicians and Surgeons of Canada (RCPSC), or equivalent accredited training in internal medicine, pediatrics, surgery or surgical specialties, obstetrics and gynecology, neurology, family practice, emergency medicine, or any combination of these, or an ACGME or equivalent accredited transitional year.

If the clinical year is offered by the institution of the core residency, and it is not itself an ACGME-accredited year, the program director will be responsible for assuring the quality of the year.

The diagnostic radiology program shall offer a minimum of 4 years of graduate medical education (including vacation and meeting time) in diagnostic radiology, of which at least 42 months of training must be in the parent or integrated institution(s). (Time spent attending the AFIP course is excluded.) The minimum period of training in nuclear radiology shall be 6 months. The maximum period of training in any subspecialty area shall be 12 months.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives, and should provide resources not otherwise available to the program. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document per Sections III.B. and VII.A. of the Program Requirements;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
 3. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. All participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the RRC.
 4. Integrated and Affiliated Institutions

Institutions may participate on an affiliated or an integrated basis. When another institution is utilized and a single program director assumes responsibility for the entire residency, including the appointment of all residents and teaching staff, that institution is designated as integrated. Within a single program some participating hospitals may qualify as integrated, while others are merely affiliated. Rotations to affiliated institutions may not exceed 6 months during the 4 years of training. (Time spent attending the AFIP course is excluded.) Rotations to integrated institutions are not limited in duration. Participation by any affiliated institution providing more than 3 months of training must be approved by the RRC. Prior approval of the RRC must be obtained for participation of an institution on an integrated basis, regardless of the duration of the rotations.

Affiliation shall be avoided with institutions that are at such a distance from the parent institution as to make resident attendance at rounds and conferences impractical, unless there is a comparable educational experience at the affiliated institution.

Service responsibility alone at a participating institution does not constitute a suitable educational experience.
- b. The program director must be certified in the specialty by the American Board of Radiology or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution to which rotations total 3 months or more; prior approval is required for addition or deletion of an integrated institution, regardless of the rotation duration;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement
 - 4) On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
 5. The program director must be provided at least one day a week protected time to fulfill the responsibilities inherent in meeting the educational goals of the program, and must have appropriate authority to organize and fulfill administrative teaching responsibilities to achieve the educational goals.
 6. A complete curriculum vitae of the program director shall be filed with the Executive Director of the RRC at the time of appointment and updated with each review of the program by the RRC.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities, including at least 3 years of participation as an active faculty member in an accredited residency program.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. As noted (IV.B.2.), there must be at a minimum one full-time equivalent faculty member at the parent and integrated institutions for every resident in the program. All members of the faculty must have their academic appointment in the department of radiology.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.

- b. The physician faculty must be certified in the specialty by the American Board of Radiology or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. While not all members of a teaching faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. *Scholarship* is defined as the following:
- a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.
- Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
- a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.
6. Didactic and clinical teaching must be provided by faculty with documented interests and expertise in the subspecialty involved. The teaching faculty responsible for the training in each designated subspecialty area must demonstrate a commitment to the subspecialty. Such commitment may be demonstrated by any of the following: (1) fellowship training or 3 years of subspecialty practice; (2) membership in a subspecialty society; (3) publications and presentations in the subspecialty; (4) annual CME credits in the subspecialty.
7. At least one physician faculty member must be designated to have primary responsibility for the educational content of each of the nine subspecialty areas. This individual must practice at least 50% of his or her time in the department. The nine subspecialty areas are neuroradiology, musculoskeletal radiology, vascular and interventional radiology, chest radiology, breast imaging, abdominal radiology, pediatric radiology, ultrasonography (including obstetrical and vascular ultrasound), and nuclear radiology. No faculty member may have primary responsibility for the educational content of more than one subspecialty area, although faculty may have clinical responsibility and/or teaching responsibilities in several subspecialty areas. A pediatric radiologist may have a primary appointment at another institution and still be the designated faculty member supervising pediatric radiologic education.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program. A dedicated residency program coordinator is required.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. The program must provide not only adequate space, equipment, and other pertinent facilities to ensure an effective educational experience for residents in diagnostic radiology but also the modern facilities and equipment required in all of the subspecialty rotations.
2. There must be 24-hour access to an on-site departmental library or to a collection of journals, references, and resource materials pertinent to progressive levels of education in diagnostic radiology and associated fields in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must include standard diagnostic radiology and radiological subspecialty textbooks and major radiology journals.
3. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. The institutional library must have facilities for electronic retrieval of information from medical databases and on-line literature searches.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon the adequacy of resources for resident education, i.e., the quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. The complement of residents must be commensurate with the total capacity of the program to offer an adequate educational experience in diagnostic radiology. A reasonable volume of radiologic examinations is no less than 7000 per year per resident. The number of examinations in each of the subspecialty areas must be of sufficient volume to ensure adequate training experience.
2. At a minimum, there must be one full-time equivalent faculty member at the parent and integrated institutions for every resident in training in the program.
3. Peer contact and discussion are as important to the learning process as contact with teaching faculty. The number of diagnostic radiology residents in the program must be sufficient to provide for frequent and meaningful discussion with peers as well as to provide appropriate coverage for adequate patient care. Appointment of a minimum of eight residents with, on average, two appointed each year, is required for an efficient learning environment. Prior approval by the RRC is required for an increase in the number of residents.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum**A. Program Design****1. Format**

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management as they advance through the program. The educational program must culminate in sufficiently independent responsibility for clinical decision-making to ensure that the graduating resident has developed sound clinical judgment.

The level of resident responsibility should be increased progressively with each year of education. This includes responsibility in patient care, leadership, teaching, and practice management. Senior residents should supervise or act as consultants to junior residents and medical students.

The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by ensuring that residents continue to be involved in clinical responsibilities throughout residency. Full-time participation in educational conferences, clinical services, and call responsibilities is expected at all levels of training, including the entire final year of residency.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

All residents should have training in critical thinking skills and outcomes research. During their training, all residents should be encouraged to engage in an investigative project under faculty supervision. This may take the form of laboratory research, clinical research, or the retrospective analysis of data from patients, and results of such projects shall be suitable for publication or presentation at local, regional, or national scientific meetings.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. **Patient care** that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.

2. **Medical Knowledge** about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;

3. **Practice-based learning and improvement** that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;

4. **Interpersonal and communication skills** that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;

5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;

6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Components

The education in diagnostic radiology must occur in an environment that encourages the interchange of knowledge and experience among residents in the program and with residents in other major clinical specialties located in those institutions participating in the program.

Diagnostic radiologic physics, radiation biology, radiation protection, and pathology are required elements of the curriculum. In view of the importance of understanding pathology as a basis for radiologic diagnosis, emphasis should be placed on its study. Radiologic/pathologic conferences are required for those residents who do not participate in formalized extramural pathology teaching programs. Didactic instruction in molecular imaging should be offered.

Teaching files (electronic or film) of cases related to all aspects of diagnostic radiology must be available for use by residents. Aggregates of these files should contain a minimum of 1000 cases that are actively maintained and continually enhanced with new cases. The American College of Radiology learning file or its equivalent should be available to residents; this only partially meets the teaching file requirements.

Conferences and teaching rounds must be correlated and provide for progressive resident participation. There should be intradepartmental conferences as well as interdepartmental conferences of appropriate frequency with each major clinical department in which both residents and faculty participate on a regular basis.

F. Clinical Components

The program in diagnostic radiology must provide a sufficient volume and variety of patients to ensure that residents gain experience in the full range of radiologic examinations, procedures, and interpretations. A reasonable volume is no less than 75000 total radiologic examinations at the parent or integrated program, and no less than 7,000 radiologic examinations per year per resident. The number of examinations in each of the subspecialty areas must be of sufficient volume to ensure adequate training experience. If volume in any subspecialty area is less than acceptable, a plan must be developed to increase trainee exposure. The presence of residents and subspecialty residents from outside institutions for limited rotations should not dilute the educational experience of the core program residents.

The clinical training must provide for progressive, supervised responsibility for patient care and must ensure that the supervised resident performs those procedures commonly accepted in all aspects of diagnostic radiology. The training must include progressive

study and experience in all of the diagnostic radiologic subspecialties. The training program should ensure sufficient time to gain experience in neuroradiology, musculoskeletal radiology, vascular and interventional radiology, chest radiology, breast imaging, abdominal radiology, pediatric radiology, ultrasonography (including obstetrical and vascular ultrasound), and nuclear radiology. There must be a minimum of 12 weeks of clinical rotations in breast imaging. Each resident should have documentation of the interpretation/multi-reading of at least 240 mammograms within a 6-month period within the last 2 years of the residency program.

Additionally, each resident must have documented supervised experience in interventional procedures, for example, image-guided biopsies, drainage procedures, noncoronary angioplasty, embolization and infusion procedures, and percutaneous introduction techniques.

The program director must require that residents maintain a record (electronic or written) in which they document the performance, interpretation, and complications of vascular, interventional, and invasive procedures. The record must be reviewed by the program director or faculty designee on a yearly basis.

Training and clinical experience are required in plain film interpretation, computed tomography, magnetic resonance imaging, angiography, and nuclear radiology examinations of the cardiovascular system (heart and great vessels). This training must include both the adult and the pediatric age group. The program must also provide didactic instruction in cardiac anatomy, physiology, and pathology, including the coronary arteries.

Radiologic education in different organ systems must provide the opportunity for residents to develop adequate knowledge regarding normal and pathologic physiology, including the biologic and pharmacologic actions of materials administered to patients in diagnostic studies.

Each resident must have basic life-support training, and advanced cardiac life-support training is recommended.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Faculty supervision must be available at all sites of training. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

The responsibility or independence given to residents should depend on their knowledge, manual skills, and experience. The resident in the first year of training in the diagnostic radiology program must have a minimum of 6 months of training in diagnostic radiology prior to independent in-house on-call responsibilities. Residents must always have faculty backup when taking night or weekend call. All radiologic images must be reviewed and all reports must be signed by faculty.

2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care. During this time, residents may complete call activities and participate with faculty in read-out sessions of the previous night's cases.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as reading a new study or participating in an interventional procedure on a patient for whom the resident has not previously provided care.
4. At-home call (or pager call) is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not

interfere with the ability of the resident to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

The RRC for Diagnostic Radiology will not consider requests for exception to the limit to 80 hours per week, averaged monthly.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.

Written evaluation of each resident's progress and competence should be conducted preferably at the end of each rotation, but not less than four times yearly. The program director or the program director's designee must meet with all the residents at least semiannually to discuss these written evaluations and provide feedback on performance.

Residents should be advanced to positions of higher responsibility only on the basis of their satisfactory progressive professional growth and scholarship. More frequent reviews of performance for residents experiencing difficulties or receiving unfavorable evaluations are required. When a resident fails to progress satisfactorily, a written plan identifying the problems and addressing how they can be corrected must be placed in his or her individual file.

- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.
2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMCC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. During the most recent 5-year period, at least 50% of its graduates should pass without condition the written and oral examinations on the first attempt. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Radiology should communicate with the Executive Director of the Board regarding the full requirements for certification, including duration of training.

Duty Hours and editorial revisions: July 1, 2003

Duty Hours section effective: July 1, 2003

Editorial revisions: December 2003

Revised common requirements: July 2004

Policies and Procedures for Residency Education in the Subspecialties of Diagnostic Radiology

Subspecialty programs must be administratively linked to an accredited core residency program in diagnostic radiology. (The only exception is pediatric radiology, as discussed below.) An application for accreditation of a new subspecialty program will be considered only if the core program has full accreditation. An application will not be accepted for review if the core program in diagnostic radiology is accredited on a provisional or a probationary basis, or if it has been accredited with a warning that adverse action will be taken if it is not in substantial compliance with the *Essentials of Accredited Residencies in Graduate Medical Education* at the time of the next review.

A subspecialty program in pediatric radiology may not necessarily be administratively linked to an accredited core residency program in diagnostic radiology if the pediatric radiology program is conducted in a children's hospital. In such a case, the subspecialty program may be considered free-standing and, therefore, not required to be under the sponsorship of a diagnostic radiology residency program.

An on-site survey of the proposed program is required for the initial review by the Residency Review Committee. Accreditation will be granted on the basis of the application and the written report from the on-site survey of the proposed program. Following the initial approval, the subspecialty program will be surveyed and reviewed in conjunction with the core diagnostic radiology program.

Subspecialty programs will be designated as "accredited" or "non-accredited." No other delineation of accreditation categories will be used. The accreditation status of the subspecialty program will be directly related to that of the core diagnostic radiology program, as follows:

Subspecialty programs may be cited for deficiencies and advised that either the deficiencies must be corrected by the specified time or accreditation will be withdrawn regardless of the accreditation status of the associated diagnostic radiology program.

If the associated diagnostic radiology program is accredited on a probationary basis, or accredited with a warning that adverse action will be taken, the subspecialty program will be informed that its accreditation status is also in jeopardy. Thereafter, accreditation of the subspecialty programs will be withdrawn if the Residency Review Committee finds that the sponsoring institution(s) is (are) not making satisfactory progress in addressing the adverse accreditation status of the core diagnostic radiology program.

Withdrawal of accreditation of the core diagnostic radiology residency program will result in simultaneous withdrawal of accreditation of the subspecialty program.

In the case of withholding of accreditation or withdrawing accreditation of subspecialty programs, the *Procedures for Proposed Adverse Actions* and the *Procedures for Appeal of Adverse Actions* apply.

Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

Preface

The program requirements set forth here are to be considered common to all specialties, and are complete only when supplemented, where indicated and individually, by each specialty.

These requirements apply to all of the accredited subspecialty areas of diagnostic radiology and should be consulted along with the individual subspecialty Program Requirements

I. General Information

A. A residency education program in a subspecialty of diagnostic radiology is an educational experience of at least 1 year designed to develop advanced knowledge and skills in a specific clinical area. All educational components of the program should be related to program goals. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.

Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

B. Residency education programs in the subspecialties of diagnostic radiology may be accredited only in institutions that either sponsor a residency education program in diagnostic radiology accredited by the ACGME or are integrated by formal agreement into such programs. (See Program Requirements for Pediatric Radiology for exceptions to this requirement.) Close cooperation between the subspecialty and residency program directors is required.

C. Subspecialty programs will not be approved if they have substantial negative impact on the education of the diagnostic radiology residents in the core program.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

A maximum of three months of the subspecialty program may be spent in rotations to affiliated institutions.

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern the education of fellows during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the subspecialty program. The person designated with this authority is accountable for the operation of the program. In the event of a change of program director, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining appropriate continuity of leadership.
3. Qualifications of a program director are as follows:
 - a. The program director must possess the requisite subspecialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Radiology in Diagnostic Radiology or Radiology, or possess qualifications judged to be acceptable by the RRC, and shall have had postresidency experience in the subspecialty, preferably fellowship training
(See *Program Requirements for Residency Education in the individual subspecialties for subspecialty certification requirements for the program director.*)
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. The program director must be an experienced educator and supervisor of fellows in the subspecialty.
 - e. The program director must be a member of the radiology faculty, spend essentially all professional time in the subspecialty, and devote sufficient time to fulfill all responsibilities inherent in meeting the educational goals of the program.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate supervision of fellows at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as es-

tablished by the sponsoring institution and in compliance with the Institutional Requirements.

- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the number of fellows for which the program is approved by the RRC.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, support of the goals and objectives of the educational program of which they are a member, and a commitment to their own continuing medical education and participation in scholarly activities.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite subspecialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified by the American Board of Radiology in Diagnostic Radiology or Radiology, or possess qualifications judged to be acceptable by the RRC. (See Program Requirements for Residency Education in the individual subspecialties for faculty subspecialty certification requirements.)
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.

- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the administration and educational conduct of the program.

Facilities and Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Space and Equipment

(See *Program Requirements for Residency Education in the individual subspecialties for space and equipment requirements.*)

2. Library

Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. Access to computerized literature search facilities is necessary. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

Prerequisite training for entry into a subspecialty fellowship program of Diagnostic radiology should include the satisfactory completion of a diagnostic radiology residency program accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

B. Number of Fellows

The RRC will approve the number of fellows based upon the adequacy of resources for education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

(See *Program Requirements for Residency Education in the individual subspecialties for required faculty to fellow ratio.*)

C. Transfer of Fellows

To determine the appropriate level of education for fellows who are transferring from another subspecialty fellowship program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of fellowship training for fellows who may leave the program prior to completion of their training.

D. Subspecialty Fellow/Core Residents

The subspecialty fellowship program must not dilute or detract from the educational opportunities available to residents in the core Diagnostic Radiology residency program.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

A subspecialty fellowship program must provide advanced education so that the fellows can acquire special skill and knowledge in a specific subspecialty. This education should consist of a cognitive and a technical component. The cognitive component should emphasize the scholarly attributes of self-instruction, teaching, skilled clinical analysis, sound judgment, and research creativity. The technical component must provide appropriate opportunity for the fellows to acquire the operative and other psychomotor skills required for the practice of the subspecialty.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Clinical Components

A sufficient number of patients must be available to ensure appropriate inpatient and outpatient experience for each subspecialty fellow without adversely affecting the experience of residents in the diagnostic radiology core program.

2. Didactic Components

Subspecialty conferences, including review of all current complications and deaths, seminars, and clinical and basic science instruction, must be regularly scheduled. Active participation of the subspecialty fellow in the planning and the production of these meetings is essential.

C. Scholarly Activities: Fellows

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

(See *Program Requirements for Residency Education in the individual subspecialties for participation of fellows in research.*)

VI. Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and the well-being of the fellow. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

A fellow must have the opportunity to provide consultation with faculty supervision. He or she should have clearly defined educational responsibilities for diagnostic radiology residents, medical students, and professional personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

There must be close interaction between the core residency program in diagnostic radiology and the subspecialty program. Lines of responsibility for the diagnostic radiology residents and the subspecialty fellow must be clearly defined. It is imperative that the educational program for the subspecialty fellow not adversely affect the education of the diagnostic radiology residents, in terms of either experience or patient responsibility.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the subspecialty program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care. During this time, fellows may complete call activities and participate in read-out sessions with faculty of the previous night's cases.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as reading a new study or participating in an interventional procedure on a patient for whom the fellow has not previously provided care.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.

- c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because subspecialty fellowship training is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fatigue sufficient to jeopardize patient care.

F. Duty Hours Exception

The RRC for Diagnostic Radiology will not consider requests for exception to the limit to 80 hours per week, averaged monthly.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the subspecialty fellowship program must demonstrate that it has an effective mechanism for assessing performance of fellows throughout the program, and for utilizing the results to improve performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least quarterly written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a written final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be

part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the subspecialty fellowship program. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

(See Program Requirements for Residency Education in the individual subspecialties for subspecialty certification requirements for program graduates.)

Editorial Revision: July 2004

Program Requirements for Residency Education in Abdominal Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which in some cases may exceed the common requirements.

I. Scope and Duration of Training

A. Definition and Scope of the Specialty

Abdominal radiology constitutes the application and interpretation of conventional radiology, computed tomography, ultrasonography, magnetic resonance (MR) imaging, nuclear medicine, fluoroscopy, and interventional methods customarily included within the specialty of diagnostic radiology as they apply to diseases involving the gastrointestinal tract, genitourinary tract, and the intraperitoneal and extra peritoneal abdominal organs.

The program must be organized to enhance substantially the residents' knowledge of the application of all forms of diagnostic imaging and interventional techniques to the unique clinical pathophysiologic problems encountered in diseases affecting the gastrointestinal and genitourinary systems. The program should include education in normal and pathologic anatomy and physiology of gastrointestinal and genitourinary disease and be structured to develop expertise in the appropriate application of all forms of diagnostic imaging and interventions to problems of the abdomen and pelvis.

B. Duration of Training

Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

II. Faculty Qualifications and Responsibilities

The director of the program in abdominal radiology must be an experienced educator and supervisor of residents in abdominal radiology. The program director must be certified by the American Board of Radiology in radiology or diagnostic radiology, or possess equivalent qualifications, and shall have had postresidency experience in abdominal radiology, preferably fellowship training.

The faculty should include, in addition to the program director, at least one other full-time radiologist specializing in abdominal radiology. At a minimum, the program faculty must have two full-time equivalent faculty members dedicated to the program. Although it is desirable that abdominal radiologists supervise special imaging such as computed tomography, ultrasonography, and magnetic resonance imaging, in instances where they are not expert in a special imaging technique, other radiologists who are specialists in those areas must be part-time members of the abdominal radiology faculty. The faculty must provide didactic teaching and supervision of the residents' performance and interpretation of all abdominal imaging procedures.

(See Program Requirements for the Subspecialties of Diagnostic Radiology for additional program director and faculty requirements.)

The total number of residents in the program must be commensurate with the capacity of the program to offer an adequate educational experience in abdominal radiology. The minimum number of residents need not be greater than one, but at least two residents is desirable. To ensure adequate supervision and evaluation of the residents' academic progress, the faculty/resident ratio should not be less than one faculty member to each resident.

III. Facilities and Resources

A. Space and Equipment

Modern imaging equipment and adequate space must be available to accomplish the overall educational program in abdominal radiology. There must be state-of-the-art equipment for conventional radi-

ography, digital fluoroscopy, computed tomography, ultrasonography, nuclear medicine, and magnetic resonance imaging. Laboratory and pathology services must be adequate to support the educational experience in abdominal radiology. Adequate areas for display of images, interpretation of images, and consultation with clinicians must be available.

B. Library

Ancillary teaching resources must include access to a medical library. A variety of textbooks, journals, and other teaching materials in abdominal radiology and related medical and surgical fields must be available. A subspecialty teaching file and in-house file must be actively developed and available for use by residents. The ACR teaching files in gastrointestinal and genitourinary radiology only partially meet this requirement.

IV. Educational Program

A. Clinical Components

The program must provide both clinical and didactic experiences that encompass the full breadth of diseases and their pathophysiology, including coverage of uncommon problems involving the gastrointestinal tract, genitourinary tract, and abdomen, including but not limited to the liver and biliary system, pancreas, stomach, esophagus, small bowel, colon, spleen, kidneys, adrenal glands, bladder, male and female reproductive systems, and lymphatic system.

The program must provide an adequate volume and variety of imaging studies and interventional procedures and must provide instruction in their indications, appropriate utilization, risks, and alternatives. The resident must have the opportunity to perform the abdominal imaging studies, including: urethrography; urography; cystography; hysterosalpingography; computed tomography; ultrasonography; MR imaging; and plain radiographic and fluoroscopic studies of the hollow gastrointestinal tract.

The resident also must gain experience in performing guided biopsies of intraperitoneal and retroperitoneal structures and aspiration and drainage of abscesses. The resident must be familiar with the indications and complications of percutaneous nephrostomy and transhepatic cholangiography and obtain experience in providing fluoroscopic guidance for the dilation of gastrointestinal, biliary, pancreatic, and ureteric duct strictures. Interpretation of endoscopic retrograde cholangiopancreatography (ERCP) and operative cholangiography must be taught. The program also should provide opportunity, through conferences and individual consultation, for the residents to integrate invasive procedures, where indicated, into optimal care plans for patients, even though formal responsibility for performing the procedures may not be part of the program.

The program must provide instruction in the indications for, as well as the complications of, certain procedures, such as visceral angiography, tumor embolization, radionuclide scintigraphy, lithotripsy, gastrostomy, nephrostomy, and cholecystostomy.

Graded responsibility or independence given to residents should depend on their knowledge, technical skill, and experience. Attending faculty must be available to perform and/or supervise procedures as required.

B. Didactic Components

A major goal of the didactic portion of the training program should be to provide the resident with understanding of the pathophysiology of diseases that affect the gastrointestinal and genitourinary tracts. Diagnostic skill and understanding of uncommon problems in abdominal disease, as well as of the indications, risks, limitations, alternatives, and appropriate utilization of imaging and

interventional procedures, should be part of the body of knowledge imparted.

Education must be available in the basic radiologic sciences, e.g., diagnostic radiologic physics, radiation biology, and the pharmacology of radiographic contrast materials.

There must be intradepartmental conferences, as well as conferences with related clinical departments, in which residents in abdominal radiology participate on a regular basis. These should include one or more weekly departmental conferences in abdominal radiology, and at least one monthly interdepartmental clinical conference.

Residents must be given the opportunity to present the radiologic aspects of cases in combined clinical conferences related to allied disciplines. They also should prepare clinically and/or pathologically proven cases for inclusion in an ongoing teaching file. There must be daily image interpretation sessions that require that residents reach their own diagnostic conclusions, which then are reviewed and critiqued by faculty. Diagnostic reports generated by residents should be closely reviewed for content, level of confidence, grammar, and style.

Residents should be encouraged to attend and participate in regional conferences. They should attend at least one national meeting or postgraduate course in abdominal radiology during the year of fellowship training.

C. Additional Required Components

There should be an ACGME-accredited residency or subspecialty training program available in general surgery, gastroenterology, oncology, urology, gynecology, and pathology; at a minimum there must be Board-certified (or equivalent) specialists in these areas to provide appropriate patient populations and educational resources in the institution. These specialists may serve as additional faculty.

D. Scholarly Activities

The training program should have a research component that offers an opportunity for residents to learn the fundamentals of design, performance, and interpretation of research studies, as well as how to evaluate investigative methods. Particular attention should be given to developing competence in critical assessment of new imaging modalities and of the radiologic literature, and residents will be expected to participate actively in research projects. The program must provide sufficient office space, supplies, and secretarial support to enable residents to conduct research projects as well as perform literature searches, manuscript preparation, statistical analysis, and photography.

V. Duty Hours and Conditions of Work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

VI. Evaluation

(See Program Requirements for the Subspecialties of Diagnostic Radiology for evaluation requirements.)

ACGME: June 22, 1998 Effective: June 23, 1998
Editorial Revision: June 6, 2002

Program Requirements for Residency Education in Cardiothoracic Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which may in some cases exceed the common requirements.

I. Scope, Duration, and Organization of Training

A. Definition and Scope of the Specialty

Special training and skill are required to enable the cardiothoracic radiologist to function as an expert diagnostic and therapeutic consultant and practitioner. The training program in the subspecialty of cardiothoracic radiology constitutes a closely supervised experience in the application and interpretation of imaging examinations and interventional procedures related to the lungs, pleura, mediastinum, chest wall, heart, pericardium, and the thoracic vascular system in the adult. The imaging methods and procedures include, but are not necessarily limited to, routine radiography, fluoroscopy, computed tomography (CT), magnetic resonance (MR) imaging, ultrasound, and interventional techniques.

The objective of training in this subspecialty of radiology is to provide trainees with an organized, comprehensive, and highly supervised full-time educational experience in the selection, interpretation, and performance of examinations and procedures related to cardiothoracic radiology; a thorough knowledge of the recent clinical aspects of diseases of the thorax; and opportunities and skills for research in the field of cardiothoracic radiology. The majority of the time in the program should be spent in clinical training in cardiothoracic radiology.

B. Duration of Training

The program shall offer 1 year of graduate medical education in cardiothoracic radiology. This year of training must follow successful completion of an Accreditation Council for Graduate Medical Education (ACGME)-accredited program in diagnostic radiology or its equivalent.

C. Institutional Organization

A cardiothoracic radiology training program should function in direct association and/or affiliation with an ACGME-accredited training program in general diagnostic radiology.

D. Faculty/Resident Numbers

There should be at least one trainee in the program. The total number of trainees must be commensurate with the capacity of the program to offer an adequate educational experience in cardiothoracic radiology. To ensure adequate supervision and evaluation of a trainee's academic progress, the faculty/trainee ratio should not be less than one full-time faculty person for every trainee in the program.

II. Faculty Qualifications and Responsibilities

The program director must be certified by the American Board of Radiology in Diagnostic Radiology or possess other appropriate qualifications, and shall have had appropriate postresidency experience in cardiothoracic radiology, preferably subspecialty training in cardiothoracic radiology.

At a minimum, the cardiothoracic radiology faculty must include, in addition to the program director, one or more radiologists who commit a significant portion of their professional effort to cardiothoracic imaging and to the program. Faculty participating in cardiothoracic radiology training must be certified by the American Board of Radiology in Diagnostic Radiology or possess other appropriate qualifications, and shall have had appropriate postresidency experience in cardiothoracic radiology, preferably subspecialty training. Faculty are strongly encouraged to spend the majority of their professional activity in the field of cardiothoracic radiology; however, individual faculty expertise may be limited to a segment of cardiothoracic radiology or a related discipline, such as cardiovascular and interventional radiology, CT, or MR imaging. The faculty must provide didactic teaching and supervision of all aspects of the trainees' performance and interpretation of cardiothoracic imaging procedures.

III. Facilities and Resources

A. Space and Equipment

Modern facilities and equipment with adequate space should be available. Access to conventional radiographic, fluoroscopic, CT, MR, and ultrasound equipment must be provided. Where possible, exposure to and use of computed or digital radiography, picture archiving and communications systems (PACS), and nuclear medicine are desirable. The interventional rooms should be equipped for monitoring so that examinations may be performed on high-risk patients. A room should be available near the procedure room for sterilization and preparation of instrument trays and other reusable supplies. There must be adequate space within the department to house these facilities. Adequate areas for image display, interpretation of images, and consultation with clinicians and adequate office space for cardiothoracic radiology faculty and trainees should be provided.

B. Office Space and Research Support

The institution should provide office space, computer facilities, office supplies, and secretarial help for the conduct of research projects. Assistance with literature searches, editing, statistical tabulation, and photography should be provided. The institution should provide laboratory facilities to support research efforts. It is also desirable that there be an animal facility with radiographic-fluoroscopic equipment, particularly that which might be used for invasive diagnostic and therapeutic procedures.

C. Library

There should be ready access to a library of general medical texts and periodicals. A collection of the major diagnostic radiology journals and current textbooks in diagnostic radiology, cardiothoracic radiology, and anatomy should also be available. Computerized literature search facilities must be available, and the ACR (or comparable) teaching films and videodiscs, including current sections of cardiothoracic radiology, should be available.

IV. The Educational Program

A. Clinical Components

The program must provide a sufficient volume and variety of pulmonary and cardiac disorders, including neoplastic, infiltrative, infectious, immunologic, vascular, traumatic, degenerative, and congenital disorders so that trainees gain adequate experience in the full gamut of cardiothoracic imaging techniques, procedures, and interpretations. The program must provide an adequate volume and variety of interventional cases, e.g., percutaneous aspiration and drainage procedures, and noninterventional examinations, e.g., CT, MR,

and radiographic studies. Clinical experience may be supplemented by training affiliations with other institutions.

The program must offer the opportunity for trainees to consult on, conduct, and interpret under close supervision invasive and noninvasive procedures in cardiothoracic radiology. Imaging studies shall include standard radiography and intensive care radiography, CT, and MR imaging. Experience in percutaneous biopsy procedures, ultrasound- and CT-guided thoracentesis, drainage procedures involving the pleural space, pulmonary angiography, and thoracic aortography, nuclear medicine (including positron-emission tomography) and computed radiography, and PACS, when possible, should be included in the program. Clinical experience in adult cardiac imaging, including chest radiographs, CT, and MR imaging, is a necessary component of the training program.

With regard to invasive procedures, trainees must be given graduated responsibility in the performance of procedures as their competence increases. Responsibility for these procedures should include preprocedural and postprocedural patient care. The program director should require that trainees maintain documentation of the interventional cases in which they have been the performing radiologist and should review the logs with them at least once in the course of the training year.

Strong clinical services in pulmonary medicine, cardiology, cardiothoracic surgery, and general thoracic surgery should be present in the institution sponsoring the cardiothoracic radiology program. There should be clinical and educational exposure to thoracic-oriented specialties such as cardiac and general thoracic surgery, pulmonary and critical care medicine, cardiology, thoracic trauma, oncology, and pathology. Access to both inpatients and outpatients is required.

The program should emphasize the importance of imaging protocols to ensure that excessive or inappropriate exams are not performed.

The subspecialty program in cardiothoracic radiology must not have any adverse impact, such as dilution of available clinical material, on the training of diagnostic radiology residents at the same institution. To ensure this, close cooperation between the subspecialty and residency program directors is required.

B. Supervision

All clinical training must be supervised. The responsibility or independence given to trainees should depend on their knowledge, manual and cognitive skills, and experience. Personnel must be available to perform or to supervise technical procedures.

C. Didactic Components

A written curriculum should be available and distributed to residents and faculty. The didactic component and teaching sessions should cover the principles of cardiothoracic radiology and the concepts of anatomy, physiology, internal medicine, and cardiothoracic surgery pertinent to the practice of cardiothoracic radiology.

Attendance and participation in regular image interpretation sessions is required. Intra- and interdepartmental conferences in cardiothoracic radiology should average approximately one per week. Regularly scheduled interdepartmental conferences that incorporate clinical cardiothoracic disciplines such as pulmonary medicine, cardiology, thoracic oncology, cardiothoracic surgery, general thoracic surgery, and pulmonary pathology are a necessary component of the program. Faculty and trainee attendance should be documented. Trainees should be encouraged to attend and participate in local extramural conferences and should attend at least one national meeting or postgraduate course in cardiothoracic radiology during the year in training. Trainees should be encouraged to present the radiologic aspects of cases that are discussed in clinical conferences with the allied disciplines, including formulation of a

diagnosis and/or recommendations for further imaging or imaging-guided intervention. They should also prepare clinically or pathologically proven cases for inclusion in a teaching file. Diagnostic reports generated by trainees should be closely reviewed for content, grammar, and style.

D. Other Required Components

1. Trainee participation in research

The training period in cardiothoracic radiology should provide research opportunities for the trainee. S/he should be able to participate in the design, performance, and interpretation of research studies and have the opportunity to develop competence in critical assessment of investigative techniques. Completion of at least one clinical or basic research investigation during the period of training is encouraged.

2. Interchange with trainees in other specialties and students

The training program must allow close interaction with the diagnostic radiology residency program. Trainees should be encouraged to participate in research projects with persons in other specialties, particularly those related to cardiothoracic disease. They should attend clinical conferences in other specialties and serve as consultants to these conferences. It is desirable that they participate in the clinical teaching of medical students and the preclinical teaching of subjects such as anatomy and physiology.

3. Duty hours and conditions of work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

V. Evaluation

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

ACGME: June 2002 Effective: June 11, 2002

Program Requirements for Residency Education in Endovascular Surgical Neuroradiology (Radiology-Diagnostic)

I. Definitions and Objectives

Endovascular surgical neuroradiology is a subspecialty that uses catheter technology, radiologic imaging, and clinical expertise to diagnose and treat diseases of the central nervous system. The unique clinical and invasive nature of this subspecialty requires special training and skills. The program must include training and experience in the following:

- A. Signs and symptoms of disorders amenable to diagnosis and treatment by endovascular surgical neuroradiology techniques.
- B. Neurological examinations to evaluate patients with neurological disorders.
- C. Pathophysiology and natural history of these disorders.
- D. Indications and contraindications to endovascular surgical neuroradiology procedures.
- E. Clinical and technical aspects of endovascular surgical neuroradiology procedures.

- F. Medical and surgical alternatives.
- G. Preoperative and postoperative management of endovascular patients.
- H. Neurointensive care management.
- I. Fundamentals of imaging physics and radiation biology.
- J. Interpretation of radiographic studies pertinent to the practice.

In this subspecialty, the objective of training is to give residents an organized, comprehensive, supervised, full-time educational experience in endovascular surgical neuroradiology. This experience includes the management of patients with neurological disease, the performance of endovascular surgical neuroradiology procedures, and the integration of endovascular surgical neuroradiology therapy into the clinical management of patients.

Training in endovascular surgical neuroradiology must be conducted in an environment conducive to investigative studies of a clinical or basic science nature.

A program in endovascular surgical neuroradiology must be jointly administered by Accreditation Council for Graduate Medical Education (ACGME)-accredited programs in neurological surgery, diagnostic radiology, and neuroradiology, which must be present within the same institution. Exceptions to this requirement will be subject to the review and approval, on a case-by-case basis, by the RRCs for Neurological Surgery and Diagnostic Radiology. The program is not intended to replace or duplicate the ACGME-accredited program in neuroradiology.

II. Duration of Training

The program shall offer 1 year of graduate medical education in endovascular surgical neuroradiology.

III. Program Director

The program director must be certified by either the American Board of Radiology or the American Board of Neurological Surgery or possess appropriate educational qualifications as determined by the RRC. The program director must have special expertise in endovascular surgical neuroradiology techniques and concentrate at least 50% of his/her practice in endovascular surgical neuroradiology therapy. In addition, the program director must devote sufficient time to the program to fulfill all the responsibilities inherent in meeting its educational goals. The program director should hold appointments to the teaching staff in both neurological surgery and radiology. The program director is responsible for establishing and maintaining the curriculum, selecting and supervising the residents, and selecting faculty members. The program director must have adequate support from the institution and both departments to carry out the mission of the program.

The director of the endovascular surgical neuroradiology training program must be appointed by and be responsible to the program director of the sponsoring training program.

IV. Faculty

Besides the program director, the program faculty must include at least one full-time member with expertise in endovascular surgical neuroradiology techniques, who (1) is certified by either the American Board of Radiology or the American Board of Neurological Surgery or (2) possesses appropriate educational qualifications as determined by the RRC. The faculty must provide didactic teaching and direct supervision of residents' performance in clinical patient management and in the procedural, interpretive, and consultative aspects of endovascular surgical neuroradiology therapy. The faculty also should stimulate scholarly activities and be able to direct residents in the conduct of such activities. Faculty members should hold appointments jointly in radiology and neurological surgery de-

partments. Evaluation of the faculty should be accomplished at least annually.

V. Faculty-to-Resident Ratio

The total number of residents in the program must be commensurate with the capacity of the program to offer an adequate educational experience in endovascular surgical neuroradiology therapy. To ensure adequate teaching supervision and evaluation of a resident's academic progress, the faculty-to-resident ratio must be at least one full-time faculty person for every resident enrolled in the program.

VI. Educational Program

A. Curriculum

The training program must offer didactic and clinical experiences that encompass the full clinical spectrum of endovascular surgical neuroradiology therapy.

1. Preparatory requirements
 - a. Common requirements: All endovascular surgical neuroradiology residents must have completed at least 12 months, preferably consecutive, in neuroradiology. In addition, all endovascular surgical neuroradiology residents must have skills and knowledge in catheter techniques.
 - b. Trainees accepted into an ACGME-accredited program in endovascular surgical neuroradiology who do not come from a radiology training program shall have access to a 1-year period of training in neuroradiology in the institution sponsoring the endovascular surgical neuroradiology program.
 - c. Residents entering from a neurosurgery background must have fulfilled the following preparatory requirements, in addition to the common requirements:
 - 1) Completed an ACGME accredited residency in neurological surgery.
 - 2) Completed a course in basic radiology skills acceptable to the program director where the neuroradiology training will occur. The basic radiology skills and neuroradiology training may be acquired during elective time in the neurological surgery residency.
 - d. Residents entering from a neurology background must have fulfilled the following preparatory requirements, in addition to the common requirements:
 - 1) Completed an ACGME-accredited residency in neurology;
 - 2) Completed an ACGME-accredited 1-year vascular neurology program;
 - 3) Completed a 3-month course in basic radiology skills acceptable to the program director where the neuroradiology training will occur. The basic radiology skills and neuroradiology training may be acquired during elective time in the neurology residency.
 - 4) Completed 3 months of clinical experience in an ACGME-accredited neurological surgery program, which may be acquired during elective time in neurology and/or vascular neurology training.
 - e. Residents entering from a radiology background must have fulfilled the following preparatory requirements, in addition to the common requirements:
 - 1) Completed an ACGME accredited residency in diagnostic radiology.
 - 2) Completed 3 months of clinical experience in an ACGME accredited neurological surgery program, which may be acquired during elective time in diagnostic radiology and/or neuroradiology training.

- f. Specifically, the preparatory training must provide residents skills and knowledge in the following areas:
- 1) The use of needles, catheters, guidewires, and angiographic devices and materials.
 - 2) The basic radiological sciences, including radiation physics, radiation protection, and the pharmacology of radiographic contrast materials.
 - 3) Angiography and image interpretation.
 - 4) The proper use and interpretation of laboratory tests and methods that are adjunctive to endovascular surgical neuroradiology procedures, such as physiological monitoring, noninvasive neurovascular testing, and noninvasive neurovascular imaging
 - 5) The evaluation of patients with neurological disease.
 - 6) The basic and clinical neurosciences, including neuroanatomy, neurobiology, and the pathophysiology and natural history of neurologic disorders, especially cerebrovascular and neoplastic conditions.
 - 7) The clinical aspects of patient assessment, treatment planning, and patient management related to endovascular surgical neuroradiology therapy, including the fundamentals of invasive monitoring and neurointensive care management.
 - 8) The clinical indications, risks, and limitations of endovascular surgical neuroradiology procedures.
 - 9) The use and administration of analgesics, antibiotics, anticoagulation agents, neuroanesthetic agents, and other drugs commonly used in endovascular surgical neuroradiology procedures.
 - 10) The director of the Endovascular Surgical Neuroradiology Program is responsible for documenting that the applicant has completed the appropriate preparatory training.
2. Endovascular surgical neuroradiology clinical training
- A period of 12 continuous months must be spent in clinical endovascular surgical neuroradiology training, during which the resident has the opportunity to carry out all of the following under close supervision: perform clinical preprocedure evaluations of patients, interpret preliminary diagnostic studies, consult with clinicians on other services, perform diagnostic and therapeutic endovascular surgical neuroradiology procedures, generate procedural reports, and participate in short-term and long-term postprocedure follow-up care, including neurointensive care. The continuity of care must be of sufficient duration to ensure that the resident is familiar with the outcome of all endovascular surgical neuroradiology procedures. Residents should serve as consultants under the supervision of staff endovascular surgical neuroradiology practitioners. Direct interactions of residents with patients must be closely observed to ensure that appropriate standards of care and concern for patient welfare are strictly maintained. Communication, consultation, and coordination of care with the referring clinical staff and clinical services must be maintained and documented with appropriate notes in the medical record.
- The program must provide adequate opportunity for residents to participate in and personally perform and analyze a broad spectrum of endovascular procedures in adults, children, and neonates. Specific training should be provided in the following areas:
- a. Anatomical and physiologic basic knowledge:
 - 1) Basic knowledge in arterial angiographic anatomy of the brain, spine, spinal cord, and head and neck.
 - 2) Venous angiographic anatomy of the brain, spine, spinal cord, and head and neck.
 - 3) Collateral circulation
 - 4) Dangerous anastomosis
 - 5) Cerebral blood flow
 - 6) Autoregulation
 - 7) Pharmacology of CNS vasculature
 - b. Technical aspects of endovascular surgical neuroradiology, including:
 - 1) Catheter and delivery systems
 - 2) Embolic agents in cerebral, spinal, and head and neck embolization
 - 3) Flow-controlled embolization
 - 4) Complication of cerebral embolization
 - 5) Flow control between the extracranial and intracranial circulation
 - 6) Electrophysiology
 - 7) Provocative testing (pretherapeutic evaluation)
 - 8) Complications of brain, spine, spinal cord, and head and neck embolization.
 - 9) Imaging of vascular system
 - c. Pharmacology
 - 1) Contrast materials
 - 2) Provocative testing with anesthetics and sedatives
 - 3) Anticoagulants
 - 4) Thrombolytics
 - d. Coagulation cascade
 - e. Brain arteriovenous malformation, spinal cord, arteriovenous fistulas of the brain, spine, spinal cord, head and neck vascular malformations, ischemic stroke, and cerebral aneurysms
 - 1) Classification
 - 2) Clinical presentation
 - 3) Natural history
 - 4) Epidemiology
 - 5) Hemodynamic basis
 - 6) Indications for treatment
 - 7) Contraindication for treatment
 - 8) Therapeutic modalities
 - 9) Combined therapies
 - f. Tumors of the head, neck, spine, and central nervous system
 - g. Revascularization for occlusive vascular diseases
 - 1) Arteriopathy
 - 2) Atherosclerotic lesions
 - 3) Techniques of revascularization: balloon angioplasty, thrombolytics, and stenting.
 - h. Embolization for epistaxis or other causes of hemorrhage
 - i. Invasive functional testing
 - j. Balloon test occlusions
3. Conferences and didactic training
- Residents must make daily rounds with the attending faculty during which patient management decisions are discussed and made. Conferences should be organized by the faculty and held to allow discussion of topics selected to broaden knowledge in the field of endovascular surgical neuroradiology. Specifically, teaching conferences should embrace the scope of endovascular surgical neuroradiology as outlined in Section I (Definitions and Objectives) of these Program Requirements. Conferences should include journal clubs, pathology meetings, and neuroanatomy dissection courses related to endovascular surgical neuroradiology.
- There must be didactic and interactive conference time, including interdepartmental meetings with neurosurgeons and neuroradiologists. Regular review of all mortality and morbidity related to the performance of endovascular surgical neuroradiology procedures must be documented. Residents must participate actively in these reviews, which should be held at least monthly. Residents should be encouraged to attend and

participate in local extramural conferences and should attend at least one national meeting or postgraduate course in endovascular surgical neuroradiology therapy while in training.

VII. Patient Population

The institution's patient population must have a diversity of illnesses from which broad experience in endovascular surgical neuroradiology therapy can be obtained. The case material should encompass a range of neurological diseases, including neurovascular. An adequate variety and number of endovascular surgical neuroradiology procedures must be available for each resident. Each program must perform at least 100 therapeutic endovascular surgical neuroradiology procedures per year. These procedures include the treatment of aneurysms, brain arteriovenous malformations, arteriovenous fistulas of the brain, tumors of the central nervous system, occlusive vascular diseases, revascularization, traumatic injury, maxillofacial vascular malformation, and tumors. In addition, the program must provide adequate training and experience in invasive functional testing.

Each resident must maintain a personal case log, which the program director must certify at the completion of training.

The program director must submit the entire clinical experience of the endovascular surgical neuroradiology program and the residents in the format prescribed by the RRC. The list of procedures and the logs must be made available to the RRC at the time of its review of the core program and the endovascular neuroradiology training program.

The subspecialty program in endovascular surgical neuroradiology must not have an adverse impact on the educational experience of diagnostic radiology, neuroradiology, neurological surgery, or vascular surgery residents in the same institution.

VIII. Equipment and Facilities

Modern imaging/procedure rooms and equipment must be available and must permit the performance of all endovascular surgical neuroradiology procedures. Rooms in which endovascular surgical neuroradiology procedures are performed should be equipped with physiological monitoring and resuscitative equipment. The following state-of-the-art equipment must be available: MRI scanner, CT scanner, digital subtraction angiography equipment, ultrasound, and a radiographic-fluoroscopic room(s) with a tilt table. Facilities for storing catheters, guidewires, contrast materials, embolic agents, and other supplies must be next to or within procedure rooms. There must be adequate space and facilities for image display and interpretation and for consultation with other clinicians.

The institutions where endovascular surgical neuroradiology training is conducted must include appropriate inpatient, outpatient, emergency, and intensive care facilities for direct resident involvement in providing comprehensive endovascular surgical neuroradiology care.

IX. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include

1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth under-

- standing of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. participation in journal clubs and research conferences.
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
4. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
6. provision of support for resident participation in scholarly activities

X. Research

A subspecialty program should have an investigational component such that the residents may become familiar with the design, implementation, and interpretation of clinical research studies. Facilities should be made available for research activity.

XI. Research Facilities

The institution should provide laboratory facilities to support research projects pertinent to endovascular therapies.

XII. Interchange With Residents in Other Specialties and Students

Residents should be encouraged to participate in research activities with residents and staff in other related specialties. They also should be encouraged to attend and participate in clinical conferences. It is desirable that they participate in the clinical teaching of neurological surgery and radiology residents and medical students.

XIII. Duty Hours and Conditions of Work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

XIV. Evaluation

A. Residents

Subspecialty program directors must establish clearly defined procedures for regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as judgment. The program director, with participation of members of the teaching staff, shall

1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. communicate each evaluation to the resident in a timely manner.
3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

B. Faculty

Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Residents should participate in these evaluations.

C. Program

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed by the subspecialty program director, the core diagnostic radiology program director, and the Institutional Review Committee on a regular basis. Written evaluations by residents should be utilized in this process.

ACGME: June 26, 2000 Effective: June 27, 2000

ACGME: February 11, 2003 Effective: April 11, 2003

Program Requirements for Residency Education in Musculoskeletal Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which in some cases may exceed the common requirements.

I. Scope and Duration of Training**A. Definition and Scope of the Subspecialty**

The musculoskeletal radiology training program constitutes a closely supervised experience in the application and interpretation of all imaging examinations and procedures as they relate to the analysis of disorders of the musculoskeletal system, including bones, joints, and soft tissues. The imaging methods and procedures include, but are not necessarily limited to, routine radiography, computed tomography, ultrasonography, radionuclide scintigraphy, magnetic resonance, arthrography, and image-guided percutaneous biopsy techniques. The objective of training in musculoskeletal radiology is to provide an organized, comprehensive, supervised, and progressively responsible full-time educational experience in the selection, interpretation, and performance of these examinations and procedures. A further objective is to provide the resident an opportunity to develop skills necessary for clinical and/or basic research in the subspecialty of musculoskeletal radiology.

B. Duration of Training

Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

II. Faculty Qualifications and Responsibilities

The program director must be certified in diagnostic radiology or radiology by the American Board of Radiology or possess equivalent qualifications.

In addition to the program director, the program must include at least one person experienced in musculoskeletal radiology who has

a substantial commitment to the training program. If necessary, other radiologists with expertise in certain imaging methods or procedures may function at least as part-time members of the training program. To ensure adequate supervision of the residents, there must be at least one full-time faculty person available for each two residents in the program.

III. Facilities and Resources**A. Space and Equipment**

Modern facilities and equipment and adequate space must be available to ensure an adequate educational experience for the resident. Access to routine radiographic, computed tomographic, scintigraphic, magnetic resonance, and ultrasound equipment must be provided. Adequate space for film display, film interpretation, and consultation with referring physicians must be available, and adequate office space, office supplies, and secretarial help for the conduct of research projects should be provided for musculoskeletal radiology faculty and residents. Assistance with literature searches, editing, statistical tabulation, and photography should be provided.

B. Library

The training program must provide ancillary teaching resources including access to a medical library with a sufficient number of textbooks and journals related to musculoskeletal diseases and electronic literature search capabilities. A musculoskeletal radiology/pathology teaching file must be developed and available for use by the residents. The American College of Radiology teaching file will only partially meet this requirement.

IV. Educational Program**A. Clinical Components**

Residents in musculoskeletal radiology must be provided access to a variety of patients encompassing the entire range of disorders of the musculoskeletal system, including articular, degenerative, metabolic, hematopoietic, infectious, traumatic, vascular, congenital, and neoplastic diseases. The imaging methods and procedures available for training should include routine radiography, computed tomography, ultrasonography, radionuclide scintigraphy, magnetic resonance, arthrography, and image-guided percutaneous biopsy techniques.

The program curriculum must provide clinical experience and didactic sessions encompassing the entire spectrum of musculoskeletal diseases. This must include both the axial and the appendicular skeletons of both adult and pediatric patients. The resident must interpret, under appropriate supervision, diagnostic examinations that include routine radiography, computed tomography, and magnetic resonance. Furthermore, the resident must perform and interpret arthrograms. The program must provide experience with image-guided percutaneous biopsy procedures and exposure to ultrasonography, bone densitometry, and radionuclide scintigraphy as they relate to diseases of the musculoskeletal system. A log must be kept by each resident documenting the types of arthrographic and biopsy procedures that she or he performs. With regard to invasive procedures, residents are to be given graduated responsibility as competence increases; such responsibility should include preprocedural and postprocedural patient care. Emphasis is placed on close coordination and cooperation with referring physicians, including orthopedic surgeons, rheumatologists, and emergency department specialists, and on establishment of proper imaging protocols to ensure that excessive or inappropriate examinations are not ordered and performed. Access to both inpatients and outpatients is required.

B. Didactic Components

There must be didactic conferences and teaching sessions that provide coverage of musculoskeletal concepts related to anatomy, physiology, pathology, orthopedic surgery, and rheumatology. Attendance at and participation in department conferences, such as daily film interpretation sessions, are required. Regularly scheduled interdepartmental conferences in, for example, orthopedic surgery, neurosurgery, and other appropriate surgical specialties; pathology; rheumatology; and oncology are also necessary components of the program. In addition, the training experience should include radiology-oriented conferences with medical students and graduate medical staff. The resident also should be encouraged to attend at least one national meeting or postgraduate course dealing with musculoskeletal radiology during his/her fellowship year.

Although the precise responsibility of the resident will vary from one clinical conference to another, opportunities must exist for active participation in the formulation of a diagnosis and/or the generation of an imaging protocol; such participation is to be used as a means by which the program director and other faculty members judge the resident's progress.

C. Resident Participation in Research

The training period in musculoskeletal radiology should provide sufficient research opportunities for the resident. He or she should be able to participate in the design, performance and interpretation of research studies and have the opportunity to develop competence in critical assessment of investigative techniques. Completion of at least one clinical or basic research investigation during the period of training is encouraged. Laboratory facilities to support research projects should be available in the institution.

D. Interchange With Residents in Other Specialties

The presence of accredited training programs in orthopedic surgery and rheumatology is highly desirable.

Shared experiences with residents in orthopedic surgery, rheumatology, pathology, and other appropriate specialties, including surgical subspecialties, are strongly encouraged. When appropriate, supervision and teaching by faculty expert in these additional disciplines should be available.

V. Evaluation

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

*ACGME: February 12, 1996 Effective: February 13, 1996
Editorial Revision: June 6, 2002*

Program Requirements for Residency Education in Neuroradiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which may in some cases exceed the common requirements.

I. Introduction

A. Definition and Scope of the Subspecialty

The body of knowledge and practice of neuroradiology comprises both imaging (plain film interpretation, computed tomography, magnetic resonance imaging, ultrasonography, nuclear radiology) and invasive procedures related to the brain, spine and spinal cord, head, neck, and organs of special sense (eyes, ears, nose) in adults and children. Special training and skills are required to enable the neuroradiologist to function as an expert diagnostic and therapeutic consultant and practitioner. In addition to knowledge of imaging findings, the resident must learn the fundamentals of pathology, pathophysiology, and clinical manifestations of the brain, spine and spinal cord, head, neck, and organs of special sense. The program must provide residents with an organized, comprehensive, and supervised full-time educational experience in the selection, interpretation, and performance of neuroradiologic examinations and procedures. The program must also provide residents with opportunities to conduct research in the field of neuroradiology.

The training program must provide the resident with the opportunity to develop, under supervision, progressively independent skills in the performance and interpretation of neuroradiologic imaging studies and invasive procedures. At the culmination of training, the resident should be capable of independent and accurate clinical decision making in all areas of neuroradiology.

B. General Information

The program shall offer 1 year of graduate medical education in neuroradiology. All of the program components specified in the Program Requirements must be offered in the first year, which is the year that is accredited. Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

II. Faculty Qualifications and Responsibilities

A. Program Director

The program director must be certified by the American Board of Radiology in diagnostic radiology or radiology, or possess appropriate educational qualifications, and shall have a certificate of Added Qualifications in Neuroradiology. The program director must be a credentialed member of the radiology faculty and must spend at least 80% of his or her clinical and academic time in neuroradiology. The program director shall select and supervise the residents and select other neuroradiology faculty members. The program director shall perform quarterly reviews of the residents and obtain feedback from the residents on the program and the faculty.

B. Faculty

The neuroradiology faculty must include, in addition to the program director, one or more neuroradiologists who spend at least 80% of their time in the practice of neuroradiology. The faculty must provide teaching and supervision of the residents' performance and interpretations of neuroradiologic procedures.

C. Faculty/Resident Ratio

The total number of residents in the program must be commensurate with the capacity of the program to offer an adequate educational experience in neuroradiology and not to have a negative impact on the core diagnostic radiology program. The minimum number of residents need not be greater than one, but two or more residents are desirable. To ensure adequate supervision and evalua-

tion of a resident's academic progress, the faculty/resident ratio must be at least one full-time faculty person for each resident.

III. Facilities and Resources

A. Equipment and Space

The following equipment, which must be "state of the art," must be available: magnetic resonance scanner, computed tomography (CT) scanner, digital subtraction angiography equipment, a radiographic-fluoroscopic room(s) with tilt table suitable for performing myelography, ultrasound equipment with Doppler capability, and conventional radiographic equipment. Physiological monitoring must be available. There must be adequate facilities adjacent to or within examination rooms, for storing supplies needed for the conduct of invasive neuroradiologic procedures. There must be appropriately trained nurses and technologists for these invasive procedures. A crash cart for emergency ventilation and cardiac life support must be available.

Adequate space for image display, interpretation of studies, and consultation with clinicians must be available. There must be adequate office space and support space for neuroradiology faculty/staff and residents.

The program should provide adequate office space and supplies and secretarial support for the conduct of research projects. Assistance with literature searches, editing, statistical tabulation, and photography should be provided.

B. Laboratory

The institution should provide laboratory facilities to support research projects.

C. Library

There should be ready access to a library of current general medical texts and periodicals. In particular, there should be periodicals and texts in the fields of neuroradiology, diagnostic radiology, head and neck radiology, neurology, neurosurgery, neuroanatomy, physics, neuropathology, otolaryngology, neurophysiology, and orthopedic surgery. Computerized literature search facilities and Internet access must be available. A film-based, web-based, or electronic neuroradiology teaching file containing or providing access to a minimum of 500 cases must be available for use by the neuroradiology residents. The available teaching material should be enhanced with new cases when appropriate.

IV. Educational Program

A. Curriculum

The program must offer the opportunity for residents to perform and interpret noninvasive and invasive diagnostic and interventional procedures under supervision. The procedures shall include diagnostic catheter-based cerebral angiography; other percutaneous minimally-invasive procedures (image-guided biopsies, spinal canal access for myelography, spinal fluid analysis, and medication installation); CT; MRI; MR/CT angiography; ultrasound of the central nervous system (including its vascular structures); plain film radiography related to the brain, head (including organs of special sense), skull base, and neck and spine; and nuclear medicine studies of the central nervous system. MR techniques such as magnetic resonance spectroscopy, functional activation studies, diffusion, and perfusion imaging should be incorporated into the training program. Residents must be given graduated responsibility in the performance and interpretation of the noninvasive and invasive procedures. Responsibility for these procedures should include pre- and postprocedural patient care. The resident must be thoroughly familiar with all aspects of administering and monitoring sedation

of the conscious patient. They also must have advanced cardiac life support training and certification.

B. Clinical Components

The program in neuroradiology must provide a sufficient volume and variety of patients with neurological, neurosurgical, ophthalmologic, otorhinolaryngologic, spinal, and other pertinent disorders so that residents gain adequate experience in the full gamut of neuroradiologic examinations, procedures, and interpretations. The neuroradiology training program should provide a minimum number of procedures per year as follows:

1. 2500 total examinations (including plain radiographs, CT, MR, ultrasound, catheter angiograms, and image-guided invasive procedures). Of these 2500 examinations, there should be at least
 - a. 1000 neuroradiological CT scans;
 - b. 1000 neuroradiological MR scans.
2. Residents must have participated in and documented the following:
 - a. At least 50 catheter-based angiographic procedures.
 - b. At least 50 image-guided invasive procedures (CT, MR, or fluoroscopically guided).
 - c. Participation in at least five intracranial microcatheter procedures is highly recommended.
3. The 12-month training program must consist of at least
 - a. Four weeks or equivalent dedicated training in pediatric neuroradiology.
 - b. Four weeks or equivalent dedicated training in head and neck radiology.
 - c. Four weeks or equivalent dedicated training in spine radiology including image-guided procedures.
 - d. Six to 8 weeks or equivalent dedicated training in vascular neuroradiology. During this period there should be a special emphasis on catheter neuroangiography. Experience in microcatheter techniques for thrombolysis treatment of acute stroke is strongly recommended. The program must offer the opportunity for residents to perform and interpret noninvasive and invasive diagnostic catheter-based cerebral angiography, other percutaneous minimally invasive procedures (image-guided biopsies, spinal canal access for myelography, spinal fluid analysis, and medication installation), CT, MRI, MR/CT angiography, ultrasound of the central nervous system (including its vascular structures), and plain film radiography related to the brain, head (including organs of special sense), skull base, neck, and spine.
 - e. Two to 4 weeks or equivalent dedicated experience performing and interpreting vascular sonography.
 - f. Twenty-four to 26 weeks or equivalent dedicated training in general adult diagnostic neurodiology.

C. Conferences

Residents must participate in one or more weekly departmental conferences in neuroradiology and one or more interdepartmental conferences with allied clinical departments (e.g., neurology, neurosurgery, orthopedic surgery, neuropathology, head and neck surgery, and ophthalmology), as well as institutional conferences in clinical neurosciences (e.g., grand rounds) that are held at least monthly. Residents should be encouraged to attend and participate in local extramural conferences and should attend at least one national meeting or postgraduate course in neuroradiology while in training.

Residents should be encouraged to present the radiological aspects of cases that are discussed during daily work rounds and in clinical conferences related to allied disciplines such as neurosurgery and the neurological sciences. They should also prepare

clinically or pathologically proved cases for inclusion in the teaching file.

There must be daily interpretation sessions requiring residents to reach their own diagnostic conclusions, which must then be reviewed by faculty. Diagnostic reports generated by residents should be closely reviewed for content, level of confidence, grammar, and style. Feedback must be provided and the reports must be signed by a neuroradiology staff physician.

The residents are required to maintain documentation (procedure log) of the invasive cases that they have performed. The program director must review the log with the resident at least quarterly.

Residents should be encouraged to participate in the teaching of diagnostic radiology residents and medical students, including the presentation of at least one didactic lecture.

D. Other Required Components

1. Resident participation in research

The residents should learn the fundamentals of experimental design, performance, and interpretation of results. They should participate in clinical, basic biomedical, or health services research projects and should be encouraged to undertake at least one project as principal investigator. They should submit at least one scientific paper or exhibit to a regional or national meeting. The opportunity also must be provided for residents to develop their competence in critical assessment of new imaging modalities and of new procedures in neuroradiology.

2. Duty hours and conditions of work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

3. Interchange with students and residents in other specialties

Neuroradiology residents should be encouraged to participate in the research projects of staff persons and residents in other specialties. They should attend clinical conferences in other specialties and serve as consultants to these conferences. It is desirable that they participate in the clinical teaching of medical students and also in the preclinical curriculum in subjects such as neuroanatomy and neurophysiology.

V. Evaluation of Residents, Faculty, and Program

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

ACGME: February 13, 2001 Effective: January 1, 2002

Editorial Revision: June 6, 2002

Program Requirements for Residency Education in Nuclear Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which may in some cases exceed the common requirements.

I. Introduction

A. Definition and Scope of the Specialty

Nuclear radiology is defined as a clinical subspecialty of radiology involving the diagnostic and therapeutic use of radioactive materials using unsealed sources. The three basic applications include:

1. diagnostic imaging by external detection of radionuclides and/or bio-distribution by external detection of radionuclides in the body;
2. diagnostic in-vivo or combination in-vivo/in-vitro procedures that involve the administration and detection of radioactivity by non-imaging methods;
3. Therapeutic administration of radionuclides (excluding sealed sources).

B. Duration and Scope of Education

The program shall offer 1 year of graduate medical education in nuclear radiology.

C. Prerequisite Training

The year of nuclear medicine training should follow successful completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC) or other training judged suitable by the program director.

II. Institutional Organization

A training program in nuclear radiology will be accredited only in those institutions that have an accredited training program in diagnostic radiology. The nuclear radiology program will be reviewed and accredited in conjunction with the review and accreditation of the residency program in diagnostic radiology.

Those aspects of institutional support that pertain to residencies in diagnostic radiology shall also apply to programs in nuclear radiology; e.g., administrative support, facilities, and clinical resources.

III. Faculty Qualifications and Responsibilities

The program director is responsible for the instructional program and for supervision of the nuclear radiology fellows. The program director shall be certified by the American Board of Radiology in Diagnostic Radiology or Radiology and have subspecialty certification (CAQ) in Nuclear Radiology; or shall be certified by the American Board of Nuclear Medicine; or possess qualifications judged acceptable by the RRC for Diagnostic Radiology. It is desirable that faculty members be certified in boards appropriate to those areas in which they are assigned to instruct and supervise fellows. They must contribute sufficient time to the program to provide adequate instruction and supervision.

A faculty (nuclear medicine physician)-to-fellow ratio of 1:2 should adequately provide for teaching and supervisory responsibilities.

IV. Facilities and Resources

State-of-the-art nuclear imaging, including positron emission tomography (PET) and radiation detection equipment, should be available for instructional purposes.

V. Educational Program

The educational program must provide for well-balanced and progressive participation of the fellow through examination of a diverse patient population, with continuous teaching and an active research effort in nuclear radiology.

A. Clinical Component

1. The training program shall include graduated study, experience, and responsibility in all facets of nuclear radiological diagnosis and therapy, medical nuclear and diagnostic radiological physics, radiobiology, health physics and protection, nuclear medical instrumentation, radiopharmaceutical chemistry and instrumentation, clinical applications of nuclear radiology, and pathology.
2. The program must provide adequate opportunity for a fellow to participate in and personally perform a broad range of nuclear radiological procedures, including PET scanning.

B. Didactic Components

1. Formal instruction is required in diagnostic radiologic and medical nuclear physics, instrumentation, radiation protection and safety, radiobiology, conventional radionuclide imaging, molecular imaging, fusion imaging, diagnostic in-vivo or combination in-vivo/in-vitro procedures, therapeutic administration of radionuclides, and radiopharmaceutical chemistry.
2. Appropriate emphasis must be placed on the educational value of teaching rounds and conferences. In addition, there should be frequent correlative and interdepartmental teaching conferences.

C. Research

The program should provide an environment in which the fellow is encouraged to engage in investigative work with appropriate faculty supervision. Documentation of this environment should be made in the application and indicated by papers published by fellows and/or clinical faculty.

D. Teaching File

A teaching file of images referable to all applicable aspects of nuclear radiology must be available for use by fellows. This file should be indexed, coded, and regularly maintained.

E. Trainee Policies**1. Supervision**

The responsibility or independence given to fellows should depend on their knowledge, skills, and experience. Additional personnel must be available within an appropriate time interval to perform or to supervise procedures.

2. Duty Hours and Conditions of Work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

VI. Evaluation

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

ACGME: June 2004 Effective: January 2005

Program Requirements for Residency Education in Pediatric Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which may in some cases exceed the common requirements.

I. Scope and Duration of Training**A. Definition and Scope of the Specialty**

The training program in the subspecialty of pediatric radiology constitutes a supervised experience in the pediatric applications and interpretation of radiography, computed tomography, ultrasonography, angiography, interventional techniques, nuclear radiology, magnetic resonance, and any other imaging modality customarily included within the specialty of diagnostic radiology.

The program should be structured to enhance substantially the subspecialty fellow's knowledge of the applications of all forms of diagnostic imaging to the unique clinical/pathophysiologic problems of the newborn, infant, child, and adolescent. The fundamentals of radiobiology, radiologic physics, and radiation protection as they relate to the infant, child, and adolescent should be reviewed during the pediatric radiology training experience. The program must provide fellows direct and progressively responsible experience in pediatric imaging as they advance through training. This training must culminate in sufficiently independent responsibility for clinical decision making such that the program is assured that the graduating resident has achieved the ability to execute sound clinical judgment.

B. Duration of Training

Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

C. Objectives and Goals

The educational program in pediatric radiology shall meet training objectives so that on completion of the program the fellow is able to:

1. Understand the developmental and acquired disease processes of the newborn, infant, child, and adolescent that are basic to the practice of pediatric and adolescent medicine.
2. Perform and interpret radiological and imaging studies of the pediatric patient.
3. Supervise and teach the elements of radiography and radiology as they pertain to infants and children.
4. Understand how to design and perform research
5. Prepare material suitable for presentation and publication.

II. Institutional Organization

A program of pediatric radiology training should function whenever feasible in direct association and/or affiliation with an Accreditation Council for Graduate Medical Education (ACGME)-accredited program in diagnostic radiology.

III. Faculty Qualifications and Responsibilities**A. Program Director**

The program director must have sufficient academic and administrative experience to ensure effective implementation of these program requirements and should have had at least 5 years of participation as an active faculty member in an accredited pediatric radiology program. The program director must be certified by the American Board of Radiology in radiology or diagnostic radiology and must have received the Certificate of Added Qualifications in Pediatric Radiology granted by the American Board of Radiology, or have appropriate educational qualifications, as so judged by the RRC. The director must devote sufficient time to the program to fulfill all of the responsibilities inherent in meeting the educational

goals of the program. The program director is responsible for establishing the curriculum as well as procedures for evaluation of the fellow's competency. Evaluation of the fellow at least quarterly with a formal semiannual meeting with the fellow and written feedback is required. The program director shall select and supervise the fellows and shall select pediatric radiology program faculty members.

B. Faculty

There should be sufficient qualified professional personnel to constitute a teaching faculty. The faculty should comprise no fewer than two experienced radiologists, including the program director, who work full-time in pediatric radiology and its related subspecialty areas and are able to devote adequate time to the program. The minimum faculty requirement may be met by the program director and one other full-time equivalent, ie a total of two or more individual faculty members. A ratio of at least one pediatric radiologist for every subspecialty fellow is essential to provide adequate opportunity for teaching and supervision. It is desirable that pediatric radiologists supervise special imaging, such as angiography, interventional radiology, nuclear radiology, computed tomography, magnetic resonance.

IV. Facilities and Resources

A. Space and Equipment

Modern facilities and equipment in adequate space must be available and functioning to accomplish the overall educational program in pediatric radiology. Diagnostic imaging modalities shall include radiography, computed tomography, ultrasonography, radionuclide scintigraphy, angiography, and magnetic resonance imaging. The department must have a minimum of one radiographic/fluoroscopic room, one ultrasound unit, one angiographic room, one CT scanner, one MR unit, and one nuclear radiology gamma camera. All equipment must be up-to-date. There must be justification for continued use of any equipment that is more than 10 years of age.

In general hospitals that treat patients of all ages, pediatric radiology often is a section of the radiology department; similarly, special imaging services of such departments are separate sections. In such cases, there should be recognition within the special imaging sections of the particular needs of the pediatric radiology program. There should be low-dose roentgenographic/fluoroscopic facilities specifically for children and minimizing CT radiation dose in children should be emphasized. The availability of all special imaging services for pediatric radiology fellows is essential.

Laboratory and pathology services must be adequate to permit fellows to enhance their educational experience during the diagnostic imaging and care of patients and obtain timely correlation with diagnostic imaging studies.

B. Inpatient and Outpatient Services

The hospital must have sufficient inpatient and outpatient services in general and subspecialty pediatrics to ensure a broad and in-depth exposure to pediatrics.

C. Library

Learning resources should include access to an institutional and/or departmental library with current journals and textbooks sufficient to cover the specialty of pediatrics and pediatric subspecialties, radiology, and related fields. The library must contain journals and current textbooks on all aspects of pediatric radiology. The institutional library must have a librarian and internet access to electronic database searches. Moreover, the methods of performing such electronic database searches must be taught to fellows. A pediatric radiology teaching file must be available for use by pediatric radiology fellows. This teaching file should contain a minimum of

500 cases that are indexed, coded, actively maintained, and continually enhanced with new cases. Availability of the American College of Radiology pediatric learning file or its equivalent is desirable; this only partially meets the teaching file requirements.

D. Other Accredited Programs

There should be an ACGME-accredited residency in pediatrics, as well as pediatric medical and surgical subspecialty programs, to provide an appropriate patient population and educational resources in the institution. In addition to full-time pediatricians, there should be one or more pediatric surgeons, one or more pediatric pathologists, as well as a broad range of pediatric medical and surgical subspecialists.

V. Educational Program

A. Curriculum

The training should consist of didactic and clinical experiences that encompass the scope of pediatric radiology from the neonate to the adolescent. Every organ system should be studied in the contexts of growth and development, congenital malformations, diseases peculiar to infants and children, and diseases beginning in childhood but causing substantial residual impairment in adulthood. The didactic component should promote scholarship, self-instruction, self-evaluation, teaching, and research activity. It should foster the development of analytic skills and judgment. The clinical component should facilitate skillful technical performance of low radiation dose procedures on all organ systems that are examined in the practice of pediatric radiology. The pediatric imaging experience should include both inpatient and outpatient studies.

The fellows must have graded responsibility and supervision in the performance of procedures and the perfection of technical and interpretive skills. It is essential that the pediatric radiology fellow be instructed in common pediatric imaging technical procedures and their indications, limitations, judicious utilization, and risks, including radiation dose considerations. The pediatric radiology fellow must also be instructed in the risks and benefits of pediatric sedation; this includes an understanding of the physician's role in the monitoring and management of pediatric patients during and after sedation for diagnostic and therapeutic procedures. Where the program is conducted in a general hospital, the pediatric radiology fellow must have training in imaging examinations of pediatric patients. The scope of a 1-year training program in pediatric radiology shall include all diagnostic imaging applicable to the pediatric patient. The 1-year training program should include no more than 4 weeks' vacation. The curriculum must include the central nervous, musculoskeletal, cardiopulmonary, gastrointestinal, and genitourinary systems. In each organ system, the effective and appropriate use of imaging modalities, including ultrasound, computed tomography, magnetic resonance, nuclear radiology, and vascular/interventional radiology, should be taught. The fellow is responsible for following the imaging workup of the patient and must be substantially involved in the performance and interpretation of examinations that utilize various modalities. Correlation of radiologic findings with the clinical management and outcome aspects of the pediatric patient is essential.

B. Clinical Component

The institution's pediatric population must include patients with a diversity of pediatric illnesses from which broad experience can be gained. The number of pediatric radiology fellows in a program at any given time should reflect the patient census to ensure each trainee of an adequate experience. The program must have sufficient volume and variety of patients to ensure that fellows gain experience in the full range of pediatric radiologic examinations, pro-

cedures, and interpretations. There should be no fewer than 7000 pediatric radiologic examinations per year per fellow.

The pediatric radiology training program should provide a minimum number of procedures available per year per resident as follows:

- 300 fluoroscopic procedures
- 300 ultrasound examinations
- 200 body imaging (CT/MR) examinations

The procedures available for the pediatric radiology fellow should not have an adverse impact on the education of the residents of the core diagnostic radiology residency program in the same institution.

The pediatric radiology fellow must have experience in each of the following specialized areas: pediatric neuroradiology; vascular/interventional radiology; and nuclear radiology. There must be direct clinical experience as the primary or secondary operator, which should be supplemented by lectures and conferences. Supervised instruction should be provided by physicians with special expertise in those disciplines. It is acceptable to supplement the pediatric experience with adult patients in some specialties, such as vascular and interventional radiology, to enhance teaching. The program must require fellows to maintain a logbook to document their training in nuclear radiology, neuroradiology, and vascular/interventional radiology. The log should be reviewed periodically with the program director. The logbook should include the patient name, medical record number, and procedure(s) performed. The minimum numbers of procedures per resident performed in these specialized areas of pediatric radiology are as follows:

- 50 pediatric nuclear radiology studies
- 200 neuroimaging studies
- 25 vascular/interventional studies

The fellows should serve as pediatric radiologic consultants, under the supervision and mentoring of faculty pediatric radiologists. The teaching experience should include pediatric- and radiologic-oriented conferences with medical students, residents, medical staff, and health care professionals.

C. Didactic Component

Study of clinical and basic sciences as they relate to radiology and pediatrics shall be a part of the didactic program. Subspecialty conferences, seminars, and academic review activities in pediatric radiology must be regularly scheduled. It is essential that the fellow participate in the planning and presenting of conferences. In addition to conferences, study is integrated with the performance and interpretation of roentgenographic and other imaging examinations.

Fellows must attend a minimum of 3 departmental or interdepartmental conferences per week dedicated to pediatric radiology, which may include rounds with pediatric services. A journal club or research club must meet monthly.

The fellow must also be involved in teaching conferences for medical students, radiology residents, other residents rotating on the pediatric radiology service, and other health professional training programs.

D. Supervision

The responsibility or independence given to residents should depend on their knowledge, skills, and experience. Additional personnel must be available within an appropriate time interval to perform or to supervise procedures.

E. Duty Hours and Conditions of Work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

F. Subspecialty Fellow Participation in Research

The training program in pediatric radiology should have a research component that will offer the fellow an opportunity to learn the fundamentals of design, performance, interpretation of research studies, and evaluation of investigative methods. Trainees should develop competence in critical assessment of imaging research, patient outcomes data, and the scientific literature.

The fellow should participate in clinical, basic biomedical, or health services research projects and submit at least one scientific paper or exhibit to a regional or national meeting. The fellow should participate in the quality improvement program of the department.

G. Other Residents/Fellows

The training program should have close interaction with a diagnostic radiology residency. Shared experience with residents in general pediatrics and with fellows in the pediatric-related subspecialties, i.e., surgery, pathology, and cardiology, is strongly encouraged; where appropriate, supervision and teaching by expert faculty in these disciplines should occur.

The subspecialty program in pediatric radiology must not have an adverse impact, such as by dilution of the available clinical material, on the education of the diagnostic radiology residents in the same institution.

V. Evaluation

The RRC will consider as one measure of a program's quality the performance of its graduates on the examination of the American Board of Radiology for the Certificate of Added Qualifications in Pediatric Radiology. All program graduates should take the examination.

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for additional evaluation requirements.)

ACGME: September 22, 1997 Effective: July 1, 1998

Revision: December 18, 2000

Editorial Revision: December 19, 2001

Editorial Revision: June 6, 2002

Draft Revision: November 2003

Minor Revisions: November 12, 2004

Program Requirements for Residency Education in Vascular and Interventional Radiology (Radiology-Diagnostic)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology, programs must comply with the following requirements, which in some cases exceed the common requirements.

I. Introduction

A. Definition and Scope of the Subspecialty

The unique clinical and invasive nature of practice in vascular and interventional radiology requires special training and skills. The educational program in the subspecialty of vascular and interventional radiology must be organized to provide comprehensive, full-time training and a supervised experience in the evaluation and management of patients potentially requiring diagnostic

vascular imaging guided interventional procedures. The training must include a supervised experience in performance of imaging-guided diagnostic and interventional procedures used to treat a variety of disorders. Vascular and interventional procedures are guided by a number of imaging modalities, including fluoroscopy, angiography, computed tomography, ultrasonography, magnetic resonance imaging, radionuclide scintigraphy, and others included within the specialty of radiology. The training program must be structured to enhance substantially the subspecialty fellows' knowledge of the application of all forms of imaging to the performance and interpretation of vascular and interventional procedures.

The program in vascular and interventional radiology must be structured to enhance the subspecialty fellows' knowledge of the signs and symptoms of disorders amenable to diagnosis and/or treatment by percutaneous techniques. The program must assure that the fellow is proficient in taking a history and in the performance of an appropriate physical exam. The significance of the signs and symptoms must be understood, as well as the pathophysiology and natural history of the disorders. Fellows must know the indications for, contraindications to, and risks of vascular and interventional procedures, and understand the medical and surgical alternatives to those procedures. The vascular and interventional radiologist must have a complete understanding of imaging methods used to guide percutaneous procedures. Fellows must learn and participate in appropriate follow-up care, including inpatient rounds and longitudinal management of outpatients via clinic visits. Fellows must become skilled in the technical aspects of percutaneous procedures. The fundamentals of radiation physics, radiation biology, and radiation protection should all be reviewed during the vascular and interventional training experience. In addition, training should provide opportunities for research into new technologies and evaluation of the clinical outcomes of interventional radiology.

B. Duration and Scope of Education

The program shall offer 1 year of graduate medical education in vascular and interventional radiology. Prerequisite training for entry into a diagnostic radiology subspecialty program should include the satisfactory completion of a diagnostic radiology residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada (RCPSC), or other training judged suitable by the program director.

C. Faculty/Fellow Numbers

To ensure an adequate educational experience, as well as adequate supervision and evaluation of a fellow's academic progress the faculty-to-fellow, ratio must not be less than one full-time faculty person for every fellow.

II. Program Director/Faculty

A. Program Director

The program director must be certified by the American Board of Radiology in Diagnostic Radiology or Radiology and have subspecialty certification (CAQ) in Vascular and Interventional Radiology from the American Board of Radiology, or possess qualifications judged to be acceptable by the RRC.

B. Faculty

There should be sufficient qualified professional personnel to constitute a teaching faculty. The faculty should comprise at least two full-time vascular and interventional radiologists, including the program director. While the expertise of any one faculty member may be limited to a particular aspect of vascular and interventional radiology,

the training program must provide experience that includes all aspects of vascular and nonvascular interventional radiology, and including both the technical aspects as well as clinical patient evaluation and management. The faculty must provide didactic teaching and direct supervision of fellows' performance in clinical patient management, as well as in the procedural, interpretative, and consultative aspects of vascular and interventional radiology. The faculty must demonstrate a commitment to the subspecialty of vascular and interventional radiology. Such commitment includes membership in professional societies in this field, publications in this field, and/or a minimum of 30 hours of CME Category I credit per year.

(See Program Requirements for the Subspecialties of Diagnostic Radiology for additional program director and faculty requirements.)

III. Facilities and Resources

A. Space and Equipment

Modern imaging/procedure rooms and equipment in adequate space must be available to permit the performance of all vascular and interventional radiologic procedures. Imaging modalities in the department should include fluoroscopy, digital subtraction angiography, computed tomography, ultrasonography, magnetic resonance imaging, and radionuclide scintigraphy. Fluoroscopic equipment should be high resolution and have digital display with post-procedure image processing capability. Rooms in which vascular and interventional procedures are performed must be equipped with physiologic monitoring and resuscitative equipment. Suitable recovery and patient holding areas should be available. Adjacent to or within procedure rooms, there should be facilities for storing catheters, guide wires, contrast materials, embolic agents, and other supplies. There must be adequate space and facilities for image display, image interpretation, and consultation with other clinicians. Space, separate from the procedure rooms, should be available for patient consultations and non-procedural follow-up visits. The space should be conducive to patient privacy and the conducting of physical examinations. There must be adequate office space and support space for vascular and interventional radiology faculty or staff and fellows.

B. Patient Population

The institution's patient population must have a diversity of illnesses from which a broad experience in vascular and interventional radiology can be obtained. There must also be an adequate variety and number of interventional procedures for each fellow. Fellows must document their direct participation in a minimum of 500 vascular and interventional procedures that cover the entire range of the specialty. These procedures should be recorded in a personal case log that should be reviewed quarterly with the program director. Clinical experience may be supplemented by training affiliations to other institutions.

C. Library

Teaching resources must include a medical library with access to a variety of textbooks and journals in radiology, vascular and interventional radiology, and related fields. There should be a coded vascular and interventional radiology learning file. Fellows should have access to computerized literature search facilities.

D. Support Services

Pathology and medical laboratory services and consultation must be regularly and conveniently available to meet the needs of patients, as determined by the medical staff. Services should be available 24 hours a day. At least one qualified medical technologist must be on

duty or available at all times. Diagnostic laboratories for the noninvasive assessment of peripheral vascular disease also must be available. Nursing support must be readily available.

E. Research Facilities

The institution should provide laboratory and ancillary facilities to support research projects. These laboratory facilities and research opportunities may be made available to vascular and interventional radiology fellows through cooperative arrangements with other departments or institutions.

IV. The Educational Program

A. Clinical Components

The training program curriculum must include didactic and clinical experiences that encompass the full clinical spectrum of vascular and interventional radiology. Fellows must have the opportunity to carry out all of the following under close, graded responsibility and supervision: clinical pre-procedure evaluation of patients, interpretation of diagnostic studies, consultation with clinicians on other services, performance of vascular and interventional procedures, generation of formal consultation reports, procedural reports, follow-up communications with referring physicians and delivery of both short- and long-term follow-up care, including both in-patient rounds and scheduled out-patient clinical responsibilities. The continuity of care must be of sufficient duration to enable fellows to obtain appropriate comment regarding the management of patients under their care.

Both vascular and nonvascular interventional procedures must be included in the training program. Examples of vascular procedures include but are not limited to arteriography, venography, lymphography, angioplasty, vascular stenting, percutaneous revascularization procedures, embolotherapy, transcatheter infusion therapy, intravascular foreign body removal, and percutaneous placement of endovascular prostheses such as stent grafts and inferior vena cava filters and insertion of vascular access catheters. Examples of nonvascular procedures include, but are not limited to, percutaneous imaging-guided biopsy; percutaneous gastrostomy; percutaneous nephrostomy; ureteral stenting and other transcatheter genitourinary procedures for diagnosis and for treatment of lithiasis, obstruction, and fistula; percutaneous transhepatic and transcholecystic biliary procedures; percutaneous drainage for diagnosis and treatment of infections and other fluid collections; and percutaneous imaging-guided procedures such as ablation of neoplasms and cysts. Fellows must have specific clinical time dedicated to the performance and interpretation of vascular ultrasound studies, magnetic resonance angiograms, and CT angiograms.

The responsibility or independence given to fellows must depend on an assessment of their knowledge, manual skill, and experience. In supervising fellows during vascular and interventional procedures, faculty members should reinforce the understanding gained during fellowship training of x-ray generators, image intensifiers, film processing, ultrasonography, computed tomography, and other imaging modalities. Fellows must be provided with instruction in the use of needles, catheters, guide wires, balloons, stents, and other interventional devices, and must be directly supervised and given graduated responsibility in the performance of procedures as competence increases. A thorough understanding of the clinical indications, risks, interpretation, and limitations of vascular and interventional procedures is essential to the practice of vascular and interventional radiology. Fellows must be instructed in these areas. Fellows should also be instructed in proper use and interpretation of laboratory tests and in methods that are adjunctive to vascular and interventional procedures, such as use of physiologic monitoring devices, noninvasive vascular testing, and noninvasive

vascular imaging. There shall be specific instruction in the clinical aspects of patient assessment, patient treatment, planning, and patient management related to vascular and interventional radiology in both inpatient and outpatient settings. There also should be instruction in the use of analgesics, antibiotics, and other drugs commonly employed in conjunction with these procedures. Fellows must be thoroughly familiar with all aspects of administering and monitoring sedation of the conscious patient. They also must have advanced cardiac life support training and certification.

Fellows must be given graded responsibility with respect to longitudinal inpatient and outpatient care for disease processes diagnosed and treated by interventional radiology. Fellows should serve as consultants under the supervision of staff vascular and interventional radiologists. Direct interactions of residents with patients must be closely observed to ensure that appropriate standards of care and concern for patient welfare are strictly maintained. Communication, consultation, and coordination of care with the referring clinical staff and clinical services must be maintained and documented with appropriate notes in the medical record. Reports for the medical record generated by fellows should be closely reviewed by faculty for accuracy of content, grammar, style, and level of confidence. The vascular and interventional fellows should also assist and train diagnostic radiology residents in the performance and interpretation of procedures.

B. Didactic Components

There shall be scheduled intradepartmental conferences as well as conferences with related clinical departments in which fellows participate on a regular basis. These should include one or more specific weekly departmental conferences and at least one interdisciplinary conference per week at which attendance is required. In particular, interdepartmental conferences with the surgical specialties should be an important teaching component. The fellows' teaching experience should include conferences with medical students, graduate medical staff, and allied health personnel. Scheduled presentations by fellows during these conferences should be encouraged.

Clinical and basic sciences as they relate to radiology and vascular and interventional radiology should be part of the didactic program. This should include but not be limited to the anatomy, physiology, and pathophysiology of the hematological, circulatory, respiratory, gastrointestinal, genitourinary, and musculoskeletal systems. Relevant pharmacology, patient evaluation and management skills, and diagnostic techniques also should be addressed.

There must be documented regular review of all mortality and morbidity related to the performance of interventional procedures. Fellows must participate actively in this review, which should be held not less frequently than monthly. Fellows should be encouraged to attend and participate in local extramural conferences and to attend at least one national meeting or postgraduate course in interventional radiology while in training. Participation in local or national vascular and interventional radiology societies should be encouraged. Fellows should be encouraged to present the radiologic aspects of cases that are discussed in multi-disciplinary conferences. They also should prepare clinically or pathologically proven cases for inclusion in the learning file.

C. Other Required Components

1. Participation of Fellows in Research

The program should provide instruction in the fundamentals of experimental design, performance, and interpretation of results. They should participate in clinical, basic biomedical or health services research projects, and should be encouraged to undertake at least one project as principal investigator. They should submit at least one scientific paper or exhibit to a regional or national meeting. The opportunity also must be provided for fellows

to develop their competence in critical assessment of new imaging modalities and of new procedures in vascular and interventional radiology.

2. Duty Hours and Conditions of Work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

V. Evaluation

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning evaluation requirements.)

VI. Board Certification

The Residency Review Committee will consider as one measure of a program's quality the performance of its graduates on the examination of the American Board of Radiology for subspecialty certification in Vascular and Interventional Radiology. All program graduates should take the examination.

Revision: April 2004

ACGME: June 2004 Effective: January 2005

Program Requirements for Residency Education in Radiation Oncology

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition

Radiation oncology is that branch of clinical medicine concerned with the causes, prevention, and treatment of cancer and certain nonneoplastic conditions utilizing ionizing radiation. Radiation oncologists are an integral part of the multidisciplinary management of the cancer patient, and must collaborate closely with physicians in related disciplines and their roles in the management of the patient.

The objective of the residency program is to educate and train physicians to be skillful in the practice of radiation oncology, and to be caring and compassionate in the treatment of patients. To accomplish this goal, adequate structure, facilities, faculty, patient resources, and educational environment must be provided.

B. Duration and Scope of Training

Resident education in radiation oncology must include 5 years of accredited, clinically-oriented graduate medical education. The first year of postgraduate clinical training must be spent in internal medicine, family practice, obstetrics/gynecology, surgery or surgical specialties, pediatrics, a year of categorical radiation oncology, or a transitional-year program. This clinical experience must then be followed by 4 years focused in radiation oncology. The PG-1 year must include at least 9 months of direct patient care in medical and/or surgical specialties other than radiation oncology.

No fewer than 36 months of the 4-year program must be spent in clinical radiation oncology. In addition, the program must provide a 2-month rotation in medical oncology, to include adult and pediatric patients, as well as exposure to oncologic pathology and diagnostic imaging by a one-month rotation for each discipline. The medical oncology requirement may be met by documented attendance at regularly-scheduled multidisciplinary conferences (at least 4 hours per month during the clinical rotations). The pathology and diagnostic imaging requirements may be satisfied through multidisciplinary conferences if pathology and imaging material for both pediatric and adult patients are shown and discussed (at least one hour per month during the clinical rotations for each discipline). The remaining months must allow for in-depth experience in individually-selected areas applicable to clinical radiation oncology, as described in Section V B, Clinical Curriculum. A research component, either clinical or basic laboratory research, is desirable.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

1. The administration of the institution sponsoring the program in radiation oncology must provide funding for space, equipment, staff, nonprofessional personnel, and residents. It must assist the program director in teaching and recruiting faculty, as well as in

selecting, evaluating, and dismissing residents whose performance is unsatisfactory.

2. Education in radiation oncology must occur in an environment that encourages the exchange of knowledge and experience among residents both in the program and in other oncology specialties within the sponsoring institution. There should be other residency programs accredited by the Accreditation Council for Graduate Medical Education (ACGME), including internal medicine and general surgery, in the institution.

B. Participating Institutions

1. **Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives,** and should provide resources not otherwise available to the program. The preponderance of the educational experience must take place in the parent institution. **When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.** Outside institutions may participate on an affiliated or integrated basis.
 - a) The program may establish an *affiliated* relationship with another institution for the purpose of limited rotations. Affiliated institutions must provide additional resources and experience, and must not be added primarily for the purpose of meeting service needs.
 - (1) The program director must obtain prior approval from the Residency Review Committee (RRC) when the outside rotation totals more than 3 months.
 - (2) Arrangements for rotations should not be made with institutions that are at such a distance from the parent institution as to make resident attendance at rounds and conferences difficult.
 - (3) Rotations away from the primary and integrated institution may not exceed a total of 6 months over the course of the 4 years of radiation oncology.
 - b) An institution is considered *integrated* when the program director (a) appoints the members of the faculty and is involved in the appointment of the chief of service at the integrated institution; (b) determines all rotations and assignments of residents; and (c) is responsible for the overall conduct of the educational program in the integrated institution. There must be a written agreement between the parent institution and the integrated institution stating that these provisions are in effect; this agreement must be approved by the RRC prior to implementation. Rotations to integrated institutions are not limited in duration.
2. **Assignment to a participating institution requires a letter of agreement with the sponsoring institution that provides an educational experience for a resident that is one month in duration or longer. Such a letter of agreement should:**
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience;
 - d) state the policies and procedures that will govern resident education during the assignment; and
 - e) specify the number and types of patients and procedures available to the residents.
3. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience, and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the vari-

ous specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program, and should be a member of the staff of the sponsoring or integrated institution. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents, and the maintenance of records related to program accreditation, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. **Qualifications of the program director are as follow:**
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Radiology, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The program director must be licensed to practice medicine in the state(s) where the institution that sponsors the program is located (certain federal programs are exempted).
A complete curriculum vitae of the program director shall be filed with the executive director of the RRC at the time of appointment, and updated with each review of the program by the RRC.
4. **Responsibilities of the program director are as follows:**
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;

(3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e) In addition, the executive director of the RRC must be promptly notified, in writing as they occur, of any changes that might significantly alter the educational experience (e.g., changes in faculty, the number of residency positions offered, institutional affiliation, or equipment.)

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.

- a) The program must provide a minimum of 4 full-time-equivalent faculty radiation oncologists who devote their professional time to the program for the teaching of clinical radiation oncology.
- b) In addition, the faculty must include one full-time radiation biologist or cancer biologist, who must also be on site, for the teaching of radiation and cancer biology, and one full-time faculty medical physicist, who also must be on-site, for the teaching of radiation physics.

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.

3. Qualifications of the physician faculty are as follows:

- a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
- b) The physician faculty must be certified in the specialty by the American Board of Radiology, or possess qualifications judged to be acceptable by the RRC.
- c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.

b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Facilities

A training program in radiation oncology must have adequate space and equipment to train residents in state-of-the-art radiation oncology. There must be 2 or more megavoltage machines, a machine with a broad range of electron beam capabilities, a dedicated therapy simulator, three-dimensional conformal computerized treatment planning, a system for the construction of treatment aids, and equipment to perform interstitial and intracavitary brachytherapy. Access to kilovoltage capability is desirable.

2. Other Services

Adequate medical services must be available in the specialties of medical oncology, surgical oncology and its subspecialties, gynecologic oncology, and pediatric oncology. There must be access to current imaging techniques, nuclear medicine, pathology, a clinical laboratory, and a tumor registry.

3. Library Resources

A sufficient variety of journals (hard copy or online), reference books, and resource materials pertinent to radiation oncology, associated fields in oncology, and basic sciences must be provided in a radiation oncology library, and must be immediately accessible at all times, including nights and weekends, for resident study. In addition, residents must have access to a general medical library. The sponsoring institution must provide residents with ready access to a computerized search system and rapid access to national databases in medicine to permit timely literature review.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. The RRC recognizes the importance of peer interaction among residents themselves, as well as of interactions between faculty and residents in the conduct of conferences and patient care. A minimum number of residents is essential to provide an opportunity for meaningful interaction throughout the training period. Each program must be structured to have a minimum of 4 residents.
2. The faculty (full-time equivalent staff radiation oncologist) to resident ratio must be a minimum of 1 faculty member for every 1.5 residents during training in clinical radiation oncology. Staff radiation oncologists should be certified by the American Board of Radiology or be in the process of obtaining certification.

3. Approval must be obtained from the RRC before increasing the number of resident positions. Such an increase must be based on educational considerations, not the fulfillment of service requirements.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the 6 areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;

5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Components

1. Conferences and teaching rounds must provide for progressive participation of residents. There must be adequate frequency of conferences, with attendance by residents, radiation oncologists, and other staff. Adequate conference room and audiovisual facilities must be provided.
2. The clinical and basic sciences must be taught through regularly-scheduled lectures, case presentations, conferences, and discussions relevant to the practice of radiation oncology. The training program must provide curricula for the teaching of basic sciences essential to training in radiation oncology, including radiation and cancer biology and medical physics. The curriculum in medical physics must include didactic lectures and laboratory demonstrations of radiation safety procedures, calibration of radiation therapy machines, the use of the computer for treatment planning, the construction of treatment aids, and the safe handling of sealed and unsealed radionuclides. Safe handling of unsealed sources should address quality control procedures for instruments used to determine the activity of dosages and procedures used to perform checks for proper operation of survey meters. The radiation and cancer biology curriculum must include didactic lectures on all aspects of radiation effects on normal and neoplastic tissues, as well as the fundamental biology of the causes, prevention, and treatment of cancer. The program also must familiarize the resident with medical statistics, through an organized program of lectures or conferences; oncologic pathology, with special emphasis on neoplasia and radiation effects; and diagnostic imaging.
3. There must be didactic instruction in the potential value and limitations of other oncologic disciplines, such as medical oncology (both adult and pediatric), surgical oncology and the various surgical specialties, and gynecologic oncology, which play a role in the management of the patient. This shall be accomplished by attendance at multidisciplinary and departmental conferences.
4. There must be intradepartmental clinical oncology conferences, including new patient conferences, weekly chart reviews, problem case conferences, continuous quality improvement, morbidity and mortality, physics, dosimetry, radiation and cancer biology, and journal review.

F. Clinical Components

1. Clinical Resources

To ensure adequate numbers and variety of patients for resident training, at least 600 patients must receive external beam irradiation yearly in the parent institution or integrated program, and the number of patients treated with external beam irradiation by each resident must be no fewer than 150 per year (determined by the number of patients simulated), or a minimum of 450 during the clinical radiation oncology rotations. A resident should not treat more than 250 patients with external beam irradiation in any 1 year. Only cases for which the resident has primary responsibility may be counted.

2. Clinical Curriculum

- a) The program must provide the resident with the opportunity to gain in-depth knowledge of clinical radiation oncology, including the indications for irradiation and special therapeutic con-

siderations unique to each site and stage of disease. The resident must be trained in standard radiation techniques, as well as in the use of treatment aids and treatment planning to optimize the distribution of the radiation dose. The principles of normal tissue tolerance to radiation and tumor dose-response must be taught. The use of combined modality therapy and altered fractionation schemes should also be part of the clinical curriculum. Teaching in pain management and palliative care should be provided.

- b) The clinical core curriculum shall include experience with lymphomas and leukemias; gastrointestinal, gynecologic, genitourinary, breast, soft tissue and bone, skin, head and neck, lung, pediatric, and central nervous system tumors; and treatment of benign diseases for which radiation is utilized. In addition, the curriculum must provide instruction in the physics, radiation and cancer biology, and clinical applicability of the following areas: radiosurgery, intraoperative radiation therapy, three-dimensional conformal treatment planning and delivery, radioimmunotherapy, unsealed sources, total body irradiation as used in stem-cell transplantation, total skin irradiation, high- and low-dose rate brachytherapy, hyperthermia, kilovoltage irradiation, plaque therapy, particle therapy, intravascular brachytherapy, and any others that may be developed as they apply to the core curriculum.
- c) The resident must also be trained in the use of external beam modalities, including megavoltage irradiation, electron beam, simulation using conventional and/or CT simulators to localize anatomy, and computerized treatment planning. The faculty must ensure that the resident personally performs technical procedures, including treatment setups as well as intracavitary and interstitial placement of radiation sources.
- d) During the course of training, the resident must perform no fewer than 5 interstitial implants in at least 5 patients, perform 10 intracavitary implants in at least 5 patients, and observe an additional 5 interstitial implants in at least 5 patients and 10 intracavitary implants in at least 5 patients. In addition, residents must participate in the administration of no fewer than 6 procedures using radioimmunotherapy, other targeted therapeutic radiopharmaceuticals, or unsealed radioactive sources.
- e) Residents must treat no fewer than 12 pediatric patients of whom a minimum of 9 have solid tumors.

Follow-up of the irradiated patients by the resident, including pediatric patients, on an inpatient or outpatient basis is a required part of resident training, and must be demonstrated by the program to ensure that residents have the opportunity to learn about the problems of recurrent and disseminated tumors and of late aftereffects and complications of radiation therapy.

3. Resident Logs

- a) The resident must keep a detailed, well-organized, and accurate electronic log of these procedures to include patients simulated, procedures performed and observed, and modalities used, for semiannual review by the program director.
- b) The program director must:
 - (1) review the logs with all residents at least semiannually to ensure accuracy and to verify that the case distribution meets the standards specified;
 - (2) provide documentation of these discussions for the resident's record maintained by the institution; and
 - (3) submit the cumulative experience of graduating residents to the RRC office annually in accordance with the format and the due date specified by the RRC.

G. Resident Investigative Project

During their training, residents shall be required to complete an investigative project under faculty supervision. This may take the form of biological laboratory research, clinical research, medical physics research, or the retrospective analysis of data from treated patients. The results of such projects shall be suitable for publication in peer-reviewed scholarly journals or presentation at scientific meetings.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities,

transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.

3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the resident has not previously provided care.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements III.D.1.k.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and im-

provement, interpersonal and communication skills, professionalism, and systems-based practice.

- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
 - c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.
2. Final Evaluation
- The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. The review should include the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program. The RRC will use program data for the most recent 5- and 10-year periods, and will take into consideration notable improvements or declines during the period considered. Poor performance will be cited if the number of candidates passing both the written and oral board examinations on the first opportunity is consistently at or below the 25th percentile of all programs in the nation.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Radiation Oncology should communicate with the office of the board regarding the full requirements for certification.

Editorial Revisions: March 2003

ACGME: June 2003 Effective: July 2003

Editorial Revisions: March 2004

Program Requirements for Residency Education in Surgery

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

The goal of a surgical residency program is to prepare the resident to function as a qualified practitioner of surgery at the high level of performance expected of a board-certified specialist. The education of surgeons for the practice of general surgery encompasses education in basic sciences, training in cognitive and technical skills, development of clinical knowledge, and maturity in the acquisition of surgical judgment. The educational program should include the fundamentals of basic science as applied to clinical surgery, including: the elements of wound healing, homeostasis, hematologic disorders, oncology, shock, circulatory physiology, genitourinary physiology, surgical endocrinology, surgical nutrition, fluid and electrolyte balance, metabolic response to injury including burns, musculoskeletal biomechanics and physiology, immunobiology and transplantation, applied surgical anatomy, and surgical pathology.

B. Duration and Scope of Education

Five years of graduate training in surgery following graduation from a medical school accredited by the Liaison Committee for Medical Education (LCME) is required for the acquisition of the necessary knowledge, technical skill, and judgment. Each resident must be notified in writing of the length of the program prior to admission to the program. All years must be in an accredited program under the guidance of the program director in surgery, regardless of assignments to other disciplines.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions (a participating institution is defined as any institution to which residents rotate for an assigned experience).

1. The program should be conducted in institutions accredited by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) or its equivalent, and must be classified as general hospitals. These institutions, by definition, must include facilities and staff for a variety of services, including radiology and pathology.
2. There must be at least one additional residency program, in internal medicine or pediatrics or family practice whose residents rotate through the same integrated institution(s) as the surgery residents.
3. Adequate educational, clinical and support services must be provided.

B. Participating Institutions

1. **Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.**

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document.
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
 3. Integrated Institutions
 - a. Institutions may be integrated with the sponsoring institution through an integration agreement that must additionally specify that the program director must
 - 1) appoint the members of the teaching staff at the integrated institution
 - 2) appoint the chief or director of the teaching service in the integrated institution
 - 3) appoint all residents in the program
 - 4) determine all rotations and assignments of both residents and members of the teaching staff.
 - b. As a general rule, integrated institutions must be in close geographic proximity to allow all residents to attend joint conferences, basic science lectures, and morbidity and mortality reviews on a regular documented basis in a central location. If the institutions are geographically so remote that joint conferences cannot be held, an equivalent educational program of lectures and conferences in the integrated institution must be fully documented.
 - c. Integration will not be approved between two institutions, each with an accredited residency program in the same specialty.
 4. Prior approval must be obtained from the RRC for
 - a. a portion of the chief year to be spent at a participating institution
 - b. participating institutions where each resident will be assigned for 6 months or more, as well as for all integrations
 - c. educational assignments requiring 1 year or more in total spent away from the sponsoring or integrated institution(s).
- b. The program director must be certified in the specialty by the American Board of Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. be licensed to practice medicine in the state where the institution that sponsors the program is located
 - e. demonstrate scholarly activity in at least 1 of the areas listed in sections III.B.4. of this document.
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution.
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.
 On review of a proposal for any such major change in the program, the RRC may determine that a site visit is necessary.
 - e. The program director must devote his/her principal effort to the program's management and administration, as well as to teaching, research, and clinical care at the sponsoring or integrated institution.
 - f. The program director must designate other well-qualified surgeons to assist in the supervision of the residents so that in addition to the program director for each approved chief residency position, there is at least one additional geographic full-time teaching staff member whose major function is to support the residency program. These key staff members must be appointed for a period long enough to ensure adequate continuity in the supervision of the resident staff.
 - g. The program director is responsible to assign clinical rotations and staff appointments of attending surgeons on the teaching services for the sponsoring and all integrated institutions.
 - h. The program director is responsible to prepare and implement the academic and clinical program for resident education to include a comprehensive effective, well organized curriculum, both academically and clinically.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership. The term of appointment, as a normal rule, must be for at least the duration of the program plus 1 year, i.e., a minimum of 6 years.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and

objectives of the educational program of which they are a member.

3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

 - d. Documented leadership in major medical specialty organizations.
 - e. Mentorship of junior faculty, residents and fellows.
 - f. The staff as a whole must document active involvement in all phases of scholarly activity as defined above to be considered adequate.
 - g. Adequate documentation of scholarly activities by the program director and the teaching staff at the sponsoring and integrated institutions is required at the time of the site visit. Staff activity at participating institutions cannot account or substitute for the educational environment of the sponsoring and integrated institutions.
 - h. While not all members of a teaching staff can be investigators, clinical and/or basic science research must be ongoing in the department of surgery of the sponsoring and integrated institution(s).
 - i. Research on the part of residents also is not a substitute for the involvement of the program director and teaching faculty.
5. Qualifications of the nonphysician faculty are as follows
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. Residency positions must be allocated to one of three groups: categorical, designated preliminary, and nondesignated preliminary positions.
 - a. Categorical residents (C) are accepted into the residency program with the objective to complete the entire surgery program, i.e., normally 5 clinical years, assuming satisfactory performance.
 1. At each level, the number of categorical PG1, PG2, PG3, and PG4 positions shall not exceed the number of approved chief residency positions.
 2. Modest variations, not to exceed a 10% increase in the total number of categorical positions, may be permitted on a temporary basis only.
 - b. Designated preliminary residents (DP) are accepted for 1, 2, or 3 years prior to continuing their education in another surgical or nonsurgical specialty or subspecialty program.
 1. Letters of commitment must be on file for each of these residents.
 2. The number of designated preliminary positions shall not be specifically limited, as long as the total number of residents does not exceed the educational capacity of the surgical program.
 - c. Nondesignated preliminary residents (NDP) are accepted into the general surgical program for 1 or 2 years but at the time of recruitment have not determined further residency training.
 1. The number of nondesignated preliminary positions in the PG1 and PG2 years combined shall not exceed 200% of the number of categorical chief resident positions.
 2. Documentation of these residents continuation in graduate medical education must be provided.
 3. Exceptions to the number of nondesignated preliminary positions will require not only adequate documentation of continuing in graduate medical education in another program, but will also require clear evidence of educational benefit to the overall program.
 - d. Both temporary and permanent increases in resident complement must be approved in advance by the RRC. A permanent increase in categorical resident positions may be requested only in conjunction with a site visit. Any increase in the resident complement must be justified in terms of the educational goals of the program.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

1. All fellows and other students in both ACGME accredited and non-accredited programs in the sponsoring and integrated institutions that might affect the experience of the general surgery residents must be identified, e.g., vascular surgery, oncologic surgery, head and neck surgery, critical care, trauma, endoscopy, gastroenterology, transplantation, pediatric surgery, and endocrine surgery. The relationship of these fellow (s) to the residents in the general surgery program must be detailed.
2. A chief resident and a fellow must not have primary responsibility for the same patients.

V. Program Curriculum**A. Program Design****1. Format**

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Academic Component

The written course of study should reflect careful planning with evidence of a cyclical presentation of core specialty knowledge, including teaching in critical thinking, design of experiments, and evaluation of data; and technological advances that relate to surgery and the care of patients with surgical diseases.

- a. Conferences should be scheduled to permit the residents to attend on a regular basis. Participation by both residents and teaching staff must be documented.
- b. The following types of conferences must exist within a program:
 - (1) A weekly review of all current complications and deaths, including radiological and pathological correlation of surgical specimens and autopsies.
 - (2) A course or a structured series of conferences to ensure coverage of the basic and clinical sciences fundamental to surgery in general; Sole reliance on textbook review is inadequate.
 - (3) Regular, organized, clinical teaching such as grand rounds, ward rounds, and clinical conferences.
2. Clinical Component

Operative skill is essential and can be acquired only through personal experience and training. The program must provide for sufficient operative experience to educate qualified surgeons, taking into account individual capability and rate of progress.

 - a. The 5-year clinical program should be organized as follows
 - (1) No more than 12 months may be devoted to education in a single surgical discipline other than the principal (essential) components of surgery

- (2) No more than 6 months may be allocated to nonsurgical clinical disciplines such as internal medicine, pediatrics, gastroenterology, anesthesiology, or surgical pathology
- (3) At least 54 months must be clinical surgery, with experience in endoscopy, surgical intensive care, and emergency care included in this category
- (4) Thirty-six (36) of the 54 months must include the principal (essential) components of general surgery
- b. The volume and variety of operative experience must ensure a sufficient number and distribution of complex cases, as determined by the RRC, for the achievement of adequate operative skill, surgical balance, and experience for each resident in the
 - (1) principal (essential) components of general surgery, i.e., abdomen; alimentary tract, breast, skin, and soft tissues; the comprehensive management of trauma, and emergency surgery; endocrine surgery; head and neck surgery; surgical critical care; and the vascular system
 - (2) secondary components of general surgery, i.e., anesthesiology, burn management, cardiothoracic surgery, endoscopy, gynecology, neurosurgery, orthopedics, pediatric surgery, plastic surgery, transplant surgery, and urology.
- c. A resident is considered to be the surgeon when he or she can document a significant role in the following aspects of management: determination or confirmation of the diagnosis, provision of preoperative care, selection and accomplishment of the appropriate operative procedure, direction of the postoperative care, and accomplishment of sufficient follow-up to be acquainted with both the course of the disease and the outcome of its treatment. Participation in the operation only, without preoperative and postoperative care, is inadequate.
- d. Numbers of Operative Cases
 - (1) While the total number of major operations to be performed by each resident is not specified, the RRC will consider the range of 500 to 1000 major cases as acceptable in aggregate for all 5 years, including 150 to 300 major cases in the chief year.
 - (2) The operative experience for any 1 resident in excess of 450 cases for the chief year or 1,500 cases for all 5 years must be justified by the program director.
- e. When operative experience justifies a teaching role, residents should act as teaching assistants and should list such cases for the fourth and fifth years only.
- f. The Chief Year
 - (1) The program must commit the chief clinical year to the principal (essential) components of general surgery at the sponsoring or integrated institution(s). Primary responsibility for surgical specialty cases of patients on a general surgical service is permissible.
 - (2) The majority of the 12 months of the chief year must be served in the final year of the program. (To take advantage of a unique educational opportunity in a program during a resident's final year, a portion of the chief year may be served in the next to the last year, provided it is not earlier than the fourth clinical year and it has been approved in advance by the RRC.)
 - (3) No more than 4 months may be devoted exclusively to any 1 principal (essential) component of general surgery.
 - (4) With prior approval of the RRC, assignment to a pediatric surgical service may be acceptable under the following conditions:
 - i. The resident's experience in the principal (essential) components of general surgery is adequate

- ii. The resident is responsible for the preoperative, operative, and postoperative care of the pediatric surgical patient
- iii. The volume and complexity of cases are appropriate for a chief resident.

g. Additional Components

- (1) Defined experience with a variety of rigid and flexible endoscopic procedures, particularly proctosigmoidoscopy, colonoscopy, esophagogastroduodenoscopy, laparoscopy, and operative choledochoscopy, as well as experiences in other relevant diagnostic and therapeutic techniques including laryngoscopy, bronchoscopy, and fine-needle aspiration.
- (2) Defined experience with evolving diagnostic and therapeutic methods, such as: laser applications; investigation and manipulation of the distal common bile duct (including sphincterotomy); stereotactic breast biopsy, sentinel lymph node biopsy techniques; physiologic testing and evaluation of the gastrointestinal tract; non-invasive diagnostic evaluation of the vascular system and invasive vascular interventional techniques; ultrasonography of the head and neck, breast, abdomen (including laparoscopic intra-abdominal); and endorectal ultrasound.
- (3) Experience in an emergency room and in intensive care units to enable residents to manage patients with severe and complex illnesses and with major injuries requiring critical care.
- (4) Management of patients on surgical services who may or may not require surgical intervention, e.g., patients with pancreatitis, portal hypertension, multiple trauma, immunosuppression, and to acquire skill in such nonoperative management.

h. Outpatient Responsibilities

Residents must be provided, on average, with at least 1 day each week of outpatient experience during assignments in the primary components of surgery. Each resident should have the opportunity to examine patients preoperatively, consult with the attending surgeon, participate in the operation and in the immediate postoperative care until release from the facility, and to see patients personally in an outpatient setting and consult with the attending surgeon regarding follow-up care.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and resident must participate actively in such scholarly activities.

The participation of residents in clinical and/or laboratory research is encouraged.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. **Patient care** that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health. Surgical residents must:
 - a. demonstrate manual dexterity appropriate for their training level.
 - b. be able to develop and execute patient care plans appropriate for the resident's level.
2. **Medical Knowledge** about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and so-

cial-behavioral) sciences, as well as the application of this knowledge to patient care. Surgical residents are expected to critically evaluate and demonstrate knowledge of pertinent scientific information.

3. **Practice-based learning and improvement** that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care. Surgical residents are expected to:
 - a. critique personal practice outcomes.
 - b. demonstrate a recognition of the importance of lifelong learning in surgical practice.
4. **Interpersonal and communication skills** that result in the effective exchange of information and collaboration with patients, their families, and other health professionals. Surgical residents are expected to:
 - a. communicate effectively with other health care professionals.
 - b. counsel and educate patients and families.
 - c. effectively document practice activities.
5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds. Surgical residents are expected to:
 - a. maintain high standards of ethical behavior.
 - b. demonstrate a commitment to continuity of patient care.
 - c. demonstrate sensitivity to age, gender and culture of patients and other health care professionals.
6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care. Surgical residents are expected to:
 - a. practice high quality, cost effective patient care.
 - b. demonstrate a knowledge of risk-benefit analysis.
 - c. demonstrate an understanding of the role of different specialists and other health care professionals in overall patient management.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.
4. The attending physician has both an ethical and a legal responsibility for the overall care of the individual patient and for the supervision of the resident involved in the care of that patient. Although senior residents require less direction than junior

residents, even the most senior must be supervised. A chain of command that emphasizes graded authority and increasing responsibility as experience is gained must be established. Judgments on this delegation of responsibility must be made by the attending surgeon who is ultimately responsible for the patient's care; such judgments shall be based on the attending surgeon's direct observation and knowledge of each resident's skills and ability.

5. A fellow may not supervise chief residents.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the surgery service or department has not previously provided care. The resident should evaluate the patient before surgery.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements III.D.1.k.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.
4. Oversight
 - a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
 - b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.
5. Duty Hours Exceptions

The RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance. The evaluations must be related to the goals and objectives for each program assignment.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

3. Although each program is encouraged to develop its own cognitive testing instruments, the American Board of Surgery (ABSITE) Examination is considered a highly desirable test of surgical knowledge. These test results should not be the sole criterion of resident knowledge and should not be used as the sole criterion for promotion to a subsequent PG level.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMCE of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.
3. The performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. At minimum, for the most recent 5-year period, 60% of the graduates must pass the qualifying and certifying examinations on the first attempt.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

ACGME: September 1995 Effective: July 1996

Minor revisions: April 2001 and November 2001

Competencies: July 1, 2002

Editorial Revisions: July 2003 and July 2004

Program Requirements for Residency Education in the Subspecialties of General Surgery

I. General Information

- A. A residency education program in a subspecialty of general surgery is an educational experience of at least 1 year designed to develop advanced knowledge and skills in a specific clinical area. All educational components of the program should be related to program goals. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.

Subspecialty education is a component in the continuum of the education process and must be in addition to the requirements for complete residency education in general surgery. Ordinarily the subspecialty education will follow completion of an accredited general surgery residency program.

- B. Residency education programs in the subspecialties of general surgery may be accredited only in institutions that either sponsor a residency education program in general surgery or pediatric surgery accredited by the Accreditation Council for Graduate Medical Education (ACGME) or are integrated by formal agreement into such programs. The subspecialty programs will be approved only as an administratively integrated part of the approved core program in general surgery. Rotations to affiliated institutions can be approved for a period not exceeding 25% of the total program; adequate educational justification for such rotations must be provided to the RRC prior to implementation.

The description and regulations governing affiliated and integrated institutions in the Program Requirements for Residency Education in General Surgery also apply to the subspecialty programs of surgery.

- C. Subspecialty programs will not be approved if they have substantial negative impact on the education of the general surgery residents in the core program.

II. Program Director and Teaching Staff

Subspecialty education programs must provide a scholarly environment for acquiring the necessary cognitive and procedural clinical skills essential to the practice of the specific subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program. It is also imperative that appropriate resources and facilities be present. Service obligations must not compromise educational goals and objectives.

A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the Program Director:

The subspecialty program director must be a surgeon who is qualified to supervise and to educate residents appropriately in the specific subspecialty.

- a. The director must either be certified in the subspecialty by the American Board of Surgery or possess equivalent qualifications, as determined by the RRC.
- b. The director must have an appointment in good standing to the medical staff of an institution participating in the program.
- c. The director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)

2. Responsibilities of the Program Director:

It is the responsibility of the subspecialty program director to support the residency education program by devoting his/her principal effort to its management and administration, as well as to teaching, research, and clinical care limited to the integrated institutions. This general responsibility includes the following specifics:

- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- f. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- g. Preparation of an accurate statistical and narrative description of the program.

B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

C. Other Program Personnel

Programs must be provided the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

III. Educational Principles

The principles of education enumerated in the Program Requirements for Residency Education in General Surgery are also applicable to the subspecialty programs.

- A. The program directors for both the subspecialty and the core programs, as well as the institution itself, are responsible for ensuring that adequate facilities and resources are available to achieve the educational objectives.
 - B. A postgraduate residency must provide advanced education so that the residents can acquire special skill and knowledge in a specific subspecialty. This education should consist of a cognitive and a technical component. The cognitive component should emphasize the scholarly attributes of self-instruction, teaching, skilled clinical analysis, sound surgical judgment, and research creativity. The technical component must provide appropriate opportunity for the residents to acquire the operative and other psychomotor skills required for the practice of the subspecialty.
 - C. The program director must establish an environment that is optimal both for resident education and for patient care, including the responsibility for continuity of care, while assuring that undue stress and fatigue among residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not subjected to excessively difficult or prolonged working hours. It is desirable that residents' work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Different specialties and different rotations may require different working hours and patterns. A distinction must be made between on-call time in the hospital and on-call availability at home vis-a-vis actual hours worked. The ratio of hours worked and on-call time will vary, particularly at the senior levels, and therefore necessitates flexibility.
 - D. During the on-call hours residents should be provided with adequate sleeping, lounge, and food facilities. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the resident does not spend an inordinate amount of time in noneducational activities that can be discharged properly by other personnel.
- IV. Educational Components**
- Subspecialty programs must include the following educational components:
- A. A sufficient number of patients must be available to assure appropriate inpatient and outpatient experience for each subspecialty resident, without adversely affecting the experience of residents in the general surgery core program. There must be adequate responsibility for continuity of care, to include prehospital and posthospital experience.
 - B. Subspecialty conferences, including review of all current complications and deaths; seminars; and clinical and basic science instruction must be regularly scheduled. Active participation of the subspecialty resident in the planning and the production of these meetings is essential.
 - C. A resident must have the opportunity to provide consultation with faculty supervision. He or she should have clearly defined educational responsibilities for other residents, medical stu-

dents, and professional personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

D. There must be close interaction between the core residency program in general surgery and the subspecialty program. Lines of responsibility for the general surgery residents and the subspecialty resident must be clearly defined. It is imperative that the educational program for the subspecialty resident not adversely affect the education of the general surgery residents, either in terms of operative experience or patient responsibility. In particular, the following are noted:

1. A subspecialty surgical resident may be a teaching assistant for residents other than general surgery chief residents.
2. Unless explicitly allowed by the Program Requirements for Residency Education in the specific subspecialty of general surgery, a chief resident in general surgery and a subspecialty resident may not have primary responsibility for the same patients.

The subspecialty resident should maintain a close working relationship with residents and fellows in general surgery and in other disciplines such as radiology, pathology, medicine, and pediatrics.

- E. A subspecialty program must offer supervised training to assure the acquisition of the necessary preoperative, operative, and postoperative skills integral to the subspecialty discipline. Instruction and experience must be sufficient for the residents to acquire an understanding of the common procedures of the subspecialty, their indications, risks, and limitations.
- F. Adequate and appropriate supervision of subspecialty residents must be provided at all times in accord with their level of experience and expertise.

V. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

A. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organization's meetings and publications in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

B. Research

A subspecialty program should have an investigational component such that the residents may become familiar with the design, imple-

mentation, and interpretation of clinical research studies. Facilities should be made available for research activity.

C. Library

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

VI. Evaluation

A. Residents

Subspecialty program directors must establish clearly defined procedures for regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as surgical judgment.

The program director, with participation of members of the teaching staff, shall:

1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.

The provision of a written final evaluation is required for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

B. Program Director

The subspecialty program director should be evaluated annually by the director of the core general surgery program regarding teaching, scholarly activities including research productivity, patient care activities, and administrative capabilities.

C. Program

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed by the program director, the core General Surgery program director, and by the Institutional Review Committee on a regular basis. Written evaluations by residents should be utilized in this process.

D. Efficacy of the Program

An important measure of the efficacy of the program is the performance of its graduates on the certification examinations offered by the American Board of Surgery. It is expected that 60% or more of the graduates of the program will become certified on their first attempt.

ACGME: September 1996 Effective: July 1997

Program Requirements for Residency Education in Surgical Critical Care (Surgery)

I. Introduction

A. Definition and Scope of the Specialty

1. Surgical critical care deals with complex surgical and medical problems in critically ill surgical patients. Institutions sponsoring graduate educational programs in surgical critical care must provide the educational, clinical, and administrative resources to allow residents to develop advanced proficiency in the management of critically ill surgical patients, to develop the qualifications necessary to supervise surgical critical care units, and to conduct scholarly activities in surgical critical care. The educational program must be an integral part of and enhance an accredited core program in general surgery.
2. Completion of at least 3 clinical years in an accredited graduate educational program in the disciplines of general surgery, neurosurgery, urology, or obstetrics and gynecology is a prerequisite. A subspecialty educational program in surgical critical care is in addition to the requirements for critical care education set forth in the Program Requirements for these core programs. There should be an institutional policy governing the educational resources committed to critical care programs and ensuring cooperation of all involved disciplines.
3. Residents in one of the surgical disciplines listed in Section I.A.2 who enter the program prior to completing a residency must have a categorical residency position in their specialty available to them on satisfactory completion of the critical care fellowship.

B. Duration and Scope of Training

1. Graduate education in surgical critical care shall be 12 months, of which 2 months may be elective rotations. These 12 months must be devoted to advanced educational and clinical activities related to the care of critically ill patients and to the administration of critical care units.
2. A surgical critical care program must include primary educational activities in a surgical critical care unit with pediatric and/or adult patients, located in an institution that has been approved by the Residency Review Committee (RRC) for surgery as an integrated institution (as defined in the Program Requirements for General Surgery) with a core general surgery or pediatric surgery residency program.

Training may take place in various settings that provide for the care of critically ill adult and/or pediatric surgical patients, including those with general surgical conditions such as trauma, burns, and surgical oncology; with cardiothoracic, neurosurgical, and high risk pregnancy conditions; and with organ transplantation.

3. In some instances residents may devote up to 25% of their time to direct operative care of critically ill patients. During such operative care, the critical care resident and chief resident in general surgery may not share primary responsibility for the same patient. However, in the nonoperative management of critically ill surgical patients the surgical critical care residents and general surgery residents may interact as long as they share primary responsibility in patient management decisions. The final decision and responsibility rests with the supervising attending surgeon.

C. Objectives

1. The completion of an accredited surgical residency training program qualifies the surgeon to manage critically ill surgical patients. Therefore, the surgical critical care program must enable the resident to acquire an advanced body of knowledge and level of skill in the management of critically ill surgical patients in order to assume a leadership role in teaching and in research in surgical critical care. This advanced body of knowledge and level of skill must include the mastery of (1) the use of advanced technology and instrumentation to monitor the physiologic status of children or adults of both sexes, including those in the neonatal, pediatric, child-bearing, or advanced years; (2) organizational and administrative aspects of a critical care unit; and (3) ethical, economic, and legal issues as they pertain to critical care.
2. In addition, individuals completing a training program in surgical critical care will be expected to be able to
 - a. teach the specialty of surgical critical care.
 - b. undertake investigations into the various areas of surgical critical care, such as new instrumentation, identification of important physiologic parameters, evaluation of pharmacologic agents in critically ill patients, or health outcomes and/or health policy issues related to surgical critical care.
 - c. administer a surgical critical care unit and appoint, train, and supervise specialized personnel, establish policy and procedures for the unit, and coordinate the activities of the unit with other administrative units within the hospital.

II. Institutional Organization

- A. Residency education programs in surgical critical care may be accredited only in institutions that either sponsor a residency education program in general surgery or pediatric surgery accredited by the Accreditation Council for Graduate Medical Education (ACGME) or are integrated by formal agreement into such programs. The critical care program will be approved only as an administratively integrated part of the approved core program in general or pediatric surgery.

Rotations to affiliated institutions can be approved for up to 3 months; adequate educational justification for such rotations must be provided to the RRC prior to implementation.

The description and regulations governing affiliated and integrated institutions in the Program Requirements for Residency Education in General Surgery also apply to the critical care program.

- B. A critical care program will not be approved if it has substantial negative impact on the education of the general surgery residents in the core program.

III. Faculty Qualification and Responsibilities

A. Program Director

1. The critical care training program must be under the direction of a surgeon who is certified in surgical critical care by the American Board of Surgery or judged by the RRC to possess appropriate educational qualifications and documented experience in surgical critical care.
2. The program director of the critical care program must be the director or co-director of one or more of the critical care units in which the clinical aspects of the critical care program take place, and he or she must be personally involved in clinical supervision and teaching of general surgery and surgical critical care residents in that unit.
3. The program director shall have administrative responsibility for the surgical critical care educational program and shall appoint

all residents and teaching staff to the program and determine their duties.

B. Responsibilities of the Program Director

It is the responsibility of the critical care program director to support the residency education program by devoting his/her principal effort to its management and administration, as well as to teaching, research, and clinical care limited to the integrated institutions. This general responsibility includes the following specifics:

1. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
2. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
3. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
4. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
5. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
6. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
7. Preparation of an accurate statistical and narrative description of the program.

C. Faculty

1. In the teaching environment of the surgical critical care unit, it is recognized that the teaching staff in surgery, medicine, pediatrics, obstetrics and gynecology, anesthesiology, and other disciplines may all be involved in the care of specific patients. Therefore, a collegial relationship must exist between the surgical director of the critical care educational program and the teaching staff to enhance the educational opportunities for all residents and trainees.
2. The teaching staff must be specifically qualified in the care of critically ill surgical patients and must provide the program director with regular evaluations of the residents. At least one surgeon qualified in surgical critical care must be appointed to the teaching staff for every surgical critical care resident enrolled in the program.
3. The teaching staff must have real and demonstrated interest in teaching and set an example for residents by documented engagement in scholarly pursuits, to include (1) participation in their own continuing education in surgical critical care, (2) participation in regional and national surgical scientific societies, and (3) demonstration of an active interest in research as it pertains to critical care problems.
4. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

5. The teaching staff must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

D. Other Program Personnel

Programs must be provided the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Working Environment and Hours

- A. The program director must establish an environment that is optimal both for resident education and for patient care, including the responsibility for continuity of care, while assuring that undue stress and fatigue among residents are avoided. It is the program director's responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not subjected to excessively difficult or prolonged working hours. Residents' work schedules must be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. Different specialties and different rotations may require different working hours and patterns. A distinction must be made between on-call time in the hospital and on-call availability at home vis-à-vis actual hours worked. The ratio of hours worked and on-call time will vary particularly at the senior levels and therefore necessitates flexibility.
- B. During the on-call hours, residents should be provided with adequate sleeping, lounge, and food facilities. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty. Support services and systems must be such that the resident does not spend an inordinate amount of time in non-educational activities that can be discharged properly by other personnel.

V. Facilities and Resources

The surgical critical care program must function in a unit that has sufficient numbers of knowledgeable personnel and the necessary equipment to care for critically ill surgical patients.

- A. Personnel should include specially trained nurses and technicians who are skilled in critical care instrumentation, respiratory function, and laboratory medicine.
- B. The critical care unit must be located in a designated area within the hospital, constructed and designed specifically for the care of critically ill patients.
- C. Equipment and personnel in the critical care unit should be centrally concentrated to provide efficient and expeditious operation.
- D. There should be a supporting laboratory available to provide complete and prompt laboratory evaluation.
- E. The objectives of a surgical critical care program can be achieved only when the program is based within an institution that has an accredited residency program in general surgery. It is desirable for the institution to have accredited residencies in the surgical specialties and in disciplines that particularly relate to sur-

- gery, such as internal medicine, radiology, pathology, and anesthesia.
- F. Conveniently located and adequate space for conferences and study is essential.
- G. The average daily census for each surgical critical care unit to which the residents are assigned shall permit a resident-to-patient ratio of one resident to five patients. The qualified surgical faculty-to-critical care resident ratio shall be at least one to one. These ratios are sufficient to provide an adequate clinical and supervisory base. When more than one critical care program exists in an institution, it will be the responsibility of the institution to coordinate interdisciplinary requirements and to ensure that each resident meets the Program Requirements for Residency Education in Critical Care in their primary discipline (e.g., medicine, anesthesiology, etc.).
- H. To provide sufficient breadth in patient exposure, a critical care program that averages a daily census of at least 10 patients is required.
- I. The record-keeping system must maintain the records of patients in the critical care unit as retrievable parts of the hospital chart, so they can be available for evaluation.
- J. Library
1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
 2. Library services should include the electronic retrieval of information from medical databases.
 3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

VI. The Educational Program

A. Curriculum Overview

The program must provide the opportunity for residents to acquire advanced knowledge of the following aspects of critical care, particularly as they relate to the management of patients with hemodynamic instability, multiple system organ failure, and complex coexisting medical problems:

1. Cardiopulmonary resuscitation
2. Physiology, pathophysiology, diagnosis, and therapy of disorders of the cardiovascular, respiratory, gastrointestinal, genitourinary, neurologic, endocrine, musculoskeletal, and immune systems, as well as of infectious diseases
3. Metabolic, nutritional, and endocrine effects of critical illness
4. Hematologic and coagulation disorders
5. Critical obstetric and gynecologic disorders
6. Trauma, thermal, electrical, and radiation injuries
7. Inhalation and immersion injuries
8. Monitoring and medical instrumentation
9. Critical pediatric surgical conditions
10. Pharmacokinetics and dynamics of drug metabolism and excretion in critical illness
11. Ethical and legal aspects of surgical critical care
12. Principles and techniques of administration and management
13. Biostatistics and experimental design

B. Critical Care Skills

The program must provide supervised training that will enable the resident to gain competence in the performance and application of the following critical care skills:

1. Respiratory: airway management, including endoscopy and management of respiratory systems

2. Circulatory: invasive and noninvasive monitoring techniques, including transesophageal and precordial cardiac ultrasound and application of transvenous pacemakers; computations of cardiac output and of systemic and pulmonary vascular resistance; monitoring electrocardiograms and management of cardiac assist devices
3. Neurological: the performance of complete neurological examinations; use of intracranial pressure monitoring techniques and of the electroencephalogram to evaluate cerebral function; application of hypothermia in the management of cerebral trauma
4. Renal: the evaluation of renal function; peritoneal dialysis and hemofiltration; knowledge of the indications and complications of hemodialysis
5. Gastrointestinal: utilization of gastrointestinal intubation and endoscopic techniques in the management of the critically ill patient; application of enteral feedings; management of stomas, fistulas, and percutaneous catheter devices
6. Hematologic: application of autotransfusion; assessment of coagulation status; appropriate use of component therapy
7. Infectious disease: classification of infections and application of isolation techniques, pharmacokinetics, drug interactions, and management of antibiotic therapy during organ failure; nosocomial infections; indications for applications of hyperbaric oxygen therapy
 - a. Nutritional: application of parenteral and enteral nutrition; monitoring and assessing metabolism and nutrition
 - b. Monitoring/bioengineering: use and calibration of transducers, amplifiers, and recorders
 - c. Miscellaneous: use of special beds for specific injuries; employment of pneumatic antishock garments, traction, and fixation devices

C. Documentation of Experience

The program must document to the site visitor that residents in the surgical critical care program have had direct involvement in the management of a broad spectrum of critically ill surgical patients. In addition, each resident must submit an operative log of the number and type of operative experiences while a surgical critical care resident.

VII. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

A. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organization's meetings and publications in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.

5. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
 6. Provision of support for resident participation in scholarly activities.
- B. A critical care program should have an investigational component such that the residents may become familiar with the design, implementation, and interpretation of clinical research studies. Facilities should be made available for research activity.

VIII. Evaluation

A. Residents

Critical care program directors must establish clearly defined procedures for regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as surgical judgment.

The program director, with participation of members of the teaching staff, shall:

1. At least semi-annually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a record of evaluation for each resident and have it accessible to the resident and other authorized personnel.

The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

B. Program Director

The critical care program director should be evaluated annually by the director of the core general surgery program regarding teaching, scholarly activities including research productivity, patient care activities, and administrative capabilities.

C. Program

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed by the program director, the core general surgery program director, and the Institutional Review Committee on a regular basis. Written evaluations by residents should be utilized in this process.

D. Efficacy of Program

An important measure of the efficacy of the program is the performance of its graduates on the certification examinations offered by the American Board of Surgery. It is expected that 60% or more of the graduates of the program will become certified on their first attempt.

ACGME: June 1992 Effective: July 1, 2001

Program Requirements for Residency Education in Hand Surgery (Surgery)

I. Introduction

A. Definition of the Specialty

Hand surgery is a surgical subspecialty that deals with congenital and acquired defects of the hand and wrist that compromise the function of the hand. A hand surgery educational program is designed to educate physicians in the art and science of hand surgery and to develop a competent hand surgeon who is capable of independent function. The educational program should provide experience in the repair, resection, and reconstruction of defects of form and function of the hand; in the design, construction, and transfer of flaps and the transplantation of tissues, including microsurgery of multiple tissues; in replantation of upper extremity parts; in surgical and ancillary methods of treatment of tumors; in management of complex wounds; and in the use of alloplastic materials.

B. Scope of Education

1. Prerequisite resident education must be completed in a general surgery, orthopaedic surgery, or plastic surgery program accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The length of the educational program is 1 year.

II. Institutional Organization

A. Sponsoring Institution

The educational program should have one sponsoring institution that has primary responsibility for the entire program. The sponsoring institution should provide sufficient faculty; financial resources; and clinical, research, and library facilities to meet the educational needs of the residents and to permit the program to comply with the requirements for accreditation.

B. Participating Institutions

1. When multiple institutions participate in the educational program, the commitment of each participating institution must be documented in a written agreement that complies with the ACGME Institutional Requirements.
2. Assignments to participating institutions must be based on an appropriate educational rationale. Assignments that dilute the education of residents or that do not provide proper supervision and coordination of educational activities should not be established or maintained.
3. Assignments to participating institutions that are geographically distant from the sponsoring institution are not desirable. To be justifiable, such assignments must offer special resources or opportunities not otherwise available to the program.
4. The number and location of participating institutions must not preclude the participation of residents and faculty in the educational activities of the hand surgery course of study.

C. Appointment of Residents

1. The total number of residents must be approved in advance by the Residency Review Committee (RRC). The number of residents shall be based primarily on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to resident education.

2. Programs may not graduate more hand surgery residents in any given year than the number of residents approved by the RRC.
3. Any increase, including a temporary increase in resident complement, must receive prior approval of the RRC. Requests for changes in the approved resident complement of a program must include a strong educational rationale.

III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

A single program director must be responsible for the program.

1. Qualifications of the program director
 - a. Requisite and documented clinical, educational, and administrative abilities and experience.
 - b. Licensure to practice medicine in the state where the institution that sponsors the program is located.
 - c. Certification by the appropriate ABMS Board or suitable equivalent qualifications in the appropriate specialty and a certificate of added qualifications in hand surgery or suitable equivalent qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
 - d. Appointment in good standing to the medical staff of an institution participating in the program.
 - e. Frequent changes in leadership or long periods of temporary leadership are undesirable and may adversely affect the accreditation status of the program.
2. Responsibilities of the program director
 - a. Prepare a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of hand surgery residents at each level of education and for each assignment. This statement must be distributed to hand surgery residents and members of the faculty. It should be readily available for review.
 - b. Select residents for appointment to the program according to institutional and departmental policies and procedures.
 - c. Select and supervise the faculty and other program personnel at each participating institution.
 - d. Supervise residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervising physicians.
 - e. Regularly evaluate residents' knowledge, skills, and overall performance. The program director, with participation of the faculty, must
 1. at least quarterly, evaluate the progress of each hand surgery resident in writing, using appropriate criteria and procedures;
 2. communicate each evaluation to the resident in a timely manner;
 3. advance residents to positions of higher responsibility only on evidence of their satisfactory progressive scholarship and growth;
 4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
 5. provide a final written evaluation to each hand surgery resident who completes the program. The evaluation must include a review of the resident's performance during the

final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. Each evaluation should be signed by the resident and program director and be maintained on file by the program director for at least 5 years following completion of the program.

- f. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- g. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.
- h. Prepare an accurate statistical and narrative description of the program, as requested by the RRC.
- i. Ensure that each resident is provided with a sufficient educational program, including a sufficient volume and variety of operative experience and progressive surgical responsibility.
- j. Annually collect, compile, and retain the number and types of hand surgery operative procedures performed in all institutions used for resident education. These data must be provided in the form and format specified by the RRC.
- k. Annually collect, compile, and retain a comprehensive record of the operative procedures performed by each hand surgery resident completing the program. This information must be provided in the form and format specified by the RRC. This record must be signed by the hand surgery resident and the program director, attesting to its accuracy.
 1. Advise applicants of the prerequisite requirements of the appropriate specialty board.
 - m. Document the satisfactory completion of prerequisite education before the resident begins the hand surgery program.
 - n. Notify the executive director of the RRC in writing of any major change in the program that significantly alters the educational experience for the residents, including
 1. changes in program leadership, to include any change in appointment of the program director, section or division head, or department chair, and
 2. changes in administrative structure that affect the status of the parent department in the institution.
 - o. Obtain prior RRC approval for the following changes in the program:
 1. the addition or deletion of any participating institution to which residents are assigned for a total of 2 months or longer;
 2. any change in the approved resident complement of the program; and
 3. any change in the length or format of the program.

B. Faculty

1. The hand surgery faculty must be certified by the one of the sponsoring boards, or possess suitable equivalent qualifications and be certified in hand surgery or possess suitable equivalent qualifications. The majority of the faculty must possess certificates of added qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
2. There must be a sufficient number of qualified faculty to adequately instruct and supervise hand surgery residents to ensure optimal patient care and resident education. The faculty must be able to devote sufficient time to the program to meet their supervisory and teaching responsibilities.

3. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A faculty member at each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving these goals. The hand surgery resident should participate in these reviews.
6. The faculty should, at least annually, evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of the faculty, and the quality of resident supervision.

C. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty must be research investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. Scholarship is defined as an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. This activity should include

1. participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;
2. participation in journal clubs and research conferences;
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals;
4. participation in research, particularly in projects funded following peer review and/or that result in publications or presentations at regional and national scientific meetings;
5. offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research; and
6. provision of support for resident participation in scholarly activities.

D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Facilities and Resources

A. Inpatient Facilities

1. Inpatient facilities should have a sufficient number of beds, support personnel, and proper equipment to ensure quality patient care and education.
2. Operating suite and diagnostic and treatment facilities must contain technologically current equipment.

B. Outpatient Facilities

Appropriately equipped outpatient facilities including support staff, operating suites, and clinic and office space must be available for resident participation in the preoperative evaluation, treatment,

and postoperative follow-up of patients for whom the resident has responsibility.

C. Library Facilities

1. The residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.

V. The Educational Program

A. Program Design

1. The program director and faculty must prepare and implement written educational goals for the program.
2. The program design and/or structure must be approved by the RRC as part of the regular review process.

B. Clinical Component

1. Residents must be provided with education in surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pathology, pharmacology, wound healing, microbiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation.
2. A sufficient number and variety of adult and pediatric hand surgery patients must be available for resident education.
3. Generally equivalent and sufficient distribution of operative procedures among the residents in all categories of hand surgery must be demonstrated.
4. Residents should be provided with graduated and progressive patient management responsibility.
5. Because judgment and technical capability to achieve satisfactory surgical results are mandatory qualities for the hand surgeon, education should be provided in the following areas:
 - a. Skin repair, including grafts and flaps, multiple tissue flaps, free microscopic tissue transfers, and insertion of tissue expanders
 - b. Fingertip injuries
 - c. Tendon repair, including flexor tendon repair and graft, implantation of tendon spacer, extensor tendon repair, and tenolysis/tenodesis
 - d. Tendon transfer and tendon balancing
 - e. Nerve repair, including major and digital, graft, neurolysis, surgical treatment of neuroma, transpositions, and nerve decompressions
 - f. Management of fractures and dislocations, including phalangeal or metacarpal with and without internal fixation; wrist, radius, and ulna with and without internal fixation; and injuries to joint ligaments
 - g. Bone grafts
 - h. Joint and tendon sheath repairs, including release of contracture, synovectomy, arthroplasty with and without implant, arthrodesis, trigger finger release, and stiff joints that result from rheumatoid or other injury
 - i. Pollicization or ray transfer
 - j. Foot to hand transfer
 - k. Tumors, benign and malignant
 - l. Dupuytren's contracture
 - m. Replantation, revascularization
 - n. Amputations
 - o. Fasciotomy, deep incision and drainage for infection, and wound débridement
 - p. Congenital deformities, including syndactyly and others
 - q. Management of upper extremity vascular disorders and insufficiencies

- r. Foreign body, implant removal
- s. Thermal injuries
- t. Arthroscopy
- u. Upper extremity pain medicine

C. Didactic Components

1. A comprehensive, organized course of study must be offered, to include educational conferences that are well defined, documented, and regularly held. At minimum, the program must provide a didactic component for clinical education referencing section V.B.1 of these Program Requirements for Residency Education in Hand Surgery.
2. The written course of study should reflect careful planning, with evidence of a cyclical presentation of core specialty knowledge supplemented by the addition of current information, including practice management, ethics, and medicolegal topics as they relate to hand surgery. Conferences must include basic science subjects related to clinical surgery of the hand, such as anatomy, physiology, pathology, genetics, microbiology, and pharmacology. A periodic review of the morbidity and mortality experience of the service must be included.
3. A list of the conferences should be maintained and available for review at the time of the site visit.
4. Conferences should be attended by both the residents and the faculty, and such attendance should be documented.
5. Conferences should be organized by the faculty to ensure that sufficient educational experience is provided. Hand surgery residents assigned to participating institutions other than the sponsoring institution should attend the hand surgery conferences at those sites.
6. Residents should make presentations at conferences and actively participate in conference discussions. Adequate time for resident preparation should be permitted to maximize the educational experience.
7. Hand surgery residents should be encouraged to pursue clinical or basic science research interests.

D. Supervision

1. All patient care services must be supervised by qualified hand surgery faculty. The program director must ensure, direct, and document proper supervision of residents at all times.
2. Residents must be provided with rapid, reliable systems for communicating with faculty at all times.
3. Hand surgery residents may function as intermediate supervisors when documented prior experience makes it appropriate, but faculty supervision must be available.

E. Duty Hours

1. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. The ratio of hours worked to on-call time will vary, particularly at senior levels, and flexibility will be necessary.
2. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.
3. Sufficient support services must be provided to ensure that residents are not required to spend excessive time in noneducational activities that can be discharged properly by other personnel.
4. The hand surgery residency is a full-time responsibility. Activities outside the educational program must not interfere with resident performance in the educational program as determined by the program director and must not interfere with resident opportunity for rest, relaxation, and study.

F. Appointment of Other Residents

1. The appointment of other residents for hand surgery education must not dilute or detract from the educational opportunities of hand surgery residents.
2. The appointment of other residents to the hand surgery service requires a clear statement of the areas of education, clinical responsibilities, and duration of the education. This statement must be supplied to the RRC at the time the program is reviewed.
3. If such residents so appointed will, in the judgment of the RRC, detract from the education of the hand surgery residents, the accreditation status of the program may be adversely affected.

VI. Evaluation

A. Resident Evaluation

The program director and faculty are responsible for regularly evaluating the residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

B. Faculty Evaluation

1. At least annually, all individual faculty members must be formally evaluated by the program director. Hand surgery residents should be provided with the opportunity to evaluate faculty.
2. A mechanism for sharing the results of such evaluations with the faculty that preserves resident confidentiality in the evaluation process must be employed.
3. The program should demonstrate that such evaluations are used in improving the program.

C. Program Evaluation

1. The educational effectiveness of a program must be evaluated at least annually. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by hand surgery residents should be utilized in this process.
2. One measure of the quality of a program is the performance of its graduates on the examination for the certificate of added qualifications in hand surgery given by the American Board of Surgery. The RRC may consider this information as part of the overall evaluation of the program.

VII. Board Certification

Residents who plan to seek hand surgery certification as administered by the American Board of Surgery should communicate with the secretary of the board to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: September 1997 Effective: July 1998

Program Requirements for Residency Education in Pediatric Surgery (Surgery)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

A residency program in pediatric surgery is an educational experience designed to provide advanced knowledge and skills in the surgery of infants and children. At the completion of this education, pediatric surgery residents should function as competent pediatric surgeons.

B. Duration and Scope of Education

1. Admission Prerequisites

The resident applicant must have satisfactorily completed a program in general surgery accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada, be admissible to examination by the American Board of Surgery (or its equivalent), or be certified by that board.

2. Program Length

- a. The program length is 2 years, of which 18 months must be clinical pediatric surgery. The remaining 6 months may be devoted to related clinical disciplines designed to enhance the educational experience or to scholarly activities.
- b. The last 12 months of clinical education must be at the chief level with responsibility for patient management and semi-independent operative experience under appropriate supervision.

II. Institutional Support

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

1. A pediatric surgery program should be offered in institutions accredited by the JCAHO or its equivalent and classified as general hospitals or Children's Hospitals. These institutions must include facilities and staff with a variety of services, including adequate inpatient surgical admissions, intensive care units for both infants and older children, and radiology, pathology, and an emergency department in which infants and children can be managed 24 hours a day.
2. There must be at least one additional residency program in pediatrics whose residents rotate through the same integrated institution(s) as the pediatric surgical residents.

B. Participating Institutions (defined as any institution to which residents rotate for assigned experiences)

1. Assignments to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

2. Assignment to a participating institution requires a letter of agreements with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
3. Clinical assignments of 3 months or less may be spent at participating institutions at the discretion of the program director during the first year of the residency program without advance RRC approval.
4. Assignments to participating institutions outside the sponsoring or integrated institutions may not exceed a total of 6 months during the 24-month program and requests for integration must be approved in advance by the RRC.
5. Institutions may be integrated with the sponsoring institution through an integration agreement specifying that the program director must:
 - a. appoint the members of the faculty at the integrated institution
 - b. appoint the chief or director of the teaching service in the integrated institution
 - c. appoint all residents in the program
 - d. determine all rotations and assignments of both residents and members of the faculty.
 - e. As a general rule, integrated institutions must be in close geographic proximity as to allow all residents to attend joint conferences, basic science lectures, and morbidity and mortality reviews regularly and in a central location. If the institutions are geographically so remote that joint conferences cannot be held, an equivalent educational program of lectures and conferences in the integrated institution must be fully documented.
 - f. Advance approval from the RRC must be obtained for all integrations.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either the program director or the department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System (WebADS) of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director are essential to maintaining such an appropriate continuity of leadership. The length of the appointment, as a normal rule, must be for at least the duration of the program plus 1 year, i.e., a minimum of 3 years.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in surgery and pediatric surgery by the American Board of Surgery, or possess qualifications judged to be acceptable by the RRC.

- c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located.
 - e. The program director must demonstrate scholarly activity in at least one of the areas listed in section B4 below of this document.
4. Responsibilities of the program director are as follows:
- a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both the program and resident records through the ACGME Accreditation Data System (ADS).
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, may include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. In addition to the program director, for each approved chief resident position, there must be at least 1 geographic full-time faculty member whose major function is to support the residency program. These faculty appointments must be of sufficient length to ensure continuity in the supervision and education of the residents.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in the field.
 - b) The physician faculty must be certified in surgery and pediatric surgery by the American Board of Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and

an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.
- Complementary to the above scholarship is the regular participation of the faculty in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
- d) Participation and productivity in scholarly activities by the faculty is a required attribute for an accredited program.
 - e) Documented leadership in major medical specialty organizations.
 - f) Mentorship of junior faculty, residents, and fellows.
5. Qualifications of the nonphysician faculty are as follows:
- a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

Both temporary and permanent increases in resident complement must be approved in advance by the RRC. A permanent increase in resident complement may be requested only in conjunction with a site visit. Any increase in complement must be justified in terms of the educational goals of the program.

C. Resident Transfers

To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, prior to acceptance into the program. A program director is required to pro-

vide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.

V. Program Curriculum

A. Program Design

1. The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical.

1. Academic Component

- a. The academic component of the program should emphasize the scholarly attributes of self-instruction, teaching, skilled clinical analysis, sound surgical judgment, and research creativity.
- b. A course or structured series of conferences in the basic and clinical sciences fundamental to pediatric surgery should be provided in: embryology; genetics; wound healing; hemostasis and blood disorders; immunobiology; transplantation; physiology and pathology of the circulatory, respiratory, gastrointestinal, genitourinary, and endocrine systems; fluid and electrolyte balance; infection; metabolic response to injury; and anesthesiology.

c. Structured educational activities must include

- 1) Teaching rounds with bedside teaching conducted by the surgical faculty
- 2) Conferences, held at least twice monthly, to include pediatric surgical grand rounds, morbidity and mortality conferences, and radiology conferences
- 3) Other relevant multidisciplinary conferences, including surgical pathology and tumor conferences.
- 4) During the chief year, the resident should personally organize the formal pediatric conferences, grand rounds, and mortality and morbidity conferences, and be directly responsible for presentations and discussions at these conferences.
- 5) Pediatric surgery residents should have significant teaching responsibilities for junior residents and medical students assigned to the service.
- 6) The program should provide residents with familiarity in the design, implementation, and interpretation of clinical research studies.

2. Clinical Component

- a. Residents must be given responsibility for surgical management to demonstrate competence and attain detailed knowledge and experience of
 - 1) congenital, neoplastic, infectious, and other acquired conditions of the gastrointestinal system and other abdominal organs; the blood and vascular system; the integument; the diaphragm and thorax, exclusive of the heart; the endo-

crine glands; the gonads and reproductive organs; and the head and neck;

- 2) traumatic conditions of the abdomen, chest, head and neck, and extremities with sufficient experience in the management of children who have sustained injuries to multiple organs;
 - 3) nonoperative management of surgical patients;
 - 4) endoscopy of the airway and gastrointestinal tract, including laryngoscopy, bronchoscopy, esophagoscopy, and gastroduodenoscopy; lower intestinal endoscopy, laparoscopy and cystoscopy; and the study and performance of new and evolving endoscopic techniques;
 - 5) the complete care of the critically ill infant or child, including: (a) cardiopulmonary resuscitation, (b) the management of patients on respirators, (c) invasive monitoring techniques and interpretation, (d) nutritional assessment and management, and (e) the recognition and management of clotting and coagulation disorders.
- b. Residents must have the opportunity to gain adequate knowledge of the basic principles of cardiothoracic surgery, gynecology, neurological surgery, orthopaedic surgery, otolaryngology, anesthesia, vascular surgery, transplant surgery, and the management of burns. Although clinical assignments to these services are highly desirable, an understanding of the principles of these subspecialties by a structured curriculum that adequately deals with these surgical areas is sufficient.
- c. Operative Experience
- 1) The pediatric surgical service should document a minimum of 900 operations per year, including neonatal and major solid tumor procedures.
 - 2) Residents must document an appropriate breadth, volume, and balance of operative experience.
 - 3) The chief resident must document at least 250 pediatric surgical operations under supervision during the chief year.
 - 4) For residents other than surgery chief residents, the pediatric surgical resident may act as a teaching assistant when their operative experience justifies a teaching role.
 - 5) A pediatric surgery resident and a surgery chief resident may not have primary responsibility for the same patients.
- d. Outpatient Experience
- 1) An effective mechanism for follow-up must be provided for all patients, whether in clinics or private office settings.
 - 2) Residents must have the opportunity to evaluate patients, make appropriate provisional diagnoses, initiate diagnostic procedures, form preliminary treatment plans, and have the opportunity for outpatient follow-up care of surgical patients.
 - 3) Follow-up care should include not only short-term but long-term evaluation and progress, particularly with major congenital anomalies or neoplasm cases.
- e. Pediatric surgical residents must provide care as consultants under appropriate supervision in the emergency department and with other specialists such as neonatologists and intensivists.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research and other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies (Note: This section does not apply to this subspecialty.)

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of resident time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.
4. The attending physician has both an ethical and legal responsibility for the overall care of the individual patient and for the supervision of residents. Although senior residents require less direction than junior residents do, even the most senior must be supervised. A chain of command that emphasizes graded authority and increasing responsibility as experience is gained must be established. Judgments on this delegation of responsibility must be made by the attending surgeon who is ultimately responsible for the patient's care. Such judgments shall be based on the attending surgeon's direct observation and knowledge of the pediatric surgery resident's skill and ability.
5. The pediatric surgery resident may not supervise a chief surgery resident.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10 hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the

normal workday when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a four-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to six additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care as defined in Specialty and Subspecialty Program Requirements.
3. No new patients, as defined in Specialty and Subspecialty Program Requirements, may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the surgery service or department has not previously provided care. The pediatric surgery resident should evaluate the patient before surgery.
4. At-home call (pager call) is defined as call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exception

An RRC may grant exceptions for up to 10% of the 80-hour limit, to individual programs based on a sound educational rationale. However, prior permission of the institution's GMEC is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communications skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semi-annual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the residents' performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of faculty must be evaluated by the program no less frequently than at the mid-point of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative personnel (i.e., at least the program director, representative faculty and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct formal documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMCC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcomes assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure if evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation and innovative projects that may deviate from the program requirements may be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Surgery should communicate with the office of the board regarding the full requirements for certification.

Approved: 1993

Approved: 1998

Approved: 1999

Common Program Requirements Editorial Revision: July 2004

Program Requirements for Residency Education in Vascular Surgery (Surgery)

I. Introduction

A. Definition and Scope of the Specialty

1. Graduate training programs in vascular surgery should be designed to provide the educational resources appropriate for the development of proficiency in the diagnosis and treatment of diseases of the arterial, venous, and lymphatic circulatory systems, exclusive of those components intrinsic to the heart and intracranial vessels. The foregoing definition describes what is hereinafter referred to as the vascular system. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.
2. The training of surgeons for the practice of vascular surgery encompasses education in basic sciences, training in cognitive and technical skills, development of clinical knowledge and maturity, and acquisition of surgical judgment regarding the vascular system.
3. The goal of a vascular surgery residency program is to prepare residents to function as a qualified practitioner of vascular surgery at the high level of performance expected of a board-certified specialist; the educational components of the program, therefore, must be of the highest priority. Residents must be provided adequate time and sufficient facilities for study and be assured of a rotation schedule that provides an equivalent educational opportunity for each resident. While every graduate education program carries with it a commitment of service to patients in the institution, the service responsibilities must support and not detract from the educational activities.

B. Types of Programs

Subspecialty education in vascular surgery is a component in the continuum of the education process and must be in addition to the requirements for complete residency education in general surgery. Appropriate education and training in vascular surgery may be attained through two types of programs:

1. A vascular surgery residency that follows the completion of an accredited residency program in general surgery.
2. A vascular surgery residency that is a component of an accredited cardiothoracic surgery program, in which patient material is adequate to fulfill the requirements of both areas of training. Specialized training in vascular surgery as part of an accredited cardiothoracic surgery program is in addition to the 2-year requirement for completion of standard cardiothoracic surgery program.

C. Duration of Training

The vascular surgery program must be of sufficient duration to allow residents to acquire an advanced level of skill in the diagnosis and treatment of vascular diseases. The program shall not be less than 12 months in duration and shall be exclusively devoted to vascular surgery. It shall be in addition to the training required for certification in either general surgery or thoracic surgery. Any program that extends clinical training beyond these minimum requirements must present a clear educational rationale consonant with the program requirements and objectives for residency training. The program director must obtain approval of the RRC prior to implementation and at each subsequent review of the program. Prior to entry into the program, each resident must be notified in writing of the required length of training.

D. Number of Approved Residency Positions

The number of positions in the training program must be approved by the RRC. This number will include all residents who are appointed for a full academic year in the training program. Any request for changes in the resident complement must be justified in terms of the educational goals of the program.

E. Interaction with General Surgery Residents

Lines of responsibility for general surgery residents and vascular surgery residents must be clearly defined when both rotate in the same institution. Ideally, the roles of general and vascular surgery residents should complement each other for a mutual educational benefit in terms of operative experience, patient responsibility, and faculty interaction. The following are noted in particular:

1. A vascular surgery resident may be a teaching assistant for residents other than general surgery chief residents.
2. Although a vascular surgery resident and a chief resident in general surgery may function together on a service with the same junior residents, they may not have primary responsibility for the same patients.

In addition, general surgery and vascular surgery program directors should confer and agree about proposed changes in either program that might adversely affect the other, such as changes in the total number of resident positions.

II. Institutional Requirements

A. Sponsoring Institution

1. Inasmuch as vascular surgery is a discipline of great breadth and is often consultative in nature, the program should be conducted in institutions accredited by the Joint Commission on Accreditation of Healthcare Organizations or its equivalent and classified as general hospitals. These institutions, which by definition must include facilities and staff for a variety of services, including radiology and pathology, must also have a demonstrated commitment to graduate medical education and research.
2. Residency education programs in vascular surgery may be accredited in institutions that sponsor accredited residency programs in general surgery or that are affiliated with an Accreditation Council for Graduate Medical Education

(ACGME)-accredited general surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.

B. Participating Institutions

An institution that cannot provide sufficient resources and clinical experience within its own facilities may make arrangements with other institutions through formal written agreements to provide additional resources and experience. All such agreements are subject to approval by the RRC, for either affiliated or integrated institutions, as indicated below.

1. Institutions may be affiliated with the parent institution through an Affiliation Agreement, which must cover the areas specified in the Institutional Requirements of the ACGME. Affiliated institutions must promote the educational goals of the program rather than simply enlarge the program and must not be added primarily for the purpose of meeting service needs.
2. Rotations to affiliated institutions can be approved for a period not exceeding 3 months; adequate educational justification for such rotations must be provided to the RRC prior to implementation.
3. Institutions may be integrated with the parent institution through an Integration Agreement that must specify—in addition to the Institutional Requirements—that the program director of the parent institution (1) appoint the members of the teaching staff at the integrated institution, (2) appoint the chief or director of the teaching service in the integrated institution, (3) appoint all residents in the program, and (4) determine all rotations and assignments of both residents and members of the teaching staff. As a general rule, institutions integrated with parent hospitals must be in close geographic proximity to allow all residents to attend joint conferences, basic science lectures, and morbidity and mortality reviews on a regular documented basis in a central location. If the institutions are geographically so remote that joint conferences cannot be held, an equivalent educational program of lectures and conferences in the integrated institution must be fully documented.

C. Vascular Service

1. The institution, department, or service accredited to conduct a program of graduate education in vascular surgery must be able to provide a sufficient number and variety of vascular surgery patients to ensure that residents have an adequate exposure to a wide spectrum of lesions of the vascular system.
2. To provide an effective training program, a vascular surgery service must be organized as an identifiable unit, even though it is within the framework of a larger administrative entity such as a department of surgery or general surgery or thoracic surgery. It is highly desirable that all patients with vascular disease who are available for teaching purposes be admitted to this unit so that the patients may be centralized and utilized most efficiently for teaching.
3. Privileges on the vascular surgery teaching service should be granted to surgeons only with the understanding that their patients are to be available for coordinated graduate education of residents.

III. Teaching Staff

The establishment of an inquiring and scholarly environment in the parent and integrated institution(s) is the primary responsibility of the teaching staff in a vascular surgery training program. Only in such a milieu can residents develop the facility for critical analysis and further growth potential necessary to a lifetime of self-education after the completion of formal residency training. The teaching staff responsible for the direction and execution of the program must be well qualified to create and maintain such an environment

and be of sufficient diversity of interest that the many facets of vascular surgery are represented. There must be a single program director responsible for the program. The program director and teaching staff must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to these goals.

A. Qualifications of the Program Director

1. Documented qualification in vascular surgery, requisite administrative abilities and experience, and dedication to surgical education and scholarship, as evidenced by his or her curriculum vitae.
2. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
3. Certification in vascular surgery by the American Board of Surgery, or suitable equivalent qualifications as determined by the RRC.
4. Appointment in good standing to the medical staff of the parent or one of the integrated institutions participating in the program.
5. Appointment for at least 3 years. Persons appointed or elected for short duration or in an honorary capacity cannot serve as program directors.

B. Responsibilities of the Program Director

1. Support the residency training program by devoting his or her principal effort to its management and administration, as well as to teaching, research, and clinical care limited to the parent or integrated institution(s).
2. Prepare a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
3. Designate other well-qualified surgeons to assist in the supervision of the resident staff, but maintain continuous responsibility and authority for administrative and teaching policies of the service.
4. Be responsible for rotations and staff appointments of attending surgeons on the teaching services in the parent and in all integrated institutions.
5. Select residents for appointment to the program in accordance with institutional and departmental policies and procedures, make resident assignments, and be responsible for the proper conduct of the educational activities; namely, for their supervision, direction, and administration in all participating institutions.
6. Provide residents with explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
7. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
8. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified as further described in Section IV.B.

9. Provide complete and accurate program information forms and resident operative records to the RRC so that an appropriate assessment of the program can be made.

C. Other Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise the residents in the program. In addition to the program director, for each approved residency position there must be at least one geographic full-time teaching staff member whose major function is to support the residency program. These key staff members must be appointed for a period long enough to ensure adequate continuity in the supervision of the resident staff. Surgeons with teaching responsibilities should be certified by the American Board of Surgery or possess suitable equivalent qualifications, as determined by the RRC. At a minimum, one surgeon on the teaching staff, in addition to the program director must be certified in vascular surgery by the American Board of Surgery, or have suitable equivalent qualifications as determined by the RRC. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. The teaching staff must include members with diverse expertise to meet the needs of the training program. All members of the staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. A resident representative should participate in these reviews.
5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

D. Faculty Scholarly Activity

1. Scholarly activity of the faculty at the parent and integrated institutions is of paramount importance to the program. Staff activity at affiliated institutions cannot substitute for this effort. Adequate documentation of scholarly activity on the part of the program director and the teaching staff at the parent and integrated institutions must be submitted at the time of the program review.
2. Documentation of scholarly activity is based on participation in continuing surgical education; participation in regional or national surgical scientific societies; presentation and publication of scientific studies; and demonstration of an active interest in research as it pertains to their own special surgical interests.
3. Commitment of the faculty to research will be judged based on projects that are funded following peer review; publications in peer-reviewed journals; presentations at national and regional scientific meetings; and research protocols that have been approved by appropriate institutional committees or other organizations.
4. While not all members of a teaching staff can be investigators, clinical and/or basic science research must be ongoing in vascu-

lar surgery at the parent and integrated institution(s). Research on the part of residents is not a substitute for the involvement of the program director and teaching staff. The staff as a whole must document active involvement in all phases of scholarly activity as defined above if they are to be considered adequate to conduct a program of graduate education in vascular surgery.

E. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Environment and Resources

A. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

B. Working Environment and Hours

1. Graduate education in vascular surgery requires a commitment to continuity of patient care. This continuity of care must take precedence—without regard to the time of day, day of the week, number of hours already worked, or on-call schedules. At the same time, patients have a right to expect a healthy, alert, responsible, and responsive physician dedicated to delivering effective and appropriate care.
2. The program director must establish an environment that is optimal both for resident education and for patient care, while ensuring that undue stress and fatigue among residents are avoided. It is his or her responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not required to perform excessively difficult or prolonged duties regularly. It is desirable that residents' work schedules be designed so that on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. A distinction must be made between on-call time in the hospital and on-call availability at home and their relation to actual hours worked. The ratio of hours worked to on-call time will vary each week and therefore necessitates flexibility. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.
3. Residency training in vascular surgery is a full-time responsibility; activities outside the educational program must not interfere with the residents' performance in the educational process, as determined by the program director, nor must they interfere with the residents' opportunities for rest, relaxation, and study.

C. Logistics

During in-hospital on-call hours residents should be provided with adequate sleeping, lounge, and food facilities. Support services must be such that residents do not spend an inordinate amount of time in noneducational activities that can be discharged properly by other personnel.

V. The Educational Program

A. Curriculum

1. The curriculum for the vascular surgery program should encompass the entire vascular system as defined in section I.A.1. Clinical, vascular laboratory and basic science curricula developed by the Association of Program Directors in Vascular Surgery are useful in this regard. Instruction in each area should be associated with relevant patients whenever possible. However, if direct patient exposure is not possible in some specific areas, instructional materials must be provided to ensure adequate education in all areas.
2. The program must provide instruction and require residents to become knowledgeable in the fundamental sciences, including anatomy, biology, embryology, microbiology, physiology, and pathology as they relate to the pathophysiology, diagnosis, and treatment of vascular lesions.
3. Residents must be provided with progressive senior surgical responsibilities in the total care of vascular surgery patients, including preoperative evaluation, therapeutic decision making, operative experience, and postoperative management. The focus of the program is clinical education; research, laboratory, and nonvascular clinical assignments should be related to this focus.
4. Residents must acquire familiarity with special diagnostic techniques for the management of vascular lesions. It is essential that residents have an acquaintance with the methods and techniques of angiography and competence in the interpretation of angiographic findings. Residents must also have experience in the application, interpretation, and limitations of noninvasive vascular diagnostic techniques.
5. Residents must have the opportunity to provide consultation with faculty supervision. They should have clearly defined educational responsibilities for other residents, medical students, and professional personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of vascular surgery.
6. Continuity of primary responsibility for patient care must be taught in a longitudinal way, and include: ambulatory care; inpatient care; referral and consultation; utilization of community resources.
7. The program must provide teaching in critical thinking, design of experiments, and evaluation of data as well as in technological advances that relate to vascular surgery and the care of patients with vascular diseases. The program must encourage participation by the residents in clinical and/or laboratory research and make appropriate facilities available.

B. Volume and Complexity of Operative Experience

1. Operative skill is essential for surgeons and can be acquired only through personal experience and training. The program must provide sufficient operative experience to train qualified vascular surgeons, taking into account individual capability and rate of progress. A sufficient number and distribution of complex cases, as determined by the RRC, must be provided for the achievement of adequate operative skill and surgical judgment.
2. Residents must be afforded the opportunity to have chief or senior resident responsibility in the operative management of patients who require the wide range of reconstructive and nonreconstructive vascular procedures within the scope of vascular surgery. This must include experience in endovascular procedures. Chief or senior operative experience is defined as activity in the course of which the resident functions as the operating surgeon or performs the critical technical portions of the operation. Residents should perform a minimum of 100 major vascular reconstructive procedures that reflect an adequate representa-

tion of current trends in the spectrum of surgical care of vascular diseases. Operative experience in excess of 450 total cases, however, must be justified by the program director who must also ensure that the operative experience of individual residents in the same program is comparable.

3. When previous personal operative experience justifies a teaching role, vascular surgery residents may act as teaching assistants for general surgery residents, provided these general surgery residents are not in their chief residency year.
4. A resident is considered to be the surgeon when he or she can document a significant role in all of the following aspects of management: determination or confirmation of the diagnosis, provision of preoperative care, selection and accomplishment of the appropriate operative procedure, direction of the postoperative care, and accomplishment of sufficient follow-up to be acquainted with both the course of the disease and the outcome of its treatment. Participation in the operation only, without preoperative and postoperative care, is inadequate, and such cases will not be approved by the RRC as meeting educational requirements.

C. Supervision

1. The attending physician has both an ethical and a legal responsibility for the overall care of the individual patient and for the supervision of residents involved in the care of that patient. Judgments on the delegation of this responsibility to vascular surgery residents must be made by the attending surgeon who is ultimately responsible for the patient's care; such judgments shall be based on the attending surgeon's direct observation and knowledge of each resident's skills and ability.
2. Supervision of residents must be specified in the bylaws, policies, procedures, rules, and/or regulations of the department, which must not be less demanding than those of the institution.
3. Evidence that adequate supervision exists within a program must be provided to the site visitor at the time of program review in the form of signed notes in the patient charts and/or other such records, as well as through personal interviews of residents.
4. Proper supervision must not conflict with progressively more independent decision making on the part of the residents; thus, the degree of supervision may vary with the clinical circumstances and the experience of each resident. However, to exercise their responsibilities properly, members of the teaching staff always must be immediately available for consultation and support.

D. Outpatient Responsibilities

To be adequate, a program must document both inpatient and outpatient activities. Outpatient activities constitute an essential component of adequate experience in continuity of patient care. These activities should be conducted in such a way that residents have an opportunity to examine patients preoperatively, have ample opportunity to consult with the attending surgeon regarding operative care, and have an opportunity to participate in the operation and in the immediate postoperative care until release from the facility. To participate in post-hospital care, residents have the responsibility for seeing patients personally in an outpatient setting and consulting with the attending surgeon regarding follow-up care. As a guideline, approximately 1 day per week should be devoted to these outpatient activities.

E. Educational Conferences

Educational conferences must be adequate in quality and quantity to provide a review of vascular surgery as well as recent advances. The conferences should be scheduled to permit the residents to attend on a regular basis. Participation by both residents and teaching staff must be documented. Active participation by vascular sur-

gery residents in the planning and production of these conferences is essential.

The following types of conferences must exist within a program:

1. At least biweekly review of all current complications and deaths, including radiological and pathological correlation of surgical specimens and autopsies when relevant
2. A course or a structured series of conferences to ensure coverage of the basic and clinical sciences fundamental to vascular surgery; sole reliance on textbook review is inadequate
3. Regular organized clinical teaching, such as ward rounds and clinical conferences
4. A regular review of recent literature, such as a journal club format.

VI. Evaluation

A. Evaluation of Residents

1. There must be adequate, ongoing evaluation of the knowledge, competency, attitudes, and performance of the residents. Written evaluation of each resident's knowledge, skills, professional growth and performance, using appropriate criteria and procedures, must be accomplished at least semiannually. This assessment must include cognitive, motor, and interpersonal skills, as well as surgical judgment. Evaluations must be communicated to residents in a timely manner.
2. The program must maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
3. The program director and faculty are responsible for provision of a written evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
4. A system for documentation of residents' experiences must be utilized to monitor the educational experience and to provide documentation for future hospital privileges.

B. Evaluation of the Program and Faculty

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. All teaching faculty must also be evaluated on a regular basis, including teaching ability, availability, attitudes, scholarly contributions, interpersonal skills, and communication abilities. Written evaluations by residents of the program and faculty should be utilized in this process. Resident feedback should be anonymous if feasible, and under no circumstance should it result in any negative program or faculty response directed toward the residents. In addition, internal review of the program should be conducted by the Institutional Review Committee on a regular basis.

C. Other Evaluation Tools

A program must strive for the highest possible quality of educational experience for the residents; it will be judged on this basis. One measure of the quality of a program is the performance of its graduates with respect to the American Board of Surgery certification process. Graduates of ACGME-accredited programs are expected to complete this process successfully. At a minimum, for the most recent 5-year period, 60% of the graduates must have passed the qualifying and certifying examinations in vascular surgery on their first attempt.

ACGME: June 1999 Effective: January 2000

Program Requirements for Residency Education in Thoracic Surgery

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Thoracic Surgery encompasses the operative, perioperative, and critical care of patients with pathologic conditions within the chest. This includes the surgical care of coronary artery disease; cancers of the lung, esophagus, and chest wall; abnormalities of the great vessels and heart valves; congenital anomalies of the chest and heart; tumors of the mediastinum; diseases of the diaphragm; and management of chest injuries.

B. Duration and Scope of Education

1. Before admission to a thoracic surgery residency program, the resident must have documented completion of a general surgery residency program accredited by either the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The length of the educational program required for the acquisition of the necessary knowledge, judgment, and technical skills in the specialty is 2 years. Any program extended beyond these minimum requirements must present a clear educational rationale consistent with these program requirements and must be approved in advance by the Residency Review Committee (RRC).
3. Prior to admission to the program, each resident must be notified in writing of the length of the program.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

1. The sponsoring institution must ensure an administrative and academic structure that provides for educational and financial resources dedicated to the needs of the program; i.e., the appointment of teaching faculty and residents, support for program planning and evaluation, the ensuring of sufficient ancillary personnel, provision for patient safety, and the alleviation of resident fatigue.
2. Library services, including electronic retrieval of information, and a collection of appropriate texts and journals should be readily available at all clinical sites.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;

- b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
- c) specify the duration and content of the educational experience; and
- d) state the policies and procedures that will govern resident education during the assignment.

3. Integrated Institutions

- A formal, written integration agreement is required that specifies, in addition to the points above, that the program director:
- a) appoints the members of the teaching staff at the integrated institution;
 - b) appoints the chief or director of the teaching service in the integrated institution;
 - c) appoints all residents in the program; and
 - d) determines all rotations and assignments of both residents and members of the teaching staff.

4. Multiple abbreviated assignments among several institutions or simultaneous assignments to more than one institution are not acceptable.

5. Assignments of 4 months or more to any participating institution must be prior-approved by the RRC.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Thoracic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.

d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:

- (1) the addition or deletion of a participating institution or integrated institution;
- (2) a change in the format of the educational program;
- (3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

e) The program director must promptly notify the executive director of the RRC using the ADS of a change in program director or department chair, or of any additional change in the program that may significantly alter the educational experience for the residents.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. One designated cardiothoracic faculty member should be responsible for coordinating multidisciplinary clinical conferences and for organizing instruction and research in general thoracic surgery.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities, including documented participation in the undergraduate curriculum. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Thoracic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. Scholarship is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.

b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching. A minimum of one thoracic surgery resident must be appointed in each year to provide for sufficient peer interaction.

C. Resident Transfer

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education. Such verification must include documentation of the resident's operative experience.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Component.

The educational program must be designed to provide a broad academic experience in esophageal; pulmonary, mediastinal, and chest wall; diaphragmatic, and cardiovascular disorders in all age groups.

- a) The program director is responsible for providing separate and regularly-scheduled teaching conferences, mortality and morbidity conferences, rounds, and other educational activities in which both the thoracic surgery faculty and the residents attend and participate.
 - b) Conferences should be under the direction of qualified thoracic surgeons and other faculty in related disciplines.
 - c) Records of conference attendance must be kept and must be available for review by the site visitor.
2. Clinical Component
- The program director is responsible for providing an organized written plan and a block diagram for the clinical assignments to the various services and institutions in the program.
- a) The clinical assignments should be carefully structured to ensure that graded levels of responsibility, continuity in patient care, a balance between education and service, and progressive clinical experiences are achieved for each resident.
 - b) The resident must have the opportunity, under supervision, to:
 - (1) provide preoperative management, including the selection and timing of operative intervention and the selection of appropriate operative procedures;
 - (2) provide postoperative management of thoracic and cardiovascular patients;
 - (3) provide critical care of patients with thoracic and cardiovascular surgical disorders, including trauma patients, whether or not operative intervention is required;
 - (4) correlate the pathologic and diagnostic aspects of cardiopulmonary disorders, demonstrating skill in diagnostic procedures (e.g., bronchoscopy and esophagoscopy), and to interpret appropriate imaging studies (e.g., ultrasound, computed tomography, roentgenographic, radionuclide, cardiac catheterization, pulmonary function, and esophageal function studies); and
 - (5) demonstrate knowledge in the use of cardiac and respiratory support devices.
 - c) The minimum operative experience of each resident must include:
 - (1) an annual average of 125 major operations from those listed on the program information forms;
 - (2) an adequate distribution of categories and complexity of procedures to ensure each resident a balanced and equivalent operative experience;

The categories of procedures must include but are not limited to the: lungs, pleura, and chest wall; esophagus, mediastinum, and diaphragm; thoracic aorta and great vessels; congenital heart anomalies; valvular heart diseases; and myocardial revascularization.

 - (3) Additional experiences should include: cardiac pacemaker implantation, mediastinoscopy, pleuroscopy, and flexible and rigid esophagoscopy and bronchoscopy.
 - d) Credit for operative experience may be documented when the resident:
 - (1) participated in the diagnosis, preoperative planning, and selection of the operation for the patient;
 - (2) performed those technical manipulations that constituted the essential parts of the patient's operation;
 - (3) was substantially involved in postoperative care; and
 - (4) was supervised by responsible faculty/teaching staff.
 - e) Assignments to nonsurgical areas (i.e., cardiac catheterization and esophageal or pulmonary function labs) may not exceed a

total of 3 months during the clinical program, and may not occur in the chief year.

- f) The chief year must be spent in the sponsoring or integrated institutions for the program. Exceptions require advance approval by the RRC. During this year, the resident must assume senior responsibility for the pre-, intra-, and post-operative care of patients with thoracic and cardiovascular disease.
3. Outpatient responsibilities constitute an essential component for providing adequate experience in continuity of patient care.
- a) The resident should have an opportunity to examine the patient preoperatively, to consult with the attending surgeon regarding operative care, and to participate in the surgery and postoperative care.
 - b) Outpatient care activities include resident responsibility for seeing the patient personally in an outpatient setting and, as a minimum in some cases only, consulting with the attending surgeon regarding the follow-up care rendered to the patient in the doctor's office.
 - c) The policies and procedures governing pre-hospital and post-hospital involvement of the residents must be documented. Documentation of this process must be available to the site visitor at the time of program review.
 - d) Permission for performing an autopsy should be sought in all deaths, to include the appropriate review of autopsy material by teaching staff and residents.
4. Thoracic surgery residents should have the opportunity for peer interaction with residents in related specialties at all participating institutions.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities. A protected research assignment is not permitted during the program; resident participation in scholarly activities should be encouraged.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. **Patient care that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;**

Residents are expected to develop and execute patient care plans, demonstrate technical ability, use information technology, and evaluate diagnostic studies.
2. **Medical Knowledge about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;**

Residents are expected to know current medical information, and critically evaluate scientific information.
3. **Practice-based learning and improvement that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;**

Residents are expected to demonstrate the ability to practice lifelong learning, analyze personal practice outcomes, and use information technology to optimize patient care.
4. **Interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;**

Residents are expected to communicate with other health care professionals, counsel and educate patients and families, maintain appropriate records documenting practice activities and outcomes, and function as a team member and/or leader.

5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;

Residents are expected to maintain high standards of ethical behavior; demonstrate continuity of care (i.e., preoperative, operative and postoperative); demonstrate sensitivity to age, gender, culture and other differences; and demonstrate honesty, dependability, and commitment.

6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

Residents are expected to practice cost-effective care without compromising quality, promote disease prevention, demonstrate risk-benefit analysis, and know how different practice systems operate to deliver care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the thoracic surgery service or department has not previously provided care. The resident should evaluate the patient before participating in surgery.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program. Because the program of thoracic surgery education is demanding, moonlighting is strongly discouraged.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

The RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation**A. Resident****1. Formative Evaluation**

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents. Because of the small resident cohort in each program, assurance that the content of resident evaluations does not adversely affect resident progression is required.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Thoracic Surgery should communicate with the office of the board regarding the full requirements for certification.

ACGME: September 1992 Effective: September 1993

Minor Revision: November 2001

Competency revisions: July 2002

Editorial Revisions: January 2003 and July 2004

Common PR Revisions effective: July 1, 2004

Program Requirements for Residency Education in Urology

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition of the Specialty

Urology is the medical and surgical specialty involving disorders of the genitourinary tract, including the adrenal gland. Specialists in this discipline must demonstrate the knowledge, skill, and understanding of the pertinent basic medical sciences. Residency programs must educate physicians in the prevention of urologic disease, and in the diagnosis, medical and surgical treatment, and reconstruction of neoplasms, deformities, and injuries.

B. Duration and Scope of Education

Each program must document the following sequence of requirements in the 60-month program of postgraduate medical education: 12 months of general surgery in a program accredited by the ACGME that comprises the pre-urology year; this is to be followed by 36 months of clinical urology that includes the final 12 months of chief residency with appropriate clinical responsibility, under supervision, and in institutions approved as a part of the urology residency program. This additional 12 months of education must be composed of general surgery or urology or of fields directly related to urology.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.
3. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience, and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals, as well as educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC).

- a) The RRC considers 4 participating institutions or fewer as optimal to promote educational and peer activities. Due to the importance of peer interaction, experiences outside the sponsoring institution should not be assigned to a single resident.
- b) Assignments to institutions distant from the sponsoring institution are to be considered an exception; such affiliations must be justified, and must provide educational experiences otherwise not available in the program.
- c) A single resident should not be assigned to a participating institution unless special resources or opportunities are offered at that institution that are not otherwise available in the educational program.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership. The term of appointment, as a normal rule, must be at least the duration of the program plus one year (i.e., a minimum of 6 years).
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Urology, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;

(3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

5. The Program Director is responsible to compile annually an accurate statistical and narrative description of the program as requested by the RRC. The log must include a comprehensive record of the number and types of operative procedures performed by each resident completing the program, together with all of the procedures in which the resident was either surgeon or assistant surgeon; the log must be signed by both the resident and the program director as a statement of its accuracy. The log must also include ambulatory or outpatient procedures performed by the resident in office practice or ambulatory facilities. This information must be provided in the format and form specified by the RRC.
6. The program director must notify each resident prior to admission and in writing of the required length of the educational program. The required length of the educational program may not be changed without mutual agreement with the resident unless there is a significant break in his or her educational program or unless the resident requires remedial education. All changes to the length of the educational program for any resident must be approved in advance by the RRC.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Urology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
 - d) To provide the greatest depth of knowledge in a variety of subjects, the faculty should possess special knowledge in all of the urological domains: extracorporeal shock wave lithotripsy, impotence, infertility, female urology, geriatric urology, infectious disease, laparoscopy, neurourology, obstructive disease, oncology, pediatric urology, renovascular disease, sexual dysfunction, renal transplantation, trauma, and urodynamics.
 - e) In addition to the program director, there must be a minimum of 2 clinical urology faculty committed fully to the educational objectives of the residency program who devote sufficient time to the supervision and teaching of the residents. A faculty-to-resident ratio of at least 1:2 in the total program is required. The program director may be counted as one of the faculty in determining the ratio. The program director must notify the RRC if the number of clinical urology faculty members drops below 2, or if the ratio falls below 1:2 and remains below that level longer than one year.
 - f) There must be a qualified urologist (the local site director) appointed by and responsible to the program director in each geographically separate institution. This urologist must be re-

sponsible for the education of the residents, and must supervise the educational activities of the urology faculty in that institution. The urology director at each participating institution must have the majority of his or her clinical responsibilities based at that institution.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. There must be adequate space and equipment for the educational program, including meeting rooms and classrooms with audiovisual and other educational aids; office space for staff; diagnostic, therapeutic, and research facilities; and outpatient facilities, clinic, and office space accessible to residents for preoperative evaluation and postoperative follow-up. Library services should include the electronic retrieval of information from medical databases.
2. Technologically-current diagnostic and treatment facilities such as cystoscopy, imaging with biopsy, imaging with percutaneous access to the kidney, ultrasound with biopsy, endourology, laparoscopy, laser, and urodynamics equipment should be present. The use of video imaging for educational purposes is desirable.
3. An extracorporeal shock wave lithotripsy facility must be available for resident education in the treatment of urinary calculi.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC for Urology will approve the number of residents based upon established written criteria that include the adequacy of

resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

Programs may not graduate more residents in any given year than the number of residents approved by the RRC. Any change in the number of residents by year, or any change in the total number of residents, whether permanent or temporary, must receive prior approval of the RRC. Requests for changes in the resident complement of a program must include a strong educational rationale. A vacancy in a resident complement, if filled, must be at the same level in which the vacancy occurs, unless otherwise approved by the RRC.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed urology residents.

Any program with fellows must submit a clear statement of the areas of education, clinical responsibilities, and duration of the educational program. This impact statement must be supplied to the RRC at the time of the site visit. A log, grouped by procedure, that details the operative experience of the fellow must be submitted with the urology resident logs at the time of the site visit.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Component

- The didactic conferences must include a combined morbidity and mortality conference for all participating hospitals, urological imaging, urological pathology, and journal review.
- Urologic core knowledge must include: adrenal disease and endocrinology, andrology, calculus disease, endourology, extracorporeal shock wave lithotripsy, impotence, infertility, female urology, geriatric urology, infectious disease, laparoscopy, neurourology, obstructive disease, oncology, pediatric

urology, renovascular disease, sexual dysfunction, renal transplantation, trauma, and urodynamics.

- A list of conferences must be maintained and available for review at the time of the site visit. The list should include the names of those attending, the subjects discussed, and the principal speakers.
- Conferences must be well attended by both residents and faculty, and such attendance should be documented. A faculty member must supervise each conference.

2. Clinical Component

- A sufficient number and variety of inpatient and ambulatory adult and pediatric patients with urologic disease must be available for resident education.
- Generally-equivalent and adequate distribution of operative urologic procedures among the residents must be demonstrated. Significantly unequal experience in volume and/or complexity of operative procedures among the residents demonstrates noncompliance with these requirements.

c) Graded responsibility.

The responsibility given to residents for patient care should depend upon each resident's knowledge, problem-solving ability, manual skills, experience, and the severity and complexity of each patient's status.

d) Progressive patient management.

The program must provide residents with experience in direct and progressively-responsible patient management as they advance through the program. The resident should have responsibility under supervision for the total care of the patient, including initial evaluation, establishment of diagnosis, selection of appropriate therapy, implementation of therapy, and management of complications.

e) Continuity of patient care.

The resident must participate in the continuity of patient care through preoperative and postoperative clinics and inpatient contact. When residents participate in preoperative and postoperative care in a clinic or private office setting, the program director must ensure that the resident functions with an appropriate degree of responsibility.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

- Patient care** that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
- Medical Knowledge** about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
- Practice-based learning and improvement** that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
- Interpersonal and communication skills** that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;

5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities,

transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.

3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient to whom the resident has not previously provided care.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

The RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient

care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Urology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: June 2003 Major revision effective: July 2003
Common PR Editorial revisions effective: July 1, 2004*

Program Requirements for Residency Education in Pediatric Urology (Urology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Scope of Education

Subspecialty education in pediatric urology involves all aspects of congenital anomalies, childhood-acquired urologic problems such as tumors and trauma, and overlapping problems of adolescence. The subspecialty education in pediatric urology must provide an experience of sufficient level for the pediatric urology resident to acquire advanced skills in the management of congenital anomalies and pediatric urologic problems.

B. Duration of Education

A pediatric urology program is 1 continuous clinical year taken subsequent to the completion of an accredited residency in urology. A pediatric urology educational program can be provided only in conjunction with an ACGME accredited urology residency program.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

The pediatric urology program must be centered at a children's hospital or a medical center with pediatric medical, surgical, and radiologic subspecialties. The sponsoring institution of the pediatric urology program may seek a complementary affiliation with other institutions that offer significant educational opportunities to the residency program.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;

- c) specify the duration and content of the educational experience; and
- d) state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Urology, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The program director must be dedicated to and actively engaged in pediatric urology education.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution; (Participation by any institution providing more than 2 months of education in the program must be approved by the Residency Review Committee.)
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.
 All permanent or temporary increases in resident complement must be approved in advance by the RRC.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e) Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures
 - f) Selection and supervision of the faculty and other program personnel at each institution participating in the program
 - g) Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances
 - h) Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.
- #### B. Faculty
1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
 2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
 3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Urology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
 4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.
 Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
 5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

Diagnostic facilities should include body-imaging equipment suitable for the care of pediatric patients.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Clinical Experiences

a. The institution sponsoring the pediatric urology program must provide a sufficient volume and variety of pediatric urology experience to meet the needs of the pediatric urology resident without compromising the quality of resident education in general urology.

b. To be considered for accreditation, the institution should have the following resources available for resident education: a broad spectrum of urologic diseases; a sufficient volume and broad variety of pediatric urology surgical procedures consisting of 200 major, 200 intermediate, and 100 minor procedures per year; and 2000 pediatric urologic outpatient visits per year, including urology subspecialty clinics.

Representative examples of these classifications include minor: circumcision, meatotomy, diagnostic endoscopy, percutaneous aspiration or tube insertion; intermediate: therapeutic endoscopy, inguinal surgery > 2 years, distal hypospadias with no urethroplasty, diagnostic laparoscopy; major: all abdominal surgery, flank surgery, hypospadias, laparoscopic surgery, valve ablation, inguinal surgery < 2 years.

c. The clinical component of the program must include experience in:

- i. The surgical aspects of pediatric urology. Such experience must be documented in an accurate, comprehensive, operative log maintained by the resident and reviewed by the program director quarterly. All operative procedures in which the pediatric urology resident acts as surgeon or teaching assistant should be separately documented.
- ii. Inpatient consultation and outpatient management of pediatric urologic disease, with graded responsibility for patient care, which must be similarly documented and maintained
- iii. Body imaging modalities used in the care of pediatric patients
- iv. Performance and evaluation of urodynamic studies
- v. Multidisciplinary management of patients with urologic tumors
- vi. Multidisciplinary management of patients with urologic trauma
- vii. Multidisciplinary management of nephrological disease
- viii. Neonatal and intensive care unit treatment for all pediatric ages
- ix. Multidisciplinary management of myelomeningocele and other neuropathic bladder entities
- x. Multidisciplinary management of patients with problems relating to sexual development and medical aspects of intersex states
- xi. Performance of genetic counseling for renal and genital anomalies
- xii. Pediatric infectious disease and its treatment

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(N.B.: Section V. D. does not apply to this subspecialty)

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal workday, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient to whom the resident has not previously provided care.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation**A. Resident****1. Formative Evaluation**

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMCC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Urology should communicate with the office of the board regarding the full requirements for certification.

ACGME approved: February 1990

ACGME approved: September 28, 1998 Effective: January 1, 1999

Editorial Revision: July 2004

Program Requirements for the Transitional Year

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Purpose of a Transitional Year

The objective of the transitional year is to provide a well-balanced program of graduate medical education in multiple clinical disciplines designed to facilitate the choice of and/or preparation for a specific specialty. The transitional year is not meant to be a complete graduate education program in preparation for the practice of medicine.

The transitional year must be designed to fulfill the educational needs of medical school graduates who

1. have chosen a career specialty for which the categorical program in graduate medical education has, as a prerequisite, 1 year of fundamental clinical education, which may also contain certain specific experiences for development of desired skills; or
2. have not yet made a career choice or specialty selection and desire a broad-based year to assist them in making that decision; or
3. are planning to serve in organizations such as the public health service or on active duty in the military as general medical officers or primary flight/undersea medicine physicians prior to completing a program in graduate medical education; or
4. desire or need to acquire at least 1 year of fundamental clinical education prior to entering a career path that does not require broad clinical skill, such as administrative medicine or nonclinical research.

The sponsoring institution and the transitional year program must demonstrate substantial compliance with both the Institutional Requirements of the *Essentials of Accredited Residencies* and the Program Requirements that follow.

B. Duration and Content of Program

1. The duration of the transitional year program must be 1 year (12 calendar months).
2. At least 24 weeks of each resident's curriculum must be provided by a discipline or disciplines that offer fundamental clinical skills, that is, emergency medicine, family practice, internal medicine, obstetrics/gynecology, pediatrics or surgery.
3. Other rotations should be a minimum of 4 weeks in duration to ensure reasonable continuity of education and patient care.

II. Institutional Support

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institution.

1. The transitional year program must be offered by an institution and its affiliate(s) conducting two or more Accreditation Council for Graduate Medical Education (ACGME)-accredited residency programs, in good standing. Two of these accredited programs must be designated as sponsors of the transitional year program. One of the sponsors must be in a discipline that provides fundamental clinical skills training. Those disciplines considered to provide these experiences are emergency medicine, family practice, internal medicine, obstetrics/gynecology, pediatrics, and surgery. (See V.D.2, Skill Development)

2. Together the sponsors must provide at least 25% of each resident's clinical experience.
3. The program director or a designee from each of the sponsors must participate in the organization of the didactic curriculum components of the program.

B. Participating Institutions

1. Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.
2. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved.
3. Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should
 - a. identify the faculty who will assume the educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV.D. and VI.A of the Program Requirements;
 - b. outline the educational goals and objectives to be attained by the resident during the assignment;
 - c. specify the period of resident assignment;
 - d. establish the policies that will govern resident education during the assignment.

C. Institutional Coordination Committee

1. An institutional coordination committee (ICC) must be appointed and have major responsibility for conducting and monitoring the activities of the transitional year program. The ICC may be a freestanding committee or may be a subcommittee of the Graduate Medical Education Committee (GMEC). The ICC should be convened by the parent institution at least four times a year. The membership of this committee should be composed of but not limited to the transitional year program director, the program directors (or designees) of disciplines regularly included in the curriculum, the program directors (or designees) of each program sponsor, a resident member nominated by his or her peers, and the chief executive officer (CEO) (or designee in hospital administration) of the parent institution. The CEO or the designee must not be the transitional year program director.
2. The responsibilities of the committee must include the following:
 - a. To recommend to the governing body of the sponsoring institution policies that establish the educational content of the transitional year and the allocation of resources for the effective conduct of the program.
 - b. To ensure that the quality of medical care provided by transitional year residents is equivalent to that expected of first-year residents in other ACGME-accredited programs within the institution.
 - c. To monitor the impact of the transitional year program on the categorical residents' programs to ensure that there is no compromise of the educational resources. This includes monitoring the adequacy of the number of patients, variety of

illnesses, educational materials, teaching/attending physicians, and financial support.

- d. To review at least twice a year the evaluations of the transitional year residents' performance and the residents' assessment of the components of the transitional year, including the faculty.
- e. To ensure that the educational opportunities provided transitional year residents are within acceptable standards of medical care and are equivalent to those provided first-year residents in the categorical programs in which the transitional year residents participate.
- f. To ensure that the quality of education provided by the nonaccredited components of the program is reasonably comparable to that provided to the first-year residents in accredited programs.
- g. To approve the curriculum of each transitional year resident, which has been planned with the transitional year program director in accordance with the individual needs of the residents and the Program Requirements of the Transitional Year.
- h. To ensure that the transitional year program undergoes a periodic internal review in accordance with the general institutional requirements.
- i. To maintain records documenting the committee's activities for each of the above requirements and to have copies of these records available for transmission to the Transitional Year Review Committee.
- j. To review ACGME letters of accreditation for program sponsors and to monitor areas of noncompliance.

D. Support Facilities/Departments

1. Pathology, radiology and nuclear medicine facilities must exist in the parent and affiliated institutions. These disciplines must be directed by qualified physicians who are committed to medical education and to providing competent instruction to the transitional year residents when patients require these diagnostic and/or therapeutic modalities.
2. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

III. Resident Appointment

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements and select the residents for appointment to the program in accordance with institutional policies and procedures.

B. Number of Residents

The Transitional Year Review Committee will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. A program should have at least four residents in training to foster a sense of identity for the transitional year residents and to provide appropriate peer interaction during all phases of the transitional year program. Program applications will be reviewed for

assurance that there is an appropriate balance between the number of transitional year residents in training and the educational resources available to them.

2. Any proposed change in the number of transitional year residents must receive prior approval by the Transitional Year Review Committee. Programs that consistently fail to fill the designated number of approved positions may be asked to reduce the number offered, but to no fewer than four residents.
3. Residents who have successfully completed 12 months of transitional year training are not eligible to receive additional credit for subsequent rotations taken.

C. Resident Transfer

To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section V.B., prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.

IV. Faculty

The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide continuity of leadership for a minimum of 3 years.

A. Qualifications of the Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution. The process by which the program director of the transitional year program is appointed must be consistent with the policies for the appointment of other program directors in the sponsoring institution.
2. The program director must
 - a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field, including the ability to devote the time required for program development, implementation, administration, and supervision.
 - b. be certified by a specialty board or possess qualifications judged to be acceptable by the Transitional Year Review Committee.
 - c. be appointed in good standing and based at the primary teaching site.
 - d. be licensed to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempt.)

B. Responsibilities of the Program Director

1. Overseeing and organizing the activities of the educational program in all institutions that participate in the program.

This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

2. Preparing an accurate statistical and narrative description of the program as requested by the Transitional Year Review Committee as well as updating annually the program and resident records through the ACGME Accreditation Data System (ADS).
3. Promptly notifying the executive director of the Transitional Year Review Committee, using ADS, of a change in program director as well as of changes in the accreditation status of sponsoring programs when they occur.
4. Grievance procedures and due process: The program director must ensure the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.
5. Monitoring of resident well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.
6. Obtaining prior approval of the Transitional Year Review Committee for changes in the program that may significantly alter the educational experience of the residents, for example:
 - a. the addition or deletion of major participating institution(s) as specified in section II.B. of this document.
 - b. Change in the approved resident complement for those specialties that approve resident complement.
 - c. Change in the format of the educational program.On review of a proposal for a major change in a program, the Transitional Year Review Committee may determine that a site visit is necessary.
7. Maintaining records of (1) all residents appointed to the transitional year program; (2) the transitional year objectives, curriculum content offered by the program, and the curriculum undertaken by each resident; (3) the performance evaluations; (4) the residents' subsequent training or other professional activities. Tracking of graduates must be accomplished either until the transitional year graduate enters a formal medical educational program or for at least 5 years following graduation. A record of these graduates must be available for review.

C. Faculty Qualifications

1. The physician faculty must
 - a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.
 - b. be certified by a specialty board or possess qualifications judged to be acceptable by the Transitional Year Review Committee.
 - c. be appointed in good standing to the staff of an institution participating in the program.
2. Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.

D. Faculty Responsibilities

1. At each institution participating in the program, there must be a sufficient number of faculty with documented qualifica-

tions to instruct and supervise adequately the residents in the program. The teaching and supervision of transitional year residents must be the same as that provided residents in the participating categorical programs.

2. Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.
3. The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E.1.

E. Other Program Personnel

The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

V. The Educational Program

The program design and sequencing of educational experiences will be approved by the R.R.C. as part of the accreditation process.

A. Role of Program Director and Faculty

The program director, with assistance of the faculty, must coordinate the educational experiences within the separate categorical programs and participating disciplines. He/she is responsible for developing and implementing the academic and clinical program of resident education by

1. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.
2. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
3. providing residents with direct experience in progressive responsibility for patient management.
4. counseling transitional year residents in the development of a curriculum appropriate to their individual learning needs and career goals.

B. ACGME Competencies

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

4. *Interpersonal and communication skills* that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Didactic Components

1. The curriculum should include a broad range of clinical and biomedical problems and discussions of moral, ethical, legal, social, and economic issues.
2. All disciplines participating in the transitional year program must provide planned educational experiences for transitional year residents which should include:
 - a. morbidity and mortality conferences,
 - b. journal review,
 - c. seminars,
 - d. presentation of specialty topics, and
 - e. grand rounds.
 Attendance should be monitored and documented.

D. Clinical Components

1. The transitional year program must be designed to meet the educational needs of the residents. Service obligations of the sponsoring institution must be secondary to the transitional year educational objectives.
2. Skill Development
 - a. The development of mature clinical judgment requires that residents, properly supervised, be given responsibility for patient care commensurate with their ability. Residents must be given the responsibility for decision making and for direct patient care in all settings, subject to review and approval by senior residents and attending physicians, to include the planning of care, and the writing of orders, progress notes and relevant records.
 - b. To acquire fundamental clinical skills, the transitional year resident should have developed the following competencies before completion of the transitional year:
 - 1) obtain a complete medical history
 - 2) perform a complete physical examination
 - 3) define a patient's problems
 - 4) develop a rational plan for diagnosis, and
 - 5) implement therapy based on the etiology, pathogenesis, and clinical manifestations of various diseases.
 - c. Educational experiences must ensure development not only of cognitive and procedural/technical skills but also of humane qualities that enhance interactions between the physician and the patients'/patients' families.
3. Electives
 - a. The transitional year resident must have no fewer than 8 weeks of electives, which may not include vacation time. Elective rotations should be determined by the educational needs of the individual resident.
 - b. A maximum of 8 weeks may be designated for nonclinical patient care experience, e.g., research, administration, and computer science.
4. Emergency Medicine
 - a. The transitional year residents must have at least a 4-week rotation (minimum of 140 hours) in emergency medicine under

the supervision of qualified teaching staff within the sponsoring or an affiliated institution.

- b. The transitional year residents must have the opportunity to participate in the evaluation and management of the care of all types of patients who present to an institution's emergency department.
5. Ambulatory Care
- a. The transitional year residents must have at least 140 hours of documented experience in ambulatory care other than that acquired in the emergency department. This experience may consist of a 1-month block or be divided into lesser periods of time to ensure a total of 140 hours.
 - b. Outpatient experience must be obtained from ambulatory experiences provided by family practice, internal medicine, obstetrics/gynecology, pediatrics, and surgery at the sponsoring or affiliated institution(s)/sites.
6. Outside Rotations
- Rotations may be taken away from the institution and its affiliates provided that there is educational justification for the outside rotations and that the following policies are met:
- a. No more than 8 weeks of transitional year rotations may be taken away from the institution and its affiliates.
 - b. Outside required rotations must be taken in an ACGME-accredited program.
 - c. Outside rotations not part of ACGME-accredited programs must be designated as electives. The program director must provide a complete description of the experience, to include curriculum objectives, resident responsibilities, and the faculty assigned for supervision.
 - d. Outside rotations must be evaluated by the residents, and the performance of each resident must be evaluated by the respective faculty. Evaluations are to be reviewed and kept on file by the program director.
 - e. The program director must give consideration to the resident's liability coverage and state licensing requirements prior to approving the rotation.

E. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
 - a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
 - b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
 - c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
 - d. Active participation of the faculty in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.
2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.

F. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. Supervision of Residents

- a. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
 - 1) At least 24 weeks of each transitional year resident's rotations must be on clinical services where the transitional year resident works directly with more-senior residents who are supervised by attending faculty in ACGME-accredited programs.
 - 2) The responsibility or independence given to the transitional year residents by the supervising physician for the care of patients should depend on the residents' knowledge, manual skills, experience, the complexity of the patients' illnesses, and the risk of procedures that residents perform.
- b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
- c. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

2. Duty Hours

- a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.
- b. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
- c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
- d. Adequate time for rest and personal activities must be provided. This should consist of a 10 hour time period provided between all daily duty periods and after in-house call.

3. On-Call Activities

- The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.
- a. In-house call must occur no more frequently than every third night, averaged over a four-week period.
 - b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to six additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clin-

ies, and maintain continuity of medical and surgical care as defined in Specialty and Subspecialty Program Requirements.

- c. No new patients, as defined in Specialty and Subspecialty Program Requirements, may be accepted after 24 hours of continuous duty.
- d. At-home call (pager call) is defined as call taken from outside the assigned institution.
 - 1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - 2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - 3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.
- 4. Moonlighting
 - a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
 - b. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III. D.1.k.
 - c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), i.e., internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.
- 5. Oversight
 - a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.
 - b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.
- 6. Duty Hours Exception

The Transitional Year Review Committee will not grant exceptions for up to 10 % of the 80-hour limit, to individual programs.

VI. Evaluation

A. Resident Evaluation

1. The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include
 - a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

- b. mechanisms for providing regular and timely performance feedback to residents by the faculty of the participating discipline on each resident's completion of a rotation in that discipline that includes at least
 - 1) a written evaluation at least three times a year that is communicated to each resident in a timely manner and
 - 2) the maintenance of a record of evaluation for each resident that is accessible to the resident.
- c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff.
- 2. The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty Evaluation

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Annual written confidential evaluations by residents must be included in this process.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.
2. Outcome assessment
 - a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
 - b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
 - c. If more than 20% of the transitional year graduates, when averaged over 5 years, do not enter a Graduate Medical Education program, such will be considered as evidence that a program is not achieving its essential objectives and may be cause for an adverse accreditation action.

VII. Experimentation and Innovation

- A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

- B. Requests for experimentation or innovative projects that may deviate from the program requirements must be prior-approved by the Transitional Year Review Committee and must include the educational rationale and a method for evaluating the project.**
- C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.**

ACGME: June 1999 Effective: January 2000
Minor Revision Effective: April 12, 2002
Common Program Requirements: July 1, 2003

Section III

Accredited Graduate Medical Education Programs

Introduction

This section of the *Directory* contains a list of graduate medical education (GME) programs accredited by the Accreditation Council for Graduate Medical Education (ACGME).

Programs are listed by specialty under the state and city of the sponsoring institution (refer to sample, below). Listed under the program name is the institution that sponsors the residency program, followed by the major participating institution(s), if any, which are recognized by at least one ACGME Residency Review Committee (RRC) as providing a major portion of required GME. Hospitals and other institutions that provide rotations of less than one-sixth of the program length or less than a total of 6 months are not listed in the *Directory*.

Listings contain the program director's name and program address, telephone and fax numbers, and e-mail address. Newly appointed program directors since the publication of last year's *Directory* are noted with an asterisk. Additional information on each program includes the ACGME-accredited length of the program and number of ACGME approved/offered positions. (*Note:* The published program length reflects the length approved by the RRC. The program may require or offer additional years; these data are included in FREIDA Online, at www.ama-assn.org/go/freida, and the *GME Library on CD-ROM*.) The program identification number appears at the bottom of each listing; the first three digits of this number indicate the specialty/subspecialty code (see "Specialties/Subspecialties with ACGME Program Requirements," p 549) and the next two the state code.

Sample Listing

Title of the Program

Sponsor: The program's sponsoring institution

The program's major participating institution(s) (if any)

Prgm Director: Name (* = new director since publication of last *Directory*)

Address

City, state, zip code

Telephone number, fax number

E-mail address

Length: Program length *ACGME Approved/Offered Positions:*

Program ID: 000-00-00-000

The Role of the ACGME

The population of programs listed in Section III is set by the ACGME, which shares with the AMA information about accreditation actions and other changes through regular electronic data transfers.

The *Directory*, as the official list of ACGME-accredited programs, generally reflects accreditation actions completed by December of the previous year. The data published in this edition were transferred from the ACGME to the AMA on January 20, 2005. *Programs with withdrawal dates after this date are included in Section III.* Readers are reminded that accreditation actions and related changes can alter the ACGME program population on a daily basis and that the *Directory* serves only as a "snapshot" of this population at a given moment. For updated information on ACGME-accredited programs, consult the ACGME Web site at www.acgme.org.

Preventive Medicine Programs

The preventive medicine programs listed in Section III include programs that offer areas of specialization in aerospace medicine, general preventive medicine, occupational medicine, and public health and general preventive medicine.

Transitional Year Programs

Transitional Year programs are available for physicians seeking broad clinical experience before entering GME in their chosen field or for physicians who have not yet decided on a medical specialty.

Combined Specialty Programs

Combined specialty programs (listed in Appendix A) have been approved by each respective specialty board; resident physicians completing these programs are eligible for board certification. Neither the ACGME nor the Residency Review Committees accredit combined programs; they accredit each specialty program separately. Information in the combined program list was provided by specialty boards and through the National GME Census. Applicants to combined specialty programs are encouraged to review requirements for admission to the certification process of each board in Appendix B of the *Directory*.

Restricted-entry GME Programs

US Armed Services Programs

In most cases, only persons enrolled in the US Armed Services are eligible for appointment to residency positions at US Army, Navy, and Air Force hospitals and teaching institutions. These programs are identified in Section III with the text *US Armed Services Program*.

Centers for Disease Control and Prevention Programs

GME programs at the Centers for Disease Control and Prevention (CDC) are usually open only to CDC physicians.

Programs on Probation

The *Directory* may include programs that are on probation. For information on a program's current accreditation status, contact the ACGME, 515 N State St/Ste 2000, Chicago, IL 60610; 312 464-4920; 312 464-4098 Fax; www.acgme.org.

Disclaimer

It is the AMA's understanding that all institutions listed in the *Graduate Medical Education Directory* are required by law to include the phrase "EEO, M/F/D/V" on any information distributed for public view.

Sources for Additional Information

The *Graduate Medical Education Directory Companion: An Insider's Guide to Selecting a Residency Program*, which is published annually, and FREIDA Online (Fellowship and Residency Electronic Interactive Database Access), an Internet database available through the AMA home page at www.ama-assn.org/go/freida, are two additional sources of information on GME programs. In addition, the *Graduate Medical Education E-letter*, a monthly publication available via e-mail, offers news and updates on all facets of GME. Current/archive issues are available at www.ama-assn.org/go/gmenews.
