Table of Contents

1 Section I—Graduate Medical Education Information

- 1 Review and Accreditation of Graduate Medical Education Programs
- 1 Introduction
- 2 Application and Site Visit
- 2 Review and Accreditation
- 5 Notification of Accreditation Status
- 5 Procedures for Proposed Adverse Actions and Procedures for Appeal of Adverse Actions
- 6 Program Organization
- 7 Institutional Review
- 7 Fees for Evaluation and Accreditation
- 7 Information and Inquiries

9 Section II—Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements

- 9 Preface
- 9 I. The Education of Physicians
- 10 II. Accreditation of GME Programs
- 11 III. A Glossary of Selected Terms Used in GME Accreditation
- 12 **Institutional Requirements**
- 17 **Common Program Requirements**
- 21 **Program Requirements**
- 21 Allergy and Immunology
- 26 Anesthesiology

1389 Appendix C—Medical Schools in the United States

1393 Appendix D—Graduate Medical Education Glossary

Preface

The *Graduate Medical Education Directory* (90th edition), published by the American Medical Association (AMA), lists programs accredited by the Accreditation Council for Graduate Medical Education (ACGME).

The *Directory* provides medical students with a list of accredited graduate medical education (GME) programs in the United States, which aids them in making important professional decisions. State licensing boards, specialty societies, and hospitals refer to the *Directory* to verify the authenticity of programs presented by physicians who wish to qualify for licensure, certification, or hospital privileges. The *Directory* provides a unique historical record of accredited GME programs and background information about the ACGME accreditation process.

Contents of the Directory

Section I—Graduate Medical Education Information—summarizes the accreditation policies and procedures followed by the ACGME.

Section II—Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements—provides information on the ACGME accreditation process, requirements for institutions sponsoring GME programs, and Program Requirements for each of the medical specialties and subspecialties, including the Common Program Requirements. The Program Requirements describe curricular content for GME programs and may also address program resources and personnel, program length, and other specifications.

Section III—Accredited Graduate Medical Education Programs—lists GME programs accredited by the ACGME as of January 20, 2005, the date the ACGME transferred to the AMA the data used in this section. Section III provides program name, sponsoring institution, major participating institution(s), program director name, address, and phone/fax numbers, e-mail address, accredited program length, ACGME approved/offered positions, and program ID number. Specialties and subspecialties are listed in alphabetical order. Programs within each specialty or subspecialty are listed in alphabetical order by state and city. A list of accredited transitional year programs offered by hospitals or groups of hospitals is also included. Newly appointed program directors since the publication of last year's *Directory* are noted with an asterisk. (Note: The *Directory* may include programs that are on probation. For information on a program's current accreditation status, contact the ACGME, 515 N State St/Ste 2000, Chicago, IL 60610; 312 464-4920; www.acgme.org.)

Section IV—New and Withdrawn Programs—lists GME programs newly accredited since the publication of the 2004-2005 edition of the *Directory* and programs that are no longer accredited to offer GME as of December 31, 2004, or earlier.

Section V—Graduate Medical Education Teaching Institutions—lists institutions and organizations that sponsor or participate in GME programs. Teaching institution listings include type of affiliation (sponsor and/or participant) and are listed alphabetically by state and city. Institution listings include the name and address of the institution, medical school affiliations (as verified biennially by the deans of accredited US medical schools), a list of the specialties and subspecialties in which the institution provides training, and the institution identification number.

Appendix A—Combined Specialty Programs—provides information on programs that offer combined specialty training. These combined programs are approved by each respective medical specialty board, and physicians completing combined training programs are eligible for board certification. Although the ACGME has accredited

each program separately, neither the ACGME nor the Residency Review Committees have reviewed these combined programs.

Appendix B—Medical Specialty Board Certification Requirements—contains information about the American Board of Medical Specialties (ABMS) and the certification requirements for each of the 24 member boards of the ABMS. Certification is the process by which a medical specialty board grants recognition to a physician who has met certain predetermined qualifications, as specified by the board. Certification requirements are also published by and available from each medical specialty board. Questions concerning certification requirements should be directed to the particular specialty board office listed in Appendix B.

Appendix C—Medical Schools in the United States—contains a list of US medical schools accredited by the Liaison Committee on Medical Education (LCME), including the identification number, name, and location of each LCME-accredited medical school.

Appendix D—Graduate Medical Education Glossary—defines various terms commonly used in GME.

Contents of the *GMED Companion*

The following sections, which had been included in previous editions of the *Directory*, are now available in the *GMED Companion: An Insider's Guide to Selecting a Residency Program*:

- Entry of Foreign-born Medical Graduates to the United States
- Fifth Pathway Program
- Appointment to US Armed Services Graduate Medical Education Programs
- Electronic Residency Application Service (ERAS)
- National Resident Matching Program (NRMP)
- Medical Licensure Information

Production of the Directory

The work of the ACGME's Residency Review Committees (RRCs), which review and evaluate programs, provides a basis for program and institution information included in Sections III through V of the *Directory*. Through regular electronic data transfers, the ACGME shares with the AMA information about accreditation actions and other changes. Although the AMA, in turn, shares with the ACGME information collected on its annual survey of GME programs, directors of ACGME-accredited programs are reminded that most RRCs require prompt notification, *in writing*, of changes in the program's leadership. Providing information on program director changes via the National GME Census alone does not meet this requirement. In addition, most RRCs require a current copy of the curriculum vitae for new program directors.

The *Directory*, as the official list of ACGME-accredited programs, reflects accreditation actions completed as of January 20, 2005, the date the ACGME transferred to the AMA the data used in Sections III through V. Readers are reminded that accreditation actions and related changes can alter the ACGME program population on a daily basis and that the *Directory* serves only as a "snapshot" of this population at a given moment. For updated information on ACGME-accredited programs, consult the ACGME Web site at www.acgme.org.

The ACGME also provides the Institutional Requirements, Common Program Requirements, and Program Requirements listed in Section II of this *Directory* (*Essentials of Accredited Residencies in Graduate Medical Education*). Accreditation of a residency program indicates that the program and its sponsoring and affiliated institutions are judged to be in substantial compliance with the *Essentials*.

FREIDA Online® (Fellowship and Residency Electronic Interactive Database Access)

FREIDA Online® provides Internet access to extensive information on ACGME-accredited residency programs and combined specialty programs. FREIDA Online® allows users to search these programs by program identifier, specialty/subspecialty, state/region, program size, and educational requirements, among other variables. All program listings include program director name, address, and phone number, as well as program length and program start date(s). In addition, the majority of programs listed include expanded variables, such as the number of positions, program benefits (including compensation), resident-to-faculty ratio, work schedule, policies, and educational environment.

FREIDA Online® is available through the AMA home page at www.ama-assn.org/go/freida.

AMA Physician Masterfile

The AMA Physician Masterfile is a comprehensive and authoritative database on resident and licensed physicians used to produce portions of the *Directory* as well as of FREIDA Online® and AMA Physician Select. Masterfile data track physicians' entire educational and professional careers, from medical school and graduate medical education to practice.

Medical Education Data Service

The AMA Medical Education Data Service provides published information, existing tables, custom tables, electronic data, and mailing labels to educational institutions, professional associations, government agencies, foundations, and others interested in collecting, analyzing, and disseminating medical education data. Written requests for data must state the purpose of the project, describe the specific data service requested, include expected due date for data, and provide the name, address, phone, and fax number of the project contact. When requests require staff contribution or organizational overhead, a fee is assessed. Most data requests require a licensure agreement.

Individuals interested in obtaining medical education data should contact Sarah Brotherton, PhD, AMA, 515 N State St, Chicago, IL 60610; 312 464-4487; sarah_brotherton@ama-assn.org.

Disclaimer

It is the AMA's understanding that all institutions listed in the *Graduate Medical Education Directory* are required by law to include the phrase "EEO, M/F/D/V" (Equal Employment Opportunity, Minority/Female/Disabled/Veteran) on any information distributed for public view.

Back issues of the Directory

Copies of previous editions of the *Directory* are available for purchase at \$25 per copy. For more information or to order, please call 312 464-5333. In addition, the CD-ROM version of the *Directory* contains Adobe Acrobat files of editions from 1996-1997 to the present.

Special Acknowledgment to the ACGME

The AMA gratefully acknowledges the cooperation of the Accreditation Council for Graduate Medical Education (ACGME) in supplying the ACGME accreditation standards, the list of programs accredited by the ACGME and sponsoring/participating institutions, and relevant information about the ACGME accreditation process. Particularly helpful have been the contributions of the RRC executive directors and accreditation administrators, who provided corrected

copy of Program Requirements and notification of recent RRC and ACGME actions.

Finally, the AMA thanks ACGME staff Ingrid Philibert, John Nysten, MBA, Rebecca Miller, MS, Doris Stoll, PhD, and Kathy Malloy for their many ongoing contributions to the *Directory*.

Acknowledgments

Many people contributed to the publication of this edition of the *Graduate Medical Education Directory*. In addition to collaborative efforts with the ACGME (see "Special Acknowledgment," above), the ABMS and staff of the member boards of the ABMS provided requirements for certification in each of the medical specialties and subspecialties.

Special acknowledgment is also given to the following groups and individuals:

AMA Department of Data Collection, for data collection and information resources management: Susan Montrimas, Chris Mathews, Frank Karnavas, Patrick Cook, John Wilson, Angelina Martinez, and Charles Fisher.

Association of American Medical Colleges, for its collaboration with the AMA in collecting data on combined programs (see Appendix A) via the National GME Census: Jennifer Faerberg, Jason Cantow, and Charnita Uzzell.

AMA Press, for production support and assistance in disseminating this product: Suzanne Fraker, Jean Roberts, Ronnie Summers, Carol Brockman, Boon Ai Tan, J D Kinney, Amy Postlewait, Lori Hollacher, Mark Daniels and Al Novak.

AMA Medical Education Group, for data cleaning, QA, and editorial advising and assistance: Sarah Brotherton, PhD, Sylvia Etzel, Irie Swopshire, Dorothy Grant, Enza Messineo, and Arcia Washington.

We would also like to recognize the many contributions of Rod Hill of North Coast Associates, the typesetter of this publication.

Fred Domini-Lenhoff, MA, Editor

Paul H. Rockett, MD, MPH, Director, Division of Graduate Medical Education

Section I

Graduate Medical Education Information

Review and Accreditation of Graduate Medical Education Programs

Note: This summary of the process of review and accreditation of graduate medical education programs was adapted from official policies of the Accreditation Council for Graduate Medical Education (ACGME); for the official Manual of Policies and Procedures for ACGME Residency Review Committees, other information related to the accreditation process, and the current listing of accredited programs, showing their status and length of review cycle, contact the ACGME or consult the ACGME Web site at www.acgme.org.

Introduction

The Accreditation Council for Graduate Medical Education (ACGME) is a separately incorporated organization, responsible for the accreditation of approximately 8,000 allopathic graduate medical education programs. It has five member organizations: the American Board of Medical Specialties, American Hospital Association, American Medical Association, Association of American Medical Colleges, and Council of Medical Specialty Societies. Each member organization nominates four individuals to the ACGME's Board of Directors. In addition, the Board of Directors includes three public representatives, a resident representative, and the chair of the Residency Review Committee Council. A representative for the federal government and the chair of the RRC Resident Council also serve on the Board in a non-voting capacity.

The mission of the ACGME is to improve health care in the United States by ensuring and improving the quality of graduate medical education experience for physicians in training. The ACGME establishes national standards for graduate medical education by which it approves and continually assesses educational programs under its aegis. It uses the most effective methods available to evaluate the quality of graduate medical education programs. It strives to develop evaluation methods and processes that are valid, fair, open, and ethical.

In carrying out these activities the ACGME is responsive to change and innovation in education and current practice, promotes the use of effective measurement tools to assess resident physician competency, and encourages educational improvement.

Under the aegis of the ACGME, the accreditation of graduate medical education programs is carried out by 27 review committees and a committee for the review of sponsoring institutions. These committees have been delegated accreditation authority by the ACGME. A Residency Review Committee (RRC) consists of representatives appointed by the American Medical Association, the appropriate specialty board, and, in some cases, a national specialty organization. The Transitional Year Review Committee is composed of ten members who are appointed by the chair of the ACGME in conjunction with the Executive Committee. The term "review committee" is used to denote a Residency Review Committee, the Transitional Year Review Committee and the Institutional Review Committee. The Institutional Review Committee (IRC) is composed of ten members appointed by the Chair of the ACGME in conjunction with the Executive Committee. The Institutional Review Committee assumes the responsibility for reviewing institutions which sponsor multiple programs. It evaluates institutions for substantial compliance with the Institutional Requirements.

Graduate medical education programs are accredited when they are judged to be in substantial compliance with the *Essentials of Accredited Residencies in Graduate Medical Education*. The *Essentials* consist of (a) the Institutional Requirements, which are prepared by the ACGME and apply to all programs, and (b) the Program Requirements for each specialty and subspecialty. The requirements are developed and periodically revised by a review committee for its area(s) of competence, and are approved by the ACGME. The activities of the ACGME extend only to those institutions within the jurisdiction of the United States of America.

A list of programs accredited by the ACGME, including detailed information about each program, is published by the American Medical Association annually in the *Graduate Medical Education Directory*, using information provided by the ACGME. As this list is periodically updated to add or remove programs or to change their accreditation status, the most current information is always found on the ACGME's Web listing of programs (www.acgme.org). With the exception of this listing of programs and their current accreditation status, the contents of program files are confidential, as are all other documents regarding a program used by a review committee.

Application and Site Visit

The accreditation review process is set in motion in one of two ways, depending upon whether the program under consideration is seeking initial accreditation, re-accreditation, or continued accreditation.

Application

In the case of a program seeking initial accreditation or re-accreditation, the process begins when the program director sends an application to the executive director of the review committee. Review and evaluation of an application involves several steps and usually requires 8 to 10 months from the time the application is received by the review committee executive director until an accreditation action is taken.

The review committee executive director checks the application for completeness and forwards the document to the director of field activities, who schedules a site visit of the program. The scheduling and completion of the site visit take approximately 6 months. In some specialties, a member of the review committee or a specialist will review the application to identify areas requiring clarification by the site visitor.

Re-accreditation following loss of accreditation involves the process described above. A program cannot apply for re-accreditation while engaged in the appeals process described in this document. In addition, an institution placed on unfavorable status by the Institutional Review Committee may not apply for any new programs or reapply for programs withdrawn or voluntarily withdrawn until it has once more attained favorable status.

Review of Accredited Programs

Accredited programs undergo site visits and reviews on cycles determined by the review committee, as described below in the sections on actions regarding accreditation of general specialty and subspecialty programs. Program directors are notified well in advance of the site visit, at which time they receive the appropriate forms for completion. Program directors may request forms earlier.

A review committee may elect to review a program outside the usual cycle. A program director also may request an early review. However, a program will not be reviewed while it is in the appeals process.

Function of Site Visitor

Annually, approximately 1,900 site visits are conducted by the ACGME Field Staff, and between 100 and 200 visits are conducted by Specialist Site Visitors, who are members of the particular specialty being reviewed. In either case, the site visitor does not participate in the final accreditation decision or recommendation of the review committee beyond providing a written report. It is the site visitor's primary responsibility to verify the information that has been provided by the program director. The site visitor also conducts interviews with administrators, faculty, and residents in order to report accurately on the various aspects of the educational program. The site visitor, whether field staff or specialist, should not be viewed as a consultant to the program and should not be expected to provide feedback to the program or to conduct a formal exit interview.

After the site visit has been completed, the site visitor's report is submitted to the review committee executive director, who prepares the program file for evaluation by the review committee. The site visitor is not present when the review committee evaluates the program.

Review and Accreditation

The review committee reviews the program information in detail, evaluates the program, and determines the degree to which it meets the published educational standards (*Essentials*). The review committee decides upon an accreditation status for the program and identifies areas of noncompliance with the *Essentials*.

Actions Regarding Accreditation of General Specialty Programs

The following actions may be taken by a review committee regarding the accreditation status of general specialty programs and by the Transitional Year Review Committee regarding the status of transitional year programs.

Withhold Accreditation

A review committee may withhold accreditation when it determines that the proposal for a new program does not substantially comply with the *Essentials*. The review committee will cite those areas in which the proposed program does not comply with the *Essentials*.

Provisional Accreditation

Provisional accreditation is granted for initial accreditation of a program or for a previously accredited program that had its accreditation withdrawn and has subsequently applied for re-accreditation. Provisional accreditation may also be used in the unusual circumstance in which separately accredited programs merge into one or an accredited program has been so altered that in the judgment of the review committee it is the equivalent of a new program.

When a program is accredited on a provisional basis, the effective date of accreditation will be stipulated. Under special circumstances, the effective date may be made retroactive; however, unless specifically justified, it should not precede the beginning of the academic year during which the program is accredited.

Provisional accreditation implies that a program is in a developmental stage. It remains to be demonstrated that the proposal for which accreditation was granted will be implemented as planned. A review committee will monitor the developmental progress of a program accredited on a provisional basis. Following accreditation, programs should undergo a site visit in approximately 2 years in preparation for review by the respective committee. The interval between accreditation and the next review of the program should not exceed 3 years. In the course of monitoring a program's

development, a review committee may continue provisional accreditation; however, the total period of provisional accreditation should not exceed 5 years for programs of 4 years' duration or less, or the length of the program plus 1 year for programs of 5 years' duration or longer. With the exception of special cases as determined by a review committee, if full accreditation is not granted within either of these time frames, accreditation of the program should be withdrawn.

Full Accreditation

A review committee may grant full accreditation in three circumstances:

- A. When programs holding provisional accreditation have demonstrated, in accordance with ACGME procedures, that they are functioning on a stable basis in substantial compliance with the *Essentials*;
- B. When programs holding full accreditation have demonstrated, upon review, that they continue to be in substantial compliance with the *Essentials*; and
- C. When programs holding probationary accreditation have demonstrated, upon review, that they are in substantial compliance with the *Essentials*.

The maximum interval between reviews of a program holding full accreditation is 5 years; however, a review committee may specify a shorter cycle.

Probationary Accreditation

This category is used for programs holding full accreditation that are no longer considered to be in substantial compliance with the *Essentials*. The normal interval for review of programs holding probationary accreditation is 2 years; however, a review committee may specify a shorter cycle. In reviewing a program holding probationary accreditation, a committee may exercise the following options: grant full accreditation; withdraw accreditation; or, in special circumstances, continue probationary accreditation. A program should not hold probationary accreditation for more than 4 consecutive years until it is returned to full accreditation or the review committee acts to withdraw accreditation. This period may be extended for procedural reasons, as when a program exercises the right to appeal procedures or the review schedule exceeds 4 years. The probationary period is calculated from the date of the initial decision for probation. The *Procedures for Proposed Adverse Actions* and *Procedures for Appeal of Adverse Actions*, in subsequent text, provide further details on adverse actions.

Withdrawal of Accreditation

Accreditation of a program may be withdrawn under the following conditions:

- A. Noncompliance with *Essentials*. Accreditation of programs holding either provisional accreditation or probationary accreditation may be withdrawn as follows:
 1. For programs holding provisional accreditation, once a review committee has notified a program director that the program has not developed as proposed to establish and maintain substantial compliance with the *Essentials*, the program will be subject to withdrawal of accreditation for failure to be in substantial compliance with the *Essentials*.
 2. For programs holding probationary accreditation, once a review committee has notified a program director that the program is accredited on a probationary basis, the program will be subject to withdrawal of accreditation for continued failure to be in substantial compliance with the *Essentials*.
 3. In giving notification, as indicated in 1 and 2 above, a review committee must indicate the areas in which the program is judged not to be in substantial compliance with the *Essentials*.

It is understood that these areas may change in the course of multiple reviews conducted from the time a program is first given notice that it is not in compliance until withdrawal of accreditation may occur.

- B. Request of Program. Voluntary withdrawal of accreditation may occur at the request of the program director in the following ways:
 1. A program director may request voluntary withdrawal of accreditation of a program, without prejudice. It is expected that if a program is deficient for one or more of the reasons set forth in E below, the director will seek voluntary withdrawal of accreditation. Normally such requests would come from the program director, with a letter of confirmation from the sponsoring institution's chief executive officer.
 2. Two or more programs may be merged into a single new program. If the review committee accredits the new program, it will take concurrent action for withdrawal of accreditation, without prejudice, of the previously separate programs. The review committee will consider the expressed preference of the program director in establishing the effective date for withdrawal of accreditation of the program(s).
- C. Delinquency of Payment. Programs that are judged to be delinquent in payment of fees are not eligible for review and shall be notified by certified mail, return receipt requested, of the effective date of withdrawal of accreditation. On that date, the program will be removed from the list of ACGME-accredited programs.
- D. Noncompliance with Accreditation Actions and Procedures. A program director may be deemed to have withdrawn from the voluntary process of accreditation and a review committee may take appropriate action to withdraw accreditation if that director refuses to comply with the following actions and procedures:
 1. To undergo a site visit and program review;
 2. To follow directives associated with an accreditation action; and
 3. To supply a review committee with requested information.
- E. Program Inactivity or Deficiency. A review committee may withdraw accreditation from a program, regardless of its current accreditation status, under the following circumstances:
 1. The program has been inactive for 2 or more years, without requesting and being granted official "inactive status."
 2. The program has incurred a catastrophic loss or complete change of resources, e.g., faculty, facilities, or funding, such that the program is judged not creditable.
 3. The program has incurred an egregious accreditation violation.
- F. Withdrawal of accreditation for reasons noted in the above paragraphs (Delinquency of Payment, Noncompliance with Accreditation Actions and Procedures, and Program Inactivity or Deficiency) is an administrative action and is not subject to the appeals process.
- G. The following policies apply when action is taken to withdraw accreditation (except for establishment of an effective date in the case of voluntary withdrawal of accreditation or withdrawal of accreditation because of inactivity or deficiency):
 1. The effective date of withdrawal of accreditation shall not be less than 1 year from the date of the final action taken in the procedures to withdraw accreditation.
 2. The effective date of withdrawal of accreditation shall permit the completion of the training year in which the action becomes effective.
 3. Once notification has been made of the effective date of withdrawal of accreditation, no residents may be appointed to the program.

4. When action has been taken by a review committee to withdraw accreditation of a residency program and the program has entered into appeal procedures, an application for re-accreditation of the program will not be considered until the appeal action is concluded.

The *Procedures for Proposed Adverse Actions* and *Procedures for Appeal of Adverse Actions*, provided in this document, contain further details.

H. Inactive Status in Lieu of Withdrawal of Accreditation

A program in otherwise good standing that has not been active (had residents) for 2 or more years may request "inactive status" in lieu of withdrawal of accreditation if it is contemplated to re-activate the program within the next 2 years. The RRC may stipulate what assurances must be provided for reactivation to be sure the program continues in substantial compliance. For dependent subspecialty programs, "inactive status" does not exempt from policies related to accreditation status. Unless the general specialty program is in full or continued accreditation the dependent subspecialty is not eligible for "inactive status." Programs with residents may not elect to become inactive until all residents have left the program.

In any event a program may not retain accreditation for more than 4 consecutive years without residents even with "inactive status" for 2 years.

Actions Regarding Accreditation of Subspecialty Programs

There are two procedural models for the accreditation of subspecialty programs:

- A. When the accreditation status of a subspecialty program is not directly related to, or dependent upon, the status of a general specialty/parent program, the subspecialty programs are accredited in accordance with the same procedures used for general specialty programs as heretofore described.
- B. When the accreditation status of a subspecialty program is directly related to, or dependent upon, the status of a general specialty/parent program, the following accreditation actions are used:
 1. **Withhold Accreditation.** A review committee may withhold accreditation when it determines that the proposal for a new subspecialty program does not substantially comply with the *Essentials*. The review committee will cite those areas in which the proposed program does not comply with the *Essentials*.
 2. **Accreditation.** The subspecialty program has demonstrated substantial compliance with the *Essentials* and is attached to a general specialty program that holds full accreditation or is otherwise deemed satisfactory by the review committee.
 3. **Accreditation With Warning.** The accredited subspecialty program has been found to have one or more areas of noncompliance with the *Essentials* that are of sufficient substance to require correction.
 4. **Accreditation With Warning, Administrative.** The general specialty program to which the subspecialty program is attached has been granted accreditation on a probationary basis. This action simultaneously constitutes an administrative warning of potential loss of accreditation to any subspecialty program that is attached to the general specialty program.
 5. **Withdraw Accreditation.** An accredited subspecialty program is considered not to be in substantial compliance with the *Essentials* and has received a warning about areas of noncompliance.
 6. **Withdraw Accreditation, Administrative.** If a general specialty program has its accreditation withdrawn, simultaneously the

accreditation of any subspecialty program that is attached to the general specialty program is administratively withdrawn.

7. **Other Actions by a Review Committee.** The policies and procedures on withdrawal of accreditation of general specialty programs, as well as those on deferral of action, resident complement, participating institutions, and progress reports governing general specialty programs, also apply to the actions concerning subspecialty programs.

Warning Notices

A review committee may use a special procedure to advise a program director that it has serious concerns about the quality of the program and that the program's future accreditation status may be in jeopardy. In keeping with the flexibility inherent in the accreditation process, each review committee may use this procedure in accordance with its own interpretation of program quality and the use of the different accreditation categories. This procedure is not considered an adverse action and therefore is not subject to the appeal procedures.

The warning procedure may be used as follows:

- A. For a program with provisional accreditation. A review committee may elect to continue provisional accreditation, but include in the letter of notification a statement that the program will be reviewed in approximately 1 year, following a site visit, at which time withdrawal of accreditation will be considered if the program has not achieved satisfactory development in establishing substantial compliance with the *Essentials*.
- B. For a program with full accreditation. A review committee may elect to continue full accreditation, but include in the letter of notification a statement that the program will be reviewed in approximately 1 year, following a site visit, at which time probationary accreditation will be considered if the program is not in substantial compliance with the *Essentials*.
- C. Review committees may extend the interval before the next review to 2 years, as in cases where program improvements may be addressed more appropriately within 2 years rather than 1 year.

Deferral of Accreditation Action

A review committee may defer a decision on the accreditation status of a residency program. The primary reason for deferral of accreditation action is lack of sufficient information about specific issues, which precludes an informed and reasonable decision. When a committee defers accreditation action, the residency program retains its current accreditation status until a final decision is made.

Size of Resident Complement

The complement of residents in a program must be commensurate with the total capacity of the program to offer each resident an educational experience consistent with accreditation standards; thus, a review committee may indicate that a residency program is accredited to train a specific number of residents as a maximum at any one time. In addition, a committee may indicate the number of residents to be trained in each year of the program. A review committee may also indicate that a minimum number of residents is considered necessary in each program to provide an effective learning environment.

Participating Institutions

The sponsoring institution of a residency program may utilize one or more additional institutions to provide necessary educational resources. In such cases, a review committee may evaluate whether each participating institution contributes meaningfully to the educational program.

Progress Reports

A review committee may request a progress report from a program director. The committee should specify the exact information to be provided and a specific due date for the report. The progress report should be reviewed by the sponsoring institution GMEC and signed by the chair of the GMEC.

Notification of Accreditation Status

Letters of Notification

Accreditation actions taken by a review committee are reported to program directors by formal letters of notification. The accreditation status of any program will change only by subsequent action of the review committee. The notification letters usually contain reference to the approximate time of the next site visit and review of the program.

Notifying Residents and Applicants

All residents in a program, as well as applicants (that is, all candidates invited to come for an interview), should be aware of the accreditation status of the program and must be notified of any change in the accreditation status. When an adverse action is taken, program directors must notify all current residents as well as applicants to the program in writing. For applicants, the information on accreditation status must be provided in writing prior to having candidates come to the program for an interview. Copies of the letters to residents and applicants must be kept on file by the program director and a copy must be sent to the executive director of the review committee within 50 days of receipt of the notification of the adverse action. Additional information regarding notification letters is contained in the *Procedures for Proposed Adverse Actions* and *Procedures for Appeal of Adverse Actions*.

Duration of Accreditation

When a residency program is initially accredited, accreditation commences with the date specified in the letter of notification. A program remains accredited until formal action is taken by a review committee to withdraw accreditation. The action to withdraw accreditation will specify the date on which accreditation ends. ACGME accreditation does not lapse merely because of the passage of time. The time interval specified in the letter of notification is the time of the next site visit and review; it does not imply that accreditation will end when the time of next review occurs.

Identification of Programs in ACGME Records

Because numerous users consult and reference ACGME records, the ACGME retains the right to identify programs in a way that is consistent and will not give unfair advantage to any program.

The following standards are followed:

- The program title clearly identifies the sponsoring institution.
- Only one sponsoring institution is identified.
- Participating institutions are identified in the program listing only if they serve as major teaching sites for resident education. This means that, in a 1-year program, residents must spend at least 2 months in a required rotation at the site for it to be listed; in a 2-year program, the rotation must be 4 months, and in a program of 3 years or longer, the rotation must be at least 6 months. Review committees retain the right to grant exceptions to this formula.
- Outpatient facilities and ambulatory clinics and inpatient sites not serving as major participating institutions generally are

listed in the Accreditation Data System (ADS) on an optional basis, as determined by the program.

- Units that do not operate under a separate license are not listed as discrete training sites.

Procedures for Proposed Adverse Actions and Procedures for Appeal of Adverse Actions

ACGME Procedures for Proposed Adverse Actions (Approved by ACGME June 24, 2003)

The following procedures will be implemented when a Residency Review Committee (RRC) determines that a program is not in substantial compliance with the *Essentials of Accredited Residencies in Graduate Medical Education* (Essentials). [Note: Here and elsewhere in these Procedures for Proposed Adverse Actions, reference to "Residency Review Committee" also includes the ACGME's Transitional Year Review Committee.]

- When an RRC determines that an adverse action is warranted, the RRC will first give notice of its proposed adverse action to the program director and to the Designated Institutional Official of the sponsoring institution. This notice of proposed adverse action will include the citations that form the basis for the proposed adverse action, a copy of the site visitor's report, and the date by which the program may submit, in writing, its response to each of the citations and to the proposed adverse action. [Note: Here and elsewhere in these Procedures for Proposed Adverse Actions, the word "action" reflects delegation of accreditation authority to the RRC. In the event of a decision by an RRC not holding delegated authority, read "recommendation of an RRC and action by the ACGME" throughout the procedures.]
- The program may provide to the RRC written information revising or expanding factual information previously submitted; challenging the findings of the site visitor; rebutting the interpretation and conclusions of the RRC; demonstrating that cited areas of noncompliance with the published standards either did not exist or have been corrected since the time when the RRC reviewed the program and proposed an adverse decision; and contending that the program is in compliance with the standards. The RRC will determine whether the information may be considered without verification by a site visitor.
- The RRC will complete its evaluation of the program at a regularly scheduled meeting, as indicated to the program director in the notice of proposed adverse action. The RRC may confirm the adverse action or modify its position and take a nonadverse action.
- If an RRC confirms the adverse action, it will communicate to the program director the confirmed adverse action and the citations, as described above, including comments on the program director's response to these citations.
- The letter of notification, which will include information on the right of the program to appeal the RRC's decision to the ACGME, will be sent to the program director, and the DIO. The program director may appeal the decision; otherwise, it is final. If the decision is accepted as final, the program director may subsequently request a new review in order to demonstrate that the program is in compliance with the standards.
- Upon receipt of notification of a confirmed adverse accreditation action, the program director must inform, in writing, the residents and any applicants who have been invited to interview with the program that the adverse action has been confirmed,

whether or not the action will be appealed. A copy of the written notice must be sent to the executive director of the RRC within 50 days of receipt of the RRC's letter of notification.

ACGME Procedures for Appeal of Adverse Actions (Approved by ACGME June 24, 2003)

- a. If a Residency Review Committee (RRC) takes an adverse action, the program may request a hearing before an appeals panel.
[*Note:* Here and elsewhere in these Procedures for Appeal of Adverse Actions, reference to "Residency Review Committee" also includes the ACGME's Transitional Year Review Committee.]
[*Note:* Here and elsewhere in these Procedures for Appeal of Adverse Actions, the word "action" reflects delegation of accreditation authority to an RRC. In the event of a decision by an RRC not holding delegated authority, read "recommendation of an RRC and action by the ACGME" throughout the procedures.] If a written request for such a hearing is not received by the executive director of the ACGME within 30 days following receipt of the letter of notification, the action of an RRC will be deemed final and not subject to further appeal.
- b. Requests for a hearing must be sent express mail to: Executive Director, Accreditation Council for Graduate Medical Education, 515 North State Street, Suite 2000, Chicago, Illinois 60610.
- c. If a hearing is requested, the appeals panel will be appointed according to the following procedures:
 - 1) The ACGME shall maintain a list of qualified persons in each specialty as potential appeals panel members.
 - 2) For a given hearing, the program shall receive a copy of the list of potential appeals panel members and shall have an opportunity to delete a maximum of one-third of the names from the list of potential appeals panel members. Within 15 days of receipt of the list, the program shall submit its revised list to the executive director of the ACGME.
 - 3) A three-member appeals panel will be constituted by the ACGME from among the remaining names on the list.
 - a. When a program requests a hearing before an appeals panel, the program reverts to its status prior to the appealed adverse action until the ACGME makes a final determination on the status of the program. Nonetheless, at this time residents and any applicants who have been invited to interview with the program must be informed in writing as to the confirmed adverse action by an RRC on the accreditation status. A copy of the written notice must be sent to the executive director of the RRC within 50 days of receipt of the RRC's letter of notification.
 - b. Hearings conducted in conformity with these procedures will be held at a time and place to be determined by the ACGME. At least 25 days prior to the hearing, the program shall be notified of the time and place of the hearing.
 - c. The program will be given the documentation of the RRC action in confirming its adverse action.
 - d. The documents comprising the program file, the record of the RRC's action, together with oral and written presentations to the appeals panel, shall be the basis for the recommendations of the appeals panel.
 - e. The appeals panel shall meet and review the written record, and receive the presentations. The appropriate RRC shall be notified of the hearing and a representative of the RRC may attend the hearing to be available to the appeals panel to provide clarification of the record.

Proceedings before an appeals panel are not of an adversary nature as typical in a court of law, but rather, provide an administrative mechanism for peer review of an accreditation decision about an educational program. The appeals

panel shall not be bound by technical rules of evidence usually employed in legal proceedings.

The program may not amend the statistical or narrative descriptions on which the decision of the RRC was based. The appeals procedures limit the appeals panel's jurisdiction to clarification of information as of the time when the adverse action was confirmed by the RRC. Information about the program subsequent to that time cannot be considered in the appeal. Furthermore, the appeals panel shall not consider any changes in the program or descriptions of the program which were not in the record at the time when the RRC reviewed the program and confirmed the adverse decision. [*Note:* Option: When there have been substantial changes in a program and/or correction of citations after the date of the confirmed action by the RRC, a program may forego an appeal and request a new evaluation and accreditation decision. Such an evaluation will be done in accordance with the ACGME procedures, including an on-site survey of the program. The adverse status will remain in effect until a reevaluation and an accreditation decision have been made by the RRC.] Presentations shall be limited to clarifications of the record, arguments to address compliance by the program with the published standards for accreditation, and the review of the program in the context of the administrative procedures governing accreditation of programs. Presentations may include written and oral elements. The appellant may make oral arguments to the appeals panel, but the oral argument will be limited to two hours in duration.

The appellant shall communicate with the appeals panel only at the hearing or in writing through the executive director of the ACGME.

The appeals panel shall make recommendations to the ACGME whether there is substantial, credible and relevant evidence to support the action taken by the RRC in the matter that is being appealed. The appeals panel, in addition, will make recommendations as to whether there has been substantial compliance with the administrative procedures governing the process of accreditation of graduate medical education programs.

- f. The program may submit additional written material within 15 days after the hearing. The intention to submit such material must be made known to the appeals panel at the hearing.
- g. The appeals panel shall submit its recommendations to the ACGME within 20 days after receipt of additional written material. The ACGME shall act on the appeal at its next regularly scheduled meeting.
- h. The decision of the ACGME in this matter shall be final. There is no provision for further appeal.
- i. The executive director of the ACGME shall, within 15 days following the final ACGME decision, notify the program under appeal of the decision of the ACGME.

Program Organization

The organization of a program may involve any of several administrative forms. For example, a program may be conducted within a single institution, that is, the assignment of residents is limited to that institution; or a program may involve more than one institution, that is, the resident assignments are not limited to the sponsoring institution.

Some RRCs have specific requirements relating to program organization. These may be found in the appropriate *Program*

Requirements (see Section II). In all cases, however, a single, clearly identified sponsoring organization must exercise oversight over the educational program.

Institutional Review

Procedures for review of sponsoring institutions for compliance with the Institutional Requirements of the *Essentials* have been established, in addition to the process of review and accreditation of programs in graduate medical education.

The purpose of the review is to determine whether the sponsoring institution provides ***the necessary educational, financial, and human resources to support graduate medical education; supports the residents and their work environment through well-established and documented policies and procedures; and provides strong oversight of the residency programs to ensure substantial compliance with the Program Requirements.*** Institutions that sponsor programs in two or more different core specialty or subspecialty areas will undergo an institutional site visit and will have formal review by the Institutional Review Committee of the ACGME. Institutions that sponsor only one residency program, one residency program and its related subspecialty(ies), or several residencies in only one specialty, such as Family Practice, will undergo an institutional review as part of their program site visit and will be reviewed by the appropriate RRC.

Results of institutional review evaluation for institutions that undergo a formal institutional review by the IRC are reported as either favorable or unfavorable in a letter of report. Beginning July 2005, the institutional review will use the same accreditation status designations as for the review of programs. The date of the next institutional review will be identified in this letter. Results of institutional review for institutions that do not undergo a formal institutional review by the IRC are incorporated into the letter of notification concerning program accreditation.

An institution that has received an unfavorable evaluation can request another institutional review earlier than the specified review cycle. An unfavorable review of an institution may lead to the withdrawal of accreditation of all the residency programs sponsored by the institution at the time of the institution's next review. An appeals mechanism has been established for the latter contingency.

Fees for Evaluation and Accreditation

Fees charged for the accreditation of programs are determined annually by the ACGME. As of January 1, 2000, the following fee schedule is in effect.

Application Fee

A fee is charged for processing applications for programs seeking initial accreditation. This also applies to programs seeking re-accreditation following any withdrawal status. The charge for applications is \$3,000. It is normally billed at the time the application is received.

Program Fee

An annual accreditation fee is assessed on a per program basis for all accredited programs. This annual fee is \$2,000 for programs with five or fewer residents and \$2,500 for programs with five or more residents. This fee is billed around January 1 of each year and applies to the current academic year.

Palm Pilot Fee

Programs required to use the ACGME Internet Case log system for tracking resident cases may choose the option of utilizing Palm Pilots to record and then upload data into the system. Though use of the Internet system is free to all accredited residencies, the Palm Pilot interface carries a \$25 per resident per year charge. Use of a Palm Pilot is optional. This is a pass-through charge for software licensing required for Palm Pilot use.

Cancelled Site Visit Fee

Should a program cancel or postpone a scheduled site visit, including cancellation of the site visit for a program electing voluntary withdrawal of accreditation or inactive status, if inadequate notice is provided the ACGME may impose a cancellation fee penalty of up to \$2,750. This penalty may be imposed at the discretion of the Director of Field Activities.

Appeal Fee

The fee for an appeal of an accreditation decision is \$10,000 plus expenses of the appeals panel members, and the associated administrative costs shall be shared equally by the appellant and the ACGME.

Information and Inquiries

Inquiries regarding the accreditation of residency programs should be directed to ACGME staff members listed below. The educational standards (*Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements*) published in this edition of the *Graduate Medical Education Directory* have an effective date as indicated for each document. Please consult with the ACGME for changes in those standards that occur throughout the year. Copies of the Institutional Requirements and of the Program Requirements for each specialty/subspecialty may be obtained through the Internet at www.acgme.org. Other documents pertaining to the accreditation process are also available through this source.

The address for the ACGME is as follows:

Section II

Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements

Section II—Essentials of Accredited Residencies in Graduate Medical Education: Institutional and Program Requirements—begins with a preface containing general information about the three major phases of the education of physicians, the accreditation of graduate medical education programs, and a glossary of selected terms, followed by a copy of the Institutional Requirements and the Common Program Requirements, both effective July 1, 2003. The bulk of Section II consists of Program Requirements organized by specialty/related subspecialty, reflecting updates/revisions in 2003. Because the RRCs meet periodically throughout the year to review programs, the most current list of accredited programs of graduate medical education and relevant Program Requirements can be found at the ACGME Web site at www.acgme.org.

Preface

I. The Education of Physicians

Medical education in the United States occurs in three major phases.

A. Undergraduate Medical Education

Undergraduate medical education is the first or “medical school” phase. The medical school curriculum provides instruction in the sciences that underlie medical practice and in the application of those sciences to health care. Students learn basic information-gathering, decision-making, and patient-management skills in rotations through the various clinical services. Students are granted the MD or DO degree on the successful completion of the medical school curriculum and are eligible to undertake the next phase of medical education.

Accreditation of educational programs leading to the MD degree is the responsibility of the Liaison Committee on Medical Education (LCME). Accreditation of educational programs leading to the DO degree is the responsibility of the American Osteopathic Association.

B. Graduate Medical Education

Graduate medical education (GME), the second phase, prepares physicians for practice in a medical specialty. GME focuses on the development of clinical skills and general and professional competencies and on the acquisition of detailed factual knowledge in a medical specialty. This learning process prepares the physician for the independent practice of medicine in that specialty. The programs are based in hospitals or other health care institutions and, in most specialties, utilize both inpatient and ambulatory settings, reflecting the importance of care for adequate numbers of patients in the GME experience. GME programs, including Transitional Year programs, are usually called residency programs, and the physicians being educated in them, residents.

The single most important responsibility of any sponsoring institution of GME is to ensure the provision of organized educational programs with guidance and supervision of the resident, facilitating the resident's professional and personal development while ensuring safe and appropriate care for patients. A resident takes on progressively greater responsibility throughout the course of a residency, consistent with individual growth in clinical experience, knowledge, and skill.

The education of resident physicians relies on an integration of didactic activity in a structured curriculum with diagnosis and management of patients under appropriate levels of supervision and scholarly activity aimed at developing and maintaining life-long learning skills. The quality of this experience is directly related to the quality of patient care, which is always the highest priority.

Residency Review Committee Appointing Organizations

Residency Review Committee	Sponsoring Organizations	Residency Review Committee	Sponsoring Organizations
Allergy and Immunology	American Board of Allergy and Immunology (A Conjoint Board of the American Board of Internal Medicine and the American Board of Pediatrics) AMA Council on Medical Education	Ophthalmology	American Academy of Ophthalmology American Board of Ophthalmology AMA Council on Medical Education
Anesthesiology	American Board of Anesthesiology American Society of Anesthesiologists AMA Council on Medical Education	Orthopaedic Surgery	American Academy of Orthopaedic Surgeons American Board of Orthopaedic Surgery AMA Council on Medical Education
Colon and Rectal Surgery	American Board of Colon and Rectal Surgery American College of Surgeons AMA Council on Medical Education	Otolaryngology	American Board of Otolaryngology American College of Surgeons AMA Council on Medical Education
Dermatology	American Board of Dermatology AMA Council on Medical Education	Pathology	American Board of Pathology AMA Council on Medical Education
Diagnostic Radiology	American Board of Radiology American College of Radiology AMA Council on Medical Education	Pediatrics	American Academy of Pediatrics American Board of Pediatrics AMA Council on Medical Education
Emergency Medicine	American Board of Emergency Medicine American College of Emergency Physicians AMA Council on Medical Education	Physical Medicine and Rehabilitation	American Academy of Physical Medicine and Rehabilitation American Board of Physical Medicine and Rehabilitation AMA Council on Medical Education
Family Practice	American Academy of Family Physicians American Board of Family Practice AMA Council on Medical Education	Plastic Surgery	American Board of Plastic Surgery American College of Surgeons AMA Council on Medical Education
Internal Medicine	American Board of Internal Medicine American College of Physicians AMA Council on Medical Education	Preventive Medicine	American Board of Preventive Medicine AMA Council on Medical Education
Medical Genetics	American Board of Medical Genetics American College of Medical Genetics AMA Council on Medical Education	Psychiatry	American Board of Psychiatry and Neurology American Psychiatric Association AMA Council on Medical Education
Neurological Surgery	American Board of Neurological Surgery American College of Surgeons AMA Council on Medical Education	Radiation Oncology	American Board of Radiology American College of Radiology AMA Council on Medical Education
Neurology	American Academy of Neurology American Board of Psychiatry and Neurology AMA Council on Medical Education	Surgery	American Board of Surgery American College of Surgeons AMA Council on Medical Education
Nuclear Medicine	American Board of Nuclear Medicine AMA Council on Medical Education Society of Nuclear Medicine	Thoracic Surgery	American Board of Thoracic Surgery American College of Surgeons AMA Council on Medical Education
Obstetrics-Gynecology	American Board of Obstetrics and Gynecology American College of Obstetricians and Gynecologists AMA Council on Medical Education	Urology	American Board of Urology American College of Surgeons AMA Council on Medical Education

Educational quality and patient care quality are interdependent and must be pursued in such a manner that they enhance one another. A proper balance must be maintained so that a program of GME does not rely on residents to meet service needs at the expense of educational objectives.

A resident is prepared to undertake independent medical practice within a chosen specialty on the satisfactory completion of a residency. Residents in a program accredited by the Accreditation Council for Graduate Medical Education (ACGME) typically complete educational requirements for certification by a specialty board recognized by the American Board of Medical Specialties (ABMS).

The accreditation of GME programs is the responsibility of the ACGME, its associated Residency Review Committees (RRCs) for the various specialties, and the Transitional Year Review Committee (TYRC). These committees are hereafter referred to as "review committees." In addition, the review of the institutions sponsoring GME programs is carried out by an Institutional Review Committee established specifically for this purpose by the ACGME. Further

information on the ACGME and the review committees is provided below.

C. Continuing Medical Education

Continuing medical education (CME) is the third phase of medical education. This phase continues the specialty education begun in graduate training; it reflects the commitment to life-long learning inherent in the medical profession.

The Accreditation Council for Continuing Medical Education (ACCME) is responsible for accrediting the providers of CME.

II. Accreditation of GME Programs

A. Accreditation, Certification, Licensure

In the context of GME, accreditation is the process for determining whether an educational program is in substantial compliance with established educational standards as promulgated in the institutional and program requirements. Accreditation represents a professional judgment about the quality of an educational program. De-

cisions about accreditation are made by the review committees under the authority of the ACGME.

Certification is the process for determining whether an individual physician has met established requirements within a particular specialty. The standards for certification are determined by the appropriate member specialty board recognized by the ABMS.

Licensure is distinct from both accreditation and certification. Licensure is a process of government through which an individual physician is given permission to practice medicine within a particular licensing jurisdiction. Medical licenses are granted by the Board of Medical Examiners (or the equivalent) in each licensing jurisdiction (the 50 states, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands).

B. Accreditation of Residency Programs

Accreditation of residency programs is a voluntary process. By participating in the process, residency programs undergo regular review. The review helps programs in their goals of attaining and maintaining educational excellence. The review also serves to inform the public, specialty boards, residents, and medical students whether specific residency programs are in substantial compliance with the standards that have been established for GME.

For a program to become accredited, the sponsoring institution must demonstrate a commitment to GME. The sponsoring institution must be in substantial compliance with the Institutional Requirements and must assume responsibility for the educational quality of its sponsored program(s). (Further information concerning a "sponsoring institution" is provided below.)

The Institutional Requirements, which have been established by the ACGME's Institutional Review Committee (IRC), apply to all institutions that seek to sponsor programs in GME. An assessment of whether institutions fulfill these requirements is made by the IRC through its institutional review process and by the review committees through their program review process.

A program must demonstrate to its RRC that it is in substantial compliance with the Program Requirements for its particular discipline and that it is sponsored by an institution in substantial compliance with the Institutional Requirements. Materials used by the review committees in making this determination include the results of the most recent institutional review conducted by the ACGME.

The Program Requirements are developed by each review committee for programs in its specialty and accredited subspecialties. The Program Requirements specify essential educational content, instructional activities, responsibilities for patient care and supervision, and the necessary facilities of accredited programs in a particular specialty. In developing and updating Program Requirements, a review committee obtains comments on the proposed documents from interested parties and agencies. The review committee then decides on the final proposal to be submitted to the ACGME. The ACGME has final authority for approving all Program Requirements.

Accreditation actions taken by the review committees are based on information submitted by program directors and on the reports of site visitors. Actions of the committees, under the authority of the ACGME, determine the accreditation status of residency programs and are based on the degree to which the programs meet the published educational standards.

The ACGME is responsible for adjudication of appeals of adverse decisions and has established policies and procedures for such appeals.

Current operating policies and procedures for review, accreditation, and appeal are contained in the ACGME *Manual of Policies and Procedures for Graduate Medical Education Review Committees*. The *Manual* is reviewed annually and is revised as appropriate. (A copy of the *Manual*, as well as copies of the Institutional

Requirements and of the Program Requirements, may be obtained from the ACGME's Web site at www.acgme.org or the Office of the Executive Director, ACGME, 515 N State St, Ste 2000, Chicago, IL, 60610.)

Information about the accreditation status of a residency program may be obtained by contacting the executive director of the ACGME.

C. Structure of the ACGME and of the Review Committees

1. The ACGME is an independently incorporated voluntary accreditation organization. Its five member organizations are national professional bodies, each of which has major interests in and involvement with residency education.

The five member organizations of the ACGME are as follows:
 American Board of Medical Specialties (ABMS)
 American Hospital Association (AHA)
 American Medical Association (AMA)
 Association of American Medical Colleges (AAMC)
 Council of Medical Specialty Societies (CMSS)

Each member organization submits nominees to the ACGME Board of Directors for approval. From among the nominees of each member organization, the Board of Directors elects four directors to the ACGME per member organization. The ACGME appoints three public directors.

The Resident and Fellow Section of the AMA, with the advice of other national organizations that represent residents, selects a resident director to the ACGME.

The Chair of the RRC Council, an advisory body of the ACGME, represents that group on the ACGME.

The Secretary of the US Department of Health and Human Services designates a nonvoting representative of the federal government to the ACGME.

2. There is an RRC for each of the specialties in which certification is offered by a specialty board that is a member of the ABMS. Each RRC is sponsored by the AMA's Council on Medical Education, by the board that certifies physicians within that specialty, and in most cases, by the professional college or other professional association within the specialty.

The Transitional Year Review Committee, which accredits 1 year of GME consisting of rotations in multiple clinical disciplines, is appointed directly by the ACGME.

The established RRCs and their respective appointing organizations are listed in the chart on the previous page.

3. There is an Institutional Review Committee (IRC) that assumes the responsibility for reviewing institutions that sponsor multiple programs. It evaluates institutions for substantial compliance with the Institutional Requirements. The IRC is appointed directly by the ACGME.

III. A Glossary of Selected Terms Used in GME Accreditation

Applicants: Persons invited to come for an interview for a GME program.

Consortium: Two or more organizations or institutions that have come together to pursue common objectives (e.g., GME). A consortium may serve as a "sponsoring institution" for GME programs if it is formally established as an ongoing institutional entity with a documented commitment to GME.

Desirable: A term, along with its companion "highly desirable," used to designate aspects of an educational program that are not mandatory but are considered to be very important. A program may be cited for failing to do something that is desirable or highly desirable.

Essential: (See "Must.")

Fellow: A physician in a program of graduate medical education accredited by the ACGME that is beyond the requirements for eligibility for first board certification in the discipline. Such physicians may also be termed as “resident” as well. Other uses of the term “fellow” require modifiers for precision and clarity, e.g., “research fellow.”

Institution: An organization having the primary purpose of providing educational and/or health care services (e.g., a university, a medical school, a hospital, a school of public health, a health department, a public health agency, an organized health care delivery system, a medical examiner’s office, a consortium, an educational foundation).

A. Major Participating Institution: An institution to which residents rotate for a required experience and/or those that require explicit approval by the appropriate RRC prior to utilization. Major participating institutions are listed as part of an accredited program in the *Graduate Medical Education Directory*.

B. Participating Institution: An institution that provides specific learning experiences within a multi-institutional program of GME. Subsections of institutions, such as a department, clinic, or unit of a hospital, do not qualify as participating institutions.

C. Sponsoring Institution: The institution that assumes the ultimate responsibility for a program of GME.

Institutional Review: The process undertaken by the ACGME to judge whether a sponsoring institution offering GME programs is in substantial compliance with the Institutional Requirements.

Intern: Historically, “intern” was used to designate individuals in the first year of GME; less commonly it designated individuals in the first year of any residency program. Since 1975 the *Graduate Medical Education Directory* and the ACGME have not used the term, instead referring to individuals in their first year of GME as residents.

Internal Review: The formal process conducted by a sponsoring institution to assess the educational effectiveness of its sponsored residency programs.

Must (Shall, Essential): Terms used to indicate that something is required, mandatory, or done without fail. These terms indicate absolute requirements.

Program: The unit of specialty education, comprising a series of graduated learning experiences in GME, designed to conform to the program requirements of a particular specialty.

Resident: A physician at any level of GME in a program accredited by the ACGME. Participants in accredited subspecialty programs are specifically included.

Scholarly Activity: Educational experiences that include active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship; active participation in journal clubs, research conferences, regional or national professional and scientific societies, particularly through presentations at the organizations’ meetings and publications in their journals; participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities. May be defined in more detail in specific Program Requirements.

Shall: (See “Must.”)

Should: A term used to designate requirements that are so important that their absence must be justified. The accreditation status of a program or institution is at risk if it is not in compliance with a “should.”

Substantial Compliance: The judgment made by experts, based on all available information, that a sponsoring institution or residency program meets accreditation standards.

Suggested: A term, along with its companion “strongly suggested,” used to indicate that something is distinctly urged rather than required. An institution or a program will not be cited for failing to do something that is suggested or strongly suggested.

Institutional Requirements

I. Introduction

A. Purpose of Graduate Medical Education (GME)

The purpose of GME is to provide an organized educational program with guidance and supervision of the resident, facilitating the resident’s ethical, professional and personal development while ensuring safe and appropriate care for patients.

B. Sponsoring Institution

1. ACGME-accredited GME programs must operate under the authority and control of a Sponsoring Institution (see definition of “Sponsoring Institution” in the Glossary under “Institution”).
2. A Sponsoring Institution must be appropriately organized for the conduct of GME in a scholarly environment and must be committed to excellence in both medical education and patient care.

C. Compliance with ACGME Requirements, Policies and Procedures

1. A Sponsoring Institution must be in substantial compliance with the Accreditation Council for Graduate Medical Education (ACGME) Institutional Requirements and must ensure that its ACGME-accredited programs are in substantial compliance with the Institutional, common and specialty-specific Program Requirements.
2. A Sponsoring Institution’s failure to comply substantially with the Institutional Requirements may jeopardize the accreditation of all of its sponsored ACGME-accredited programs.
3. A Sponsoring Institution and its ACGME-accredited programs must be in substantial compliance with the ACGME Manual of Policies and Procedures for GME Review Committees (ACGME Web site, www.acgme.org). Of particular note are those policies and procedures that govern “Administrative Withdrawal,” an action that could result in the closure of a Sponsoring Institution’s ACGME-accredited program(s) and cannot be appealed.

II. Institutional Responsibilities

A. Commitment to GME

The commitment of the Sponsoring Institution to GME is exhibited by the provision of leadership, organizational structure, and resources to enable the institution to achieve substantial compliance with the Institutional Requirements and to enable its ACGME-accredited programs to achieve substantial compliance with Program Requirements. This includes providing an ethical, professional, and educational environment in which the curricular requirements as well as the applicable requirements for scholarly activity and the general competencies can be met. The regular assessment of the quality of the GME programs, the performance of their residents, and the use of outcome assessment results for program improvement are essential components of this commitment.

1. There must be a written statement of institutional commitment to GME that is dated and signed within two years of the next institutional review and indicates the support of the governing au-

thority, the administration, and the GME leadership of the Sponsoring Institution. This statement must specify, at a minimum, a commitment to providing the necessary educational, financial, and human resources to support GME.

2. There must be an organized administrative system, which includes a graduate medical education committee (GMEC) as described in Section IV, to oversee all ACGME-accredited programs of the Sponsoring Institution.
3. There must be a Designated Institutional Official (DIO) who has the authority and responsibility for the oversight and administration of the Sponsoring Institution's ACGME-accredited programs and who is responsible for assuring compliance with ACGME Institutional Requirements.
 - a) The DIO is to establish and implement procedures to ensure that s/he, or a designee in the absence of the DIO, reviews and cosigns all program information forms and any correspondence or document submitted to the ACGME by the program directors that either addresses program citations or requests changes in the programs that would have significant impact, including financial, on the program or institution.
 - b) The DIO and/or the Chair of the GMEC shall present an annual report to the Organized Medical Staff(s) (OMS) and the governing body(s) of the major participating JCAHO-accredited hospitals in which the GME programs of the Sponsoring Institution are conducted. This annual report will review the activities of the GMEC during the past year with attention to resident supervision, resident responsibilities, resident evaluation, and the Sponsoring Institution's participating hospitals' and programs' compliance with the duty-hour standards. The GMEC should receive concerns of the OMS related to the items listed above. The GMEC and the OMS should regularly communicate about the safety and quality of patient care provided by the residents.
4. The Sponsoring Institution must provide sufficient institutional resources, to include GME staff, space, equipment, supplies, and time to allow for effective oversight of its ACGME-accredited programs. In addition, there must be sufficient institutional resources to ensure the effective implementation and development of the ACGME-accredited programs in compliance with the Program and Institutional Requirements.
5. The DIO, GME staff and personnel, program directors, faculty and residents must have access to adequate communication resources and technological support. This should include, at a minimum, computers and access to the Internet.

B. Institutional Agreements

1. The Sponsoring Institution retains responsibility for the quality of GME even when resident education occurs in other institutions.
2. Current institutional agreements (i.e., master affiliation agreements) must exist between the Sponsoring Institution and all of its major participating institutions.
3. The Sponsoring Institution must assure that each of its ACGME-accredited programs has established program letters of agreement (or memoranda of understanding) with its participating institutions in compliance with the specialty's Program Requirements.

C. Accreditation for Patient Care

1. Institutions sponsoring or participating in ACGME-accredited programs should be accredited by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO), if such institutions are eligible.
2. If a sponsoring or participating institution is eligible for JCAHO accreditation and chooses not to undergo such accreditation,

then the institution should be reviewed by and meet the standards of another recognized body with reasonably equivalent standards.

3. If a sponsoring or participating institution is not accredited by JCAHO, it must provide a satisfactory explanation of why accreditation has not been either granted or sought.
4. If an institution loses its JCAHO accreditation or recognition by another appropriate body, the Institutional Review Committee (IRC) must be notified in writing with an explanation.

D. Quality Assurance

Sponsoring Institutions must ensure that formal quality-assurance programs are conducted and that there is a review of complications and deaths. To the degree possible and in conformance with state law, residents should participate in appropriate components of the institution's performance improvement program.

III. Institutional Responsibilities for Residents

A. Eligibility and Selection of Residents

The Sponsoring Institution must assure that all enrolled residents are eligible as defined below. Institutions and ACGME-accredited programs that enroll noneligible residents will be subject to administrative withdrawal. The Sponsoring Institution must have written policies and procedures for the recruitment and appointment of residents that comply with the following requirements and must monitor each program for compliance:

1. Resident eligibility:
 - Applicants with one of the following qualifications are eligible for appointment to ACGME-accredited programs:
 - a) Graduates of medical schools in the United States and Canada accredited by the Liaison Committee on Medical Education (LCME).
 - b) Graduates of colleges of osteopathic medicine in the United States accredited by the American Osteopathic Association (AOA).
 - c) Graduates of medical schools outside the United States and Canada who meet one of the following qualifications:
 - 1) Have received a currently valid certificate from the Educational Commission for Foreign Medical Graduates prior to appointment or
 - 2) Have a full and unrestricted license to practice medicine in a US licensing jurisdiction in which they are in training.
 - d) Graduates of medical schools outside the United States who have completed a Fifth Pathway program provided by an LCME-accredited medical school. [*A Fifth Pathway program is an academic year of supervised clinical education provided by an LCME-accredited medical school to students who meet the following conditions: (1) have completed, in an accredited college or university in the United States, undergraduate premedical education of the quality acceptable for matriculation in an accredited United States medical school; (2) have studied at a medical school outside the United States and Canada but listed in the World Health Organization Directory of Medical Schools; (3) have completed all of the formal requirements of the foreign medical school except internship and/or social service; (4) have attained a score satisfactory to the sponsoring medical school on a screening examination; and (5) have passed either the Foreign Medical Graduate Examination in the Medical Sciences, Parts I and II of the examination of the National Board of Medical Examiners, or Steps 1 and 2 of the United States Medical Licensing Examination (USMLE).]
2. Resident selection:

- a) The Sponsoring Institution must ensure that its ACGME-accredited programs select from among eligible applicants on the basis of their preparedness, ability, aptitude, academic credentials, communication skills, and personal qualities such as motivation and integrity. ACGME-accredited programs must not discriminate with regard to sex, race, age, religion, color, national origin, disability, or veteran status.
- b) In selecting from among qualified applicants, it is strongly suggested that the Sponsoring Institution and all of its ACGME-accredited programs participate in an organized matching program, such as the National Resident Matching Program (NRMP), where such is available.

B. Financial Support for Residents

Sponsoring and participating institutions should provide all residents with appropriate financial support and benefits to ensure that residents are able to fulfill the responsibilities of their educational programs.

C. Benefits and Conditions of Appointment

Candidates for ACGME-accredited programs (applicants who are invited for an interview) must be informed, in writing or by electronic means, of the terms, conditions, and benefits of appointment, including financial support; vacations; parental, sick, and other leaves of absence; professional liability, hospitalization, health, disability and other insurance provided for the residents and their families; and the conditions under which living quarters, meals, laundry services, or their equivalents are to be provided.

D. Agreement of Appointment

- 1. The Sponsoring Institution must assure that residents are provided with a written agreement of appointment or contract outlining the terms and conditions of their appointment to an ACGME-accredited program, and the institution must monitor the implementation of these terms and conditions by the program directors. Sponsoring Institutions and program directors must ensure that residents adhere to established practices, policies, and procedures in all institutions to which residents are assigned. The agreement must contain or provide a reference to at least the following:
 - a. Residents' responsibilities;
 - b. Duration of appointment;
 - c. Financial support;
 - d. Conditions under which living quarters, meals, and laundry services or their equivalents are provided;
 - e. Conditions for reappointment;
- 1) Nonrenewal of agreement of appointment: The Sponsoring Institution must provide a written institutional policy that conforms to the following: In instances where a resident's agreement is not going to be renewed, the Sponsoring Institution must ensure that its ACGME-accredited programs provide the resident(s) with a written notice of intent not to renew a resident's agreement no later than four months prior to the end of the resident's current agreement. However, if the primary reason(s) for the nonrenewal occurs within the four months prior to the end of the agreement, the Sponsoring Institution must ensure that its ACGME-accredited programs provide the residents with as much written notice of the intent not to renew as the circumstances will reasonably allow, prior to the end of the agreement.
- 2) Residents must be allowed to implement the institution's grievance procedures as addressed below if they have received a written notice of intent not to renew their agreements.

- f. Grievance procedures and due process: The Sponsoring Institution must provide residents with fair and reasonable written institutional policies on and procedures for grievance and due process. These policies and procedures must address
 - 1) academic or other disciplinary actions taken against residents that could result in dismissal, nonrenewal of a resident's agreement or other actions that could significantly threaten a resident's intended career development; and,
 - 2) adjudication of resident complaints and grievances related to the work environment or issues related to the program or faculty.
- g. Professional liability insurance:
 - 1) The Sponsoring Institution must ensure that residents in ACGME-accredited programs are provided with professional liability coverage for the duration of training. Such coverage must provide legal defense and protection against awards from claims reported or filed after the completion of the ACGME-accredited program if the alleged acts or omissions of the residents are within the scope of the ACGME-accredited program.
 - 2) The professional liability coverage should be consistent with the Sponsoring Institution's coverage for other medical/professional practitioners.
 - 3) Current residents in ACGME-accredited programs must be provided with the details of the institution's professional liability coverage for residents.
- h. Health and disability insurance: The Sponsoring Institution must provide hospital and health insurance benefits for the residents and their families. The Sponsoring Institution must also provide access to insurance to all residents for disabilities resulting from activities that are part of the educational program.
- i. Leaves of absence:
 - 1) The Sponsoring Institution must provide written institutional policies on residents' vacation and other leaves of absence (with or without pay) to include parental and sick leave; these policies must comply with applicable laws.
 - 2) The Sponsoring Institution must ensure that each program provides its residents with a written policy in compliance with its Program Requirements concerning the effect of leaves of absence, for any reason, on satisfying the criteria for completion of the residency program.
- j. Duty Hours:
 - 1) The Sponsoring Institution is responsible for promoting patient safety and education through carefully constructed duty-hour assignments and faculty availability.
 - 2) The institution must have formal written policies and procedures governing resident duty hours that support the physical and emotional well-being of the resident, promote an educational environment, and facilitate patient care.
- k. Moonlighting:
 - 1) Professional and patient care activities that are external to the educational program are called moonlighting. Moonlighting activities, whether internal or external, may be inconsistent with sufficient time for rest and restoration to promote the residents' educational experience and safe patient care. Therefore, institutions and program directors must closely monitor all moonlighting activities.
 - 2) The Sponsoring Institution must have a written policy that addresses moonlighting. The policy must
 - a) specify that residents must not be required to engage in moonlighting;

- b) require a prospective, written statement of permission from the program director that is made part of the resident's file; and,
 - c) state that the residents' performance will be monitored for the effect of these activities upon performance and that adverse effects may lead to withdrawal of permission.
- l. Counseling services: The Sponsoring Institution should facilitate residents' access to appropriate and confidential counseling, medical, and psychological support services.
 - m. Physician impairment: The Sponsoring Institution must have written policies that describe how physician impairment, including that due to substance abuse, will be handled.
 - n. Sexual harassment: The Sponsoring Institution must have written policies covering sexual and other forms of harassment.
2. Residency Closure/Reduction: The Sponsoring Institution must have a written policy that addresses a reduction in size or closure of a residency program. The policy must specify
 - a. that if the Sponsoring Institution intends to reduce the size of an ACGME-accredited program or close a residency program, the Sponsoring Institution must inform the residents as early as possible; and,
 - b. that in the event of such a reduction or closure, the Sponsoring Institution must either allow residents already in the program to complete their education or assist the residents in enrolling in an ACGME-accredited program in which they can continue their education.
 3. Restrictive Covenants: ACGME-accredited programs must not require residents to sign a noncompetition guarantee.

E. Resident Participation in Educational and Professional Activities

1. The Sponsoring Institution must ensure that each ACGME-accredited program defines, in accordance with its Program Requirements, the specific knowledge, skills, attitudes, and educational experiences required in order for their residents to demonstrate the following:
 - a. **Patient care** that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
 - b. **Medical knowledge** about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
 - c. **Practice-based learning** and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
 - d. **Interpersonal and communication skills** that result in effective information exchange and teaming with patients, their families, and other health professionals
 - e. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
 - f. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system for health care and the ability to effectively call on system resources to provide care that is of optimal value.
2. In addition, the Sponsoring Institution must ensure that residents
 - a. develop a personal program of learning to foster continued professional growth with guidance from the teaching staff;

- b. participate fully in the educational and scholarly activities of their program and, as required, assume responsibility for teaching and supervising other residents and students;
 - c. have the opportunity to participate on appropriate institutional and departmental committees and councils whose actions affect their education and /or patient care;
 - d. participate in an educational program regarding physician impairment, including substance abuse.
3. The Sponsoring Institution must ensure that residents submit to the program director or to the DIO at least annually confidential written evaluations of the faculty and of the educational experiences.

F. Resident Work Environment

1. The Sponsoring Institution and its ACGME-accredited programs must provide an educational and work environment in which residents may raise and resolve issues without fear of intimidation or retaliation. This includes the following:
 - a. Provision of an organizational system for residents to communicate and exchange information on their work environment and their ACGME-accredited programs. This may be accomplished through a resident organization or other forums in which to address resident issues.
 - b. A process by which individual residents can address concerns in a confidential and protected manner.
2. The Sponsoring Institution must provide services and develop systems to minimize the work of residents that is extraneous to their GME programs and ensure that the following conditions are met:
 - a. Food services: Residents on duty must have access to adequate and appropriate food services 24 hours a day in all institutions.
 - b. Call rooms: Residents on call must be provided with adequate and appropriate sleeping quarters.
 - c. Support services: Patient support services, such as intravenous services, phlebotomy services, and laboratory services, as well as messenger and transporter services, must be provided in a manner appropriate to and consistent with educational objectives and patient care.
 - d. Laboratory/pathology/radiology services: There must be appropriate laboratory, pathology, and radiology services to support timely and quality patient care in the ACGME-accredited programs. This must include effective laboratory, pathology, and radiologic information systems.
 - e. Medical records: A medical records system that documents the course of each patient's illness and care must be available at all times and must be adequate to support quality patient care, the education of residents, quality assurance activities, and provide a resource for scholarly activity.
 - f. Security/safety: Appropriate security and personal safety measures must be provided to residents at all locations including but not limited to parking facilities, on-call quarters, hospital and institutional grounds, and related clinical facilities (e.g., medical office building).

IV. Graduate Medical Education Committee (GMEC)

A. GMEC Composition and Meetings

1. The Sponsoring Institution must have a GMEC that has the responsibility for monitoring and advising on all aspects of residency education. Voting membership on the committee must include residents nominated by their peers. It must also include appropriate program directors, administrators, the accountable DIO, and may include other members of the faculty.

2. The committee must meet at least quarterly, and maintain written minutes documenting fulfillment of the committee's responsibilities.

B. GMEC Responsibilities

The GMEC must

1. establish and implement policies and procedures regarding the quality of education and the work environment for the residents in all ACGME-accredited programs.
2. review annually and make recommendations to the Sponsoring Institution on resident stipends, benefits, and funding for resident positions to assure that these are reasonable and fair.
3. establish and maintain appropriate oversight of and liaison with program directors and assure that program directors establish and maintain proper oversight of and liaison with appropriate personnel of other institutions participating in the ACGME-accredited programs of the Sponsoring Institution.
4. establish and implement formal written policies and procedures governing resident duty hours in compliance with the Institutional and Program Requirements. The GMEC must assure that the following requirements are met:
 - a) Each ACGME-accredited program must establish formal written policies governing resident duty hours that are consistent with the Institutional and Program Requirements. These formal policies must apply to all participating institutions used by the residents and must address the following requirements:
 - 1) The educational goals of the program and learning objectives of residents must not be compromised by excessive reliance on residents to fulfill institutional service obligations. Duty-hours and call schedules must be monitored by both the Sponsoring Institution and programs and adjustments made as necessary to address excessive service demands and/or resident fatigue. Duty hours, however, must reflect the fact that responsibilities for continuing patient care are not automatically discharged at specific times. ACGME-accredited programs must ensure that residents are provided appropriate backup support when patient care responsibilities are especially difficult or prolonged; and,
 - 2) Resident duty hours and on-call time periods must be in compliance with the Institutional and Program Requirements. The structuring of duty hours and on-call schedules must focus on the needs of the patient, continuity of care, and the educational needs of the resident.
 - b) The GMEC must develop and implement procedures to regularly monitor resident duty hours for compliance with the Sponsoring Institution's policies and the Institutional and Program Requirements.
 - c) The GMEC must develop and implement written procedures to review and endorse requests from programs prior to submission to an RRC for exceptions in the weekly limit on duty hours up to 10 percent or up to a maximum of 88 hours. All exceptions requested must be based on a sound educational rationale. The procedures must outline the process for endorsing an exception in compliance with the ACGME policies and procedures for duty-hour exceptions. The procedures and their application, if the institution has utilized them, will be assessed during the institutional review.
5. assure that ACGME-accredited programs provide appropriate supervision for all residents that is consistent with proper patient care, the educational needs of residents, and the applicable Program Requirements. Supervision of residents must address the following:
 - a) Residents must be supervised by teaching staff in such a way that the residents assume progressively increasing responsibility according to their level of education, ability, and experience.
 - b) On-call schedules for teaching staff must be structured to ensure that supervision is readily available to residents on duty.
 - c) The teaching staff must determine the level of responsibility accorded to each resident.
6. assure that each program provides a curriculum and an evaluation system to ensure that residents demonstrate achievement of the six general competencies listed in Section III.E and as defined in each set of Program Requirements.
7. establish and implement formal written institutional policies for the selection, evaluation, promotion, and dismissal of residents in compliance with the Institutional and Program Requirements.
8. regularly review all ACGME program accreditation letters and monitor action plans for the correction of concerns and areas of noncompliance.
9. regularly review the Sponsoring Institution's Letter of Report from the IRC and develop and monitor action plans for the correction of concerns and areas of noncompliance.
10. review and approve prior to submission to the ACGME
 - a. all applications for ACGME accreditation of new programs and subspecialties;
 - b. changes in resident complement;
 - c. major changes in program structure or length of training
 - d. additions and deletions of participating institutions used in a program;
 - e. appointments of new program directors;
 - f. progress reports requested by any Review Committee;
 - g. responses to all proposed adverse actions;
 - h. requests for increases or any change in resident duty hours
 - i. requests for "inactive status" or to reactivate a program;
 - j. voluntary withdrawals of ACGME-accredited programs;
 - k. requests for an appeal of an adverse action; and,
 - l. appeal presentations to a Board of Appeal or the ACGME.
11. conduct internal reviews of all ACGME-accredited programs including subspecialty programs to assess their compliance with the Institutional Requirements and the Program Requirements of the ACGME Residency Review Committees in accordance with the guidelines in Section V.

V. Internal Review**A. Process**

1. The GMEC is responsible for the development, implementation and oversight of the internal review process. The internal review process must comply with the following:
 - a. The GMEC must designate an internal review committee(s) to review each ACGME-accredited program in the Sponsoring Institution. The internal review committee must include faculty, residents, and administrators from within the institution but from GME programs other than the one that is being reviewed. External reviewers may also be included on the committee as determined by the GMEC.
 - b. The review must follow a written protocol approved by the GMEC that incorporates, at a minimum, the requirements in this section (Section V).
 - c. Reviews must be conducted at approximately the midpoint between the ACGME program surveys.
 - d. Although departmental annual reports are often important sources of information about a residency program, they do not meet the requirement for a periodic internal review.

2. While assessing the residency program's compliance with each of the program standards, the review should also appraise
 - a. the educational objectives of each program;
 - b. the effectiveness of each program in meeting its objectives;
 - c. the adequacy of available educational and financial resources to support the program;
 - d. the effectiveness of each program in addressing areas of non-compliance and concerns in previous ACGME accreditation letters and previous internal reviews;
 - e. the effectiveness of each program in defining, in accordance with the Program and Institutional Requirements (Section III.E), the specific knowledge, skills, attitudes, and educational experiences required for the residents to achieve competence in the following: patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice;
 - f. the effectiveness of each program in using evaluation tools developed to assess a resident's level of competence in each of the six general areas listed above;
 - g. the effectiveness of each program in using dependable outcome measures developed for each of the six general competencies listed above; and,
 - h. the effectiveness of each program in implementing a process that links educational outcomes with program improvement.
3. Materials and data to be used in the review process must include
 - a. Institutional and Program Requirements for the specialties and subspecialties of the ACGME RRCs from the Essentials of Accredited Residency Programs;
 - b. accreditation letters from previous ACGME reviews and progress reports sent to the RRC; and,
 - c. reports from previous internal reviews of the program.
4. The internal review committee must conduct interviews with the program director, faculty, peer-selected residents from each level of training in the program, and other individuals deemed appropriate by the committee.
5. Program inactivity: ACGME-accredited programs and subspecialties that have applied for and received RRC approval for "inactive" status do not need internal reviews. However, an internal review must be conducted prior to requesting RRC approval for reactivation.

B. Internal Review Report

1. There must be a written report of the internal review for each ACGME-accredited specialty and subspecialty program that contains, at a minimum, the following:
 - a. the name of the program or subspecialty program reviewed and the date of the review;
 - b. the names and titles of the internal review committee members to include the resident(s);
 - c. a brief description of how the internal review process was carried out, including the list of the groups/individuals who were interviewed;
 - d. sufficient documentation or discussion of the specialty's or the subspecialty's Program Requirements and the Institutional Requirements to demonstrate that a comprehensive review was conducted and was based on the GMC's internal review protocol;
 - e. a list of the areas of noncompliance or any concerns or comments from the previous ACGME accreditation letter with a summary of how the program and /or institution addressed each one.
2. The written report of each internal review must be presented to and reviewed by the GMC to monitor the areas of noncompliance and recommend appropriate action.
3. Reports from internal reviews are required to be shown to the ACGME site visitor for the institutional review and must be included in the Institutional Review Document submitted to the IRC. During the review of individual programs, these reports must not be shown to the ACGME site visitor or specialist site visitors, who only will ascertain that an internal review was completed in the interval since the program's previous site visit.

Approved by ACGME: February 11, 2003 Effective: July 1, 2003

Common Program Requirements

Preface

The program requirements set forth here are to be considered common to all specialties, and are complete only when supplemented, where indicated and individually, by each specialty.

I. [Specialty Introduction inserted here]

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:

- a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of _____, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution; [as further specified by the RRC]
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement. [as further specified by the RRC]On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of _____, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program. [as further specified by the RRC]
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;

- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
- a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available. [as further specified by the RRC]

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching. [as further specified by the RRC]

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents. [as further specified by the RRC]

V. Program Curriculum

A. Program Design

1. Format
The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.
2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments. [as further specified by the RRC]

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management. [as further specified by the RRC]

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities. [as further specified by the RRC]

D. ACGME Competencies

(N.B.: Section V. D. does not apply to certain subspecialties)

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care. [as further specified by the RRC]
3. No new patients may be accepted after 24 hours of continuous duty. [as further specified by the RRC]
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.

3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of _____ should communicate with the office of the board regarding the full requirements for certification.

ACGME: February 2003 Effective: July 1, 2004
Editorial Revision: February 2004

Program Requirements for Residency Education in Allergy and Immunology

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

Preface

The program requirements set forth here are to be considered common to all specialties, and are complete only when supplemented, where indicated and individually, by each specialty.

I. Introduction

A. Definition and Scope of the Specialty

Graduate medical education programs in allergy and immunology should be designed to prepare specialists who provide expert medical care for patients with allergic and immunologic disorders and who can serve as consultants, educators, and physician scientists in asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases.

B. Duration and Scope of Education

1. Residents admitted to allergy and immunology programs should have successfully completed a program in internal medicine or pediatrics accredited by the Accreditation Council for Graduate Medical Education (ACGME).
2. The length of the educational program is 24 months of full-time education. Before entry into the program, each resident must be notified in writing of the required length of the allergy and immunology educational program. The required program may be spread over a longer time period if the program documents the required 24 months of education consistent with the goals, objectives, educational content, and policies, as referenced in these Program Requirements, section III.
3. Residents must demonstrate competencies in both children and adults with asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases.

II. Institutional Support

A. Sponsoring institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

1. Allergy and immunology programs should be conducted principally in institutions with accredited graduate medical education programs in pediatrics and internal medicine.
2. The sponsoring institution must provide sufficient faculty, financial resources, clinical resources, research opportunities, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives and should provide resources not otherwise available to the program. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience. Participation

by any institution providing more than 4 months of education for each resident during the 2-year program must receive prior approval by the Residency Review Committee (RRC).

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document per Sections III.B. and VII.A. of the Program Requirements;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.
3. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution. In a conjoint program, one program director must be designated as the single responsible administrator. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities and experience in his or her field.
 - b. The program director must be certified in the specialty by the American Board of Allergy and Immunology, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. possess leadership qualities and devote sufficient time and effort to the program to provide day-to-day continuity of leadership and to fulfill all of the responsibilities of meeting the educational goals of the program.

- e. licensed to practice medicine in the state where the institution that sponsors the program is located.
- 4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution as specified in section II.B. of this document.
 - 2) a change in the format of the educational program
 - 3) a change in the approved resident complement for those specialties that approve resident complement.On review of a proposal for any such major change in the program, the RRC may determine that a site visit is necessary.
 - e. Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.
 - f. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

B. Faculty

- 1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. The faculty must include a
 - a. qualified allergist(s) and immunologist(s) with a background in internal medicine and
 - b. qualified allergist(s) and immunologist(s) with a background in pediatrics.
- 2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise. They must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, and must support the goals and objectives of the educational program of which they are a member and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section III.B.4.
- 3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching

abilities, as well as documented educational and administrative abilities and experience in their field.

- b. The physician faculty must be certified in the specialty by the American Board of Allergy and Immunology, or possess qualifications judged to be acceptable by the RRC.
- c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
- 4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
- 5. Qualifications of the nonphysician faculty are as follows:
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program. All other program faculty, such as healthcare providers and scientists, must be appropriately qualified in their area of expertise.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in Section

V.D., prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. The Educational Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

1. Twenty-five percent of the program must be devoted to research and scholarly activities.
2. Residents must be provided with a structured research experience sufficient to result in an understanding of the basic principles of study design, performance, analysis, and reporting:
 - a. Residents must be able to conduct a comprehensive literature search.
 - b. Residents must have the opportunity to design, write, review, or edit research protocols or plans.
 - c. Residents must demonstrate a working knowledge of research design, statistics, clinical trials, epidemiology, and laboratory research.
 - d. Residents must be able to apply the principles of data collection, data analysis, and data interpretation.
 - e. Residents must conduct the research activity under proper supervision.
 - f. Residents must be able to communicate research findings orally and in writing.
 - g. Presentations at national meetings and publication in peer-reviewed journals are strongly encouraged.

D. ACGME Competencies

(N.B.: Section V. D. does not apply to certain subspecialties)

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Role of Program Director and Faculty

The program director, with assistance of the faculty is responsible for developing and implementing the academic and clinical program of resident education by providing documentation that each resident is provided with the following components in the 24-month course of study as referenced in Sections V.F. and G. of these Program Requirements:

1. Fifty percent of the program must be devoted to direct patient care activities.
2. Twenty-five percent of the program must be devoted to research and scholarly activities.
3. Twenty-five percent of the program must be devoted to other educational activities.

F. Didactic Components

1. Allergy and immunology-specific competencies

Residents must be able to expertly and appropriately demonstrate the following allergy and immunology specific competencies to begin the independent practice of this specialty:

- a. Conduct a comprehensive and detailed medical interview with children and adults who present with suspected allergic and/or immunologic disorders
- b. Perform a physical examination appropriate to the specialty
- c. Select, perform, and interpret diagnostic tests or studies
- d. Assess the risks and benefits of therapies for allergic and immunologic disorders (e.g., drug therapy, allergen immunotherapy, immunomodulatory therapy)
- e. Counsel and educate patients about diagnosis, prognosis, and treatment
- f. Consult with and educate other physicians and health care providers
- g. Apply basic and clinical science to the clinical care of patients
- h. Coordinate the care of patients, including the use of consultation
- i. Analyze medical and other scientific literature
- j. Design, conduct, write, and present research in either laboratory-based or clinical investigation in allergy and/or immunology

The following basic science areas must be included in the educational program:

2. Knowledge of aerobiology; cellular and molecular immunobiology; humoral and cellular immunology; pulmonary physiology; mechanisms of inflammation; pharmacology and

pharmacokinetics, drug metabolism, drug side effects, and drug interactions; the scientific basis of the methodology, indications, and interpretation of laboratory tests and imaging procedures used in the diagnosis and follow-up of patients with asthmatic, allergic, immunologic, and other diseases; preparation and standardization of allergen extracts; means to measure indoor allergens and the institution of environmental control measures in the home and other sites; transplantation medicine and tumor immunology; reproductive immunology; the costs of therapy and diagnostic testing; and the psychological effects of chronic illness

3. Knowledge of applied immunology, to include the principles and techniques of clinical immunology laboratory procedures such as tests for humoral immunity, cellular immunity, neutrophil function, cytokines, immune complexes, cryoprecipitable proteins, total serum complement activity and individual complement components, and histocompatibility, as well as procedures for the preparation and use of monoclonal antibodies.
4. Knowledge of the etiology, immunopathogenesis, differential diagnosis, therapy, and complications of those diseases referenced in these Program Requirements.
5. Knowledge of controversial or unproven drug or therapeutic techniques in allergy, asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases.

G. Clinical Components

The course of study must include asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases. All residents must be provided with opportunities to apply immunologic theories, principles, and techniques to the investigation, diagnosis, and treatment of a broad spectrum of allergic and immunologic diseases. The required education in the various aspects of the clinical program must involve supervised patient care; rotations through cooperating services; attendance at conferences, lectures, journal clubs, or seminars; reading and preparation for teaching assignments.

1. Direct patient care experience: Fifty percent of the resident's time must be devoted to direct patient care activities. Direct patient care is defined as both inpatient and outpatient care, clinical case conferences, and record reviews.
 - a. Cross-training in internal medicine and pediatrics: Residents must receive cross-training in both pediatric and adult allergy and immunology because specialists in allergy and immunology, whatever their primary specialties, are called on to diagnose and treat individuals of all ages.
 - 1) Twenty percent of the required minimum 12-month equivalent direct patient care activity is the required cross-training experience.
 - 2) Inpatient experiences, both initially and through follow-up, should be provided as an educational experience in the crossover specialty.
 - b. Ambulatory experience: A sufficient number of adult and pediatric ambulatory patients must be provided for each resident during the 24-month program.
 - c. Inpatient experience:
 - 1) A sufficient number of adult and pediatric inpatients must be provided for each resident during the 24-month program. These inpatient experiences should include direct patient care such as primary patient care, consultation, or teaching rounds.
 - 2) Inpatient activities may be accomplished through educational liaisons with other specialties or services. There must be sufficient diversity of patient ages and diagnoses to reflect the breadth of the specialty.

2. A patient listing consisting of a unique patient identifier, age, and diagnosis for each patient seen by each resident must be available for verification by the site visitor.
3. Continuity of care: Residents must be provided with continuing responsibility for the care of patients with asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases.
4. Number, variety, and classification of patients: The program must provide a sufficient number of pediatric and adult patients to provide education in asthma, allergic disorders, immunologic disorders, and immunodeficiency diseases.
 - a. Residents must have direct patient contact with children and adults with the following diagnoses:
 - 1) Anaphylaxis
 - 2) Asthma
 - 3) Atopic dermatitis
 - 4) Contact dermatitis
 - 5) Drug allergy
 - 6) Food allergy
 - 7) Immunodeficiency
 - 8) Rhinitis
 - 9) Sinusitis
 - 10) Stinging insect hypersensitivity
 - 11) Urticaria and angioedema
 - b. Direct contact with patients with the following diagnoses is strongly encouraged:
 - 1) Autoimmune disease
 - 2) Bronchopulmonary aspergillosis
 - 3) Eosinophilic disorders
 - 4) Hypersensitivity pneumonitis
 - 5) Mastocytosis
 - 6) Ocular allergies
 - 7) Occupational lung disease
 - 8) Vasculitis
5. Residents must demonstrate proficiency with the following procedures
 - a. Allergen immunotherapy
 - b. Delayed hypersensitivity skin testing
 - c. Drug desensitization and challenge
 - d. Immediate hypersensitivity skin testing
 - e. IVIG treatment
 - f. Performance and interpretation of pulmonary function tests
 - g. Physical urticaria testing
6. Resident proficiency with the following procedures is highly desirable:
 - a. Exercise challenge
 - b. Methacholine and other bronchial challenge testing
 - c. Nasal cytology
 - d. Oral challenge tests
 - e. Patch testing
 - f. Rhinologyngoscopy

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation**A. Resident****1. Formative Evaluation**

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance. The structured use of checklists and evaluation forms is encouraged. The direct observation of resident interactions with patients should be included. Innovation in resident evaluation is encouraged.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice com-

petently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Allergy and Immunology should communicate with the office of the board regarding the full requirements for certification.

ACGME: September 2001 Effective: July 2002

Common Program Requirements: July 2003

Editorial Revision: July 2004

Program Requirements for Graduate Medical Education in Anesthesiology

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

The Residency Review Committee (RRC) representing the medical specialty of anesthesiology exists in order to foster and maintain the highest standards of training and educational facilities in anesthesiology, which the RRC defines as the practice of medicine dealing with but not limited to the following:

1. Assessment of, consultation for, and preparation of patients for anesthesia;
2. Relief and prevention of pain during and following surgical, obstetric, therapeutic, and diagnostic procedures;
3. Monitoring and maintenance of normal physiology during the perioperative period;
4. Management of critically ill patients;
5. Diagnosis and treatment of acute, chronic, and cancer-related pain;
6. Clinical management and teaching of cardiac and pulmonary resuscitation;
7. Evaluation of respiratory function and application of respiratory therapy;
8. Conducting of clinical and basic science research;
9. Supervision, teaching, and evaluation of performance of personnel, both medical and paramedical, involved in perioperative care.

B. Duration and Scope of Education

1. Length of Program

A minimum of 4 years of graduate medical education is necessary to train a physician in the field of anesthesiology. Three years of the training must be in clinical anesthesia. The RRC for Anesthesiology and the Accreditation Council for Graduate Medical Education (ACGME) accredit programs only in those institutions that possess the educational resources to provide 3 years of clinical anesthesia training. The capability to provide the Clinical Base Year within the same institution is desirable but not required for accreditation.

2. Program Design

The continuum of education in anesthesiology consists of 4 years of training, the Clinical Base Year (CBY) and 36 months of clinical anesthesia training (CA-1, CA-2, and CA-3 years).

a) Clinical Base Year

One year of the total training must be the Clinical Base Year, which should provide the resident with 12 months of broad education in medical disciplines relevant to the practice of anesthesiology. The Clinical Base Year usually precedes training in clinical anesthesia. It is strongly recommended that the Clinical Base Year be completed before the resident begins the CA-2 year; the Clinical Base Year, however, must be completed before the resident begins the CA-3 year.

The Clinical Base Year must include at least 10 months of clinical rotations, of which at most 1 month may involve training in anesthesiology. Clinical Base Year rotations include training in internal medicine or emergency medicine, pediatrics, surgery or any of the surgical specialties, critical care

medicine, obstetrics and gynecology, neurology, family practice, or any combination of these. At most, 2 months of the Clinical Base Year may be taken in electives or in specialties other than those listed above. If an accredited anesthesiology program offers this year of training, the RRC will verify that the content is acceptable. When the parent institution provides the Clinical Base Year, the anesthesiology program director must approve the rotations for individual residents, and must have general oversight for rotations on the services that are used for the Clinical Base Year.

b) **Clinical Anesthesia Training: CA-1 through CA-3 Years**

These 3 years, usually the second through the fourth years of graduate medical education, consist of training in basic and advanced anesthesia. They must encompass all aspects of perioperative care to include evaluation and management during the preoperative, intraoperative, and postoperative periods. The clinical training must progressively challenge the resident's intellect and technical skills, and must provide experience in direct and progressively responsible patient management. As the resident advances through training, she or he should have the opportunity to learn to plan and to administer anesthesia care for patients with more severe and complicated diseases, as well as patients who undergo more complex surgical procedures. The training must culminate in sufficiently independent responsibility for clinical decision-making and patient care so that the program is assured that the graduating resident exhibits sound clinical judgment in a wide variety of clinical situations and can function as a consultant in anesthesiology.

(1) **CA 1 and 2 years**

Experience in basic anesthesia training must emphasize the fundamental aspects of anesthesia. At least 12 months of the CA-1 and CA-2 years should be spent in basic anesthesia training, with the majority of this time occurring during the CA-1 year. Residents should receive training in the complex technology and equipment associated with the practice of anesthesiology. There must be documented evidence of direct faculty involvement with tutorials, lectures, and clinical supervision of beginning residents.

Anesthesiology encompasses the theoretical background and clinical practice of a variety of subspecialty disciplines. Exposure to these should occupy a minimum of 7 months in the CA-1 and CA-2 years. There must be identifiable 1-month rotations in obstetric anesthesia, pediatric anesthesia, neuroanesthesia, and cardiothoracic anesthesia. Experiences in perioperative care must include a 2-month rotation in critical care, a 1-month rotation in pain medicine, and 2 continuous weeks in the postanesthesia care unit.

The program director may determine the sequencing of these rotations. The resident should be evaluated following each rotation, and the written evaluations should be maintained in each resident's file. There must be a written description of each rotation in the CA-1 and CA-2 years. The goals and objectives for the CA-1 and CA-2 experience must be separate and distinct from those designed for the CA-3 year training.

(2) **CA-3 year**

The program must provide 12 months' experience in advanced and complex anesthesia assignments in the CA-3 year. In addition, the resident must complete an academic assignment. A curriculum for the CA-3 year, as well as the specific program for each resident, must be on file in the department.

Clinical assignments in the CA-3 year must include difficult or complex anesthesia procedures and the care of seriously ill patients. Subspecialty rotations are encouraged, but none may be longer than 6 months. A curriculum specific to each of the subspecialty programs offered must be on file in the department. This curriculum must be distinct from the CA-1 and CA-2 years subspecialty curricula, and must reflect increased responsibility and learning opportunities. These assignments must not compromise the learning opportunities for the CA-1 and CA-2 residents.

All CA-3 residents must be certified as providers of advanced cardiac life support (ACLS).

Academic projects may include special training assignments, grand rounds presentations, preparation and publication of review articles, book chapters, manuals for teaching or clinical practice, or similar academic activities. A faculty supervisor must be in charge of each project. The academic project may, at the program director's discretion, occur prior to the CA-3 year.

c) **Research Track**

The program must have the resources to provide a Research Track of up to 6 months devoted to laboratory or clinical investigation. For the residents who elect this track, it is expected that the results of the investigations will be suitable for presentation at a local, regional, or national scientific meeting. The Research Track generally occurs in the CA-3 year, but at the program director's discretion, it may be taken earlier. A curriculum describing the goals and objectives of this track must be on file in the department.

C. Goals and Objectives

An accredited program in anesthesiology must provide education, training, and experience in an atmosphere of mutual respect between instructor and residents so that residents will be stimulated and prepared to apply acquired knowledge and talents independently. The program must provide an environment that promotes the acquisition of the knowledge, skills, clinical judgment, and attitudes essential to the practice of anesthesiology.

In addition to clinical skills, the program should emphasize interpersonal skills, effective communication, and professionalism. The residency program must work toward ensuring that its residents, by the time they graduate, assume responsibility and act responsibly and with integrity; demonstrate a commitment to excellence and ethical principles of clinical care, including confidentiality of patient information, informed consent, and business practices; demonstrate respect and regard for the needs of patients and society that supersede self-interest; and work effectively as members of a health-care team or other professional group. Further, residents are expected to create and sustain a therapeutic relationship with patients, engage in active listening, provide information using appropriate language, ask clear questions, provide an opportunity for comments and questions, and demonstrate sensitivity and responsiveness to cultural differences, including awareness of their own and their patients' cultural perspectives.

These objectives can be achieved only when the program leadership, faculty, supporting staff, and administration demonstrate a commitment to the educational program and provide appropriate resources and facilities. Service commitments must not compromise the achievement of educational goals and objectives.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Require-

ments, and this responsibility extends to resident assignments at all participating institutions. The institution sponsoring an accredited program in anesthesiology must also sponsor or be affiliated with ACGME-approved residencies in at least the specialties of general surgery and internal medicine.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives, and should provide resources not otherwise available to the program. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document per Sections III B and VII A of the Program Requirements;
 - c) specify the duration and content of the educational experience;
 - d) state the policies and procedures that will govern resident education during the assignment; and
 - e) outline the educational goals and objectives to be attained by the resident during the assignment.

C. A participating institution may be either *integrated* or *affiliated* with the parent institution:

1. An *integrated institution* must formally acknowledge the authority of the core program director over the educational program in that hospital, including the appointments of all faculty and all residents. Integrated institutions should be in close geographic proximity to the parent institution to allow all residents to attend joint conferences. If an institution is not in geographic proximity and joint conferences cannot be held, an equivalent educational program in the integrated institution must be fully established and documented. Rotations to integrated institutions are not limited in duration. It is expected, however, that the majority of the program will be provided in the parent institution. Prior approval of the RRC must be obtained for participation of an institution on an integrated basis, regardless of the duration of the rotation.
2. An *affiliated institution* is one that is related to the core program for the purpose of providing limited rotations that complement the experience available in the parent institution. Assignments at affiliated institutions must be made for educational purposes and not to fulfill service needs. Rotations to affiliated institutions may be no more than a maximum of 12 months during the 3 years of clinical anesthesia. Prior approval of the RRC must be obtained if the duration of a rotation at an affiliated institution will exceed 6 months.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program, and should be a member of the staff of the sponsoring or integrated institution. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of RRC through the Web Accreditation Data System of the ACGME.

2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership. Frequent changes in leadership or long periods of temporary leadership may adversely affect an educational program and may present serious cause for concern. When a new director, either permanent or acting, has been appointed, the RRC must be notified immediately. The RRC may initiate an inspection of the program in conjunction with this change when it deems it necessary to ensure continuing quality.

3. Qualifications of the program director are as follows:

- a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
- b) The program director must be certified in the specialty by the American Board of Anesthesiology, or possess qualifications judged to be acceptable by the RRC.
- c) The program director must be appointed in good standing and based at the primary teaching site.
- d) The program director must possess faculty experience, leadership, organizational and administrative qualifications, and the ability to function effectively within an institutional governance. The program director must have significant academic achievements in anesthesiology, such as publications, the development of educational programs, or the conduct of research.

4. Responsibilities of the Program Director are as follows:

- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution as specified in Section II B of this document.
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. The number of faculty must be sufficient to provide each resident with adequate supervision, which shall not vary substantially with the time of day or the day of the week. In the clinical set-

ting, faculty members should not direct anesthesia at more than 2 anesthetizing locations simultaneously.

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Anesthesiology, or possess qualifications judged to be acceptable by the RRC. Faculty who are not ABA-certified should be in the process of obtaining certification.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.
6. The faculty should have varying interests, capabilities, and backgrounds, and must include individuals who have specialized expertise in the subspecialties of anesthesiology, which includes but is not limited to critical care, obstetric anesthesia, pediatric anesthesia, neuroanesthesia, cardiothoracic anesthesia, and pain medicine. Didactic and clinical teaching must be provided by faculty with documented interests and expertise in the subspecialty involved. Fellowship training, several years of practice (primarily within a subspecialty), and membership and active participation in national organizations related to the subspecialty may signify expertise.
7. Teaching by residents of medical students and junior residents represents a valid learning experience. The use of a resident as an instructor of junior residents, however, must not substitute for experienced faculty.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

The integration of nonphysician personnel into a department with an accredited program in anesthesiology will not influence the accreditation of such a program unless it becomes evident that such personnel interfere with the training of resident physicians. Interference may result from dilution of faculty effort, dilution of the available teaching experience, or downgrading of didactic material. Clinical instruction of residents by nonphysician personnel is inappropriate, as is excessive supervision of such personnel by resident staff.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Space and Equipment

There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with visual and other educational aids, study areas for residents, office space for teaching staff, diagnostic and therapeutic facilities, laboratory facilities, and computer support. The institution must provide appropriate on-call facilities for male and female residents and faculty.

2. Library Resources

There must be a department library. This may be complemented, but not replaced, by private faculty book collections and hospital and/or institutional libraries. Journals, reference books, and other texts must be readily available to residents and faculty during nights and weekends. Residents must also have ready access to a major medical library, either at the institution where the residents are located or through arrangements with convenient nearby institutions. Library services must include electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals and electronic databases must be readily available during nights and weekends.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

1. The RRC will approve the number of residents based upon criteria that include the adequacy of resources for resident education, i.e., the quality and volume of patients and related clinical material available for education, faculty-resident ratio, institutional funding, and the quality of faculty teaching.

Specific criteria evaluated in establishing the number of residents for a program or in considering requests to increase the resident complement include: a) the program's current accreditation status and duration of review cycle; b) the most recent accreditation citations, especially any relating to adequacy of clinical experience and/or faculty coverage; c) documentation of adequate clinical volumes for all residents; and d) the ABA-certification rate of the program's graduates for the most recent 5-year period.

2. Appointment of a minimum of nine residents with, on average, three appointed each year is required. Any proposed increase in the number of residents must receive prior approval by the RRC.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

Substance Abuse Policy: The residency program must have a written policy and an educational program regarding substance abuse that specifically address the needs of anesthesiology.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;

6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Components

Didactic instruction should encompass clinical anesthesiology and related areas of basic science, as well as pertinent topics from other medical and surgical disciplines. Practice management should be included in the curriculum, and should address issues such as operating room management, types of practice, job acquisition, financial planning, contract negotiations, billing arrangements, and issues of professional liability. The material covered in the didactic program should demonstrate appropriate continuity and sequencing to ensure that residents are ultimately exposed to all subjects at regularly held teaching conferences. The number and types of such conferences may vary among programs, but a conspicuous sense of faculty participation must characterize them. The program director should also seek to enrich the program by providing lectures and contact with faculty from other disciplines and other institutions.

F. Clinical Components

1. Clinical Experience

A wide spectrum of disease processes and surgical procedures must be available within the program to provide each resident with broad exposure to different types of anesthetic management. The following list represents the minimum clinical experience that should be obtained by each resident in the program. Although the minimum requirements are for the CA-1 through CA-3 years, the majority of these should be accomplished in the CA-1 and CA-2 years.

- a) Forty anesthetics for vaginal delivery; evidence of direct involvement in cases involving high-risk obstetrics, as well as a minimum of 20 cesarean sections.
- b) Anesthesia for 100 children under the age of 12, including anesthesia for 15 infants less than 1 year of age, including infants less than 45 weeks postconceptual age.
- c) Anesthesia for 20 patients undergoing surgical procedures involving cardiopulmonary bypass.
- d) Twenty other major vascular cases (including endovascular cases).
- e) Twenty intrathoracic (thoracotomy, thoracoscopy) noncardiac cases.
- f) Twenty procedures involving an open cranium, some of which must include intracerebral vascular procedures.
- g) Fifty epidural anesthetics for patients undergoing surgical procedures, including cesarean sections.
- h) Ten major trauma cases.
- i) Fifty subarachnoid blocks performed for patients undergoing surgical procedures.
- j) Forty peripheral nerve blocks for patients undergoing surgical procedures.
- k) Twenty-five new patient evaluations for management of patients with acute, chronic, or cancer pain disorders. Residents should have familiarity with the breadth of pain medicine, including clinical experience with interventional pain procedures.
- l) Documented involvement in the management of acute post-operative pain, including familiarity with patient-controlled intravenous techniques, neuraxial blockade, and other pain-control modalities.
- m) Documented involvement in the systematic process of the preoperative management of the patient.

- n) Significant experience with certain specialized techniques for airway management (such as fiberoptic intubation, double lumen endotracheal tube placement, and laryngeal mask airway management), central vein catheter placement, pulmonary artery catheter placement, peripheral artery cannulation, transesophageal echocardiography, evoked potentials, and electroencephalography.
- o) A postanesthesia care experience of 2 continuous weeks, which must involve direct care of patients in the postanesthesia-care unit and responsibilities for management of pain, hemodynamic changes, and emergencies related to the postanesthesia-care unit. Designated faculty must be readily and consistently available for consultation and teaching.
- p) Critical care rotation, including active participation in patient care by anesthesia residents in an educational environment in which participation and care extend beyond ventilatory management, and active involvement by anesthesiology faculty experienced in the practice and teaching of critical care. This training must take place in units in which the majority of patients have multi-system disease. The postanesthesia-care unit experience does not satisfy this requirement.
- q) Appropriate didactic instruction and sufficient clinical experience in managing problems of the geriatric population.
- r) Appropriate didactic instruction and sufficient clinical experience in managing the specific needs of the ambulatory surgical patient.

2. Clinical Documentation

a) Resident Log

The program director must require residents to maintain an electronic record of their clinical experience. The record must be reviewed by the program director or faculty on a regular basis. It must be submitted annually to the RRC office in accordance with the format and the due date specified by the RRC.

The program should also have the means for monitoring the appropriate distribution of cases among the residents.

b) Patient Records

A comprehensive anesthesia record must be maintained for each patient as an ongoing reflection of the drugs administered, the monitoring employed, the techniques used, the physiologic variations observed, the therapy provided as required, and the fluids administered. The patient's medical record should contain evidence of preoperative and postoperative anesthesia assessment.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide residents with continuous supervision and consultation. Supervision shall not vary substantially with the time of day or day of the week. In the clinical setting, faculty members should not direct anesthesia at more than 2 anesthetizing locations simultaneously.
3. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call. The RRC will not consider requests for a rest period of less than 10 hours.

C. On-Call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period, as well as with the challenges of providing care outside regular duty hours. Therefore, on-call activities, including those that occur throughout the night, are necessary components of the education of all residents. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care. During the 6 additional hours, residents may not administer anesthesia in the operating room for a new operative case or manage new admissions to the ICU. The resident should not manage non-continuity patients in the 6 hours post-call.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the resident has not previously provided care.
4. At-home call (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

- b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
- c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

The RRC for Anesthesiology will not consider requests for an exception to the limit to 80 hours per week, averaged monthly.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final

period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least semiannually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.
3. As part of the overall evaluation of the program, the RRC will take into consideration the information provided by the ABA regarding resident performance on the certifying examinations over the most recent 5-year period. The RRC will also take into account noticeable improvements or declines during the period considered. Program graduates should take the certifying examination, and at least 70% of the program graduates should become certified.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Anesthesiology should communicate with the office of the Executive Vice President of the American Board of Anesthesiology, Inc., 4101 Lake Boone Trail, The Summit - Suite 510, Raleigh, NC 27607-7506 regarding the full requirements for certification.

Editorial Revision: April 16, 2003

Duty Hours Requirements/ACGME approved/effective: July 1, 2003

Editorial Revision: July 1, 2004

Policies and Procedures for Subspecialties of Anesthesiology

Anesthesiology subspecialty programs will be surveyed and reviewed in conjunction with the survey and review of the core anesthesiology programs to which they are attached. In the case of a new application or in special cases determined by the Residency Review Committee (RRC), a subspecialty program may be reviewed separately. For an initial application, a survey will not be required when the application is reviewed without the core program.

Applications for accreditation of new subspecialty programs will not be considered if the core residency program in anesthesiology is accredited on a provisional or probationary basis, or if it has been accredited with a warning that adverse action will be taken if it is not in substantial compliance with the Essentials of Accredited Residencies at the time of the next review.

The RRC will designate the subspecialty programs as being accredited or not accredited. No further delineation of accreditation categories will be utilized. The accreditation of a subspecialty program will be directly tied to that of the core. If the core program is subsequently accredited on a probationary basis, this is simultaneously a warning to the related subspecialty program that accreditation is in jeopardy. Withdrawal of accreditation of the core program will result in the simultaneous loss of accreditation of the subspecialty program that functions in conjunction with it.

If the core program remains in good standing but the RRC judges a subspecialty program to be in noncompliance with the Program Requirements, a warning will be issued. If suitable improvement is not demonstrated in the time specified by the RRC, accreditation may be withdrawn from the subspecialty program. The *Procedures for Proposed Adverse Actions* and the *Procedures for Appeal of Adverse Actions* may be utilized by subspecialty programs from which accreditation has been withdrawn in an action separate from the core program.

Inquiries about accreditation of anesthesiology subspecialty programs should be addressed to the executive secretary of the RRC for Anesthesiology.

Program Requirements for Residency Education in the Subspecialties of Anesthesiology

Preface

The program requirements set forth here are to be considered common to all specialties, and are complete only when supplemented, where indicated and individually, by each specialty.

These requirements apply to all of the accredited subspecialty areas and should be consulted along with the individual subspecialty Program Requirements.

I. General Information

A. A residency education program in a subspecialty of anesthesiology is an educational experience of at least 1 year designed to develop advanced knowledge and skills in a specific clinical area.

All educational components of the program should be related to program goals. The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.

Completion of an Accreditation Council for Graduate Medical Education (ACGME)-accredited anesthesiology residency, or its equivalent, is a prerequisite for entry into a subspecialty program of anesthesiology.

- B. Residency education programs in the subspecialties of anesthesiology may be accredited only in an institution that either sponsors a residency education program in anesthesiology accredited by the ACGME or is related by formal integration agreement with the core program. (The pediatric anesthesiology program is an exception to this requirement. See Program Requirements for Pediatric Anesthesiology, Sec. II.A.) Close cooperation between the subspecialty and residency program directors is required.
- C. Subspecialty programs will not be approved if they have substantial negative impact on the education of the anesthesiology residents in the core program.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to assignments of fellows at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of program director, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:

- a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Anesthesiology, or possess qualifications judged to be acceptable by the RRC, and shall have had post residency experience in the subspecialty, preferably fellowship training (See Program Requirements for Residency Education in the individual subspecialties for subspecialty certification requirements.)
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. The program director must be a member of the anesthesiology faculty, spend essentially all professional time in the subspecialty, and devote sufficient time to fulfill all responsibilities inherent in meeting the educational goals of the program.
4. Responsibilities of the program director are as follows:
- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate supervision of fellows at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the number of fellows for which the program is approved by the RRC.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, sound clinical and teaching abilities, a commitment to their own continuing medical education, and participation in scholarly activities, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified by the American Board of Anesthesiology, or possess qualifications judged to be acceptable by the RRC.

- c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
- a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
- a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.
6. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one fellow representative should participate in these reviews.
7. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of fellows.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the administration and educational conduct of the program.

D. Facilities and Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Space and Equipment
(See Program Requirements for Residency Education in the individual subspecialties for space and equipment requirements.)
2. Library
Residents must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. Access to computerized literature search facilities is necessary. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Appointment of Fellows

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements and the Program Requirements for Residency Education in the individual subspecialties of Anesthesiology.

B. Number of Fellows

The RRC will approve the number of fellows based upon the adequacy of resources for education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Transfer of Fellows

To determine the appropriate level of education for fellows who are transferring from another subspecialty fellowship program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of fellowship training for fellows who may leave the program prior to completion of their education.

D. Subspecialty Fellow/Core Residents

The subspecialty fellowship program must not dilute or detract from the educational opportunities available to residents in the core anesthesiology residency program.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

The director and teaching staff must prepare and comply with written goals for the program. All educational components of the program should be related to the program goals. A written statement of the educational objectives must be given to each fellow. A postgraduate residency must provide advanced education so that the fellows can acquire special skill and knowledge in the specific subspecialty. This education should consist of a cognitive and a technical component. The cognitive component should emphasize the scholarly attributes of self-instruction, teaching, skilled clinical analysis, sound judgment, and research creativity. The technical component must provide appropriate opportunity for the fellows to acquire the operative and other psychomotor skills required for the practice of the subspecialty.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

C. Scholarly Activities: Fellows

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. Clinical Components

A sufficient number of patients must be available to ensure appropriate inpatient and outpatient experience for each subspecialty fellow, without adversely affecting the experience of residents in the anesthesiology core program. The total number of fellows is dependent on the program's resources and its capacity to provide an excellent educational experience.

E. Didactic Components

Subspecialty conferences, including review of all current complications and deaths, seminars, and clinical and basic science instruction must be regularly scheduled. Active participation of the subspecialty fellow in the planning and the production of these meetings is essential.

VI. Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.
4. A fellow must have the opportunity to provide consultation with faculty supervision. He or she should have clearly defined educational responsibilities for anesthesiology residents, medical students, and professional personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
5. There must be close interaction between the core residency program in anesthesiology and the subspecialty program. Lines of responsibility for the anesthesiology fellows and the subspecialty fellow must be clearly defined. It is imperative that the educational program for the subspecialty fellow not adversely affect the education of the anesthesiology residents, in terms of either experience or patient responsibility.

B. Duty Hours and Conditions of Work

1. Duty hours are defined as all clinical and academic activities related to the subspecialty program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.

2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When fellows are called into the hospital from home, the hours they spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.

2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

The RRC for Anesthesiology will not consider requests for exception to the limit to 80 hours per week, averaged monthly.

G. Substance Abuse

The program must have a written policy specifically addressing the needs of anesthesiology and an education program regarding substance abuse.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing performance of fellows throughout the program, and for utilizing the results to improve of performance.

- a. Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to fellows that includes at least semi-annual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a written final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by fellows must be assessed by the subspecialty program director, the core anesthesiology program director, and by the Institutional Review Committee on a regular basis. Written evaluations by fellows should be utilized in this process.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effec-

tiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the subspecialty program. The program should maintain a process for using assessment results together with other program evaluation results to improve the subspecialty program.
3. There must be continuing quality improvement, utilization review, and evaluation.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

(See Program Requirements for Residency Education in the individual subspecialties of Anesthesiology for subspecialty certification requirements for program graduates.)

Editorial Revision: July 2004

Program Requirements for Residency Education in Anesthesiology Critical Care Medicine (Anesthesiology)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Anesthesiology, programs must comply with the following requirements, which in some cases exceed the common requirements.

I. Scope and Duration of Training

A. Definition and Scope of the Specialty

Anesthesiology critical care medicine (ACCM) is a subspecialty of anesthesiology devoted to the acute and long-term care of critically ill patients with multiple organ system derangements.

B. Duration of Training

Subspecialty training in ACCM shall consist of 12 months of full-time training, beginning after satisfactory completion of a core anesthesiology residency program. At least 9 of the 12 months of training in ACCM must be spent in the care of critically ill patients in intensive care units (ICUs). The remainder may be in clinical activities or research relevant to critical care.

C. Objectives

The subspecialty program in ACCM must be structured to provide resources necessary to assure optimal patient care while providing its trainees the opportunity to develop skills in clinical care and judgment, teaching, administration, and research.

Exposure should be provided to a wide variety of clinical problems in adult and pediatric patients necessary for the development of broad clinical skills required for a subspecialist in CCM.

II. Institutional Organization

A. Relationship to Core Program

Accreditation of a subspecialty training program in ACCM will be granted only when the program is in direct association with a core residency program in anesthesiology accredited by the Accreditation Council for Graduate Medical Education (ACGME). Therefore, subspecialty training in ACCM can occur only in an institution in which there is an ACGME-accredited residency program in anesthesiology, or in an institution related by formal integration agreement to the core program.

If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the ACCM program is conducted. Rotations outside the institution in which the ACCM program is based should not exceed 4 months.

(Refer to the Program Requirements for Residency Education in Anesthesiology for the definitions governing affiliated and integrated institutions.)

The subspecialty program must function in conjunction with the core program in anesthesiology. The lines of responsibility between resident staffs in both the core program and the subspecialty program must be clearly delineated.

In addition, there must be ACGME-accredited core residencies in general surgery and internal medicine.

B. Institutional Policy: Resources

There should be an institutional policy governing the educational resources committed to critical care programs, ensuring cooperation of all involved disciplines. Where more than one critical care program exists in an institution, it will be the responsibility of the institution to coordinate interdisciplinary requirements.

III. Program Director/Faculty

A. Program Director

The program director of subspecialty training in ACCM must be an anesthesiologist who is certified in critical care medicine (CCM) by the American Board of Anesthesiology, or who possesses appropriate educational qualifications in critical care medicine as determined by the Residency Review Committee (RRC). The subspecialty program director has responsibility for the teaching program in ACCM subject to the approval of the director of the core residency training program in anesthesiology.

B. Medical Director

The director of the critical care program must be the medical director or co-medical director of one or more of the critical care units in which the majority of the clinical training of the critical care program is required to take place, and he or she must be personally involved in clinical supervision and teaching of anesthesiology critical care residents in that unit.

C. Faculty

There must be evidence of active participation by qualified anesthesiologists with a continuous and meaningful role in the subspecialty

training program. Faculty involved in teaching subspecialty trainees in ACCM must possess expertise in the care of critically ill patients. Recognition that such expertise will often cross specialty boundaries emphasizes the importance of collegial relationships and consultation between the CCM program director and faculty from other disciplines including, but not limited to, surgery and its subspecialties, internal medicine and its subspecialties, pediatrics, obstetrics and gynecology, pathology, and radiology. Where appropriate, supervision and teaching by faculty in these disciplines should be integrated into the teaching program for subspecialty trainees in ACCM.

Anesthesiology faculty with expertise in critical care must be involved in teaching ACCM residents and these should equal two or more full-time equivalents. A ratio of one full-time equivalent faculty member to two subspecialty residents shall be maintained.

IV. Facilities and Resources

A. ICUs

Subspecialty training in ACCM will occur principally in areas of the hospital commonly characterized as ICUs. Such ICUs are capable of providing acute and long-term life support of patients with multiple organ system derangements. Examples of ICUs include, but are not limited to, multidiscipline, surgical, medical, neonatal and pediatric, high-risk pregnancy, neurosurgical, trauma, and burn units. An ICU must be located in a designated area within the hospital and designed specifically for care of critically ill patients.

B. Patient Population

To provide sufficient range of exposure, an ICU that averages a census of at least five patients for each subspecialty trainee in ACCM is recommended.

C. Support Services

1. Adequate numbers of specially trained nurses plus technicians with expertise in biomedical engineering and respiratory therapy must be available.
2. There should be readily available, at all times, facilities to provide laboratory measurements pertinent to care of critically ill patients with multiple organ system derangements. These include, but are not limited to, measurement of blood chemistries, blood gases and pH, culture and sensitivity, toxicology, and analysis of plasma drug concentrations.
3. Facilities for special radiologic imaging procedures and echocardiography are essential.
4. Appropriate monitoring and life-support equipment must be readily available and representative of current levels of technology.

D. Library

Conveniently located library facilities and space for research and teaching conferences in CCM are essential. There must be a departmental library with adequate material relevant to critical care. This may be supplemented but not replaced by private faculty book collections and hospital and institutional libraries.

E. Space

Space for research and teaching conferences in critical care must be available.

V. Educational Program

A. Clinical Components

The subspecialty trainee in ACCM must gain clinical experience in the following areas:

1. Airway maintenance and management

2. Mechanical ventilation
3. Devices that supply supplemental oxygen
4. Indications of and techniques for emergency and therapeutic treatment of conditions requiring thoracentesis and/or tube thoracotomy
5. Emergency and therapeutic fiber-optic laryngotracheobronchoscopy
6. Assessment and evaluation of pulmonary function
7. Cardiopulmonary resuscitation (Residents must be certified in ACLS, ATLS, and PALS prior to completion of their ACCM training. The program must provide access to this training.)
8. Placement and management of arterial, central venous, and pulmonary arterial catheters
9. Emergency and therapeutic placement of pacemakers
10. Pharmacologic and mechanical support of circulation
11. Evaluation and management of central nervous system dysfunction
12. Recognition and treatment of hepatic and renal dysfunction
13. Diagnosis and treatment of sepsis
14. Fluid resuscitation and management of massive blood loss
15. Enteral and total parenteral nutrition
16. Bioengineering and monitoring
17. Interpretation of laboratory results
18. Psychiatric effects of critical illness
19. Transesophageal echocardiography (TEE)
20. Ethical aspects of critical care

B. Didactic Components

The teaching curriculum for the subspecialty trainee in ACCM must include the following areas:

1. Resuscitation
2. Cardiovascular physiology, pathology, pathophysiology, and therapy
3. Respiratory physiology, pathology, pathophysiology, and therapy
4. Renal physiology, pathology, pathophysiology, and therapy
5. Central nervous system physiology, pathology, pathophysiology, and therapy
6. Pain medicine of critically ill patients
7. Metabolic and endocrine effects of critical illness
8. Infectious disease physiology, pathology, pathophysiology, and therapy
9. Hematologic disorders secondary to critical illness
10. Gastrointestinal, genitourinary, and obstetric-gynecologic acute disorders
11. Trauma, including burns
12. Monitoring, bioengineering, biostatistics
13. Life-threatening pediatric conditions
14. End of life care
15. Pharmacokinetics and dynamics; drug metabolism and excretion in critical illness
16. Transport of critically ill patients
17. Administrative and management principles and techniques
18. Medical informatics
19. Cost-effective care
20. Ethical and legal aspects
21. Effective interpersonal and communication skills with patients, family members, and other health care providers

C. Consultation

In preparation for roles as consultants to other specialists, the subspecialty trainee in ACCM must have the opportunity to provide consultation under the direction of faculty responsible for teaching in the ACCM program.

D. ICU Administration

Subspecialty trainees in ACCM should gain experience in the administration of an ICU as related to appointment and training of nonphysician personnel, establishment of policies regulating functioning of the ICU, and coordination of the activities of the ICU with other in-hospital units.

E. Conferences

Subspecialty conferences, including mortality and morbidity conferences, journal reviews, and research seminars, must be regularly scheduled. Active participation of the subspecialty trainee in ACCM in the planning and production of these conferences is essential. Attendance at multidisciplinary conferences is encouraged, with particular attention given to those conferences relevant to CCM.

VI. Scholarly Activity

Refer to the Program Requirements for Residency Education in the Subspecialties of Anesthesiology for requirements concerning scholarly activity.

VII. Evaluation

Faculty responsible for teaching subspecialty trainees in ACCM must provide critical evaluations of each trainee's progress and competence to the director at the end of 6 months and 12 months of training. These evaluations should include intellectual abilities, manual skills, attitudes, and interpersonal relationships, as well as specific tasks of patient management, decision-making skills, and critical analysis of clinical situations. The subspecialty trainee in ACCM must achieve an overall satisfactory evaluation at 12 months to receive credit for training. There must be written feedback of these evaluations to the subspecialty trainee.

Written and confidential evaluation of CCM faculty performance by the resident must take place once a year.

Written evaluations of patient care and subspecialty training objectives are required annually.

VIII. Board Certification

One measure of the quality of a program is the record of its graduates in obtaining certification in critical care by the American Board of Anesthesiology. The RRC will consider this information as part of the overall evaluation of the program.

ACGME: February 2000 Effective: January 2001

Program Requirements for Residency Education in Anesthesiology Pain Medicine (Anesthesiology)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Anesthesiology, programs must comply with the following requirements, which in some cases exceed the common requirements.

I. Scope and Duration of Training

A. Definition and Scope of the Specialty

Pain medicine is a discipline within the practice of medicine that specializes in the management of patients suffering from acute, chronic, and cancer pain. The management of acute and chronic pain syndromes is a complex matter involving many areas of inter-

est and medical disciplines. Clinical and investigative efforts are vital to the progress of the specialty.

B. Duration of Training

Subspecialty training in pain medicine shall consist of 12 months of full-time training, beginning after satisfactory completion of a core residency program. At least 9 of the 12 months of training must be in clinical pain medicine. The remainder may be in clinical activities or research relevant to pain medicine. All assignments must be directly related to pain medicine.

II. Institutional Organization

A. Relationship to Core Program

Accreditation of a subspecialty program in pain medicine will be granted only when the program is in direct association with a core residency program in anesthesiology accredited by the Accreditation Council for Graduate Medical Education (ACGME). If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the pain medicine program is conducted. Rotations outside the institution in which the pain medicine program is based should not exceed four months.

B. Appointment of Residents

Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed increase in the number of residents must receive prior approval by the RRC. Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.

C. Institutional Policy: Resources

Because pain medicine is a multidisciplinary approach to a common problem, there should be an institutional policy governing the educational resources committed to pain medicine that ensures cooperation of all involved disciplines.

III. Program Director/Faculty

A. Program Director

The program director must be an anesthesiologist who has been certified in pain medicine by the American Board of Anesthesiology, or who possesses qualifications judged to be acceptable by the RRC.

The subspecialty program director has responsibility for the teaching program in pain medicine subject to the approval of the director of the core residency program.

B. Medical Director

The medical director of the pain medicine service may be someone other than the subspecialty program director. Recognizing the institutional and multidisciplinary nature of pain medicine, the primary specialty of the medical director is not as important as the provision that such an individual represent the best-qualified person within the institution.

C. Faculty

Qualified physicians with expertise in pain medicine must have a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty residents in pain medicine must possess expertise in the care of patients with acute, chronic, and cancer pain problems. Such expertise frequently crosses specialty boundaries. Thus, the program is encouraged to include faculty from ABMS-recognized medical specialties other

than anesthesiology. Where appropriate, supervision and teaching by faculty in these and other disciplines should be incorporated into the teaching program for subspecialty residents in pain medicine.

At least three anesthesiology faculty with expertise in pain medicine should be involved in teaching pain medicine residents and these should equal two or more full-time equivalents. A ratio of one full-time equivalent faculty member to two subspecialty residents shall be maintained.

IV. Facilities and Resources

A. Space and Equipment

A pain medicine center (clinic) must be located within a hospital/medical office complex and must be designed specifically for the management of pain patients. Space for research and teaching conferences in pain medicine must be available.

Appropriate monitoring and life-support equipment must be immediately available wherever invasive pain medicine procedures are performed.

There must be appropriate on-call facilities for male and female residents and faculty.

B. Support Services

The following functions and support must be available:

1. Appropriate laboratory facilities
2. Appropriate radiologic imaging facilities
3. Psychiatric/psychological services, including behavioral modification
4. Physical and/or occupational therapy
5. Social services
6. Medical record keeping
7. Other services as indicated (vocational, nursing, pharmacy, dietary, etc.)
8. Appropriate electrodiagnostic facilities

C. Patient Population

For each subspecialty pain medicine resident each year, there must be a minimum of 200 new patients. The subspecialty resident must manage a minimum of 200 new patients, which includes a minimum of 30 new patients in each of the three types of pain problems: acute pain, chronic pain, and cancer pain.

There must be ready access to consultation from other disciplines involved in pain medicine.

D. Library

There must be a departmental library with adequate material relevant to pain medicine. This may be supplemented but not replaced by private faculty book collections and hospital or institutional libraries.

V. The Educational Program

A. Educational Environment

An accredited program in pain medicine must provide education, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated and prepared to apply acquired knowledge and talents independently.

B. Clinical Components

There should be exposure to a wide variety of clinical pain problems. Such exposure is necessary for the development of broad clinical skills and knowledge required for a specialist in pain medicine. Subspecialty training in pain medicine must include experience in the management of both inpatients and outpatients.

The resident must become familiar with theory, benefits, indications, and practical applications of the following procedures and techniques:

1. A broad range of peripheral nerve block procedures
2. Epidural and subarachnoid injections
3. Joint and bursal sac injections
4. Cryotherapeutic techniques
5. Epidural, subarachnoid, or peripheral neurolysis
6. Electrical stimulation techniques
7. Implanted epidural and intrathecal catheters, ports, and infusion pumps
8. Acupuncture and acupressure
9. Behavioral modification
10. Physical therapy
11. Hypnosis, stress management, and relaxation techniques
12. Trigeminal ganglionectomy
13. Peripheral neurectomy and neurolysis
14. Sympathectomy techniques
15. Alternative pain therapies
16. Prevention, recognition, and management of local anesthetic overdose, including airway management and resuscitation
17. Recognition and management of therapies, side effects and complications of pharmacologic agents used in pain medicine.

The pain medicine resident must have significant experience in providing consultation.

C. Didactic Components

The pain medicine curriculum must include the following topics in lectures and reading:

1. Anatomy and physiology of the pain projection system
2. Epidemiology, economic impact, and sociology of pain
3. Pharmacology of opiates, non narcotic analgesics, and nonsteroidal anti-inflammatory agents
4. Pharmacology of centrally acting drugs used in pain medicine
5. Measurement and assessment of pain and function
6. Principles of neural stimulation
7. Principles of diagnostic testing
8. Nerve blocks in pain medicine
9. Neuroablative procedures
10. Behavioral, cognitive, and supportive psychotherapeutic treatment principles, including rehabilitation and the role of team management
11. Principles and techniques of acute pain medicine
12. Principles and techniques of cancer pain medicine, including death and dying, and the ethical principles involved in hospital, hospice, and home care
13. Principles and techniques of management of other chronic pain problems
14. Principles of physical therapy, occupational therapy, and rehabilitation of the chronic pain patient
15. Principles of multidisciplinary approaches to pain medicine
16. Management of pain in children
17. Management of pain in the elderly
18. Principles and ethics of pain research in humans and animals
19. Organization and management of a pain medicine center
20. Continuing quality improvement, utilization review, and program evaluation
21. Disability assessment and rehabilitation procedures

D. Pain Center Management

Subspecialty residents in pain medicine must gain experience in the management of a pain center (clinic) with regards to appointment and training of nonphysician personnel, establishment of policies relating to management of pain problems, and coordination of

the activities of the pain center with other inpatient and outpatient services.

E. Resident Teaching

The subspecialty resident in pain medicine must become experienced in teaching principles of pain medicine to resident physicians, medical students, and other health-care professionals.

F. Conferences

Pain medicine conferences must be held regularly. These should include morbidity and mortality conferences, journal reviews, and research seminars. Active participation in the planning and presentation of these conferences by the pain medicine resident and faculty is essential. Attendance at multidisciplinary conferences is encouraged.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
4. A 10-hour time period for rest and personal activities must be provided between all daily duty periods, and after in-house call.

C. On-Call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a four-week period.

2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, maintain continuity of medical and surgical care, transfer care of patients, or conduct outpatient pain clinics where they provide management for continuity patients. The resident may not manage non-continuity patients in the 6 hours post-call.
3. No new patients may be accepted after 24 hours of continuous duty, except in outpatient continuity clinics. A new patient is defined as any patient for whom the resident has not previously provided care.
4. At-home call (pager call) is defined as call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III. D.1.k.
3. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), i.e., internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

VII. Scholarly Activity

(Refer to the Program Requirements for Residency Education in the Subspecialties of Anesthesiology for requirements concerning scholarly activity.)

VIII. Evaluation

- A. Faculty responsible for teaching subspecialty residents in pain medicine anesthesiology must provide critical evaluations of each resident's progress and competence to the anesthesiology pain medicine program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient medicine, decision-making skills, and critical analysis of

clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in pain medicine anesthesiology must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.

B. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in pain medicine anesthesiology should be involved in continuous quality improvement, utilization review, and risk management.

IX. Board Certification

The record of its graduates in obtaining certification in pain medicine by ABMS certifying bodies represents one measure of the quality of a program. The RRC will consider this information as part of the overall evaluation of the program.

ACGME: June 22, 1998 Effective: July 1, 1999

April 23, 2003 (editorial)

October 2004 (editorial)

Program Requirements for Residency Education in Pediatric Anesthesiology (Anesthesiology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Pediatric anesthesiology is the subspecialty of anesthesiology devoted to the preoperative, intraoperative, and postoperative anesthetic care of pediatric patients.

B. Duration and Scope of Education

Subspecialty training in pediatric anesthesiology shall be 12 months in duration, beginning after satisfactory completion of the residency program in anesthesiology as required for entry into the examination system of the American Board of Anesthesiology. Subspecialty training in pediatric anesthesiology is in addition to the minimum requirements described in the Program Requirements for the core program in anesthesiology.

The clinical training in pediatric anesthesiology must be spent caring for pediatric patients in the operating rooms, other anesthetizing locations, and in intensive care units. The training will include experience in providing anesthesia both for inpatient and outpatient surgical procedures and for nonoperative procedures outside the operating rooms, as well as preanesthesia preparation and postanesthesia care, pain medicine, and advanced life support for neonates, infants, children, and adolescents.

C. Goals and Objectives

The subspecialty program in pediatric anesthesiology must be structured to ensure optimal patient care while providing residents the opportunity to develop skills in clinical care and judgment, teaching, administration, and research. The subspecialist in pediatric anesthesiology should be proficient not only in providing anes-

thesia care for neonates, infants, children, and adolescents undergoing a wide variety of surgical, diagnostic, and therapeutic procedures, but also in pain medicine, critical perioperative care, and advanced life support. To meet these goals, the program should provide exposure to the wide variety of clinical problems in pediatric patients, as outlined in V.B., that are necessary for the development of these clinical skills.

II. Institutional Organization

A. Sponsorship

A pediatric anesthesiology program should function whenever feasible in direct association and/or affiliation with an ACGME-accredited core anesthesiology program. However, a pediatric anesthesiology program may be conducted in either a general hospital or a children's hospital. If the program is conducted in a general hospital, there must be within the same institution a fully accredited core anesthesiology program with which the pediatric anesthesiology program is associated. When the core program and the subspecialty program are conducted within the same institution, the division of responsibilities between residents in the core program and those in the subspecialty program must be clearly delineated.

If the pediatric anesthesiology program is conducted in a children's hospital, there are two sponsorship options:

1. The program may be under the sponsorship of another institution that conducts a fully accredited core anesthesiology residency program, in which case there must be an affiliation agreement between the two institutions.
2. The program may be under the direct sponsorship of the children's hospital, in which case the children's hospital must be the sponsoring institution for an ACGME-accredited core pediatric residency and at least one pediatric subspecialty program that is under a primary specialty other than pediatrics. There must also be a GMCC in the children's hospital that assumes the responsibility of a sponsoring institution as stipulated in the Institutional Requirements.

B. Institutional Policy

There should be an institutional policy governing the educational resources committed to pediatric anesthesiology programs.

III. Faculty Qualifications and Responsibilities

A. Program Director

1. Qualifications of the Program Director

The program director in pediatric anesthesiology must be an anesthesiologist who is certified by the American Board of Anesthesiology or who possesses qualifications judged to be acceptable by the RRC. The program director also must be licensed to practice medicine in the state where the institution that sponsors the program is located (certain federal programs are exempted) and have an appointment in good standing to the medical staff of an institution participating in the program.

The program director must have completed a pediatric anesthesiology training program or have equivalent educational and clinical qualifications in providing anesthesia care for pediatric patients. He/she must devote sufficient time to provide adequate leadership to the program and supervision for the residents. The clinical director of the pediatric anesthesiology service may be someone other than the program director.

2. Responsibilities of the Program Director

- a. Preparation, periodic review, and, if necessary, revision of a written outline of the educational goals of the program with respect to the knowledge, skills, and other attributes of resi-

dents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.

- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the teaching staff and other program personnel.
- d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all residents and faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- f. Preparation of an accurate statistical and narrative description of the program, as requested by the Residency Review Committee (RRC).

B. Faculty

Although the number of faculty members involved in teaching residents in pediatric anesthesiology will vary, it is recommended that at least three faculty members be involved, and that these be equal to or greater than two full-time equivalents, including the program director. A ratio of no less than one full-time equivalent faculty member to one subspecialty resident shall be maintained. The RRC understands that *full-time* means that the faculty member devotes essentially all professional time to the program.

There must be evidence of active participation by qualified physicians with training and/or expertise in pediatric anesthesiology beyond the requirement for completion of a core anesthesiology residency. The faculty must possess expertise in the care of pediatric patients and must have a continuous and meaningful role in the subspecialty training program.

The program should include teaching in multidisciplinary conferences by faculty in pediatric and neonatal intensive care, pediatric medicine, and pediatric surgery.

The pediatric anesthesiology program director and faculty responsible for teaching subspecialty residents in pediatric anesthesiology must maintain an active role in scholarly pursuits pertaining to pediatric anesthesiology, as evidenced by participation in continuing medical education as well as by involvement in research as it pertains to the care of pediatric patients.

IV. Clinical and Educational Facilities and Resources

The following resources and facilities are necessary to the program:

- A. Intensive care units for both newborns and older children.
- B. An emergency department in which children of all ages can be effectively managed 24 hours a day.
- C. Operating rooms adequately designed and equipped for the management of pediatric patients. A postanesthesia care area adequately designed and equipped for the management of pediatric patients must be located near the operating room suite.
- D. Pediatric surgical patients in sufficient volume and variety to provide a broad educational experience for the program. Surgeons with special pediatric training and/or experience in general surgery, cardiovascular surgery, neurosurgery, otolaryngology, ophthalmology, orthopedics, plastic surgery and urology must be available.

E. Monitoring and advanced life-support equipment representative of current levels of technology.

F. Allied health staff and other support personnel.

G. Facilities that are readily available at all times to provide prompt laboratory measurements pertinent to the care of pediatric patients. These include but are not limited to measurement of blood chemistries, blood gases and pH, oxygen saturation, hematocrit/hemoglobin, and clotting function.

If adequate clinical experiences are not provided in the primary institution, arrangements should be made to assure that adequate clinical experiences are obtained. The total time in rotations outside the primary institution for the purpose of supplemental experience should not exceed three months and should be approved by the RRC.

V. Educational Program

A. Goals and Objectives

The director and teaching staff must prepare and comply with written goals for the program. All educational components of the program should be related to the program goals. The program design must be approved by the RRC as part of the regular review process. A written statement of the educational objectives must be given to each resident.

B. Clinical Components

The subspecialty resident in pediatric anesthesiology should gain expertise in the following areas of clinical care of neonates, infants, children, and adolescents:

1. Preoperative assessment of children scheduled for surgery
2. Cardiopulmonary resuscitation and advanced life support
3. Management of normal and abnormal airways
4. Mechanical ventilation
5. Temperature regulation
6. Placement of venous and arterial catheters
7. Pharmacologic support of the circulation
8. Management of both normal perioperative fluid therapy and massive fluid and/or blood loss
9. Interpretation of laboratory results
10. Management of children requiring general anesthesia for elective and emergent surgery for a wide variety of surgical conditions including neonatal surgical emergencies, cardiopulmonary bypass, and congenital disorders
11. Techniques for administering regional anesthesia for inpatient and ambulatory surgery in children
12. Sedation or anesthesia for children outside the operating rooms, including those undergoing radiologic studies
13. Recognition, prevention, and treatment of pain in medical and surgical patients
14. Consultation for medical and surgical patients
15. Recognition and treatment of perioperative vital organ dysfunction, including in the postanesthesia care unit
16. Diagnosis and perioperative management of congenital and acquired disorders
17. Participation in the care of critically ill infants and children in a neonatal and/or pediatric intensive care unit
18. Transport of critically ill patients between hospitals and/or within the hospital
19. Psychological support of patients and their families

In preparation for roles as consultants to other specialists, subspecialty residents in pediatric anesthesiology should have the opportunity to provide consultation under the direction of faculty responsible for teaching in the pediatric anesthesiology program. This should include assessment of the appropriateness of a patient's preparation for surgery and recognition of when an

institution's personnel, equipment, and/or facilities are not appropriate for management of the patient.

C. Didactic Components

The didactic curriculum, provided through lectures and reading, should include the following areas, with emphasis on developmental and maturational aspects as they pertain to anesthesia and life support for pediatric patients:

1. Cardiopulmonary resuscitation
2. Pharmacokinetics and pharmacodynamics and mechanisms of drug delivery
3. Cardiovascular, respiratory, renal, hepatic, and central nervous system physiology, pathophysiology, and therapy
4. Metabolic and endocrine effects of surgery and critical illness
5. Infectious disease pathophysiology and therapy
6. Coagulation abnormalities and therapy
7. Normal and abnormal physical and psychological development
8. Trauma, including burn, management
9. Congenital anomalies and developmental delay
10. Medical and surgical problems common in children
11. Use and toxicity of local and general anesthetic agents
12. Airway problems common in children
13. Pain medicine in pediatric patients of all ages
14. Ethical and legal aspects of care
15. Transport of critically ill patients
16. Organ transplantation in children
17. All pediatric anesthesiology residents should be certified as providers of advanced life support for children.

Subspecialty conferences, including morbidity and mortality conferences, journal reviews, and research seminars, should be regularly attended. Active participation of the subspecialty resident in pediatric anesthesiology in the planning and production of these conferences is essential. However, the faculty should be the conference leaders in the majority of the sessions. Attendance by residents at multidisciplinary conferences, especially those relevant to pediatric anesthesiology, is encouraged.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to pa-

tient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.

2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10 hour time period provided between all daily duty periods and after in-house call.

C. On-Call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a four-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, maintain continuity of medical and surgical care, transfer care of patients, or conduct continuity clinics. During the 6 additional hours, residents may not administer anesthesia in the OR for a new operative case or manage new admissions to the ICU. As a general rule, the resident may not manage non-continuity patients in the 6 hours post-call.
3. No new patients may be accepted after 24 hours of continuous duty, except in outpatient continuity clinics. A new patient is defined as any patient for whom the resident has not previously provided care. A patient admitted to the ICU from surgery is considered a new patient.
4. At-home call (pager call) is defined as call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements III.
 - D.1.k.

3. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), i.e., internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

B. There must be a regular opportunity for residents to provide written, confidential evaluation of the faculty and program.

C. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in pediatric anesthesiology should be involved in continuous quality improvement, utilization review, and risk management.

D. Periodic evaluation of subspecialty training objectives is encouraged.

ACGME: September 2003 Effective: July 1, 2004

VII. Peer Interaction

Subspecialty residents in pediatric anesthesiology should become experienced in teaching principles of pediatric anesthesiology, including topics such as management of patients requiring sedation outside the OR's, pain medicine, and life support, to other resident physicians, medical students, and other health care professionals. Residents should also participate in planning and conducting conferences.

VIII. Scholarly Activities

The subspecialty training program in pediatric anesthesiology should provide the opportunity for active resident participation in research projects pertinent to pediatric anesthesia. Subspecialty residents should be instructed in the conduct of scholarly activities and the evaluation of investigative methods and interpretation of data, including statistics; they should have the opportunity to develop competence in critical assessment of new therapies and of the medical literature.

IX. Additional Required Components

There should be prompt access to consultation with other disciplines, including pediatric subspecialties of neonatology, cardiology, neurology, pulmonology, radiology, critical care, emergency medicine, and pediatric subspecialties of surgical fields. To provide the necessary breadth of experience, an accredited residency training program in pediatrics is required within the institution. Residency programs or other equivalent clinical expertise in other specialties, particularly pediatric general surgery and pediatric surgical subspecialties, such as otolaryngology, cardiovascular surgery, urology, neurosurgery, ophthalmology, and orthopedics, and pediatric radiology are highly desirable.

X. Evaluation

- A. Faculty responsible for teaching subspecialty residents in pediatric anesthesiology must provide critical evaluations of each resident's progress and competence to the pediatric anesthesiology program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in pediatric anesthesiology must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.

Program Requirements for Graduate Medical Education in Colon and Rectal Surgery

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

Duration and Scope of Training

Institutions offering residencies in Colon and Rectal Surgery must provide the necessary education to qualify the resident as a colon and rectal specialist in the care of patients, in teaching, and in research. Surgeons admitted to each residency are required to have completed a minimum of five years of an accredited, graded program in general surgery. Thus, the residents should already have developed a satisfactory level of clinical maturity, technical skills, and surgical judgment which will enable them to begin a residency in colon and rectal surgery for the purpose of specializing in this field of surgery. The period of training must be one year and the program must comply with the institutional requirements for residency training.

II. Institutional Support

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives and should provide resources not otherwise available to the program. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document per sections III.B. and VII.A. of the Program Requirements;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
3. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational

and peer activities. Exceptions must be justified and prior-approved.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership. There should be a minimum of two staff members, including the program director.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Colon and Rectal Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:

- a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Colon and Rectal Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
- a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.
- Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
- a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Facilities and Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients

and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(N.B.: Section V.D. does not apply to certain subspecialties)

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;

5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Components

1. Residents in colon and rectal surgery should be given the opportunity to obtain sufficient knowledge of those aspects of anesthesiology, radiology, and pathology that relate to colon and rectal surgery to develop overall competence as a specialist. Such training is best accomplished in cooperation with the departments of anesthesiology, radiology, and pathology.
2. Teaching contributes to the educational process, and therefore should be a regular part of the training program. The resident should assist when possible in the instruction of general surgical residents, and medical students, as well as nurses, and other allied health professionals. It is important to include instruction in the care of intestinal stomas, especially in institutions that do not have enterostomal therapists.

F. Clinical Components

1. The program should supply the necessary volume and variety of colon and rectal surgery to assure adequate training of residents. If there is insufficient volume or variety in the primary institutions, arrangements should be made for an affiliation with a participating institution to correct the inadequacy. Each resident must have ample opportunity and responsibility for the care of patients with anorectal and colonic diseases.
2. The educational program must also include training in both diagnostic and therapeutic colonoscopy. The objective is to develop the necessary competence in the use of this procedure to qualify as an expert in the field. Therefore, adequate numbers of both diagnostic and therapeutic colonoscopies must be available either at the colon and rectal training program or through an appropriate institutional affiliation to satisfy this particular need.
3. An important aspect of the educational program is training in an out-patient facility to develop skills in patient evaluation, examination, office treatment, and surgical aftercare. Where feasible, such training should include work in the faculty member's office, as well as in the out-patient clinic of the hospital.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.

3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both in-patient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.

3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Colon and Rectal Surgery should communicate with the office of the board regarding the full requirements for certification, prior to beginning their residency to be certain that their general surgical training is acceptable as one of the requirements for certification.

ACGME: June 1995 Effective: July 1996

Competencies: July 2001

Editorial Revision: July 2004

Program Requirements for Graduate Medical Education in Dermatology

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction: Duration and Scope of Training

- A. Accredited training programs in dermatology shall be organized to provide trainees with the educational and practical experience that will enable them to deliver superior specialized care to patients with diseases of the skin, hair, nails and mucous membranes. Such experience must be varied and broad, progressive and systematic, and of sufficient duration. Moreover, it must include instruction in the pertinent basic sciences and in all clinical areas that bear upon the specialty of dermatology and training in research and teaching. Accomplishment of these objectives requires a suitable institutional environment; a cooperative and supportive administrative authority; a stable financial base; an enthusiastic, competent, and available staff; an adequate patient population; modern, efficient equipment and space; and satisfactory liaison with other disciplines that relate to dermatology.
- B. A dermatology residency may be accredited to offer either 3 or 4 years of graduate medical education:
1. A 3-year program is preceded by a broad-based clinical year of training (PGY-1) in an Accreditation Council for Graduate Medical Education (ACGME)-accredited program or similar program accredited in Canada.
 2. A 4-year program must provide a broad-based clinical experience during the first year and 3 years of dermatology education in the second through fourth year of the program.
 3. Approximately 75% of the resident's time during the 3 years of dermatology training must be related to the direct care of dermatologic outpatients and inpatients; this includes consultations, clinical conferences and inpatient rounds.
 4. Dermatopathology, microbiology, and other basic science lectures, seminars, and conferences are essential components of the resident's training.
 5. Exceptionally, accreditation of residency programs of less than 3 years is possible, but only under the following conditions:
 - a. This training must represent an unusual and highly specialized experience, in research or in a selected major area of dermatology, in an institution with extraordinary capability in such fields and with multiple accredited training programs in other disciplines.
 - b. Moreover, training under such conditions will provide the trainee with only 1 year of credit to be applied against the necessary 3 years of training in dermatology. This training may not be used in lieu of the first postgraduate year or the first year of residency training in dermatology.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.
2. The sponsoring institution must assure the financial, technical, and moral support and provide the necessary space, facilities,

and supply of patients for the establishment and maintenance of an approved residency program in dermatology.

3. Adequate exposure to both outpatients and inpatients is necessary, as are opportunities to do research, to teach, and to become acquainted with administrative aspects of the specialty.
4. A cooperative relationship with other disciplines in medicine will result in the most effective implementation of these activities.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities, and must have a full-time commitment to the educational program and related activities. Directors should have at least 5 years of experience (following residency) in the care of dermatology patients and as a teacher in a dermatology residency.
 - b) The program director must be certified in the specialty by the American Board of Dermatology, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
- (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.
- On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
5. At times of his or her absence, the program director must designate an interim director. If this period is for 6 months or longer, the RRC must be notified. Appointment of an interim director should not exceed 2 years, as it may have a detrimental effect on the program.
 6. Documentation of resident evaluation, institutional and inter-institutional agreements, resident agreements and departmental statistics should be kept on file and provided upon request to the RRC or site visitor. The accurate and complete execution of application forms, progress reports and replies to other requests from the RRC is the responsibility of the program director. The care and precision given to these responses will be taken into consideration in the assessment of the training program.
 7. Ensuring that a log of surgical procedures performed by residents is kept on file and provided upon request to the RRC or the site visitor.
- B. Faculty**
1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. An instructor-to-trainee ratio of at least one-to-three is desirable, as is a minimum of 2 geographic full-time members of the clinical faculty, one of whom must be the training director.
 2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
 3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Dermatology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
 4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
 5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.
- C. Other Program Personnel**
1. Faculty from any and all clinical and basic science departments can and should be utilized to provide a complete educational experience for the trainees.
 2. Additional necessary professional, technical, and clerical personnel must be provided to support the program.
- D. Resources**
1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
 2. Projection equipment and facilities for reviewing and taking clinical photographs should be provided.
 3. Space should also be made available for dermatology conferences, preferably space dedicated for that purpose.
 4. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases.
 5. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.
- IV. Resident Appointments**
- A. Eligibility Criteria**
- The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.
- B. Number of Residents**
- The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.
- C. Resident Transfers**
- To determine the appropriate level of education for residents who are transferring from another residency program, the pro-

gram director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical, and must provide equivalent educational experiences for all residents. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Components

Didactic training should complement and, when possible, precede or parallel the clinical activities. Such education should be organized to follow a curriculum that will ensure resident exposure to the complete range of disorders encountered by the dermatologist.

a. Basic science content

A vital part of the residency program is the structured study of the basic sciences related to dermatology, including allergy, anatomy, bacteriology, biochemistry, embryology, entomology, genetics, histology, immunology, molecular biology, mycology, oncology, parasitology, pathology, pharmacology, photobiology, physiology, serology, virology, and basic principles of therapy by physical agents. In addition, the structured study should include the basic medical sciences and principles that underlie dermatologic surgery and therapy by physical agents. Particular emphasis should be placed upon dermatologic microbiology, dermatopathology and immunodermatology. There should be a well-organized course of instruction and range of experience in these three disciplines. The dermatopathology training should be directed by a physician with special qualification, or its equivalent, in dermatopathology.

b. Teaching Methods

Teaching methods throughout the training period should include various combinations of lectures, conferences, seminars, demonstrations, individual or group study of color transparencies and histologic slides, clinical rounds, chart and record reviews, faculty-trainee sessions in small groups and one-to-one settings, book and journal reviews, and attendance at local, regional, and national meetings.

2. Clinical components

a. To facilitate clinical and laboratory teaching it is essential that the department have an adequate supply of properly classified anatomic and pathologic materials, including histologic and photographic slides, and that the resident participate actively in the interpretation of histopathologic sections. Clinical laboratory facilities for microscopic analysis of biologic specimens (e.g., fungal and ectoparasite scrapings, Tzanck preparations, immunofluorescence), culture for microbes (e.g., fungi, bacterial, viruses), and interpretation of histologic specimens by light and electron microscopy should be conveniently available.

b. The training should be sufficient to ensure a knowledge of and competence in the performance of procedures in allergy and immunology, cryosurgery, dermatologic surgery, laser surgery, dermatopathology, clinical pathology, parasitology, patch testing, photobiology, and topical and systemic pharmacotherapy and microbiology, including sexually transmitted diseases. Among these disciplines, dermatologic surgery should be given special emphasis in the organization of and implementation into the training program. The surgical training should be directed by faculty who have had advanced training in dermatologic surgery. Dermatologic surgical training should include appropriate anesthesia, electrosurgery, cryosurgery, laser surgery, nail surgery, biopsy techniques, and excisional surgery with appropriate closures, including flaps and grafts when indicated.

c. The practice of dermatology is concerned with both ambulatory and hospitalized patients. It is essential that an active outpatient service furnish sufficient clinical material representing the broad array of diseases seen by the dermatologist. Suitable facilities that permit the use of modern diagnostic and therapeutic techniques in the care of these patients should be provided. Inpatient, daycare, or extended care facilities are also essential so that residents may have the opportunity to treat the more serious cutaneous diseases on a daily basis and observe the dermatologic manifestations of systemic disease. Properly supervised experience with appropriate follow-up in the provision of consultation to other services whose patients manifest skin diseases as secondary diagnosis is also necessary. The keeping of complete and accurate consultation records within the dermatology unit should be emphasized throughout this phase of the training. Space and equipment should be provided to permit instruction in dermatologic surgery, electrosurgery, phototherapy, cryosurgery, application of topical medicaments and dressings, and appropriate epicutaneous and intradermal testing, phototesting, and other diagnostic procedures.

d. During training it is necessary for trainees to gain an understanding of many diagnostic procedures and therapeutic techniques, even though they may not personally perform them. Residents should become familiar with hair transplantation, dermabrasion, sclerotherapy, laser resurfacing, liposuction, chemical peel and tissue augmentation. In addition, residents should gain experience with Mohs micrographic surgery. The physical modalities are especially notable, since an understanding of the basic properties of the electromagnetic spectrum is needed for the resident to become knowledgeable about the effects of various forms of this energy in the cause of disease and about their use in dermatologic diagnosis and therapy. Electron beam, x-ray, and laser are among these modalities. Even if some of these modalities are unavailable within a training unit, it is still an obligation of the director to assure that the trainee has received appropriate instruction

concerning the disease implication and therapeutic application of these energy sources.

- e. Training must be provided in cutaneous allergy and immunology and sexually transmitted diseases. Training should also be provided in appropriate aspects of environmental and industrial medicine, internal medicine, obstetrics and gynecology, ophthalmology, otolaryngology, pathology, pediatrics, physical medicine, preventive medicine, psychiatry, radiology, and surgery.
- f. Experience in the teaching of dermatology to other residents, medical students, nurses, and/or allied health personnel is an important element of the residency program. In addition, trainees should, when possible, be given selected administrative responsibility commensurate with their interests, abilities, and qualifications.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate

supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not inter-

with the ability of the resident to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations

should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Dermatology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: February 2002 Effective: July 2002
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Dermatopathology (Dermatology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Subspecialty

1. Dermatopathology is the subspecialty of dermatology and pathology that is concerned with the study and diagnosis of diseases of the skin and adjacent mucous membranes, cutaneous append-

ages, hair, nails and subcutaneous tissues by histological, histochemical, immunological, ultrastructural, molecular, microbiological, and other related techniques.

2. Graduate medical education programs in dermatopathology must provide an organized educational experience for qualified physicians seeking to acquire the additional competence of a dermatopathologist.
3. Programs must provide organized education in all current aspects of dermatopathology, including basic science, laboratory procedures, laboratory management, quality assurance, and self-assessment.
4. The dermatopathology program must be an equal and joint function of the Department of Dermatology and of the Department of Pathology in the sponsoring institution that has an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in Dermatology and an ACGME-accredited residency in Anatomic Pathology (AP-3) or Anatomic and Clinical Pathology (APCP-4).

B. Duration and Scope of Education

1. Dermatopathology programs must offer 12 months of education subsequent to the satisfactory completion of an ACGME-accredited residency in either dermatology or pathology.
2. For all dermatopathology fellows, 50% of their education should be devoted to the study of dermatopathology as outlined in II.A.1. For those who have completed a pathology residency, 50% of the 1-year program should be education in clinical dermatology provided by the dermatology teaching staff. For those who have completed a dermatology residency, 50% of the program should be education in anatomic pathology provided by the pathology teaching staff.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a

change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.

2. The Program Director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows, and the maintenance of records related to program accreditation, as well as for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership, and must devote sufficient time to the program to ensure the implementation of sound administrative practices and the provision of adequate facilities, teaching staff, fellow staff, and educational resource materials.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in Dermatopathology by the American Board of Dermatology or the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
 - e) The director must have at least 5 years of experience (following fellowship) in the practice of dermatopathology.
 - f) The director must have had experience as a teacher and/or administrator in a dermatopathology or related program
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications in

dermatopathology to instruct and supervise adequately all fellows in the program.

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Dermatology or the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

1. The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.
2. Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. There must be ample case material and supporting facilities to meet the training requirements in dermatopathology, dermatology, and pathology. Each dermatopathology fellow should examine at least 5,000 dermatopathology specimens (i.e., inhouse or referred specimens in the institution's accessions file for which reports are generated.)

3. There must be adequate equipment, laboratory space, office facilities, meeting rooms, classrooms, and research space to support service, teaching, and educational responsibilities.
4. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
5. Fellows must have ready access to a major medical library either at the institution where the fellows are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a fellowship program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Fellows appointed to an ACGME-accredited dermatopathology fellowship must have completed an ACGME-accredited residency in Anatomic Pathology (AP-3), Anatomic Pathology/Clinical Pathology (AP/CP-4), or Dermatology.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also pro-

vide fellows with direct experience in progressive responsibility for patient management.

1. Didactic Components

- a. Lectures, tutorials, seminars, and conferences with clinical services must be regularly scheduled and held.
- b. Instruction should include the use of and access to study sets and files of usual and unusual cases and other educational resources (e.g., the internet, etc.).

2. Clinical Components

- a. Fellows must actively participate in the review and diagnosis of current dermatopathological specimens on a daily basis. This experience must extend throughout the 12 months of accredited education and must be equivalent in quantity and quality for all fellows.
- b. The program must include didactic instruction and practical experience in the diagnosis of skin disorders by direct inspection, and by histological techniques (including frozen sections and interpretation of Mohs micrographic frozen sections), histochemical, immunological, molecular, microbiological, and other related techniques.
- c. Dermatopathology fellows must be given clearly defined assignments and increasing responsibility as they progress through the program.
- d. The program must provide a sufficient volume and variety of dermatopathology specimens (at least 5,000 new accessions per fellow per year) and other educational material for the fellow to acquire the qualifications of a consultant in dermatopathology.
- e. The program must provide the fellow with the experience required to set up and to operate a dermatopathology laboratory and to supervise and train laboratory personnel.
- f. All dermatopathology fellows should participate in patient examination appropriate to dermatopathology. Fellows who are pathologists must participate in the examination of at least 1,000 dermatology patients.
- g. Dermatopathology fellows who are dermatologists must have exposure to surgical pathology. This experience should emphasize contemporary diagnostic techniques and require attendance at surgical pathology conferences, and the review of slide sets of diseases relevant to dermatopathology. Participation in autopsies appropriate to dermatopathology is desirable.

C. Fellows Scholarly Activities

1. Each program must provide an opportunity for fellows to participate in dermatopathologic research or other scholarly activities, and fellows must participate actively in such scholarly activities.
2. Fellows should have the opportunity to become involved in the teaching of dermatopathology.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided

with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly

activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Dermatology or the American Board of Pathology should communicate with their respective boards regarding the full requirements for certification.

*ACGME: February 2002 Effective: July 2002
Editorial Revision: March 2004*

Program Requirements for Graduate Medical Education in Procedural Dermatology (Dermatology)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of subspecialty

Procedural Dermatology is the subspecialty within dermatology that is concerned with the study, diagnosis, and surgical treatment of

diseases of the skin and adjacent mucous membranes, cutaneous appendages, hair, nails, and subcutaneous tissue. Dermatologic surgical procedures are minimally invasive and may be safely performed in outpatient settings without general anesthesia or other intravascular physiologic alteration. An especially important technique is Mohs micrographic surgical excision, which is used for certain cancers of the skin and incorporates training in clinical dermatology and dermatopathology as they apply to dermatologic surgery. In addition, cutaneous reconstruction of surgical defects, sclerotherapy, chemical peel, hair transplantation, dermabrasion, small-volume liposuction, cutaneous soft tissue augmentation with injectable filler material, rhinophyma correction, and laser surgery are important components of these fellowships.

B. Duration and scope of education

1. Procedural Dermatology fellowships will be accredited to offer 12 months of education and experience subsequent to the satisfactory completion of an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in Dermatology, when all residents are required to develop initial competence in dermatologic surgery.
2. Graduate medical education programs in procedural dermatology must provide an organized, systematic, and progressive educational experience for physicians seeking to acquire advanced competence as a dermatologic surgeon.
3. Programs must provide organized education in all current aspects of procedural dermatology, including basic science, anatomy, anesthesia, ethics, pre- and post-operative management, surgical technique, wound healing, Mohs micrographic surgery, laboratory technique, interpretation of pathologic specimens related to Mohs micrographic surgery, cutaneous reconstruction of surgical defects, sclerotherapy, chemical peel, hair transplantation, dermabrasion, small-volume liposuction, cutaneous soft tissue augmentation with injectable filler material, rhinophyma correction cutaneous oncology, laser surgery, epidemiology, medicolegal and regulatory issues, quality assurance, and self-assessment.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. Most procedural dermatology fellowships will be sponsored by institutions that also sponsor ACGME-accredited residency programs in dermatology. Programs that are not affiliated with a dermatology residency will also be eligible for accreditation if they are able to document compliance with the ACGME's Institutional Requirements as well as those for Procedural Dermatology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;

- b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
- c) specify the duration and content of the educational experience; and
- d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Dermatology, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) Have completed a formal, 12-month PGY-5 fellowship in dermatologic surgery or appropriate clinical experience.
 - e) Have at least five years of patient care experience as a dermatologist and dermatologic surgeon.
 - f) Have at least five years of experience as a teacher in graduate medical education in dermatology and dermatologic surgery as well as an ongoing clinical practice in dermatologic surgery.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e) Committing sufficient time (at least 20 hours a week) to the administrative and teaching tasks inherent in achieving the educational goals of the program.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
 - a. All programs should have at least two faculty who are actively involved in the clinical practice of procedural dermatology and have significant responsibility for the instruction and supervision of all fellows during the 12 months of accredited education.
 - b. In the short-term absence of the program director, one member of the teaching staff must assume the responsibility for the direction of the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field. Members of the teaching staff who have responsibility for fellow education in Mohs micrographic surgery must have completed a 12-month PGY-5 dermatologic surgery fellowship or have appropriate clinical experience.
 - b) The physician faculty must be certified in the specialty by the American Board of Dermatology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

1. Additional necessary professional, technical, and clerical personnel must be provided to support the program.
2. As the care of patients with skin diseases involves collaboration with other specialties, fellows must have an opportunity to work with health care personnel from Dermatology, Dermatopathology, Medical Oncology, Pathology, and Radiation Therapy. Fellow experience would be enhanced by interaction with General Surgery, Ophthalmology, Orthopaedic Surgery, Otolaryngology, Plastic Surgery, Podiatry, and Prosthetics.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. Adequate space should be dedicated to the performance of dermatologic surgery procedures; this must include a Mohs micrographic frozen section laboratory and examination areas for surgical patients.
3. The frozen section laboratory should be in close proximity to the operating suite or rooms in which dermatologic surgery is performed. The technician must be proficient in performing histologic sections.
4. Program laboratories should be in compliance with all federal, state and local regulations regarding a work environment (e.g., OSHA and CLIA).
5. There should be appropriate space for fellows to read, study, and complete their paperwork.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.
2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic components

a. Programs must be structured so that fellows are involved in procedural dermatology throughout the year and must include the systematic study of the body of knowledge which dermatologists have utilized in the development of surgical procedures that may be safely performed in an outpatient setting to treat disorders of the integumentary system. In particular, evaluation and surgical intervention for skin disease is based on an advanced understanding of cutaneous structure and function, cutaneous pathophysiology, clinical dermatology, and clinical dermatopathology as they are related to dermatologic surgery procedures. Procedural dermatology is broadly categorized into the following three areas:

- (1) *Cutaneous oncologic surgery* incorporates medical, surgical, and dermatopathological knowledge of cutaneous neoplasms. The fellow is expected to develop in-depth knowledge and abilities in the clinical diagnosis, biology, and pathology of skin tumors as well as laboratory interpretation related to surgical treatment. Further, they must become skilled at the early identification of benign premalignant and malignant skin lesions through morphologic recognition visually as well as with the use of tools such as Woods lamp examination, epiluminescent microscopy and confocal microscopy.
- (2) *Cutaneous reconstructive surgery* includes the repair of skin defects that result from the surgical removal of tumors or other skin disease and scar revision, and is based upon a knowledge of cutaneous wound healing and repair techniques.
- (3) *Cutaneous cosmetic surgery* incorporates medical, surgical, and dermatopathologic knowledge of cutaneous disorders and the aging of the skin. It focuses on the study and performance of procedures that have been developed by dermatologists to improve the appearance of the skin and control cutaneous disease.

b. Fellows must also expand their knowledge of related disciplines such as surgical anatomy, sterilization of equipment, aseptic technique, anesthesia (including preoperative sedation, local and regional anesthesia, and indications for conscious sedation and general anesthesia), closure materials (sutures, staples), and instrumentation. Appropriate evaluation and management skills must be mastered for all cutaneous surgical patients regardless of diagnosis, including preoperative, perioperative, and postoperative evaluation. Training with certification in advanced cardiopulmonary resuscitation is required. Training in wound healing, including basic science, clinical aspects, and the use of specialized wound dressings appropriate to the clinical problem must be provided.

c. Lectures, tutorials, seminars, and conferences with clinical services must be regularly scheduled and held. There must be systematic study of the body of knowledge upon which

dermatologic surgical procedures are based as well as the review of study materials and files of usual and unusual cases.

2. Clinical components

a. Surgical Volume

The program must provide a sufficient volume and variety of surgical cases for the fellow to acquire the experience of a subspecialist in procedural dermatology. Program faculty must collectively perform at least 1000 dermatologic surgical procedures per fellow per year. At least 500 of that minimum total must be Mohs micrographic excisions per fellow per year.

b. Selection and Referral of Patients

The program must be designed to ensure that fellows develop an advanced competence in the identification of patients whose conditions should be treated by minimally invasive dermatologic surgical procedures and others, such as those requiring general anesthesia, who should be referred to other specialists such as ophthalmologists, orthopaedic surgeons, general surgeons, otolaryngologists, or plastic surgeons, who typically use techniques that are more invasive and are designed to treat diseases and conditions involving cartilage, bone, muscle, vessels, and nerves as well as skin.

c. Procedural Skills

The program must be designed to ensure that all fellows develop advanced skills in the performance of destruction techniques (electrosurgical, cryosurgical, chemical, and laser), excision (of skin cancers, warts, and other skin lesions followed by a layered closure), and Mohs micrographic surgery (for removal of basal cell and squamous cell carcinomas). In addition, the educational program should include instruction in hair transplantation (typically a staged procedure of grafts containing 1 to 15 hairs during a session that includes 50 to 500 grafts), skin rejuvenation techniques (to remove wrinkles or age spots using dermabrasion, chemical peel, laser resurfacing, or rhinophyma correction), laser surgery (typically for removal of a wart, tattoo, or port wine stain), laser phototherapy, nail surgery (typically to remove a nail, destroy the nail matrix, or perform a biopsy), small-volume tumescent liposuction, cutaneous soft tissue augmentation with injectable filler material, and sclerotherapy (injection of fluids into vessels typically less than 1 mm in diameter in the leg).

- (1) A knowledge of the principles of and the provision of practical training in electrosurgery for benign and malignant lesions (electrocoagulation, electrofulguration, electrodesiccation, electrosection, electrocautery), cryosurgery, curettage and electrosurgery, scalpel surgery, and Mohs micrographic surgery are mandatory. Experience in staged reconstruction techniques, chemical destructive techniques, nail surgery, grafts, local flaps, sclerotherapy, laser surgery, wedge excision (lip and ear), and closures is also required.
- (2) Procedures of an aesthetic nature should be taught. This component of the program should include cutaneous soft tissue augmentation with injectable filler material, small-volume tumescent liposuction and fat transplantation, hair replacement surgery, skin resurfacing techniques, and cosmetic laser procedures (e.g., methods of scar revision or elimination of congenital skin defects).
- (3) The program must provide training in Mohs micrographic surgery, as employed in the management of complicated cancers of the skin. This technique has special importance since it requires both surgical skill and expertise in dermatopathology and in the laboratory methods utilized for the preparation of tissue specimens. Fellow experience in Mohs surgery must include treatment of aggressive tu-

mors, large tumors, tumors arising in difficult anatomic sites (ear, eyelid, nose, lips), tumors requiring complex histopathologic interpretation, basal cell or squamous cell carcinoma that has spread from skin to contiguous tissues, tumors requiring multiple stages of excision, recurrent tumors, tumors for which management requires the involvement of colleagues from other specialties, and tumors in patients with complex medical problems requiring special intraoperative management.

- (4) The reconstruction of defects following Mohs micrographic surgery or other excisions should be given special attention. The fellows must become competent in cutaneous reconstructive surgery including random pattern axial flap repair, grafting techniques, and staged reconstructive techniques. However, some cases will be quite complex and fellows should learn when the assistance of (or referral to) colleagues from other specialties will be necessary.

d. Laboratory Management

The program must provide the fellow with the experience required to set up and operate a frozen section laboratory capable of processing sections for Mohs micrographic surgery and to supervise and train laboratory personnel.

e. Quality Assurance Activities and Documentation

- (1) There should be an ongoing quality assurance program.
- (2) Documentation of cases and complications in a case log for departmental files and the personal files of all fellows is required. There should be regularly scheduled conferences to consider complications and outcomes and utilization review.
- (3) There should be documentation of the fellows' surgical experience. This should include a case log with operative reports and pre- and postoperative photographs in appropriate cases. The surgical director should review and confirm the operative experience records of all fellows.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because graduate medical education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation**A. Fellow****1. Formative Evaluation**

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effec-

tiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

ACGME: February 2003 Effective: February 2003
Editorial Revision: June 2004

Program Requirements for Residency Education in Emergency Medicine

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Residencies in emergency medicine are designed to prepare physicians for the practice of emergency medicine. These programs must teach the fundamental skills, knowledge, and humanistic qualities that constitute the foundations of emergency medicine practice and provide progressive responsibility for and experience in the application of these principles to enable effective management of clinical problems. Equal opportunity must be provided for the residents, under the guidance and supervision of a qualified faculty, to develop a satisfactory level of clinical maturity, judgment, and technical skill. On completion of the program, residents should be capable of practicing emergency medicine, able to incorporate new skills and knowledge during their careers, and able to monitor their own physical and mental well being and that of others.

B. Duration and Scope of Education

1. The required length of an emergency medicine residency is 36 months in a curriculum under the control of the emergency medicine program director. Accreditation by the Accreditation Council for Graduate Medical Education (ACGME) is required for all years of the educational program.
2. Before entry into the program, each resident must be notified in writing of the required length of the program. This period may not be changed for a particular resident during his or her program unless there is a significant break in his or her education, or the resident needs remedial education.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions. The sponsoring institution must provide evidence of commitment to graduate medical education, including emergency medicine. While it is recognized that the practice of emergency medicine occurs within a variety of organizational structures, the administrative and academic structure must be organized in a way that facilitates the provision of an adequate educational experience. There must be evidence of an adequate financial commitment to the program.

B. Participating Institutions

1. Assignments to participating institutions must be based on a clear educational rationale, integral to the program curriculum, must have clearly-stated activities and objectives and should provide resources not otherwise available to the program. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:

- a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
- e. such a letter of agreement for Emergency Medicine should also describe resources and facilities in the institution(s) that will be available to residents, including but not limited to library and medical records;
 - f. explain the relationship that will exist between emergency medicine residents and residents and faculty in other programs;
 - g. and, for emergency medicine rotations, identify the physician responsible under the authority of the program director for the teaching and supervision of emergency medicine residents.
3. The program should be based at a primary hospital (hereafter referred to as the *primary clinical site*). More of the didactic and clinical experiences should take place at the primary clinical site than at any other single site. Educationally justified exceptions to this requirement will be considered.
 4. Programs using multiple hospitals must ensure the provision of a unified educational experience for the residents. Each affiliated institution must offer significant educational opportunities to the overall program. The reasons for including each institution must be stated.
 5. To maintain program cohesion, continuity, and critical mass, as well as to reduce stress on the residents and their families, mandated rotations to affiliated institutions that are geographically distant from the sponsoring institution are acceptable only if they offer special resources or a rural EM experience, unavailable locally, that significantly augment the overall educational experience of the program.
 6. The number and geographic distribution of participating institutions must not preclude the satisfactory participation by all residents in conferences and other educational exercises.

C. Affiliation Agreements

1. When there is a cooperative educational effort involving multiple institutions, the commitment of each institution to the program must be made explicit in an affiliation agreement with each institution that conforms to ACGME Institutional Requirements.

D. Medical School Affiliation

Medical school affiliation is desirable. When a medical school affiliation is present, there must be a written affiliation agreement or a letter of understanding which documents the duties and responsibilities of both the medical school and the program. Program core faculty should have appropriate faculty appointments at the medical school.

E. Facilities and Resources

In every hospital in which the emergency department is used as a training site, the following must be provided; exceptions for rotations in rural settings will be considered with appropriate educational justification:

1. adequate space for patient care;
2. adequate space for clinical support services;
3. laboratory and diagnostic imaging results returned on a timely basis; (especially those required on a STAT basis)

4. adequate program support space, including office space for faculty and residents;
5. current medical library resources, including access to appropriate informational resources and medical databases in the emergency department. In addition, residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions; there services should include the electronic retrieval of information from medical databases;
6. adequate and readily accessible instructional space;
7. information systems; and,
8. appropriate security services and systems to ensure a safe working environment.

F. Clinical Services

1. Clinical support services must be provided on a 24-hour basis. These services must be adequate to meet reasonable and expected demands and must include nursing, clerical, intravenous, EKG, respiratory therapy, messenger/transporter, and phlebotomy services.
2. The hospital must assure that all clinical specialty and subspecialty services are available in a timely manner for emergency department consultation and hospital admission. Clinical services should include, but are not limited to, internal medicine and its subspecialties, surgery and its subspecialties, pediatrics and its subspecialties, orthopedics, obstetrics and gynecology. If any clinical services are not available for consultation or admission, the hospital must have a written protocol for provision of these services elsewhere. This may include written agreements for the transfer of these patients to a designated hospital that provides the needed clinical service.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
 2. The program director together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide continuity of leadership. Frequent changes in leadership or long periods of temporary leadership may adversely affect the accreditation status of the program.
 3. Qualifications of the Program Director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Emergency Medicine, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. The program director must function within a sound administrative organizational framework, and have an effective program faculty; both are essential elements of an approved residency program.
 - e. The program director must be a member of the program's core teaching faculty.
 - f. The program director must have at least three years' experience as a clinician, administrator, and educator in emergency medicine.
 - g. The program director must not work more than 20 hours per week clinically, on average, or 960 clinical hours per year.
 - h. The program director must be active full time in emergency medicine, be clinically active, devote sufficient time and effort to the program to provide day-to-day continuity of leadership, and fulfill all of the responsibilities inherent in meeting the educational goals of the program.
 - i. The program director must demonstrate leadership qualities and the capability to mentor emergency medicine residents.
 - j. The program director must demonstrate active involvement in
 - 1) continuing emergency medicine education,
 - 2) state, regional, or national societies; and,
 - 3) presentations, publications, and other scholarly activities.
 - k. The program director must have appropriate authority to oversee and to organize the activities of the educational program, including but not limited to:
 - 1) supervision, direction and administration of the educational activities;
 - 2) evaluation of the residents and residency program; and,
 - 3) participation in the evaluation of faculty.
4. Responsibilities of the Program Director are as follows:
- a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution to which residents rotate for 4 months or longer;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement (prior approval is not required for temporary changes in resident numbers due to makeup or remedial time for currently enrolled residents or to fill vacancies at the same level of education in which the vacancy occurs);
 - e. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
 - f. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members

of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.

- g. Regular evaluation of the residents' knowledge, skill and overall performance.
- h. Provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. Members of the faculty of the emergency medicine program must be able to devote sufficient time to meet their supervisory and teaching responsibilities. To ensure a sufficient number of faculty to provide adequate on-line 24-hour emergency department attending staff supervision and participation in ongoing scholarly activity and research in support of the emergency medicine residents, there must be a minimum of one core physician faculty member for every three residents in the program. When the total resident complement exceeds 30, the faculty-resident ratio of one core faculty member for every three residents may be altered with appropriate educational justification.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member. A core physician faculty member, a member of the program faculty, is one who provides clinical service and teaching, devotes the majority of his or her professional efforts to the program and has sufficient time protected from direct service responsibilities to meet the educational requirements of the program. To this end, core faculty should not average more than 28 clinical hours per week, or 1344 clinical hours per year.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Emergency Medicine or possess qualifications judged to be acceptable by the RRC. *This standard applies to all core physician program faculty and to other attending staff hired to provide resident supervision in any emergency department where emergency medicine residents rotate.*
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
 - d. The physician faculty for emergency medicine must show evidence of participation in a spectrum of professional activities within the institution, as well as within local, state, regional, and national associations.
 - e. The physician faculty for emergency medicine must be engaged in research and have protected time and adequate support services to accomplish these tasks.
 - f. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and

an active research component must be included in each program. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. Adequate resources for scholarly activities for faculty and residents must be available. The program as a whole must demonstrate broad involvement in scholarly activities. All core faculty must be involved in continuing scholarly activity. **Scholarship is defined as the following:**

- a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings;
 - d. Active participation in regional or national professional and scientific societies;
 - e. Editorial review services, such as serving on editorial boards or serving as a reviewer for peer-reviewed publications;
 - f. Abstract or grant review services;
5. Qualifications of nonphysician faculty are as follows:
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.
 6. Core Faculty Development
Each program should encourage the academic growth of its core faculty. Faculty development opportunities should be made available to each core faculty member.
 7. Chair/Chief of Emergency Medicine
The chair/chief of emergency medicine shall
 - a. be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.);
 - b. be a member of the program's core teaching faculty;
 - c. be qualified and have at least three years' experience as a clinician, administrator, and educator in emergency medicine;
 - d. be certified in emergency medicine by the American Board of Emergency Medicine or have possess appropriate qualifications judged to be acceptable by the RRC;
 - e. demonstrate active involvement in emergency medicine through:
 - 1) continuing medical education,
 - 2) professional societies, and
 - 3) scholarly activities, and
 - f. demonstrate leadership qualities and be capable of mentoring faculty, residents, administrators, and other health care professionals.
- ## C. Other Program Personnel
- Additional necessary professional, technical, and clerical must be provided to support the program.
1. A member of the program faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
 2. The program faculty must be organized and have regular documented meetings in order to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

- The program faculty members should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support for the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

The sponsoring institution for emergency medicine education must have a major educational commitment as evidenced by training programs in other major specialties. The program must demonstrate the availability of educational resources in other specialties for the training of emergency medicine residents. A lack of such resources will adversely affect the accreditation status of the program.

IV. Resident Appointment

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, faculty to resident ratio, institutional funding, and the quality of faculty teaching. In addition, the RRC will consider the number of core and total faculty, faculty clinical supervision, patient acuity, and clinical experience with procedures and resuscitations.

- There should be a minimum of six residents per year of training to achieve a major impact in the emergency department, to ensure meaningful attendance at emergency medicine conferences, to provide for progressive responsibility, and to foster a sense of residency program and departmental identity. Exceptions to these standards will require justification based on sound educational principles and must demonstrate substantial compliance with the intent of this requirement.
- The program should request a number or range (minimum-maximum) of emergency medicine residents per year. The RRC will approve a range (minimum-maximum) or number of residents per year based on the educational resources of the program.

C. Resident Transfers

To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six core areas described in the Program Requirements, prior to acceptance into the program. A program director is required to provide verification of residency education for any residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

3. Role of Program Director and Faculty

The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Organization and Structure

a. Patient Population

- There must be an adequate number of patients of all ages and both sexes with a wide variety of clinical problems to provide a patient population sufficient to meet the educational needs of emergency medicine residents and other residents who are assigned for training in emergency medicine. The primary clinical site and other emergency departments where residents rotate for 4 months or longer should have at least 30,000 emergency department visits annually. Educationally justifiable exceptions will be considered, such as clinical sites in a rural setting.
- Pediatric experience, defined as the care of patients less than 18 years of age, should be at least 16% of all resident emergency department encounters, or 4 months of full-time-equivalent experience dedicated to the care of infants and children. The program can balance a deficit of patients by offering dedicated rotations in the care of infants and children. The formula for achieving this balance is a 1-month rotation equals 4% of patients. Although this experience should include the critical care of infants and children, at least 50% of the 4 months should be in an emergency setting.
- The number of critically ill or critically injured patients treated in aggregate by the residents at the primary clinical site should be significant, constituting at least 3% or 1,200 of the emergency department patients per year (whichever is greater) who are admitted to monitored care settings, operative care or the morgue following treatment in the emergency department. Additional critical care experience is required during off-service rotations.

2. Curriculum

- The program director must provide each resident and member of the faculty, in writing and in advance of the experience, a

comprehensive curriculum specific to the educational needs of the emergency medicine resident and designed to accomplish the defined goals and core competencies of the emergency medicine training program. The curriculum shall be readily available for review.

- b. The curriculum must include didactic and clinical information to enable the residents to achieve the goals and competencies of the training program. These include knowledge and skill-based competencies as listed in the Model of the Clinical Practice of Emergency Medicine (www.acgme.org) that include, but are not limited to, signs, symptoms, and presentations; abdominal and gastrointestinal disorders; cardiovascular disorders; cutaneous disorders; endocrine, metabolic and nutritional disorders; environmental disorders; head, ear, eye, nose, throat disorders; hematologic disorders; immune system disorders; systemic infectious disorders; musculoskeletal disorders (nontraumatic); nervous system disorders; obstetrics and gynecology; psychobehavioral disorders; renal and urogenital disorders; thoracic-respiratory disorders; toxicologic disorders; and traumatic disorders.
- c. The curriculum must include measurable competency objectives for each year of training, a description of how the objectives will be assessed and remediated when necessary. Measurable objectives should also be developed for each non-EM rotation with assessment tools described.

C. Resident Scholarly Activities: Provision of support for resident participation in scholarly activities.

- 1) Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.
- 2) The curriculum should include resident experience in scholarly activity prior to completion of the program. Some examples of suitable resident scholarly activities are the preparation of a scholarly paper such as a collective review or case report, active participation in a research project, or formulation and implementation of an original research project; and,
- 3) Residents must be taught an understanding of basic research methodologies, statistical analysis, and critical analysis of current medical literature.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

D. ACGME Core Competencies

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following competency objectives are met:

1. **Patient Care:** Residents must be able to provide patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health. Among other things, residents are expected to:
 - a. Gather accurate, essential information in a timely manner.
 - b. Generate an appropriate differential diagnosis
 - c. Implement an effective patient management plan.
 - d. Competently perform the diagnostic and therapeutic procedures and emergency stabilization.

- e. Prioritize and stabilize multiple patients and perform other responsibilities simultaneously.
- f. Provide health care services aimed at preventing health problems or maintaining health.
- g. Work with health care professionals to provide patient-focused care.

2. **Medical Knowledge:** Residents must demonstrate knowledge about established and evolving biomedical, clinical, and cognate (e.g. epidemiological and social-behavioral) sciences and the application of this knowledge to patient care. Among other things, residents are expected to:

- a. Identify life-threatening conditions, the most likely diagnosis, synthesize acquired patient data, and identify how and when to access current medical information
- b. Properly sequence critical actions for patient care and generate a differential diagnosis for an undifferentiated patient
- c. Complete disposition of patients using available resources

3. **Practice-Based Learning:** Residents must be able to investigate and evaluate their patient care practices, appraise and assimilate scientific evidence, and improve their patient care practices. Among other things, residents are expected to:

- a. Analyze and assess their practice experience and perform practice-based improvement
- b. Locate, appraise and utilize scientific evidence related to their patient's health problems
- c. Apply knowledge of study design and statistical methods to critically appraise the medical literature
- d. Utilize information technology to enhance their education and improve patient care
- e. Facilitate the learning of students and other health care professionals

4. **Interpersonal and Communication Skills:** Residents must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with patients, their families and professional associates. Among other things, residents are expected to:

- a. Develop an effective therapeutic relationship with patients and their families, with respect for diversity and cultural, ethnic, spiritual, emotional, and age-specific differences
- b. Demonstrate effective participation in and leadership of the health care team
- c. Develop effective written communication skills
- d. Demonstrate the ability to handle situations unique to the practice of emergency medicine
- e. Effectively communicate with out-of-hospital personnel as well as non-medical personnel

5. **Professionalism:** Residents must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population. Residents are expected to demonstrate a set of model behaviors that include but are not limited to:

- a. Treats patients/family/staff/paraprofessional personnel with respect
- b. Protects staff/family/patient's interests/confidentiality
- c. Demonstrates sensitivity to patient's pain, emotional state, and gender/ethnicity issues,
- d. Able to discuss death honestly, sensitively, patiently, and compassionately
- e. Unconditional positive regard for the patient, family, staff, and consultants
- f. Accepts responsibility/accountability
- g. Openness and responsiveness to the comments of other team members, patients, families, and peers

6. Systems-Based Practice: Residents must demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value. Among other things, residents are expected to:

- a. Understand, access, appropriately utilize, and evaluate the effectiveness of the resources, providers, and systems necessary to provide optimal emergency care
- b. Understand different medical practice models and delivery systems and how to best utilize them to care for the individual patient
- c. Practice cost-effective health care and resource allocation that does not compromise quality of care
- d. Advocate for and facilitates patients' advancement through the health care system.

E. Planned Educational Experiences

1. Each program must offer its residents an average of at least 5 hours per week of planned educational experiences (not including change of shift report) developed by the emergency medicine residency program.
2. The program should ensure that residents are relieved of clinical duties to attend these planned educational experiences. Although release from some off-service rotations may not be possible, the program should require that each resident participate in at least 70% of the planned emergency medicine educational experiences offered (excluding vacations). Attendance should be monitored and documented.
3. These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administrative seminars, and research methods. They may include but are not limited to problem-based learning, evidence-based learning, laboratories, and computer-based instruction, as well as joint conferences cosponsored with other disciplines. The Committee will consider the use of alternative methods of education, such as interactive conferencing, with appropriate educational justification.
4. Emergency medicine faculty are expected to attend and meaningfully participate in these planned educational experiences. Participation in resident conferences should be one component in the annual evaluation of the core emergency medicine faculty.
5. The curriculum must include at least 2 months of inpatient critical care rotations, during which the residents should have decision-making experience that allows them to develop the skills and judgment necessary to manage critically ill and injured patients who present to the emergency department.
6. The program must assure that the residents follow-up on a representative sample of patients so as to learn about the results of diagnostic studies, the outcome of interventions, and the final patient diagnosis.
7. Of the total educational experience, no less than 50% should take place under the supervision of emergency medicine faculty. Such experiences can include emergency medical services, toxicology, pediatric emergency medicine, sports medicine, emergency medicine administration, and research in emergency medicine.
8. **Out-of-Hospital Care**
Since out-of-hospital care is an integral and vital part of emergency medicine, there must be a formal, structured resident experience. This should include: participation in paramedic base station communications; emergency transportation and care in the field, including ground units and if possible air ambulance units; teaching and oversight of out-of-hospital personnel; and disaster planning and drills. If residents are required to ride in

ground or air ambulance units, they must be notified of this requirement during the resident recruitment process.

9. Resuscitations and Procedures

Each resident must have sufficient opportunities to perform invasive procedures, monitor unstable patients and direct major resuscitations of all types on all age groups. A major resuscitation is patient care for which prolonged physician attention is needed and interventions such as defibrillation, cardiac pacing, treatment of shock, intravenous use of drugs (e.g., thrombolytics, vasopressors, neuromuscular blocking agents), or invasive procedures (e.g., cut downs, central line insertion, tube thoracostomy, endotracheal intubations) that are necessary for stabilization and treatment. The resident must have the opportunity to make admission recommendations and direct resuscitations.

- a. Programs must maintain a record of all major resuscitations and procedures performed by each resident. The record must document their role, i.e., participant or director; the type of procedure(s); and age of patient. Only one resident may be credited with the direction of each resuscitation and the performance of each procedure.
- b. These records should be verified by the residency director and should be the basis for documenting the total number of resuscitations and procedures in the program. They should be available for review by the site visitor and the Residency Review Committee.

10. Systems-Based Practices and Performance Improvement

Each resident must actively participate in emergency department continuous performance quality improvement (PI) programs. Program components should include

- a. basic principles and application of PI;
- b. formal regular clinical discussions, rounds, and conferences that provide critical review of patient care and promote PI and quality care, such as mortality and morbidity conferences that analyze system factors in medical errors. Efforts should be made to gain permission for postmortem examinations to review the results of these examinations;
- c. evidence of development, implementation and assessment of a project to improve care, such as a clinical pathway, a patient satisfaction survey, or improvement of a recognized problem area.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. **All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.**
2. **Faculty schedules must be structured to provide residents with continuous supervision and consultation.**

3. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

4. All residents within the emergency department must be under the supervision of qualified emergency medicine faculty in the emergency department at all times, except when residents from other services provide supervised care to patients on their service. In such circumstances, they must be supervised by emergency medicine faculty or by faculty from their services.
5. Sufficient faculty must be present to provide supervision appropriate to the care of each patient.
6. All residents assigned to the emergency department must have supervision commensurate to their level of training.
7. Allied health professionals, such as physician assistants and nurse practitioners must not compromise the educational objectives of the emergency medicine program by diluting the training experience or preventing appropriate progressive responsibility for the emergency medicine residents.
8. The program director should ensure that all emergency medicine residents, while on rotation on other services, are appropriately supervised and are provided with an educational experience equivalent to that of an ACGME-approved residency in that specialty.
9. The program director must ensure that the degree of professional responsibility accorded to a resident is progressively increased through the course of training commensurate with skill and experience. Included should be opportunities to develop clinical and administrative judgment in the areas of patient care, teaching, administration, and leadership.

10. Fellowships

Programs must notify the RRC if they sponsor any emergency medicine-related fellowships within institutions participating in the program. Documentation must be provided describing the fellowship's relationship to and impact on the residency.

- a. The appointment of other individuals for special training or education, such as fellows, must not dilute or detract from the educational opportunities of regularly appointed emergency medicine residents.
- b. Addition or integration of such individuals into an existing residency program requires a clear statement of the areas of education, clinical responsibilities, duration of training, and overall impact on the educational needs of existing emergency medicine residents.

B. Duty Hours

1. **Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both in-patient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.**
2. **Emergency medicine rotations**
 - a. As a minimum, residents shall be allowed an average of 1 full day in 7 days away from the institution and free of any clinical or academic responsibilities, including planned educational experiences.
 - b. While on duty in the emergency department, residents may not work longer than 12 continuous scheduled hours. There must be at least an equivalent period of continuous time off between scheduled work periods.
 - c. A resident should not work more than 60 scheduled hours per week seeing patients in the emergency department and no more than 72 duty hours per week. Duty hours comprise all

clinical duty time and conferences, whether spent within or outside the educational program, including all on-call hours.

3. **Non-Emergency Department Rotations**
 - a. For rotations on other services, **duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.**
 - b. **Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.**
 - c. **Adequate time for rest and personal activities must be provided. This should consist of a 10 hour time period provided between all daily duty periods and after in-house call.**

C. On-Call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

1. **In-house call must occur no more frequently than every third night, averaged over a four-week period.**
2. **Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to six additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care as defined in Specialty and Subspecialty Program Requirements.**
3. **No new patients, as defined in Specialty and Subspecialty Program Requirements, may be accepted after 24 hours of continuous duty.**
4. **At-home call (pager call) is defined as call taken from outside the assigned institution.**
 - a. **The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.**
 - b. **When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.**
 - c. **The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.**
5. **Extracurricular activities**

Activities that fall outside the educational program may not be mandated, nor may they interfere with the resident's performance in the educational process as defined in the agreement between the institution and the resident.

D. Moonlighting

1. **Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.**
2. **The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the Institutional Requirements.**
3. **Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites**

must be considered part of the 80 hour weekly limit on duty hours. (seventy-two-hour weekly total limit for emergency medicine.) This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hour Exception

The RRC will not grant an exception to the applicable duty limits described above.

VII. Evaluation

A. Resident

There must be effective, ongoing evaluation of all components of the residency program. This evaluation process must relate to the educational objectives of the program and provide a mechanism to effect change.

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

3. At least annually, there must be a formal evaluation of each resident's competency to progress to the next year of training. The competency evaluation tools should be defined prospectively and take into account the core competencies.
4. At least yearly, competency in chief complaint assessment, procedures and resuscitations must be formally evaluated by the program with remediation plans put in place as needed.

5. Residents on non-EM rotations should be evaluated based on defined competency expectations.
6. Residents should be advanced to positions of higher responsibility on the basis of evidence of their satisfactory progressive scholarship and professional growth.
7. A plan to remedy deficiencies must be in writing and on file. Progress and improvement must be monitored at a minimum of every 3 months if a resident has been identified as needing a remediation plan.
8. A permanent record of evaluation for each resident must be maintained and must be accessible to the resident and other authorized personnel.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by the residents.

1. At least annually, individual faculty members must be formally evaluated by the chair/chief of emergency medicine, which should include information from the program director and the emergency medicine residents. A mechanism for preserving resident confidentiality in the evaluation process must be implemented.
2. Faculty evaluations should include documentation of teaching ability, clinical knowledge, administrative and interpersonal skills, participation and contributions to resident conferences, and scholarly contributions. A summary of the evaluations should be communicated in writing to each faculty member.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident, must be organized to review program goals and objectives and the effectiveness with which they are achieved. This group must conduct a formal meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program. The RRC will take into consideration performance of program graduates over a period of several years.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved

and must include the educational rationale and a method for evaluating the project. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Emergency Medicine should communicate with the office of the board regarding the full requirements for certification.

X. Other

A. Notice of Changes in the Program

1. The program leadership is responsible for notifying the Executive Director of the RRC within 30 days, in writing, of any major changes in the program that may significantly alter the educational experience for the residents, including the following:
 - a. changes in leadership of the department or the program
 - b. changes in administrative structure, such as an alteration in the hierarchical status of the program/department within the institution
 - c. a drop in the core faculty complement below the required minimum number or if one-third or more of the core faculty leave within 1 year
 - d. a drop below the minimum approved number of residents in the program for 2 consecutive years
 - e. Should the RRC determine that a significant alteration of the educational resources has occurred; an immediate resurvey of the program may be performed.
- B. Guidelines – The RRC will publish guidelines on its Web site for interpretation of some of these requirements, such as minimum numbers of procedures and resuscitations expected. These guidelines are provided for program directors to understand how the RRC evaluates some of the Program Requirements. The guidelines are assessed yearly by the RRC to be consistent with the clinical practice of emergency medicine.

XI. Combined Programs

The RRC will review combined education program proposals only after the review and approval of the American Board of Emergency Medicine. Review by the RRC will consider only whether the residency has sufficient resources to support combined education without diluting the experience of the regularly appointed residents. The RRC does not accredit combined education. The proposal must be submitted to the RRC prior to the implementation of required education.

ACGME: June 2004 Effective: January 1, 2005

Program Requirements for Residency Education in the Subspecialties of Emergency Medicine

The following requirements pertain to programs in the subspecialties of emergency medicine. Each program must comply with the requirements listed below as well as with the specialty content found in the program requirements for the respective area.

These programs must exist in conjunction with and be an integrated part of an Accreditation Council for Graduate Medical Education (ACGME)-accredited emergency medicine residency

program. Their existence should not compromise the integrity of the core program.

Residents appointed to the sports medicine programs should have completed an ACGME-accredited residency in emergency medicine, family practice, internal medicine, or pediatrics. [*Note:* Those lacking board certification in one of these areas will not be considered eligible for a Certificate of Added Qualifications from any of the corresponding specialty boards.]

I. Program Goals and Objectives

The director and teaching staff of a program must prepare and comply with written educational goals for the program.

A. Program Design

All educational components of a residency program should be related to program goals.

1. The program design and/or structure must be approved by the Residency Review Committee (RRC) for Emergency Medicine as part of the regular review process.
2. Participation by any institution providing more than 3 months of training in a program must be approved by the RRC.

B. Program Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

II. Program Personnel

The program director and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director include:
 - a. Requisite and documented clinical, educational, and administrative abilities and experience.
 - b. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
 - c. Certification by one of the following boards: American Board of Emergency Medicine, American Board of Family Practice, American Board of Internal Medicine, or American Board of Pediatrics, and possess a Certificate of Added Qualifications in Sports Medicine from that same board. The RRC will determine the adequacy of alternate qualifications.
 - d. Appointment in good standing to the medical staff of an institution participating in the program.
2. Responsibilities of the program director include:
 - a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
 - b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.

- c. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- d. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

The program director, with participation of members of the teaching staff, shall:

1. At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
 2. Communicate each evaluation to the resident in a timely manner.
 3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
 4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- f. The provision of a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
 - g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
 - h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
 - i. Preparation of an accurate statistical and narrative description of the program as requested by a review committee.

B. Teaching Staff

1. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
2. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
4. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.

5. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

III. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

A. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity.

This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

B. Library

1. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

ACGME: September 1994 Effective: September 1994

Program Requirements for Residency Education in Medical Toxicology (Emergency Medicine)

I. Introduction

A. Definition and Description of the Subspecialty

1. Medical toxicology is a clinical specialty that includes the monitoring, prevention, evaluation and treatment of injury and illness due to occupational and environmental exposures, pharmaceutical agents, as well as unintentional and intentional poisoning in all age groups. A medical toxicology residency must be organized to provide residents with experience in the clinical practice of medical toxicology for all age groups and to provide a sound basis for the development of physician practitioners, educators, researchers, and administrators capable of practicing medical toxicology in academic and clinical settings.
2. Residencies in medical toxicology must teach the basic skills and knowledge that constitute the foundations of medical toxicology practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. It is expected that the resident will develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render the resident capable of independent practice in medical toxicology.
3. Programs must provide a broad education in medical toxicology to prepare the resident to function as a specialist capable of providing comprehensive patient care.

B. Duration and Scope of Education

1. Prerequisite training for entry into a medical toxicology program should include the satisfactory completion of an ACGME-accredited residency. [Note: Candidates who do not meet this criterion should consult the American Board of Emergency Medicine or the American Board of Preventive Medicine regarding their eligibility for subspecialty certification.]
2. The length of the educational program is 24 months. The program must be associated with an ACGME-accredited residency program in emergency medicine or preventive medicine.
3. Prior to entry into the program, each resident must be notified in writing of the required length of the program.

II. Institutional Organization

A. Sponsoring Institution

1. The sponsoring institution must provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation. It is highly desirable that the program structure include the participation of a medical school, a school of public health, and a school of pharmacy or department of pharmacology.
2. Programs in medical toxicology should be based at a primary hospital (hereafter referred to as the primary clinical site). The majority of the didactic and clinical experiences should take place at the primary clinical site.
3. The following services must be organized and provided at the primary clinical site:
 - a. An emergency service for both adult and pediatric patients, adult and pediatric inpatient facilities, and adult and pediatric intensive care facilities

- b. Renal dialysis services with 24-hour availability
 - c. Toxicology laboratory services with 24-hour availability
 - d. Inpatient and outpatient facilities with staff who consult the toxicology service
 - e. It is desirable that hyperbaric oxygen therapy is available
4. The program must develop an institutional affiliation to provide residents with clinical experiences not provided at the primary clinical site, other than those listed in II.A.3.a-d.

B. Participating Institutions

1. All participating institutions must provide appropriate support services to ensure an adequate educational experience. This includes support personnel in all categories and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.
2. The program must develop an institutional affiliation with a clinical facility to provide residents with clinical experience in critical care areas should this experience not be provided at the sponsoring institution.
 - a. Approval of participating institutions will be based on the presence of sufficient opportunities for residents to manage, either as primary physicians or consultants, the entire course of critically poisoned patients in both the pediatric and adult categories.
 - b. Institutional resources must be available to support the provision of clinical experience in adult and pediatric critical care areas for residents without prior experience of at least 1 month in an adult intensive care unit and 1 month in a pediatric intensive care unit.
 - c. Programs using multiple participating institutions must ensure the provision of a unified educational experience for the residents. Each participating institution must offer significant educational opportunities to the overall program that do not duplicate experiences otherwise available within the program. An acceptable educational rationale must be provided for each participating institution.
 - d. Participating institutions must not be geographically distant from the sponsoring institution unless special resources are provided that are not available at the primary clinical site.
 - e. The number and geographic distribution of participating institutions must not preclude all residents' participation in conferences and other educational exercises.
 - f. A letter of agreement with each institution participating in the program must be developed to include
 1. the educational objectives and the method to accomplish and to evaluate each objective;
 2. the resources and facilities in the institution(s) that will be available to each resident, including but not limited to library resources;
 3. the resident's duties and responsibilities and duty hours for the assignment; and
 4. the relationship that will exist between medical toxicology residents and residents and faculty in other programs.

C. Library

Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions. Reference material specific to the content of the subspecialty must be available in either text or electronic retrieval form.

D. Appointment of Residents

The Residency Review Committee (RRC) will approve the number of medical toxicology residents in the program. Approval will be based on the number, qualifications, and scholarly activity of the

faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources available to the program.

III. Faculty Qualifications and Responsibilities

- A. In addition to the qualifications and responsibilities of the program director and faculty described in the Program Requirements for Residency Education in the Subspecialties of Emergency Medicine or the Program Requirements for Residency Education in Preventive Medicine, there must be a minimum of two medical toxicology faculty who each devote a minimum of 5 hours per week of direct teaching time to the residents and whose medical practice makes them available to the residents for consultations on cases.
- B. The program director and faculty must be certified in medical toxicology or possess suitable equivalent qualifications as determined by the RRC.
- C. Consultants from appropriate medical subspecialties including those with special expertise in disaster and mass casualty incident management, hyperbaric medicine, immunology, industrial hygiene, occupational toxicology, pulmonary medicine, biostatistics, epidemiology, public health, botany, cardiology, dermatology, gastroenterology, nephrology, ophthalmology, pathology, pharmacology, surgical subspecialty, zoology, hazardous materials and mass exposure to toxins, laboratory toxicology, forensic toxicology and environmental toxicology, and nonmedical specialties, such as botany, herpetology, and mycology should be available for consultation and academic lectures.

IV. The Educational Program

- A. The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC.
- B. The curriculum must include the following academic and clinical content:
 1. The clinical manifestations, differential diagnosis, and management of poisoning
 2. The biochemistry of metabolic processes, the pharmacology, pharmacokinetics, and teratogenesis, toxicity, and interactions of therapeutic drugs
 3. The biochemistry of toxins, kinetics, metabolism, mechanisms of acute and chronic injury, and carcinogenesis
 4. Experimental design and statistical analysis of data as related to laboratory, clinical, and epidemiologic research
 5. Laboratory techniques in toxicology
 6. Occupational toxicology, including acute and chronic workplace exposure to intoxicants and basic concepts of the workplace and industrial hygiene
 7. Prevention of poisoning, including prevention of occupational exposures by intervention methodologies, that take into account the epidemiology, environmental factors, and the role of regulation and legislation in prevention
 8. Environmental toxicology, including identification of hazardous materials and the basic principles of management of large-scale environmental contamination and mass exposures
 9. The function, management, and financing of poison control centers
 10. Oral and written communication skills and teaching techniques
 11. Principles of epidemiology and risk communication, analytical laboratory techniques, and research methodologies in toxicology

C. Clinical Experience

Residents must have a minimum of 12 months of clinical experience as the primary or consulting physician responsible for providing direct/bedside patient evaluation, management, screening, and preventive services.

Residents must be provided with experience in evaluating and managing patients with workplace and environmental exposures and must have experience in workplace evaluation, as well as in an occupational medicine or toxicology clinic.

- D. Residents must have opportunities to evaluate and manage patients with acute and long-term workplace and environmental toxic exposures. Clinical training should include experience in an industrial setting or an occupational medicine clinic or access to occupational medicine patients in a referral setting. The resident should also have the opportunity to evaluate and manage intoxicated patients in both industrial and referral setting, including responsibility for providing bedside evaluation, management, screening, and preventive services for a minimum of 12 months or its full-time equivalent.
- E. Regional Poison Information Center
 1. The program must provide residents with educational experiences in a regional poison control center certified by the American Association of Poison Control Centers or its equivalent. It is highly desirable that the poison control center be in physical proximity to the primary clinical site.
 2. Each resident must have 12 months' experience with a referral population of poisoned patients under the supervision of a physician who is certified in medical toxicology or who possesses suitable equivalent qualifications as determined by the RRC.
 3. The poison control center should have at least 1,500 calls annually that require physician telephone consultation or intervention.
- F. Planned Educational Conferences

Each program must offer to its residents an average of at least 5 hours per week of planned educational experiences (not including change-of-shift reports). These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administrative seminars, and research methods. They may include but are not limited to problem-based learning, laboratory research, and computer-based instruction, as well as joint conferences cosponsored with other disciplines.
- G. Additional Educational Experiences

The program curriculum must include pharmacology, pharmacokinetics, and drug interactions. This must be accomplished by (1) an affiliation with a school of pharmacy or department of pharmacology that provides regular didactic experience and consultation to residents or (2) the presence of a Doctor of Pharmacology or PhD pharmacologist as a participating member of the teaching faculty.
- H. Additional Clinical Experiences

The program should provide the opportunity for the residents to maintain their primary board skills during training, but it may not require that residents provide more than 12 hours per week of clinical practice not related to medical toxicology as a condition of the educational program.
- I. Communication and Teaching Experience

Residents must have progressive experience and responsibility for the teaching of medical toxicology to health care professionals. Residents in the second year of training should participate in the teaching and supervision of first-year residents and should be responsible for regular contributions to formal didactic experiences within the training program, in other academic depart-

ments in the institution(s), and in the community. Research leading to publication should be encouraged.

V. Board Certification

Those planning to seek a subspecialty certificate from their primary board should communicate with the administrative officer of the board to ascertain the full requirements.

ACGME: June 1998 Effective: June 1998

Program Requirements for Residency Education in Pediatric Emergency Medicine (Emergency Medicine)

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Pediatrics or Emergency Medicine, programs in pediatric emergency medicine must comply with the following requirements.

I. Introduction

The goal of a residency program in pediatric emergency medicine is to produce physicians who are clinically proficient in the practice of pediatric emergency medicine, especially in the management of the acutely ill or injured child, in the setting of an emergency department that is approved as a 911 receiving facility or its equivalent and has an emergency medical services system.

A program in pediatric emergency medicine must be administered by, and be an integral part of, an ACGME-accredited program in either emergency medicine or pediatrics and must be associated with an ACGME-accredited residency program in the corresponding discipline.

There must be written agreements between the director of the program in pediatric emergency medicine and the directors of the participating residencies in pediatrics and emergency medicine specifying the experiences that will compose this subspecialty program. These agreements should address appropriate curriculum content, supervision of the resident, amount and distribution of clinical and nonclinical time, conferences, clinical performance criteria, and mechanisms for resolving performance problems.

Prerequisite training should include satisfactory completion of an ACGME-accredited residency program in either emergency medicine or pediatrics.

II. Duration and Scope of Training

A training period of 2 years is required for all subspecialty residents. [Note: For those planning to seek certification from the American Board of Pediatrics, 3 years of training is required.]

[Note: If a third year is offered, it must be described when the program is reviewed by the Residency Review Committee. Those planning to seek certification should consult with the appropriate certifying board regarding the criteria for eligibility, including duration of training.]

The educational program must be organized and conducted in a way that ensures an appropriate environment for the well-being and care of the patients and their families while providing residents the opportunity to become skilled clinicians, competent teachers, and knowledgeable investigators. The program must emphasize the fundamentals of assessment, diagnosis, and management. Residents also should be exposed to the academic debate, intensive research

review, and the interaction between and among the specialties of pediatrics and emergency medicine.

III. Curriculum

The residents in pediatric emergency medicine must participate in the care of pediatric patients of all ages, from infancy through young adulthood, with a broad spectrum of illnesses and injuries of all severities. At least 12 months of the clinical experience must be obtained seeing children in an emergency department where children, ages 21 years of age or less, are treated for the full spectrum of illnesses and injuries. To provide adequate exposure for selected problems, additional experience with anesthesiologists, intensivists, neurologists, psychiatrists, pre-hospital care providers, orthopedists, surgeons, toxicologists, traumatologists who have training and experience in the care of children and adolescents, and other specialists must be available.

Specialty-specific content must include at least 4 months of training in the reciprocal specialty from which the resident enters the training program. Additional elective months of reciprocal training should be scheduled when deemed appropriate by the program director on the basis of the background of the resident and his/her progress in acquiring the essential skills of a pediatric emergency specialist.

For the emergency medicine graduate, the reciprocal time must include time spent in pediatric subspecialty and ambulatory clinics, inpatient management, neonatal management, and pediatric critical care in an ACGME-accredited residency program in pediatrics.

For the pediatric graduate, this must include 4 months in an adult emergency department that is part of an ACGME-accredited residency program in emergency medicine. One month of that experience may occur off site as approved by the ACGME-accredited program in emergency medicine, in EMS, adult trauma, or toxicology.

Additional experiences may be necessary for residents from both core specialties. For example, adolescents have unique aspects of disease and injury. Experience with blunt and penetrating trauma, and with significant gynecologic and obstetrical emergencies, as well as psychiatric emergencies of the adolescent, must be a part of a resident's training if previous experience in these areas was not adequate. These experiences should be in settings best suited for the resident's training.

The core content must include training in EMS, administration, ethics, legal issues, and procedures. It must also include but not be limited to structured opportunities to develop special competence in such areas as cardiopulmonary resuscitation; trauma; disaster and environmental medicine; transport; triage; sedation; monitoring (biomedical instrumentation); emergencies arising from toxicologic, obstetric, gynecologic, allergic/immunologic, cardiovascular, congenital, dermatologic, dental, endocrine/metabolic, gastrointestinal, hematologic/oncologic, infectious, musculoskeletal, neurologic, ophthalmic, psychosocial, and pulmonary causes; renal/genitourinary and surgical disorders; and physical and sexual abuse.

In addition to achieving an understanding of the pathophysiology, epidemiology, and management of these problems, the resident must learn how to evaluate the patient with an undifferentiated chief complaint such as abdominal pain. The resident must be taught to arrive at a diagnosis, whether it falls in areas traditionally designated medical or surgical, eg, appendicitis, ectopic pregnancy, intussusception, sickle cell anemia; to perform the evaluation rapidly in accordance with any pathophysiologic disturbances in the patient; and to proceed with an appropriate life-saving therapy, such as endotracheal intubation or thoracostomy or administration of antibiotics, before arriving at a definitive diagnosis.

The resident must learn the skills necessary to prioritize and manage the emergency care of multiple patients. Finally, the resident must have supervised experience in a range of technical/procedural skills, as they apply to pediatric patients of all ages.

The resident must be given increasing responsibilities for patient care as she or he progresses through the program. In the final year of training, the resident must be given the opportunities to demonstrate the skills appropriate to a supervisor, teacher, and a decision maker in pediatric emergencies.

There must be an emphasis on developing a compassionate understanding of the stress associated with sudden illness, injury, and death so that the resident may be responsive to the emotional needs of the patients, their families, and the staff of the emergency department. Discussion and appreciation of the many ethical issues involved in pediatric emergency medicine should be part of the educational program.

Residents should be exposed to formal sessions on organizing teaching programs, medical writing, and oral presentation. Residents should have the opportunity to develop teaching skills by conducting lectures, seminars, and clinical conferences and by preparing written reports and teaching materials. These efforts must be reviewed and evaluated by the supervising faculty in light of competency-based objectives developed by the program. The resident must receive instruction and experience in the administrative and management skills necessary to oversee a division or department.

IV. Conferences

There should be opportunities to participate in regularly scheduled, multidisciplinary conferences that include lectures, morbidity and mortality conferences, case conferences, general reviews, and research seminars. The program must include instruction in or other educational exposure to related basic sciences, including physiology, growth and development, pathophysiology, and epidemiology, and prevention of pediatric illnesses and injuries.

The program also should provide education on physician wellness and stress management.

V. Teaching Staff

There must be at least four members of the teaching staff who have experience and knowledge of the care of acute pediatric illness and injuries to provide adequate supervision of residents and to ensure the educational and research quality of the program. Two of the faculty must be certified in pediatric emergency medicine or have equivalent qualifications. For a subspecialty program that functions as an integral part of a pediatric residency program, there must be adequate exposure to faculty who are certified by the American Board of Emergency Medicine. Conversely, for a subspecialty program based in an emergency medicine residency program, there must be adequate exposure to faculty certified by the American Board of Pediatrics.

The availability of consultant and collaborative faculty in related medical and surgical disciplines, as referred to in Section III, must be ensured.

The pediatric emergency medicine faculty must have an active role in curriculum development and in the supervision and evaluation of the subspecialty residents.

VI. Patient Population

A sufficient number of patients must be available to provide adequate opportunity for subspecialty residents to acquire competence in the management of the full spectrum of acutely ill and injured children, adolescents, and young adults. The subspecialty residents must provide the initial evaluation of and treatment to all types of patients.

To meet the educational objectives of the program and to provide both the pediatric and subspecialty residents with an adequate experience to acquire competence in clinical management, there should be a minimum of 15,000 pediatric patient visits per year in the primary emergency department that is used for the program. Patient acuity and the total number of trainees will be considered in assessing the adequacy of the patient population. These must include a sufficient number of patients with major and minor trauma, airway insufficiency, ingestions, obstetric and gynecologic disorders, psychosocial disturbances, and emergent problems from all pediatric medical and surgical subspecialties.

Subspecialty residents should not serve as the only care givers for children seen in the emergency department. They should provide supervision and consultation to other residents who are assigned to the emergency department and will be caring for patients. These subspecialty residents must, however, have the opportunity to manage multiple patients at the same time, to learn the skills necessary to prioritize the evaluation and treatment of these patients. In addition, the program must provide the pediatric emergency medicine residents the opportunity to assume leadership responsibility for the pediatric emergency department.

VII. Facilities

There must be an acute care facility that receives patients via ambulance from the prehospital setting, is equipped to handle trauma, and that has a full range of services associated with residencies in pediatrics and emergency medicine. This facility should be accredited by the Joint Commission on Accreditation of Healthcare Organizations.

The emergency department must be adequately staffed, have appropriate bedside monitoring capability, and be capable of resuscitating medical and trauma patients. Facilities and equipment must meet the generally accepted standards of a modern emergency department and be available within the institution on a 24-hour-a-day basis.

The institution should have comprehensive radiologic and laboratory support systems and readily available operative suites and intensive care unit beds.

VIII. Board Certification

Residents seeking certification in the subspecialty of pediatric emergency medicine should consult their primary specialty board, i.e., the American Board of Pediatrics or the American Board of Emergency Medicine, regarding the criteria for eligibility for certification in this subspecialty.

ACGME: June 1998 Effective: June 1998

Program Requirements for Residency Education in Sports Medicine (Emergency Medicine)

I. Introduction

In addition to complying with the requirements below, each program must comply with the Program Requirements for Residency Education in the Subspecialties of Emergency Medicine.

II. Scope and Duration of Training

An educational program in sports medicine must be organized to provide a well-supervised experience at a level sufficient for the

resident to acquire the competence of a physician with added qualifications in this field. It shall be 12 months in duration.

The practice of sports medicine is the application of the physician's knowledge, skills, and attitudes to those engaged in sports and exercise. Thus, the program must provide training in the development of the clinical competencies needed to diagnose and manage medical illnesses and injuries related to sports and exercise, for example, first-degree sprains, strains, and contusions, including appropriate referrals of, for example, fractures, dislocations, and third-degree sprains. Clinical experience must include injury prevention, preparticipation evaluation, management of acute and chronic illness or injury, and rehabilitation, as applied to a broad spectrum of undifferentiated patients. There must be experience functioning as a team physician and in the promotion of physical fitness and wellness.

The program should emphasize physiology and biomechanics; principles of nutrition; pathology and pathophysiology of illness and injury; pharmacology; effects of therapeutic, performance-enhancing, and mood-altering drugs; psychological aspects of exercise, performance, and competition; ethical principles; and medical-legal aspects of exercise and sports.

III. Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program.

The teaching staff must include orthopedic surgeons who are engaged in the operative management of sports injuries and other conditions and who are readily available to teach and provide consultation to the residents. Teaching staff from the disciplines of nutrition, pharmacology, pathology, exercise physiology, physical therapy, behavioral science, physical medicine and rehabilitation, and clinical imaging also should be available to assist in the educational program. Coaches and athletic trainers also should be included.

IV. Facilities and Resources

The program must include the following:

A. Patient Population

A patient population that is unlimited by age or gender and is adequate in number and variety to meet the needs of the training program must be available. The program director must ensure that residents are accorded meaningful patient responsibility with the supervision of a faculty member at all facilities and sites.

B. Sports Medicine Clinic

There must be an identifiable clinic that offers continuing care to patients who seek consultation regarding sports- or exercise-related health problems. The nonsurgical trainees must be supervised by a physician who has qualifications in sports medicine and is certified by the American Board of Emergency Medicine, the American Board of Family Practice, the American Board of Internal Medicine, or the American Board of Pediatrics or who possesses suitable equivalent qualifications.

Adequate, up-to-date diagnostic imaging and rehabilitation services must be readily available and accessible to clinic patients. Consultation in medical and surgical subspecialties, physical therapy, nursing, nutrition, and pharmacy must be available. The opportunity to render continuing care and to organize recommendations from other specialties and disciplines is mandatory and will require that medical records include information pertinent to the assessment and management of patients with health problems related to sports and exercise.

C. Sporting Events/Team Sports/Mass-Participation Events

The program must have access to sporting events, team sports, and mass-participation events during which the resident can have meaningful patient responsibility.

D. Acute-Care Facility

There must be an acute-care hospital with a full range of services associated with and in proximity to the sponsoring residency. This facility must be readily accessible to patients served by the program.

V. Educational Program

The curriculum must provide the educational experiences necessary for the residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of physicians in the care of patients with health problems related to sports and exercise.

Didactic as well as clinical learning opportunities must be provided as part of the required curriculum for all residents. Conferences or seminars/workshops in sports medicine should be specifically designed for the residents to augment the clinical experiences.

All educational activities must be adequately supervised, while allowing the resident to assume progressive responsibility for patient care. The clinical activities in sports medicine should represent a minimum of 50% of the time in the program. The remainder of the time should be spent in didactic, teaching, and/or research activities and in the primary care or emergency medicine ambulatory facility.

Residents must spend ½ day per week maintaining their skills in their primary specialty.

Participation in the following must be required of all residents:

A. Preparticipation Evaluation of the Athlete

The program must ensure that all sports medicine residents are involved in the development and conduct of preparticipation examination programs.

B. Acute Care

The resident must have appropriate authority and responsibility to participate meaningfully in the medical care that is provided to acute-care patients (see Scope and Duration of Training, above). In addition, the program should arrange for residents to observe representative inpatient and outpatient operative orthopedic procedures.

C. Sports Medicine Clinic Experience

The resident must attend patients in a continuing, comprehensive manner, providing consultation for health problems related to sports and exercise. The resident shall spend at least 1 day per week for 10 months of the training period in this activity.

If patients are hospitalized, the resident should follow them during their inpatient stay and resume outpatient care following the hospitalization. Consultation with other physicians and professionals in other disciplines should be encouraged.

D. On-Site Sports Care

The resident should participate in planning and implementation of all aspects of medical care at various sporting events. The program must ensure that supervised sports medicine residents provide on-site care and management to participants in these events.

In addition, the resident must participate in the provision of comprehensive and continuing care to a sports team. Preferably, the experience should include several teams that engage in seasonal sports.

E. Mass-Participation Sports Events

The resident should participate in the planning and implementation of the provision of medical coverage for at least one mass-participation event. The program must ensure that its residents have experience that includes providing medical consultation, direct patient care, event planning, protection of participants, coordination with local EMS systems, and other medical aspects of those events.

VI. Specific Knowledge and Skills**A. Clinical**

The program must provide educational experiences that enable residents to develop clinical competence in the overall field of sports medicine.

The curriculum must include but not be limited to the following content and skill areas:

1. Anatomy, physiology, and biomechanics of exercise
2. Basic nutritional principles and their application to exercise
3. Psychological aspects of exercise, performance, and competition
4. Guidelines for evaluation prior to participation in exercise and sport
5. Physical conditioning requirements for various activities
6. Special considerations related to age, gender, and disability
7. Pathology and pathophysiology of illness and injury as they relate to exercise
8. Effects of disease, e.g., diabetes, cardiac conditions, arthritis, on exercise and the use of exercise in the care of medical problems
9. Prevention, evaluation, management, and rehabilitation of injuries
10. Understanding pharmacology and effects of therapeutic, performance-enhancing, and mood-altering drugs
11. Promotion of physical fitness and healthy lifestyles
12. Functioning as a team physician
13. Ethical principles as applied to exercise and sports
14. Medical-legal aspects of exercise and sports
15. Environmental effects on exercise
16. Growth and development related to exercise

B. Patient Education/Teaching

The program must provide the experiences necessary for the residents to develop and demonstrate competence in patient education regarding sports and exercise. They must have experience teaching others, e.g., nurses, allied health personnel, medical students, residents, coaches, athletes, other professionals, and members of patients' families. There must also be relevant experience working in a community sports medicine network involving parents, coaches, certified athletic trainers, allied medical personnel, residents, and physicians.

ACGME: June 2000 Effective: June 2000

Program Requirements for Residency Education in Undersea and Hyperbaric Medicine (Emergency Medicine)

I. Introduction**A. Definition and Scope of the Specialty**

1. The subspecialty of Undersea and Hyperbaric Medicine is a discipline that deals with the prevention of injury and illness due to exposure to environments in which the ambient pressure is increased, such as in diving or hyperbaric chamber exposure, and the therapeutic use of high environmental pressure and the delivery of oxygen under high pressure to treat disease. The scope of the subspecialty emphasizes the occupational, environmental, safety, and clinical aspects of diving, hyperbaric chamber operations, compressed air work and hyperbaric oxygen therapy. A program in undersea and hyperbaric medicine must provide a broad educational experience and a sound basis for the development of physician practitioners, educators, researchers, and administrators capable of practicing in academic and clinical settings.
2. Training in undersea and hyperbaric medicine must teach the basic skills and knowledge that constitute the foundations of undersea and hyperbaric medicine practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. It is expected that the resident will develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render the resident capable of independent practice in undersea and hyperbaric medicine.
3. Programs must offer a broad education in undersea and hyperbaric medicine to prepare the resident to function as a specialist capable of providing comprehensive patient care.

B. Duration and Scope of Education

1. The length of the educational program must be 12 months. The program must be associated with an ACGME-accredited residency program in emergency medicine or preventive medicine.
2. Prior to entry into the program, each prospective resident must be notified in writing of the required length of the program.

II. Institutional Organization

- A. The sponsoring institution must provide sufficient faculty, financial resources, clinical, research, and library facilities to meet the educational needs of the residents and enable the program to comply with the requirements for accreditation. It is highly desirable that the program structure include the participation of a medical school.
- B. The program should be based at a primary hospital (hereafter referred to as the primary clinical site). More of the didactic and clinical experiences should take place at the primary clinical site than at any other single site. Educationally justified exceptions to this requirement will be considered.
- C. The following services must be organized and provided at the primary clinical site:
 1. Twenty-four hour availability of hyperbaric medicine services, with at least 100 consultations and 1000 patient treatments per year
 2. An emergency service for both adult and pediatric patients, adult and pediatric inpatient facilities, and adult and pediatric surgical and intensive care facilities

3. Inpatient and outpatient facilities with staff who consult the hyperbaric medicine service

D. Participating Institutions

1. All participating institutions must provide appropriate support services to ensure an adequate educational experience. This includes support personnel and physical resources to ensure that residents have sufficient time and space to carry out their clinical and educational functions.
2. The program must develop an institutional affiliation with a clinical facility to provide residents with clinical experience in critical care areas should this experience not be provided at the sponsoring institution.
3. Approval of participating institutions will be based on the presence of sufficient opportunities for residents to manage, as appropriate, either as primary physicians or consultants, the entire course of therapy, including critically ill patients in both adult and pediatric categories.
4. Programs using multiple participating institutions must ensure the provision of a unified educational experience for the residents. Each participating institution must offer significant educational opportunities to the overall program that do not duplicate experiences otherwise available within the program. An acceptable educational rationale must be provided for each participating institution.
5. Participating institutions must not be geographically distant from the sponsoring institution unless special resources are provided that are not available at the primary clinical site.
6. The number and geographic distribution of participating institutions must not preclude all residents' participation in conferences and other educational exercises.
7. A letter of agreement with each institution participating in the program must be developed to include:
 - a. The educational objectives and the method to accomplish and to evaluate each objective;
 - b. The resources and facilities in the institution(s) that will be available to each resident, including but not limited to library resources;
 - c. The resident's duties, responsibilities, and duty hours for the assignment; and
 - d. The relationship that will exist between undersea and hyperbaric medicine residents and the faculty in other programs.
8. Participation by any institution that provides 3 months or more of education in a program must be approved by the RRC.

E. Appointment of Subspecialty Residents

1. The Residency Review Committee (RRC) will approve the number of undersea and hyperbaric medicine residents in the program. Approval will be based on the number, qualifications, and scholarly activity of the faculty; the volume and variety of the patient population available for education purposes; and the institutional resources available to the program.
2. Prerequisite training for entry to an undersea and hyperbaric medicine program is contingent upon completion of an ACGME-accredited residency program involving a minimum of 12 months of preventive, primary, surgical, and/or critical care training.

F. Resident Policies

1. Supervision
 - a. All patient care services must be supervised by appropriately qualified faculty.
 - b. The program director must ensure, direct, and document proper supervision of residents at all times.
 - c. Residents must be provided with rapid, reliable systems for communicating with faculty. Supervising faculty with ap-

propriate experience for the severity and complexity of patient conditions and treatments must be available at all times.

2. Duty hours and conditions of work

It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on-call in the hospital no more often than every third night.

III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

There must be a single program director responsible for the program.

1. Qualifications of the program director

- a. Licensure to practice medicine in the state where the institution that sponsors the program is located.
- b. Certification in undersea and hyperbaric medicine by the American Board of Emergency Medicine or the American Board of Preventive Medicine or possess appropriate educational qualifications as determined by the RRC.
- c. Appointment in good standing to the medical staff of an institution participating in the program.

2. Responsibilities of the program director

- a. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and faculty. It should be readily available for review.
- b. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- c. Selection and supervision of the faculty and other program personnel at each institution participating in the program.
- d. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
- e. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.
- f. The program director, with participation of the faculty, shall
 - 1) at least quarterly evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
 - 2) communicate each evaluation to the resident in a timely manner;
 - 3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
 - 4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
 - 5) provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice compe-

tently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

- g. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- h. Monitoring of resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Preparation of an accurate statistical and narrative description of the program as requested by a review committee.
- j. Notification of the RRC regarding major programmatic changes.

B. Faculty

1. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all the residents in the program at each participating institution. The faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities. In addition to the program director, one additional faculty member must possess certification by the American Board of Emergency Medicine or the American Board of Preventive Medicine in undersea and hyperbaric medicine or possess appropriate educational qualifications as determined by the RRC.
2. All members of the faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
3. Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all of the faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity.
4. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. Consultants from appropriate medical subspecialties should be available for consultation and didactic teaching, including those with experience and understanding of such fields of medicine as preventive medicine, infectious disease, orthopaedics, vascular surgery, plastic surgery, anesthesiology, critical care, emergency medicine, ophthalmology, oral surgery, podiatry, pulmonary medicine, otolaryngology, rehabilitative medicine, and other disciplines as they pertain to the comprehensive treatment of the clinical hyperbaric patient.

C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. The Educational Program

The program director and teaching staff of a program must prepare and comply with written educational goals for the program. All edu-

cational components of a residency should be related to the program goals. Clinical, basic science, and research conferences as well as seminars and critical literature review activities pertaining to the subspecialty must be conducted regularly and as scheduled. The program design and/or structure must be approved by the RRC.

A. The curriculum must include the following academic and clinical content

1. History of undersea and hyperbaric medicine
 2. Decompression theory and physiology, including theory and application of decompression tables
 3. Oxygen physiology in normobaric, hyperbaric and hypobaric environments; oxygen toxicity
 4. Pathophysiology of decompression illness and arterial gas embolism, including iatrogenic gas embolism
 5. Diving operations and human performance in the hypo/hyperbaric environments
 6. Medical examination/standards for divers and personnel working in hypo/hyperbaric environments
 7. Effects of hyperbaric oxygenation on infectious disease
 8. Principles of treatment of toxic gas exposures, such as carbon monoxide poisoning
 9. Effects of hyperbaric oxygenation on irradiated tissues and ischemic wounds
 10. Tissue oxygen measurement
 11. Multiplace and monoplace hyperbaric chamber operations, including safety considerations, management of critically ill patients in the hyperbaric environment, clinical monitoring, and mechanical ventilation
 12. Evaluation of the patient for clinical hyperbaric treatment, including contraindications and side effects
 13. Hazards of standard electrical therapies in hyperbaric environment, e.g., electrical defibrillation and precautions
 14. Emergency procedures for both monoplace and multiplace installations
 15. Saturation diving covering air quality standards and life support requirements, including the physiology and practical (medical) issues associated with heliox, trimix, and hydrogen/oxygen/helium mixtures
 16. Systems management, including administrative aspects of chamber operations, such as billing issues, quality assurance, and peer review
- B. Residents must have a minimum of 10 months of clinical experience as the primary or consulting physician responsible for providing direct/bedside patient evaluation and management. A maximum of 2 elective months can be offered in appropriate related areas.
- C. Residents must have opportunities to evaluate and manage patients with both acute and non-emergency indications for hyperbaric oxygen therapy. The resident should have the opportunity to evaluate and manage 100 or more patients, including responsibility for providing bedside evaluation and management. This experience should be organized for a minimum of 10 months or its full-time equivalent and cover IV.C.1 through IV.C.8. Up to 2 months of elective time may be allowed for additional training in areas of relevance to undersea and hyperbaric medicine, such as critical care, surgery, submarine medicine, toxicology, or radiation oncology. Competencies that will be attained at the end of the 12-month training period must include:
1. Assessment of prospective divers for fitness to dive
 2. Assessment of hyperbaric chamber personnel for fitness to participate as a tender in a multiplace hyperbaric chamber
 3. Assessment of patients with suspected decompression sickness or iatrogenic gas embolism and prescription of treatment

4. Assessment of patients with specific problem wounds with respect to indications for hyperbaric oxygen therapy, fitness for hyperbaric treatment, and prescription of treatment
5. Assessment and management of patients with complications of hyperbaric therapy
6. Management of critically ill patients in the hyperbaric environment
7. Knowledge of the indications for hyperbaric oxygen therapy
8. Assessment of patients with toxic gas exposure (e.g., carbon monoxide)

D. Planned Educational Conferences

Each program must offer to its residents an average of at least 5 hours per week of planned educational experiences (not including change-of-shift reports). These educational experiences should include presentations based on the defined curriculum, morbidity and mortality conferences, journal review, administrative seminars, and research methods. They may include but are not limited to problem-based learning, laboratory research, and computer-based instruction, as well as joint conferences cosponsored with other disciplines.

E. Additional Clinical and Educational Experiences

The program should provide the opportunity for the residents to maintain their primary board skills during training, but it may not require that residents provide more than 12 hours per week of clinical practice not related to hyperbaric medicine as a condition of the educational program.

F. Teaching and Research Experience

Residents must have progressive experience and responsibility for the teaching of undersea and hyperbaric medicine to health care trainees and professionals, including medical students, interns, residents, and nurses. Residents should participate in the formal didactic teaching program. Research leading to publication should be encouraged.

D. Support Services

Support services must include physical therapy, social services, occupational medicine, and psychologic and psychological testing services.

VI. Certification

Those planning to seek a subspecialty certificate from their primary board should communicate with the administrative officer of the Board to ascertain the full requirements.

ACGME: February 2002 Effective: February 2002

V. Facilities and Resources

A. Space and Equipment

Adequate space must be available for faculty to perform their educational, research, and administrative functions. A library containing hyperbaric texts and journals must be readily available. Adequate conference and teaching space must be available for didactic and case conferences.

B. Inpatient, Ambulatory Care, Laboratory, and Other Clinical Facilities

A hyperbaric chamber must be available that is capable of treatment of the full range of conditions amenable to hyperbaric oxygen therapy. A full service clinical laboratory must be available at all times that is capable of measurement of chemist, blood indices, and microbiology of patients needing hyperbaric therapy. Radiologic services must be available within the institution at all times. Inpatient and outpatient facilities, including intensive care units capable of addressing the needs of patients with respiratory poisons, gas forming infections, wound healing problems, gas embolism, and other conditions requiring hyperbaric treatment, must be available.

C. Patient Population

There shall be sufficient patients of all ages and both sexes with medical and surgical conditions requiring hyperbaric therapy. Patients with necrotizing infections, carbon monoxide and cyanide poisoning, diving problems, gas embolism, and osteomyelitis must be present in the patient population.

Program Requirements for Residency Education in Family Medicine

I. Introduction

A. Duration of Training

Residencies in Family Medicine must be 3 years in duration after graduation from medical school and must be planned so that a coherent, integrated, and progressive educational program with progressive resident responsibility is ensured.

B. Scope of Training

The programs must be specifically designed to meet the educational needs of medical school graduates intending to become family physicians and must provide experience and responsibility for the residents in those areas of medicine that will be of importance to their future practice. The goal of the Family Medicine training program is to produce fully competent physicians capable of providing care of high quality to their patients.

Toward this end the residents must learn to gather essential and accurate information about the patient and use it together with up-to-date scientific evidence to make decisions about diagnostic and therapeutic intervention. They must learn to develop and carry out patient management plans.

Family Medicine residency programs should provide opportunity for the residents to learn, in both the hospital and ambulatory settings, those procedural skills that are within the scope of Family Medicine.

The residency program must ensure that its residents, by the time they graduate, provide appropriate, effective, and compassionate clinical care. Residents are expected to gather essential and accurate information about the patient and use it together with up-to-date scientific evidence to make decisions about diagnostic and therapeutic interventions, develop and carry out patient management plans, provide health care services aimed at preventing health problems or maintaining health.

Residents must locate, appraise, and assimilate "best practices" related to their patients' health problems.

C. Clinical Care

The residency program must ensure that its residents, by the time they graduate, possess knowledge in established and evolving psychosocial biomedical and clinical science domains and apply it to clinical care. Residents are expected to demonstrate rigor in their thinking about clinical situations and to know and apply the basic and clinically supportive sciences which are appropriate to their discipline.

Use of the computer to manage information, access on-line medical information, and support clinical care and patient education is required.

The residency program must ensure that its residents, by the time they graduate, demonstrate the fundamental qualities of professionalism. Residents are expected to demonstrate respect, regard, and integrity and a responsiveness to the needs of patients and society that supercedes self-interest. They must assume responsibility and act responsibly, and demonstrate a commitment to excellence.

Residents must learn to apply knowledge of study designs and statistical methods to the appraisal of clinical studies and other information on diagnostic and therapeutic effectiveness.

The residency program must ensure that its residents are aware that health care is provided in the context of a larger system and can effectively call on system resources to support the care of patients. Residents are expected to understand how their patient-care practices and related actions impact component units of the health care delivery system and the total delivery system, and how delivery systems impact provision of health care.

They must be taught systems-based approaches for controlling health care costs and allocating resources and must learn to practice cost-effective health care and resource allocation that does not compromise quality of care.

Residents must learn how to advocate for quality patient care and assist patients in dealing with system complexities. They must be taught how to partner with health care managers and health care providers to assess, coordinate, and improve health care and know how these activities can impact system performance.

The presence of other programs sponsored by the residency, e.g., geriatric medicine and/or sports medicine, must not result in significant dilution of the experience available to the Family Medicine residents.

II. Institutional Organization

A. Sponsoring Institution

There must be one sponsoring institution for each residency, as mandated by the Institutional Requirements. This entity must be identified at the time of each review of the residency.

The sponsoring institution must ensure the existence and availability of those basic educational and patient care resources necessary to provide the Family Medicine resident with meaningful involvement and responsibility in the required clinical specialties.

Since Family Medicine programs are dependent in part on other specialties for the training of residents, the ability and commitment of the institution to fulfill these requirements must be documented. Instruction in the other specialties must be conducted by faculty with appropriate expertise. There must be agreement with specialists in other areas/services regarding the requirement that residents maintain concurrent commitment to their patients in the Family Medicine Center (FMC) during these rotations.

B. Participating Institutions

When a residency relies on multiple institutions to provide curricular components, the arrangements between the program/primary site and each affiliated facility must be described in a written document that is signed by the appropriate administrators of the respective institutions. These arrangements must be specific to the Family Medicine residency and must address the scope of the affiliation, the content and duration of the rotations involved, the duties and patient care responsibilities of the residents during these rotations and the details of the supervision and resident evaluation that will be provided. These documents should be appended to the program information forms each time there is a site visit and review of the program.

Participation by an institution that provides more than 6 of the 36 months of training in the program must be approved by the Residency Review Committee (RRC). A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

C. Appointment of Residents

(Applicants who have had previous graduate training may be considered for admission to Family Medicine residencies. Credit for this other training may be given only in the amount that is compatible with the Program Requirements for Residency Education in

Family Medicine. Directors should consult with the American Board of Family Medicine on each case prior to making a determination regarding the equivalence of such training.)

Programs should appoint only those candidates who intend to complete the full program. As a general rule, programs should appoint residents to the first year of training and those accepted into the first year of training should be assured of a position for the full 3 years, barring the development of grounds for dismissal. A Family Medicine program should endeavor not to function as a transitional year program.

To provide adequate peer interaction a program should offer at least 4 positions at each level and should retain, on average, a minimum complement of 12 residents. Except for periods of transition, the program should offer the same number of positions for each of the 3 years.

In certain cases, for urban or rural areas serving under served communities, tracks may be approved that have a smaller resident complement but with at least one resident at the second and third levels or two residents at one of the levels to ensure peer interaction. In such cases, programs are encouraged to arrange opportunities for the residents to interact with other residents, e.g., through didactic sessions at the parent program.

The degree of resident attrition and the presence of a critical mass of residents are factors that will be considered by the RRC in the evaluation of a program.

III. Faculty Qualifications and Responsibilities

The program director and teaching staff are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation and advancement of residents and the maintenance of records related to program accreditation.

All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

A. Program Director

There must be a single program director responsible for the residency.

Continuity of leadership over a period of years is important to the stability of a residency program. Frequent changes in leadership or long periods of temporary leadership usually have an adverse effect on an educational program and will be cause for serious concern. The RRC must be notified promptly in writing of any change in the leadership of the program.

In order to provide continuity of leadership and to fulfill the administrative and teaching responsibilities inherent in achieving the educational goals of the program, the director must devote sufficient time to the residency program, i.e., at least 1400 hours per year exclusive of time spent in direct patient care without the presence of residents. Where a program in the 1-2 format operates in conjunction with a three year program, there must be a separate rural site director.

1. Qualifications of the Program Director

The following are the requirements for the program director. An acting or interim director should be similarly qualified.

a. Academic and professional qualifications: The director must have demonstrated ability as a teacher, clinician, and administrator; must be capable of administering the program in an effective manner; and must be actively involved in the care of patients. Prior to assuming this position, the program director must have had a minimum of 2 years full-time professional ac-

tivity in Family Medicine and should have had teaching experience in a Family Medicine residency.

- b. Licensure: The director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
- c. Certification requirements: The director must be currently certified by the American Board of Family Medicine or have appropriate educational qualifications, as so judged by the RRC.
- d. Medical staff appointment: The director must hold an appointment in good standing to the medical staff of an institution participating in the program.

2. Responsibilities of the Program Director

The program director is responsible for the following:

- a. Written educational goals: The director must have responsibility for a written statement outlining the educational goals of the program. These must be provided in a document that outlines the specific knowledge, skills, and other attitudes expected of residents at each level of training and for each major rotation or other program assignment. The goals must be distributed to residents and teaching staff and should be available for review by the site visitor.
- b. Selection of residents: Residents for appointment to the program must be selected in accordance with institutional and departmental policies and procedures.
- c. Teaching staff and other program personnel: The director must have responsibility for selection and supervision of these staff members at each institution participating in the program.
- d. Supervision of residents: Institutional and program policies and procedures must ensure that all residents are adequately supervised in carrying out their patient care responsibilities. It is the responsibility of the program director and faculty to ensure that residents are appropriately supervised. Supervising policies of the residency should be consistent with those of the institution. They must be in writing and be distributed to all members of the program staff.

Faculty schedules including their time on-call, must be structured to ensure that supervision is readily available to residents on duty.

- e. Resident evaluation: There must be regular and formal evaluation of residents with participation of the teaching staff.
- f. Discipline: The director has responsibility for the implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- g. Resident well-being: The director must monitor resident stress, including mental or emotional conditions that inhibit performance or learning, and dysfunction related to drugs or alcohol. The director and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support service to residents. To promote physician well-being and prevent impairment, residents should be trained to balance personal and professional responsibilities in a way that can be reflected throughout their careers. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
- h. Provision of accurate information: The director must submit accurate and complete information as requested by the RRC on the program information forms or in special communication as directed by the committee.
- i. Notification of change: The director must notify the RRC regarding major programmatic changes and obtain approval prior to their implementation.

B. Family Physician Faculty

The faculty must contain teachers with the diversified interests and expertise necessary to meet the training responsibilities of the program. There must be a sufficient number of hours contributed by a critical mass of family physician faculty to prevent fragmentation of the learning experience. Where part-time faculty are utilized, there must be evidence of sufficient continuity of teaching and supervision.

In addition to the program director, there must be at least one full-time equivalent (FTE) family physician faculty for each six residents in the program. By the time a program offers all three years of training with the required minimum number of resident positions, i.e., 4-4-4, at least one of the additional Family Physician faculty should be full time. A full-time commitment is at least 1400 hours per year devoted to the residency, exclusive of time spent in direct patient care without the presence of residents. Any program in operation must have at least two family physician faculty members, including the director, regardless of resident complement.

The family physician faculty should have a specific time commitment to patient care to enable them to maintain their clinical skills. Some of the family physician teaching staff must see patients in the FMC to serve as role models for the residents. In addition, the program must have family physician faculty with admitting privileges in the hospital(s) where the FMC patients are hospitalized.

The family physician faculty must be currently certified by the American Board of Family Medicine or must demonstrate appropriate educational qualifications, as so judged by the RRC. The RRC will determine the acceptability of alternate qualifications.

C. Other Faculty

Physicians in the other specialties must devote sufficient time to teaching and supervising the Family Medicine residents and providing consultation to ensure that the program's goals for their specialty areas are accomplished.

Additional teaching staff will be needed to provide training in areas such as behavioral science, nutrition, and the use of drugs and their interaction.

D. Qualifications and Development of Faculty

All of the key members of the teaching staff in the program must demonstrate appropriate qualifications for their specialty areas, e.g., certification by a member board of the American Board of Medical Specialties (ABMS) or appropriate educational qualifications for physician faculty, and appropriate credentials for the non-physician faculty. The RRC will determine the acceptability of alternate qualifications.

There must be an explicit system to develop and maintain academic and clinical skills of the faculty and to foster their continual professional growth and development.

IV. Facilities

A program must provide the facilities required for the education of residents in sufficient proximity to the primary hospital to allow for the efficient functioning of the educational program.

A. Primary and Affiliated Hospitals**1. Multiple Hospitals**

If the primary facility is unable to provide all of the required experiences, additional facilities may be used. Such arrangements will be considered acceptable only if there is no compromise in the quality of the educational program and no significant reduction in attendance of residents at teaching sessions or of camaraderie and exchange of information among residents and with the faculty. These affiliated hospitals may not be at such a distance

from the primary teaching sites that they require excessive travel time or otherwise fragment the educational experience.

2. Number of Beds

It is essential that the participating hospitals, primary and affiliated, be of sufficient size and have an adequate number of occupied teaching beds to ensure a sufficient patient load and variety of problems for the education of the number of residents and other learners on the services. Inpatient facilities must also provide adequate physical, human, and educational resources for training in Family Medicine. In determining the adequacy of the number of occupied beds in the primary and affiliated hospitals, the patient census, the types of patients, and their availability for residency education will be considered.

3. Medical Staff

The medical staff should be organized so that family physician members may participate in appropriate hospital governance activities on a basis equivalent to that of members in other specialties. Where a hospital is departmentalized, there must be a clinical department of Family Medicine.

B. Family Medicine Center**1. Introduction**

The primary setting for training in the knowledge, skills, and attitudes of Family Medicine is the model office or FMC, where each resident must provide continuing, comprehensive care to a panel of patient families. The FMC must be for the exclusive use of the residency, i.e., all activities in the FMC must be residency-related and under the direction of the program director. The center must be clearly and significantly identified as a Family Medicine Center.

An FMC must be in operation on the date the program begins. If a temporary center is used, it must meet the criteria specified below. If multiple centers are used for training, each must be approved by the RRC and must meet the same criteria as the primary center. All of the FMC's used in a program must provide comparable experiences.

Programs that involve training in Community or Migrant Health Centers (C/MHCs) (See Section 330 of the Public Health Service Act.) must provide assurance that these facilities meet the criteria for an FMC, as outlined below, unless an exception is approved by the RRC.

2. Administration and Staffing

The program director must have administrative responsibility for and control of the FMC and its staff. The director of the FMC must report to the program director. In cases where the facility is not owned by the program, its primary hospital, or its sponsoring institution, e.g., a Community Health Center, a letter of agreement must be provided that guarantees the program director's authority over and responsibility for the educational activities that take place in the facility.

The FMC must be appropriately staffed with nurses, technicians, clerks, and administrative and other health professional personnel to ensure efficiency and adequate support for patient care and educational needs.

3. Location and Access

The FMC must be close enough to the hospital to require minimal travel time. It may not be at such a distance as to require travel that interferes with the educational opportunities, efficiency, or patient care responsibility.

When a FMC is at such a distance from the primary hospital that the patients are hospitalized elsewhere, the program director must demonstrate how the residents will efficiently maintain continuity for their hospitalized patients at one hospital while having their required rotations at another and the extent to

which they are able to participate in the program's educational activities, such as attendance at required conferences.

The facility must be designed to ensure adequate accessibility and efficient patient flow, be environmentally sensitive to patient care needs, and provide appropriate access and accommodations for the handicapped.

4. Required Areas

Each FMC must have

- a. a reception area and waiting room that is consistent with the patient care and educational needs of the residency;
- b. suitable resident work space and space for individual and small group counseling;
- c. an office library resource, office laboratory, and a business office;
- d. two examining rooms that are large enough to accommodate the teaching and patient care activities of the program for each physician faculty member and resident when they are providing patient care;
- e. faculty offices, if not in the FMC, then immediately adjacent to the center;
- f. a conference room that is conveniently accessible and readily available, as needed, and is large enough to accommodate the full program. Where multiple FMC's are used in a program, there must be a meeting room within or immediately adjacent to each FMC that is large enough for smaller meetings of all faculty, residents, and staff at that site.

When other learners, e.g., fellows, residents from other specialties, medical students, and nurses, are being trained by family physicians in the FMC, additional space may be required. Efficiency and education of the Family Medicine residents must not be compromised by the training of other health care professionals.

5. Equipment

There must be

- a. appropriate diagnostic and therapeutic equipment in the FMC to meet the basic needs of an efficient and up-to-date Family Medicine office and an acceptable educational program for residents in Family Medicine and
- b. provision for diagnostic laboratory and imaging services so that there is prompt and convenient access by patients and residents for patient care and education.

6. Patient Access to the Family Medicine Center

The FMC must be available for patient services at times commensurate with community medical standards and practice. When the center is not open, there must be a well-organized plan that ensures continuing access to the patient's personal physician or a designated family physician from the FMC.

Patients of the FMC must receive education and direction as to how they may obtain access to their physician or a substitute physician for continuity of care during the hours the center is closed. Patients should have access to printed policies and procedures of the Center.

7. Record System

The FMC patients' records should be maintained in the FMC. However, if a centralized record system is used, easy and prompt accessibility of the records of the FMC patients must be ensured at all times, i.e., during and after hours. The record system should be designed to provide information on patient care and the residents' experience. These records must be well maintained, legible, and up-to-date, and should document the patient's primary physician.

The record system must provide the data needed for patient care audit and chart review of all facets of family care, including

care rendered in the FMC, in the hospital, at home, by telephone, through consultations, and by other institutions.

8. Source of Income

The fiscal operation of the FMC must reflect a balance between education and service. Service demands must not adversely affect educational objectives. A plan should be in place to ensure fiscal stability of the program. Residents, faculty, and staff should be educated periodically on the importance of cost-effective quality health care and the importance of efficiency within the FMC.

C. Library Services

In addition to the office library in the FMC, residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.

Library services should include the electronic retrieval of information from medical databases.

There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program, and these must be readily available during nights and weekends.

D. Patient Population

A patient population of adequate size and representing a broad spectrum of problems, various ages and both sexes should be attended in the hospital, in the FMC, at home, and in institutions for long-term care or rehabilitation. A sufficient number of inpatients must be available to provide a broad spectrum of problems in any area listed in these requirements that involves inpatient care. The disease spectrum available for resident education must be that common to the general community. These experiences must include the opportunity to attain expertise in emergency initial care of unusual or life-threatening problems.

V. The Educational Program

A. Introduction

The curricula and plans for all rotations and experiences must be developed by the Family Medicine faculty. Other specialty faculty should be consulted for assistance as needed. All major dimensions of the curriculum should be structured educational experiences for which written goals and objectives, specific methodologies for teaching, and methods of evaluation exist.

While every residency program must have the required core curriculum as contained in this document, curriculum components may vary, with approval of the RRC, to reflect current regional practice patterns and patient care needs and may be flexible enough to utilize the strengths of the program.

Family physicians must be utilized to the fullest extent as teachers consistent with their experience, training, and current competence.

1. Program design

The program design and/or structure must be approved by the RRC as part of the regular review process. All components of a residency program should be related to the program goals. Programs utilizing multiple sites and/or tracks must describe a core curriculum of at least 20 months that is participated in by all of the residents. If the remaining months are offered at more than one site they must be comparable in terms of their content, duration, and intensity.

Innovative and experimental educational designs and formats will be considered. For example, programs in Family Medicine may propose utilization of a nonrotational format for providing resident education in areas usually taught in block rotations.

Such proposals must demonstrate that the program provides experience equivalent to that of block rotations for its residents and must include documentation that residents will have all of the required experiences during their training, including experience with an adequate volume and mix of patients, the required continuity of care experiences, and appropriate faculty supervision.

2. Approval of Changes

Prior approval of the RRC is required for major changes in the curriculum, format, or design of the program; the addition or deletion of a major participating hospital; and/or the utilization of a new or additional FMC or the alteration of an existing center in any way that might make the facility less suitable.

On review of a proposal for major change in curriculum, facilities, or design of a program, the RRC may determine that a site visit is necessary before a decision can be made.

B. Principles of Family Medicine

Continuity of care and family-oriented comprehensive care must be integral components of all programs. Residents must be taught throughout their training to demonstrate and to articulate clearly the following philosophy and concepts of Family Medicine to patients and colleagues.

1. Continuity of Care

The program must instruct residents in the provision of continuity of care and ensure that each resident has experience with the interrelating roles played by the physician, the patient, the patient's family, the health care system, and the community in optimizing the patient's care.

The learning of continuity of care requires stable, protected physician-patient relationships that are structured to enhance both resident learning and patient care. This must occur primarily with a panel of patients in the FMC. Additional continuity patients, who may not be able to visit the FMC, should be enrolled and assigned as needed to provide residents with continuity experience in home care and long-term care settings.

The program must require that each resident maintain continuity of responsibility for his/her patients when such patients require hospitalization or consultation with other providers, both to integrate each patient's care and to optimize each resident's continuity training. The resident must maintain active involvement in management and treatment decisions.

2. Family-Oriented Comprehensive Care

The family physician assumes responsibility for the total health care of the individual and family, taking into account social, behavioral, economic, cultural, and biologic dimensions. Therefore, a program must emphasize comprehensive, family-oriented care that must be taught in didactic and clinical settings during the entire period of residency training. Residents must have experience in all patient care contexts, including outpatient, inpatient, home, and long-term care settings.

The resident must be given the opportunity to achieve high levels of competence in health maintenance and in disease and problem management and to develop attitudes that reflect expertise in comprehensive patient management and education.

The program must provide the opportunity for residents to acquire knowledge and experience in the provision of longitudinal health care to families, including assisting them in coping with serious illness and loss and promoting family mechanisms to maintain wellness of its members.

Essential elements to be integrated into the teaching of family care to residents include, for the individual patient, health assessment, health maintenance, preventive care, acute and chronic illness and injury, rehabilitation, behavioral counseling, health education, and human sexuality. Elements for the family

include family structure and dynamics, genetic counseling, family development, family planning, child rearing and education, aging, end of life issues, epidemiology of illness in families, the role of family in illness care, family counseling and education, nutrition, and safety.

The resident must be taught patterns of record keeping that incorporate a comprehensive information base, retrievable documentation of all aspects of care, and mechanisms for promotion of health maintenance and quality assessment of care.

C. Family Medicine Center Experience

1. Orientation

First-year residents must have an orientation period in the FMC to introduce the comprehensive approach to health care and to promote resident identity as a family physician.

2. Faculty Supervision

The number of family physician faculty assigned to the FMC must be sufficient to ensure that there is always an appropriate number who, without other obligations, supervise and are immediately available on-site to the residents in the FMC whenever two or more residents are seeing patients. If there is only one resident seeing patients, the preceptor may engage in other activities in the FMC to a maximum of 50%. In addition to their availability when needed by residents, these supervisors must provide active precepting of the residents.

3. Patient Population

Each program must document the availability of a stable patient population of sufficient number and variety to ensure comprehensiveness and continuity of experience for the residents in the FMC. Patient populations seeking only episodic care will not satisfy this requirement.

The majority of the scheduled patient visits in the FMC should be from families for whom a resident is responsible. To achieve this, appointments must be scheduled by regular employees of the FMC or by an employee assigned specifically to scheduling Family Medicine patients. These employees must be cognizant of the significance of the appointment policy on continuity of care and patient access to personal physicians. Wherever possible, assignment of family groups to a resident and priority scheduling with the primary provider should be considered.

4. Continuity Patient Panels

Residents should develop and maintain a continuing physician-patient relationship with an undifferentiated panel of patients and their families throughout the 3-year period. The program must be structured to ensure that residents maintain such continuity at least throughout their second and third years of training. This continuity may be interrupted for a maximum of 1 month in the first year of training. During the last 2 years of training the resident may not be absent longer than 2 months in each year, and these 2 two-month periods may not be consecutive. After the first interruption, the residents must return to provide continuity care for their patient panels for at least 2 months before interrupting continuity again.

Each resident must be assigned to the same FMC for the minimum number of half days specified below. A half-day session must be at least 3 hours. To gain adequate experience, each resident must see, on average, the following required minimum numbers of patients per year:

- a. Each first-year resident must be assigned to the FMC at least one half day per week and see a total of at least 140 patient visits by the end of the year
- b. Each second-year resident must be assigned to the FMC at least two half days per week and see a total of at least 500 patient visits during the year

- c. Each third-year resident must be assigned at least three half days per week in the FMC and see a total of at least 1000 patient visits during the year

D. Focused Experiences

The program should implement a plan to ensure that residents retain their identity and commitment to the principles and philosophical attitudes of Family Medicine throughout the training program, particularly while they rotate on other specialty services.

An appropriately qualified member of the program's faculty must be in attendance on site when the services or procedures needed exceed the capability of the most senior supervising resident or when qualified senior residents are unavailable for supervision of more junior residents.

While the content of a rotation is more important than the time assigned to it, it is necessary to establish guidelines for the allocation of time segments to provide an objective measure of the opportunity provided for residents to achieve the cognitive knowledge, psychomotor skills, attitudinal orientation, and practical experience required of a family physician in each of the curricular elements. Time spent in the FMC seeing continuity patients may not be included when calculating the duration of the specialty rotations for which a number of required hours is specified. It is understood, however, that FMC time is included in the required rotations that are specified in months.

The following curricular areas must be included in each program.

1. Human Behavior and Mental Health

Knowledge and skills in this area should be acquired through a program in which behavioral science and psychiatry are integrated with all disciplines throughout the resident's total educational experience. Training should be accomplished primarily in an outpatient setting through a combination of longitudinal experiences and didactic sessions. Intensive short-term experiences in facilities devoted to the care of chronically ill patients should be limited. Instruction must be provided by faculty who have the training and experience necessary to apply modern behavioral and psychiatric principles to the care of the undifferentiated patient. Family physicians, psychiatrists, and behavioral scientists should be involved in teaching this curricular component.

There must be instruction in the following areas:

- a. Diagnosis and management of psychiatric disorders in children and adults
 - b. Emotional aspects of non-psychiatric disorders
 - c. Psychopharmacology
 - d. Alcoholism and other substance abuse
 - e. The physician/patient relationship
 - f. Patient interviewing skills
 - g. Counseling skills
 - h. Normal psychosocial growth and development in individuals and families
 - i. Stages of stress in a family life cycle
 - j. Sensitivity to gender, race, age, sexual orientation and cultural differences in patients
 - k. Family violence including child, partner, and elder abuse (physical and sexual), as well as neglect, and its effect on both victims and perpetrators
 - l. Medical ethics, including patient autonomy, confidentiality, and issues concerning quality of life
 - m. Factors influencing patient compliance
- ##### 2. Adult Medicine

This experience must provide the resident with the opportunity to acquire the knowledge and skills necessary for the diagnosis, treatment, and management of non-surgical diseases of adults. This experience should enhance the resident's understanding of

the pathophysiologic basis for non-surgical diagnostic and therapeutic techniques and promote development of a disciplined, scientific approach to the practice of adult medicine. Faculty must include family physicians and may include internists or other specialists.

There must be a minimum of 8 months of experience in adult medicine. At least 6 months should occur in the inpatient setting, on either a Family Medicine or an internal medicine service. In all cases, experiences should progress from general to specific content areas, with graduated resident responsibilities and supervision.

This training must include a separate defined critical care experience of at least 1 month's duration, or its equivalent, and a structured clinical experience in cardiology.

The curriculum must also provide instruction in endocrinology, pulmonary diseases, hematology and oncology, gastroenterology, infectious diseases, rheumatology, nephrology, allergy and immunology, and neurology through lectures, rotations, or interaction with consultants.

There must be education in the prevention and detection of diseases in women. Instruction on women should also cover social issues of concern to women, including domestic violence, rape, sexual abuse, and the changing role of women in our society. Residents should have the opportunity to develop an understanding of the effect of the community on women's health care, including the epidemiology of infant mortality and prevention of teenage pregnancy. Residents must have the opportunity to learn about the mental health issues of women, including problems that are seen predominantly in women, such as eating disorders and the *sequelae* of sexual abuse.

3. Maternity and Gynecologic Care

a. Maternity Care

The resident must be provided instruction in the biological and psychosocial impacts of pregnancy, delivery, and care of the newborn on a woman and her family. There must be a minimum of 2 months of experience in maternity care, including the principles and techniques of prenatal care, management of labor and delivery, and postpartum care. This must involve sufficient instruction and experience to enable residents to manage a normal pregnancy and delivery.

The program must have family physician faculty who are engaged in providing these services and who can supervise the residents and serve as role models for them.

The resident must be trained in the recognition and initial management of the high-risk prenatal patient, including consultation and referral. Additionally, the residents must be taught to recognize and manage complications and emergencies in pregnancy, labor, and delivery. Residents also must receive training in genetic counseling. When appropriate for the resident's future practice and patient care, the resident must be trained in the management of the high risk prenatal patient.

Each resident must perform a sufficient number of deliveries to ensure adequate opportunity for the achievement of competencies appropriate to family physicians. A portion of the maternity care experience must be derived from patients seen in continuity. To accomplish the objectives of the curriculum in maternity care, residents must assume the responsibility of longitudinal provision of antenatal, natal, and postnatal care during their 3 years of training. Whenever possible, these patients should be derived from the residents' panels of patients in the FMC.

Supervision of labor and delivery care must be immediately available. For deliveries, and for labor when risk factors are

present, there must be on-site supervision in the delivery suite/labor deck by a family physician, an obstetrician, a senior resident in an ACGME obstetrics residency or by a senior Family Medicine resident who has had sufficient experience. In determining the supervision that is required, the program director must consider the year of training and previous obstetrical experience of the supervising resident. If supervision is provided by a senior resident it must be documented that s/he has had sufficient maternity care experience to function in this capacity. When the direct supervision is provided by a senior resident, there must be on-site physician faculty supervision immediately available in the hospital.

The program must make available additional training in maternity care as an elective within the 36-month curriculum. This elective experience must include high-risk maternity care, including the opportunity for residents to develop technical proficiency in appropriate operative procedures that may form a part of their future practice.

b. Gynecological Care

There must be a minimum of 140 hours of structured experience in the care of the gynecological system in nonpregnant women. This experience must be in addition to the routine care of continuity patients in the FMC and gynecological experience gained during Family Medicine call or during the emergency medicine rotation.

All residents must be provided instruction in normal growth and development; diseases of the female reproductive tract; reproductive physiology including fertility, family planning, and human sexuality; physiology of menopause; and pelvic floor dysfunction. The program also must provide adequate instruction and clinical experience in managing emergency problems of the female reproductive system. This experience should be predominantly ambulatory, but residents must participate in the management of gynecological/surgical emergencies. The training should include some inpatient care, preoperative care, assisting in surgery, and postoperative care. The residents must have the opportunity to learn to perform appropriate procedures.

4. Care of the Surgical Patient

The program must provide instruction with special emphasis on the diagnosis and management of surgical disorders and emergencies and the appropriate and timely referral of surgical cases for specialized care.

Residents must be taught to appreciate the varieties of surgical treatments and the potential risks associated with them to enable them to give proper advice, explanation, and emotional support to patients and their families. The residents should also be taught to recognize conditions that are preferably managed on an elective basis.

The program must provide all residents with training in preoperative and postoperative care, basic surgical principles, asepsis, handling of tissue, and technical skills to assist the surgeon in the operating room. The program should provide the opportunity for residents to develop technical proficiency in those specific surgical procedures that family physicians may be called on to perform. If the residents expect to include surgery as a major aspect of their practice, additional training must be considered.

a. General Surgery

The residents must be required to participate in a structured experience in general surgery of at least 2 months, including ambulatory and operating room experience. Experiences in general surgery must be designed to provide opportunity for residents to achieve competency in the diagnosis and man-

agement of a wide variety of common surgical problems typically cared for by family physicians.

b. Surgical Subspecialties

The required experiences in surgical subspecialties may occur in a block or longitudinal format and are exclusive of time spent caring for patients in the assigned panel of FMC patients and of the learning acquired through consultations.

A minimum of 140 hours of structured experience in the care of orthopaedic disorders is required. If sports medicine experience is integrated with orthopaedics, the time devoted to it must be in addition to the 140 hours required for experience in orthopaedics.

This experience must include caring for a broad variety of acute and emergency musculoskeletal injuries and illnesses, as well as for chronic disorders. Residents must have the opportunity to develop skills in casting and splinting. The program also must provide experience in the initial evaluation and rehabilitation of adult and pediatric musculoskeletal disorders, including the appropriateness of consultation. This educational experience must include didactic conferences and clinical exposure, and should occur primarily in an outpatient setting. Supervision must be provided by faculty with demonstrated expertise in evaluation and treatment of musculoskeletal disorders.

The curriculum also must include structured experiences in the care of genitourinary disorders and disorders of the eye, ear, nose, and throat. Residents must have the opportunity under appropriate supervision to learn to perform appropriate procedures. Most of these experiences should occur in outpatient settings and must be in addition to the experiences residents have during the care of their continuity patients in the FMC.

5. Sports Medicine

The sports medicine experience must include didactic and clinical experience in the areas of preparticipation assessment, injury prevention, evaluation, management, and rehabilitation related to athletic and recreational injuries.

The orthopaedic aspects of sports medicine training may be integrated into the orthopaedic curriculum, but the time devoted to sports medicine should be in addition to the minimum requirement of 140 hours for orthopaedics.

6. Emergency Care

There must be a structured educational experience of at least a 1 month block rotation in the delivery of emergency care. Additional required or elective emergency care experiences may be in either a block or longitudinal format. There must be on-site supervision by qualified physicians whenever residents are on the service.

A sufficient volume and variety of patient visits, adequate numbers and types of support personnel, and suitable facilities must be available to ensure the residents an adequate experience in the initial management of serious illnesses and injuries.

The emergency care training should include didactic as well as clinical experiences. Residents should receive training in all standard current life support skills and procedures for both trauma and medical emergencies in patients of all ages.

7. Care of Neonates, Infants, Children, and Adolescents

There must be a structured educational experience in the care of children that is at least 4 months in duration and involves pediatric ambulatory clinic and inpatient experience with a sufficient volume of patients in each setting. This must include the newborn nursery as well as clinical experience in management of the distressed neonate who may need resuscitation, stabilization, and preparation for transport. The resident should have

the opportunity to develop an understanding of the prenatal period, the growth and development of the newborn through adolescence, child rearing, and emotional problems of children and their management. In addition, the resident should be taught to recognize and manage behavioral, medical, and surgical problems of children and adolescents in home, school, ambulatory, and hospital settings.

8. Community Medicine

Residents must be taught to assess and understand the important health needs of the community in which they work. Instruction and clinical experiences in the following areas must be provided:

- a. Occupational medicine, including disability assessment, employee health, and job-related injury and illness
- b. Community health resources that may be utilized in the care of patients and their families, including school health services and public health (including environmental health) services
- c. Disease prevention/health promotion, including appropriate strategies and behaviors such as immunizations and healthful lifestyle changes that will protect children, adults, and families from illness or injury.

9. Care of the Older Patient

Educational experience must be provided in the common and complex clinical problems of the older patient and must include the preventive aspects of health care, functional assessment, the physiological and psychological changes of senescence, the sociocultural parameters of the patient and his or her greater community, the nutritional and pathological (acute and chronic) entities of aging, and the effective utilization of all members of the health care team.

There must be experience with the older adult patient in the hospital, the FMC, a long-term care facility, and the home.

10. Care of the Skin and Associated Organs

The curriculum must include a required educational experience of at least 60 hours, most of which should be in an outpatient setting and be supplementary to the learning that results from consultations. The experience should be supervised by a physician with competence in this area.

11. Diagnostic Imaging and Nuclear Medicine

The program must provide the residents with a structured opportunity to learn the appropriate application of techniques and specialty consultations in the diagnostic imaging and nuclear medicine therapy of organs and body systems. Instruction should include the limitations and risks attendant to these techniques. The format of the instruction should be adapted to the resources available, but must include radiographic film/diagnostic imaging interpretation and nuclear medicine therapy pertinent to Family Medicine.

12. Conferences

Conferences should be offered to cover the breadth of the specialty of Family Medicine.

There should be a core curriculum that is based in the residency and that is specifically directed to the residents as learners. This core curriculum should be supplemented by conferences during other rotations. Residents and faculty should periodically be presenters at conferences, but residents should not be used excessively in this role. Resident and faculty attendance at conferences must be monitored and documented, and these records should be reviewed periodically by the program director and they should also be available for review by the site visitor.

13. Resident Research and Scholarly Activity

Each program must provide opportunity for residents to participate in research or other scholarly activities. Instruction in the critical evaluation of medical literature, including assessing study validity and the applicability of studies to the residents' patients, must be provided.

The participation of each resident in an active research program should be encouraged as preparation for a lifetime of self-education after the completion of formal training. Generally, this activity should be concurrent with other assignments, provided that the responsibilities of the resident are adjusted to permit a reasonable time for research activity. This experience should be designed to give the residents an awareness of the basic principles of study design, performance, analysis, and reporting, as well as of the relevance of research to patient care.

Other acceptable forms of scholarly activity include presentations at national, regional, state, or local meetings, and presentation and publication of review articles and case presentations.

14. Practice Management

There must be at least 60 hours of formal instruction in practice management in both the didactic and the practical setting. A practice management curriculum should include but not be limited to the areas of personal finance, office and personnel management, business planning, use of computers in practice, managed care, alternative practice models, professional liability, and risk management.

The FMC should be considered a primary site for teaching practice management and should serve as an example on which residents may model their future practice.

15. Electives

Electives are intended primarily to enrich the residents' training with experiences relevant to their plans for future practice or their interests as family physicians. There must be a minimum of 3 and a maximum of 6 months of appropriately supervised electives available to all residents. The choice of electives by the resident, including those for remedial purposes, must be made with the approval of the program director.

E. Resident Workload and Impairment

Each program must ensure an appropriate working environment and a duty hour schedule that are consistent with proper patient care and the educational needs of the residents. The educational goals of the program and the learning objectives of the residents must not be compromised by excessive reliance on residents to fulfill institutional service obligations.

There must be formal written policies on the following matters that demonstrate compliance with these requirements. These documents must be available to the RRC, if requested.

1. Moonlighting

It is the responsibility of the program to see that residents provide patient care in the pursuit of their education without additional remuneration based on productivity. Residency training is a full-time responsibility. The program director should monitor the effects of outside activities, including moonlighting inside or outside the participating institutions, to ensure that the quality of patient care and the resident's educational experience are not compromised.

2. Workload/Duty Hours

Resident assignments must be made in such a way as to prevent excessive patient loads, excessive new admission workups, inappropriate intensity of service or case mix, and excessive length and frequency of call contributing to excessive fatigue and sleep deprivation. The program must also ensure the following:

- a. At least 1 day out of 7, averaged monthly, away from the residency program

- b. On-call duty no more frequently than every third night, averaged monthly
- c. Adequate backup if sudden and unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods

Programs must have formal mechanisms specifically designed for promotion of physician well-being and prevention of impairment. There also should be a structured and facilitated group designed for resident support that meets on a regular schedule.

F. Faculty Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include

1. Active participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship.
2. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
3. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
4. Provision of guidance and technical support (e.g., research design, statistical analysis) to residents involved in research.

VI. Evaluation

A. Evaluation of Residents

There must be adequate, ongoing evaluation of the knowledge, skills, and performance of the residents. Entry evaluation assessment, interim testing, and periodic reassessment, as well as other modalities for evaluation, should be utilized. There must be a method of documenting the procedures that are performed by the residents. Such documentation must be maintained by the program, be available for review by the site visitor, and be used to provide documentation for future hospital privileges.

The program must demonstrate that it has developed an effective plan for evaluation and provision of feedback to the residents and that it uses specific performance measure in each resident's evaluation. These must include, at a minimum, the assessment of the resident's competence in patient care, clinical science, practice-based learning and improvement, interpersonal skills and communication, professionalism, and systems-based practice.

The faculty must provide a written evaluation of each resident after each rotation, and these must be available for review by the residents and site visitor. Written evaluation of each resident's knowledge, skills, professional growth, and performance, using appropriate criteria and procedures, must be accomplished at least semiannually and must be communicated to and discussed with the resident in a timely manner.

Residents should be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship, and professional growth.

The program must maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel. The program director and faculty are responsible for provision of a written final evaluation for each resident who

completes the program. This evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record that is maintained by the institution.

B. Evaluation of Faculty

All teaching faculty must be formally evaluated at least annually. Documentation of faculty evaluation should include teaching ability, clinical knowledge, attitudes, and communication skills. There should be a mechanism for confidential input by the residents.

C. Evaluation of the Program

The Family Medicine residency must incorporate all elements of these Program Requirements. The educational effectiveness of a program must be evaluated in a systematic manner at least annually. The program should engage in self-evaluation within the context of the educational goals and objectives, the needs of the residents, teaching responsibilities of the faculty, and the availability of administrative and financial support and of adequate health care resources within the community. This evaluation should include an examination of the balance among education, research, and service. The teaching staff must hold regular, documented meetings to accomplish these reviews. At least one resident representative should participate in these reviews and written evaluations by residents and feedback from the program's graduates should be utilized in the process.

D. Evaluation of Patient Care

A mechanism must be in place to evaluate the care provided in both inpatient and outpatient settings. There should be evidence that this evaluation is used to improve education and the provision of care.

The residency program must ensure that its residents, by the time they graduate, are able to investigate, evaluate, and improve their patient care practices. Residents are expected to analyze practice experience and perform practice-based improvement activities using a systematic methodology.

E. Evaluation of the Graduates

Each program must maintain a system of evaluation of its graduates. The residency should obtain feedback on demographic and practice profiles, licensure and board certification, the graduates' perceptions of the relevancy of training to practice, suggestions for improving the training, and ideas for new areas of curriculum. The suggested format is a written survey after 1 year and every 5 years thereafter.

The data from the evaluation of the graduates should be used as part of the program's determination of the degree to which the program's stated goals are being met.

VII. Evaluation of the Program by the RRC

The program will be evaluated by the RRC at regular intervals, at which times the RRC will judge the degree of its compliance with the Program Requirements.

One measure of the quality of a residency program is the performance of its graduates on the certifying examination of the American Board of Family Medicine. In its evaluation of residency programs, the RRC will take into consideration the information provided by ABFM regarding resident performance on the certifying examinations over a period of several years.

The committee will use scores for a minimum of 3 and a maximum of 5 years and will take into consideration noticeable improvements or declines during the period considered. Poor performance

will be cited if more than 10% of a program's candidates fail on the first examination over a period of consecutive years and/or the program's composite score is consistently at or below the 25th percentile in the nation.

Approved: ACGME September 26, 2000 Effective: July 1, 2001

Program Requirements for Residency Education in Family Medicine Geriatric Medicine and Family Medicine Sports Medicine

The following generic requirements pertain to programs in Family Medicine Geriatric Medicine and Family Medicine Sports Medicine. Each program must comply with the requirements listed below as well as with the specialty content found in the Program Requirements for the respective area.

These programs must exist in conjunction with and be an integrated part of an Accreditation Council for Graduate Medical Education (ACGME)-accredited family medicine residency program. Their existence should not compromise the integrity of the core program.

Residents who are appointed to programs in geriatric medicine must have satisfactorily completed an ACGME-accredited residency in family medicine or internal medicine. Residents appointed to the sports medicine programs should have completed an ACGME-accredited residency in emergency medicine, family medicine, internal medicine, or pediatrics. [Note: Those lacking board certification in one of these areas will not be considered eligible for a Certificate of Added Qualifications from any of the corresponding specialty boards.]

I. Program Organization

A. Program Design

The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of the residency program must be related to these goals and should be structured educational experiences for which a specific methodology and method of evaluation exist.

The program design and/or structure must be approved by the Residency Review Committee (RRC) as part of the regular review process.

B. Participating Institutions

Participation by any institution providing more than 3 months of training in a program must be approved by the RRC.

A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.

II. Program Personnel

The program director and the teaching staff are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

There must be a single program director responsible for the program, who is based primarily at the teaching center. The director must be fully committed to the program in order to devote sufficient time to the achievement of the educational goals and objectives. She or he must have sufficient authority to manage, control, and direct the program.

1. Qualifications

The program director must possess the following qualifications:

- Requisite and documented clinical, educational, and administrative abilities and experience.
- Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
- Certification by the specialty board in the discipline of the program or demonstrate suitable equivalent qualifications. For directors of programs in geriatric medicine this means certification by the American Board of Family Medicine or the American Board of Internal Medicine and a Certificate of Added Qualification in Geriatric Medicine from the same board. Directors of programs in sports medicine may be certified by any of the following boards: American Board of Emergency Medicine, American Board of Family Medicine, American Board of Internal Medicine, or American Board of Pediatrics, and must possess a Certificate of Added Qualification in Sports Medicine from that same board. The RRC will determine the adequacy of alternate qualifications.
- Appointment in good standing to the medical staff of an institution participating in the program.

2. Responsibilities

The responsibilities of the program director include:

- Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff and be readily available for review.
- Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
- Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- Preparation of an accurate statistical and narrative description of the program as requested by the RRC.

B. Teaching Staff

- There must be a sufficient number of teaching staff with documented qualifications, i.e., board certification for the physician faculty and appropriate credentials for the nonphysician teaching staff, to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
- All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.

C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

III. Workload/Call Schedule

The schedule for the residents should allow them to make full utilization of their educational experiences without resultant counterproductive stress, fatigue, and depression. There should be adequate staff to prevent excessive patient loads and excessive length and frequency of call. On-call duty should occur no more frequently than every third night, averaged monthly, and residents must be permitted to spend a monthly average of at least 1 day out of 7 away from program duties. Formal written policies on these matters must be established and available for review.

There must be attention given to monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

IV. Program Research and Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

A. Teaching Staff Research/Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
3. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.

B. Resident Research/Scholarly Activity

The residents must be exposed to and take part in research programs that provide an environment conducive to a questioning attitude and critical analysis. The program must provide support for resident participation in scholarly activities and offer guidance and technical support, e.g., research design, statistical analysis, for residents involved in research. Residents must participate in journal clubs and research conferences.

C. Library

Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.

The library services should include the electronic retrieval of information from medical databases.

There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a

residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

V. Evaluation

A. Evaluation of Residents

There must be regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall

1. Evaluate the knowledge, skills, and professional growth of the residents at least semiannually, using appropriate criteria and procedures.
2. Communicate each evaluation to the resident in a timely manner.
3. Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. Provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.
6. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.

B. Evaluation of the Teaching Staff

Formal mechanisms for annual evaluation of the teaching staff must exist and must include confidential resident participation.

C. Program Evaluation

The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. At least one resident representative should participate in these reviews, and written evaluations by residents should be utilized in this process.

There should also be periodic evaluation of the utilization of resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

One measure of the quality of a program will be the performance by its graduates on the examinations of the certifying board.

VI. Certification

Those planning to seek a Certificate of Added Qualifications from their primary board should communicate with the administrative officer of the board to ascertain the full requirements.

ACGME: September 1994 Effective: July 1995

Essentials

Program Requirements for Residency Education in Family Medicine Geriatric Medicine

In addition to complying with the Program Requirements for Residency Education in Family Medicine Geriatric Medicine and Family Medicine Sports Medicine, programs must also comply with the following requirements, which may in some cases exceed the common requirements.

I. Educational Program

An educational program in geriatric medicine must be organized to provide a well-supervised experience at a sufficient level for the resident to acquire the competence of a physician with added qualifications in the field. It shall be 12 months in duration. The program must be conducted by an accredited residency program in internal medicine or Family Medicine.

Clinical experience must include opportunities to manage elderly patients with a wide variety of medical problems on an inpatient and outpatient basis. Residents must be given the opportunity to provide both primary care and consultation for patients in acute, ambulatory, community, and long-term care settings in order to understand the interaction of natural aging and disease as well as the techniques of assessment, therapy, and management. Additionally, residents must be given the opportunity to care for persons who are generally healthy and require primarily preventive health-care measures.

The program should include an emphasis on the physiology of aging, the pathophysiology that commonly occurs in older persons, atypical presentations of illnesses, functional assessment, cognitive status and affective assessment, and concepts of treatment and management in both the acute and long-term care settings, as well as in the community and in the home.

Attention also should be directed to the behavioral aspects of illness, socioeconomic factors, and ethical and legal considerations that may impinge on medical management.

The program must provide the opportunity for residents to maintain their basic primary skills during the course of this training. At least ½ day per week must be spent in a continuity of care experience in the resident's primary discipline

II. Faculty And Staff

A. Program Director

The program director must be fully committed to the program in order to devote sufficient time to the achievement of the educational goals and objectives. The director must have demonstrated experience in geriatric medicine and must have demonstrated experience in education and scholarly activity and have a career commitment to academic geriatric medicine. The director must be primarily based at the teaching center.

B. Other Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devote a substantial portion of professional time to the training program. For programs with more than two residents, there must be 0.5 additional faculty member for each additional resident. Some of these faculty may be part-time in geriatric medicine or drawn wholly from collaborating programs. The faculty commitment must not attenuate the quality of the core residency training program. The program must ensure that interdisciplinary relationships with

the following specialties occur: physical medicine and rehabilitation, neurology, and psychiatry. Appropriate relationships with other disciplines including but not limited to general surgery, orthopedics, ophthalmology, otolaryngology, urology, gynecology, emergency medicine, dentistry, pharmacy, audiology, physical and occupational therapy, speech therapy, and nursing and social services should be maintained. Additionally, a liaison with the physician assistants, when available, should be established.

C. Geriatric Care Team

The resident must have experience with physician-directed interdisciplinary geriatric teams in an acute-care hospital, in a nursing home, that includes subacute and long-term care, in a home care setting, and in a Family Medicine center or other outpatient settings. Essential members include a geriatrician, a nurse, and a social worker. Additional members may be included in the team as appropriate, including representatives from disciplines such as neurology, psychiatry, physical medicine and rehabilitation, physical therapy, occupational therapy and speech therapy, dentistry, pharmacy, psychology, and pastoral care. Regular team conferences must be held as dictated by the needs of the individual patient.

III. Facilities/Resources

A patient population adequate to meet the needs of the training program must be available in the facilities in which the educational experiences take place. Elderly patients of both sexes with a variety of chronic illnesses, at least some of whom have potential for rehabilitation, must be available. At all facilities utilized by the program the resident must be given opportunities to assume meaningful patient responsibility. At each setting certain activities are mandated and must be supervised and taught by the appropriate clinician.

The program must include the following:

A. Acute-Care Hospital

The acute-care hospital central to the geriatric medicine program must be an integral component of a teaching center. It must have the full range of services usually ascribed to an acute-care general hospital, including intensive care units, emergency medicine, operating rooms, diagnostic laboratory and imaging services, and a pathology department.

B. Long-term Care Institution

One or more long-term care institutions, such as a skilled nursing facility or chronic care hospital, is a necessary component of the geriatric medicine program. Exposure to subacute care and rehabilitation care in the long-term care setting is desirable. The total number of beds available must be sufficient to permit a comprehensive educational experience. The institutions must be approved by the appropriate licensing agencies of the state, and the standard of facilities and care in each must be consistent with those promulgated by the Joint Commission on the Accreditation of Healthcare Organizations.

C. Long-term Noninstitutional Care

Noninstitutional care service, for example, home care, day care, residential care, or assisted living, is a major component of the geriatric medicine program. A home care program or home health agency is a necessary resource to permit residents to learn to provide care for patients who are homebound but not institutionalized. Day care or day hospital centers, life care communities, and residential care facilities for the elderly are also desirable training sites.

D. Ambulatory Care Program

The ambulatory care program must comprise a minimum of 33% of the resident's time. Each resident should evaluate approximately 1 to 3 new geriatric patients and 4 to 8 follow-up geriatric patients

each week. This must include at least ½ day per week spent in a continuity of care experience. This experience must be designed to provide care in a geriatric clinic or Family Medicine center to elderly patients who may require the services of multiple medical disciplines (including but not limited to neurology, gynecology, urology, psychiatry, podiatry, orthopedics, physical medicine and rehabilitation, dentistry, audiology, otolaryngology and ophthalmology, as well as nursing, social work, and nutrition, among other disciplines. The opportunity to provide continuing care and to coordinate the implementation of recommendations from these medical specialties and disciplines is mandatory. In addition, experiences in relevant ambulatory specialty and subspecialty clinics (e.g., geriatric psychiatry and neurology) and those that focus on geriatric syndromes (e.g., falls, incontinence, osteoporosis) are highly desirable.

E. Additional Educational Environment

Peer interaction is essential for residents. To achieve this goal, an accredited training program in at least one relevant specialty other than Family Medicine must be present at the teaching center sponsoring the training program in geriatric medicine. This may be accomplished by affiliation with another educational institution for the enrichment of the educational experience.

Involvement in other health care and community agencies is desirable. There must be a formal affiliation agreement between each long-term care facility included in the program and the sponsoring institution, in which each institution must acknowledge its responsibility to provide high-quality care, adequate resources, and administrative support for the educational mission. In addition, there must be a letter of agreement between each long-term care facility and the office of the director of the geriatric medicine program that guarantees the director appropriate authority at the long-term care institution to carry out the training program.

IV. Specific Program Content

All major dimensions of the curriculum should be structured educational experiences for which written goals and objectives, a specific methodology for teaching, and a method of evaluation exist. A written curriculum that describes the program comprehensively, including sites, educational objectives for each component, and topics to be covered in didactic sessions, should be available to residents and faculty. The curriculum must ensure the opportunity for residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of a physician who specializes in the care of the aged.

Didactic as well as clinical learning opportunities must be available to the resident. Conferences or seminars/workshops in geriatric medicine should be specifically designed to augment the residents' clinical experiences. Journal club or other activities that foster interaction and develop skills in interpreting the medical literature are necessary.

All deaths of patients who receive care by residents should be reviewed and autopsies performed whenever possible.

As the residents progress through their training, they must have the opportunity to teach personnel such as nurses, allied health personnel, medical students, and residents. Appropriate experiences designed to refine educational and teaching skills of the residents and to develop the necessary administrative skills must be provided.

Appropriate faculty supervision of the residents must be provided during all of their educational experiences.

The following components must be provided:

A. Geriatric Medicine Consultation Program

This program must be formally available in the ambulatory setting, the inpatient service, and/or emergency medicine in the acute-care

hospital or at an ambulatory setting administered by the primary teaching institution.

B. Long-term Care Experience

In the long-term care institutional setting each resident must have 12 months of continuing longitudinal clinical experience with an assigned panel of patients for whom the resident is the primary provider. Additional block time to provide long-term care experience is encouraged. Emphasis during the longitudinal experience should be focused on (1) the approaches to diagnosis and treatment of the acutely and chronically ill, frail elderly in a less technologically sophisticated environment than the acute-care hospital; (2) working within the limits of a decreased staff-patient ratio compared with acute-care hospitals; (3) a much greater awareness of and familiarity with subacute care physical medicine and rehabilitation; (4) the challenge of the clinical and ethical dilemmas produced by the illness of the very old; and (5) administrative aspects of long-term care.

Experience with home visits and hospice care must be included. The resident must be exposed to the organizational and administrative aspects of home health care. Continuity of care with an assigned panel of home or hospice care patients for whom the resident is the primary provider is essential.

C. Geriatric Psychiatry

Identifiable structured didactic and clinical experiences in geriatric psychiatry must be included in the program of each resident. Behavioral sciences such as psychology/social work and others must be included in the curriculum.

D. Curriculum

The training program must provide opportunities for the residents to develop clinical competence in the overall field of geriatric medicine. The curriculum of the program must exhibit, as a minimum, the following content and skill areas:

1. Current scientific knowledge of aging and longevity, including theories of aging, the physiology and natural history of aging, pathologic changes with aging, epidemiology of aging populations, and diseases of the aged.
2. Aspects of preventive medicine, including nutrition, oral health, exercise, screening, immunization and chemoprophylaxis against disease. Instruction about and experience with community resources dedicated to these activities should be included.
3. Geriatric assessment, including medical, affective, cognitive, functional status, social support, economic, and environmental aspects related to health; activities of daily living (ADL); the instrumental activities of daily living (IADL); the appropriate use of the history; physical and mental examination; and laboratory.
4. Appropriate interdisciplinary coordination of the actions of multiple health professionals, including physicians, nurses, social workers, dietitians, and rehabilitation experts, in the assessment and implementation of treatment.
5. Topics of special interest to geriatric medicine, including but not limited to cognitive impairment, depression and related disorders, falls, incontinence, osteoporosis, fractures, sensory impairment, pressure ulcers, sleep disorders, pain, senior (elder) abuse, malnutrition, and functional impairment.
6. Diseases that are especially prominent in the elderly or that have different characteristics in the elderly, including neoplastic, cardiovascular, neurologic, musculoskeletal, metabolic, and infectious disorders.
7. Pharmacologic problems associated with aging, including changes in pharmacokinetics and pharmacodynamics, drug interactions, overmedication, appropriate prescribing, and adherence.

8. Psychosocial aspects of aging, including interpersonal and family relationships, living situations, adjustment disorders, depression, bereavement, and anxiety.
9. The economic aspects of supporting services, including Title III of the Older Americans Act, Medicare, Medicaid, capitation, and cost containment.
10. Ethical and legal issues especially pertinent to geriatric medicine, including limitation of treatment, competency, guardianship, right to refuse treatment, advance directives, wills, and durable power of attorney for medical affairs.
11. General principles of geriatric rehabilitation, including those applicable to patients with orthopedic, rheumatologic, cardiac, and neurologic impairments. These principles should include those related to the use of physical medicine modalities, exercise, functional activities, assistive devices, environmental modification, patient and family education, and psychosocial and recreational counseling.
12. Management of patients in long-term care settings, including palliative care, knowledge of the administration, regulation, and financing of long-term institutions, and the continuum from short- to long-term care.
13. Research methodologies related to geriatric medicine, including clinical epidemiology, decision analysis, and critical literature review.
14. Perioperative assessment and involvement in management.
15. Iatrogenic disorders and their prevention.
16. Communication skills with patients, families, professional colleagues, and community groups, including presenting case reports, literature searches, and research papers, when appropriate, to peers and lectures to lay audiences.
17. The pivotal role of the family in caring for many elderly and the community resources (formal support systems) required to support both patient and family.
18. Cultural aspects of aging, including knowledge about demographics, health care status of older persons of diverse ethnicities, access to health care, cross-cultural assessment, and use of an interpreter in clinical care. Issues of ethnicity in long-term care, patient education, and special issues relating to urban and rural older persons of various ethnic backgrounds should be covered.
19. Home care, including the components of a home visit, accessing appropriate community resources to provide care in the home setting.
20. Hospice care, including pain medicine, symptom relief, comfort care, and end-of-life issues.

V. Certification

Those planning to seek a Certificate of Added Qualifications from the American Board of Internal Medicine or the American Board of Family Medicine should communicate with the administrative officer of the board as listed in the Graduate Medical Education Directory to ascertain the full requirements.

ACGME: February 1998 Effective: July 1998

Program Requirements for Residency Education in Family Medicine Sports Medicine

I. Introduction

In addition to complying with the Program Requirements for Residency Education in Family Medicine Geriatric Medicine and Family Medicine Sports Medicine, programs must also comply with the following requirements, which may in some cases exceed the common requirements.

II. Scope and Duration of Training

An educational program in sports medicine must be organized to provide a well-supervised experience at a level sufficient for the resident to acquire the competence of a physician with added qualifications in this field. It shall be 12 months in duration. The practice of sports medicine is the application of the physician's knowledge, skills, and attitudes to those engaged in sports and exercise. Thus, the program must provide training in the development of the clinical competencies needed to diagnose and manage medical illnesses and injuries related to sports and exercise, for example, first-degree sprains, strains, and contusions, including appropriate referrals of, for example, fractures, dislocations, and third-degree sprains. Clinical experience must include injury prevention, preparticipation evaluation, management of acute and chronic illness or injury, and rehabilitation, as applied to a broad spectrum of undifferentiated patients. There must be experience functioning as a team physician and in the promotion of physical fitness and wellness. The program should emphasize physiology and biomechanics; principles of nutrition; pathology and pathophysiology of illness and injury; pharmacology; effects of therapeutic, performance-enhancing, and mood-altering drugs; psychological aspects of exercise, performance, and competition; ethical principles; and medical-legal aspects of exercise and sports.

III. Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program. The teaching staff must include orthopedic surgeons who are engaged in the operative management of sports injuries and other conditions and who are readily available to teach and provide consultation to the residents. Teaching staff from the disciplines of nutrition, pharmacology, pathology, exercise physiology, physical therapy, behavioral science, physical medicine and rehabilitation, and clinical imaging also should be available to assist in the educational program. Coaches and athletic trainers also should be included.

IV. Facilities and Resources

A. Patient Population

A patient population that is unlimited by age or gender and is adequate in number and variety to meet the needs of the training program must be available. The program director must ensure that residents are accorded meaningful patient responsibility with the supervision of a faculty member at all facilities and sites.

B. Sports Medicine Clinic

There must be an identifiable clinic that offers continuing care to patients who seek consultation regarding sports- or exercise-related health problems. The nonsurgical trainees must be supervised by a physician who has qualifications in sports medicine and is certified

by the American Board of Emergency Medicine, the American Board of Family Medicine, the American Board of Internal Medicine, or the American Board of Pediatrics or who possesses suitable equivalent qualifications. Adequate, up-to-date diagnostic imaging and rehabilitation services must be readily available and accessible to clinic patients. Consultation in medical and surgical subspecialties, physical therapy, nursing, nutrition, and pharmacy must be available. The opportunity to render continuing care and to organize recommendations from other specialties and disciplines is mandatory and will require that medical records include information pertinent to the assessment and management of patients with health problems related to sports and exercise.

C. Sporting Events/Team Sports/Mass-Participation Events

The program must have access to sporting events, team sports, and mass-participation events during which the resident can have meaningful patient responsibility.

D. Acute-Care Facility

There must be an acute-care hospital with a full range of services associated with and in proximity to the sponsoring residency. This facility must be readily accessible to patients served by the program.

V. Educational Program

The program must include the following: The curriculum must provide the educational experiences necessary for the residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of physicians in the care of patients with health problems related to sports and exercise. Didactic as well as clinical learning opportunities must be provided as part of the required curriculum for all residents. Conferences or seminars/workshops in sports medicine should be specifically designed for the residents to augment the clinical experiences. All educational activities must be adequately supervised, while allowing the resident to assume progressive responsibility for patient care. The clinical activities in sports medicine should represent a minimum of 50% of the time in the program. The remainder of the time should be spent in didactic, teaching, and/or research activities and in the primary care or emergency medicine ambulatory facility. Residents must spend 1/2 day per week maintaining their skills in their primary specialty.

Participation in the following must be required of all residents:

A. Preparticipation Evaluation of the Athlete

The program must ensure that all sports medicine residents are involved in the development and conduct of preparticipation examination programs.

B. Acute Care

The resident must have appropriate authority and responsibility to participate meaningfully in the medical care that is provided to acute-care patients (see Scope and Duration of Training, above). In addition, the program should arrange for residents to observe representative inpatient and outpatient operative orthopedic procedures.

C. Sports Medicine Clinic Experience

The resident must attend patients in a continuing, comprehensive manner, providing consultation for health problems related to sports and exercise. The resident shall spend at least 1 day per week for 10 months of the training period in this activity. If patients are hospitalized, the resident should follow them during their inpatient stay and resume outpatient care following the hospitalization. Consultation with other physicians and professionals in other disciplines should be encouraged.

D. On-Site Sports Care

The resident should participate in planning and implementation of all aspects of medical care at various sporting events. The program must ensure that supervised sports medicine residents provide on-site care and management to participants in these events. In addition, the resident must participate in the provision of comprehensive and continuing care to a sports team. Preferably, the experience should include several teams that engage in seasonal sports.

E. Mass-Participation Sports Events

The resident should participate in the planning and implementation of the provision of medical coverage for at least one mass-participation event. The program must ensure that its residents have experience that includes providing medical consultation, direct patient care, event planning, protection of participants, coordination with local EMS systems, and other medical aspects of those events.

VI. Specific Knowledge and Skills

A. Clinical

The program must provide educational experiences that enable residents to develop clinical competence in the overall field of sports medicine. The curriculum must include but not be limited to the following content and skill areas:

1. Anatomy, physiology, and biomechanics of exercise
2. Basic nutritional principles and their application to exercise
3. Psychological aspects of exercise, performance, and competition
4. Guidelines for evaluation prior to participation in exercise and sport
5. Physical conditioning requirements for various activities
6. Special considerations related to age, gender, and disability
7. Pathology and pathophysiology of illness and injury as they relate to exercise
8. Effects of disease, e.g., diabetes, cardiac conditions, arthritis, on exercise and the use of exercise in the care of medical problems
9. Prevention, evaluation, management, and rehabilitation of injuries
10. Understanding pharmacology and effects of therapeutic, performance-enhancing, and mood-altering drugs
11. Promotion of physical fitness and healthy lifestyles
12. Functioning as a team physician
13. Ethical principles as applied to exercise and sports
14. Medical-legal aspects of exercise and sports
15. Environmental effects on exercise
16. Growth and development related to exercise

B. Patient Education/Teaching

The program must provide the experiences necessary for the residents to develop and demonstrate competence in patient education regarding sports and exercise. They must have experience teaching others, e.g., nurses, allied health personnel, medical students, residents, coaches, athletes, other professionals, and members of patients' families. There must also be relevant experience working in a community sports medicine network involving parents, coaches, certified athletic trainers, allied medical personnel, residents, and physicians.

ACGME: June 2000 Effective: June 2000

Program Requirements for Residency Education in Internal Medicine

Common Program Requirements are printed in bold.

I. Introduction

A. Definition and Scope of Specialty

Internal medicine is the discipline encompassing the study and practice of health promotion, disease prevention, diagnosis, care, and treatment of men and women from adolescence to old age, during health and all stages of illness. Intrinsic to the discipline are scientific knowledge, the scientific method of problem solving, evidence-based decision making, a commitment to lifelong learning, and an attitude of caring derived from humanistic and professional values.

B. Duration and Scope of Education

1. An accredited residency program in internal medicine must provide 36 months of supervised graduate education.
2. A minimum of one-third of the training time must be spent in ambulatory sites and a minimum of one-third of the time in inpatient sites.
3. Over the 36 months of training, at least 1/2 day each week must be spent in a continuity ambulatory experience (continuity clinic) managing a panel of general internal medicine patients.
4. The internal medicine component of special educational tracks must be conducted under the auspices of the Department of Internal Medicine. Although such tracks may differ in educational content, the core experience of residents must provide training in both inpatient and ambulatory general internal medicine to enable the graduates of such special tracks to function as general internists. The Residency Review Committee (RRC) evaluates the internal medicine components of the special educational tracks in the accreditation process.

C. Educational Standards

Residency training is primarily an educational experience. These program requirements define the minimum standards and outcomes for residency education in internal medicine. They balance didactic instruction and education through direct patient care.

II. Institutional Support

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions. The sponsoring institution must:

1. demonstrate a commitment to education and research sufficient to support the residency program;
2. establish the internal medicine residency within a department of internal medicine or an administrative unit whose primary mission is the advancement of internal medicine education and patient care;
3. provide resident compensation and benefits, faculty, facilities, and resources for education, clinical care, and research required for accreditation;
4. designate and support a single program director within the internal medicine administrative unit with the qualifications and appropriate authority (Defined in Section IV.B);
5. provide at least 50% salary support for the program director

6. provide 20 hours per week salary support for each associate program director (APD) required to meet these Program Requirements;
7. notify the RRC within 60 days of:
 - a. a change in departmental leadership.
 - b. a change in the program director. The qualifications and the curriculum vitae of the new program director must be submitted to the RRC.
 - c. changes in institutional governance, affiliation, or resources that affect the educational program.

B. Participating Institutions

1. **Assignments to participating institutions must be based on a clear educational rationale, must have clearly stated learning objectives and activities, and should provide resources not otherwise available to the program.**
2. **Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the Residency Review Committee (RRC).**
3. **Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. The agreements should:**
 - a. **identify the faculty who will assume educational and supervisory responsibility for residents and specify the faculty responsibilities for teaching, supervision, and formal evaluation of resident performance per Sections IV., and VI.A. of the Program Requirements;**
 - b. **outline the educational goals and objectives to be attained by the resident during the assignment;**
 - c. **specify the period of resident assignment to the participating institution, the financial agreements, and the details for insurance and benefits.**
 - d. **establish the policies and procedures that will govern resident education during the assignment.**
4. Participation by any institution that provides 6 months or more of the training in the program must be approved by the RRC.

C. Facilities and Resources

Adequate outpatient and inpatient facilities, support services, and space for teaching and patient care must be available. Residents must have clinical experiences in efficient, effective ambulatory and inpatient care settings.

1. **Space and equipment**

There must be space and equipment for the educational program, including meeting rooms, classrooms, examination rooms, computers, visual and other educational aids, and office space for teaching staff.
2. **Facilities**
 - a. To ensure that a spectrum of cardiovascular disorders is available for resident education, cardiac catheterization facilities should be present at the site(s) where the residents see the majority of their acutely ill, hospitalized patients.
 - b. Additional facilities must include those for: bronchoscopy, gastrointestinal endoscopy, noninvasive cardiology studies, pulmonary function studies, hemodialysis, and imaging studies,

including radionuclide, ultrasound, fluoroscopy, angiography, computerized tomography, and magnetic resonance imaging.

- c. Residents must have sleeping, lounge, and food facilities during assigned duty hours.
- d. When residents are assigned night duty in the hospital, they must be provided with on-call facilities that are convenient and that afford privacy, safety, and a restful environment with a secure space for their belongings.

D. Medical Records

Clinical records that document both inpatient and ambulatory care must be readily available at all times. (See Institutional Requirements)

E. Medical Reference Material

1. There must be a means of access to an on-site library or to reference material (print or electronic) in each participating institution at all times.
2. Residents must have ready access to a computerized literature search system and electronic medical databases at all times.

F. Patient Population

1. The patient population must have a variety of clinical problems and stages of disease.
2. There must be patients of both sexes, with a broad age range, including geriatric patients. (Note: The resident's panels of patients must include at least 25% of patients of each gender.)

G. Pathology Material

1. All deaths of patients who received care by residents must be reviewed, and autopsies performed whenever possible.
2. Residents must receive autopsy reports after autopsies are completed on their patients.

H. Support Services

1. Support must include adequate professional and teaching staff in each of the major subspecialties of internal medicine.
2. Administrative support must include adequate secretarial and administrative staff and technology to support the program director and associate program director(s).
3. It is desirable that each program appoint a professional administrator/coordinator to oversee the program director's office staff and to assist in the administration of the residency program.
4. Inpatient clinical support services must be available on a 24-hour basis to meet reasonable and expected demands, including intravenous services, phlebotomy services, messenger/transporter services, and laboratory and radiologic information retrieval systems that allow prompt access to results.
5. Consultations from other clinical services in the hospital must be available in a timely manner. All consultations should be performed by or under the supervision of a qualified specialist.

III. Resident Appointment

A. Eligibility Criteria

1. The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.
2. The program should demonstrate the ability to retain qualified residents by graduating at the end of the residency at least 80% of the enrolled, first-year, categorical residents.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education such as quality and volume of patients and related clinical material available for education, fac-

ulty-resident ratio, institutional funding, and the quality of faculty teaching.

1. A program must have a minimum of 12 residents enrolled and participating in the training program at all times.
2. The program director must obtain written approval from the RRC before changing the total number of approved residency positions.
3. A resident who has satisfactorily completed a preliminary training year should not be appointed to additional years as a preliminary resident.

C. Resident Transfer

1. To determine the appropriate level of education for a resident who is transferring from another residency program, the program director must receive written verification of the previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an assessment of competence in the six areas described in section V. B., prior to acceptance into the program.
2. A program director must provide verification of residency education for any residents who may leave the program prior to completion of their education.
3. Residents must not be accepted for advanced standing from non-ACGME-accredited programs. Exceptions will be permitted for physicians with at least 3 years of verified internal medicine training abroad or other training that has been approved by the American Board of Internal Medicine (ABIM).

D. Appointment of Fellows and Other Students

The presence of fellows, other specialty residents, or students must not dilute or detract from the educational opportunities of internal medicine residents.

IV. Faculty

The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Qualifications of the Program Director

1. must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution.
2. The program director must
 - a. possess requisite specialty expertise as well as documented educational and administrative abilities and experience in his or her field, including
 - 1) at least 5 years of participation as an active faculty member in an ACGME-accredited internal medicine residency program and
 - 2) at least three years of graduate medical education administrative experience prior to appointment.
 - b. be certified in General Internal Medicine by the American Board of Internal Medicine.
 - c. be appointed in good standing and based at the primary teaching site, i.e., his or her home office must be at the principal clinical training institution. The program director must be responsible to the sponsoring organization.

B. Responsibilities of the program director

1. **Overseeing and organizing the activities of the educational program in all institutions that participate in the program.** This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
2. **Preparing an accurate statistical and narrative description of the program, as requested by the RRC as well as update annually the program and resident records through the ACGME Accreditation Data System (ADS).**
3. **Promptly notifying the executive director of the RRC using the ADS of a change in program director or department chair.**
4. **Ensuring the implementation of fair policies and procedures, as established by the sponsoring institution, to address resident grievances and due process in compliance with the Institutional Requirements.**
5. **Monitoring of resident well-being:** The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified. These must include:
6. **Obtaining prior approval of the RRC for changes in the program that may significantly alter the education experience of the residents, for example:**
 - a. **The addition or deletion of major participating institution(s) as specified in section II.B of this document.**
 - b. **Change in the approved resident complement**
 - c. **Change in the format of the educational program.**

On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.
7. **Dedicating no less than 50% (at least 20 hours per week) of his or her professional effort to the internal medicine educational program and receive institutional support for this time.** This effort must be devoted to administrative and educational activities of the internal medicine educational program.
8. **Having primary responsibility and appropriate authority for the organization, implementation, and supervision of all aspects of the training program, including the selection and supervision of teaching faculty and other program personnel at each institution participating in the program.**
9. **Having the authority to ensure effective teaching and obtain teaching commitments from other departments involved in the education of internal medicine residents.**
10. **Selecting residents for appointment to the program in accordance with institutional and departmental policies and procedures and evaluate the quality of care rendered by the residents.**
11. **Preparing written educational goals and objectives of the program with respect to the Competencies of residents at each level of training and for each major rotation or other program assignment.**
12. **Ensuring that the written educational goals and objectives are readily available for review and are distributed to residents and faculty members.**
13. **Ensuring that the residency does not place excessive reliance on residents for service as opposed to education.**
14. **Having responsibility for and appropriate authority to accomplish the general administration of the program and the maintenance of records related to program accreditation.**

15. **Establishing a process to teach and document the residents' achievement of milestones in the Competencies.**
16. **Monitoring any internal medicine subspecialty training programs sponsored by the institution to ensure compliance with the ACGME accreditation standards.**
17. **Having supervisory authority over all educational tracks in the internal medicine residency program.**
18. **Outlining in writing the lines of responsibility for and supervision of patient care on all inpatient and ambulatory settings for all members of the teaching teams.**
19. **Participating in academic societies and in educational programs designed to enhance his/her educational and administrative skills.**
20. **Implementing a program of continuous quality improvement in medical education for the faculty, especially as it pertains to the teaching and evaluation of the Competencies.**

C. Faculty Qualifications

1. **The physician faculty must**
 - a. **possess requisite specialty expertise as well as documented educational and administrative abilities and experience in their field.**
 - b. **be certified in the specialty by the American Board of Internal Medicine or possess qualifications judged by the RRC to be acceptable.**
 - c. **be appointed in good standing to the staff of an institution participating in the program.**
 - d. **must be licensed to practice medicine in the state where the sponsoring institution is located or the major teaching activity occurs. (Certain federal programs are exempted.)**
 - e. **must meet professional standards of ethical behavior.**
2. **Nonphysician faculty must be appropriately qualified in their field and possess appropriate institutional appointments.**

D. Faculty Responsibilities.

1. **At each institution participating in the program, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.**
2. **Faculty members must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. The faculty must evaluate in a timely manner the residents whom they supervise.**
3. **The faculty must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, support the goals and objectives of the educational program, and demonstrate commitment to their own continuing medical education by participating in scholarly activities as described in Section V.E. While not all faculty members must be investigators, collectively their activity must include all of the elements outlined in that section.**
4. **All clinical faculty members**
 - a. **must have a commitment to the goals and objectives of the teaching program, including mastery of the Competencies and clinical judgment.**
 - b. **should nurture the attributes of the scholar, scientist, teacher, and humanist in residents.**
 - c. **should be available to residents for advice and counseling.**
 - d. **must implement the written curriculum that describes both patient-based and educational elements of the residency.**
 - e. **should participate in prescribed faculty development programs designed to enhance their teaching effectiveness.**
 - f. **should review the written learning objectives and expectations for each rotation or assignment with residents at the beginning of the rotation or assignment.**

E. Other Program Personnel

The program must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

F. Associate Program Directors

Associate program directors (APD's) are faculty who assist the program director in the administrative and clinical oversight of the educational program. Sponsoring organizations must provide associate program directors based on program size. At a minimum, associate program directors are required at resident complements of 24 or greater according to the following parameters: 24 to 40 residents, 1 APD; 41 to 79, 2 APDs; 80 to 119, 3 APDs; 120 to 159, 4 APDs; more than 159, 5 APDs.

1. Qualifications. Associate program directors must
 - a. be an institutionally based faculty appointee;
 - b. be certified in the specialty by the American Board of Internal Medicine or possess qualifications judged by the RRC to be acceptable;
 - c. have documented clinical and academic experience to ensure effective implementation of the Program Requirements; and
 - d. be clinicians with broad knowledge of, experience with, and commitment to internal medicine as a discipline, and to the generalist training of residents, whether they themselves were trained as general internists or as subspecialists.
2. Responsibilities. Associate program directors must
 - a. dedicate an average of at least 20 hours per week to the administrative and educational aspects of the educational program, as delegated by the program director, and receive institutional support for this time;
 - b. assist in the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents as well as the maintenance of records related to program accreditation;
 - c. report directly to the program director; and
 - d. participate in academic societies and in educational programs designed to enhance their educational and administrative skills.

G. Key Clinical Faculty

The residency program must include institutionally based key clinical faculty (KCF) in addition to the program director, associate program directors, and chief residents. KCF are attending physicians who dedicate significant effort to the educational program [Section III.C.]. Sponsoring institutions must provide KCF based on program size. Four KCF are required at resident complements of 79 or less. At resident complements of 80 or greater, minimum KCF are required, according to the following parameters: 80 to 119 residents, 6 KCF; 120 to 159, 8 KCF; more than 159, 10 KCF.

1. Qualifications. Key clinical faculty must
 - a. be active clinicians with broad knowledge of, experience with, and commitment to internal medicine as a discipline, and to the generalist training of residents, and
 - b. be certified in the specialty by the American Board of Internal Medicine or possess qualifications judged by the RRC to be acceptable.
2. Responsibilities. Key clinical faculty must
 - a. dedicate an average of at least 15 hours per week throughout the year to the internal medicine residency program;
 - b. provide teaching and supervision of residents in the clinical setting;
 - c. assist in the preparation of the written curriculum;
 - d. assist in the development and evaluation of the Competencies in the residents; and

- e. assist in monitoring resident stress, with the goal of identifying mental or emotional conditions inhibiting performance or learning (including drug or alcohol-related dysfunction), and advise the program director or associate program director(s) as indicated.

H. Subspecialty Education Coordinators

1. Qualifications: Subspecialty education coordinators.
 - a. In conjunction with division chiefs, the program director must identify a qualified individual (subspecialty education coordinator) in each of the subspecialties of internal medicine (cardiology, critical care, endocrinology, hematology, gastroenterology, geriatric medicine, infectious diseases, nephrology, oncology, pulmonary disease, and rheumatology). The subspecialty education coordinator must be certified in the specialty by the American Board of Internal Medicine or possess qualifications judged by the RRC to be acceptable.
 - b. Each subspecialty education coordinator should have a sufficient term of office to achieve the educational goals and objectives of the residency.
2. Responsibilities: Subspecialty education coordinators. The subspecialty education coordinator must
 - a. dedicate an adequate portion of his or her professional effort throughout the year to the internal medicine training program to accomplish the educational goals in each subspecialty; and
 - b. be accountable to the program director for coordination of the residents' subspecialty educational experiences. (NOTE: KCF can also serve as subspecialty education coordinators.)

I. Site Coordinating Faculty

At each participating inpatient institution where residents spend 6 or more months, the sponsor must ensure that a designated faculty member coordinates the activities of the residents. This faculty member must be based at that participating institution and report to the program director. At a minimum, the site coordinating faculty member must satisfy the qualifications and responsibilities of a KCF member.

V. The Educational Program

The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

A. Role of Program Director and Faculty

The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by

1. preparing and implementing a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents for each major assignment and each level of the program. The statement must be distributed to residents and faculty and reviewed with residents prior to the assignment. For each rotation or major learning experience, the written curriculum:
 - a. should include the educational purpose; teaching methods; the mix of diseases, patient characteristics, and types of clinical encounters, procedures, and services; reading lists, pathological material, and other educational resources to be used; and a method of evaluation of resident competence;
 - b. must define the level of residents' supervision by faculty members in all patient-care activities; and
 - c. should be reviewed and revised at least every three years by faculty members and residents to keep it current and relevant.

2. preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
3. providing residents with direct experience in progressive responsibility for patient management.
 - a. The program must advance residents to positions of higher responsibility on the basis of their satisfactory demonstration of achievement of program-developed milestones in the Competencies.
 - b. The program must ensure, with each year of training, that each resident has increasing responsibility in patient care, leadership, teaching, and administration.

B. ACGME Competencies

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. Patient care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health.
2. Medical knowledge about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.
3. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.
4. Interpersonal and communication skills that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

C. Didactics

1. Formal Teaching Program

a. Inpatient teaching

1) Teaching (attending) rounds.

Teaching or attending rounds must be patient-based sessions in which current cases are presented as a basis for discussion of such points as interpretation of clinical data, pathophysiology, differential diagnosis, specific management of the patient, the appropriate use of technology, the incorporation of evidence and patient values in clinical decision making, and disease preventions.

- i) On all inpatient and consultative teaching services, teaching rounds must be regularly scheduled and formally conducted.
 - ii) Teaching rounds must include direct resident and attending interaction with the patient, and must include bedside teaching and the demonstration of interview and physical examination techniques.
 - iii) Teaching rounds must occur at least 3 days of the week for a minimum of 4.5 hours per week.
- 2) Management (work) rounds by the physician of record.

Management or work rounds involve the bedside review of patients and their clinical data and the development of the daily plan of care (therapeutic and diagnostic) by the physician of record with the residents. Such rounds are distinguished from teaching (attending) rounds by their focus on the care plan (resident order writing; record documentation; communication with nurses, pharmacists, families; etc.).

- i) Each physician of record has the responsibility to make management rounds on his or her patients and to communicate effectively with the residents participating in the care of these patients at a frequency appropriate to the changing care needs of the patients.
 - ii) To avoid interference with the residents' educational experience and ability to accomplish their daily tasks of patient care, including resident work rounds, residents should not be required to relate to an excessive number of physicians of record.
 - iii) Note writing and other coding/documentation activities by the physician of record must not infringe upon teaching rounds or resident education.
- 3) Combined teaching and management rounds
Inpatient teaching rounds and management rounds may be functionally combined when:
- i) there is a single physician of record for most or all patients on the teaching service, and
 - ii) that attending physician of record is also the teaching physician conducting teaching for those same patients, and
 - iii) the total time spent in combined inpatient rounds must exceed by a minimum of 4½ hours per week the time required to supervise the care of the patients, with this time dedicated to fulfill the requirements outlined above for teaching rounds.
- b. Ambulatory teaching
In every ½-day session in the ambulatory setting, each resident should have at least 30 minutes of contact time with the supervising faculty physician.

2. Conferences and Seminars

In addition to morning report and rounds, the program must provide core conferences (e.g., CPC conferences, grand rounds, morbidity and mortality review conferences, literature-review activities, and other seminars covering both general medicine and the internal medicine subspecialties), for a minimum of 150 hours per year of conference-based educational experience.

a. The core conference series must

- 1) cover the major topics in general internal medicine (including issues arising in ambulatory and extended care settings) and the internal medicine subspecialties;
 - 2) be repeated often enough, or be made available for review on tape or electronically, to afford each resident an opportunity to attend or review most of the core conference topics;
 - 3) include the following interdisciplinary topics: adolescent medicine, clinical ethics, medical genetics, quality assessment, quality improvement, risk management, preventive medicine, medical informatics and decision-making skills, law and public policy, pain medicine, end-of-life care, domestic violence, physician impairment, and substance-use disorders; and
 - 4) be made available to residents at each of the program's participating institutions.
- b. Conferences should include information from the basic medical sciences, with emphasis on the pathophysiology of disease

and reviews of recent advances in clinical medicine and biomedical research.

- c. The program must sponsor monthly conferences in which faculty members are involved. These must include
 - 1) a journal club emphasizing critical appraisal of the medical literature and evidence-based medicine; and either
 - 2) clinical pathologic conferences correlating current pathological material, including material from autopsies, surgical specimens, and other pathology material, with the clinical course and management of patients; or
 - 3) clinical quality improvement (morbidity and mortality) conferences focusing on adverse clinical events on the teaching services. It should analyze the causes and consequences of each event, and should result in proposals for actions to avoid recurrence of similar events.
- d. It is desirable that each resident attends at least 60% of these conferences.

D. Clinical

1. Ambulatory Medicine

- a. At least one-third of the residency training must be in the ambulatory care setting. (NOTE: In assessing the contribution of various clinical experiences with ambulatory patients to the 33% minimum, the following guidelines can be used: ½ day per week assigned to an ambulatory setting throughout all 3 years of training is equivalent to 10%; a 1-month block rotation is equivalent to 3%; 1 full day per week throughout a single year of training is equivalent to 7%. Examples of settings that may be counted toward this requirement are general medicine continuity clinics, subspecialty clinics, ambulatory block rotations, physicians' offices, managed health-care systems, emergency medicine, walk-in clinics, neighborhood health clinics, and home-care visits.)
 - 1) In an ambulatory setting, one faculty member must be responsible for no more than five residents or other learners.
 - 2) On-site faculty members' primary responsibilities must include the supervision and teaching of residents. On-site supervision as well as the quality of the educational experience must be documented.
 - 3) Residents must be able to obtain appropriate and timely consultation from other specialties for their ambulatory patients.
 - 4) There should be services available from other health-care professionals such as nurses, social workers, language interpreters, and dietitians.

b. Ambulatory Medicine — Continuity Clinic

- 1) At the program director's discretion, residents may be excused from attending their continuity clinic when they are assigned to an intensive care unit, to emergency medicine, to an away-elective, or to night float.
- 2) Residents must attend a minimum of 108 weekly continuity clinic sessions during the 36 months of training.
- 3) The continuing patient-care experience should not be interrupted by more than 1 month, excluding a resident's vacation.
- 4) The number of patients seen by a first-year resident, when averaged over the year, must not be less than 3 or greater than 5 per scheduled ½-day session.
- 5) The number of patients seen by a second-year resident, when averaged over the year, must not be less than 4 or greater than 6 per scheduled ½-day session.
- 6) The number of patients seen by a third-year resident, when averaged over the year, must not be less than 4 per scheduled ½-day session.

- 7) During the continuity experience, arrangements should be made to minimize interruptions of the experience by residents' duties on inpatient and consultation services.
- 8) Each resident must follow patients with chronic diseases on a long-term basis.
- 9) It is desirable that residents be informed of the status of their continuity patients when they are hospitalized so the resident can make appropriate arrangements to maintain continuity of care.

c. Ambulatory Medicine — Emergency Medicine

- 1) Internal medicine residents assigned to emergency medicine must have first-contact responsibility for a sufficient number of unselected patients to meet the educational needs of internal medicine residents. Triage by other physicians prior to this contact is unacceptable.
- 2) Internal medicine residents must be assigned to emergency medicine for at least 4 weeks of direct experience in blocks of not less than 2 weeks.
- 3) Total required emergency medicine experience must not exceed 3 months in 3 years of training.
- 4) During emergency medicine assignments, continuous duty must not exceed 12 hours.
- 5) Residents must have direct patient responsibility, including participation in diagnosis, management, and admission decisions across the broad spectrum of medical, surgical, and psychiatric illnesses, such that the residents learn how to determine which patients require hospitalization.
- 6) Internal medicine residents assigned to rotations on emergency medicine must have on-site, 24-hour, supervision by qualified faculty members.
- 7) Timely, on-site consultations from other specialties must be available.

2. Inpatient Medicine

a. On Inpatient rotations:

- 1) A first-year resident must not be assigned more than five new patients per admitting day; an additional 2 patients may be assigned if they are in-house transfers from the medical services.
- 2) A first-year resident must not be assigned more than eight new patients in a 48-hour period.
- 3) A first-year resident must not be responsible for the ongoing care of more than 12 patients.
- 4) The program must demonstrate a minimum of 210 admissions per year to the medical teaching services for each first-year resident.
- 5) When supervising more than one first-year resident, the supervising resident must not be responsible for the supervision or admission of more than 10 new patients and 4 transfer patients per admitting day or more than 16 new patients in a 48-hour period.
- 6) When supervising one first-year resident, the supervising resident must not be responsible for the ongoing care of more than 16 patients.
- 7) When supervising more than one first-year resident, the supervising resident must not be responsible for the ongoing care of more than 24 patients.
- 8) First-year residents should interact with second- or third-year internal medicine residents in the care of patients.
- 9) Second- or third-year internal medicine residents or other appropriate supervisory physicians (e.g., subspecialty residents or attendings) with documented experience appropriate to the acuity, complexity, and severity of patient

illness must be available at all times on-site to supervise first-year residents.

- 10) On inpatient rotations, residents should have continuing responsibility for most of the patients they admit.
 - 11) Residents from other specialties must not supervise internal medicine residents on any internal medicine inpatient rotation.
 - 12) Residents must write all orders for patients under their care, with appropriate supervision by the attending physician. In those unusual circumstances when an attending physician or subspecialty resident writes an order on a resident's patient, the attending or subspecialty resident must communicate his or her action to the resident in a timely manner.
 - 13) There must be a resident on-call schedule and detailed check-out and check-in procedures, so residents will learn to work in teams and effectively transmit necessary clinical information to ensure safe and proper care of patients.
 - 14) The on-call system must include a plan for backup to ensure that patient care is not jeopardized during or following assigned periods of duty.
 - 15) There must be a minimum of 6 months of inpatient internal medicine teaching service assignments in the first year,
 - 16) There must be a minimum of 6 months of inpatient internal medicine teaching service assignments over the second and third years of training combined.
 - 17) The required 12 months of inpatient internal medicine must include a minimum of 3 months of inpatient general internal medicine teaching service assignments over the 3 years of training.
 - 18) Geographic concentration of inpatients assigned to a given resident is desirable because such concentration promotes effective teaching and fosters interaction with other health-care personnel.
- b. Inpatient Medicine — Critical Care
- 1) Residents must be assigned to critical care rotations (e.g., medical or respiratory intensive care units, cardiac care units) no fewer than 3 months in 3 years of training.
 - 2) Total required critical care experience must not exceed 6 months in 3 years of training. (NOTE: When elective experience occurs in the critical care unit, it must not result in more than a total of 8 months of critical care in 3 years of training for any resident.)
 - 3) All critical care training must occur in critical care units that are directed by ABMS-certified critical care specialists.
 - 4) All coronary intensive care unit training must occur in critical care units that are directed by ABIM-certified cardiologists.
 - 5) Timely and appropriate consultations must be available from other internal medicine subspecialists and specialists from other disciplines.
3. Subspecialty Experience
- a. Clinical experience in each of the subspecialties of internal medicine must be included in the training program and may occur in either inpatient or ambulatory settings (see IV.H.1.a. for the list of required specialties).
 - b. Although it is not necessary that each resident be assigned to a dedicated rotation in every subspecialty, the curriculum must be designed to ensure that each resident has sufficient clinical exposure to the diagnostic and therapeutic methods of each of the recognized internal medicine subspecialties.

- c. Residents must have formal instruction and assigned clinical experience in geriatric medicine. The curriculum and clinical experience should be directed by an ABMS-certified geriatrician. These experiences may occur at one or more specifically designated geriatric inpatient units, geriatric consultation services, long-term care facilities, geriatric ambulatory clinics, and/or in home-care settings.

- d. Total required transplant rotations in dedicated units should not exceed 1 month in 3 years.

4. Other Specific Experiences and Skills

a. Gender-specific health care

Residents should receive instruction and clinical experience in the prevention, counseling, detection, and diagnosis and treatment of gender-specific diseases of women and men. (NOTE: This clinical experience may occur in general medicine clinics or other specialty clinics.)

b. Experiences in other specialties

- 1) The program must provide residents with instruction and sufficient clinical experience in neurology to acquire the knowledge needed to diagnose, follow, and treat patients with common neurologic disorders and to recognize those disorders that should be referred to a neurologist.
- 2) Residents should have sufficient instruction and clinical experience in psychiatry, dermatology, medical ophthalmology, office gynecology, otorhinolaryngology, non-operative orthopedics, and rehabilitation medicine to become familiar with those aspects of care in each specialty area that can be diagnosed and managed by general internists and those that should be referred to, or managed jointly with, other specialists. (NOTE: This experience may occur in clinical rotations or consultative interactions with specialists in these disciplines.)

c. Procedures and technical skills

1) Procedures

- i) All residents must be instructed in the indications, contraindications, complications, limitations, and interpretations of findings, and they must develop technical proficiency in performing the following procedures: advanced cardiac-life support (American Heart Association documentation of successful training within the teaching institution), abdominal paracentesis, arterial puncture, arthrocentesis, central venous line placement, lumbar puncture, nasogastric intubation, pap smear and endocervical culture, and thoracentesis.
- ii) Residents should have the opportunity to achieve competence in additional procedures that may be required in their future practice settings. These may include arterial line placement, cryosurgical removal of skin lesions, elective cardioversion, endotracheal intubation, skin biopsies, soft tissue and joint injections, temporary pacemaker placement, and treadmill exercise testing.

2) Interpretative skills

- i) All residents must develop competency in interpretation of electrocardiograms.
- ii) All residents should develop competency in interpretation of chest roentgenograms, peripheral blood smears, Gram stains of sputum, microscopic examinations of urine, spirometry, and KOH and wet prep examinations of vaginal discharge.
- iii) Residents should have the opportunity to achieve competence in additional common interpretive skills required in the residents' expected practice settings. These include but are not limited to ambulatory elec-

trocardiography, ambulatory blood pressure monitoring, and spirometry.

- 3) Consultative experience
Residents must have a structured clinical experience to act, under supervision, as consultants to physicians in other specialties.

E. Scholarly Activities

1. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included within each program. Both faculty and residents must participate actively in scholarly activity. Scholarship is defined as one of the following:
 - a. The scholarship of discovery, as evidenced by peer-reviewed funding or publication of original research in peer-reviewed journals.
 - b. The scholarship of dissemination, as evidenced by review articles or chapters in textbooks.
 - c. The scholarship of application, as evidenced by the publication or presentation at local, regional, or national professional and scientific society meetings, for example, case reports or clinical series.
 - d. Active participation in clinical discussions, rounds, journal club, and research conferences in a manner that promotes a spirit of inquiry and scholarship; offering of guidance and technical support, e.g., research design, statistical analysis, for residents involved in research; and provision of support for resident participation as appropriate in scholarly activities.
2. Adequate resources for scholarly activities for faculty and residents must be available, e.g., sufficient laboratory space, equipment, computer services for data analysis, and statistical consultation services.
3. There must be regular resident interaction with clearly identified faculty members.
 - a. who participate in research conferences that emphasize the presentation of original research;
 - b. who participate in research or scholarly activity that leads to publication or presentations at regional and national scientific meetings;
 - c. who offer guidance and technical support such as research design and statistical analysis to residents involved in research or scholarly activity.

F. Resident Duty Hours and the Work Environment

Providing residents with a sound academic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents time and energies. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

1. Supervision of Residents
 - a. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
 - b. Faculty schedules must be structured to provide residents with continuous supervision and consultation.

- c. Faculty and residents must be educated to recognize the signs of fatigue and adopt and apply policies to prevent and counteract the potential negative effects.

2. Duty Hours

- a. Duty hours are defined as all clinical and academic activities related to the residency program, i.e., patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.
- b. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
- c. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a four week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
- d. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods, and after in-house call.

3. On-Call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24 hour period. In-house call is defined as those duty hours beyond the normal work day when residents are required to be immediately available in the assigned institution.

- a. In-house call must occur no more frequently than every third night.
- b. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient continuity clinics and maintain continuity of medical and surgical care.
- c. No new patients may be accepted after 24 continuous hours on duty. A new patient is defined as any patient for whom the resident has not previously provided care.
- d. At-home call (pager call) is defined as call taken from outside the assigned institution.

- 1) The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

- 2) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

- 3) The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

4. Moonlighting

- a. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
- b. The program director must comply with the sponsoring institution's written policies and procedures regarding moon-

lighting, in compliance with the Institutional Requirements III. D.1.k

- c. Moonlighting that occurs within the residency program and/or the sponsoring institution or the non-hospital sponsor's primary clinical site(s), i.e., internal moonlighting, must be counted toward the 80-hour weekly limit on duty hours.

5. Oversight

- a. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Monitoring of duty hours is required with frequency sufficient to ensure an appropriate balance between education and service.
- b. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

6. Duty Hour Exception

The RRC for Internal Medicine will not consider requests for exceptions to the limit to 80 hours per week, averaged monthly.

7. Service versus education

- a. A sponsoring institution must not place excessive reliance on residents to meet the service needs of the participating training sites.
- b. To this end, the sponsoring and participating institutions must have written policies and procedures and provide the resources to ensure the implementation of the following:
 - 1) Residents must not be required to provide routine intravenous, phlebotomy, or messenger/transporter services.
 - 2) Residents' service responsibilities must be limited to patients for whom the teaching service has diagnostic and therapeutic responsibility. (NOTE: "Teaching Service" is defined as those patients for whom internal medicine residents [PGY 1, 2, or 3] routinely provide care.)
 - 3) The admission and continuing care of patients by residents must be limited to those on the teaching service.
 - 4) Residents must not be assigned more than 1.5 months of night float during any year of training, or more than 4 months of night float over the 3 years of residency training. Residents must not be assigned to more than 1 month of consecutive night float rotation.
 - 5) For each rotation or major clinical assignment, the teaching ratio must not exceed a total of 8 residents and students (excluding subspecialty residents in special care units) to one teaching attending.
 - 6) Emergency medicine or night float assignments should be separated by at least 10 hours without residency-related activities.

8. Graded Responsibility

- a. Each resident must be assigned at least 24 months of the 36 months of residency education in settings where the resident personally provides, or supervises junior residents who provide, direct patient care in inpatient or ambulatory settings.
- b. These inpatient and ambulatory assignments must include development of diagnostic strategies, planning, record keeping, order or prescription writing, management, discharge summary preparation, and decision making commensurate with residents' abilities and with appropriate supervision by the attending physician.

9. Grievance procedures and due process

- a. In the event of an adverse annual evaluation, a resident must be offered an opportunity to address a judgment of academic deficiencies or misconduct before a constituted clinical competence committee.
- b. There must be a written policy that ensures that academic due process provides fundamental fairness to the resident and protects the institution by ensuring accurate, proper, and definitive resolution of disputed evaluations.

VI. Evaluation

A. Resident Evaluation

1. Formative Evaluation

The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing the results to improve resident performance. This plan should include

- a. the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. mechanisms for providing regular and timely performance feedback to residents that includes at least
 - 1) written semiannual evaluation that is communicated to each resident in a timely manner and include formal evaluations of knowledge, skills, and professional growth of residents and required counseling by the program director or designee
 - 2) the maintenance of a record of evaluation for each resident that is accessible to the resident; that is, permanent records of both of the evaluation and counseling sessions (and any others that occur) for each resident must be maintained in the resident's file and must be accessible to the resident and other authorized personnel.
 - a) The record of evaluation should be based on close observation of residents performing specific tasks of patient management such as the interview and physical examination, choice of diagnostic studies, formulation of differential diagnosis or problem lists, development of plans for short-term and long-term medical management, communication of treatment plans, invasive procedures, and (when on inpatient services) discharge planning.
 - b) It should document
 - (1) that residents have demonstrated an in-depth understanding of the basic mechanisms of human biology, and the application of current knowledge to practice, by the integration of pathophysiologic processes into the diagnosis, treatment, and management of clinical disorders.
 - (2) that prior to the completion of training, each resident has demonstrated
 - (a) acceptable scholarly activity such as: original research, comprehensive case reports, or review of assigned clinical and research topics.
 - (b) basic science literacy and understands the fundamental principles of clinical study design and evaluation of research findings.
 - (c) the effective application of knowledge and clinical skills (patient care), utilizing the synthetic skills of clinical judgment.
 - (3) that structured clinical evaluations were conducted during the first year (for examples see ACGME Website's Outcome Toolbox).

- (4) that the review of residents' clinical documentation for format, quality of data entry, accuracy of the assessment, and appropriateness of the plan was completed on resident inpatient and outpatient records (including inpatient discharge summaries) during each rotation, with feedback to the residents. The program director should ensure that the review of medical records is incorporated into residents' evaluation.
 - (5) that records were maintained by documentation log-book or by an equivalent method to demonstrate that residents have achieved competence in the performance of invasive procedures. These records must state the indications and complications and include the names of the supervising physicians. Such records must be of sufficient detail to permit use in future credentialing.
 - (6) that residents were evaluated in writing and their performance reviewed with them verbally on completion of each rotation period.
 - (7) that residents were evaluated in writing and their performance in continuity clinic reviewed with them verbally on at least a semiannual basis.
- c. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Appropriate sources of evaluation include faculty, patients, peers, self, and other professional staff, including nurses.**

2. Summative Evaluation

The program director must provide a final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

- a. The program director must also prepare a written summative evaluation of the clinical competence of each resident annually. (NOTE: This is in addition to the completion of the ABIM tracking form.)
- b. The summative evaluation must stipulate the degree to which the resident has achieved the level of performance expected in each Competency (i.e., patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice).

B. Faculty Evaluation

- 1. The performance of the faculty must be evaluated by the program annually. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Provision must be made for residents to confidentially provide written evaluations of each teaching attending at the end of a rotation and for the evaluations to be reviewed with faculty annually.
- 2. The results of the evaluations must be used for faculty-member counseling and for selecting faculty members for specific teaching assignments.

C. Program Evaluation

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

- 1. Representative program personnel, i.e., at least the program director, representative faculty, and at least one resident,

must be organized to review program goals and objectives and the effectiveness of the program in achieving them. The group must have regular documented meetings at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' annual confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes.

- a. The evaluation should include the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the effectiveness of inpatient and ambulatory teaching, the performance of faculty members, and the quality of supervision of residents.
- b. The residents must have the opportunity to formally assess the effectiveness of ambulatory teaching on an ongoing basis.

2. Outcome assessment

- a. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program.
- b. The program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.

3. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.

- a. A program's graduates must achieve a pass rate on the certifying examination of the ABIM of at least 70% for first-time takers of the examination for the most recent defined 3-year period.
- b. At least 80% of those completing their training in the program for the most recent defined 3-year period must have taken the certifying examination.

VII. Experimentation and Innovation

A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects supported by sound educational principles are encouraged.

B. Requests for experimentation or innovative projects that may deviate from the program requirements must be RRC prior-approved and must include the educational rationale and a method for evaluating the project.

C. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

D. Performance Improvement Process

- 1. The program should identify and participate in at least two ongoing performance improvement (PI) activities which relate to the competencies.
- 2. The PI activities must involve both residents and faculty in planning and implementing.
- 3. The PI activities should result in measurable improvements in patient care or residency education.

VIII. Certification

Residents who plan to seek certification by the American Board of Internal Medicine should communicate with the registration sec-

tion of the board regarding fulfillment of requirements for certification. Residents must be certified in internal medicine prior to seeking certification in a subspecialty.

Effective: July 1, 2003

Policies and Procedures for Fellowship Education in the Subspecialties of Internal Medicine

1. As a general rule, subspecialty programs will be surveyed and reviewed in conjunction with the parent residency program in internal medicine. In the case of applications, or as determined by the Residency Review Committee (RRC), a subspecialty program may be surveyed and reviewed separately.
2. Subspecialty program information forms will be distributed to the director of the parent internal medicine residency program, who will coordinate the collection of information, completion of the forms, and submission of required materials to the RRC for all subspecialty programs to be reviewed.
3. The survey may be conducted by a member of the Field Staff or by a specialist selected by the RRC. The surveyor will submit a report on the internal medicine residency program as well as on each of the subspecialty programs under review.
4. Subspecialty programs will be designated as "accredited" or "non-accredited." No other delineation of accreditation categories will be used. The accreditation status of subspecialty programs will be directly related to that of the parent internal medicine program as follows:
 - a. Applications for accreditation of new subspecialty programs will be considered only if the parent residency program in internal medicine carries the status of full accreditation.
 - b. Applications for accreditation of new subspecialty programs will not be considered if the parent residency program in internal medicine is (1) accredited on a provisional or probationary basis; or (2) involved in the process of implementing appeal procedures.
 - c. Application for combined subspecialty training programs such as hematology and oncology or pulmonary disease and critical care medicine will not be considered if the application is based on an existing subspecialty program accredited with warning.
 - d. When a subspecialty program is found not to be in substantial compliance with the *Essentials of Accredited Residencies*, the program director will be warned that accreditation will be withdrawn if the program is found not to be in substantial compliance with the *Essentials* at the time of the next scheduled review, regardless of the accreditation status of the parent internal medicine program.
 - e. If the parent internal medicine program is accredited on a probationary basis, or accredited on a provisional basis with a warning that adverse action will be taken if the program is not in substantial compliance with the *Essentials of Accredited Residencies* at the time of the next scheduled review, the subspecialty programs will be informed that their accreditation status is in jeopardy.

In addition, if the primary subspecialty program is accredited with a warning that an adverse action will be taken if the program is not in substantial compliance with the *Essentials of Accredited Residencies* at the time of the next scheduled review, the linked secondary subspecialty program (e.g., cardiovascular disease and clinical cardiac electrophysiology) will be

informed that its accreditation status is in jeopardy. Further, accreditation of the secondary subspecialty program will be administratively withdrawn if the RRC withdraws accreditation of the primary subspecialty program.

Thereafter, accreditation of the subspecialty programs will be administratively withdrawn if the RRC (1) continues accreditation of the parent residency program in internal medicine on a probationary basis beyond 2 years; (2) withdraws accreditation of the parent residency program in internal medicine.

- f. Withdrawal of accreditation of the parent internal medicine residency program under circumstances other than those described above will also result in simultaneous withdrawal of all subspecialty programs.
5. In case of withholding accreditation or withdrawing accreditation of subspecialty programs, the Procedures for Proposed Adverse Actions and the Procedures for Appeal of Adverse Actions apply.

General Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of Specialty

1. Subspecialty training in internal medicine is a voluntary component in the continuum of the educational process; such training should take place after satisfactory completion of an accredited program in internal medicine.
2. When averaged over any five-year period, a minimum of 75% of fellows in each subspecialty training program must be graduates of an ACGME accredited internal medicine training program. Non-ACGME internal medicine trained fellows must have at least three (3) years of internal medicine training prior to starting fellowship. Prior to appointment, the program director must inform non-ACGME trained applicants in writing of the ABIM policies and procedures that may affect the fellow's eligibility for ABIM certification. (N.B.: Fellows in the subspecialty of geriatric medicine may be graduates of an ACGME-accredited family practice training program.)
3. Subspecialty programs must provide advanced training to allow the fellow to acquire competency in the subspecialty with sufficient expertise to act as a consultant.

B. Duration and Scope of Education

1. To be eligible for accreditation, a subspecialty program must function as an integral part of an accredited residency program in internal medicine.
2. There must be a reporting relationship, to ensure compliance with the ACGME accreditation standards, from the program director of the subspecialty program to the program director of the parent internal medicine residency program.
3. The discipline must be one for which a certificate or a certificate of added qualifications is offered by the American Board of Internal Medicine. (For editorial purposes, the term "subspecialty" is used throughout the document for both types of training programs.)

C. Educational Standards

Fellowship training is primarily an educational experience. These program requirements define the minimum standards and outcomes for fellowship education in the subspecialties of internal medicine. They balance didactic instruction and education through direct patient care.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.

1. The sponsoring institution must demonstrate a commitment to education and research sufficient to support the fellowship program;
2. The sponsoring institution must establish the internal medicine subspecialty fellowship within a department of internal medicine or an administrative unit whose primary mission is the advancement of internal medicine education and patient care;
3. The sponsoring institution must provide fellow compensation and benefits, faculty, facilities, and resources for education, clinical care, and research required for accreditation;
4. The sponsoring institution must assure that adequate salary support is provided to the program director for the administrative activities of the internal medicine subspecialty program. The program director must not be required to generate clinical or other income to provide this administrative support. It is suggested that this support be 25-50% of the program director's salary, depending on the size of the program. (See Section III A 4 f))
5. The sponsoring institution must notify the RRC within 60 days of changes in institutional governance, affiliation, or resources that affect the educational program.
6. Graduate education in the subspecialties of internal medicine requires a major commitment to education by the sponsoring institution. Evidence of such a commitment includes each of the following:
 - a) The minimum number of fellowship positions supported by the institution in each training program must not be less than the number of accredited training years in the program.
 - b) The institution must assure significant research in each subspecialty for which it sponsors a training program.

B. Participating Institutions

Participating institutions include both the Primary Training Site and other training sites. The Primary Training Site is defined as the health-care facility that provides the required training resources, should be the location of the program director's major activity, the location where the fellow spends the majority of their clinical training time, and the primary location of the core program in internal medicine.

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;

- c) specify the duration and content of the educational experience at the participating institution, the financial agreements, and the details for insurance and benefits; and
- d) state the policies and procedures that will govern fellow education during the assignment.

3. The RRC must give prior approval for participation by any institution providing 3 months or more of training in a 12 or 24 month program, or 6 months or more of training in a 36 month program.
4. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved by the RRC.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite subspecialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the subspecialty by the American Board of Internal Medicine, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site, i.e., his or her home office must be at either the sponsoring institution, or the site where fellows receive the majority of their training. The program director must be responsible to the sponsoring organization.
 - d) The program director must have at least 5 years of participation as an active faculty member in an ACGME-accredited internal medicine subspecialty fellowship program.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as es-

established by the sponsoring institution and in compliance with the Institutional Requirements.

- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
- (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement, i.e., any temporary or permanent increase in the total number of enrolled fellows.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e) The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance or learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.
- f) The program director must dedicate an average of 20 hours per week of his or her professional effort to the internal medicine subspecialty educational program, with sufficient time for administration of the program, and receive institutional support for that administrative time (see Section II A 4 of this document).
- g) The program director must participate in academic societies and in educational programs designed to enhance his or her educational and administrative skills.
- h) The program director must implement a program of continuous quality improvement in medical education for the faculty, especially as it pertains to the teaching and evaluation of the ACGME Competencies (as outlined in Section V D of this document).

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite subspecialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the subspecialty by the American Board of Internal Medicine, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
 - d) The physician faculty must be licensed to practice medicine in the state where the sponsoring institution is located or the major teaching activity occurs. (N.B.: Certain federal programs are exempted.)
 - e) The physician faculty must meet professional standards of ethical behavior.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and

an active research component must be included in each program. Scholarship is defined as the following:

- a) the scholarship of discovery, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of dissemination, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of application, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.
- Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
- d) The majority of faculty must be involved in scholarship as defined in III B 4 a), b), or c) above.
- e) The majority of key clinical faculty must demonstrate evidence of productivity in the scholarship as defined in III B 4 a) or b) above.
- f) At least one faculty member must be active in the scholarship of discovery as defined in III B 4 a) above.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

6. Key Clinical Faculty

In addition to the program director, each program must have two key clinical faculty (KCF). KCF are attending physicians who dedicate, on average, 10 hours per week throughout the year to the training program. For programs with more than five fellows enrolled during the accredited portion of the training program, a ratio of KCF to fellows of at least 1:1.5 must be maintained. (N.B.: The required number of KCF may vary by subspecialty.)

- a) Qualifications of the key clinical faculty are as follows:
 - (1) Key clinical faculty must be active clinicians with broad knowledge of, experience with, and commitment to the internal medicine subspecialty as a discipline; and
 - (2) Key clinical faculty must be certified in the subspecialty by the American Board of Internal Medicine or possess qualifications judged by the RRC to be acceptable.
 - b) Responsibilities for the key clinical faculty are as follows:

In addition to the responsibilities of all individual faculty, the key clinical faculty with the program director, are responsible for the planning, implementation, monitoring and evaluation of the fellow's clinical and research training.
7. All clinical faculty members should participate in prescribed faculty development programs designed to enhance the effectiveness of their teaching.

C. Other Program Personnel

Additional professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. Fellows must have clinical experiences in efficient, effective ambulatory and inpatient care settings.

a) Space and equipment

There must be space and equipment for the educational program, including meeting rooms, classrooms, examination rooms, computers, visual and other educational aids, and work/study space.

b) Facilities

(1) Fellows must have lounge and food facilities during assigned duty hours.

(2) When fellows are assigned night duty in the hospital or called in from home, they must be provided with on-call facilities that are convenient and that afford privacy, safety, and a restful environment with a secure space for their belongings.

3. Medical Records

Clinical records that document both inpatient and ambulatory care must be readily available at all times. (See Institutional Requirements, Section II D 3 d)

4. Medical Reference Material

Fellows must have access at all times and in each participating institution to:

a) reference material (i.e., textbooks and journals) either print or electronic

b) a computerized literature search system and electronic medical databases.

5. Patient Population

a) The inpatient and ambulatory care population must provide experience with patients whose illnesses are encompassed by, and help to define, the subspecialty.

b) There must be patients of both sexes, with a broad age range, including geriatric patients.

c) A sufficient number of patients must be available to ensure adequate inpatient and ambulatory experience for each subspecialty fellow without diluting the experience of the residents in the general internal medicine residency program.

6. Pathology Material

a) All deaths of patients who received care by fellows must be reviewed and autopsies performed whenever possible.

b) Fellows must receive autopsy reports after autopsies are completed on their patients.

7. Support Services

a) Administrative support must include adequate secretarial and administrative staff and technology to support the program director.

b) Inpatient clinical support services must be available on a 24-hour basis to meet reasonable and expected demands, including intravenous services, phlebotomy services, messenger/transporter services, and laboratory and radiologic information retrieval systems that allow prompt access to results.

c) Consultations from other clinical services in the hospital must be available in a timely manner. All consultations should be performed by or under the supervision of a qualified specialist.

IV. Fellow Appointment

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfer

To determine the appropriate level of education for fellows who are transferring from another fellowship program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of fellowship education for fellows who may leave the program prior to completion of their education.

D. Appointment of Specialty Fellows and Other Students

The appointment of fellows, other specialty residents, or students or trainees from programs not accredited by the ACGME must not dilute or detract from the educational opportunities of internal medicine fellows.

E. Fellows responsibilities and professional relationships

Fellows must have clearly defined written lines of responsibility for all clinical experiences.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the accreditation process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments. For each rotation or major learning experience, the written goals and objectives:

- should include the educational purpose; teaching methods; the mix of diseases, patient characteristics, and types of clinical encounters, procedures, and services; reading lists, pathological material, and other educational resources to be used; and the method for evaluation of fellows competence;
- must define the level of fellows' supervision by faculty members in all patient-care activities; and
- should be reviewed and revised at least every three years by faculty members and fellows to keep it current and relevant.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

C. Fellows Scholarly Activities and Research

- Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.
- Participation in an active research program is an essential component for fellows enrolled in subspecialty fellowship training programs of 24 months or greater duration.
 - The program must ensure a meaningful, supervised research experience with appropriate protected time for each fellow—either in blocks or concurrent with clinical rotations—while maintaining the essential clinical experience.
 - Fellows must be advised and supervised by qualified faculty members in the conduct of research.
 - Fellows must learn the standards of ethical conduct of research, design and interpretation of research studies, respon-

sible use of informed consent, and research methodology, and interpretation of data.

- d) The majority of fellows must demonstrate evidence of recent research productivity through:
- (1) publication (manuscripts or abstracts) in peer-reviewed journals, or
 - (2) abstracts presented at national specialty meetings
- (N.B.: Training programs in critical care medicine, internal medicine-geriatric medicine, and internal medicine-sports medicine are exempt from this requirement relative to research productivity by fellows.)

D. ACGME Competencies

The fellowship program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their fellows to demonstrate the following:

1. Patient care that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. Medical Knowledge about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. Practice-based learning and improvement that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. Interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactics

1. Inpatient and Consultation Teaching
 - a) Teaching and management rounds are usually combined in subspecialty training programs. These rounds must be patient-based sessions in which current cases are presented as a basis for discussion of such points as interpretation of clinical data, pathophysiology, differential diagnosis, specific management of the patient, the appropriate use of technology, the incorporation of evidence and patient values in clinical decision making, and disease prevention.
 - b) The total teaching time spent in combined management and teaching rounds must exceed by a minimum of 5 hours per week the time required to supervise the care of patients.
2. Conferences and Seminars
 - a) Conferences must be conducted regularly as scheduled and must be attended by faculty and fellows. At a minimum, these must include:
 - (1) at least one clinical conference weekly,
 - (2) one literature review conference (journal club) monthly, and
 - (3) one research conference monthly.
 - (4) at least one core curriculum conference weekly, when averaged over 1 year.

- (a) The core curriculum conference series must include the basic sciences relevant to the subspecialty;
 - (b) The core curriculum conference series must cover the major clinical topics in the subspecialty;
 - (c) The core curriculum conference series must repeat often enough, or be made available for review on tape or electronically, to afford each fellow an opportunity to attend or review most of the core conference topics;
- b) Fellows must participate in formal review of gross and microscopic pathological material from patients who have been under their care.
- c) Fellows must participate in planning and in conducting conferences.
3. Interdisciplinary Topics
 - a) Fellows should become proficient in the critical assessment of medical literature, medical informatics, clinical epidemiology, and biostatistics.
 - b) Educational experiences should include instruction in the following: clinical ethics, medical genetics, quality assessment, quality improvement, patient safety, risk management, preventive medicine, pain medicine, end-of-life care, and physician impairment.

F. Clinical

1. Ambulatory medicine

- a) There must be on-site faculty whose primary responsibilities must include the supervision and teaching of fellows.
- b) Fellows must be able to obtain appropriate and timely consultation from other specialties for their ambulatory patients.
- c) There should be services available from other health-care professionals such as nurses, social workers, language interpreters, and dietitians.

2. Experience with continuity ambulatory patients

- a) Fellows must have a continuity ambulatory clinic experience 1/2-day each week to develop a continuous healing relationship with patients for whom they provide subspecialty care. This continuity experience should expose fellows to the breadth and depth of the subspecialty. (N.B.: May vary by subspecialty.)

This may be accomplished by either

 - (1) A single continuity clinic for the length of the accredited fellowship, or
 - (2) Blocks of at least 6 months duration for the length of the accredited fellowship.
- b) Each fellow should, on average, be responsible for four to eight patients during each 1/2-day session.
- c) Over the course of accredited training, each fellow's panel of patients must include at least 25% of patients from each gender.
- d) Each fellow's clinical experiences with ambulatory patients must provide fellows the opportunity to observe and to learn the course of disease.
- e) The continuing patient-care experience should not be interrupted by more than 1 month, excluding a fellow's vacation.
- f) During the continuity experience, arrangements should be made to minimize interruptions of the experience by fellows' duties on inpatient and consultation services.
- g) It is suggested that fellows be informed of the status of their continuity patients when they are hospitalized so the fellow can make appropriate arrangements to maintain continuity of care.

3. Procedures

- a) Fellows must develop a comprehensive understanding of indications, contraindications, limitations, complications, tech-

niques, and interpretation of results of those diagnostic and therapeutic procedures integral to the discipline.

- b) Fellows must acquire knowledge of and skill in educating patients about the rationale, technique, and complications of procedures and in obtaining procedure-specific informed consent.
- c) Faculty supervision of procedures performed by each fellow must occur until proficiency has been acquired and documented by the program director
- d) Each program must
 - (1) identify key procedures.
 - (2) define a standard for proficiency.
 - (3) document achievement of proficiency.
 - (4) assure that fellows log all key procedures performed.

VI. Fellow Duty Hours and the Work Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the fellowship program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-Call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the resident has not previously provided care.
4. At-home call (or pager call) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because fellowship education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of internal moonlighting.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hour Exception

The RRC for Internal Medicine will not consider requests for exceptions to the limit to 80 hours per week, averaged monthly.

G. Service versus education

A sponsoring institution must not place excessive reliance on fellows to meet the service needs of the participating training sites.

1. Fellows must not be required to provide routine intravenous, phlebotomy, or messenger/transporter services.
2. Fellows' service responsibilities must be limited to patients for whom the teaching service has diagnostic and therapeutic responsibility.

3. The admission and continuing care of patients by fellows must be limited to those patients on the teaching service.

H. Grievance Procedures and Due Process

1. In the event of an adverse annual evaluation, a fellow must be offered an opportunity to address a judgment of academic deficiencies or misconduct before a formally constituted clinical competence committee.
2. There must be a written policy that ensures that academic due process is provided.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the fellowship program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

b) Assessment should include the regular and timely performance feedback to fellows that includes at least semi-annual written evaluations, and a formal evaluation of knowledge, skills, and professional growth of fellows and required counseling by the program director. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.

c) Permanent records of both of the evaluation and counseling sessions (and any others that occur) for each fellow must be maintained in the fellow's file and must be accessible to the fellow and other authorized personnel.

(1) The record of evaluation should document the fellow's achievement of the competencies using appropriate evaluation methods.

(2) The record of evaluation should document that records were maintained by documentation logbook or by an equivalent method to demonstrate that fellows have achieved competence in the performance of invasive procedures. These records must state the indications and complications and include the names of the supervising physicians. Such records must be of sufficient detail to permit use in future credentialing.

(3) The record of evaluation should document that fellows were evaluated in writing and their performance reviewed with them verbally on completion of each rotation period, and at least quarterly for longitudinal assignments.

(4) The record of evaluation should document that fellows were evaluated in writing and their performance in continuity clinic reviewed with them verbally on at least a semi-annual basis.

d) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, including nurses, to achieve progressive improvements in fellows' competence and performance.

2. Final (Summative) Evaluation

The program director must provide a final evaluation for each fellow who completes the program. The evaluation must include a review of the fellow's performance during the final pe-

riod of education and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty and Rotation Assessment

1. The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows. Provision must be made for fellows to confidentially provide written evaluations of each teaching attending at the end of a rotation or assignment, and for the evaluations to be reviewed with faculty annually.

2. In addition to evaluation of the effectiveness of teaching of the faculty, fellows must evaluate the effectiveness of the rotation or assignment in achievement of the goals and objectives identified in the curriculum for that rotation or assignment.

3. The results of the evaluations must be used for counseling faculty, for selecting faculty for teaching assignments, and for annual program review (see below).

C. Program

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' annual confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

a) In addition, annually the fellows must evaluate in writing the effectiveness of the program in achievement of the goals and objectives identified in the curriculum. The evaluation should include the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the effectiveness of inpatient and ambulatory teaching, the performance of faculty members, and the quality of supervision of fellows.

2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the fellowship program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the fellowship program.

a) At least 80% of those eligible to take an ABIM subspecialty certifying examination upon completion of their training for the most recently 5 year period must have taken an ABIM subspecialty certifying examination.

(Note: Five-year rolling pass rate for first time takers of the ABIM certifying examination will be examined at each program review.)

VIII. Experimentation and Innovation

A. Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

B. Performance Improvement Process

1. The program should identify and participate in at least one ongoing performance improvement (PI) activity which relates to the competencies.
2. The PI activity must involve both fellows and faculty in planning and implementing.
3. The PI activity should result in measurable improvements in patient care or fellowship education.

IX. Board Certification

Fellows who plan to seek certification in the specific subspecialty by the American Board of Internal Medicine should communicate with the office of the board regarding the full requirements for certification.

X. Subspecialty Specific Program Requirements

The Program Requirements for training programs in a specific subspecialty may exceed the minimum requirements set forth above.

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Cardiovascular Disease (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in cardiology must be organized to provide training and supervised experience in the evaluation and management of a wide variety of patients with acute and chronic cardiovascular conditions. The training and experience must be at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. The program must have, at a minimum, the following experiences.
1. The training program must be 3 years in duration.
 2. There must be at least 24 months of clinical training, including inpatient and special experiences.
 - a) A minimum of 12 months must be spent in the following areas:
 - (1) Four months in the cardiac catheterization laboratory
 - (2) Six months in noninvasive cardiac evaluations, consisting of:
 - (a) three months of echocardiography and Doppler;

- (b) two months of nuclear cardiology, to include the fellow's active participation in daily nuclear cardiology study interpretation (a minimum of 80 hours) during the rotation; and
- (c) one month of other noninvasive cardiac evaluations, which includes at least
 - (i) exercise stress testing,
 - (ii) ECG interpretation, and
 - (iii) ambulatory ECG monitoring.
 - (iv) cardiovascular magnetic resonance and other techniques (e.g., electron beam or fast helical computed tomography)

These rotations may be done in conjunction with other block rotations or concurrently with other clinical rotations.

- (3) Two months devoted to electrophysiology, pacemaker follow-up and ICDs.

b) Additional Clinical Experience

There must be at least 9 months of non-laboratory clinical practice activities (e.g., consultations, cardiac care units, postoperative care of cardiac surgery patients, congenital heart disease, heart failure/cardiac transplantation, preventive cardiology, and vascular medicine).

XII. Faculty

- A. The program must provide a minimum of four institutionally based key clinical faculty members, including the program director.
- B. In programs with a total of more than six fellows enrolled, a ratio of key clinical faculty to fellows of at least 1:1.5 must be maintained.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

- A. Diagnostic Laboratory Services.
No additional resources required.
- B. Imaging
Cardiac radionuclide laboratories must be available.
- C. Surgery and Pathology
1. An active cardiac surgery program.
 2. A cardiac surgery intensive care unit.
- D. Other Facilities, Resources or Support Services
1. ECG, ambulatory ECG, and exercise testing laboratories
 2. Echocardiography laboratories, including Doppler and transesophageal echocardiography
 3. Cardiac catheterization laboratories, including cardiac hemodynamics and a full range of interventional cardiology
 4. Invasive electrophysiology laboratories (N.B.: These may be located at institutions other than at the primary training site.)
 5. Coronary intensive care unit
 6. Services for placement of pacemakers, implantable cardioverter/defibrillator, and follow-up
 7. Pulmonary function laboratories
 8. Peripheral vascular laboratories
- E. Patient Population.

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIV. Specific Program Content

A. Clinical Experience

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the prevention, evaluation and management of both inpatients and outpatients with the following:
 - a) chronic coronary heart disease
 - b) congestive heart failure
 - c) arrhythmias
 - d) acute myocardial infarction and other acute ischemic syndromes
 - e) lipid disorders
 - f) hypertension
 - g) cardiomyopathy
 - h) valvular heart disease
 - i) pulmonary heart disease and pulmonary embolism
 - j) peripheral vascular disease
 - k) infections and inflammatory heart disease
 - l) cardiovascular rehabilitation
2. Fellows must have formal instruction and clinical experience in the prevention, evaluation and management of both inpatients and outpatients with the following:
 - a) adult congenital heart disease
 - b) pericardial disease
 - c) cardiovascular trauma

B. Technical and Other Skills

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the performance of the following:
 - a) elective cardioversion
 - b) insertion and management of temporary pacemakers, including transvenous and transcutaneous
 - c) programming and follow-up surveillance of permanent pacemakers
 - d) bedside right heart catheterization
 - e) right and left heart catheterization including coronary arteriography; fellows must participate in a minimum of 100 catheterizations.
 - f) exercise stress testing; fellows must perform a minimum of 50 stress ECG tests
 - g) echocardiography; fellows must perform a minimum of 75 and interpret a minimum of 150 studies, including transesophageal cardiac studies
2. Fellows must have formal instruction, clinical experience, and demonstrate competence in the interpretation of the following:
 - a) chest x-rays
 - b) electrocardiograms; a minimum of 3500 electrocardiograms
 - c) ambulatory ECG recordings; a minimum of 150 ambulatory ECG recordings
 - d) radionuclide studies of myocardial function and perfusion
3. Fellows must have formal instruction and clinical experience in performing the following:
 - a) intracardiac electrophysiologic studies
 - b) intra-aortic balloon counterpulsation
 - c) percutaneous transluminal coronary angioplasty and other interventional procedures
 - d) programming and follow-up surveillance of ICDs
 - e) pericardiocentesis

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. Basic science, including
 - a) cardiovascular anatomy
 - b) cardiovascular physiology

- c) cardiovascular metabolism
 - d) molecular biology of the cardiovascular system
 - e) cardiovascular pharmacology, including drug metabolism, adverse effects, indications, the effects on aging, relative costs of therapy, and the effects of non-cardiovascular drugs upon cardiovascular function
 - f) cardiovascular pathology
 - g) genetic causes of cardiovascular disease
2. Prevention of cardiovascular disease, including
 - a) epidemiology and biostatistics
 - b) risk factors
 - c) lipid disorders
 3. Evaluation and management of patients with
 - a) cerebrovascular disease
 - b) heart disease in pregnancy
 4. Management of
 - a) preoperative and postoperative patients
 - b) cardiac transplant patients
 - c) geriatric patients with cardiovascular disease
 5. Diagnostic techniques, including
 - a) magnetic resonance imaging
 - b) fast computed tomography
 - c) positron emission tomography

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Clinical Cardiac Electrophysiology (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in clinical cardiac electrophysiology (CCEP) must function as an integral component of an accredited subspecialty fellowship in cardiovascular disease and must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. The CCEP program must be 1 year in length.
- C. All applicants entering CCEP must have completed an ACGME-accredited cardiovascular disease program. (N.B.: For exceptions, see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.)

XII. Faculty

- A. There must be a minimum of two key clinical CCEP faculty members, including the program director.
- B. In programs with a total of more than two fellows, a ratio of key clinical faculty to fellows of at least 1:1 must be maintained.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

- A. Diagnostic Laboratory Services
No additional resources required.

B. Imaging

Cardiac radionuclide laboratories.

C. Surgery and Pathology

1. An active cardiac surgery program.
2. A cardiac surgery intensive care unit.

D. Other Facilities, Resources or Support Services

1. A clinical cardiac electrophysiologic laboratory for invasive intracardiac electrophysiologic studies and catheter ablation ECG. The electrophysiology laboratory must contain appropriate cardiac fluoroscopic equipment, programmable stimulator, recording devices, and resuscitative equipment.
2. An outpatient clinic.
3. A follow-up program to care for patients with pacemakers and implantable cardioverters/defibrillators (ICDs).
4. A cardiac intensive care unit.

E. Patient Population

See *Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine*.

(3) The program director of the CCEP training program will be expected to ensure the competency of the fellow in the following:

- (a) Electrode catheter introduction
- (b) Electrode catheter positioning in atria, ventricles, coronary sinus, His bundle area, and pulmonary artery
- (c) Stimulating techniques to obtain conduction times and refractory periods and to initiate and terminate tachycardias
- (d) Recording techniques, including an understanding of amplifiers, filters, and signal processors
- (e) Measurement and interpretation of data

c) therapeutic catheter ablation procedures

- (1) A minimum of 75 catheter ablative procedures, including postdiagnostic testing, will be required for each fellow
- (2) These cases must include a mix of AV nodal reentrant tachycardia and accessory pathway modification, atrial tachycardia and atrial flutter, AV junctional ablation and modification, and ventricular tachycardia ablation.

d) implantation of cardioverter/defibrillators and pacemakers

- (1) Participation in a minimum of 25 initial ICD and 50 pacemaker procedures will be required for each fellow.
- (2) Device programming, with a minimum of 100 interrogations.
- (3) Noninvasive programmed stimulation for arrhythmia induction through the device
- (4) Defibrillation threshold testing
- (5) Final prescription of anti-tachycardia pacing and defibrillation therapies

2. Fellows must have formal instruction, clinical experience, and demonstrate competence in the interpretation of the following:

- a) activation sequence mapping recordings
- b) invasive intracardiac electrophysiologic studies, including endocardial electrogram recording
- c) relevant imaging studies, including chest radiography
- d) tilt testing
- e) electrocardiograms and ambulatory ECG recordings
- f) continuous in-hospital ECG recording
- h) advanced electrocardiographic methods of risk stratification
- i) stress test ECG recordings
- j) transtelephonic ECG readings

XIV. Specific Program Content

A. Clinical Experience

1. Special Clinical Experiences

Fellows must have formal instruction, clinical experience, and demonstrate competence in:

- a) the prevention, evaluation and management of both inpatients and outpatients with the following disorders:
 - (1) disorders of cardiac rhythm, including but not limited to
 - (a) sinus node dysfunction,
 - (b) atrioventricular (AV) and intraventricular block, and
 - (c) supraventricular and ventricular tachyarrhythmias.
 - (2) unexplained syncope
 - (3) aborted sudden cardiac death
 - (4) palpitations
 - (5) Wolff-Parkinson-White (WPW) syndrome, and
 - (6) Prolonged QT syndrome.
- b) consultation to physicians in other disciplines
- c) the care of patients in the cardiac care unit, emergency room, or other intensive care settings.
- d) the care of the patient before and after an electrophysiologic procedure.
- e) the care of patients with postoperative arrhythmias.
- f) outpatient follow-up of patients treated with drugs, devices, or surgery.
- g) electrocardiography; proficiency in the interpretation of the standard 12-lead ECG, stress testing, ambulatory ECG recording, signal-averaged ECG, and telephone-transmitted ECGs.
- h) the care of patients with temporary and permanent pacemakers.
- i) the care of patients with ICDs.

B. Technical and Other Skills

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the performance of the following:

- a) noninvasive testing relevant to arrhythmia diagnoses and treatment,
- b) invasive electrophysiologic testing
 - (1) The fellow must perform an average of three or more electrophysiology invasive diagnostic/interventional catheter procedures per week as the primary operator or as an assistant closely involved with data collection and analysis.
 - (2) A minimum of 150 intracardiac procedures must be performed by each fellow. Of these procedures, at least 75 studies related to supraventricular arrhythmia are required.

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. basic cardiac electrophysiology, including but not limited to genesis of arrhythmias, normal and abnormal electrophysiologic responses, autonomic influences, effects of ischemia, drugs, and other interventions.
2. clinical cardiac electrophysiology.
3. arrhythmia control device management
4. the genetic basis of pathological arrhythmias.
5. epidemiology of arrhythmias.
6. clinical trials of arrhythmia management and their impact on clinical practice.

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Critical Care Medicine (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in critical care medicine must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire competency in managing critically ill patients and in supervising critical care units.
- B. It must be 2 years in duration, except under the following circumstances:
1. Programs that accept only those who have completed training in an accredited program in one of the subspecialties of internal medicine may be organized to offer a single year of training.
 2. Programs organized to provide critical care medicine training in association with an accredited program in one of the subspecialties of internal medicine may fulfill training requirements by devoting 12 months to critical care in addition to the required training in the other subspecialty.
- C. A minimum of 12 months must be devoted to clinical experiences in critical care.
- D. The program must provide fellows with 9 months of clinical training, of which
1. at least 6 months of which must be devoted to the care of critically ill medical patients (i.e., MICU/CICU or equivalent), and
 2. at least 3 months to the care of critically ill non-medical patients (i.e., SICU, Burn Unit, Transplant Unit, Neurointensive Care, or equivalent). This experience should consist of at least one month of direct patient care activity, with the remainder being fulfilled with either consultative activities or with direct care of such patients.

XII. Faculty

- A. The program director and the critical care teaching staff must have primary responsibility for the admission, treatment, and discharge of all patients under the care of critical care fellows.
- B. The critical care clinical teaching faculty at the primary training site must include each of the following:
1. There must be a minimum of 3 key clinical faculty members, including the program director.
 2. For programs with more than three fellows, there must be one key clinical faculty member per additional fellow.
 3. There must be American Board of Internal Medicine (ABIM) subspecialty certified clinical faculty members in nephrology, gastroenterology, pulmonary, cardiology, infectious disease, hematology, oncology, and geriatric medicine who participate in the educational program.
 4. Faculty members in anesthesiology, neurology, and neurosurgery must be certified in their specialty by the American Board of Medical Specialties (ABMS) Board.
- C. Faculty from several related disciplines such as general surgery, thoracic surgery, urology, orthopedic surgery, obstetrics-gynecology, neurology, neurosurgery, emergency medicine, anesthesiology, cardiovascular surgery, and vascular surgery must be available to participate in the training program.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

A supporting laboratory must be available to provide complete and prompt laboratory evaluation.

B. Imaging

Timely bedside imaging services.

C. Surgery and Pathology

1. An active open heart surgery program.
2. An accredited residency program in general surgery.

D. Other Facilities, Resources or Support Services

1. To provide opportunities for peer interaction in the care of critically ill patients, the primary training site should sponsor three accredited subspecialty programs from the following disciplines: cardiovascular disease, gastroenterology, infectious diseases, nephrology, or pulmonary disease.
2. An active emergency service must be available.
3. The critical care unit(s) must be located in a designated area within the hospital and must be constructed and designed specifically for the care of critically ill patients
4. Whether operating in separate locations or in combined facilities, the program must provide the equivalent of a medical intensive care unit (MICU), a surgical intensive care unit (SICU), and a coronary intensive care unit (CICU).
5. The MICU must be at the primary training site and should be the focus of a teaching service in which the program director in critical care medicine is responsible for the educational program.
6. Facilities must be adequate to care for patients with acute myocardial infarction, severe trauma, shock, recent open heart surgery, recent major thoracic or abdominal surgery, and severe neurologic and neurosurgical conditions.
7. A sufficient number of knowledgeable personnel and the necessary equipment to care for critically ill patients must be available. Personnel must include specially trained nurses and technicians who are skilled in critical care instrumentation, respiratory function, and laboratory medicine.
8. Nutritional support services must be available.

E. Patient Population

1. In units to which a fellow is assigned, an average census of at least five patients per fellow is required.
2. Because critical care medicine is multidisciplinary in nature, the program must provide opportunities to manage adult patients with a wide variety of serious illnesses and injuries requiring treatment in a critical care setting
3. The program must provide additional clinical experience with other critically ill patients, which may include surgical, shock/trauma, and neurologic/neurosurgical intensive care units; pediatric intensive care unit; burn unit; dialysis unit; anesthesia service; cardiac catheterization laboratory; high-risk pregnancy intensive care unit; and transplant unit.

XIV. Specific Program Content

A. Clinical Experience

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the evaluation and management of patients with
 - a) Circulatory disorders

- b) Shock Syndromes
 - c) Cardiovascular diseases
 - d) Sepsis and sepsis syndrome
 - e) Hypertensive emergencies
 - f) Acute and chronic respiratory failure
 - g) Acute metabolic disturbances, including overdosages and intoxication syndromes
 - h) Multi-organ system failure
 - i) Electrolyte and acid-base disorders
 - j) Metabolic, nutritional, and endocrine effects of critical illnesses
 - k) Hematologic and coagulation disorders associated with critical illness
2. Fellows must have formal instruction, clinical experience and demonstrate competence in:
- a) Management of the immunosuppressed patient
 - b) Management of anaphylaxis and acute allergic reactions
 - c) Hemodynamic and ventilatory support of patients with organ system damage or in the post operative period
 - d) Use of paralytic agents and sedative and analgesic drugs
 - e) Detection and prevention of iatrogenic and nosocomial problems in critical care medicine
 - f) Psychosocial and emotional effects of critical illnesses on patients and their families
 - g) Management of end of life issues and palliative care
3. Fellows must have formal instruction and clinical experience in the evaluation and management of patients:
- a) With trauma
 - b) With neurosurgical emergencies
 - c) With disorders of the cardiovascular, respiratory, renal, gastrointestinal, genitourinary, neurologic, endocrine, hematologic, musculoskeletal, and immune systems as well as of infectious diseases
 - d) With critical obstetric and gynecologic disorders
 - e) After discharge from the critical care unit. To assess the various aspects of critical care, the fellow should learn about former critical care patients after hospital discharge.

B. Technical and Other Skills

The program must be structured to permit all critical care fellows to develop the requisite procedural and technical skills, including the ability to interpret data derived from various bedside devices commonly employed to monitor patients in the critical care setting.

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the following:
- a) Airway Management
 - b) Use of a variety of positive pressure ventilatory modes, to include:
 - (1) initiation, maintenance, and weaning of ventilatory support
 - (2) respiratory care techniques;
 - (3) withdrawal of mechanical ventilatory support
 - c) Use of reservoir masks and continuous positive airway pressure masks for delivery of supplemental oxygen, humidifiers, nebulizers, and incentive spirometry
 - d) Management of pneumothorax (needle insertion and drainage system)
 - e) Insertion of chest tubes and drainage systems
 - f) Insertion of arterial, central venous, and pulmonary artery balloon flotation catheters
 - g) Emergency cardioversion
 - h) Interpretation of intracranial pressure monitoring
 - i) Operation of bedside hemodynamic monitoring systems
 - j) Nutritional support

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. Pericardiocentesis
2. Transvenous pacemaker insertion
3. Percutaneous needle biopsies
4. Renal replacement therapy
5. Pharmacokinetics, pharmacodynamics, and drug metabolism and excretion in critical illness
6. Principles and techniques of administration and management of an MICU.
7. Ethical, economic, and legal aspects of critical illness
8. Skills required to organize, administer, and direct a critical care unit and to work effectively as a member of a multidisciplinary team.
9. Skills required to organize, administer and direct a respiratory therapy section and to work effectively as a member of a multidisciplinary team.
10. Recognition and management of the critically ill from disasters, including those caused by chemical and biological agents.
11. Management of critical illness in pregnancy.
12. Quality improvement and patient safety activities in the intensive care unit.

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Endocrinology, Diabetes, and Metabolism (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in endocrinology, diabetes, and metabolism must be organized to provide training and experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. It must be 2 years in duration.
- C. A minimum of 12 months must be devoted to clinical experiences.

XII. Faculty

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, other facilities and resources must be present at the primary training site:

A. Diagnostic Laboratory Services

1. Complete biochemistry laboratory and facilities for hormonal immunoassay.
2. Access to karyotyping and immunohistologic studies.

B. Imaging Services

Imaging services must include nuclear, ultrasound, and radiologic facilities, including bone densitometry.

C. Surgical and Pathological Services

No additional facilities required.

D. Other Facilities, Resources or Services

There must be a close working relationship with dietary and/or nutrition services, as well as specialists in surgery, nephrology, neurology and neurosurgery, obstetrics and gynecology, ophthalmology, pediatrics, podiatry, and urology.

E. Patient Population

1. There must be a sufficient population of inpatients and outpatients representing the full range of endocrinologic disorders.
2. Adolescents must be included in this patient population.

XIV. Specific Program Content

A. Clinical Experience

1. The fellows must be given opportunities to assume responsibility for and follow patients throughout the training period in both inpatient and outpatient settings to observe the evolution and natural history of endocrine disorders, as well as the effectiveness of therapeutic interventions. To accomplish these goals, the program must include a minimum of 2 half days of ambulatory care per week averaged over the 2 years of training, which includes the continuity ambulatory experience. Yet, the RRC suggests that 3 half days of ambulatory care per week occur.
2. The fellows must be given opportunities to function in the role of an endocrinology consultant in both the inpatient and outpatient settings.
3. Fellows must have formal instruction, clinical experience, and demonstrate competence in the evaluation and management of hormonal problems including diseases, infections, neoplasms and other causes of dysfunction of the following endocrine organs:
 - a) Hypothalamus and pituitary
 - b) Thyroid
 - c) Adrenal cortex and medulla
 - d) Pancreatic islets
 - e) Ovaries and testes
 - f) Parathyroid
4. Fellows must have formal instruction, clinical experience, and demonstrate competence in the evaluation and management of type 1 and type 2 diabetes including:
 - a) Acute, life-threatening complications of hyper- and hypoglycemia
 - b) Intensive insulin management in critical care and surgical patients
 - c) Long term goals, counseling, education and monitoring
 - d) Intensive management of glycemic control in the ambulatory setting
 - e) Prevention and surveillance of microvascular and macrovascular complications
 - f) Diabetes detection and management during pregnancy
 - g) Multidisciplinary diabetes education and treatment program
5. Fellows must have formal instruction, clinical experience, and demonstrate competence in the evaluation and management of multifactorial disorders associated with hormonal regulation including:
 - a) Disorders of fluid, electrolyte, and acid-base metabolism
 - b) Disorders of bone and mineral metabolism with particular emphasis on the diagnosis and management of osteoporosis
 - c) Calcium, phosphorus, and magnesium imbalance.
 - d) Diagnosis and management of ectopic hormone production
 - e) Endocrine adaptations and maladaptations to systemic diseases

- f) Endocrine aspects of psychiatric diseases
- g) Parenteral nutrition support
- h) Nutritional disorders of obesity, anorexia nervosa, and bulimia
- i) Diagnosis and management of lipid and lipoprotein disorders
- j) Genetic screening and counseling for endocrine and metabolic disorders

B. Technical and Other Skills

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the performance of the following:
 - a) Interpretation of laboratory studies, including the effects of non-endocrine disorders on these studies.
 - (1) Interpretation of hormone assays
 - (2) Performance and interpretation of stimulation and suppression tests
 - b) Interpretation of radiologic studies for diagnosis and treatment of endocrine and metabolic diseases
 - (1) radionuclide localization of endocrine tissue
 - (2) ultrasonography of the soft tissues of the neck
 - c) Performance of fine needle aspiration of the thyroid.
2. Fellows must have formal instruction and clinical experience with the following:
 - a) Radiologic measurement of bone density and other tests used in the management of osteoporosis and other metabolic bone diseases.
 - b) Radiologic studies used in the evaluation of patients with endocrine disorders, such as CT, and MRI.

C. Formal Instruction

The curriculum must emphasize biochemistry and physiology, including cell and molecular biology, as they relate to endocrinology, diabetes, and metabolism. The appropriate utilization and interpretation of clinical laboratory, radionuclide, and radiologic studies for the diagnosis and treatment of endocrine and metabolic diseases must be stressed. Formal instruction must include:

1. Genetics as it relates to endocrine diseases
2. Developmental endocrinology, including growth and development, sexual differentiation, and pubertal maturation
3. Endocrine physiology and pathophysiology in systemic diseases and principles of hormone action
4. Biochemistry and physiology, including cell and molecular biology and immunology, as they relate to endocrinology and metabolism
5. Signal transduction pathways and biology of hormone receptors performance of endocrine clinical laboratory and radionuclide studies and basic laboratory techniques, including quality control, quality assurance, and proficiency standards.
6. Pathogenesis and epidemiology of diabetes mellitus
7. Whole organ and islet cell pancreatic transplantation

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Gastroenterology (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in gastroenterology must be organized to provide training and experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. It must be 3 years in duration.
- C. A minimum of 18 months must be devoted to clinical experiences. Hepatology should comprise at least 5 months of this experience.
- D. The training program must provide opportunities for fellows to develop clinical competence in the field of gastroenterology, including hepatology, endoscopy, clinical nutrition, and gastrointestinal oncology.

XII. Faculty

- A. The program must provide a minimum of four institutionally based key clinical faculty members, including the program director.
- B. In programs with a total of more than six fellows enrolled, a ratio of key clinical faculty to fellows of at least 1:1.5 must be maintained.
- C. At least one key clinical faculty member should have demonstrated expertise and primary focus in hepatology and one or more in all aspects of endoscopy including advanced procedures.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

1. There must be a procedure laboratory completely equipped to provide modern capability in gastrointestinal procedures. This equipment must include an up-to-date array of complete diagnostic and therapeutic endoscopic instruments and accessories plus esophageal motility instrumentation.
2. Facilities for parasitology testing should be provided.

B. Imaging

No additional resources required.

C. Surgery and Pathology

No additional resources required.

D. Other Facilities, Resources or Support Services

1. Supporting services including pathology, diagnostic radiology, interventional radiology, medical imaging and nuclear medicine, general surgery, and oncology also must be available.
2. Facilities for the intensive care of critically ill patients with gastrointestinal disorders must be provided, including a working relationship with surgery, oncology, pediatrics, radiology, and pathology services.

E. Patient Population

See *Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine*

XIV. Specific Program Content

A. Clinical Experience

Fellows must have formal instruction, clinical experience, and demonstrate competence in the evaluation and management of the following disorders:

1. Diseases of the esophagus

2. Acid peptic disorders of the gastrointestinal tract
3. Motor disorders of the gastrointestinal tract
4. Irritable bowel syndrome
5. Disorders of nutrient assimilation
6. Inflammatory bowel diseases
7. Vascular disorders of the gastrointestinal tract
8. Gastrointestinal infections, including retroviral, mycotic, and parasitic diseases
9. Gastrointestinal diseases with an immune basis
10. Gallstones and cholecystitis
11. Alcoholic liver diseases
12. Cholestatic syndromes
13. Drug-induced hepatic injury
14. Hepatobiliary neoplasms
15. Chronic liver disease
16. Gastrointestinal manifestations of HIV infections
17. Gastrointestinal neoplastic disease
18. Acute and chronic hepatitis
19. Biliary and pancreatic diseases
20. Women's health issues in digestive diseases
21. Geriatric gastroenterology
22. Gastrointestinal bleeding
23. Cirrhosis and portal hypertension
24. Genetic/inherited disorders
25. Medical management of patients under surgical care for gastrointestinal disorders
26. Management of GI emergencies in the acutely ill patient

B. Technical and Other Skills

1. Fellows must have formal instruction, clinical experience and demonstrate competence in the performance of the following procedures. A skilled preceptor must be available to teach and to supervise the fellows in the performance of these procedures which must be documented in each fellow's record, giving indications, outcomes, diagnoses, and supervisor(s). Assessment of procedural competence should not be based solely on a minimum number of procedures performed, but by a formal evaluation process. These evaluations should include objective performance criteria, for example, rate of successful cecal intubation for colonoscopy.
 - a) Esophagogastroduodenoscopy; fellows must perform a minimum of 130 supervised studies.
 - b) Esophageal dilation; fellows must perform a minimum of 20 supervised studies.
 - c) Flexible sigmoidoscopy; fellows must perform a minimum of 30 supervised studies.
 - d) Colonoscopy with polypectomy; fellows must perform a minimum of 140 supervised colonoscopies and 30 supervised polypectomies.
 - e) Percutaneous liver biopsy; fellows must perform a minimum of 20 supervised studies.
 - f) Percutaneous endoscopic gastrostomy; fellows must perform a minimum of 15 supervised studies.
 - g) Biopsy of the mucosa of esophagus, stomach, small bowel, and colon
 - h) Gastrointestinal motility studies and 24-hour pH monitoring
 - i) Nonvariceal hemostasis (upper and lower); fellows must perform 25 supervised cases, including 10 active bleeders.
 - j) Variceal hemostasis; fellows must perform 20 supervised cases, including five active bleeders.
 - k) Other diagnostic and therapeutic procedures utilizing enteral intubation
 - l) Moderate and conscious sedation

2. Fellows must have formal instruction and clinical experience in the interpretation of the following diagnostic and therapeutic techniques and procedures:
 - a) Gastric, pancreatic, and biliary secretory tests
 - b) Enteral and parenteral alimentation
 - c) Pancreatic needle biopsy
 - d) ERCP, in all its diagnostic and therapeutic applications
 - e) Imaging of the digestive system, including:
 - (1) Ultrasound, including endoscopic ultrasound
 - (2) Computed tomography
 - (3) Magnetic resonance imaging
 - (4) Vascular radiography
 - (5) Contrast radiography
 - (6) Nuclear medicine
 - (7) Percutaneous cholangiography

C. Formal Instruction

The program must include emphasis on the pathogenesis, manifestations, and complications of gastrointestinal disorders, including the behavioral adjustments of patients to their problems. The impact of various modes of therapy and the appropriate utilization of laboratory tests and procedures should be stressed. In addition to formal instruction in the areas outlined above, specific content areas that must be included in the formal educational program (lectures, conferences, seminars, and journal clubs) include the following:

1. Anatomy, physiology, pharmacology, pathology and molecular biology related to the gastrointestinal system, including the liver, biliary tract and pancreas
2. The natural history of digestive diseases
3. Factors involved in nutrition and malnutrition
4. Surgical procedures employed in relation to digestive system disorders and their complications
5. Prudent, cost-effective, and judicious use of special instruments, tests, and therapy in the diagnosis and management of gastroenterologic disorders
6. Liver transplantation
7. Sedation and sedative pharmacology
8. Interpretation of abnormal liver chemistries

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Residency Education in Internal Medicine Geriatric Medicine

In addition to complying with the Program Requirements for Residency Education in the Subspecialties of Internal Medicine, programs must also comply with the following requirements, which may in some cases exceed the common requirements.

I. Educational Program

An educational program in geriatric medicine must be organized to provide a well-supervised experience at a sufficient level for the resident to acquire the competence of a physician with added qualifications in the field. It shall be 12 months in duration. The program must be conducted by an accredited residency program in internal medicine or family practice.

Clinical experience must include opportunities to manage elderly patients with a wide variety of medical problems on an inpatient and outpatient basis. Residents must be given the opportunity to provide both primary care and consultation for patients in acute,

ambulatory, community, and long-term care settings in order to understand the interaction of natural aging and disease as well as the techniques of assessment, therapy, and management. Additionally, residents must be given the opportunity to care for persons who are generally healthy and require primarily preventive health-care measures.

The program should include an emphasis on the physiology of aging, the pathophysiology that commonly occurs in older persons, atypical presentations of illnesses, functional assessment, cognitive status and affective assessment, and concepts of treatment and management in both the acute and long-term care settings, as well as in the community and in the home.

Attention also should be directed to the behavioral aspects of illness, socioeconomic factors, and ethical and legal considerations that may impinge on medical management.

The program must provide the opportunity for residents to maintain their basic primary skills during the course of this training. At least ½ day per week must be spent in a continuity of care experience in the resident's primary discipline.

II. Faculty and Staff

A. Program Director

The program director must be fully committed to the program in order to devote sufficient time to the achievement of the educational goals and objectives. The director must have demonstrated experience in geriatric medicine and must have demonstrated experience in education and scholarly activity and have a career commitment to academic geriatric medicine. The director must be primarily based at the teaching center.

B. Other Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program. For programs with more than two residents, there must be 0.5 additional faculty member for each additional resident. Some of these faculty may be part-time in geriatric medicine or drawn wholly from collaborating programs. The faculty commitment must not attenuate the quality of the core residency training program. The program must ensure that interdisciplinary relationships with the following specialties occur: physical medicine and rehabilitation, neurology, and psychiatry. Appropriate relationships with other disciplines, including but not limited to general surgery, orthopedics, ophthalmology, otolaryngology, urology, gynecology, emergency medicine, dentistry, pharmacy, audiology, physical and occupational therapy, speech therapy, and nursing and social services should be maintained. Additionally, a liaison with the physician assistants, when available, should be established.

C. Geriatric Care Team

The resident must have experience with physician-directed interdisciplinary geriatric teams in an acute-care hospital, in a nursing home that includes subacute and long-term care, in a home care setting, and in a family practice center or other outpatient settings. Essential members include a geriatrician, a nurse, and a social worker. Additional members may be included in the team as appropriate, including representatives from disciplines such as neurology, psychiatry, physical medicine and rehabilitation, physical therapy, occupational therapy and speech therapy, dentistry, pharmacy, psychology, and pastoral care. Regular team conferences must be held as dictated by the needs of the individual patient.

III. Facilities/Resources

A patient population adequate to meet the needs of the training program must be available in the facilities in which the educational experiences take place. Elderly patients of both sexes with a variety of chronic illnesses, at least some of whom have potential for rehabilitation, must be available. At all facilities utilized by the program the resident must be given opportunities to assume meaningful patient responsibility. At each setting certain activities are mandated and must be supervised and taught by the appropriate clinician. The program must include the following:

A. Acute-Care Hospital

The acute-care hospital central to the geriatric medicine program must be an integral component of a teaching center. It must have the full range of services usually ascribed to an acute-care general hospital, including intensive care units, emergency medicine, operating rooms, diagnostic laboratory and imaging services, and a pathology department.

B. Long-term Care Institution

One or more long-term care institutions, such as a skilled nursing facility or chronic care hospital, is a necessary component of the geriatric medicine program. Exposure to subacute care and rehabilitation care in the long-term care setting is desirable. The total number of beds available must be sufficient to permit a comprehensive educational experience. The institutions must be approved by the appropriate licensing agencies of the state, and the standard of facilities and care in each must be consistent with those promulgated by the Joint Commission on Accreditation of Healthcare Organizations.

C. Long-term Noninstitutional Care

Noninstitutional care service, for example, home care, day care, residential care, or assisted living, is a major component of the geriatric medicine program. A home care program or home health agency is a necessary resource to permit residents to learn to provide care for patients who are homebound but not institutionalized. Day care or day hospital centers, life care communities, and residential care facilities for the elderly are also desirable training sites.

D. Ambulatory Care Program

The ambulatory care program must comprise a minimum of 33% of the resident's time. Each resident should evaluate approximately one to three new geriatric patients and four to eight follow-up geriatric patients each week. This must include at least ½ day per week spent in a continuity of care experience. This experience must be designed to provide care in a geriatric clinic or family practice center to elderly patients who may require the services of multiple medical disciplines (including but not limited to neurology, gynecology, urology, psychiatry, podiatry, orthopedics, physical medicine and rehabilitation, dentistry, audiology, otolaryngology, and ophthalmology), as well as nursing, social work, and nutrition, among other disciplines. The opportunity to provide continuing care and to coordinate the implementation of recommendations from these medical specialties and disciplines is mandatory. In addition, experiences in relevant ambulatory specialty and subspecialty clinics (e.g., geriatric psychiatry and neurology) and those that focus on geriatric syndromes (e.g., falls, incontinence, osteoporosis) are highly desirable.

E. Additional Educational Environment

Peer interaction is essential for residents. To achieve this goal, an accredited training program in at least one relevant specialty other than internal medicine must be present at the teaching center sponsoring the training program in geriatric medicine.

Involvement in other health care and community agencies is desirable. There must be a formal affiliation agreement between each

long-term care facility included in the program and the sponsoring institution, in which each institution must acknowledge its responsibility to provide high-quality care, adequate resources, and administrative support for the educational mission. In addition, there must be a letter of agreement between each long-term care facility and the office of the director of the geriatric medicine program that guarantees the director appropriate authority at the long-term care institution to carry out the training program.

IV. Specific Program Content

All major dimensions of the curriculum should be structured educational experiences for which written goals and objectives, a specific methodology for teaching, and a method of evaluation exist. A written curriculum that describes the program comprehensively, including sites, educational objectives for each component, and topics to be covered in didactic sessions, should be available to residents and faculty. The curriculum must ensure the opportunity for residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of a physician who specializes in the care of the aged.

Didactic as well as clinical learning opportunities must be available to the resident. Conferences or seminars/workshops in geriatric medicine should be specifically designed to augment the residents' clinical experiences. Journal club or other activities that foster interaction and develop skills in interpreting the medical literature are necessary.

All deaths of patients who receive care by residents should be reviewed and autopsies performed whenever possible.

As the residents progress through their training, they must have the opportunity to teach personnel such as nurses, allied health personnel, medical students, and residents.

Appropriate faculty supervision of the residents must be provided during all of their educational experiences.

The following components must be provided:

A. Geriatric Medicine Consultation Program

This program must be formally available in the ambulatory setting, the inpatient service, and/or emergency medicine in the acute-care hospital or at an ambulatory setting administered by the primary teaching institution.

B. Long-term Care Experience

In the long-term care institutional setting each resident must have 12 months of continuing longitudinal clinical experience with an assigned panel of patients for whom the resident is the primary provider. Additional block time to provide long-term care experience is encouraged. Emphasis during the longitudinal experience should be focused on (1) the approaches to diagnosis and treatment of the acutely and chronically ill, frail elderly in a less technologically sophisticated environment than the acute-care hospital; (2) working within the limits of a decreased staff-patient ratio compared with acute-care hospitals; (3) a much greater awareness of and familiarity with subacute care physical medicine and rehabilitation; (4) the challenge of the clinical and ethical dilemmas produced by the illness of the very old; and (5) administrative aspects of long-term care.

Experience with home visits and hospice care must be included. The resident must be exposed to the organizational and administrative aspects of home health care. Continuity of care with an assigned panel of home or hospice care patients for whom the resident is the primary provider is essential.

C. Geriatric Psychiatry

Identifiable structured didactic and clinical experiences in geriatric psychiatry must be included in the program of each resident. Be-

havioral sciences such as psychology/social work and others must be included in the curriculum.

D. Curriculum

The training program must provide opportunities for the residents to develop clinical competence in the overall field of geriatric medicine. The curriculum of the program must exhibit, as a minimum, the following content and skill areas:

1. Current scientific knowledge of aging and longevity, including theories of aging, the physiology and natural history of aging, pathologic changes with aging, epidemiology of aging populations, and diseases of the aged.
2. Aspects of preventive medicine, including nutrition, oral health, exercise, screening, immunization, and chemoprophylaxis against disease. Instruction about and experience with community resources dedicated to these activities should be included.
3. Geriatric assessment, including medical, affective, cognitive, functional status, social support, economic, and environmental aspects related to health; activities of daily living (ADL); the instrumental activities of daily living (IADL); the appropriate use of the history, physical and mental examination, and laboratory.
4. Appropriate interdisciplinary coordination of the actions of multiple health professionals, including physicians, nurses, social workers, dietitians, and rehabilitation experts, in the assessment and implementation of treatment.
5. Topics of special interest to geriatric medicine, including but not limited to cognitive impairment, depression and related disorders, falls, incontinence, osteoporosis, fractures, sensory impairment, pressure ulcers, sleep disorders, pain, senior (elder) abuse, malnutrition, and functional impairment.
6. Diseases that are especially prominent in the elderly or that have different characteristics in the elderly, including neoplastic, cardiovascular, neurologic, musculoskeletal, metabolic, and infectious disorders.
7. Pharmacologic problems associated with aging, including changes in pharmacokinetics and pharmacodynamics, drug interactions, overmedication, appropriate prescribing, and adherence.
8. Psychosocial aspects of aging, including interpersonal and family relationships, living situations, adjustment disorders, depression, bereavement, and anxiety.
9. The economic aspects of supporting services, including Title III of the Older Americans Act, Medicare, Medicaid, capitation, and cost containment.
10. Ethical and legal issues especially pertinent to geriatric medicine, including limitation of treatment, competency, guardianship, right to refuse treatment, advance directives, wills, and durable power of attorney for medical affairs.
11. General principles of geriatric rehabilitation, including those applicable to patients with orthopedic, rheumatologic, cardiac, and neurologic impairments. These principles should include those related to the use of physical medicine modalities, exercise, functional activities, assistive devices, environmental modification, patient and family education, and psychosocial and recreational counseling.
12. Management of patients in long-term care settings, including palliative care, knowledge of the administration, regulation, and financing of long-term institutions, and the continuum from short- to long-term care.
13. Research methodologies related to geriatric medicine, including clinical epidemiology, decision analysis, and critical literature review.
14. Perioperative assessment and involvement in management.
15. Iatrogenic disorders and their prevention.

16. Communication skills with patients, families, professional colleagues, and community groups, including presenting case reports, literature searches, and research papers, when appropriate, to peers and lectures to lay audiences.
17. The pivotal role of the family in caring for many elderly and the community resources (formal support systems) required to support both patient and family.
18. Cultural aspects of aging, including knowledge about demographics, health care status of older persons of diverse ethnicities, access to health care, cross-cultural assessment, and use of an interpreter in clinical care. Issues of ethnicity in long-term care, patient education, and special issues relating to urban and rural older persons of various ethnic backgrounds should be covered.
19. Home care, including the components of a home visit, and accessing appropriate community resources to provide care in the home setting.
20. Hospice care, including pain medicine, symptom relief, comfort care, and end-of-life issues.

V. Certification

Those planning to seek a Certificate of Added Qualifications from the American Board of Internal Medicine or the American Board of Family Practice should communicate with the administrative officer of the board as listed in the *Graduate Medical Education Directory* to ascertain the full requirements.

ACGME: February 1998 Effective: July 1998

Program Requirements for Fellowship Education in Hematology (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in hematology must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. The training program must be 2 years in duration.
- C. At least 12 months of the program must be devoted to clinical training.
- D. The program should provide at least 1 month of clinical experience in autologous and allogeneic bone marrow transplantation.
- E. Ambulatory Clinics:
 1. The program must provide fellows with continuity experiences of at least 6 months in duration in an ambulatory care setting at least 1/2 day each week over the 24 months of training.
 2. In addition to continuity clinic, at least 10% of the required 12 months of clinical training must be spent in an ambulatory setting (i.e., the equivalent of 48 half-day sessions).

XII. Faculty

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

1. hematology laboratory
2. access to a specialized coagulation laboratory (N.B.: These may be located at institutions other than the primary training site.)

B. Radiology and Imaging

1. nuclear medicine imaging,
2. radiation oncology facilities

C. Surgery and Pathology

1. There must be advanced pathology services, including
 - a) immunopathology resources
 - b) blood banking, (N.B.: These may be located at institutions other than the primary training site.)
 - c) transfusion and apheresis facilities.
3. general surgery and surgical specialties.

D. Other Facilities, Resources or Support Services

1. Faculty members who are subspecialty certified by the American Board of Internal Medicine in their respective disciplines in infectious disease, pulmonary disease, endocrinology, gastroenterology, and oncology must be available to participate in the education of fellows in hematology.
2. The program must also participate in a multidisciplinary case management or tumor conference that includes discussion of neoplastic blood disorders and hematologic-oncology protocol studies.
3. There should be a medical oncology clinical program with which hematology fellows can interact formally in an educational experience
4. So that the fellow may see the role of other specialties in the total care of patients with hematologic and/or neoplastic diseases, the program should have the support of
 - a) nursing
 - b) rehabilitation medicine
 - c) pain medicine
 - d) dietetics, and
 - e) social services

E. Patient Population

See *Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine*.

XIV. Specific Program Content**A. Clinical Experience**

1. Fellows must have formal instruction, clinical experience, or opportunities to acquire knowledge and demonstrate competence in the prevention, evaluation, and management of
 - a) Acquired and congenital disorders of red cells, white cells, platelets and stem cells
 - b) Hematopoietic and lymphopoietic malignancies, including disorders of plasma cells
 - c) Congenital and acquired disorders of hemostasis and thrombosis including the use of antithrombotic therapy
 - d) Transfusion medicine, including the evaluation of antibodies, blood compatibility, and the indications for and complications of blood component therapy and apheresis procedures
 - e) Effects of systemic disorders and drugs on the blood, blood-forming organs, and lymphatic tissues

- f) Chemotherapeutic drugs, biologic products, and growth factors; their mechanisms of action, pharmacokinetics, clinical indications, and limitations, including their effects, toxicity, and interactions
 - g) Management and care of indwelling venous access catheters
 - h) Correlation of clinical information with cytology, histology, and immunodiagnostic imaging techniques
 - i) Principles and application of radiation medicine to hematopoietic and lymphopoietic malignancies
 - j) Management of the neutropenic and the immunocompromised patient
 - k) Treatment of patients with disorders of hemostasis and the biochemistry and pharmacology of coagulation factor replacement therapy
 - l) Indications and application of imaging techniques in patients with blood disorders
 - m) Personal development, attitudes, and coping skills of physicians and other health-care professionals who care for critically ill patients
 - n) Pain medicine in patients with blood disorders
 - o) Rehabilitation and psychosocial aspects of clinical management of patients with hematologic disorders
 - p) Palliative care, including hospice and home care
 - q) Recognition and management of paraneoplastic disorders
 - r) Participate in a multidisciplinary case management conference or discussion
 - s) Human immunodeficiency virus-related malignancies
 - t) Care and management of geriatric patients with hematologic disorders
 - u) Principles of, indications for, and complications of autologous and allogeneic bone marrow or peripheral blood stem cell transplantation and peripheral stem cell harvests, including the management of posttransplant complications
 - v) Concepts of supportive care, including hematologic, infectious disease, and nutritional
2. Hematology consultation to other physicians.
 3. Other Experiences
Fellows must have experiences in the use of chemotherapeutic agents and biological products through all therapeutic routes.

B. Technical and Other Skills

1. Fellows must demonstrate competence in the performance and/or (where applicable) interpretation of the following
 - a) Bone marrow aspiration and biopsy
 - b) Preparation, staining, and interpretation of blood smears, bone marrow aspirates, and touch preparations as well as interpretation of bone marrow biopsies
 - c) Complete blood count, including platelets and white cell differential, by means of automated or manual techniques, with appropriate quality control
2. The program should provide formal instruction and clinical experience of the following:
 - a) Apheresis procedures
 - b) Performance and interpretation of partial thromboplastin time, prothrombin time, platelet aggregation, and bleeding time as well as other standard coagulation assays
 - c) Blood banking and current blood bank practice
 - d) Clinical experience in bone marrow or peripheral stem cell harvest for transplantation
 - e) Formal instruction and at least one month of clinical experience in allogeneic and autologous bone marrow or peripheral blood stem cell transplantation and the nature and management of posttransplant complications
 - f) Test of hemostasis

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. Pathogenesis, diagnosis and treatment of disease
 - a) Basic molecular and pathophysiologic mechanisms, diagnosis, and therapy of diseases of the blood, including anemias, diseases of white blood cells and stem cells, and disorders of hemostasis and thrombosis
 - b) Etiology, epidemiology, natural history, diagnosis, pathology, staging, and management of neoplastic diseases of the blood, blood-forming organs, and lymphatic tissues
2. Genetics and Developmental biology
 - a) molecular genetics,
 - b) prenatal diagnosis,
 - c) the nature of oncogenes and their products, and
 - d) cytogenetics,
3. Physiology and Pathophysiology
 - a) cell and molecular biology,
 - b) hematopoiesis,
 - c) principles of oncogenesis
 - d) tumor immunology,
 - e) molecular mechanisms of hematopoietic and lymphopoietic malignancies
 - f) basic and clinical pharmacology, pharmacokinetics, toxicity,
 - g) pathophysiology and patterns of tumor metastases
4. Clinical epidemiology and Biostatistics
 - a) clinical epidemiology and medical statistics,
 - b) clinical study and experimental protocol design, data collection, and analysis
5. Basic principles of laboratory and clinical testing, quality control, quality assurance and proficiency standards
6. Immune markers, immunophenotyping, flow cytometry, cytochemical studies, and cytogenetic and DNA analysis of neoplastic disorders
7. Malignant and hematologic complications of organ transplantation
8. Gene therapy

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Hematology and Oncology (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in combined hematology and oncology must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. The training program must be 3 years in duration.
- C. Clinical experience must include opportunities to observe and manage both inpatients and outpatients with a wide variety of blood and neoplastic disorders.
- D. At least 18 months of the program must be devoted to clinical training.
- E. The fellow must develop competency as a consultant in these disorders, and assume continuing responsibility for acutely and

chronically ill patients in order to observe the evolution of blood diseases and the natural history of cancer as well as the benefits and adverse effects of therapy.

- F. Inpatient assignments should be of sufficient duration to permit continuing care of a majority of the patients throughout their hospitalization.
- G. The program must provide at least 1 month of clinical experience in autologous and allogeneic bone marrow transplantation.
- H. Ambulatory Clinics:
 1. The program must provide fellows with continuity experiences of at least 6 months in duration in an ambulatory care setting at least 1/2 day each week over the 36 months of training.
 2. In addition to continuity clinic, at least 10% of the required 18 months of clinical training must be spent in an ambulatory setting (i.e., the equivalent of 72 half-day sessions).

XII. Faculty

- A. The combined subspecialty program faculty must include a minimum of six qualified key clinical teaching faculty members, including the program director.
- B. At least three of the key clinical faculty must be certified in hematology and at least three must be certified in oncology.
- C. In programs with a total of more than nine fellows enrolled, a ratio of key clinical faculty to fellows of at least 1:1.5 must be maintained.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

1. hematology laboratory
2. access to specialized coagulation laboratory (N.B.: These may be located at institutions other than the primary training site)

B. Radiology and Imaging

1. nuclear medicine imaging,
2. radiation oncology facilities

C. Surgery and Pathology

1. There must be advanced pathology services, including
 - a) immunopathology resources
 - b) blood banking (N.B.: These may be located at institutions other than the primary training site.)
 - c) transfusion and apheresis facilities.
2. general surgery and surgical specialties, including surgeons with special interest in oncology

D. Other Facilities, Resources or Support Services

1. Faculty members who are subspecialty certified by the American Board of Internal Medicine in their respective disciplines in infectious disease, pulmonary disease, endocrinology, and gastroenterology, must be available to participate in the education of fellows in hematology and oncology.
2. The program also must have the support of other clinical specialties, including gynecology, neurology, neurosurgery, and dermatology.
3. The program must also participate in a multidisciplinary case management or tumor conference and cancer protocol studies.
4. So that the fellow may see the role of other specialties in the total care of the cancer patient, the program should have the support of:
 - a) psychiatry

- b) oncologic nursing
- c) rehabilitation medicine
- d) pain medicine
- e) dietetics
- f) social services, and
- g) genetic counseling

E. Patient Population

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine

XIV. Specific Program Content:

A. Clinical Experience

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the prevention, evaluation and management of
 - a) Diagnosis, pathology, staging, and management of neoplastic disorders of the:
 - (1) lung
 - (2) gastrointestinal tract (esophagus, stomach, colon, rectum, anus)
 - (3) breast
 - (4) pancreas
 - (5) liver
 - (6) testes
 - (7) lymphoid organs
 - (8) hematopoietic system
 - (9) central nervous system
 - (10) head and neck
 - (11) thyroid and other endocrine organs, including MEN syndromes
 - (12) skin, including melanoma
 - (13) genitourinary tract
 - (14) cancer family syndromes
 - (15) gynecologic malignancies
 - b) Principles of multidisciplinary management of organ-specific cancers, in particular, gynecologic malignancy
 - c) Indications and application of imaging techniques in patients with neoplastic and blood disorders
 - d) Chemotherapeutic drugs, biologic products, and growth factors; their mechanisms of action, pharmacokinetics, clinical indications, and limitations, including their effects, toxicity, and interactions
 - e) Multiagent chemotherapeutic protocols and combined modality therapy of neoplastic disorders
 - f) Management and care of indwelling access catheters
 - g) Principles of, indications for, and limitations of surgery in the treatment of cancer
 - h) Principles of, indications for, and limitations of radiation therapy in the treatment of cancer
 - i) Principles of, indications for, and complications of autologous and allogeneic bone marrow or peripheral blood stem cell transplantation and peripheral stem cell harvests, including the management of posttransplant complications
 - j) Concepts of supportive care, including hematologic, infectious disease, and nutritional
 - k) Management of the neutropenic and the immunocompromised patient
 - l) Management of pain, anxiety, and depression in patients with cancer and hematologic disorders
 - m) Rehabilitation and psychosocial aspects of clinical management of patients with cancer and hematologic disorders
 - n) Palliative care, including hospice and home care
 - o) Recognition and management of paraneoplastic disorders

- p) Cancer prevention and screening, including competency in genetic testing and for high-risk individuals
- q) Participation in a multidisciplinary case management conference or discussion
- r) Personal development, attitudes, and coping skills of physicians and other health-care professionals who care for critically ill patients
- s) Human immunodeficiency virus-related malignancies
- t) Care and management of the geriatric patient with malignancy and hematologic disorders
- u) The appropriate use of tumor markers for cancer screening and monitoring cancer therapy.
- v) Correlation of clinical information with cytology, histology, and immunodiagnostic imaging techniques
- w) Effects of systemic disorders and drugs on the blood, blood-forming organs, and lymphatic tissues
- x) Tests of hemostasis and thrombosis for both congenital and acquired disorders and regulation of antithrombotic therapy
- y) Treatment of patients with disorders of hemostasis and the biochemistry and pharmacology of coagulation factor replacement therapy
- z) Transfusion medicine, including the evaluation of antibodies, blood compatibility, and the indications for and complications of blood component therapy and apheresis procedures
- aa) Acquired and congenital disorders of red cells, white cells, platelets and stem cells
- bb) Hematopoietic and lymphopoietic malignancies, including disorders of plasma cells
- cc) Congenital and acquired disorders of hemostasis and thrombosis including the use of antithrombotic therapy
2. The fellows must be given opportunities to function in the role of a hematology and oncology consultant in both the inpatient and outpatient settings.

B. Technical and Other Skills

1. Fellows must develop competence in the performance and/or (where applicable) interpretation of the following:
 - a) Use of chemotherapeutic agents and biological products through all therapeutic routes
 - b) Serial measurement of tumor masses
 - c) Assessment of tumor imaging by computed tomography, magnetic resonance, PET scanning and nuclear imaging techniques
 - d) Complete blood count, including platelets and white cell differential, by means of automated or manual techniques, with appropriate quality control
 - e) Bone marrow aspiration and biopsy
 - f) Preparation, staining, and interpretation of blood smears, bone marrow aspirates, and touch preparations as well as interpretation of bone marrow biopsies
2. The program should provide experience or observation of the following:
 - a) Apheresis procedures
 - b) Performance and interpretation of partial thromboplastin time, prothrombin time, platelet aggregation, and bleeding time as well as other standard coagulation assays
 - c) Clinical experience in bone marrow or peripheral stem cell harvest for transplantation
 - d) Formal instruction and at least one month of clinical experience in allogeneic and autologous bone marrow or peripheral blood stem cell transplantation and the nature and management of posttransplant complications

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. Pathogenesis, diagnosis and treatment of disease
 - a) Basic molecular and pathophysiologic mechanisms, diagnosis, and therapy of diseases of the blood, including anemias, diseases of white blood cells and stem cells, and disorders of hemostasis and thrombosis
 - b) Etiology, epidemiology, natural history, diagnosis, pathology, staging, and management of neoplastic diseases of the blood, blood-forming organs, and lymphatic tissues
2. Genetics and Developmental biology
 - a) molecular genetics
 - b) prenatal diagnosis
 - c) the nature of oncogenes and their products
 - d) cytogenetics
3. Physiology and Pathophysiology
 - a) cell and molecular biology
 - b) hematopoiesis
 - c) principles of oncogenesis
 - d) tumor immunology
 - e) molecular mechanisms of hematopoietic and lymphopoietic malignancies
 - f) basic and clinical pharmacology, pharmacokinetics, and toxicity
 - g) pathophysiology and patterns of tumor metastases
4. Clinical epidemiology and Biostatistics
 - a) clinical epidemiology and medical statistics
 - b) clinical study and experimental protocol design, data collection, and analysis
5. Basic principles of laboratory and clinical testing, quality control, quality assurance, and proficiency standards
6. Immune markers, immunophenotyping, flow cytometry, cytochemical studies, and cytogenetic and DNA analysis of neoplastic disorders
7. Malignant and hematologic complications of organ transplantation

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Infectious Disease (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in infectious disease must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. The training program must be 2 years in duration.
- C. A minimum of 12 months must be devoted to clinical experiences.
- D. Ambulatory medicine experience
Continuity ambulatory care experience of 24 months must be included in the training program. During their ambulatory experience, fellows must have training in both consultative services and continuing care in infectious disease including human immunodeficiency virus (HIV) infection.

XII. Faculty

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

Fellows must have convenient access to a laboratory for clinical microbiology, such that direct and frequent interaction with microbiology laboratory personnel is readily available. (N.B.: Does not need to be located at the primary training site.)

B. Imaging

No additional facilities required.

C. Surgery and Pathology

No additional facilities or services required.

D. Other Facilities, Resources, or Support Services

1. Facilities for the isolation of patients with infectious disease must be available.
2. It is suggested that the training program be conducted in a setting in which training programs in surgery, obstetrics, gynecology, pediatrics, and other medical and surgical specialties and subspecialties are available.

E. Patient Population

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIV. Specific Program Content

A. Clinical Experience

1. Clinical experience must include opportunities to manage adult and geriatric patients with a wide variety of infectious disease in both an inpatient and ambulatory basis. Such opportunities must encompass longitudinal experiences in a continuum of care to observe the course of illness and the effects of therapy. Therapeutic modalities should include management of antibiotic administration in such settings as the acute care hospital, the office, and in conjunction with the non-acute care facility or home-care services.
2. Experience with pediatric infectious disease is suggested.

B. Technical and Other Skills

1. Fellows must receive formal instruction and gain practical experience in hospital epidemiology and infection control. This can be accomplished by didactic or practical experience, as offered through organized coursework, service on an infection control committee, or by an assigned rotation on a hospital epidemiology service.
2. Fellows must receive formal instruction and gain practical experience in clinical microbiology.
3. Fellows must have clinical experience and demonstrate competence in the evaluation and management of infections in patients with major impairments of host defense.
 - a) The teaching services on which fellows work must provide an average of at least 50 consultations per fellow during the period the fellows are rotating on these services for their clinical training.
 - b) This experience includes, but is not limited to,
 - (1) patients who are neutropenic

- (2) patients with leukemia, lymphoma or other malignancies
 - (3) patients following solid organ or bone marrow transplantation
 - (4) patients with HIV/AIDS or patients immunocompromised by other diseases or medical therapies.
 - c) Documentation of the consult numbers above can be done for the teaching service overall rather than per fellow, if these numbers are available for the service; in this case, individual fellow logs are not necessary. Otherwise, fellows should document consult numbers by an individual log.
4. Fellows must have formal instruction or clinical experience and demonstrate competence in the evaluation and management of the following disorders:
- a) Infections of the reproductive organs
 - b) Infections in solid organ transplant patients
 - c) Infections in bone marrow transplant recipients
 - d) Sexually transmitted diseases
 - e) Viral hepatitis, including hepatitis B and C
 - f) Infections in travelers

5. Consultation Experience

The inpatient teaching services on which fellows work must provide an average of at least 250 consultations per fellow during the period the fellows are rotating on these services for their clinical training. These consultations must be provided in a variety of clinical settings including

- a) Inpatient General Medical and Surgical Wards and Intensive Care Units

In these settings, fellows must have clinical experience and demonstrate competence in the evaluation and management of patients with the following disorders:

- (1) Pleuropulmonary infections
- (2) Infections and other complications in patients with HIV/AIDS
- (3) Cardiovascular infections
- (4) Central nervous system infections
- (5) Gastrointestinal and intra-abdominal infections
- (6) Skin and soft tissue infections
- (7) Bone and joint infections
- (8) Infections of prosthetic devices
- (9) Infections related to trauma
- (10) Sepsis syndromes
- (11) Nosocomial infections
- (12) Urinary tract infections

6. Ambulatory Medicine Experience

- a) Ambulatory training must include longitudinal care (at least 12 months of direct supervision of each patient) of at least 20 patients with HIV infection.
- b) Direct oversight of the longitudinal care of patients with HIV infection by the fellows must be provided by an experienced HIV physician.
- c) At a minimum, 25% of patients of either gender must be represented in the fellow's panel of patients. If this gender distribution is not feasible due to the local epidemiology of HIV, then alternative clinical experiences or didactic instruction must be provided.

C. Formal Instruction

- 1. The training program must provide formal instruction for the fellows in the cognitive aspects of the following:
 - a) Mechanisms of action and adverse reactions of antimicrobial agents; antimicrobial and antiviral resistance; drug-drug interactions between antimicrobial agents and other compounds; the appropriate use and management of antimicrobial agents in a variety of clinical settings, including the hospital, ambulatory practice, non acute-care units, and the home.

- b) Methods of determining antimicrobial activity of a drug; techniques to determine concentration of antimicrobial agents in the blood and other body fluids; interpretation of antibiotic levels in blood.
- c) Appropriate procedures for specimen collection relevant to infectious disease, including but not limited to bronchoscopy, thoracentesis, arthrocentesis, lumbar puncture, and aspiration of abscess cavities.
- d) Principles of prophylaxis and immunoprophylaxis to enhance resistance to infection.
- e) Characteristics, use, and complications of antiretroviral agents, mechanisms and clinical significance of viral resistance to antiretroviral agents, and recognition and management of opportunistic infections in patients with HIV/AIDS.
- f) Methods for accessing databases of relevance to the care and management of individuals with infectious disease.
- g) The epidemiology, clinical course, manifestations, diagnosis, treatment and prevention of mycobacterial infections and major parasitic diseases.

2. Conferences and Seminars

As part of the required conferences and seminars outlined in the Program Requirements for Fellowship Education in the Subspecialties in Internal Medicine, a minimum of 25 hours each year must be devoted to discussion of HIV-related topics.

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Interventional Cardiology (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. Interventional cardiology encompasses the special knowledge and skill required of cardiologists to care for patients receiving cardiac interventional procedures. Interventional cardiology is the practice of techniques that improve coronary circulation and alleviate valvular stenosis, treat valvular and structural heart disease.
- B. The interventional cardiology program must be 1 year in length. The subspecialty educational program in interventional cardiology must function as an integral component of an accredited subspecialty fellowship in cardiovascular disease.
- C. The interventional cardiology program is accredited for 12 continuous months of clinical training. All applicants entering interventional cardiology must have completed an ACGME-accredited cardiovascular disease program. (N.B.: For exceptions, see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.)
- D. In all clinical experiences, fellows must:
 - 1. Participate in preprocedural planning, including the indications for the procedure and the selection of the appropriate procedure or instruments
 - 2. Perform the critical technical manipulations of the procedure
 - 3. Demonstrate substantial involvement in postprocedure care
 - 4. Be supervised by teaching faculty responsible for the procedure

XII. Faculty

- A. There must be a minimum of two key clinical faculty members, including the program director, and no fewer than one key clinical faculty member per 1.5 fellows.
- B. All faculty involved in supervising fellows in the performance of interventional procedures must perform a minimum of 75 interventions per year at the Primary Training Site.

XIII. Facilities and Resources.

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

No additional resources required.

B. Imaging

Cardiac radionuclide laboratories must be available.

C. Surgery and Pathology

1. An active cardiac surgery program.
2. A cardiac surgery intensive care unit.

D. Other Facilities, Resources or Support Services

1. A cardiac catheterization laboratory wherein a minimum of 400 interventional procedures of the heart are performed per year. Cardiac catheterization laboratories must be equipped with cardiac fluoroscopic equipment, recording devices, and resuscitative equipment
2. The primary laboratory must perform a minimum of 400 interventional procedures per year, and each secondary laboratory must perform a minimum of 200 interventional procedures per year.
3. Laboratories other than those located at the primary training site may participate in the educational program under the following conditions:
 - a) The participating catheterization laboratory must perform a minimum of 400 interventional procedures.
 - b) Fellow activities at participating sites must be supervised by a key clinical faculty member, as defined in Section IX above, who conducts a minimum of 75 interventions annually at the participating site
 - c) A cardiac surgery program must be active at the participating institution.
4. A cardiac intensive care unit.
5. Access to faculty with expertise in radiation safety, hematology, pharmacology, congenital heart disease in adults, and research laboratories is suggested.
6. An outpatient program must exist to provide follow-up care for patients.

E. Patient Population

See *Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine*.

XIV. Specific Program Content

A. Clinical Experience

1. Special Clinical Experiences
Fellows must have formal instruction, clinical experience, and demonstrate competence in the prevention, evaluation and management of both inpatients and outpatients with the following disorders:
 - a) chronic ischemic heart disease
 - b) acute ischemic syndromes

- c) valvular and structural heart disease
- d) bleeding disorders or complications associated with percutaneous intervention or drugs, including but not limited to
 - (1) bleeding after thrombolytic usage
 - (2) direct or indirect thrombin inhibitor usage
 - (3) glycoprotein IIb/IIIa inhibitor usage
 - (4) thienopyridine or other antiplatelet usage
- e) use and limitations of intra-aortic balloon counterpulsation (IABP) and other hemodynamic support devices (as available)
- f) consultation and informed consent
- g) care of patients in the cardiac care unit, emergency department, or other intensive care settings
- h) care of the patient before and after interventional procedures
- i) outpatient follow-up of patients treated with drugs, interventions, devices, or surgery
- j) use of antiarrhythmic drugs, including knowledge of pharmacokinetics and pharmacodynamics related to acute ischemic events occurring during and after interventional cardiac procedures
- k) use of thrombolytic and antithrombotic, antiplatelet, and antithrombin agents
- l) use of vasoactive agents for epicardial and microvascular spasm

B. Technical and Other Skills

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the performance of the following:
 - a) coronary arteriograms
 - b) ventriculography
 - c) hemodynamic measurements
 - d) intravascular ultrasound
 - e) Doppler flow, intracoronary pressure measurement and monitoring, and coronary flow reserve
 - f) coronary interventions; Each fellow must perform a minimum of 250 coronary interventions. (N.B.: A single coronary intervention is defined as all coronary interventions performed during one hospitalization.)
 - (1) Femoral and brachial/radial cannulation of normal and abnormally located coronary ostia
 - (2) Application and usage of balloon angioplasty, stents, and other commonly used interventional devices
 - g) Management of mechanical complications of percutaneous intervention, including but not limited to:
 - (1) coronary dissection
 - (2) thrombosis
 - (3) spasm
 - (4) perforation
 - (5) "slow reflow"
 - (6) cardiogenic shock
 - (7) left main trunk dissection
 - (8) cardiac tamponade including pericardiocentesis
 - (9) peripheral vessel occlusion, and retained components
 - (10) pseudoaneurysm

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. Role of platelets and the clotting cascade in response to vascular injury
2. Pathophysiology of restenosis
3. Role and limitations of established and emerging therapy for treatment of restenosis
4. Physiology of coronary flow and detection of flow-limiting conditions

5. Detailed coronary anatomy
6. Radiation physics, biology, and safety related to the use of x-ray imaging equipment
7. Role of randomized clinical trials and registry experiences in clinical decision making
8. The clinical importance of complete vs incomplete revascularization in a wide variety of clinical and anatomic situations
9. Strengths and limitations, both short- and long-term, of percutaneous vs surgical and medical therapy for a wide variety of clinical and anatomic situations related to cardiovascular disease
10. Strengths and limitations, both short- and long-term of differing percutaneous approaches for a wide variety of anatomic situations related to cardiovascular disease
11. The role of emergency coronary bypass surgery in the management of complications of percutaneous intervention
12. Strengths and weaknesses of mechanical vs. lytic approach for patients with acute myocardial infarction
13. Use of pharmacologic agents appropriate in the postintervention management of patients
14. Strengths and limitations of both noninvasive and invasive coronary evaluation during the recovery phase after acute myocardial infarction
15. Understanding the clinical utility and limitations of the treatment of valvular and structural heart disease
16. The assessment of plaque composition and response to intervention

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Nephrology (Internal Medicine)

For sections I through X, see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in nephrology must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. The training program must be 2 years in duration.
- C. A minimum of 12 months must be devoted to clinical experiences.

XII. Faculty

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

There must be biochemistry and serologic laboratories.

B. Imaging

Available imaging services must include ultrasound, computerized tomography, magnetic resonance imaging, and a diagnostic radionuclide laboratory.

C. Surgery and Pathology

1. There must be surgical and pathological support available for the modern practice of nephrology.
2. Surgery for vascular and peritoneal dialysis access must be available.
3. Renal transplantation services must be available. The Primary Training Site must be approved to perform renal transplantation, or must have a formal written agreement with such an institution ensuring that nephrology fellows receive the requisite experience with renal transplantation.
4. Electron and immunofluorescence microscopy, and other special studies for the preparation and evaluation of renal biopsy material must be available. (N.B.: These may be located at institutions other than the primary training site.)

D. Other Facilities, Resources or Support Services

1. There must be facilities for:
 - a) acute and chronic hemodialysis
 - b) continuous renal replacement therapy
 - c) acute and chronic peritoneal dialysis
 - d) renal biopsy
2. There must be a close working relationship with dietary and/or nutrition services, social services, as well as specialists in surgery, urology, obstetrics, gynecology, psychiatry, pathology, pediatrics, if available, and radiology.

E. Patient Population

1. The training program must have access to a sufficient population of inpatients and outpatients representing the full range of nephrologic disorders.
2. The training program must have access to at least 10 new renal transplants per year per first year fellow and demonstrate a sufficient population of transplant recipients to permit the longitudinal follow-up (at least 3 months) of at least 20 patients with transplants per fellow.
3. The training program must afford the fellows the opportunity to care for patients with renal and other disorders in the intensive care unit setting.
4. The training program should be of sufficient size to ensure adequate exposure of fellows to patients with acute renal failure and a chronic dialysis patient population, including patients who utilize home dialysis treatment modalities, to ensure adequate training in chronic dialysis.

XIV. Specific Program Content

A. Clinical Experience

1. Special Clinical Experiences

Fellows must have formal instruction, clinical experience, and demonstrate competence in the prevention, evaluation, and management of the following:

 - a) Disorders of mineral metabolism, including nephrolithiasis and renal osteodystrophy
 - b) Disorders of fluid, electrolyte, and acid-base regulation
 - c) Acute renal failure
 - d) Chronic renal failure and its management by conservative methods, including nutritional management of uremia
 - e) End-stage renal disease
 - f) Hypertensive disorders
 - g) Renal disorders of pregnancy

- h) Urinary tract infections
 - i) Tubulointerstitial renal diseases, including inherited diseases of transport, cystic diseases, and other congenital disorders
 - j) Glomerular and vascular diseases, including the glomerulonephritides, diabetic nephropathy, and atheroembolic renal disease
 - k) Disorders of drug metabolism, pharmacokinetics, and nephrotoxicity
 - l) Genetic and inherited renal disorders
 - m) Geriatric aspects of nephrology, including disorders of the aging kidney and urinary tract
2. Fellows must have formal instruction, specialized clinical experiences, and demonstrate competence in dialysis, and extracorporeal therapy.
- a) Each fellow should have exposure to dialysis and extracorporeal therapies during the equivalent of at least 4 months of the training program.
 - b) Clinical experience must entail supervised involvement in decision making for patients undergoing these therapies. This experience must include:
 - (1) evaluation and selection of patients for acute hemodialysis or continuous renal replacement therapies
 - (2) evaluation of end-stage renal disease patients for various forms of therapy and their instruction regarding treatment options
 - (3) modification of drug dosage during dialysis and other extracorporeal therapies
 - (4) evaluation and management of medical complications in patients during and between dialyses and other extracorporeal therapies, including dialysis access, and an understanding of the pathogenesis and prevention of such complications
 - (5) long-term follow-up of patients undergoing chronic dialysis, including their dialysis prescription and modification and assessment of adequacy of dialysis
 - (6) the principles and practice of peritoneal dialysis, including the establishment of peritoneal access, the principles of dialysis catheters, and how to choose appropriate catheters
 - (7) the technology of peritoneal dialysis, including the use of automated cyclers
 - (8) assessment of peritoneal dialysis efficiency, using peritoneal equilibration testing and the principles of peritoneal biopsy
 - (9) writing a peritoneal dialysis prescription and how to assess peritoneal dialysis adequacy
 - (10) the pharmacology of commonly used medications and their kinetic and dosage alteration with peritoneal dialysis
 - (11) the complications of peritoneal dialysis, including
 - (a) peritonitis and its treatment, exit site and tunnel infections and their management,
 - (b) hernias, pleural effusions, and other less common complications and their management
 - (12) the special nutritional requirements of patients undergoing hemodialysis and peritoneal dialysis
 - (13) the psychosocial and ethical issues of dialysis
 - (14) end of life care and pain medicine in the care of patients undergoing chronic dialysis
3. Fellows must have formal instruction and specialized clinical experiences in renal transplantation.
- a) Each fellow must have instruction in, and have a minimum of 2 months of clinical experience, preferably consecutively, on an active renal transplant service.

- b) Clinical experience must entail supervised involvement in the decision making for patients during the pre- and post-transplant care. This experience must include
 - (1) evaluation and selection of transplant candidates
 - (2) preoperative evaluation and preparation of transplant recipients and donors
 - (3) immediate postoperative management of transplant recipients, including administration of immunosuppressants to a minimum of 10 new renal transplant recipients
 - (4) clinical and laboratory diagnosis of all forms of rejection
 - (5) medical management of rejection, including use of immunosuppressive drugs and other agents
 - (6) recognition and medical management of the surgical and nonsurgical complications of transplantations
 - (7) management in the ambulatory setting for at least 3 months of a minimum of 20 renal transplant recipients per fellow
 - (8) the psychosocial and ethical issues of renal transplantation

B. Technical and Other Skills

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the performance of the following:
- a) urinalysis
 - b) percutaneous biopsy of both autologous and transplanted kidneys
 - c) placement of temporary vascular access for hemodialysis and related procedures
 - d) peritoneal dialysis
 - e) acute and chronic hemodialysis
 - f) continuous renal replacement therapy
2. Fellows must have formal instruction and clinical experience in the use or interpretation of the results of the following:
- a) Radiology of vascular access
 - b) Balloon angioplasty of vascular access, or other procedures utilized in the maintenance of chronic vascular access patency
 - c) Therapeutic plasmapheresis
 - d) Management of peritoneal catheters
 - e) Renal ultrasound

C. Formal Instruction

The curriculum must emphasize biochemistry and physiology, including cell and molecular biology, as they relate to nephrology. The appropriate utilization and interpretation of clinical laboratory, radionuclide, and radiologic studies for the diagnosis as well as nephrologic interventions utilized in the treatment of renal disease must be stressed.

1. In addition to formal instruction in the areas outlined above, specific content areas that must be included in the formal educational program (lectures, conferences, seminars, and journal clubs) include the following:
- a) renal anatomy, physiology, and pathology
 - b) pathogenesis, natural history, and management of congenital and acquired diseases of the kidney and urinary tract and renal diseases associated with systemic disorders
 - c) normal mineral metabolism and its alteration in renal diseases, metabolic bone disease, and nephrolithiasis
 - d) normal and abnormal blood pressure regulation
 - e) clinical pharmacology, including drug metabolism and pharmacokinetics and the effects of drugs on renal structure and function
 - f) nutritional aspects of renal disorders
 - g) immunology, including
 - (1) basic principles
 - (2) immunologic mechanisms of renal disease

- (3) fundamental aspects of diagnostic laboratory immunology relevant to renal diseases
- h) transplantation—the structured curriculum for renal transplantation must, as a minimum, include
 - (1) biology of transplantation rejection
 - (2) indications for and contraindications to renal transplantation
 - (3) principles of transplant recipient evaluation and selection
 - (4) principles of evaluation of transplant donors, both living and cadaveric, including histocompatibility testing
 - (5) principles of organ harvesting, preservation, and sharing
 - (6) psychosocial aspects of organ donation and transplantation
 - (7) the pathogenesis and management of urinary tract infections
 - (8) the pathogenesis and management of acute renal failure in the transplant setting
- i) disorders of fluids and electrolytes and acid-base balance
- j) management of renal disorders in non-renal organ transplantation
- k) indications for and interpretations of radiologic tests of the kidney and urinary tract
- l) dialysis and extracorporeal therapy, including
 - (1) the kinetic principles of hemodialysis and peritoneal dialysis
 - (2) the indication for each mode of dialysis
 - (3) the short-term and long-term complications of each mode of dialysis and their management
 - (4) the principles of dialysis access (acute and chronic vascular and peritoneal), including indications, techniques, and complications
 - (5) urea kinetics and protein catabolic rate
 - (6) dialysis modes and their relation to metabolism
 - (7) dialysis water treatment, delivery systems, and reuse of artificial kidneys
 - (8) the artificial membranes used in hemodialysis and biocompatibility; and
- m) geriatric medicine, including
 - (1) physiology and pathology of the aging kidney and
 - (2) drug dosing and renal toxicity in elderly patients
- n) Lithotripsy

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Oncology (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in oncology must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. The training program must be 2 years in duration.
- C. A minimum of 12 months must be devoted to clinical experiences.

- D. Clinical experience must include opportunities to observe and manage patients with a wide variety of neoplastic diseases on an inpatient, outpatient and continuity basis.
- E. The fellow must develop competency as a consultant in these disorders and assume continuing responsibility for both acutely and chronically ill patients to learn the natural history of cancer as well as the effectiveness of therapeutic programs.
- F. Inpatient assignments should be of sufficient duration to permit continuing care of a majority of the patients throughout their hospitalization.
- G. The program should provide at least 1 month of clinical experience in autologous and allogeneic bone marrow transplantation.
- H. Ambulatory Clinics:
 - 1. The program must provide fellows with continuity experiences of at least 6 months in duration in an ambulatory care setting at least 1/2 day each week over the 24 months of training.
 - 2. In addition to continuity clinic, at least 10% of the required 12 months of clinical training must be spent in an ambulatory setting (i.e., the equivalent of 48 half-day sessions).

XII. Faculty

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

- 1. hematology laboratory
- 2. access to a specialized coagulation laboratory (N.B.: These may be located at institutions other than the primary training site.)

B. Radiology and Imaging

- 1. nuclear medicine imaging
- 2. radiation oncology facilities

C. Surgery and Pathology

- 1. There must be advanced pathology services, including
 - a) immunopathology resources
 - b) blood banking (N.B.: These may be located at institutions other than the primary training site.)
 - c) transfusion and apheresis facilities
- 2. general surgery and surgical specialties

D. Other Facilities, Resources or Support Services

- 1. Faculty members who are subspecialty certified by the American Board of Internal Medicine in their respective disciplines in infectious disease, pulmonary disease, endocrinology, gastroenterology, and hematology must be available to participate in the education of fellows in oncology.
- 2. The program also must have the support of other clinical specialties, including gynecology, neurology, neurosurgery, orthopedics, otolaryngology, urology, and dermatology.
- 3. The program must also participate in a multidisciplinary case management or tumor conference and cancer protocol studies.
- 4. There should be a hematology clinical program with which medical oncology fellows can interact formally in an educational experience.
- 5. So that the fellows may see the role of other specialties in the total care of the cancer patient, the program should have the support of:
 - a) psychiatry

- b) oncologic nursing
- c) rehabilitation medicine
- d) pain medicine
- e) dietetics
- f) social services, and
- g) genetic counseling

E. Patient Population

See *Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine*.

XV. Specific Oncology Program Content

A. Clinical Experience

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the prevention, evaluation and management of
 - a) Diagnosis, pathology, staging, and management of neoplastic disorders of the
 - (1) lung
 - (2) gastrointestinal tract (esophagus, stomach, colon, rectum, anus)
 - (3) breast
 - (4) pancreas
 - (5) liver
 - (6) soft tissue and bone
 - (7) lymphoid organs
 - (8) hematopoietic system
 - (9) central nervous system
 - (10) head and neck
 - (11) thyroid and other endocrine organs, including MEN syndromes
 - (12) skin, including melanoma
 - (13) genitourinary tract
 - (14) cancer family syndromes
 - (15) gynecologic malignancies
 - b) Principles of multidisciplinary management of organ-specific cancers
 - c) Indications and application of imaging techniques in patients with neoplastic disorders
 - d) Chemotherapeutic drugs, biologic products, and growth factors; their mechanisms of action, pharmacokinetics, clinical indications, and limitations, including their effects, toxicity, and interactions
 - e) Multiagent chemotherapeutic protocols and combined modality therapy of neoplastic disorders
 - f) Management and care of indwelling access catheters
 - g) Principles of, indications for, and limitations of surgery in the treatment of cancer
 - h) Principles of, indications for, and limitations of radiation therapy in the treatment of cancer
 - i) Principles of, indications for, and complications of autologous and allogeneic bone marrow or peripheral blood stem cell transplantation and peripheral stem cell harvests, including the management of post-transplant complications
 - j) Concepts of supportive care, including hematologic, infectious disease, and nutritional
 - k) Management of the neutropenic and the immunocompromised patient
 - l) Management of pain, anxiety and depression in the cancer patient
 - m) Rehabilitation and psychosocial aspects of clinical management of the cancer patient
 - n) Palliative care, including hospice and home care
 - o) Recognition and management of paraneoplastic disorders

- p) Cancer prevention and screening, including competency in genetic testing for high-risk individuals
 - q) Participation in a multidisciplinary case management conference or discussion
 - r) Personal development, attitudes, and coping skills of physicians and other health-care professionals who care for critically and terminally ill patients
 - s) Human immunodeficiency virus-related malignancies
 - t) Care and management of the geriatric patient with malignancy
 - u) The appropriate use of tumor markers for cancer screening and monitoring cancer therapy.
 - v) Correlation of clinical information with cytology, histology, and immunodiagnostic imaging techniques
2. The fellows must be given opportunities to function in the role of an oncology consultant in both the inpatient and outpatient settings.

B. Technical and Other Skills

Fellows must demonstrate competence in the performance and/or (where applicable) interpretation of the following:

1. Bone marrow aspiration and biopsy
2. Use of chemotherapeutic agents and biological products through all therapeutic routes
3. Serial measurement of tumor masses
4. Assessment of tumor imaging by computed tomography, magnetic resonance, PET scanning, and nuclear imaging techniques
5. Complete blood count, including platelets and white cell differential, by means of automated or manual techniques, with appropriate quality control

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. Pathogenesis, diagnosis and treatment of disease
 - a) Basic molecular and pathophysiologic mechanisms, diagnosis, and therapy of neoplastic diseases
 - b) Etiology, epidemiology, natural history, diagnosis, pathology, staging, and management of neoplastic diseases.
2. Genetics and Developmental biology
 - a) prenatal diagnosis,
 - b) oncogenesis and molecular biology of cancer, and
 - c) cytogenetics.
3. Physiology and Pathophysiology
 - a) cell and molecular biology,
 - b) tumor immunology,
 - c) molecular mechanisms of hematopoietic and lymphopoietic malignancies
 - d) pathophysiology and patterns of tumor metastases
4. Clinical epidemiology and Biostatistics
 - a) clinical epidemiology and medical statistics,
 - b) clinical study and experimental protocol design, data collection, and analysis
5. Basic principles of laboratory and clinical testing, quality control, quality assurance and proficiency standards
6. Immune markers, immunophenotyping, flow cytometry, cytochemical studies, and cytogenetic and DNA analysis of neoplastic disorders
7. Malignant complications of organ transplantation
8. Gene therapy

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Pulmonary Disease (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in pulmonary disease must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire the competency of a specialist in the field.
- B. The training program must be 2 years in duration.
- C. A minimum of 12 months must be devoted to clinical experiences.
 1. A minimum of 9 months of training must be spent in non-critical care pulmonary disease rotations.
 2. A minimum of 3 months of training must be spent in the medical intensive care unit.

XII. Faculty

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

No additional services required.

B. Imaging

1. Ventilation Perfusion Scan
2. Helical CT Scan

C. Surgery and Pathology

1. Pathology services, including exfoliative cytology
2. Thoracic Surgery service

D. Other Facilities, Resources or Support Services

1. Pulmonary function testing laboratory
2. Bronchoscopy suite, including appropriate space and staffing for pulmonary procedures
3. Critical care, postoperative care, and respiratory care services
4. Diagnostic Laboratory for Sleep Disorders (N.B.: These may be located at institutions other than the primary training site.)
5. There should be a close liaison with other services, including pediatrics, radiology, pathology, microbiology, laboratory medicine, occupational medicine, immunology, physical medicine, rehabilitation, otolaryngology and anesthesiology services.

E. Patient Population

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIV. Specific Program Content

A. Clinical Experience

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the prevention, evaluation and man-

agement of both inpatients and outpatients with the following disorders:

- a) Obstructive lung diseases, including asthma, bronchitis, emphysema, bronchiectasis
- b) Pulmonary malignancy—primary and metastatic
- c) Pulmonary infections, including tuberculous, fungal, and those in the immunocompromised host, e.g., human immunodeficiency virus-related infections
- d) Diffuse interstitial lung disease
- e) Pulmonary vascular disease, including primary and secondary pulmonary hypertension and the vasculitis and pulmonary hemorrhage syndromes
- f) Occupational and environmental lung diseases
- g) Iatrogenic respiratory diseases, including drug-induced disease
- h) Acute lung injury, including radiation, inhalation, and trauma
- i) Management of circulatory failure
- j) Pulmonary manifestations of systemic diseases, including collagen vascular disease and diseases that are primary in other organs
- k) Respiratory failure, including the acute respiratory distress syndrome, acute and chronic respiratory failure in obstructive lung diseases, and neuromuscular respiratory drive disorders
 - l) Disorders of the pleura and the mediastinum
 - m) Sleep disorders, including the recognition and differential diagnosis of common sleep symptoms, the effects of sleep on pulmonary diseases and treatments, the utility and interpretation of cardiopulmonary monitoring, critical review of polysomnographic reports, and management of sleep-disordered breathing.
 - n) Pulmonary embolism and pulmonary embolic disease
2. Fellows must have formal instruction and clinical experience in the prevention, evaluation, and management of both inpatients and outpatients:
 - a) With genetic and developmental disorders of the respiratory system, including cystic fibrosis
 - b) In pulmonary rehabilitation

B. Technical and Other Skills

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the following:
 - a) Airway Management
 - b) Use of a variety of positive pressure ventilatory modes, to include initiation;
 - (1) ventilatory support,
 - (2) weaning, and respiratory care techniques;
 - (3) maintenance and withdrawal of mechanical ventilatory support
 - c) Use of reservoir masks and continuous positive airway pressure masks for delivery of supplemental oxygen, humidifiers, nebulizers, and incentive spirometry
 - d) A minimum of 50 flexible fiber-optic bronchoscopy procedures
 - e) Management of pneumothorax (needle insertion and drainage system)
 - f) Chest tubes and drainage systems
 - g) Insertion of arterial, central venous, and pulmonary artery balloon flotation catheters
 - h) Pulmonary function tests to assess respiratory mechanics and gas exchange, including spirometry, flow volume studies, lung volumes, diffusing capacity, arterial blood gas analysis, and exercise studies
 - i) Diagnostic and therapeutic procedures, including thoracentesis, endotracheal intubation, and related procedures

- j) Operation of hemodynamic bedside monitoring systems
 - k) Examination and interpretation of sputum, bronchopulmonary secretions, pleural fluid
2. Fellows must have formal instruction and clinical experience in performing the following:
- a) Emergency cardioversion
 - b) Inhalation challenge studies
 - c) Thoracostomy tube insertion and drainage
 - d) Examination and interpretation of lung tissue for infectious agents, cytology, and histopathology

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. Imaging techniques commonly employed in the evaluation of patients with critical illness and/or pulmonary disorders.
2. Monitoring and supervising special services, including:
 - a) Respiratory care units
 - b) Pulmonary function laboratories, including quality control, quality assurance, and proficiency standards.
 - c) Respiratory care techniques and services
3. The basic sciences, with particular emphasis on
 - a) Genetics and molecular biology as they relate to pulmonary diseases
 - b) Developmental biology
 - c) Pulmonary physiology and pathophysiology in systemic diseases
 - d) Biochemistry and physiology, including cell and molecular biology and immunology, as they relate to pulmonary disease
4. Indications, complications and outcomes of lung transplantation
5. Skills required to organize, administer and direct a respiratory therapy section and to work effectively as a member of a multidisciplinary team.
6. Recognition and management of the critically ill from disasters, including those cause by chemical and biological agents.

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Pulmonary Disease and Critical Care Medicine (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A combined subspecialty educational program in pulmonary disease and critical care medicine must be organized to provide training and supervised experience at a sufficient level for the fellow to acquire the competency of a specialist in both disciplines.
- B. The combined training program must be 3 years in duration and all of the educational experiences and program content explicitly required for a training program in each area must be present in the combined program.
- C. It is suggested that a program be structured to provide 24 months of clinical training. However, the program must provide 18 months of clinical training which includes
 1. at least 9 months of meaningful patient care responsibility for inpatients and outpatients with a wide variety of pulmonary

- disease. There should be an educational emphasis on pulmonary physiology and its correlation with clinical disorders.
2. at least 9 months of clinical training in critical care medicine of which
 - a) at least 6 months of which must be devoted to the care of critically ill medical patients (i.e., MICU/CICU or equivalent), and
 - b) at least 3 months to the care of critically ill non-medical patients (i.e., SICU, Burn Unit, Transplant Unit, Neurointensive Care, or equivalent.) This experience should consist of at least one month of direct patient care activity, with the remainder being fulfilled with either consultative activities or with direct care of such patients.
 3. Fellows must have a continuity care clinic experience throughout the length of the training program.
 - a) In programs with fewer than 24 months of required clinical experience, an additional ambulatory experience of one half-day per week must be provided for fellows for six months, such as longitudinal experiences in cystic fibrosis, interstitial lung disease, etc. This ambulatory experience must not occur during the 18 months of clinical training.
 - b) Fellows may be excused from their continuity care clinic experience while on critical care rotations.
 4. Regardless of the required clinical experience in the training program, the total required intensive care unit experiences must not exceed 15 months in the 3 years of training.

XII. Faculty

- A. The program director and the critical care teaching staff must have primary responsibility for the admission, treatment, and discharge of all patients on the critical care teaching service.
- B. The critical care clinical teaching faculty at the primary training site must include each of the following:
 1. A training program must be under the direction of an internist who is Board certified in pulmonary disease and/or critical care medicine or who has obtained equivalent training and experience. If the program director does not have appropriate credentials in both specialties, an appropriately credentialed full-time key clinical faculty member must be identified as responsible for the education program in the second specific area.
 2. There must be a minimum of six key clinical faculty, including the program director. At least three of these key clinical faculty members must be certified in pulmonary disease (or possess equivalent qualifications), and at least three must be certified in critical care medicine.
 3. In programs with a total of more than nine fellows enrolled, a ratio of key clinical faculty to fellows of at least 1:1.5 must be maintained. Fifty percent of the key clinical faculty must be certified in each discipline.
 4. There must be American Board of Internal Medicine (ABIM) subspecialty certified clinical faculty members in nephrology, gastroenterology, cardiology, infectious disease, hematology, oncology and geriatric medicine who participate in the educational program.
- C. Faculty from several related disciplines such as general surgery, thoracic surgery, urology, orthopedic surgery, obstetrics-gynecology, neurology, neurosurgery, emergency medicine, anesthesiology, cardiovascular surgery, and vascular surgery must be available to participate in the training program.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of In-

ternal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

A supporting laboratory available to provide complete and prompt laboratory evaluation.

B. Imaging

1. Timely bedside imaging services available to patients in the critical care units.
2. Ventilation Perfusion Scan
3. Helical CT Scan

C. Surgery and Pathology

1. An active open heart surgery program.
2. An accredited residency program in general surgery.
3. Pathology services, including exfoliative cytology
4. Thoracic Surgery service

D. Other Facilities, Resources or Support Services

1. To provide opportunities for peer interaction in the care of critically ill patients, the primary training site should sponsor at least three accredited subspecialty programs from the following disciplines: cardiovascular disease, gastroenterology, infectious diseases, nephrology, or pulmonary disease.
2. An active emergency service must be available
3. The critical care unit(s) must be located in a designated area within the hospital and must be constructed and designed specifically for the care of critically ill patients.
4. Whether operating in separate locations or in combined facilities, the program must provide the equivalent of a medical intensive care unit (MICU), a surgical intensive care unit (SICU), and a coronary intensive care unit (CICU).
5. The MICU must be at the primary training site and should be the focus of a teaching service in which the program director in critical care medicine is responsible for the educational program.
6. Facilities must be adequate to care for patients with acute myocardial infarction, severe trauma, shock, recent open heart surgery, recent major thoracic or abdominal surgery, and severe neurologic and neurosurgical conditions.
7. Pulmonary function testing laboratory
8. Bronchoscopy suite, including appropriate space and staffing for pulmonary procedures
9. Postoperative care, and respiratory care services
10. Diagnostic Laboratory for Sleep Disorders (N.B.: These may be located at institutions other than the primary training site.)
11. Nutritional support services must be available.
12. A sufficient number of knowledgeable personnel and the necessary equipment to care for critically ill patients must be available. Personnel must include specially trained nurses and technicians who are skilled in critical care instrumentation, respiratory function, and laboratory medicine.
13. There should be a close liaison with other services, including pediatrics, radiology, pathology, microbiology, laboratory medicine, occupational medicine, immunology, physical medicine, rehabilitation, otolaryngology and anesthesiology services.

E. Patient Population

1. With respect to pulmonary disease, the fellows must be given opportunities to assume continuing responsibility for both acutely and chronically ill patients in order to learn the natural history of pulmonary disease as well as the effectiveness of therapeutic programs.

2. With respect to critical care medicine, in units to which a fellow is assigned, an average census of at least five patients per fellow is required.
3. Because critical care medicine is multidisciplinary in nature, the program must provide opportunities to manage adult patients with a wide variety of serious illnesses and injuries requiring treatment in a critical care setting.
4. The program must provide additional clinical experience with other critically ill patients, which may include surgical, shock/trauma, and neurologic/neurosurgical intensive care units; pediatric intensive care unit; burn unit; dialysis unit; anesthesia service; cardiac catheterization laboratory; high-risk pregnancy intensive care unit; and transplant unit.

XIV. Specific Program Content

A. Clinical Experience

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the prevention, evaluation and management of both inpatients and outpatients with the following:
 - a) Obstructive lung diseases, including asthma, bronchitis, emphysema, bronchiectasis
 - b) Pulmonary malignancy — primary and metastatic
 - c) Pulmonary infections, including tuberculous, fungal, and those in the immunocompromised host, e.g., human immunodeficiency virus-related infections
 - d) Diffuse interstitial lung disease
 - e) Pulmonary embolism and pulmonary embolic disease
 - f) Pulmonary vascular disease, including primary and secondary pulmonary hypertension and the vasculitis and pulmonary hemorrhage syndromes
 - g) Occupational and environmental lung diseases
 - h) Iatrogenic respiratory diseases, including drug-induced disease
 - i) Acute lung injury, including radiation, inhalation, and trauma
 - j) Management of circulatory failure
 - k) Pulmonary manifestations of systemic diseases, including collagen vascular disease and diseases that are primary in other organs
 - l) Respiratory failure, including the acute respiratory distress syndrome, acute and chronic respiratory failure in obstructive lung diseases, and neuromuscular respiratory drive disorders
 - m) Disorders of the pleura and the mediastinum
 - n) Sleep disorders, including the recognition and differential diagnosis of common sleep symptoms, the effects of sleep on pulmonary diseases and treatments, the utility and interpretation of cardiopulmonary monitoring, critical review of polysomnographic reports, and management of sleep-disordered breathing.
 - o) Perioperative management of critically ill patients
2. Fellows must have formal instruction, clinical experience, and demonstrate competence in the evaluation and management of patients with
 - a) Circulatory disorders
 - b) Shock syndromes
 - c) Cardiovascular diseases
 - d) Sepsis and sepsis syndrome
 - e) Hypertensive emergencies
 - f) Acute and chronic respiratory failure
 - g) Acute metabolic disturbances, including overdosages and intoxication syndromes
 - h) Multi-organ system failure
 - i) Electrolyte and acid-base disorders
 - j) Metabolic, nutritional, and endocrine effects of critical illness

- k) Hematologic and coagulation disorders associated with critical illness
- 3. Fellows must have formal instruction, clinical experience, and demonstrate competence in:
 - a) Management of the immunosuppressed patient
 - b) Management of anaphylaxis and acute allergic reactions
 - c) Hemodynamic and ventilatory support of patients with organ system damage in the post operative period
 - d) Use of paralytic agents and sedative and analgesic drugs
 - e) Detection and prevention of iatrogenic and nosocomial problems in critical care medicine
 - f) Psychosocial and emotional effects of critical illness on patients and their families
 - g) Management of end of life issues and palliative care
- 4. Fellows must have formal instruction and clinical experience in the evaluation and management of patients:
 - a) With genetic and developmental disorders of the respiratory system, including cystic fibrosis
 - b) In pulmonary rehabilitation
 - c) With trauma
 - d) With neurosurgical emergencies
 - e) With disorders of the cardiovascular, respiratory, renal, gastrointestinal, genitourinary, neurologic, endocrine, hematologic, musculoskeletal, and immune systems as well as of infectious diseases
 - f) With critical obstetric and gynecologic disorders
 - g) After discharge from the critical care unit.

B. Technical and Other Skills

1. The program must be structured to permit all fellows to develop the requisite procedural and technical skills, including the ability to interpret data derived from various bedside devices commonly employed to monitor patients. Fellows must have formal instruction, clinical experience, and demonstrate competence in the following:
 - a) Airway Management
 - b) Use of a variety of positive pressure ventilatory modes, to include:
 - (1) initiation, maintenance, and weaning of ventilatory support
 - (2) respiratory care techniques;
 - (3) withdrawal of mechanical ventilatory support
 - c) Use of reservoir masks and continuous positive airway pressure masks for delivery of supplemental oxygen, humidifiers, nebulizers, and incentive spirometry
 - d) A minimum of 50 flexible fiber-optic bronchoscopy procedures
 - e) Management of pneumothorax (needle insertion and drainage system)
 - f) Pulmonary function tests to assess respiratory mechanics and gas exchange, including spirometry, flow volume studies, lung volumes, diffusing capacity, arterial blood gas analysis, and exercise studies
 - g) Diagnostic and therapeutic procedures, including thoracentesis, endotracheal intubation, and related procedures
 - h) Examination and interpretation of sputum, bronchopulmonary secretions, pleural fluid
 - i) Chest tubes and drainage systems
 - j) Insertion of arterial, central venous, and pulmonary artery balloon flotation catheters
 - k) Emergency cardioversion
 - l) Interpretation of intracranial pressure monitoring
 - m) Operation of bedside hemodynamic monitoring systems
 - n) Nutritional support
 - o) Quality improvement activities in the intensive care unit

2. Fellows must have formal instruction and clinical experience in performing the following:
 - a) Emergency cardioversion
 - b) Inhalation challenge studies
 - c) Thoracostomy tube insertion and drainage
 - d) Examination and interpretation of lung tissue for infectious agents, cytology, and histopathology

C. Formal Instruction

The training program must provide formal instruction for the fellows to acquire knowledge of the following content areas:

1. Imaging techniques commonly employed in the evaluation of patients with critical illness and/or pulmonary disorders.
2. Monitoring and supervising special services, including:
 - a) Respiratory care units
 - b) Pulmonary function laboratories, including quality control, quality assurance, and proficiency standards.
 - c) Respiratory care techniques and services
3. The basic sciences, with particular emphasis on
 - a) Genetics and molecular biology as they relate to pulmonary diseases
 - b) Developmental biology
 - c) Pulmonary physiology and pathophysiology in systemic diseases
 - d) Biochemistry and physiology, including cell and molecular biology and immunology, as they relate to pulmonary disease
4. Indications, complications, and outcomes of lung transplantation
5. Pericardiocentesis
6. Transvenous pacemaker insertion
7. Percutaneous needle biopsies
8. Renal replacement therapy
9. Pharmacokinetics, pharmacodynamics, and drug metabolism and excretion in critical illness
10. Principles and techniques of administration and management of an MICU
11. Ethical, economic, and legal aspects of critical illness
12. Skills required to organize, administer, and direct a critical care unit and to work effectively as a member of a multidisciplinary team.
13. Skills required to organize, administer and direct a respiratory therapy section and to work effectively as a member of a multidisciplinary team.
14. Recognition and management of the critically ill from disasters, including those caused by chemical and biological agents.
15. Quality improvement and patient safety activities in the intensive care unit

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Fellowship Education in Rheumatology (Internal Medicine)

For sections I. through X., see Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XI. Educational Program

- A. A subspecialty educational program in rheumatology must be organized to provide training and supervised experience at a level sufficient for the fellow to acquire competence in the field.
- B. The training program must be 2 years in duration.

C. At least 12 months of the program must be devoted to clinical experiences.

D. Ambulatory Medicine Experience

The program must include a minimum of 2 half days of ambulatory care per week averaged over the 2 years of training, which includes the continuity ambulatory experience. Yet, the RRC suggests that 3 half days of ambulatory care per week occur.

XII. Faculty

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIII. Facilities and Resources

In addition to the facilities and resources outlined in the Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine, each of the following must be present at the primary training site:

A. Diagnostic Laboratory Services

No additional services required.

B. Imaging

Computerized tomography, bone densitometry, and magnetic resonance imaging.

C. Surgery and Pathology

No additional services required.

D. Other Facilities, Resources, or Support Services

1. A compensated polarized light microscope for use by fellows.
2. Rehabilitation medicine facilities.
3. Resources for specialized tests used by rheumatologists must be available on the premises or by contract arrangement.
4. There must be a meaningful working relationship, including availability for teaching and consultation, with faculty in radiology and orthopedic surgery and also with allied health professionals in physical therapy and occupational therapy.

E. Patient Population

See Program Requirements for Fellowship Education in the Subspecialties of Internal Medicine.

XIV. Specific Program Content

A. Clinical Experience

Clinical experience as a multidisciplinary team member must include supervised opportunities to manage both inpatients and outpatients with a wide variety of rheumatic and musculoskeletal diseases and other illnesses with rheumatologic musculoskeletal manifestations.

1. Fellows must have formal instruction, clinical experience, and demonstrate competence in the prevention, evaluation and management of the following disorders:
 - a) rheumatoid arthritis
 - b) systemic lupus erythematosus
 - c) scleroderma/systemic sclerosis
 - d) polymyositis
 - e) spondyloarthropathies
 - f) vasculitis
 - g) crystal-induced synovitis
 - h) osteoarthritis
 - i) regional musculoskeletal pain syndromes, and acute and chronic musculoskeletal pain syndromes
 - j) nonarticular rheumatic diseases, including fibromyalgia
 - k) nonsurgical, exercise-related (sports) injury
 - l) systemic diseases with rheumatic manifestations

m) metabolic diseases of bone

n) osteoporosis

o) infection of joints and soft tissues

p) Sjogren's Syndrome

2. It is suggested that programs with the qualified faculty and facilities provide training in pediatric rheumatic disease.

B. Technical and Other Skills

1. Fellows must have formal instruction, clinical experience and demonstrate competence in the:
 - a) examination of patients, to include a specific examination of structure and function of all joints, both axial and peripheral, as well as periarticular structure and muscle units.
 - b) diagnostic aspiration and analysis by light and compensated polarized light microscopy of synovial fluid.
 - c) therapeutic injection of diarthrodial joints, bursae, tenosynovial structures, and entheses.
 - d) use of nonsteroidal anti-inflammatory drugs, disease-modifying drugs, biologic response modifiers, glucocorticoids, cytotoxic drugs, antihyperuricemic drugs, and antibiotic therapy for septic joints.
2. Fellows must have formal instruction and clinical experience in the performance or interpretation of
 - a) biopsies of tissues relevant to the diagnosis of rheumatic diseases
 - b) bone and joint imaging techniques
 - c) bone density measurements
 - d) controlled clinical trials in rheumatic diseases
 - e) indications for arthroscopy.
 - f) electromyograms, nerve conduction studies, and muscle/nerve biopsy

C. Formal Instruction

In the study of rheumatic diseases, musculoskeletal disorders, metabolic diseases of bone, osteoporosis, and acute and chronic musculoskeletal pain, the following specific content areas as a minimum, must be included in the formal educational program (lectures, conferences, seminars, and journal clubs):

1. Anatomy, pathology, genetics, immunology, biochemistry, and physiology of connective tissue, bone, and muscle, including purine metabolism
2. The scientific basis of the methodology, indications, and interpretations of laboratory tests and imaging procedures used in diagnosis and management
3. Indications for and interpretation of electromyograms, nerve conduction studies, and muscle/nerve biopsy
4. Pharmacology and pharmacokinetics, including drug metabolism, adverse effects, interactions, and relative costs of therapy
5. Principles of physical medicine and rehabilitation in patients with rheumatologic disorders
6. Evaluation, management, and rehabilitation of exercise-related (sports) illnesses
7. Indications for surgical and orthopedic consultation
8. Geriatric and aging influences

Approved ACGME: September 28, 2004 Effective: July 1, 2005

Program Requirements for Graduate Medical Education in Sleep Medicine (Internal Medicine)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Sleep medicine is a discipline of medical practice in which sleep disorders are assessed, monitored, treated, and prevented by using a combination of techniques (clinical evaluation, physiologic testing, imaging, and intervention) and medication. Specialists in sleep medicine are expected to:

1. participate in an interdisciplinary care of patients of all ages that incorporates aspects of psychiatry, neurology, internal medicine, epidemiology, surgery, pediatrics and basic science;
2. acquire detailed knowledge of the sleep and respiratory control centers, physiology, and neurobiology underlying sleep and wakefulness;
3. diagnose and manage sleep disorder patients in outpatient and inpatient settings.

B. Duration and Scope of Education

1. All prerequisite fellowship education must be taken within programs accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The ACGME recognizes the following educational formats for entry into sleep medicine fellowships:
 - a) Fellows must complete 12 months of sleep fellowship education after the successful completion of one of the following prerequisite educational programs:
 - (1) 3 years of internal medicine; or
 - (2) 3 years of pediatrics
 - (3) 4 years of psychiatry;
 - (4) 4 years of neurology; or
 - (5) 5 years of otolaryngology.
3. Training must be separate and distinct from all training required for certification in internal medicine, pediatrics, pulmonology, psychiatry, neurology, and otolaryngology, and include as well as didactic and clinical experience in the care of patients with sleep disorders in both inpatient and outpatient settings.
4. Training should provide clinical exposure to the following disciplines as related to sleep disorders:
 - Cardiology
 - Neurology
 - Otolaryngology
 - Oral Maxillofacial Surgery
 - Pediatrics
 - Pulmonary Medicine
 - Psychiatry
 - Psychology, including Neuropsychology
5. Relation of the Subspecialty to Core Programs
Fellowship programs in the subspecialty of sleep medicine may only be accredited in institutions where the sponsoring specialty has an ACGME-accredited residency program. The sponsoring program may be in internal medicine, psychiatry, pediatrics, neurology, or otolaryngology.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions. There is a limit of one accredited sleep medicine program per sponsoring institution.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

C. Institutional Facilities and Resources

1. Patient Population
 - a) There must be an adequate number and variety of patients of all ages in both inpatient and outpatient settings to expose fellows to the board spectrum of sleep disorders. This should include experience across the major categories of sleep disorders, including: apnea and other sleep-related breathing disorders; parasomnias; circadian rhythm disorders; insomnia; narcolepsy and related excessive daytime sleepiness disorders; and sleep problems related to other factors and diseases such as medications, and psychiatric and medical disorders.
 - b) Inpatient experience should include evaluation of a sufficient number of sleep disorder patients. Experience should include longitudinal management of patients for whom the fellow is the primary physician but acting under the supervision of a faculty member.
2. Facilities
 - a) The facility should be appropriately equipped, and have a minimum of two fully-equipped polysomnography bedrooms and support space.
 - b) There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with audiovisual and other educational aids, office space for staff and fellows, pertinent library materials, and diagnostic, therapeutic, and research facilities.
3. Institutional Resources
 - a) The sponsoring institution must provide sufficient institutional resources—including GME staff, space, equipment, supplies, and time—to allow for effective oversight of its programs accredited by the ACGME.
 - b) In addition, there must be sufficient institutional resources to ensure that the programs accredited by the ACGME are implemented and developed effectively and in compliance with both the program and institutional requirements.
 - c) The American Academy of Sleep Medicine or an equivalent body should accredit for the use of both adults and children

the sleep laboratories and other related facilities and equipment.

4. Library

- a) Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
- b) Library services should include the electronic retrieval of information from medical databases.
- c) There must be access to an on-site library or to a collection of appropriate texts and journals in each institution that participates in a fellowship program. On-site libraries and/or collections of texts and journals, or access to the electronic retrieval of these materials, must be readily available during nights and weekends.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program; he or she must be fully committed to the fellowship program, and devote sufficient time to provide leadership and supervision to the program and its fellows. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified by the specialty board in sleep medicine or be certified in sleep medicine by an ABMS Member Board, or possess qualifications judged to be acceptable by the sponsoring RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.
 On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
 - a) The program that provides training in sleep medicine must have at least two core faculty, including the director, who are specialists in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, or Otolaryngology and who are certified in sleep medicine by the specialty board in sleep medicine or by the applicable ABMS board, or who possess qualifications judged acceptable by the sponsoring RRC.
 - b) For programs with more than four fellows, a ratio of one core faculty to every two fellows must be maintained.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
 - a) Appropriate expertise in the areas defined in Section I.B. above must be present between the director and faculty. The RRC recognizes that expertise in sleep medicine is available from physicians who are board certified in many medical specialties, particularly in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, and Otolaryngology; the RRC actively encourages multidisciplinary cooperation in the training of fellows.
 - b) There must be designated faculty available to participate in consultation and teaching from the following disciplines as they relate to sleep medicine and the management of sleep disorders:
 - Cardiology
 - Neurology
 - Otolaryngology
 - Oral Maxillofacial Surgery
 - Pediatrics
 - Pulmonary Medicine
 - Psychiatry
 - Psychology including neuropsychology
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified by the applicable ABMS Board, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;

c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another fellowship program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of fellowship education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

E. Fellow/Patient Ratio

The number of patients must be sufficient to provide a sound educational program. The program director must ensure an adequate number and variety of patients, with particular attention to balance in the age and gender of patients, as well as in patients with short- and long-term sleep disorders, inpatients, and outpatients.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The fellowship program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their fellows to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Program

1. Fellows must have formal instruction in, and demonstrate comprehensive knowledge of:
 - a) Major theories in sleep medicine, together with a thorough grounding in the generally accepted facts and basic sleep mechanisms.
 - b) Biological, psychological, social, economic, ethnic, and familial factors, which significantly influence the evaluation and treatment of sleep disorders.
 - c) Etiologies, prevalence, diagnosis, and treatment of all of the sleep disorders in the current nosology of sleep medicine.

- d) The use, reliability, and validity of the generally accepted techniques for diagnostic assessment.
- e) Medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g., the relationship between hypertension and snoring)
- f) The nature of the interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies
- g) Administration and interpretation of psychological tests
- h) Financing and regulation of sleep medicine.
- i) Medical ethics and its application in sleep medicine.
- j) Legal aspects of sleep medicine.
- k) Research methods in the clinical and basic sciences related to sleep medicine.
- l) Technical skills including:
 - (1) skills necessary to perform polysomnographies from preparation and hookup of the patient to the completion of the study, including multiple sleep latency and maintenance of wakefulness tests.
 - (2) Scoring and interpretation of polysomnograms and recognition of artifacts, including full montages with additional EEG leads for seizure detection
 - (3) Consultative skills in sleep medicine in a variety of medical, surgical, and psychiatric settings
- 2. The Curriculum

The curriculum must include instruction in the following:

 - a) Fundamental mechanisms of sleep
 - b) Etiopathogenic characterization of sleep disorders
 - c) Clinical manifestations of sleep disorders
 - d) Diagnostic strategies in sleep disorders
 - e) Treatment strategies in sleep disorders
 - f) Epidemiological issues
 - g) Airway anatomy
- 3. Seminars and Conferences
 - a) The training program must conduct a monthly, multidisciplinary teaching conference and a monthly journal club organized by the faculty on topics that cover the scope of sleep medicine.
 - b) The training program must conduct seminars and core conferences, that include didactic instruction in the following; this instruction must be relevant for pediatric and adult patients:
 - (1) Basic neurological sleep mechanisms
 - (2) Chronobiological mechanisms
 - (3) Respiratory physiology during sleep and pathophysiology
 - (4) Cardiovascular physiology during sleep and pathophysiology
 - (5) Endocrine physiology during sleep and pathophysiology
 - (6) Gastrointestinal physiology during sleep and pathophysiology
 - (7) Ontogeny of sleep
 - (8) Sleep across the life span
 - (9) Operation of polysomnographic monitoring equipment
 - (10) Polysomnographic troubleshooting
 - (11) Ambulatory monitoring methodology
 - (12) Polysomnogram interpretation
 - (13) SIDs and related respiratory distress
 - (14) Nosology for sleep disorders: The International Classification of Sleep Disorders
 - (15) Evaluation of patients presenting with excessive sleepiness
 - (16) Evaluation of patients presenting with difficulty initiating or maintaining sleep
 - (17) Evaluation of patients presenting with parasomnias
 - (18) Biological rhythm disorders
 - (19) Pediatric and neonatal sleep medicine
- (20) Treatment approaches for obstructive sleep apnea, to include nasal CPAP, bilevel PAP, upper airway surgery, oral appliances, and position training
- (21) Treatment approaches for insomnia, to include cognitive-behavioral therapies and pharmacological therapy
- (22) Treatment approaches for narcolepsy and idiopathic CNS hypersomnolence
- (23) Treatment approaches for parasomnias
- (24) Treatment of circadian rhythm disorders
- (25) Pharmacology of sleep (i.e. medication effects on sleep)

F. Clinical Components

1. Clinical Skills

- Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the management of sleep disorders in all age groups including following:
- a) interviewing
 - b) clear and accurate history taking
 - c) performing competent physical, neurological, and mental status examinations
 - d) recording of findings completely and systematically
 - e) relating history and clinical findings to the relevant medical, neurologic, psychiatric, and social issues associated with etiology and treatment
 - f) formulating a differential diagnosis for all conditions in the current standard nosology, taking into consideration all relevant data.
 - g) diagnosing medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions
 - h) formulating appropriate treatment plans and making appropriate referrals
 - i) providing continuous care for a variety of patients from different age groups, seen regularly and frequently over an extended time, in a variety of treatment modalities; being able to relate to patients and their families, as well as other members of the health care team, with compassion, respect, and professional integrity
 - j) Certification in cardiopulmonary resuscitation

2. Clinical Training

- Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the following:
- (1) The observation, evaluation, and management of patients of all ages with a wide variety of sleep disorders
 - (2) The integration of information obtained from patient history, physical examination, physiologic recordings, imaging studies, psychometric testing, pulmonary function testing, and biochemical and molecular tests results to arrive at an accurate and timely diagnosis and treatment plan.
 - (3) The indications for and potential pitfalls and limitations of diagnostic tests and the interpretation of the results in the context of the clinical situation. These diagnostic tests must include the following: polysomnography, multiple sleep latency testing, maintenance of wakefulness testing, actigraphy, and portable monitoring related to sleep disorders, imaging studies, magnetic resonance imaging, scoring and interpretation of polysomnograms and recognition of artifacts, including montages with additional EEG leads for seizure detection, and psychological and psychometric tests as they relate to sleep disorders.
 - (4) The development and execution of plans for evaluation and treatment, including the appropriate technical skills necessary to perform polysomnography from preparation and

hookup of the patient to the completion of the study, including multiple sleep latency tests, maintenance of wakefulness tests, and other diagnostic studies

- (5) The critical appraisal of the professional and scientific literature and application of new contributions to management and care of patients.
- b) Fellows must have formal instruction and clinical experience in systems-based skills that include working in outpatient and inpatient settings and effectively utilizing health care resources, including pathology and radiology services.
 - (1) Clinical experiences that provide for basic and advanced training and education, as well as professional development
 - (2) Opportunities to formulate a clinical diagnosis and to order and use laboratory data to clinically evaluate a patient's condition and to support outpatient and inpatient diagnostic evaluations
 - (3) Progressive experience for training that includes caring for a sufficient number of sleep disorder patients to achieve competence in the assessment of patients with a wide range of sleep medicine disorders
 - (4) Experience with medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g. the relationship between hypertension and snoring); ability to diagnose medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions; to formulate appropriate treatment plans; and to make appropriate referrals.
 - (5) Experience with interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies; competence in sleep medicine consultation in a variety of medical, surgical and psychiatric settings.
 - (6) Experience in sleep disorders center administration, especially leadership of interdisciplinary teams.
 - (7) Supervised experience in teaching sleep medicine to students in the health professions.
 - (8) Trainees should make regular patient management rounds and record reviews with the attending faculty.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.

3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the fellowship program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because fellowship education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.

3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the fellowship program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance. Fellows' evaluation by faculty must be made at least once every two months so that areas of weakness and strength may be communicated to the fellows.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evalua-

tion must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the fellowship program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the fellowship program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification in Sleep Medicine by the American Board of Medical Specialties should communicate with the office of the board regarding the full requirements for certification.

Approved by ACGME: June 2004 Effective: June 2004

Program Requirements for Residency Education in Internal Medicine Sports Medicine

I. Introduction

In addition to complying with the requirements below, each program must comply with the Program Requirements for Residency Education in the Subspecialties of Internal Medicine.

II. Scope and Duration of Training

An educational program in sports medicine must be organized to provide a well-supervised experience at a level sufficient for the resident to acquire the competence of a physician with added qualifications in this field. It shall be 1 year in duration.

The practice of sports medicine is the application of the physician's knowledge, skills, and attitudes to those engaged in sports and exercise. Thus, the program must provide training in the development of the clinical competencies needed to diagnose and manage medical illnesses and injuries related to sports and exercise, for example, first-degree sprains, strains, and contusions, including appropriate referrals of, for example, fractures, dislocations, and third-degree sprains. Clinical experience must include injury prevention, preparticipation evaluation, management of acute and chronic illness or injury, and rehabilitation as applied to a broad spectrum of undifferentiated patients. There must be experience functioning as a team physician and in the promotion of physical fitness and wellness.

The program should emphasize physiology and biomechanics; principles of nutrition; pathology and pathophysiology of illness and injury; pharmacology; effects of therapeutic, performance-enhancing, and mood-altering drugs; psychological aspects of exercise, performance, and competition; ethical principles; and medical-legal aspects of exercise and sports.

III. Teaching Staff

In addition to the program director, each program must have at least one other faculty member with similar qualifications who devotes a substantial portion of professional time to the training program.

The teaching staff must include orthopedic surgeons who are engaged in the operative management of sports injuries and other conditions and who are readily available to teach and provide consultation to the residents. Teaching staff from the disciplines of nutrition, pharmacology, pathology, exercise physiology, physical therapy, behavioral science, physical medicine and rehabilitation, and clinical imaging also should be available to assist in the educational program. Coaches and athletic trainers also should be included.

IV. Facilities and Resources

The program must include the following:

A. Patient Population

A patient population that is unlimited by age or gender and is adequate in number and variety to meet the needs of the training program must be available. The program director must ensure that residents are accorded meaningful patient responsibility with the supervision of a faculty member at all facilities and sites.

B. Sports Medicine Clinic

There must be an identifiable clinic that offers continuing care to patients who seek consultation regarding sports- or exercise-related health problems. The nonsurgical residents must be supervised by a physician who has qualifications in sports medicine and is certified by the American Board of Emergency Medicine, the American Board of Family Practice, the American Board of Internal Medicine, or the American Board of Pediatrics or who possesses suitable equivalent qualifications.

Adequate, up-to-date diagnostic imaging and rehabilitation services must be readily available and accessible to clinic patients. Consultation in medical and surgical subspecialties, physical therapy, nursing, nutrition, and pharmacy must be available. The opportunity to render continuing care and to organize recommendations from other specialties and disciplines is mandatory and will require that medical records include information pertinent to the assessment and management of patients with health problems related to sports and exercise.

C. Sporting Events/Team Sports/Mass-Participation Events

The program must have access to sporting events, team sports, and mass-participation events during which the resident can have meaningful patient responsibility.

D. Acute-Care Facility

There must be an acute-care hospital with a full range of services associated with and in proximity to the sponsoring residency. This facility must be readily accessible to patients served by the program.

V. Educational Program

The curriculum must provide the educational experiences necessary for the residents to achieve the cognitive knowledge, psychomotor skills, interpersonal skills, professional attitudes, and practical experience required of physicians in the care of patients with health problems related to sports and exercise.

Didactic as well as clinical learning opportunities must be provided as part of the required curriculum for all residents. Conferences or seminars/workshops in sports medicine should be specifically designed for the residents to augment the clinical experiences.

All educational activities must be adequately supervised while allowing the resident to assume progressive responsibility for patient care. The clinical activities in sports medicine should represent a minimum of 50% of the time in the program. The remainder of the time should be spent in didactic, teaching, and/or research activities and in the primary care or emergency medicine ambulatory facility.

Residents must spend ½ day per week maintaining their skills in their primary specialty.

Participation in the following must be required of all residents:

A. Preparticipation Evaluation of the Athlete

The program must ensure that all sports medicine residents are involved in the development and conduct of preparticipation examination programs.

B. Acute Care

The resident must have appropriate authority and responsibility to participate meaningfully in the medical care that is provided to acute-care patients (see Scope and Duration of Training, above). In addition, the program should arrange for residents to observe representative inpatient and outpatient operative orthopedic procedures.

C. Sports Medicine Clinic Experience

The resident must attend patients in a continuing, comprehensive manner, providing consultation for health problems related to sports and exercise. The resident shall spend at least 1 day per week for 10 months of the training period in this activity.

If patients are hospitalized, the resident should follow them during their inpatient stay and resume outpatient care following the hospitalization. Consultation with other physicians and professionals in other disciplines should be encouraged.

D. On-Site Sports Care

The resident should participate in planning and implementation of all aspects of medical care at various sporting events. The program must ensure that supervised sports medicine residents provide on-site care and management to participants in these events.

In addition, the resident must participate in the provision of comprehensive and continuing care to a sports team. Preferably, the experience should include several teams that engage in seasonal sports.

E. Mass-Participation Sports Events

The resident should participate in the planning and implementation of the provision of medical coverage for at least one mass-participation event. The program must ensure that its residents have experience that includes providing medical consultation, direct patient care, event planning, protection of participants, coordination with local EMS systems, and other medical aspects of those events.

VI. Specific Knowledge and Skills**A. Clinical**

The program must provide educational experiences for the residents to develop clinical competence in the overall field of sports medicine.

The curriculum must include but not be limited to the following content and skill areas:

1. Anatomy, physiology, and biomechanics of exercise
2. Basic nutritional principles and their application to exercise
3. Psychological aspects of exercise, performance, and competition
4. Guidelines for evaluation prior to participation in exercise and sport
5. Physical conditioning requirements for various activities
6. Special considerations related to age, gender, and disability
7. Pathology and pathophysiology of illness and injury as it relates to exercise
8. Effects of disease, e.g., diabetes, cardiac conditions, and arthritis, on exercise and the use of exercise in the care of medical problems
9. Prevention, evaluation, management, and rehabilitation of injuries
10. Understanding pharmacology and effects of therapeutic, performance-enhancing, and mood-altering drugs
11. Promotion of physical fitness and healthy lifestyles
12. Functioning as a team physician
13. Ethical principles as applied to exercise and sports
14. Medical-legal aspects of exercise and sports
15. Environmental effects on exercise
16. Growth and development related to exercise

B. Patient Education/Teaching

The program must provide the experiences necessary for the residents to develop and demonstrate competence in patient education regarding sports and exercise. They must have experience teaching others, e.g., nurses, allied health personnel, medical students, residents, coaches, athletes, other professionals, and members of patients' families. There also must be relevant experience working in a community sports medicine network involving parents, coaches, certified athletic trainers, allied medical personnel, residents, and physicians.

ACGME: June 2000 Effective: June 2000

Program Requirements for Graduate Medical Education in Medical Genetics

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction**A. Definition**

1. Clinical medical geneticists are physicians who provide comprehensive diagnostic, management, and genetic counseling services for patients with (or possibly with) genetic disorders. Clinical medical geneticists also plan and coordinate large-scale screening programs for inborn errors of metabolism, hemoglobinopathies, chromosome abnormalities, neural tube defects, and other genetically-influenced conditions.
2. Clinical medical geneticists are able to (a) diagnose and manage genetic disorders; (b) provide patient and family counseling; (c) use their knowledge of heterogeneity, variability, and natural history of genetic disorders in patient-care decision making; (d) elicit and interpret individual and family medical histories; (e) interpret clinical genetic and specialized laboratory testing information; (f) explain the causes and natural history of genetic disorders and genetic risk assessment; and (g) interact with other health-care professionals in the provision of services for patients with genetically influenced disorders.

B. Scope of Education

1. Accredited graduate medical education programs in medical genetics must provide the formal instruction and appropriately-clinical experience necessary for residents to develop the knowledge, skills, and attitudes essential to the practice of clinical medical genetics.
2. Programs must provide (a) opportunities for residents to become involved in research and teaching and (b) education in the basic sciences and clinical areas pertinent to medical genetics, including mendelian genetics, cytogenetics, diagnosis and treatment of inborn errors of metabolism, molecular diagnosis, syndrome identification and dysmorphology, teratology, reproductive genetics, congenital malformations, multifactorial disorders, mental retardation and developmental disabilities, genetic screening, social and ethical issues in medical genetics, genetic counseling, and quantitative human genetics.

C. Program Length

1. A residency in clinical medical genetics may be accredited to provide 2 and/or 4 years of graduate medical education.
 - a) Physicians who have completed a residency accredited by the Accreditation Council for Graduate Medical Education (ACGME) are eligible for appointment to a 2-year medical genetics residency.
 - b) A medical genetics program director may appoint a resident to a 2-year program following 2 or more years of residency education accredited by the ACGME.
 - c) A 4-year program must include 2 years of pregenetics education in other residencies accredited by the ACGME, followed by 2 years of education in clinical medical genetics. A 4-year program must be designed prospectively by the director of the medical genetics residency and by the directors of the programs to which residents will be assigned during the 2 years of pregenetics education.

2. In both 2-year and 4-year programs, the 24 months of genetics education must include at least 18 months of broad-based, clinically-oriented medical genetics activities.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

Institutions sponsoring medical genetics programs should also sponsor programs in pediatrics, internal medicine, and obstetrics/gynecology which are accredited by the ACGME.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership. Institutions must develop and implement policies and procedures to ensure continuity when the program director departs, is on sabbatical, or is unable to meet his or her duties for any other reason.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in Clinical Genetics by the American Board of Medical Genetics (ABMG), or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that par-

ticipate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
- e) The program director must maintain a continuing involvement in scholarly activities, participate in key national scientific human genetics meetings, and contribute to medical education, both locally and nationally.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
 - a) There must be at least 3 members of the teaching staff (including the program director) who are certified by the ABMG (or possess equivalent qualifications) and who are members of the medical staffs at program institutions. At least 2 of these individuals must be certified in clinical medical genetics.
 - b) The person responsible for resident education in biochemical genetics must be certified by the ABMG in biochemical genetics; the person responsible for resident education in molecular genetics must be certified by the ABMG in molecular genetics; and the person responsible for resident education in clinical cytogenetics must be certified by the ABMG in clinical cytogenetics.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Medical Genetics, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and

an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Program institutions should have a clinical cytogenetics laboratory, a clinical biochemical genetics laboratory, and a clinical molecular genetics laboratory, each of which provides an appropriate volume and variety of services related to medical genetics, as well as an adequate number of qualified staff. If a laboratory is not located in a program institution, a written letter of agreement from the laboratory director detailing the laboratory's contributions to the education of medical genetics residents must be prepared and kept on file by the program director.
2. Program institutions must provide a sufficient number and variety (e.g., pregnant and non-pregnant, all ages) of inpatients and outpatients to permit residents to gain experience with the natural history of a wide range of genetic disorders.
3. Adequate space and equipment must be available to meet the educational goals of the program. In addition to space for patient care activities, this requires meeting rooms, classrooms, office space, research facilities, and facilities for record storage and retrieval.
4. Office and laboratory space must be provided for the residents for both patient-care work and participation in scholarly activities.
5. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. The institutional library should contain standard journals and texts in genetics and related fields of medicine, and provide services for the electronic retrieval of information from national medical databases to permit the timely review of literature.
6. Residents must have access to an on-site library or to a collection of appropriate texts and journals at each institution participating in a residency program. On-site libraries and/or collections of

texts and journals must be readily available during nights and weekends.

7. Residents should have access to computer-based genetic diagnostic systems.
8. The audiovisual resources available for educational purposes should be adequate to meet the goals and objectives of the program.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents. The presence of other learners in medical genetics and in other specialties within program institutions is essential to the maintenance of a stimulating educational environment.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process. The residency must be organized to provide a well-structured, integrated, and progressive educational experience in clinical medical genetics. Residents must have the opportunity to develop the abilities to diagnose genetic disorders, counsel patients, and manage the broad range of clinical problems that are encompassed within medical genetics. Because of the complex nature and its involvement with multiple systems, residents must be exposed to multidisciplinary and interdisciplinary models during the program, and must become proficient at organizing teams of health-care professionals to provide the necessary resources for their patients. Because medical genetics involves individuals of all ages and their families, residents must be competent to work with adults and children, and must have an opportunity to gain an understanding of family dynamics as they relate to issues of diagnosis, counseling, and management.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be dis-

tributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management. The responsibility given to residents for patient care should depend on their knowledge, skill, and experience, as well as on the complexity of the patient's counseling or medical problems. This includes responsibility in such areas as patient care, leadership, teaching, organization, and administration. The program must provide residents with experience in direct and progressively-responsible patient management as they advance through the program so that those completing the program will have developed sound clinical judgment.

1. Didactic Components

a) Basic Sciences

Each resident must participate formally, through lectures or other didactic sessions, in the equivalent of a one-year graduate level course in basic, human, and medical genetics, including but not limited to population and quantitative genetics, mendelian and non-mendelian genetics, cytogenetics, biochemical genetics, and molecular genetics. (An introductory medical genetics course for medical students does not satisfy this requirement.)

b) Research seminars should be a part of the training experience, but shall not be considered an acceptable alternative to this basic science didactic component.

c) Clinical Conferences

Clinical teaching conferences must be organized by the faculty for the residents, and attendance by the residents and the faculty must be documented. These conferences must be distinct from the basic science lectures and didactic sessions. Clinical teaching conferences may include formal didactic sessions on clinical laboratory topics, medical genetics rounds, journal clubs, and follow-up conferences for genetic clinics.

2. Clinical Components

a) Patient Population

Residents must have the opportunity to care for patients and their families in sufficient number to permit them to develop an understanding of the wide variety of medical genetic problems, including mendelian disorders, inborn errors of metabolism, diseases of chromosome number and structure, multifactorial disorders, syndromes, congenital malformations, other birth defects, and other genetically-influenced conditions. Typically, this will mean that programs will care for at least 100 different patients or families per year for each resident. These patients and families must be seen in both outpatient and inpatient settings.

b) Correlation of Laboratory and Clinical Experiences

Clinical biochemical genetic, molecular genetic, and cytogenetic laboratories must be integral components of each program. Residents must spend a minimum of 2 continuous weeks in each type of laboratory so that they will be able to develop their abilities to understand and critically interpret laboratory data. Residents must develop an understanding of the appropriate use of laboratories during diagnosis, counseling, and management of patients with genetic disorders. Toward this end, resident education must include participation in the working conferences of laboratories, as well as ongoing discussion of laboratory data during other clinical conferences.

c) Other Health Care Professionals

Residents must have regular opportunities to work with genetic counselors, nurses, nutritionists, and other health care

professionals who are involved in the provision of clinical medical genetics services.

d) Responsibilities for Patient Care

The development of mature clinical judgement requires that residents, properly supervised, be given responsibility for patient care commensurate with their ability. This can be achieved only if the resident is involved in the decision-making process and in the continuity of patient care. Residents must be given the responsibility for direct patient care in all settings, including planning and management, both diagnostic and therapeutic, subject to review and approval by the attending physician.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the 6 areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. Patient care that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health. Residents are expected to:

- a) gather essential and accurate information about the patient using the following clinical skills:
 - (1) medical interviewing, including the taking and interpretation of a complete family history (including construction of a pedigree);
 - (2) physical examination; and
 - (3) diagnostic studies, including the interpretation of laboratory data generated from biochemical genetic, cytogenetic, and molecular genetic analyses.
- b) make informed decisions about diagnostic and therapeutic interventions based on patient and family information and preferences, up-to-date scientific evidence, and clinical judgment by:
 - (1) demonstrating effective and appropriate clinical problem-solving skills;
 - (2) understanding the limits of one's knowledge and expertise; and
 - (3) the appropriate use of consultants and referrals.
- c) develop and carry out patient management plans;
- d) prescribe and perform medical interventions essential for the care of patients with heritable disorders;
- e) counsel and educate patients and their families in order to:
 - (1) take measures needed to enhance or maintain health and function and to prevent disease and injury;
 - (2) encourage the family to participate actively in their care and in order to provide information that will contribute to their care; and
 - (3) empower patients to make informed decisions, interpret risk assessment, and to use predictive testing for themselves and family members.
- f) use information technology to support patient care decisions and patient education;
- g) assist patients in accomplishing their personal health goals; and
- h) work with health care professionals, including those from other disciplines, to provide patient-focused care.

- 2. Medical Knowledge** about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care. Residents must:
- know, critically evaluate, and use current medical information and scientific evidence for patient care, including:
 - results from genetics laboratory tests;
 - quantitative risk assessment; and
 - available bioinformatics.
 - be able to locate, appraise, and assimilate evidence from scientific research studies related to their patients' health problems.
- 3. Practice-based learning and improvement** that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care. Residents are expected to:
- obtain and use information about their own patients and the larger population from which their patients are drawn;
 - use information technology to manage information, access on-line medical information, and support their own education;
 - facilitate the education of patients, families, students, residents, other health care professionals, and the general public.
- 4. Interpersonal and communication skills** that result in the effective exchange of information and collaboration with patients, their families, and other health professionals. Residents must be able to:
- communicate effectively and demonstrate caring and respectful behavior when interacting with patients and their families;
 - communicate effectively with patients and families to create and sustain a professional and therapeutic relationship;
 - communicate effectively with physicians, other health care professionals, health-related agencies, and the general public;
 - work effectively as a member or leader of a health care team or organization; and
 - maintain comprehensive, timely, and legible medical records.
- 5. Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds. Residents are expected to:
- demonstrate respect, compassion, and integrity; a responsiveness to the needs of patients and society that supercedes self-interest; accountability to patients, society, and the profession; and a commitment to excellence and on-going professional development;
 - demonstrate a commitment to ethical principles pertaining to patient privacy and autonomy, the provision or withholding of clinical care, confidentiality of patient information, informed consent, conflict of interest, and business practices; and
 - demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities.
- 6. Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care. Residents must be able to:
- advocate for quality patient care and assist patients in dealing with system complexities;
 - work effectively in various health care delivery settings and systems;
 - provide optimal value for the patient by incorporating the considerations of cost-awareness and risk-benefit analysis;
 - promote health and function and prevent disease and injury in populations; and
 - possess the basic economic and business knowledge necessary to function effectively in one's practice setting.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

- All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
- Faculty schedules must be structured to provide residents with continuous supervision and consultation.
- Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

- Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site.
- Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
- Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
- Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

- In-house call must occur no more frequently than every third night, averaged over a 4-week period.
- Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
- No new patients may be accepted after 24 hours of continuous duty.
- At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must

be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

- b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
- c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Medical Genetics should communicate with the office of the board regarding the full requirements for certification.

ACGME: June 1996 Effective: July 1997
Editorial Revision: June 2004

Program Requirements for Graduate Medical Education in Molecular Genetic Pathology (Medical Genetics)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition of the Subspecialty

Molecular Genetic Pathology (MGP) is the subspecialty of Medical Genetics and Pathology in which the principles, theory, and technologies of molecular biology and molecular genetics are used to make or confirm clinical diagnoses of Mendelian genetic disorders, disorders of human development, infectious diseases and malignancies, to assess the natural history of those disorders, and to provide the primary physician with information by which to improve the ability to provide optimal care for individuals affected with these disorders. Molecular Genetic Pathology includes a body of knowledge and techniques necessary to study diseases associated with alterations in genes, provides information about gene structure, function, and alteration, and applies laboratory techniques for the diagnosis, treatment, and prognosis of individuals with these disorders.

B. Duration and Scope of Education

Educational programs in molecular genetic pathology must be 1 year in length and provide a structured educational experience for qualified physicians seeking to acquire additional competence in all current aspects of the discipline including basic science, diagnostic laboratory procedures, laboratory management, and consultation. Programs must be designed to teach trainees to integrate molecular genetic pathology into medical consultations with clinicians in the diagnosis and care of patients.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. Postgraduate fellowships in molecular genetic pathology will be accredited in institutions that also sponsor ACGME-accredited residencies in medical genetics and pathology. Requests for exceptions to this policy will be reviewed on a case by case basis.
3. The molecular genetic pathology program must be jointly sponsored by the Department of Pathology and the Department of Medical Genetics. Further, the sponsoring institution must ensure that activity is supported by other disciplines, including internal medicine, pediatrics, and obstetrics-gynecology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in by the American Board of Medical Genetics (in clinical Medical Genetics) or the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC and certification in Molecular Genetics Pathology or possess qualifications judged to be acceptable by the Residency Review Committees.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGMEs Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;

(3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in by the American Board of Medical Genetics or the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. A sufficient volume and variety of current specimens from adult and pediatric patients must be available to provide MGP fellows a broad exposure to consultation regarding medical genetic test-

ing for congenital and acquired diseases without diluting the educational experience of fellows in affiliated Pathology and Medical Genetics residencies.

3. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
4. Fellows must have ready access to a major medical library. Library services should include electronic retrieval of information from national medical databases.
5. Fellows must have ready on-site access to appropriate texts and journals in each institution participating in the program.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. MGP fellows should have completed training in an ACGME accredited residency in either Medical Genetics or Pathology, or be a physician who is certified by the American Board of Medical Genetics.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format
The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.
2. Goals and Objectives
The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

1. The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.
2. Programs should be structured so that fellows are involved in MGP throughout the year. The program must include didactic in-

struction and practical experience with the molecular biology and the biochemistry of nucleic acids and proteins including structure, function, replication mechanisms, *in vitro* synthesis, and the roles of DNA and various RNA classes and proteins in cellular biology. Programs should instruct fellows in an understanding of the mechanism of regulation of gene expression in prokaryotes and eukaryotes, and the biochemical mechanisms of mutations. The program should instruct fellows in the detailed knowledge of disease processes at the molecular level and the methods used for their detection. These diseases include but are not limited to: solid tumors, leukemia-lymphomas, infectious diseases, inherited Mendelian diseases, non-Mendelian and acquired genetic diseases (e.g., mitochondrial disorders, triplet repeats, expansion disorders, cytogenetic aberrations, and imprinting disorders). In addition, fellows should be instructed in tissue typing/identity testing and the principles of linkage analysis. The program should instruct fellows in their role as a consultant and the application of molecular techniques and interpretation of results with regard to diagnosis, prognosis, treatment and recurrence risk in patient care decision making.

3. Fellows must maintain a logbook of MGP cases in which they were involved in sufficient detail to ascertain the fellows involvement in establishing the primary diagnosis and the transmittal of this information. A "case" is defined as the complete laboratory evaluation of an individual or an individual specimen (e.g., for tumor specimens). If a family study is involved, the entire family is considered as a single case. Completion of the case will involve appropriate communication of the results (e.g., written report, verbal communication to referring physician and/or counseling of the individual/family). The logbook should contain sufficient information to demonstrate experience with the breadth of techniques and variety of diseases necessary to direct an MGP diagnostic laboratory service.
4. The program must provide a sufficient volume and variety of MGP specimens and other educational material for the fellow to acquire the qualifications of a consultant in MGP. The fellow must be instructed to create and must keep a logbook of each accession in which they are involved.
5. Fellows must gain experience as consultants in clinical decision making in collaboration with professionals from related disciplines and in the cost-effective use of molecular genetic pathology testing.
6. The program must provide the fellow with the experience required to set up and to operate a MGP laboratory and to supervise and train laboratory personnel in other advanced techniques as they are developed.
7. MGP fellows who are pathologists must participate in the diagnosis, management, and treatment of patients with genetic disorders and in the counseling of the patient and the family. MGP fellows who are medical geneticists must have exposure to autopsy and surgical pathology. This experience should emphasize contemporary diagnostic techniques and require involvement in autopsies, surgical pathology, the review of slide sets of diseases relevant to Molecular Genetic Pathology, and other relevant pathology activities.
8. There must be regularly scheduled inter-departmental MGP conferences as well as intra-departmental conferences, lectures, seminars, journal clubs and other structured educational activities. Both teaching staff and fellows must attend and actively participate in these sessions on a regular basis.
9. Instruction should include the use of study sets and files of usual and unusual cases and other educational materials.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their fellows to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.

2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institutions written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsors primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.

2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An REC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institutions GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellows performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellows permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of ac-

tion, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification in Molecular Genetic Pathology should communicate with the office of their respective office regarding the full requirements for certification.

ACGME: June 2001 Effective: June 2001
Editorial Revision: June 2004

Program Requirements for Residency Education in Neurological Surgery

I. Introduction

A. Definition of Discipline

Neurological surgery is a discipline of medicine and that specialty of surgery which provides the operative and nonoperative management (i.e., prevention, diagnosis, evaluation, treatment, critical care, and rehabilitation) of disorders of the central, peripheral, and autonomic nervous systems, including their supporting structures and vascular supply; the evaluation and treatment of pathological processes which modify the function or activity of the nervous system, including the hypophysis; and the operative and nonoperative management of pain. As such, neurological surgery encompasses treatment of adult and pediatric patients with disorders of the nervous system: disorders of the brain, meninges, skull, and their blood supply, including the extracranial carotid and vertebral arteries; disorders of the pituitary gland; disorders of the spinal cord, meninges, and vertebral column; and disorders of the cranial and spinal nerves throughout their distribution.

B. Duration and Scope of Education

1. The educational program must be diversified and well-balanced.
2. The training program in neurological surgery must include a minimum of 1 year of training in an Accreditation Council for Graduate Medical Education (ACGME)-accredited program in general surgery or at least 1 year of a program accredited for the acquisition of fundamental clinical skills, which must include at least 6 months of surgical disciplines other than neurological surgery. This training should be completed prior to the third year of neurological surgery training.
3. The neurological surgery training program is 60 months in duration, in addition to the year of acquisition of fundamental clinical skills, and must provide 36 months of clinical neurological surgery at the sponsoring institution or one of its approved participating institutions.
4. Twenty-one months of the total 60 months should be devoted to any of several aspects of the training program, depending on the needs of the resident. It may be spent in the study of the basic sciences, neuroradiology, neuropathology, or other appropriate subject matter related to the neurosciences as agreed on by individual residents and the program director. [Note: The program director should consult the American Board of Neurological Surgery for certification requirements concerning any training conducted outside the approved institutions of the program.]
5. A block of training of 3 months minimum in an ACGME-accredited neurology training program must be arranged for all residents, unless they have previously had a minimum of 1 year of formal residency training in an accredited neurology training program. This training may be taken during the year of fundamental clinical skills.
6. There must be a 12-month period of time as chief resident on the clinical service of neurological surgery in the sponsoring institution or its approved participating institutions. This is considered an essential component in each resident's planned program. The program must provide the residents with experience in direct and progressively responsible patient management as they advance through training.
 - a. The chief resident must have major or primary responsibility for patient management with faculty supervision.

b. The chief resident should also have administrative responsibility as designated by the program director.

The specific portion of the clinical training that constitutes the 12 months of chief residency must be specifically designated as the chief residency experience and must be identified at the time of program review.

7. Residents must be introduced to the practice of neurosurgery in an outpatient setting where nonemergency patients are seen by the resident for evaluation before and after surgical procedures. A crucial element of this experience is the clear understanding by the patient that the resident is involved in making decisions concerning diagnosis and participates in operative procedures and follow-up care.
8. Prior to entry into the program, each resident must be notified in writing of the length of training. The prescribed length of training for a particular resident may not be changed without mutual agreement during his or her program unless there is a break in his or her training or the resident requires remedial training. Any training added to the accredited residency must be based on a clear educational rationale and must not interfere with the education and training of the residents enrolled in the program.

C. Accreditation Guidelines

1. Training programs in neurological surgery are accredited by the Residency Review Committee (RRC) by authority of the ACGME. A list of accredited training programs in neurological surgery is published annually in the *Graduate Medical Education Directory*.
2. To be accredited by the ACGME, an educational program in neurological surgery must be in substantial compliance with both the Program Requirements for Residency Education in Neurological Surgery and the Institutional Requirements of the *Essentials of Accredited Residencies in Graduate Medical Education*. Programs must be able to demonstrate their compliance with these requirements at the time of their site visit and subsequent review by the RRC.
3. When a change in leadership occurs within an accredited neurological surgery residency, the program must be site-visited within 18 months and reviewed by the RRC within approximately 2 years following the appointment of the new program director.

II. Institutional Organization

A. Sponsoring Institution

An educational program in neurological surgery must have one sponsoring institution in a single geographic location with primary responsibility for the entire program. Appropriate institutions include medical schools, hospitals, and medical foundations. The institution must demonstrate commitment to the program in terms of financial and academic support, including timely appointment of a permanent department or division chairperson of Neurological Surgery.

B. Participating Institutions

Participating institutions include the sponsoring institution and other integrated and/or affiliated institutions approved by the RRC for training purposes (see Program Requirements for Residency Education in General Surgery, II.B.1). Participating institutions must promote the educational goals of the program rather than simply enlarge the program and must not be added primarily for the purpose of meeting service needs.

1. An integrated institution must function as a single neurological surgery service with the sponsoring institution or, in exceptional circumstances, with an approved affiliate of the sponsoring institution. The program director must demonstrate to the RRC that

the clinical service operates as a single unit in the assignment of residents and their faculty supervisors, the formulation of call and backup schedules, and the convening of teaching conferences and related educational activities.

2. An affiliated institution functions as a separate neurological surgical service with a local training director under the direction of the program director and should be sufficiently close to the sponsoring institution to ensure peer interaction and regular attendance at joint conferences and other activities. Appropriate exceptions may be considered for special resource hospitals (e.g., pediatrics, trauma, and spine).
3. Training at an additional institution, proposed for affiliated status, may be approved on a provisional basis for a maximum of 2 years, at which time such training must be either fully approved or withdrawn at the discretion of the RRC. Ordinarily, a site visit will not be necessary to confirm the permanent approval of a provisionally approved participating institution.
4. The number and distribution of participating institutions must not preclude satisfactory participation by residents in teaching and training exercises.
5. Affiliated institutions that are geographically separated from the sponsoring institution are not desirable and are acceptable only if they offer special resources that significantly augment the overall educational experience of the training program.
6. Rotations to affiliated and integrated institutions must be based on a clear statement of the value of such institutions to the teaching program as a whole.

C. Number and Quality of Residents

1. One of the measures of a training program is the quality of residents chosen and the ability of the program to ensure a steady increase in the resident's knowledge and skills.
2. The RRC will review the selection process of residents and seek evidence that the program evaluates the progression of the residents during training.
3. Where there is demonstrated excellence in providing educational experience for the residents, as determined by the RRC, a program may be authorized to enroll more than one resident per year. The ability to do so does not depend on any multiplication of the minimum requirements as established by the Program Requirements for Residency Education in Neurological Surgery. In determining the size of a resident complement, the RRC will consider the following:
 - a. Presence of a faculty of national stature in neurological surgery
 - b. Quality of the educational program
 - c. Quality of clinical care
 - d. Total number and distribution of cases
 - e. Quality of clinical and basic research
 - f. Quality of residents trained by the program, including numbers of residents starting and finishing the program, number of graduates who take written and oral examinations of the American Board of Neurological Surgery, and the number of graduates passing these written and oral examinations
 - g. Facilities
4. The number of residents at each year of training in a given program, except as provided below, shall not exceed the number approved by the most recent accreditation review of that program. Should a vacancy occur at any level of training in a program, the program director has the option of appointing a new resident at a level that might overlap with that of another resident in training, provided that such appointments do not adversely affect the training experience of residents already in the program. Furthermore, over a 5-year period, commencing at the time when the resident whose departure created the vacancy would have com-

pleted training, the average number of residents graduating yearly must not exceed the number approved by the RRC.

III. Faculty Qualifications and Responsibilities

The chairperson, program director, and the teaching staff are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director Qualifications

1. There must be a single program director responsible for the program.
2. The program director shall be a neurological surgeon who possesses and practices the necessary administrative, teaching, and clinical skills and has experience to conduct the program.
3. The program director shall be certified by the American Board of Neurological Surgery or possess suitable equivalent qualifications in neurological surgery satisfactory to the RRC.
4. The program director shall be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
5. The program director shall have an appointment in good standing to the medical staff of an institution participating in the program.

B. Program Director Responsibilities

The program director must assume responsibility for all aspects of the training program and devote sufficient time to the educational program, including the following:

1. Preparation of a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of residents at each level of training and for each major rotation or other program assignment. This statement must be distributed to residents and members of the teaching staff. It should be readily available for review.
2. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
3. Selection and supervision of the teaching staff and other program personnel at each institution participating in the program.
4. The supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.
5. Regular evaluation of each resident's knowledge, skills, operative experience, and overall performance, including the development of professional attitudes consistent with being a physician.
6. The provision of a written final evaluation for each resident who completes the program, as specified in paragraph VI.I.
7. Implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
8. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.
9. Preparation of an accurate statistical and narrative description of the program as requested by the RRC for Neurological Surgery.

10. Notifying the executive director of the RRC in writing of any major change in the program that may significantly alter the educational experience for the residents, including
 - a. changes in leadership of the department, such as the appointment of a permanent or acting program director and/or departmental chairman.
 - b. changes in administrative structure, such as alteration in the hierarchical status of the program/department within the institution.
11. The director of the program must obtain prior approval of the RRC for the following changes in the program to determine if an adequate educational environment exists to support these changes:
 - a. The addition or deletion of any participating institution to which residents rotate
 - b. The addition or deletion of any institutional rotation
 - c. Any change in the resident complement of the program
 - d. Any change in the format of the training program (including fellowships within the program)
 - e. Any change in the period of time defined as the chief resident experience

On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

C. Other Teaching Faculty Qualifications and Number

1. All clinical faculty members shall possess the necessary experience and administrative, teaching, and clinical skills to conduct the program.
2. All clinical faculty members who are neurological surgeons shall be certified by, or be in the certification process of, the American Board of Neurological Surgery or possess equivalent qualifications in neurological surgery satisfactory to the RRC.
3. There must be a sufficient number of teaching staff with documented qualifications to instruct and supervise adequately all the residents in the program. Members of the teaching staff must be able to devote sufficient time to meet their supervisory and teaching responsibilities. Under most circumstances, there should be a minimum of three neurological surgeons associated with the training program.
4. All members of the teaching staff must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. Neurological surgery faculty participation in undergraduate medical education is desirable.
5. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
6. The teaching staff should periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

D. Training Directors at Participating Institutions

1. The training director shall be a qualified neurological surgeon appointed by and responsible to the program director in each geographically separate institution. This individual must be responsible for the education of the residents and also will supervise the educational activities of other neurological surgeons relating to resident education in that institution. Appropriate exceptions may be considered for special resource hospitals.

2. These appointments will generally be for a 1-year period and can be renewable to ensure continuity of leadership.
3. The training director in neurological surgery at each participating institution must have major clinical responsibilities at that institution.

E. Scholarly Activity of Faculty

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include the following:

1. Active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. Participation in journal clubs and research conferences.
3. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals.
4. Participation in research, particularly in projects that are funded following peer review and/or result in publication or presentations at regional and national scientific meetings.
5. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
6. Provision of support for resident participation in scholarly activities.

F. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Facilities and Resources

A. Inpatient Facilities

1. Inpatient facilities available for training programs in neurological surgery should be geographically identifiable and have an adequate number of beds, support personnel, and proper equipment to ensure quality education.
2. Inpatient facilities may vary from one participating institution to another but should support essential prerequisites for excellence in patient care and teaching.
3. The presence of a neurological surgery operating room with microsurgical capabilities and an intensive care unit specifically for the care of neurological surgery patients is desirable to a training program, as are other units for specialized neurological surgery care.
4. Similarly, neurological surgery beds should be on a unit designated for the care of neurosurgery patients.

B. Outpatient Facilities

Residents must have available appropriate outpatient facilities, clinic, and office space for training purposes in the regular preoperative evaluation and postoperative follow-up for cases for which the resident has responsibility.

C. Research Facilities

1. There should be space and support personnel for research identifiable in the neurological surgery division or department, and some activity should be ongoing in this area.
2. Clinical and/or basic research opportunities should be available to the neurological surgery resident with appropriate faculty supervision.

D. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

V. Educational Program

The director and teaching staff of a program must prepare and comply with written educational goals for the program. All educational components of a residency program should be related to program goals. The program design and/or structure must be approved by the RRC for Neurological Surgery as part of the regular review process.

A. ACGME Competencies

The residency program must require its residents to obtain competencies in the six areas below to the level expected of a new practitioner. Toward this end, programs must define the specific knowledge, skills, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
2. *Medical knowledge* about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care
3. *Practice-based learning and improvement* that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care
4. *Interpersonal and communication skills* that result in effective information exchange and teaming with patients, their families, and other health professionals
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and systems resources to provide care that is of optimal value

B. Clinical Components

A current, well-organized, written plan for rotation of residents among the various services and institutions involved must be maintained and must be available to the residents and faculty.

1. Patient Requirements

- There shall be sufficient patients admitted each year to ensure that the resident participates in the care of patients suffering from the full spectrum of neurosurgical diseases.
2. This participation must include substantial experience in the management (including critical care) and surgical care of adult and pediatric patients and should include disorders of the spine and of the peripheral nerves, cerebrovascular disease including extracranial vascular disease, trauma, and tumors of the nervous system.
 - a. A program must demonstrate to the satisfaction of the RRC that it has both the volume of patients under neurological care and the breadth and depth of academic support to ensure that

it has the capability of providing excellent neurological surgery training to residents.

- b. The former must be substantiated in part by a compilation of annual institutional operative data and resident operative data (including that from residents rotating on the service from other programs) provided in a fashion prescribed by the RRC. Under some circumstances, the program may be required to include data for a period of up to 3 years prior to the date of the submitted program information forms for accreditation or reaccreditation. The entire surgical experience of the most recently graduating resident(s) must be submitted each time the program has its periodic review.
 - c. The profile of clinical experience reported to the RRC must be limited to that utilized in the resident's educational program. It also is understood that the educational requirements of the resident must be considered at all times, and assignment to a clinical service that limits or precludes educational opportunities will be adversely considered in evaluation of the program.
 - d. Within the total clinical facilities available to the training program, there should be a minimum of 500 major neurological surgery procedures per year per finishing resident. It must be understood that achievement of this minimum number of clinical procedures will not ensure accreditation of a training program.
 - e. The minimum number of clinical procedures (see paragraph V.A.2.d) is suggested with the understanding that the majority of the procedures must occur at the sponsoring institution.
 - f. The presence within a given training program of this neurological surgery workload and the distribution of the surgical experience are equally important. For instance, the cases should be appropriately distributed among cranial, extracranial, spinal, and peripheral nerve surgical procedures and should represent a well-balanced spectrum of neurological surgery in both adults and children. This spectrum should include craniotomies for trauma, verified neoplasms, aneurysms, and vascular malformations; extracranial carotid artery surgery; transsphenoidal and stereotaxic surgery (including radiosurgery); pain medicine; and spinal procedures of a sufficient number and complexity using modern techniques that encompass a variety of disorders (such as trauma, neoplasia, infection, and degenerative disorders).
 - g. No affiliated hospital unit in the training program should be a component of a training program unless there are a minimum of 100 major neurological surgery procedures per year distributed appropriately among the spectrum of cases as described in paragraph f, above. Exception may be made if a hospital offers special clinical resources, e.g., stereotaxic surgery, trauma, or pediatric neurological surgery, that significantly augment the resources of the training program as a whole.
3. Residents must have opportunities to evaluate patients referred for elective surgery in an outpatient environment. Under appropriate supervision, this experience should include obtaining a complete history, conducting an examination, ordering (if necessary) and interpreting diagnostic studies, and arriving independently at a diagnosis and plan of management. Consonant with their skills and level of experience, residents should be actively involved in preoperative decision making and subsequent operative procedures under the supervision of the attending physician who has ultimate responsibility for the patient. Residents should similarly be actively involved in postsurgical care and follow-up evaluation of their patients to develop skills in assessing postoperative recovery, recognizing and treating complications, communicating with referring physicians, and developing the physician-patient relationship. Preoperative interview and

examination of patients already scheduled for a surgical procedure will not satisfy these requirements.

C. Didactic Components

There must be a well-coordinated schedule of teaching conferences, rounds, and other educational activities in which both the neurological surgery faculty and the residents participate. Conferences must be coordinated among institutions in a training program to facilitate attendance by a majority of staff and residents. A conference attendance record for both residents and faculty must be maintained.

D. Resident Policies

1. Supervision

The program director must ensure, direct, and document proper supervision of residents at all times. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians. Attending physicians or supervising residents with appropriate experience for the severity and complexity of the patient's condition must be available at all times on site. The responsibility or independence given to residents in patient care should depend on their knowledge, their technical skill, their experience, the complexity of the patient's illness, and the risk of the operative procedures.

2. Progressive Responsibility

Resident participation in and responsibility for operative procedures embracing the entire neurosurgical spectrum should increase progressively throughout the training period.

3. Continuity of Care

Graduate training in neurological surgery requires a commitment to continuity of patient care, as practiced by qualified neurological surgeons. This continuity of care must take precedence—without regard to the time of day, day of the week, number of hours already worked, or on-call schedules. At the same time, patients have a right to expect a healthy, alert, responsible, and responsive physician dedicated to delivering effective and appropriate care.

4. Duty Hours

a. The program director must establish an environment that is optimal for both resident education and patient care, while ensuring that undue stress and fatigue among residents are avoided. It is his or her responsibility to ensure assignment of appropriate in-hospital duty hours so that residents are not required to perform excessively difficult or prolonged duties regularly. It is desirable that residents' work schedules be designed so that, on average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on-call in the hospital no more often than every third night. Different rotations may require different working hours and patterns. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.

b. A distinction must be made between on-call time in the hospital and on-call availability at home vis-a-vis actual hours worked. The ratio of hours worked to on-call time will vary, particularly at the senior levels, and therefore necessitates flexibility.

c. During these hours residents must be provided with adequate sleeping, lounge, and food facilities. Support services must be such that the resident does not spend an inordinate amount of time in noneducational activities that can be discharged properly by other personnel.

5. Extracurricular Activities

Residency training in neurological surgery is a full-time responsibility. Activities outside the educational program must not inter-

with the residents' performance in the educational process, as determined by the program director, and must not interfere with the residents' opportunities for rest, relaxation, and study.

E. Other Required Educational Components

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility.

1. Educational experience in neuroradiology and neuropathology must be an integral part of the training program designed for the education of the neurological surgery residents. Such experience should be under the direction of qualified neuroradiologists and neuropathologists.
2. The program must provide opportunities for experience and instruction in the basic neurosciences.
3. The residents should participate in scholarly activities such as ongoing clinical and/or basic research projects with which appropriate faculty are involved.
4. Resident participation in undergraduate medical education is desirable.
5. Related Disciplines
 - a. Recognizing the nature of the specialty of neurological surgery, it is unlikely that a program can mount an adequate educational experience for neurological surgery residents without approved training programs in related fields. Clinically oriented training programs in the sponsoring institution of the neurological surgery program should include accredited training programs in neurology, general surgery, internal medicine, pediatrics, and radiology.
 - b. There should be clinical resources for the education of neurological surgery residents in anesthesiology, critical care, emergency medicine, endocrinology, ophthalmology, orthopedics, otolaryngology, pathology, and psychiatry. A lack of such resources will adversely affect the accreditation status of the neurological surgery program.
6. Appointment of Fellows
 - a. The appointment of other individuals for special training or education, such as fellows, must not dilute or detract from the educational opportunities of regularly appointed residents.
 - b. Programs must notify the RRC when they sponsor or participate in any clinical fellowships to take place within institutions participating in the program. This notification must occur before the commencement of such training and at each subsequent review of the program. Documentation must be provided describing the fellowship's relationship to and impact on the residency.
 - c. If fellows so appointed will, in the judgment of the RRC, detract from the education of the regularly appointed residents, the accreditation status of the program may be adversely affected.

VI. Evaluation

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents should be utilized in this process.

A. Evaluation of Residents

The residency program must demonstrate that it has an effective plan for assessing resident performance throughout the program and for utilizing assessment results to improve resident performance. This plan should include:

1. use of dependable measures to assess residents' competence in patient care, medical knowledge, practice-based learning

and improvement, interpersonal and communication skills, professionalism, and systems-based practice

2. mechanisms for providing regular and timely performance feedback to residents
3. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance

Programs that do not have a set of measures in place must develop a plan for improving their evaluations and must demonstrate progress in implementing the plan.

B. Program Evaluation

1. The residency program should use resident performance and outcome assessment results in their evaluation of the educational effectiveness of the residency program.
 2. The residency program should have in place a process for using resident and performance assessment results together with other program evaluation results to improve the residency program.
- C. The program director is responsible for the annual collection, compilation, and retention of the number and types of neurological surgery operative procedures performed in all institutions and facilities utilized in the clinical education of residents. This information must be provided on request in the format and form specified by the RRC.
- D. Annually, the program director must ensure the compilation of a comprehensive record of the number and type of operative procedures performed by each resident completing the program. This record must include all of the procedures in which the neurological surgery resident was either surgeon or assistant and must be signed by both the resident and the program director as a statement of its accuracy. This information must be provided upon request in the format specified by the RRC. These records must be accurately maintained by the program director.
- E. The knowledge, skills, operative experience, professional growth, and progress of each resident, including professional conduct, must be evaluated by the program director in consultation with the teaching staff in a semiannual, written review. These evaluations must be provided to and discussed with each resident in a timely manner. Appropriate criteria and procedures must be used.
- F. Residents must be advanced to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
- H. The program must maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- I. At least annually, all individual faculty members must be formally evaluated by the program director of neurological surgery as well as by the residents. A mechanism for sharing the results of such evaluations with the faculty that preserves individual resident confidentiality must be employed.
- J. At least annually, the program rotations and conferences must be evaluated by both residents and faculty. The results of these evaluations should be kept on file.
- K. The thoroughness of resident, faculty, and program evaluations, as well as the accurate and timely provision of program-related information to the RRC, will be monitored in the overall review of the residency program.
- L. The program director must provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently

and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

VII. Board Certification

A. Performance on Examination

One measure of the quality of a program is the participation in and performance of its graduates on the examinations of the American Board of Neurological Surgery. The number of residents completing training and taking and passing the certification examinations will be part of the RRC's evaluation of the program. All residents must pass the ABNS primary examination before completing the program.

B. Certification Requirements

Residents who seek certification by the American Board of Neurological Surgery should communicate with the secretary of the board to be sure that the requirements for certification have been fulfilled. The current address of this office is published in each edition of the *Graduate Medical Education Directory*. Requests regarding evaluation of educational programs in neurological surgery and all related program inquiries should be addressed to the Executive Director of the Residency Review Committee for Neurological Surgery, 515 N State St/Ste 2000, Chicago, IL 60610.

ACGME: June 2001 Effective: July 2001

ACGME General Competencies Implementation Date: July 1, 2002

Program Requirements for Residency Education in Endovascular Surgical Neuroradiology (Neurological Surgery)

I. Definitions and Objectives

Endovascular surgical neuroradiology is a subspecialty that uses catheter technology, radiologic imaging, and clinical expertise to diagnose and treat diseases of the central nervous system. The unique clinical and invasive nature of this subspecialty requires special training and skills. The program must include training and experience in the following:

- A. Signs and symptoms of disorders amenable to diagnosis and treatment by endovascular surgical neuroradiology techniques.
- B. Neurological examinations to evaluate patients with neurological disorders.
- C. Pathophysiology and natural history of these disorders.
- D. Indications and contraindications to endovascular surgical neuroradiology procedures.
- E. Clinical and technical aspects of endovascular surgical neuroradiology procedures.
- F. Medical and surgical alternatives.
- G. Preoperative and postoperative management of endovascular patients.
- H. Neurointensive care management.
- I. Fundamentals of imaging physics and radiation biology.
- J. Interpretation of radiographic studies pertinent to the practice.

In this subspecialty, the objective of training is to give residents an organized, comprehensive, supervised, full-time educational experience in endovascular surgical neuroradiology. This experience includes the management of patients with neurological disease, the

performance of endovascular surgical neuroradiology procedures, and the integration of endovascular surgical neuroradiology therapy into the clinical management of patients.

Training in endovascular surgical neuroradiology must be conducted in an environment conducive to investigative studies of a clinical or basic science nature.

A program in endovascular surgical neuroradiology must be jointly administered by Accreditation Council for Graduate Medical Education (ACGME)-accredited programs in neurological surgery, diagnostic radiology, and neuroradiology, which must be present within the same institution. Exceptions to this requirement will be subject to the review and approval, on a case-by-case basis, by the RRCs for Neurological Surgery and Diagnostic Radiology. The program is not intended to replace or duplicate the ACGME-accredited program in neuroradiology.

II. Duration of Training

The program shall offer 1 year of graduate medical education in endovascular surgical neuroradiology.

III. Program Director

The program director must be certified by either the American Board of Radiology or the American Board of Neurological Surgery or possess appropriate educational qualifications as determined by the RRC. The program director must have special expertise in endovascular surgical neuroradiology techniques and concentrate at least 50% of his/her practice in endovascular surgical neuroradiology therapy. In addition, the program director must devote sufficient time to the program to fulfill all the responsibilities inherent in meeting its educational goals. The program director should hold appointments to the teaching staff in both neurological surgery and radiology. The program director is responsible for establishing and maintaining the curriculum, selecting and supervising the residents, and selecting faculty members. The program director must have adequate support from the institution and both departments to carry out the mission of the program.

The director of the endovascular surgical neuroradiology training program must be appointed by and be responsible to the program director of the sponsoring training program.

IV. Faculty

Besides the program director, the program faculty must include at least one full-time member with expertise in endovascular surgical neuroradiology techniques, who (1) is certified by either the American Board of Radiology or the American Board of Neurological Surgery or (2) possesses appropriate educational qualifications as determined by the RRC. The faculty must provide didactic teaching and direct supervision of residents' performance in clinical patient management and in the procedural, interpretive, and consultative aspects of endovascular surgical neuroradiology therapy. The faculty also should stimulate scholarly activities and be able to direct residents in the conduct of such activities. Faculty members should hold appointments jointly in radiology and neurological surgery departments. Evaluation of the faculty should be accomplished at least annually.

V. Faculty-to-Resident Ratio

The total number of residents in the program must be commensurate with the capacity of the program to offer an adequate educational experience in endovascular surgical neuroradiology therapy. To ensure adequate teaching supervision and evaluation of a resident's academic progress, the faculty-to-resident ratio must be at least one full-time faculty person for every resident enrolled in the program.

VI. Educational Program

A. Curriculum

The training program must offer didactic and clinical experiences that encompass the full clinical spectrum of endovascular surgical neuroradiology therapy.

1. Preparatory requirements

- a. Common requirements: All endovascular surgical neuroradiology residents must have completed at least 12 months, preferably consecutive, in neuroradiology. In addition, all endovascular surgical neuroradiology residents must have skills and knowledge in catheter techniques.
- b. Trainees accepted into an ACGME-accredited program in endovascular surgical neuroradiology who do not come from a radiology training program shall have access to a 1-year period of training in neuroradiology in the institution sponsoring the endovascular surgical neuroradiology program.
- c. Residents entering from a neurosurgery background must have fulfilled the following preparatory requirements, in addition to the common requirements:
 - 1) Completed an ACGME accredited residency in neurological surgery.
 - 2) Completed a course in basic radiology skills acceptable to the program director where the neuroradiology training will occur. The basic radiology skills and neuroradiology training may be acquired during elective time in the neurological surgery residency.
- d. Residents entering from a neurology background must have fulfilled the following preparatory requirements, in addition to the common requirements:
 - 1) Completed an ACGME-accredited residency in neurology;
 - 2) Completed an ACGME-accredited 1-year vascular neurology program;
 - 3) Completed a 3-month course in basic radiology skills acceptable to the program director where the neuroradiology training will occur. The basic radiology skills and neuroradiology training may be acquired during elective time in the neurology residency.
 - 4) Completed 3 months of clinical experience in an ACGME-accredited neurological surgery program, which may be acquired during elective time in neurology and/or vascular neurology training.
- e. Residents entering from a radiology background must have fulfilled the following preparatory requirements, in addition to the common requirements:
 - 1) Completed an ACGME accredited residency in diagnostic radiology.
 - 2) Completed 3 months of clinical experience in an ACGME accredited neurological surgery program, which may be acquired during elective time in diagnostic radiology and/or neuroradiology training.
- f. Specifically, the preparatory training must provide residents skills and knowledge in the following areas:
 - 1) The use of needles, catheters, guidewires, and angiographic devices and materials.
 - 2) The basic radiological sciences, including radiation physics, radiation protection, and the pharmacology of radiographic contrast materials.
 - 3) Angiography and image interpretation.
 - 4) The proper use and interpretation of laboratory tests and methods that are adjunctive to endovascular surgical neuroradiology procedures, such as physiological monitoring, noninvasive neurovascular testing, and noninvasive neurovascular imaging
 - 5) The evaluation of patients with neurological disease.

- 6) The basic and clinical neurosciences, including neuroanatomy, neurobiology, and the pathophysiology and natural history of neurologic disorders, especially cerebrovascular and neoplastic conditions.
- 7) The clinical aspects of patient assessment, treatment planning, and patient management related to endovascular surgical neuroradiology therapy, including the fundamentals of invasive monitoring and neurointensive care management.
- 8) The clinical indications, risks, and limitations of endovascular surgical neuroradiology procedures.
- 9) The use and administration of analgesics, antibiotics, anticoagulation agents, neuroanesthetic agents, and other drugs commonly used in endovascular surgical neuroradiology procedures.
- 10) The director of the Endovascular Surgical Neuroradiology Program is responsible for documenting that the applicant has completed the appropriate preparatory training.

2. Endovascular surgical neuroradiology clinical training

A period of 12 continuous months must be spent in clinical endovascular surgical neuroradiology training, during which the resident has the opportunity to carry out all of the following under close supervision: perform clinical preprocedure evaluations of patients, interpret preliminary diagnostic studies, consult with clinicians on other services, perform diagnostic and therapeutic endovascular surgical neuroradiology procedures, generate procedural reports, and participate in short-term and long-term postprocedure follow-up care, including neurointensive care. The continuity of care must be of sufficient duration to ensure that the resident is familiar with the outcome of all endovascular surgical neuroradiology procedures. Residents should serve as consultants under the supervision of staff endovascular surgical neuroradiology practitioners. Direct interactions of residents with patients must be closely observed to ensure that appropriate standards of care and concern for patient welfare are strictly maintained. Communication, consultation, and coordination of care with the referring clinical staff and clinical services must be maintained and documented with appropriate notes in the medical record.

The program must provide adequate opportunity for residents to participate in and personally perform and analyze a broad spectrum of endovascular procedures in adults, children, and neonates. Specific training should be provided in the following areas:

- a. Anatomical and physiologic basic knowledge:
 - 1) Basic knowledge in arterial angiographic anatomy of the brain, spine, spinal cord, and head and neck.
 - 2) Venous angiographic anatomy of the brain, spine, spinal cord, and head and neck.
 - 3) Collateral circulation
 - 4) Dangerous anastomosis
 - 5) Cerebral blood flow
 - 6) Autoregulation
 - 7) Pharmacology of CNS vasculature
- b. Technical aspects of endovascular surgical neuroradiology, including:
 - 1) Catheter and delivery systems
 - 2) Embolic agents in cerebral, spinal, and head and neck embolization
 - 3) Flow-controlled embolization
 - 4) Complication of cerebral embolization
 - 5) Flow control between the extracranial and intracranial circulation
 - 6) Electrophysiology

- 7) Provocative testing (pretherapeutic evaluation)
- 8) Complications of brain, spine, spinal cord, and head and neck embolization.
- 9) Imaging of vascular system
- c. Pharmacology
 - 1) Contrast materials
 - 2) Provocative testing with anesthetics and sedatives
 - 3) Anticoagulants
 - 4) Thrombolytics
- d. Coagulation cascade
- e. Brain arteriovenous malformation, spinal cord, arteriovenous fistulas of the brain, spine, spinal cord, head and neck vascular malformations, is chemic stroke, and cerebral aneurysms
 - 1) Classification
 - 2) Clinical presentation
 - 3) Natural history
 - 4) Epidemiology
 - 5) Hemodynamic basis
 - 6) Indications for treatment
 - 7) Contraindication for treatment
 - 8) Therapeutic modalities
 - 9) Combined therapies
- f. Tumors of the head, neck, spine, and central nervous system
- g. Revascularization for occlusive vascular diseases
 - 1) Arteriopathy
 - 2) Atherosclerotic lesions
 - 3) Techniques of revascularization: balloon angioplasty, thrombolytics, and stenting.
- h. Embolization for epistaxis or other causes of hemorrhage
- i. Invasive functional testing
- j. Balloon test occlusions
3. Conferences and didactic training

Residents must make daily rounds with the attending faculty during which patient management decisions are discussed and made. Conferences should be organized by the faculty and held to allow discussion of topics selected to broaden knowledge in the field of endovascular surgical neuroradiology. Specifically, teaching conferences should embrace the scope of endovascular surgical neuroradiology as outlined in Section I (Definitions and Objectives) of these Program Requirements. Conferences should include journal clubs, pathology meetings, and neuroanatomy dissection courses related to endovascular surgical neuroradiology.

There must be didactic and interactive conference time, including interdepartmental meetings with neurosurgeons and neuroradiologists. Regular review of all mortality and morbidity related to the performance of endovascular surgical neuroradiology procedures must be documented. Residents must participate actively in these reviews, which should be held at least monthly. Residents should be encouraged to attend and participate in local extramural conferences and should attend at least one national meeting or postgraduate course in endovascular surgical neuroradiology therapy while in training.

VII. Patient Population

The institution's patient population must have a diversity of illnesses from which broad experience in endovascular surgical neuroradiology therapy can be obtained. The case material should encompass a range of neurological diseases, including neurovascular. An adequate variety and number of endovascular surgical neuroradiology procedures must be available for each resident. Each program must perform at least 100 therapeutic endovascular surgical neuroradiology procedures per year. These procedures include the treatment of aneurysms, brain

arteriovenous malformations, arteriovenous fistulas of the brain, tumors of the central nervous system, occlusive vascular diseases, revascularization, traumatic injury, maxillofacial vascular malformation, and tumors. In addition, the program must provide adequate training and experience in invasive functional testing.

Each resident must maintain a personal case log, which the program director must certify at the completion of training.

The program director must submit the entire clinical experience of the endovascular surgical neuroradiology program and the residents in the format prescribed by the RRC. The list of procedures and the logs must be made available to the RRC at the time of its review of the core program and the endovascular neuroradiology training program.

The subspecialty program in endovascular surgical neuroradiology must not have an adverse impact on the educational experience of diagnostic radiology, neuroradiology, neurological surgery, or vascular surgery residents in the same institution.

VIII. Equipment and Facilities

Modern imaging/procedure rooms and equipment must be available and must permit the performance of all endovascular surgical neuroradiology procedures. Rooms in which endovascular surgical neuroradiology procedures are performed should be equipped with physiological monitoring and resuscitative equipment. The following state-of-the-art equipment must be available: MRI scanner, CT scanner, digital subtraction angiography equipment, ultrasound, and a radiographic-fluoroscopic room(s) with a tilt table. Facilities for storing catheters, guidewires, contrast materials, embolic agents, and other supplies must be next to or within procedure rooms. There must be adequate space and facilities for image display and interpretation and for consultation with other clinicians.

The institutions where endovascular surgical neuroradiology training is conducted must include appropriate inpatient, outpatient, emergency, and intensive care facilities for direct resident involvement in providing comprehensive endovascular surgical neuroradiology care.

IX. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity. This activity should include

1. active participation of the teaching staff in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
2. participation in journal clubs and research conferences.
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
4. participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
5. offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
6. provision of support for resident participation in scholarly activities

X. Research

A subspecialty program should have an investigational component such that the residents may become familiar with the design, implementation, and interpretation of clinical research studies. Facilities should be made available for research activity.

Review Committee on a regular basis. Written evaluations by residents should be utilized in this process.

ACGME: June 26, 2000 Effective: June 27, 2000
ACGME: February 11, 2003 Effective: April 11, 2003

XI. Research Facilities

The institution should provide laboratory facilities to support research projects pertinent to endovascular therapies.

XII. Interchange With Residents in Other Specialties and Students

Residents should be encouraged to participate in research activities with residents and staff in other related specialties. They also should be encouraged to attend and participate in clinical conferences. It is desirable that they participate in the clinical teaching of neurological surgery and radiology residents and medical students.

XIII. Duty Hours and Conditions of Work

(See Program Requirements for Residency Education in the Subspecialties of Diagnostic Radiology for details concerning duty hour requirements.)

XIV. Evaluation

A. Residents

Subspecialty program directors must establish clearly defined procedures for regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The assessment must include cognitive, motor, and interpersonal skills as well as judgment. The program director, with participation of members of the teaching staff, shall

1. at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures.
2. communicate each evaluation to the resident in a timely manner.
3. advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a written final evaluation for each resident who completes the program. The evaluation must include a review of the resident's performance during the final period of training and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record maintained by the institution.

B. Faculty

Faculty must be evaluated at least annually to review teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. Residents should participate in these evaluations.

C. Program

The educational effectiveness of a program must be evaluated in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed by the subspecialty program director, the core diagnostic radiology program director, and the Institutional

Program Requirements for Residency Education in Neurology

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition

Neurology is a medical specialty concerned with the diagnosis and treatment of all categories of disease involving the central, peripheral, and autonomic nervous systems, including their coverings, blood vessels, and all effector tissue, such as muscle. For these diseases, the neurologist is often the principal care physician, and may render all levels of care commensurate with his or her training.

B. Duration and Scope of Training

A complete neurology residency requires 48 months of training. Approved residencies in neurology must provide at least 36 months of this education. The program meeting these requirements may be of two types:

1. Those that provide 4 years of residency training, the first year of which training (accredited in the United States or Canada) must include a broad clinical experience in general internal medicine. This year must include at least one of the following: (a) 8 months in internal medicine with primary responsibility in patient care or (b) 6 months in internal medicine with primary responsibility in patient care and a period of at least 2 months time comprising 1 or more months of pediatrics, emergency medicine, internal medicine, or family medicine. Residents must spend no more than 2 months in neurology during this year.
2. Those that provide 3 years of residency training but accept only residents who have had an initial first year of graduate training in the United States or Canada. This first year must meet the minimum requirements as noted in I. B.1. above.

C. Goals and Objectives for Residency Education

The purpose of the training program is to prepare the physician for the independent practice of clinical neurology. This training must be based on supervised clinical work with increasing responsibility for outpatients and inpatients. It must have a foundation of organized instruction in the basic neurosciences.

D. Program Design

1. All educational components of a residency program must be related to program goals. The program design and structure must be approved by the Residency Review Committee (RRC) for Neurology as part of the regular review process.
2. Programs that cosponsor combined training in neurology and another specialty must so inform the RRC. Residents in such training must be informed of the necessary requirements of the specialty boards in question.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with

clearly-stated activities and objectives, and should provide resources not otherwise available to the program. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.
3. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience, and should provide sufficient opportunity or continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals as well as educational and peer activities. Exceptions must be justified and prior-approved by the RRC.
4. Participation by any institution providing 6 months or more of training in a program of 3 or more years must be approved by the RRC.

III. Program Personnel and Resources

The program director and faculty are responsible for the general administration of the program and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for the program director and faculty are essential to maintaining such an environment. The length of appointment for the program director should provide for continuity of leadership.

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME). Notification of a change in the program directorship must include a copy of the new director's curriculum vitae, including details of his or her experience and qualifications in graduate medical education.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Psychiatry and Neurology or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.

4. Responsibilities of the program director are as follows:

- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution, and to address resident grievances and due process in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement;
 - (4) changes in administrative structure, such as a change in the hierarchical status of the program and/or department within the institution.

On review of a proposal for a major change in a program, the RRC may determine that a site visit is necessary.

- e) Monitoring of residents' well-being: The program director is responsible for monitoring resident stress, including mental or emotional conditions inhibiting performance of learning, and drug- or alcohol-related dysfunction. Both the program director and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that demand excessive service or that consistently produce undesirable stress on residents must be evaluated and modified.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. The faculty must include a program director, a child neurologist, and a minimum of 4 neurology faculty who provide clinical service and teaching and who devote sufficient time to the program to ensure basic and clinical education for residents. A faculty to resident ratio of 1 to 1 must be maintained. The program director may be counted as one of the faculty in determining the ratio. All faculty should have American Board of Psychiatry and Neurology certification in neurology and one of its subspecialties, or have appropriate educational qualifications as judged by the RRC, to provide teaching in the subspecialties of neurology.
 - a) There must be faculty who have diverse interests and skills in an appropriate range of teaching and research; who ensure adequate clinical opportunities for residents; and who provide continued instruction through seminars, conferences, and teaching rounds.
 - b) Faculty with special expertise in all the disciplines related to neurology, including neuro-ophthalmology, neuromuscular disease, cerebrovascular disease, epilepsy, movement disorders, critical care, clinical neurophysiology, behavioral neurology, neuroimmunology, infectious disease, neuro-otology,

neuroimaging, neuro-oncology, pain medicine, neurogenetics, child neurology, the neurology of aging, sleep disorders, and psychiatry must be available on a regular basis to neurology residents.

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, demonstrate competence in both clinical care and teaching abilities, and must support the goals and objectives of the educational program of which they are a member, and demonstrate commitment to their own continuing medical education by participating in scholarly activities.

The teaching staff must periodically evaluate the use of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

3. Qualifications of the physician faculty are as follows:

- a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
- b) The physician faculty must be certified in the specialty by the American Board of Psychiatry and Neurology, or possess qualifications judged to be acceptable by the RRC.
- c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Patient Population

It is the program director's responsibility to ensure that the number of patients is appropriate. They must be diversified as to age and sex, short-term and long-term neurological problems, and inpatients and outpatients. Neurology residents must have management responsibility for patients with neurological disorders. Neurology residents must be involved in the management of patients with neurological disorders who require emergency and intensive care.

2. Facilities

There must be adequate inpatient and outpatient facilities, examining areas, conference rooms, and research laboratories. There must also be adequate space for offices for faculty members. Space for study, chart work, and dictation must be available for the residents. There must be adequate contemporary clinical laboratory facilities that report rapidly the results of necessary laboratory evaluations, including clinical-pathological, electrophysiological, imaging, and other studies needed by neurological services. Adequate chart and record-keeping systems must be in use for patient treatment.

3. Library

Residents must have access to an adequate medical library. Library services must include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries, collections of texts and journals, and electronic retrieval of information from medical databases must be readily available during nights and weekends.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. The exact number of residents that may be appointed to a given program is not specifically designated. However, the number of residents appointed to the program must be commensurate with the educational resources specifically available to the residents in terms of faculty, the number and variety of patient diagnoses, and the availability of basic science and research education.
2. The program director will establish the maximum number of resident positions that can be supported by the educational resources for the program, subject to the approval of the RRC. The program director must report any increase or decrease in the resident complement (at the beginning of the academic year), and any resulting change in the structure of the program, to the RRC. A permanent change in resident complement must be approved in advance by the RRC. Programs that fail to recruit any new residents for 2 consecutive years may be subject to adverse action because of inactivity in the educational program.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident, including an

assessment of competence in the 6 areas described in Section V.D. prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents must not dilute or detract from the educational opportunities of the regularly appointed specialty residents.

E. Leave and Vacation Policy

Each program must have an equitable level and vacation policy for residents, in accordance with overall institutional policy.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments, i.e., those block or longitudinal experiences comprising at least 1-month FTE of curriculum time.

3. The program director, with assistance of the faculty, is responsible for developing and implementing the academic and clinical program of resident education by
 - a) preparing and implementing a comprehensive, well-organized, and effective curriculum, both academic and clinical, which includes the presentation of core specialty knowledge supplemented by the addition of current information.
 - b) providing residents with direct experience in progressive responsibility for patient management.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Components – Seminars and Conferences

Residents must regularly attend seminars and conferences in the following disciplines: neuropathology, neuroradiology, neuro-ophthalmology, neuromuscular disease, cerebrovascular disease, epilepsy, movement disorders, critical care, clinical neurophysiology, behavioral neurology, neuroimmunology, infectious disease, neuro-otology, neuroimaging, neuro-oncology, sleep disorders, pain medicine, neurogenetics, rehabilitation, child neurology, the neurology of aging, and general neurology. There must be gross and microscopic pathology conferences and clinical pathological conferences. Residents must have increasing responsibility for the planning and supervision of the conferences. Residents must learn about major developments in both the basic and clinical sciences relating to neurology. Residents must attend periodic seminars, journal clubs, lectures in basic science, didactic courses, and meetings of local and national neurological societies.

2. Clinical Components – Basic Curriculum

- a) Patient care, teaching, and research must be present in every training program. Patient care responsibilities must ensure a balance between patient care and education that achieves for the trainee an optimal educational experience consistent with the best medical care. Patient care responsibilities must include inpatient, outpatient, and consultation experiences.
- b) The program must include a minimum of 18 months (full-time equivalent) of clinical adult neurology with management responsibility for patient care. This must include at least 6 months of inpatient experience in adult neurology and at least 6 months (full-time equivalent) of outpatient experience in clinical adult neurology. The outpatient experience also must include a resident longitudinal/continuity clinic with attendance by each resident ½ day weekly throughout the program. The continuity clinic may be counted toward the required 6 months of outpatient experience (i.e., assuming that one full day clinic assignment per week for 3 years is equal to 3.6 months). All clinics may be credited toward the 6 month outpatient requirement assuming that a half-day clinic comprises a 1/10 FTE/week or 1/40 FTE/month. (Residents may be excused from this clinic when a rotation site is more than 1 hour's travel time from the clinic site.)
- c) Residents in neurology must have experience with neurological disorders in children under the supervision of a child neurologist with ABPN certification or suitable equivalent qualifications. This must consist of a minimum of 3 months (full-time equivalent) in clinical child neurology with management responsibility in patient care.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Teaching Rounds

Clinical teaching rounds must be supervised by faculty. They must occur at least 5 days per week. Residents must present cases and their diagnostic and therapeutic plans.

F. Clinical Teaching

1. Residents must have instruction and practical experience in obtaining an orderly and detailed history from the patient, in conducting a thorough general and neurological examination, and in organizing and recording data. The training must include the indications for and limitations of clinical neurodiagnostic tests and their interpretation. Residents must learn to correlate the information derived from these neurodiagnostic studies with the clinical history and examination in formulating a differential diagnosis and management plan.
2. Residents must participate in the evaluation of and decision-making for patients with disorders of the nervous system requiring surgical management. The existence of a neurosurgical service with close interaction with the neurology service is essential.
3. The residents must participate in the management of patients with psychiatric disorders. The program must include at least 1 month FTE experience in clinical psychiatry, including cognition and behavior. The experience should take place under the supervision of a psychiatrist certified by the American Board of Psychiatry and Neurology, or who possesses qualifications judged acceptable to the RRC. They must learn about the psychological aspects of the patient-physician relationship and the importance of personal, social, and cultural factors in disease processes and their clinical expression. Residents must learn the principles of psychopathology, psychiatric diagnosis, and therapy and the indications for and complications of drugs used in psychiatry.
4. Residents must learn the basic principles of rehabilitation for neurological disorders.
5. Residents must participate in the management of patients with acute neurological disorders in an intensive care unit and an emergency department.
6. Residents in neurology must have experience in neuroimaging that ensures a familiarity with and knowledge of all relevant diagnostic and interventional studies necessary to correlate findings with other clinical information for the care of patients. At a minimum this must include magnetic resonance imaging, computerized tomography and neurosonology. This may be accomplished as an integral part of supervised inpatient or outpatient care during required adult and pediatric neurology rotations, where neurology residents should review and interpret their own patients' neuroimaging studies under supervision. Additional experience is desirable during rotations on neurosurgery or in subspecialty areas where neuroimaging is particularly relevant to patient care, such as cerebrovascular disease, neuro-oncology, neurointensive care, behavioral/cognitive neurology and epilepsy. An organized elective rotation in neuroradiology should be available to those with interests that will require an in-depth understanding of neuroradiology. An elective rotation in neuroradiology may also provide additional opportunities to gain experience in supervised interpretation of neuroimages and to learn the basic concepts of neuroradiology.
7. Residents must receive instruction in the principles of bioethics and in the provision of appropriate and cost-effective evaluation and treatment for patients with neurological disorders.
8. Residents must receive instruction in appropriate and compassionate methods of end-of-life palliative care, including adequate pain relief and psychosocial support and counseling for patients and family members about these issues.

9. Residents must receive instruction on recognition and management of physical, sexual, and emotional abuse.
 10. A formal curriculum is required for bioethics, cost-effective care, and palliative care, including adequate pain relief as well as psychosocial support and counseling for patients and families. If formal lectures are not provided by the institution, they must be provided by the program.
- G. Teaching of other residents, medical students, nurses, and other health care personnel, formally and informally, is a required aspect of the resident's education in neurology.

H. Progressive Responsibility

Programs must provide opportunities for increasing responsibility and professional maturation of residents. Early clinical assignments must be based on direct patient responsibility for a limited number of patients. Subsequent assignments must place residents in a position of taking increased responsibility for patients. Night call is essential in accomplishing these goals. Adequate faculty supervision is essential throughout the program. Neurological training must include assignment on a consultation service to the medical, surgical, obstetric and gynecologic, pediatric, rehabilitation medicine, and psychiatry services.

I. Basic and Related Science

Residents must learn the basic sciences on which clinical neurology is founded, including neuroanatomy, neuropathology, neurophysiology, neuroimaging, neuropsychology, neural development, neurochemistry, neuropharmacology, molecular biology, genetics, immunology, epidemiology, and statistics. The didactic curriculum developed to satisfy this requirement must cover basic science and must be organized and complete. Concentrated training in 1 or more of these areas, accomplished with a full-time equivalent experience of at least 2 months total, is required for each resident. The basic science component should be explicitly described and specific goals and objectives must be developed for the basic science experience.

J. Electives

Resident assignments need not be identical for each resident, and elective time should accommodate an individual resident's interests and previous training. Elective time should be a minimum of 3 months.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty. There must be explicit and current written supervisory lines of supervision circulated to all members of the program staff.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.

3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

Residents must provide on-call duty in the hospital. The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period. In-house call is required to provide the experience of primary coverage for all ready-hospitalized inpatients and initial evaluation and treatment of urgent admissions to neurology or consultation patients. In most instances, practicality and optimal quality of care will necessitate that residents sleep in the hospital when providing such care. Under some conditions, it may be permissible for this call to be taken from home. If at-home call causes frequent interruption or significant deprivation of sleep, it should be considered equivalent to in-house call with respect to duty hours; that is, the entire night must be included in the calculation of total on-duty hours per week, and the 10 hour rest period and the 24 and 6 rule must be triggered. It will be program director's responsibility in consultation with residents and other faculty to establish rules to assure that the spirit of the duty hours is respected, regardless of the nature of call.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as one who requires a comprehensive evaluation with significant management responsibilities by the resident.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educa-

tional and clinical responsibilities, averaged over a 4-week period.

- b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
- c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exception

The RRC for Neurology will not consider requests for exceptions to the limit to 80 hours per week, averaged over a four week period.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance (e.g., the resident in-service examination (RITE) and objective skills assessment tools).

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and

other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Psychiatry and Neurology should communicate with the office of the board regarding the full requirements for certification.

One measure of the quality of a training program is the proportion of its residents who take the examinations of the ABPN and the proportion who pass those examinations. This information must be used in the evaluation of the educational effectiveness of the program. A program will be judged deficient by the RRC if during the most recent 5-year period fewer than 60% of its graduates who take

the examinations pass either the written (Part I) or oral (Part II) examination on the first attempt.

ACGME: June 2004 Effective: January 2005

Policies and Procedures for Residency Education in the Subspecialties of Neurology

1. The initial application for a subspecialty program will not require a site visit, but will require submission of all application materials and information and must be signed by the director of the subspecialty program and the director of the core program in neurology. (Applications for programs in child neurology must be cosigned by the directors of the accredited programs in both pediatrics and neurology.) The Residency Review Committee (RRC) for Neurology will take initial action based on a "paper review" of the program, namely, a review without a site visit.
2. Subsequent review of subspecialty programs will be in conjunction with the survey and review of the core program in neurology. The subspecialty program director will complete a separate set of forms for review of the subspecialty program. In special cases determined by the RRC, a subspecialty program may be surveyed and reviewed separately. The RRC will also entertain interim requests and, on occasion, ask for interim progress reports.
3. The RRC will designate programs as being accredited or not accredited. No further delineation of accreditation categories will be utilized. The accreditation of a program will be directly tied to that of the core. If the core program (either neurology or pediatrics for child neurology programs) is subsequently accredited on a probationary basis, this is simultaneously a warning to the related subspecialty program that accreditation is in jeopardy. Withdrawal of accreditation of the core program (either neurology or pediatrics for child neurology programs) will result in a simultaneous loss of accreditation of the subspecialty program.
4. If the core program (either neurology or pediatrics for child neurology programs) remains in good standing but the RRC judges the subspecialty program to be in noncompliance with the applicable program requirements, a warning will be issued. If the areas of noncompliance are not corrected, accreditation may be withdrawn from the subspecialty program. The Procedures for Proposed Adverse Actions and the Procedures for Appeal of Adverse Actions may be utilized by programs from which accreditation has been withdrawn in an action separate from withdrawal of accreditation of a core program.
5. Inquiries about accreditation of subspecialty programs should be directed to the Executive Secretary of the RRC for Neurology.

Program Requirements for Residency Education in Child Neurology (Neurology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

[Note: This material constitutes the program requirements for residency education in child neurology. The reader should refer as well to the Program Requirements for Residency Education in Neurology

for information on requirements for core programs, to which programs in child neurology must be attached. The reader is also referred to the Institutional Requirements of the Essentials of Accredited Residencies in Graduate Medical Education and to other publications of the Accreditation Council for Graduate Medical Education (ACGME), which outline the composition and function of all Residency Review Committees (RRCs); indicate the actions that any RRC may take, as well as the actions that the ACGME may take; and describe the appeals procedure, types of programs, and the relationships among the RRCs, their parent organizations, and the ACGME.

Requests to have a program accredited to train residents in child neurology (or related inquiries regarding residency programs) should be addressed to Executive Director, RRC for Neurology, 515 N State St, Suite 2000, Chicago, IL 60610. All inquiries concerning prerequisite training or whether a physician is qualified to be examined for certification in neurology with special qualification in child neurology should be addressed to Executive Vice President, American Board of Psychiatry and Neurology (ABPN), 500 Lake Cook Rd, Ste 335, Deerfield, IL 60015.]

I. Introduction

A. Duration and Scope of Training

Training in child neurology shall encompass a total of 3 years. One year of training must be in clinical adult neurology. One year of training shall be referred to as flexible, and the resident must learn the principles of neurophysiology, neuropathology, neuroradiology, neuro-ophthalmology, psychiatry, rehabilitation, neurological surgery, neurodevelopment, and the basic neurosciences. One year of training shall be in clinical child neurology.

B. Prerequisite Training

The training can be initiated following one of three options: (1) 2 years of residency training in pediatrics in the United States or Canada; (2) one PG-1 year (as described in the Program Requirements for Residency Education in Neurology, Section I.A.1) and 1 year of residency training in pediatrics; or (3) 1 year of pediatrics plus 1 year of basic neuroscience training. The program director must review and determine the acceptability of these initial 2 years of training.

C. Goals and Objectives for Residency Training

The purpose of the training program is to prepare the physician for the independent practice of clinical child neurology. This training must be based on supervised clinical work with increasing responsibility for outpatients and inpatients. It must have a foundation of organized instruction in the basic neurosciences.

D. Relation to Core Programs

The 3 years of training in child neurology must take place in a center in which there are accredited residency programs in both pediatrics and neurology and with the approval and support of the program directors of both of these departments.

E. Leave and Vacation Policy

Each program must have an equitable leave and vacation policy for residents, in accordance with overall institutional policy.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
3. Participation by any institution providing 6 months or more of training in a program must be approved by the RRC.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The director and teaching staff of a program must prepare and comply with written educational goals for the program. The program director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents, and the maintenance of records related to program accreditation, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented clinical, educational and administrative abilities and experience.
 - b. The program director must be certified in the specialty by the American Board of Psychiatry and Neurology (ABPN) with Special Qualification in Child Neurology or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. licensure to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.

- b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.On review of a proposal for any such major change in the program, the RRC may determine that a site visit is necessary.
- e. notification in writing of the Executive Director of the RRC within 60 days of the following:
 - 1) changes in the program directorship or the departmental leadership and
 - 2) changes in administrative structure, such as a change in the hierarchical status of the program and/or department within the institution.Notification of a change in the program directorship must include a copy of the new director's curriculum vitae, including details of his or her experience and qualifications in graduate medical education.
- f. devotion of sufficient time and full commitment to provide leadership to the program and supervision of the residents.
- g. monitoring the content and ensuring the quality of the program.
- h. selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- i. supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- j. supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- k. implementation of fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- l. monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

B. Faculty

1. **At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.**
 - a. In addition to the program director, the program providing training in child neurology must have at least two child neurology faculty, in addition to the adult neurology faculty, fully committed to the residency program who devote sufficient time to the training program to ensure adequate clinical training of the child neurology residents. Within the section of child neurology, a faculty-to-resident ratio of at least 1:1 in the total program is required. The program director may be counted as one of the faculty in determining the ratio.
 - b. There must be enough faculty with diverse interests and skills to make the breadth of teaching and research appropriate to a program meeting these program requirements; to ensure adequate clinical opportunities for residents; and to provide continued instruction through seminars, conferences, and teaching rounds.
 - c. Faculty with special expertise in the disciplines related to child neurology, including cognitive development, neuro-ophthalmology, neuromuscular disorders, critical care, clinical neurophysiology, neuroimmunology, infectious disease, neuro-otology, neuroimaging, neurogenetics, neuro-oncology, and pain medicine must be available to child neurology residents.
2. **The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, a commitment to their own continuing medical education, and participation in scholarly activities and must support the goals and objectives of the educational program of which they are a member.**
3. **Qualifications of the physician faculty are as follows:**
 - a. **The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.**
 - b. **The physician faculty must be certified in the specialty by the ABPN in neurology with Special Qualification in Child Neurology, or possess qualifications judged to be acceptable by the RRC.**
 - c. **The physician faculty must be appointed in good standing to the staff of an institution participating in the program.**
4. **The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and child neurology training must be conducted in centers where there is active research activity both in clinical and basic neuroscience fields. *Scholarship* is defined as the following:**
 - a. **the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;**
 - b. **the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;**
 - c. **the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.**

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

5. **Qualifications of the nonphysician faculty are as follows:**
 - a. **Nonphysician faculty must be appropriately qualified in their field.**
 - b. **Nonphysician faculty must possess appropriate institutional appointments.**
6. The program must have a sufficient number of qualified staff involved in the teaching of residents in each of the component institutions of the program.
7. The staff must actively pursue scholarly activity in the neurosciences and encourage residents to engage in scholarly activity.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the administration and educational conduct of the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. **Patient Population**
During the year of training in clinical child neurology, the resident must work in the outpatient clinic and on the inpatient service on a regular basis. The number and type of patients must be appropriate. The patient population must be diversified as to age and sex, short-term and long-term neurologic problems, and inpatients and outpatients. Child neurology residents must have management responsibility for hospitalized patients with neurological disorders. Neurology residents must be involved in the management of patients with neurological disorders who require emergency and intensive care.
2. **Facilities**
 - a. The department or division of child neurology shall be part of the department of pediatrics and/or the department of neurology.
 - b. There must be adequate inpatient and outpatient facilities, examining areas, conference rooms, and research laboratories. There must be adequate space for offices for faculty members. Space for study, chart work, and dictation must be available for the residents. There must be adequate contemporary clinical laboratory facilities that report rapidly the results of necessary laboratory evaluations, including clinical-pathological, electrophysiological, imaging, and other studies needed by neurological services. Adequate chart and record-keeping systems must be in use for patient treatment.
3. **Library**
Residents must have access to an adequate medical library. Library services must include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries, collections of texts and journals, and electronic retrieval of information from medical databases must be readily available during nights and weekends.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

The exact number of residents that may be appointed to a given program is not specifically designated. However, the number of residents appointed to the program must be commensurate with the educational resources specifically available to the residents in terms of faculty, the number and variety of patient diagnoses, and the availability of basic science and research education.

All additional trainees in the program other than regularly appointed residents must be identified and designated as such and must not compromise resident education.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

All educational components of a residency program should be related to program goals. The program design and/or structure will be approved by the RRC for Neurology as part of the regular review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. These goals and objectives must be consistent with and linked to the program's overall goals and objectives, the educational experiences in the curriculum (both didactic and clinical), and the program requirements. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments. The program director also must develop criteria to use in the assessment of the extent to which the program's goals and objectives are met.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(N.B.: Section V. D. does not apply to certain subspecialties)

E. Basic Curriculum

1. Patient care, teaching, and research must be present in every training program. Patient care responsibilities must ensure a balance between patient care and education that achieves for the trainee an optimal educational experience consistent with the best medical care. Patient care responsibilities must include inpatient, outpatient, and consultation experiences.
2. In the program there must be a minimum of 12 months (full-time equivalent) of clinical child neurology with management responsibility for patient care. This must include at least 4 months (full-time equivalent) of outpatient experience in clinical child neurology. The outpatient experience also must include a resident longitudinal/continuity clinic with attendance by each resident at least one-half day weekly throughout the program. (The resident may be excused from this clinic when a rotation site is more than 1 hour travel time from the clinic site.)

F. Teaching Rounds

Clinical teaching rounds must be supervised and directed by the faculty of the child neurology department or division. They must occur at least 5 days per week. The resident in child neurology must present cases and their diagnostic and therapeutic plans.

G. Clinical Teaching

1. The resident must have instruction and practical experience in obtaining an orderly and detailed history from the patient, in conducting a thorough general and neurological examination, and in organizing and recording data. The training must include the indications for neurodiagnostic tests and their interpretation. The resident must learn to correlate the information derived from these neurodiagnostic studies with the clinical history and examination in formulating a differential diagnosis and management plan.
2. Residents must participate in the evaluation of and decision making for patients with disorders of the nervous system requiring surgical management. This experience must be part of the clinical child neurology experience. The existence of a neurosurgical service with close interaction with the neurology service is essential.
3. The residents must participate in the management of children and adolescents with psychiatric disorders. They must learn about the psychological aspects of the patient-physician relationship and the importance of personal, social, and cultural factors in disease processes and their clinical expression. Residents must become familiar with the principles of psychopathology, psychiatric diagnosis and therapy, and the indications for and complications of drugs used in psychiatry. This must be accomplished by at least a 1-month experience (full-time equivalent) under the supervision of a qualified child and adolescent psychiatrist.
4. Residents must learn the basic principles of rehabilitation for neurological disorders, including pediatric neurological disorders.
5. The resident must participate in the management of pediatric patients with acute neurological disorders in an intensive care unit and an emergency department.

6. The resident must receive instruction in the principles of bioethics and in the provision of appropriate and cost-effective evaluation and treatment for children with neurologic disorders.
7. The resident must receive instruction in appropriate and compassionate methods of terminal palliative care, including adequate pain relief, and psychosocial support and counseling for patients and family members about these issues.

H. Progressive Responsibility

Programs must provide opportunities for increasing responsibility and professional maturity of residents. Early clinical assignments must be based on direct patient responsibility for a limited number of patients. Subsequent assignments must place the resident in a position of taking increased responsibility for patients and in a liaison relationship with staff and referring physicians. Night call is essential in accomplishing this goal. Adequate faculty supervision is essential throughout the program. Neurological training must include assignment on a consultation service to the medical, surgical, and psychiatric services.

I. Basic and Related Science

Residents must learn the basic sciences on which clinical child neurology is founded, including neuroanatomy, neural and behavioral development, neuropathology, neurophysiology, neuroimaging, neuropsychology, neurochemistry, neuropharmacology, molecular biology, genetics, immunology, and epidemiology and statistics. Concentrated training in one or more of these areas, accomplished with a full-time equivalent experience of at least 2 months total, is required for each resident. Specific goals and objectives must be developed for this experience.

J. Electives

Resident assignments need not be identical for each resident. Elective time should accommodate individual resident interests and previous training. Elective time should be a minimum of 3 months.

K. Seminars and Conferences

1. Residents must regularly attend seminars and conferences in the following disciplines: neuropathology, clinical neurophysiology, neuroradiology, neuro-ophthalmology, cognitive development, neuromuscular disease, epilepsy, movement disorders, critical care, neuroimmunology, infectious disease, neuro-otology, neuroimaging, neurogenetics, neuro-oncology, pain medicine, and general and child neurology. There must be gross and microscopic pathology conferences and clinical pathological conferences. The resident must have increasing responsibility for the planning and supervision of the conferences.
2. The resident must learn about major developments in both the basic and clinical sciences relating to child neurology. Residents must attend periodic seminars, journal clubs, lectures, didactic courses, and meetings of local and national neurological societies.

L. Resident Responsibility for Teaching

Teaching of other residents, medical students, nurses, and other health care personnel, formally and informally, are required aspects of the resident's education in neurology.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must

recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.
5. There must be adequate physician coverage if unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

- c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

The program must have an evaluation system that provides information about each resident's educational progress and the extent to which each resident has accomplished the program's learning and performance objectives.

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident. The program director or his or her designee must meet with each resident semiannually in a formal feedback session to discuss the resident's standing in relation to specific learning and performance objectives. Plans to correct any deficiencies must be discussed. Each resident must be an active participant in formulating plans for his or her development. Evaluation

data should be used to advise the resident and to make decisions regarding the progression in the resident's level of responsibility.

- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.
- d. A written evaluation of the resident's attainment of objectives specific to the rotation must be made after each rotation and reviewed with the resident so that areas of weakness and strength can be communicated to the resident. This evaluation must incorporate evaluations obtained from faculty in the department of neurology during the resident's rotation on the adult clinical service and flexible year experiences, together with evaluations obtained from other faculty in the department or division of child neurology.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

At the conclusion of the resident's period of training in the program, the program director must prepare a detailed, written evaluation of the resident's performance in relation to the program's learning and performance objectives and discuss this evaluation with the resident.

3. Records

- a. A written record of the contents of the semiannual review session must be prepared and filed in the resident's permanent record. The written record of the evaluation and the review must be signed by the resident. The resident must have the opportunity to append a written response to the written record of the evaluation and review.
- b. Each resident's permanent record must include the written evaluations completed for each defined educational experience, the written records from the semiannual reviews, results of formal assessments, and the resident's final evaluation. Written descriptions of any deficiencies and problem areas, plans for correcting the deficiencies, disciplinary actions, and commendations, where appropriate, should be included.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Annual written evaluations by residents must be used in the process.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this

purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.
3. Evaluations of residents' attainment of the program's learning and performance objectives must be used as the basis for program evaluation. Comparisons of these data against the program's own criteria, performance criteria set by the RRC, and attainment levels of residents at comparable levels of training should be performed as a primary means of assessing attainment of goals and objectives.
4. The teaching staff should periodically evaluate the use of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Psychiatry and Neurology (ABPN) with Special Qualification in Child Neurology should communicate with the office of the board regarding the full requirements for certification

One measure of the quality of a training program is the proportion of its graduates who take the examinations of the ABPN and their performance on those examinations.

*ACGME: February 1998 Effective: January 1999
Editorial Revisions: September 1999 and July 2004*

Program Requirements for Residency Education in Clinical Neurophysiology (Neurology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition

1. Clinical neurophysiology is an area of medicine in which selected neurological disorders involving central, peripheral, and autonomic nervous systems and muscles are assessed, monitored, and treated using a combination of clinical evaluation and electrophysiological testing. A derangement of the normal physiology of the nervous system underlies these selected disorders, and an assessment of the electrophysiological abnormalities is an integral part of the evaluation process. Clinical neurophysiology requires a detailed knowledge of the normal physiology of the nervous system; the altered, abnormal electrophysiology; and the disease states involved.
2. Clinical neurophysiology is not confined to diagnostic techniques but includes the application of electrical, magnetic, and mechanical methods to the evaluation and treatment of a wide range of diseases, including:
 - a. epilepsies,
 - b. cerebrovascular disease,
 - c. dementia and encephalopathies (coma, stupor, confusion, developmental delay, regression),
 - d. multiple sclerosis (including other demyelinating disorders),
 - e. movement disorders,
 - f. brain tumors and other mass lesions,
 - g. encephalitis/meningitis,
 - h. sleep disorders,
 - i. traumatic disorders,
 - j. myelopathies,
 - k. motor neuron disease,
 - l. radiculopathies and plexopathies,
 - m. mononeuropathies,
 - n. polyneuropathies and
 - o. myopathies and neuromuscular transmission disorders.

Another application of increasing importance is the use of intraoperative monitoring to guide surgical interventions.

B. Duration and Scope of Training

Training in neurophysiology shall encompass a total of one year which must be preceded by the completion of a residency program in neurology, child neurology, or general psychiatry accredited in the United States or Canada. The training must be separate and distinct from all training required for certification in neurology, child neurology, or general psychiatry. The training must include significant didactic and clinical experience in two of the following:

1. electroencephalography
2. electromyography and nerve conduction studies, or
3. polysomnography and assessment of disorders of sleep,

The one year in clinical neurophysiology should be in a program that provides training in the broad area of clinical neurophysiology. The training must cover this broad area, with clinical or didactic experience in the following:

1. electroencephalography,
2. electromyography and nerve conduction studies,
3. polysomnography and assessment of disorders of sleep,

4. movement disorder assessment, including tremor, spasticity, and dystonia,
5. evoked potential studies,
6. single fiber electromyography,
7. video EEG monitoring,
8. intraoperative monitoring and analysis, and
9. testing of autonomic function.

C. Objective

The objective of the total training outlined above is to provide the resident with the opportunity to develop the expertise necessary to evaluate and manage patients using the procedures and techniques of clinical neurophysiology.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
3. Participation by any institution providing 2 months or more of training in a program must be approved by the RRC.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation, and for the establishment and maintenance of a stable educational environment. The director and teaching staff of a program must prepare and comply with written educational goals for the program. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:

- a. The program director must possess the requisite specialty expertise, as well as documented clinical, educational and administrative abilities
- b. The program director must be certified in the specialty by the American Board of Psychiatry and Neurology (ABPN) in Clinical Neurophysiology, or possess appropriate educational qualifications judged to be acceptable by the RRC.
- c. The program director must be appointed in good standing and based at the primary teaching site.
- d. Licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)

4. Responsibilities of the program director are as follows:

- a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
- b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
- e. Full commitment to the residency program and devotion of sufficient time to provide leadership to the program and supervision of the residents in the program.
- f. Monitoring the content and ensuring the quality of the program.
- g. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- h. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.
- i. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall
 - 1) at least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures;
 - 2) communicate each evaluation to the resident in a timely manner;

- 3) advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth;
- 4) maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
- j. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- k. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified.

B. Faculty

- 1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
- 2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, a commitment to their own continuing medical education, and participation in scholarly activities, and must support the goals and objectives of the educational program of which they are a member. The program providing training in clinical neurophysiology must have at least two faculty neurologists, including the director, who have completed training in this subspecialty. It is desirable that they be full-time members of the Department of Neurology.
- 3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Psychiatry and Neurology in clinical neurophysiology or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
- 4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and clinical neurophysiology training must be conducted in centers where there is research in clinical neurophysiology. The program must include opportunities for the resident to participate in research projects and scholarly work relating to the field of clinical neurophysiology. **Scholarship** is defined as the following:
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

- 5. Qualifications of the nonphysician faculty are as follows:
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.
- 6. Appropriate expertise in the areas defined in Section I.B., above, must be present among the director and the faculty. The RRC recognizes that expertise in clinical neurophysiology is available from physicians board certified in many medical specialties, particularly in Physical Medicine and Rehabilitation and in Psychiatry, and actively encourages multidisciplinary cooperation in the training of residents.
- 7. The faculty shall devote sufficient time to the training program to ensure adequate clinical training of the resident in clinical neurophysiology and will be primarily involved in direction of the resident during the one year training.
- 8. A member of the teaching staff of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
- 9. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative must participate in these reviews.
- 10. The teaching staff must periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the teaching staff, and the quality of supervision of residents.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

- 1. Facilities
 - The section of clinical neurophysiology shall be within the Department or Division of Neurology and have facilities adequate for the educational program.
- 2. Library
 - a. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
 - b. Library services should include the electronic retrieval of information from medical databases.
 - c. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of

texts and journals must be readily available during nights and weekends.

E. Other Teaching Staff

In addition, faculty with suitable training and experience from other disciplines may be included in the teaching program.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

All educational components of a residency program should be related to program goals.

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management. The training program is largely a clinical experience in which the resident develops and executes a plan of evaluation and treatment, including the appropriate technical skills to deal with patients with various neurological disorders.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(N.B.: Section V. D. does not apply to certain subspecialties)

E. Seminars and Conferences

The section of clinical neurophysiology must conduct formal lectures and teaching conferences in clinical neurophysiology on a regular basis. These must include clinical applications for each of the required neurophysiological studies and their correlation with the pertinent neurological disease processes as outlined in Section I.A., paragraph 2, above. Participation in clinical conferences dealing with epilepsy and neuromuscular disorders is of particular importance.

F. Teaching and Supervision

1. Supervisory faculty and staff must be available on a full-time basis. The resident must be exposed to a one-on-one relationship with the faculty. The teaching staff members must be available on site during both the neurophysiological studies and the clinical correlation of the results.
2. The resident in clinical neurophysiology must be given an active role in the teaching and training of neurology residents in which the section resides.

G. Clinical and Neurophysiological Basic Science Teaching

1. Clinical Science: The resident must have instruction and practical experience to permit him or her to develop diagnostic, procedural, technical, and interventional skills essential to the performance of clinical neurophysiology. The experience must include opportunities to observe, evaluate, and manage patients of all ages with a wide variety of disorders of the nervous system and muscles, as well as to learn the effectiveness of procedures. It should provide for basic and advanced training and education, as well as professional development. Experience must include appropriate outpatient care, inpatient care and support services in the fields of pathology and radiology. Examples of problems that must be included in the experience of the resident for the development of knowledge and skills specific to clinical neurophysiology are outlined in detail in Section I.A., paragraph 2, above. There must be experience in the development and execution of a plan of evaluation and treatment, including the appropriate technical skills to deal with patients with the specified disorders. The opportunity must include experience in clinical diagnosis and accumulation/interpretation of laboratory data relevant to these disorders as part of outpatient and inpatient diagnostic evaluations.

Experience should include training in the various areas outlined in Section I.B., above. The resident's experience must include independent EEG, EMG, and/or sleep studies of a sufficient number of patients to achieve competence in the assessment of patients with a wide range of clinical disorders.

2. Basic Science: Residents must be provided with an advanced and extensive background in those basic sciences on which clinical neurophysiology is founded. These include neurophysiology, neuroanatomy, neuropharmacology, and neuropathology. Didactic lectures and seminars must include the basic neurological sciences as they pertain to clinical neurophysiology. Clinical neurophysiology residents should participate in the teaching of residents during their neurophysiology laboratory rotations at academic hospitals and major clinics.

H. Resident/Patient Ratio

The number of patients must be adequate to provide a sound educational program. It is the program director's responsibility to ensure that the number of patients is appropriate. They must be diversified as to age, sex, short-term and long-term neurological problems, and inpatients and outpatients. Making patients available to the clinical

neurophysiology resident must not interfere with the training of residents in the core neurology training program.

I. Faculty/Resident Ratio

In general, there should be enough faculty with diverse interests and skills to make the breadth of training appropriate to a program meeting these special requirements, to ensure adequate clinical experience for residents, and to provide continued interaction (e.g., through seminars, conferences, clinical supervision) among residents and faculty.

J. Diagnostic Skills

Clinical assignments should include progressively increasing responsibility for patient care with direct supervision by the appropriate faculty member or staff. Adequate faculty supervision is essential throughout the program.

K. Subspecialty Experience

While a wide range of clinical experience is mandatory, each resident should have extensive experience in one or more areas of clinical neurophysiology. Clinical assignments need not be identical for each resident. Subspecialty experience should accommodate individual interests.

L. Resident Responsibility

The resident's education in clinical neurophysiology is reinforced by teaching the discipline to other residents in neurology and other disciplines and to medical students, nurses, and other health care personnel. Residents must be given this opportunity.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.

3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.

4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.
 - d. There should be adequate physician coverage if unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.

2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMCC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance. Resident evaluation by staff must be made at regular intervals so that areas of weakness and strength can be communicated to the resident. Records shall be maintained documenting resident experience and performance. Periodic review of the resident's performance is essential for planning his or her subsequent educational program. The evaluation will include judging the fund of knowledge, basic clinical competence, general skills in the primary specialty, and the specific technical skills required for clinical neurophysiology. The summary and final evaluation of the resident in clinical neurophysiology must be prepared by the program director of the clinical neurophysiology training program and should reflect the periodic evaluation of all the faculty. Each resident must be required to be proficient in the technical skills determined to be necessary for a clinical neurophysiologist and any related standards relevant to neurology.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by residents must be utilized in this process.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMCC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Psychiatry and Neurology (ABPN) in Clinical Neurophysiology should communicate with the office of the board regarding the full requirements for certification.

X. Other

A. Relation to Core Program

The one year of training in clinical neurophysiology must take place in a center in which there is an accredited residency program in neurology and with the written approval and support of the director of the neurology program.

B. Use of Board Examinations

One measure of the quality of a training program is the proportion of its graduates who take the examination in clinical neurophysiology provided by the American Board of Psychiatry and Neurology, as well as their performance on those examinations.

C. Review of the Program

The provisions of the Institutional Requirements for residency training of the ACGME must also be met for approval of training in clinical neurophysiology.

*ACGME: February 2000 Effective: January 2001
Editorial Revision (Common Program Requirements):
January 2005*

Program Requirements for Residency Education in Neurodevelopmental Disabilities (Neurology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

The purpose of the training program is to prepare the physician for independent practice as a neurodevelopmental disabilities specialist. The training program must combine training in the relevant basic sciences with supervised clinical training in the diagnosis and care of children with neurodevelopmental disabilities.

B. Duration and Scope of Education

1. Training in neurodevelopmental disabilities must be preceded by successful completion of 24 months of training in a pediatric residency training program accredited in the United States or Canada. The program director must review and approve the acceptability of these initial 2 years of training. This training should satisfy the requirements essential for board certification in pediatrics by the American Board of Pediatrics or its equivalent.
2. The length of the educational program is 4 years. One year of the training must be a year of training in clinical adult Neurology. Eighteen months must be spent in training in clinical child neurology and neurodevelopmental disabilities and 18 months in clinical and basic science training. Training in adult and child neurology should take place at the primary clinical site where the neurodevelopmental disabilities program is conducted. It is important that clinical and basic science training are within the same institution.
3. Any program that extends the length of training beyond 4 years must present an educational rationale that is consistent with the special requirements and the objectives for residency training. Approval for the extended curriculum must be obtained prior to implementation and at each subsequent review of the program.
4. Prior to entry into the program, each resident must be notified in writing of the required length of the program.

C. Goals of Education

Programs must provide a broad educational experience in neurodevelopmental disabilities, which will prepare the resident to function as a neurodevelopmental disabilities specialist capable of providing comprehensive patient care in academic or clinical practice settings. The curriculum must provide a strong scientific foundation that is confirmed by the training program and that will allow the resident to incorporate new developments in the basic sciences into their clinical practice. The clinical component in neurodevelopmental disabilities must also include supervised training that provides the residents with increasing responsibility for outpatients and inpatients. This clinical training should lead to a defined level of clinical competence.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements,

and this responsibility extends to resident assignments at all participating institutions.

The sponsoring institution must provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.

The four years of training in neurodevelopmental disabilities must take place in an institution in which there are accredited residency programs in child neurology, neurology, and pediatrics. The residency training program in neurodevelopmental disabilities must be within a department or division with an accredited program in neurology or pediatrics.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience. It is desirable to have the training occur at a single institution. If the resources of two or more institutions are required to support the program, inter-institutional agreements must be developed by the sponsoring and participating institutions as stated in the Institutional Requirements. Participation by any institution that provides 3 months or more of the educational program must be approved prospectively by the RRC. Participating institutions should provide clinical resources not available to the sponsoring institution for the program. Such assignments should be limited to no more than two separate institutions. The experience in child neurology and in neurodevelopmental disabilities should be in one integrated program. Training in two separate institutions will be allowed in unusual circumstances with the prior approval of the RRC.
 - a. Training in the sponsoring institution may be supplemented with training in no more than 2 additional, separate ACGME-accredited programs for periods of 3 or more months.
 - b. The primary teaching faculty must have fulltime status in the sponsoring institution.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME). There must also be an associate program director whose training complements the multidisciplinary scope of the subspecialty.

2. The program director, together with the faculty, is responsible for the general administration of the program, including activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership. The primary teaching faculty must have full time faculty status in the sponsoring institution.

3. Qualifications of the program director are as follows:

- a. The program director must possess the requisite specialty expertise, as well as documented clinical, educational and administrative abilities and experience.
- b. The program director must be certified in the specialty by the American Board of Psychiatry and Neurology, the American Board of Pediatrics, or possess qualifications judged to be acceptable by the RRC.
- c. The program director must be appointed in good standing and based at the primary teaching site.
- d. Licensure to practice medicine in the state where the institution that sponsors the program is located.

4. Responsibilities of the program director are as follows:

- a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
- b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program
 - 3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e. Selecting residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- f. Selecting and supervising the faculty and other program personnel at each institution participating in the program.
- g. Supervising residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians.

h. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

- i. Implementing fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- j. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- k. Notifying the RRC regarding major programmatic changes and changes in leadership in the training program.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, a commitment to their own continuing medical education, and participation in scholarly activities and must support the goals and objectives of the educational program of which they are a member.

3. Qualifications of the physician faculty are as follows:

- a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Psychiatry and Neurology, the American Board of Pediatrics, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
- a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

While not all of the faculty must be investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. This activity should include

- a. Participation in clinical and basic science teaching in a manner that promotes a spirit of inquiry and scholarship. Scholar-

ship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.

- b. Provision for opportunities for training in outcome research.
5. **Qualifications of the nonphysician faculty are as follows:**
 - a) **Nonphysician faculty must be appropriately qualified in their field.**
 - b) **Nonphysician faculty must possess appropriate institutional appointments.**
6. In addition to the program director, the faculty must include at least two full-time faculty members who have appropriate educational qualifications in neurodevelopmental disabilities.
7. A member of the faculty of each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
8. Additional faculty must include specialists in the following medical and allied health specialties: dentistry, genetics, neonatology, neurology, neurosurgery, ophthalmology, orthopedics, otolaryngology, pediatrics and its related subspecialties, physical medicine and rehabilitation, psychiatry, and child and adolescent psychiatry. Allied health and non-medical disciplines that must be made available to the resident include: audiology, nutrition, occupational therapy, physical therapy, neuropsychology, speech pathology, special and early education, social work, and vocational rehabilitation.
9. The faculty must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative should participate in these reviews.
10. The faculty should at least annually evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of faculty, and the quality of supervision of residents.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Facilities and Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

The institution's facilities and resources must provide sufficient space and appropriate equipment as well as an adequate number and variety of patients to support the specialty education program. In particular, there must be adequate space for the educational program, including meeting rooms; classrooms with audiovisual and other educational aids; free space for staff; pertinent library materials; and diagnostic, therapeutic, and research facilities.

1. **Inpatient, Ambulatory Care, Laboratory, and Other Clinical Facilities.**
 - a. There must be a sufficient number of examining rooms, conference rooms, and research laboratories.
 - b. The inpatient and outpatient facilities must be adequate in size and diversity and must have the appropriate equipment necessary for a broad education in pediatrics and in neurology.
 - c. The institution must provide access to diagnostic and therapeutic equipment used in the diagnosis and treatment of children with neurodevelopmental disabilities. There must be adequate clinical laboratory facilities that rapidly report the results of necessary laboratory evaluations including clinical,

pathological, electrophysiological, imaging, and other studies needed by the neurological and pediatric services.

- d. Adequate chart and record keeping systems must be in place for patient treatment and evaluation.
2. **Library**
 - a. The residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangements with a convenient nearby institution.
 - b. Library services should include electronic retrieval of information from medical databases.
 - c. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On site libraries and/or collection of texts and journals must be readily available during nights and weekends.
3. **Patient Populations**
 - a. Programs must provide residents with patient care experiences in both the inpatient and outpatient settings. A sufficient number, variety, and complexity of patients ranging in age from infancy through adulthood must be present. The patient population must also be diversified with regard to long term and short-term neurological and developmental disorders.
 - b. The resident must have primary care or consulting responsibilities for hospitalized patients with neurological disorders and neurodevelopmental disabilities. The resident must be involved with the management of patients with neurological disorders who require emergency care. Adequate numbers of new and follow-up subspecialty outpatients must be available to provide a broad experience in the subspecialty. The program must maintain an appropriate balance among the numbers and varieties of patients, numbers of preceptors, and the number of subspecialty residents in the program.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

Policy/procedure for changing resident complement or filling vacant resident positions:

1. The RRC must prospectively approve any change in the complement of residents in the training program prior to instituting the changes.
2. When a resident transfers into the training program, the training program director is responsible for communicating with the program director of the neurodevelopmental disabilities training program from which the trainee is transferring. The training director of the program into which the trainee is transferring must document in writing the concerns and training status of the transferring trainee prior to the transfer.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the perfor-

mance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

The appointment of other residents requires a clear statement of the areas of training, clinical responsibilities, and duration of the special education. This statement must be supplied to the RRC at the time the program is site visited.

If, in the judgment of the RRC, such residents will detract from the education of the regularly appointed neurodevelopmental disabilities residents, the accreditation status of the program may be adversely affected.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences and structure for neurodevelopmental disabilities training will be approved by the Neurology RRC as part of the regular review process. All educational components of the neurodevelopmental disabilities residency program should be related to program goals.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major rotation or other program assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments. It should be readily available for review.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(N.B.: Section V. D. does not apply to certain subspecialties)

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;

4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Clinical Components

The program director and the faculty must prepare and comply with written educational goals for the program as indicated in Section III. A. 2. a. above.

1. Basic Curriculum

- a. One year of adult neurology: This component must include care for some adults with chronic neurodevelopmental disabilities who are in a continuity clinic.
- b. Eighteen months of clinical child neurology and neurodevelopmental disabilities: This component must include not only training in the neurodevelopmental disabilities encountered by a child neurologist but also training in a multidisciplinary team approach to children with chronic neurological disabilities.
- c. Adequate training in neurodevelopmental disabilities requires that at least 50% of the resident's patient encounters are pediatric patients with neurodevelopmental disabilities.
- d. The training in the multidisciplinary team approach must be no less than 1 month (FTE).
- e. Eighteen months of clinical and basic science training: This component must include at least 1 month (FTE) experience in each of the following: child and adolescent psychiatry, neurosurgery and neurorehabilitation. The resident must also gain significant clinical experience with behavioral neurology, neurogenetics/metabolism, neuromuscular disorders, neuro-oncology, and neuro-ophthalmology. Included in this time must be at least 6 months of elective time.

2. Clinical training must be based upon a comprehensive neurodevelopmental curriculum. This includes exposure to all age groups and degrees of disability. While the focus is on learning principles of patient management, other foci include screening, assessment, diagnosis, interdisciplinary interaction, and advocacy. Training must be in outpatient and inpatient settings, and must include diagnostic assessment and management of the entire spectrum of neurodevelopmental disabilities. The trainee must have the opportunity to act as a neurodevelopmental pediatric consultant in developmental disabilities of other medical and non-medical disciplines in inpatient, outpatient, and community settings.
3. There should be active participation of the teaching staff in clinical discussion, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. When on inpatient rotations the resident must make rounds at least 5 days each week. The resident must also take night call during the adult and child neurology training components.
4. Residents will be expected to follow inpatient cases during the duration of their hospital stay or the duration of the resident rotation. They will be expected to follow outpatients in a continuity clinic throughout the duration of their training period. This experience should include adults and children who are followed in the continuity clinic.
5. All patients, both on the inpatient and outpatient services, must be seen by a faculty attending in conjunction with the resident.

The attending may briefly precept patients well known to the resident.

6. Adequate faculty supervision is essential throughout the program, but programs must also provide opportunities for increasing responsibility and professional maturity of residents. Early clinical assignments must be based on direct patient responsibility for a limited number of patients. Subsequent assignments must place the resident in a position of taking increased responsibility for patients in a way that corresponds to each resident's knowledge, manual skill, experience, and the complexity of the patient's illness; such assignments should enable the resident gradually to develop a liaison relationship with staff and referring physicians.
7. Residents should have structured opportunities throughout their training to develop and improve teaching skills. These activities should include the supervision of more junior trainees, as well as the teaching of other residents, medical students, nurses, and other health care professionals, either formally or informally.

F. Didactic Components

1. Residents must obtain an adequate background in those basic sciences upon which child neurology and neurodevelopment are founded, including neuroanatomy, neuroembryology, neural development, neuropathology, basic neurophysiology, neuroimaging, neuropsychology, neurochemistry, neuropharmacology, molecular biology, genetics, immunology, epidemiology, and biostatistics.
2. Specialty Content:
 - a. Residents must learn the fundamentals of specific diagnostic and management strategies of the major neurodevelopmental disabilities, including but not limited to: cognitive disorders (mental retardation, learning disabilities, progressive encephalopathies), communication disorders, neurobehavioral disorders (autistic spectrum disorders), motor disabilities (cerebral palsy, neuromuscular and other neuromotor disorders, movement disorders, including Tourette syndrome), sensory disorders (visual and auditory disorders), and multiple disabilities.
 - b. They must learn the appropriate instruments for neuropsychological assessment and understand how to apply developmental measurements and scales.
 - c. They must become familiar with anticipatory guidance and counseling of families with children who have developmental disabilities.
 - d. They must learn strategies for pharmacological and non-pharmacological management of self-injurious and other troublesome behaviors.
 - e. They must learn the skills for the management of spasticity or other movement disorders. This must include some training in the technical skills needed to manage such patients.
 - f. The resident must learn how to secure, organize, and manage patient resources and treatment.
3. Bioethics, Economics and End of Life Content
The resident must receive instruction in the bioethics and economics of medicine. The resident must also receive instruction in appropriate and compassionate methods of end-of-life palliative care.
4. Conferences
 - a. Residents must regularly attend conferences in the following disciplines: child neurology, neurorehabilitation, neuropsychology, and clinical pharmacology. Residents must attend and participate in periodic seminars, journal clubs, lectures, didactic courses, and meetings of local and national neurological and neurodevelopmental societies. Residents must be periodically responsible for the design and presentation of clinical conferences.

- b. Faculty and residents should document attendance at all of the conferences and didactic sessions that constitute the core requirements for training.
- c. Faculty must supervise and provide feedback to residents during resident-run conferences, and indicate areas of weakness or need for further development of educational skills.

G. Other Required Components

Related Disciplines

1. The resident in neurodevelopmental disabilities must receive instruction in multidisciplinary management of children with neurodevelopmental disabilities. The resident must participate in team management of children in a variety of circumstances including developmental assessment, pediatric rehabilitation, and team management of children with developmental defects.
2. The resident must participate in activities that provide experience and training in public advocacy and community consultation.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents/Resident Policies

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty and other more senior residents. Supervising faculty with appropriate experience for the severity and complexity of the patient's condition must be available at all times.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours and Conditions of Work

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

5. The program must provide the residents with experience in direct and progressively responsible patient management as they advance through the educational program. The education must culminate in sufficiently independent responsibility for clinical decision making so that the program director and faculty are assured that the graduating resident has achieved the ability to make sound clinical decisions consistently.
6. Teaching of other residents, medical students, nurses, and other health care personnel, formally and informally, is a required aspect of the resident's education in neurodevelopmental disabilities.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. *In-house call* must occur no more frequently than every third night, averaged over a 4-week period. On-call rooms arranged to permit adequate rest and privacy should be available for each resident on night duty in the hospital. There should be adequate back-up support if needed to maintain appropriate patient care.
2. *Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.*
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These poli-

cies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.

2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

The program must have a formal mechanism by which the knowledge, skills and professional growth of the residents are evaluated.

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final, written evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance in relation to the program's learning and performance objectives during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation should be discussed with the resident and signed and must be part of the resident's permanent record maintained by the institution.

3. Policy for evaluation and promotion.

- a. The residents' performance must be monitored and feedback provided on an ongoing basis.
- b. The supervising faculty must evaluate each resident in writing at the completion of each rotation. This must be reviewed with the resident in a timely manner so that areas of weakness and strength can be communicated to the resident.
- c. The program director or his or her designee must meet with each resident semiannually in a formal feedback session to discuss the resident's standing in relation to the specific learning and performance objectives. Plans to correct any deficiencies must be discussed. Each resident must be an active participant in formulating plans for his or her development. Evaluation data should be used to advise the resident and to make decisions regarding the progression in the resident's level of responsibility. The evaluation data must include the

results from annual objective written or clinical assessments of the resident's knowledge and skills.

- d. The assessment must specify how the acquisition of requisite skills for subspecialty competence is accomplished.
- e. Written record of evaluations must be maintained, must be formally reviewed with the subspecialty resident, and must be accessible to authorized personnel. The resident should be advanced to positions of higher responsibility only on the basis of evidence that there is satisfactory progressive scholarship and professional growth.

4. Records

A written record of the contents of the semiannual review session must be prepared and filed in the resident's permanent record. The resident must sign the written record of the evaluation and review. The resident must have the opportunity to append a written response to the written record of the evaluation and review.

Each resident's permanent record must include written evaluations completed for the defined educational experience, the written records from the semiannual reviews, the results of formal assessments, and the resident's final evaluation. Written descriptions of any deficiencies in problem areas, plans for the correcting the deficiencies, disciplinary actions, and commendations, where appropriate, should be included.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents. The faculty should receive formal feedback from these evaluations.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner. In particular, the quality of the curriculum and the extent to which the residents have met the educational goals must be assessed. Written, confidential evaluations by residents should be utilized in this process.

The annual review and evaluation of the program in relation to the educational goals, the quality of the curriculum, the needs of the subspecialty residents, and the clinical and research responsibilities of the faculty must be documented. At least one subspecialty resident representative should participate in the periodic and annual reviews.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with

other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification in neurodevelopmental disabilities sponsored by the American Board of Psychiatry and Neurology and the American Board of Pediatrics should communicate with the office of the Executive Vice President/Secretary of the board regarding the full requirements for certification, to ascertain the current requirements for acceptance as a candidate for certification.

Use of Board Examinations

One measure of the quality of a training program is the proportion of its graduates who take the examination in Neurodevelopmental Disabilities provided by the American Board of Psychiatry and Neurology and the American Board of Pediatrics, as well as their performance on those examinations.

*ACGME: February 2002 Effective: February 2002
Editorial Revision (Common Program Requirements):
January 2005*

Program Requirements for Residency Education in Pain Medicine (Neurology)

I. Scope and Duration of Training

A. Definition and Scope of the Specialty

Pain medicine is a discipline within the practice of medicine that specializes in the management of patients suffering from acute, chronic, and cancer pain. The management of acute and chronic pain syndromes is a complex matter involving many areas of interest and medical disciplines. Clinical and investigative efforts are vital to the progress of the specialty.

B. Duration of Training

Subspecialty training in pain medicine shall consist of 12 months of full-time training, beginning after satisfactory completion of a core residency program. At least 9 of the 12 months of training must be in clinical pain medicine. The remainder may be in clinical activities or research relevant to pain medicine. Assignments must not be made to activities not directly related to pain medicine.

II. Institutional Organization

A. Relationship to Core Program

Accreditation of a subspecialty program in pain medicine will be granted only when the program is in direct association with a core residency program in neurology accredited by the Accreditation

Council for Graduate Medical Education (ACGME). If the subspecialty program is not conducted within the institution that sponsors the core residency program, there must be an integration agreement between the core program institution and the facility in which the pain medicine program is conducted. Rotations outside the institution in which the pain medicine program is based should not exceed 4 months.

B. Appointment of Residents

Programs will be reviewed for assurance that they provide an appropriate balance between the number of residents in training and the educational resources available to them. Any proposed increase in the number of residents must receive prior approval by the Residency Review Committee (RRC). Such approval will require documentation that the available clinical resources and faculty remain in compliance with the requirements.

C. Institutional Policy: Resources

Because pain medicine is a multidisciplinary approach to a common problem, there should be an institutional policy governing the educational resources committed to pain medicine that ensures cooperation of all involved disciplines.

III. Program Director/Faculty

A. Program Director

The program director must be a neurologist who has been certified in pain medicine by the American Board of Psychiatry and Neurology or who has appropriate educational qualifications in pain medicine as determined by the RRC. The program director should have appropriate experience in pain medicine as a clinician, administrator and educator.

The subspecialty program director has responsibility for the teaching program in pain medicine subject to the approval of the director of the core residency program.

B. Medical Director

The medical director of the pain medicine service may be someone other than the subspecialty program director. Recognizing the institutional and multidisciplinary nature of pain medicine, the primary specialty of the medical director is not as important as the provision that such an individual represent the best-qualified person within the institution.

C. Faculty

Qualified physicians with expertise in pain medicine must have a continuous and meaningful role in the subspecialty training program. Faculty involved in teaching subspecialty residents in pain medicine must possess expertise in the care of patients with acute, chronic, and cancer pain problems. Such expertise frequently crosses specialty boundaries. Thus, the program is encouraged to include faculty from American Board of Medical Specialties (ABMS)-recognized medical specialties other than neurology. Where appropriate, supervision and teaching by faculty in these and other disciplines should be incorporated into the teaching program for subspecialty residents in pain medicine.

At least three faculty with expertise in pain medicine should be involved in teaching pain medicine residents, and these should equal two or more full-time equivalents. A ratio of one full-time equivalent faculty member to two subspecialty residents shall be maintained.

IV. Facilities and Resources

A. Space and Equipment

A pain medicine center (clinic) must be located within a hospital/medical office complex and must be designed specifically for the management of patient pain. Space for research and teaching conferences in pain medicine must be available.

Appropriate monitoring and life-support equipment must be immediately available wherever invasive pain medicine procedures are performed.

There must be appropriate on-call facilities for male and female residents and faculty.

B. Support Services

The following functions and support must be available:

1. Appropriate laboratory facilities
2. Appropriate radiologic imaging facilities
3. Psychiatric/psychological services, including behavioral modification
4. Physical and/or occupational therapy
5. Social services
6. Medical record keeping
7. Other services including vocational, nursing, pharmacy, dietary, pastoral, and end of life care, as well as liaison with hospice and abuse services
8. Appropriate electrodiagnostic facilities

C. Patient Population

For each resident in the subspecialty of pain medicine each year, there must be a minimum of 200 new patients. A minimum of 15% of the resident's experience should be spent in managing each of the three types of pain problems: acute pain, chronic pain, and cancer pain.

There must be ready access to consultation from other disciplines involved in pain medicine.

D. Library

There must be a departmental library with adequate material relevant to pain medicine. This may be supplemented but not replaced by private faculty book collections and hospital or institutional libraries. There must be adequate computer facilities available for each resident, including literature search engines and Internet services.

V. The Educational Program

A. Educational Environment

An accredited program in pain medicine must provide education, training, and experience in an atmosphere of mutual respect between instructor and resident so that residents will be stimulated and prepared to apply acquired knowledge and talents independently.

B. Clinical Components

There should be exposure to a wide variety of clinical pain problems. Such exposure is necessary for the development of broad clinical skills and knowledge required for a specialist in pain medicine. Subspecialty training in pain medicine must include experience in the management of both inpatients and outpatients.

The resident must become familiar with theory, benefits, indications, and practical applications of the following procedures and techniques:

1. A broad range of peripheral nerve block procedures
2. Epidural and subarachnoid injections
3. Joint and bursal sac injections
4. Cryotherapeutic techniques

5. Epidural, subarachnoid, or peripheral neurolysis
6. Electrical stimulation techniques
7. Implanted epidural and intrathecal catheters, ports, and infusion pumps
8. Acupuncture and acupressure
9. Behavioral modification and biofeedback
10. Rehabilitative and restorative therapies
11. Hypnosis, stress management, and relaxation techniques
12. Trigeminal ganglionectomy
13. Peripheral neurectomy and neurolysis
14. Sympathectomy techniques
15. Management of chronic headache
16. Alternative pain therapies
17. Neurosurgical ablative techniques
18. Prevention, recognition, and management of local anesthetic overdose, including airway management and resuscitation
19. Recognition and management of therapies, side effects and complications of pharmacologic agents used in pain medicine

In addition to the above skills, the pain medicine resident must have significant experience in providing concise written and verbal consultation to other services, including evidence-based differential diagnosis, planning, potential complications of treatment(s), prognosis and follow-up.

C. Didactic Components

The pain medicine curriculum must include the following topics in lectures and reading:

1. Anatomy and physiology of the pain projection system
2. Epidemiology, economic impact, and sociology of pain disorders
3. Pharmacology of opiates, nonnarcotic analgesics, nonsteroidal anti-inflammatory agents, and other medications commonly used in pain medicine
4. Pharmacology of centrally acting drugs used in pain medicine
5. Measurement and assessment of pain and function
6. Principles of neural stimulation
7. Indications and limitations of diagnostic testing, including electrodiagnostic evaluation
8. Nerve blocks in pain medicine
9. Neuroablative procedures
10. Behavioral, cognitive, and supportive psychotherapeutic treatment principles, including rehabilitation and the role of team management
11. Principles and techniques of acute pain medicine
12. Principles and techniques of cancer pain medicine, including death and dying, and the ethical principles involved in hospital, hospice, and home care
13. Principles and techniques of management of other chronic pain problems
14. Principles of physical therapy, occupational therapy, and rehabilitation of the patient with chronic pain
15. Principles of multidisciplinary approaches to pain medicine
16. Management of pain in children
17. Management of pain in the elderly
18. Principles and ethics of pain research in humans and animals
19. Organization and management of a pain medicine center
20. Continuing quality improvement, utilization review, and program evaluation
21. Disability assessment and rehabilitation management
22. Assessment and management of musculoskeletal conditions

D. Pain Center Management

Subspecialty residents in pain medicine must gain experience in the management of a pain center (clinic) with regards to appointment and training of nonphysician personnel, establishment of policies relating to management of pain problems, coordination of the

activities of the pain center with other inpatient and outpatient services, and basic economics of pain-related health-care delivery.

E. Resident Teaching

The subspecialty resident in pain medicine must become experienced in teaching principles of pain medicine to resident physicians, medical students, and other health-care professionals.

F. Conferences

Pain medicine conferences must be held regularly. These should include morbidity and mortality conferences, journal reviews, and research seminars. Active participation in the planning and presentation of these conferences by the pain medicine resident and faculty is essential. Attendance at multidisciplinary conferences is encouraged.

VI. Scholarly Activity

The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and neurology pain medicine training must be conducted in centers where there is active research activity both in clinical and basic neuroscience fields. This activity should include the following:

- A. Active participation of the teaching staff in clinical discussions, rounds and conferences in a manner that promotes a spirit of inquiry and scholarship. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
- B. Participation in journal clubs and research conferences.
- C. Active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publications in their journals.
- D. Participation in research, particularly in projects that are funded following peer review and/or result in publications or presentations at regional and national scientific meetings.
- E. Offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research.
- F. Provision of support for resident participation in scholarly activities. The resident should have assigned time to conduct research or other scholarly activities. The goal for the resident should be at least one scientific presentation, abstract or publication.

VII. Evaluation

- A. Faculty responsible for teaching subspecialty residents in neurology pain medicine must provide critical evaluations of each resident's progress and competence to the neurology pain medicine program director at the end of 6 months and 12 months of training. These evaluations should include attitude, interpersonal relationships, fund of knowledge, manual skills, patient management, decision-making skills, and critical analysis of clinical situations. The program director or designee must inform each resident of the results of evaluations at least every 6 months during training, advise the resident on areas needing improvement, and document the communication. Subspecialty residents in neurology pain medicine must obtain overall satisfactory evaluations at completion of 12 months of training to receive credit for training.
- B. Periodic evaluation of patient care (quality assurance) is mandatory. Subspecialty residents in neurology pain medicine should be involved in continuous quality improvement, utilization review, and risk management.

VIII. Board Certification

The record of its graduates in obtaining certification in pain medicine by ABMS certifying bodies represents one measure of the quality of a program. The RRC will consider this information as part of the overall evaluation of the program.

ACGME: June 2000 Effective: June 2000

Program Requirements for Graduate Medical Education in Sleep Medicine (Neurology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Sleep medicine is a discipline of medical practice in which sleep disorders are assessed, monitored, treated, and prevented by using a combination of techniques (clinical evaluation, physiologic testing, imaging, and intervention) and medication. Specialists in sleep medicine are expected to:

1. participate in an interdisciplinary care of patients of all ages that incorporates aspects of psychiatry, neurology, internal medicine, epidemiology, surgery, pediatrics and basic science;
2. acquire detailed knowledge of the sleep and respiratory control centers, physiology, and neurobiology underlying sleep and wakefulness;
3. diagnose and manage sleep disorder patients in outpatient and inpatient settings.

B. Duration and Scope of Education

1. All prerequisite fellowship education must be taken within programs accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The ACGME recognizes the following educational formats for entry into sleep medicine fellowships:
 - a) Fellows must complete 12 months of sleep fellowship education after the successful completion of one of the following prerequisite educational programs:
 - (1) 3 years of internal medicine; or
 - (2) 3 years of pediatrics
 - (3) 4 years of psychiatry;
 - (4) 4 years of neurology; or
 - (5) 5 years of otolaryngology.
3. Training must be separate and distinct from all training required for certification in internal medicine, pediatrics, pulmonology, psychiatry, neurology, and otolaryngology, and include as well as didactic and clinical experience in the care of patients with sleep disorders in both inpatient and outpatient settings.
4. Training should provide clinical exposure to the following disciplines as related to sleep disorders:
 - Cardiology
 - Neurology
 - Otolaryngology
 - Oral Maxillofacial Surgery
 - Pediatrics
 - Pulmonary Medicine
 - Psychiatry

Psychology, including Neuropsychology

5. Relation of the Subspecialty to Core Programs

Fellowship programs in the subspecialty of sleep medicine may only be accredited in institutions where the sponsoring specialty has an ACGME-accredited residency program. The sponsoring program may be in internal medicine, psychiatry, pediatrics, neurology, or otolaryngology.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions. There is a limit of one accredited sleep medicine program per sponsoring institution.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

C. Institutional Facilities and Resources

1. Patient Population
 - a) There must be an adequate number and variety of patients of all ages in both inpatient and outpatient settings to expose fellows to the board spectrum of sleep disorders. This should include experience across the major categories of sleep disorders, including: apnea and other sleep-related breathing disorders; parasomnias; circadian rhythm disorders; insomnia; narcolepsy and related excessive daytime sleepiness disorders; and sleep problems related to other factors and diseases such as medications, and psychiatric and medical disorders.
 - b) Inpatient experience should include evaluation of a sufficient number of sleep disorder patients. Experience should include longitudinal management of patients for whom the fellow is the primary physician but acting under the supervision of a faculty member.
2. Facilities
 - a) The facility should be appropriately equipped, and have a minimum of two fully-equipped polysomnography bedrooms and support space.
 - b) There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with audiovisual and other educational aids, office space for staff and fellows, pertinent library materials, and diagnostic, therapeutic, and research facilities.
3. Institutional Resources
 - a) The sponsoring institution must provide sufficient institutional resources—including GME staff, space, equipment, sup-

- plies, and time—to allow for effective oversight of its programs accredited by the ACGME.
- b) In addition, there must be sufficient institutional resources to ensure that the programs accredited by the ACGME are implemented and developed effectively and in compliance with both the program and institutional requirements.
 - c) The American Academy of Sleep Medicine or an equivalent body should accredit for the use of both adults and children the sleep laboratories and other related facilities and equipment.
4. Library
- a) Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
 - b) Library services should include the electronic retrieval of information from medical databases.
 - c) There must be access to an on-site library or to a collection of appropriate texts and journals in each institution that participates in a fellowship program. On-site libraries and/or collections of texts and journals, or access to the electronic retrieval of these materials, must be readily available during nights and weekends.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program; he or she must be fully committed to the fellowship program, and devote sufficient time to provide leadership and supervision to the program and its fellows. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified by the specialty board in sleep medicine or be certified in sleep medicine by an ABMS Member Board, or possess qualifications judged to be acceptable by the sponsoring RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.
 On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
 - a) The program that provides training in sleep medicine must have at least two core faculty, including the director, who are specialists in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, or Otolaryngology and who are certified in sleep medicine by the specialty board in sleep medicine or by the applicable ABMS board, or who possess qualifications judged acceptable by the sponsoring RRC.
 - b) For programs with more than four fellows, a ratio of one core faculty to every two fellows must be maintained.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
 - a) Appropriate expertise in the areas defined in Section I.B. above must be present between the director and faculty. The RRC recognizes that expertise in sleep medicine is available from physicians who are board certified in many medical specialties, particularly in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, and Otolaryngology; the RRC actively encourages multidisciplinary cooperation in the training of fellows.
 - b) There must be designated faculty available to participate in consultation and teaching from the following disciplines as they relate to sleep medicine and the management of sleep disorders:
 - Cardiology
 - Neurology
 - Otolaryngology
 - Oral Maxillofacial Surgery
 - Pediatrics
 - Pulmonary Medicine
 - Psychiatry
 - Psychology including neuropsychology
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified by the applicable ABMS Board, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another fellowship program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of fellowship education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

E. Fellow/Patient Ratio

The number of patients must be sufficient to provide a sound educational program. The program director must ensure an adequate number and variety of patients, with particular attention to balance in the age and gender of patients, as well as in patients with short- and long-term sleep disorders, inpatients, and outpatients.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The fellowship program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their fellows to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Program

1. Fellows must have formal instruction in, and demonstrate comprehensive knowledge of:

- a) Major theories in sleep medicine, together with a thorough grounding in the generally accepted facts and basic sleep mechanisms.
 - b) Biological, psychological, social, economic, ethnic, and familial factors, which significantly influence the evaluation and treatment of sleep disorders.
 - c) Etiologies, prevalence, diagnosis, and treatment of all of the sleep disorders in the current nosology of sleep medicine.
 - d) The use, reliability, and validity of the generally accepted techniques for diagnostic assessment.
 - e) Medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g., the relationship between hypertension and snoring)
 - f) The nature of the interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies
 - g) Administration and interpretation of psychological tests
 - h) Financing and regulation of sleep medicine.
 - i) Medical ethics and its application in sleep medicine.
 - j) Legal aspects of sleep medicine.
 - k) Research methods in the clinical and basic sciences related to sleep medicine.
 - l) Technical skills including:
 - (1) skills necessary to perform polysomnographies from preparation and hookup of the patient to the completion of the study, including multiple sleep latency and maintenance of wakefulness tests.
 - (2) Scoring and interpretation of polysomnograms and recognition of artifacts, including full montages with additional EEG leads for seizure detection
 - (3) Consultative skills in sleep medicine in a variety of medical, surgical, and psychiatric settings
2. The Curriculum
- The curriculum must include instruction in the following:
- a) Fundamental mechanisms of sleep
 - b) Etiopathogenic characterization of sleep disorders
 - c) Clinical manifestations of sleep disorders
 - d) Diagnostic strategies in sleep disorders
 - e) Treatment strategies in sleep disorders
 - f) Epidemiological issues
 - g) Airway anatomy
3. Seminars and Conferences
- a) The training program must conduct a monthly, multidisciplinary teaching conference and a monthly journal club organized by the faculty on topics that cover the scope of sleep medicine.
 - b) The training program must conduct seminars and core conferences, that include didactic instruction in the following; this instruction must be relevant for pediatric and adult patients:
 - (1) Basic neurological sleep mechanisms
 - (2) Chronobiological mechanisms
 - (3) Respiratory physiology during sleep and pathophysiology
 - (4) Cardiovascular physiology during sleep and pathophysiology
 - (5) Endocrine physiology during sleep and pathophysiology
 - (6) Gastrointestinal physiology during sleep and pathophysiology
 - (7) Ontogeny of sleep
 - (8) Sleep across the life span
 - (9) Operation of polysomnographic monitoring equipment
 - (10) Polysomnographic troubleshooting
 - (11) Ambulatory monitoring methodology
 - (12) Polysomnogram interpretation
 - (13) SIDs and related respiratory distress
 - (14) Nosology for sleep disorders: The International Classification of Sleep Disorders
 - (15) Evaluation of patients presenting with excessive sleepiness
 - (16) Evaluation of patients presenting with difficulty initiating or maintaining sleep
 - (17) Evaluation of patients presenting with parasomnias
 - (18) Biological rhythm disorders
 - (19) Pediatric and neonatal sleep medicine
 - (20) Treatment approaches for obstructive sleep apnea, to include nasal CPAP, bilevel PAP, upper airway surgery, oral appliances, and position training
 - (21) Treatment approaches for insomnia, to include cognitive-behavioral therapies and pharmacological therapy
 - (22) Treatment approaches for narcolepsy and idiopathic CNS hypersomnolence
 - (23) Treatment approaches for parasomnias
 - (24) Treatment of circadian rhythm disorders
 - (25) Pharmacology of sleep (i.e. medication effects on sleep)
- F. Clinical Components**
1. Clinical Skills
- Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the management of sleep disorders in all age groups including following:
- a) interviewing
 - b) clear and accurate history taking
 - c) performing competent physical, neurological, and mental status examinations
 - d) recording of findings completely and systematically
 - e) relating history and clinical findings to the relevant medical, neurologic, psychiatric, and social issues associated with etiology and treatment
 - f) formulating a differential diagnosis for all conditions in the current standard nosology, taking into consideration all relevant data.
 - g) diagnosing medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions
 - h) formulating appropriate treatment plans and making appropriate referrals
 - i) providing continuous care for a variety of patients from different age groups, seen regularly and frequently over an extended time, in a variety of treatment modalities; being able to relate to patients and their families, as well as other members of the health care team, with compassion, respect, and professional integrity
 - j) Certification in cardiopulmonary resuscitation
2. Clinical Training
- a) Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the following:
- (1) The observation, evaluation, and management of patients of all ages with a wide variety of sleep disorders
 - (2) The integration of information obtained from patient history, physical examination, physiologic recordings, imaging studies, psychometric testing, pulmonary function testing, and biochemical and molecular tests results to arrive at an accurate and timely diagnosis and treatment plan.
 - (3) The indications for and potential pitfalls and limitations of diagnostic tests and the interpretation of the results in the context of the clinical situation. These diagnostic tests must

include the following: polysomnography, multiple sleep latency testing, maintenance of wakefulness testing, actigraphy, and portable monitoring related to sleep disorders, imaging studies, magnetic resonance imaging, scoring and interpretation of polysomnograms and recognition of artifacts, including montages with additional EEG leads for seizure detection, and psychological and psychometric tests as they relate to sleep disorders.

- (4) The development and execution of plans for evaluation and treatment, including the appropriate technical skills necessary to perform polysomnography from preparation and hookup of the patient to the completion of the study, including multiple sleep latency tests, maintenance of wakefulness tests, and other diagnostic studies
 - (5) The critical appraisal of the professional and scientific literature and application of new contributions to management and care of patients.
- b. Fellows must have formal instruction and clinical experience in systems-based skills that include working in outpatient and inpatient settings and effectively utilizing health care resources, including pathology and radiology services.
- (1) Clinical experiences that provide for basic and advanced training and education, as well as professional development
 - (2) Opportunities to formulate a clinical diagnosis and to order and use laboratory data to clinically evaluate a patient's condition and to support outpatient and inpatient diagnostic evaluations
 - (3) Progressive experience for training that includes caring for a sufficient number of sleep disorder patients to achieve competence in the assessment of patients with a wide range of sleep medicine disorders
 - (4) Experience with medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g. the relationship between hypertension and snoring); ability to diagnose medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions; to formulate appropriate treatment plans; and to make appropriate referrals.
 - (5) Experience with interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies; competence in sleep medicine consultation in a variety of medical, surgical and psychiatric settings.
 - (6) Experience in sleep disorders center administration, especially leadership of interdisciplinary teams.
 - (7) Supervised experience in teaching sleep medicine to students in the health professions.
 - (8) Trainees should make regular patient management rounds and record reviews with the attending faculty.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the fellowship program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because fellowship education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation**A. Fellow****1. Formative Evaluation**

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the fellowship program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance. Fellows' evaluation by faculty must be made at least once every two months so that areas of weakness and strength may be communicated to the fellows.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part

of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the fellowship program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the fellowship program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification in Sleep Medicine by the American Board of Medical Specialties should communicate with the office of the board regarding the full requirements for certification.

Approved by ACGME: June 2004 Effective: June 2004

Program Requirements for Residency Education in Vascular Neurology (Neurology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition

1. Vascular neurology is an area of medicine in which selected neurological disorders involving the central nervous system due to ischemia or hemorrhage are assessed, monitored, treated and prevented using a combination of clinical evaluation, imaging, interventional techniques, and medication. Specialists in vascular neurology are expected to
 - a. Participate in an interdisciplinary care of patients with vascular disease that incorporates aspects of epidemiology, basic science, clinical neurology, neuroimaging, critical care, endovascular surgical neuroradiology, neurological vascular surgery, neurosurgery, neurosonology, cerebral blood flow and metabolism, neurobehavior, and neurorehabilitation
 - b. Acquire detailed knowledge of the vascular supply of the central nervous system and its alteration by disease
 - c. Manage stroke patients in outpatient and inpatient settings, including critical care units
2. Vascular neurology includes the prevention, evaluation and treatment of a wide range of diseases resulting in vascular insults to the nervous system, including:
 - a. Cardiogenic brain embolism
 - b. Large vessel cerebral atherosclerosis
 - c. Aortic arch cerebral and spinal embolism
 - d. Small cerebral artery occlusive disease
 - e. Hemodynamic brain ischemia
 - f. Migraine
 - g. Hereditary and acquired hypercoagulable states
 - h. Disseminated intravascular coagulation, thrombotic thrombocytopenic purpura, other hematological disorders
 - i. Antiphospholipid antibody syndromes
 - j. Substance abuse and drug toxicities
 - k. Hypertensive encephalopathy
 - l. Arterial dissection
 - m. Vasculopathies including inflammatory, infectious, Moya-moya
 - n. Cerebral venous thrombosis
 - o. Genetic and metabolic disorders
 - p. Intracerebral hemorrhage
 - q. Aneurysmal subarachnoid hemorrhage (SAH)
 - r. Subdural hematomas
 - s. Spinal cord infarction
 - t. Complications of vascular disease, including raised intracranial pressure, sepsis and venous thrombosis
 - u. Vascular malformations

B. Duration and Scope of Training

Training in vascular neurology shall encompass a total of one year that must be preceded by the completion of a residency program in neurology or child neurology accredited by the ACGME or the Royal College of Physicians and Surgeons (Canada). Elective time must be available for residents to pursue individual interests. Training must (1) be separate and distinct from all training required for certification in neurology and child neurology, and (2) include significant didactic and clinical experience in the care of patients with

stroke and/or who are at risk for stroke in both inpatient and outpatient settings as detailed in the Educational Programs section (IV). In particular, training must provide the following clinical experiences

1. Inpatient management of patients with stroke, both ischemic and hemorrhagic;
2. Critical care management of patients with stroke, both ischemic and hemorrhagic;
3. Management of patients with neurosurgical cerebrovascular disorders including aneurysms and arteriovenous malformations;
4. Emergent management of patients with stroke, including emergency department management;
5. Care of patients in different settings, including nursing homes, medical rehabilitation centers and outpatient clinics;
6. Ordering and clinical correlation of diagnostic brain and vascular imaging;
7. Ordering and interpretation of diagnostic laboratory tests in stroke;
8. Involvement in community activities, including outpatient primary and secondary prevention of stroke;
9. Participation in the delivery of educational programs about stroke and stroke prevention, including teaching medical students, ancillary health professionals, and residents;
10. Consulting with other medical professionals, including cardiologists, radiologists, neurosurgeons, vascular surgeons and physiatrists in the overall care and management of stroke patients; and,
11. Participation in research, such as epidemiological studies, clinical trials, or laboratory research

C. Relation to Core Program

The 1-year of training in vascular neurology must take place in a center in which there is an ACGME-accredited residency program in neurology and with the written approval and support of the director of the neurology program.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation, and for the establishment and maintenance of a stable educational environment. The director and teaching staff of a program must prepare and comply with written educational goals for the program. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the ABPN in Neurology and Vascular Neurology, or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. Completion of at least one additional year of stroke or vascular neurology training. At least 50% of the program director's practice should be devoted to care of stroke patients.
 - e. Licensure to practice medicine in the state where the institution that sponsors the program is located (Certain federal programs are exempted.)
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program;
 - 3) a change in the approved resident complement for those specialties that approve resident complement.
 On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
 - e. Full commitment to the residency program and devotion of sufficient time to provide leadership to the program and supervision of the residents in the program
 - f. Monitoring the content and ensuring the quality of the program.
 - g. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures
 - h. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff. Residents must be provided with prompt, reliable systems for communication and interaction with supervisory physicians
 - i. Regular evaluation of residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician. The program director, with participation of members of the teaching staff, shall
 - 1) At least semiannually evaluate the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures
 - 2) Communicate each evaluation to the resident in a timely manner
 - 3) Advance residents to positions of higher responsibility only on the basis of evidence of their satisfactory progressive scholarship and professional growth
 - 4) Maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
 - j. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances
 - k. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and teaching staff should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Training situations that consistently produce undesirable stress on residents must be evaluated and modified

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. The program providing training in vascular neurology must have at least two faculty neurologists, including the director, who have completed training in this subspecialty. It is desirable that they be full-time members of the Department of Neurology.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, a commitment to their own continuing medical education, and participation in scholarly activities and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the ABPN in Neurology and Vascular Neurology, or possess

appropriate educational qualifications judged to be acceptable by the RRC.

- c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad involvement in scholarly activity, and vascular neurology training must be conducted in centers where there is research in vascular neurology. The program must include opportunities for the resident to participate in research projects and scholarly work relating to the field of vascular neurology. *Scholarship is defined as the following:*
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities. Scholarship implies an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice.
5. Qualifications of the nonphysician faculty are as follows:
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.
6. Appropriate expertise in the areas defined in Section I.B., above, must be present among the director and the faculty. The RRC recognizes that expertise in stroke is available from physicians board certified in many medical specialties, particularly in Physical Medicine and Rehabilitation, Cardiology, Neurosurgery, Vascular Surgery and Psychiatry, and actively encourages multidisciplinary cooperation in the training of residents.
7. The faculty shall devote sufficient time to the training program to ensure adequate clinical training of the resident in vascular neurology and will be primarily involved in direction of the resident during the one year training.
8. A member of the teaching staff of each participating institution must be designated by the program director to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
9. The teaching staff must be organized and have regular documented meetings to review program goals and objectives as well as program effectiveness in achieving them. At least one resident representative must participate in these reviews.
10. The teaching staff must periodically evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the

performance of members of the teaching staff, and the quality of supervision of residents.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the administration and educational conduct of the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Patient Population

There must be an adequate number and variety of patients in both inpatient and outpatient settings to expose residents to the broad spectrum of vascular diseases of the brain. Inpatient experience should include evaluation of a substantial number of stroke patients. No more than 50% of these should be hemorrhagic strokes. Outpatient experience should include management of at least 50 patients for whom the resident is the primary physician under supervision of a faculty member.

2. Facilities

Vascular neurology shall be within the Department or Division of Neurology and have facilities adequate for the educational program. There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with audiovisual and other educational aids, office space for staff and residents, pertinent library materials, and diagnostic, therapeutic and research facilities.

3. Library

- a. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
- b. Library services should include the electronic retrieval of information from medical databases.
- c. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

E. Other Teaching Staff

Faculty with suitable training and experience from other disciplines should be included in the teaching program.

IV. Resident Appointments

A. Eligibility Criteria

The program must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to

provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the regular review process. All educational components of a residency program should be related to program goals.

Participation by any institution providing 2 months or more of training in a program must be approved by the RRC.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments. It should be readily available for review.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(N.B.: Section V. D. does not apply to certain subspecialties)

E. Curriculum

The training program is largely a clinical experience in which the resident develops and executes a plan of evaluation and treatment for patients with various cerebrovascular disorders. In addition to teaching the appropriate technical skills, the curriculum must include instruction in the following:

1. Fundamental Mechanisms of Stroke and Other Nervous System Vascular Disorders
2. Etiopathogenic Characterization of Stroke and Other Nervous System Vascular Disorders
3. Clinical Manifestations of Stroke and Other Nervous System Vascular Disorders
4. Diagnostic Strategies in Stroke and Other Nervous System Vascular Disorders
5. Treatment Strategies in Stroke and Other Nervous System Vascular Disorders
6. Epidemiologic issues

F. Seminars and Conferences

The section of vascular neurology must conduct seminars and conferences that include:

1. Formal lectures and teaching conferences in Vascular Neurology on a schedule that will allow the training program to cover all of the topics listed under I.A.2.

2. A monthly didactic teaching conference organized by the faculty on topics that cover the scope of vascular neurology as outlined in Section I of these Program Requirements.
3. The monthly conference should be supplemented by journal clubs, pathology meetings, neuroanatomy courses, neuroscience grand rounds related to vascular neurology and multidisciplinary conferences with neuroradiology, neurosurgery, and neuropathology.
4. Trainees should make regular patient management rounds with the attending faculty and these should be supplemented with weekly or bi-weekly teaching rounds during which specific vascular neurology patient management issues are discussed in depth by the faculty.

G. Teaching and Supervision

1. Supervisory faculty and staff must be available on a full-time basis. There must be a 1:1 faculty and resident ratio.
2. The resident must be given an active role in the teaching and training of neurology residents in which the section resides.
3. Clinical and Basic Science Teaching
 - a. Clinical Science

The resident must have instruction and practical experience to foster the development of diagnostic, procedural, technical, and interventional skills essential to the practice of vascular neurology, including

 - 1) Opportunities to observe, evaluate, and manage patients of all ages with a wide variety of disorders of the cerebrovascular and nervous systems
 - 2) Learning about the effectiveness of procedures to manage stroke
 - 3) Participating in clinical experiences that provide for basic and advanced training and education, as well as professional development
 - 4) Acquiring systems-based skills that include working in outpatient and inpatient settings and effectively utilizing health care resources, including pathology and radiology services
 - 5) Participating in problem based learning that includes experience in the areas critical to vascular neurology as outlined in Section I.A.2
 - 6) Developing and executing plans for evaluation and treatment, including the appropriate
 - 7) Technical skills for the non-invasive management of stroke patients. These skills must include familiarity with the indications for intubation, extubation/weaning and the general principles of respirator management and the placement of catheters for the supportive care and pharmacological treatment of strokes
 - 8) Opportunities to formulate a clinical diagnosis and to order and use laboratory data to clinically evaluate a patient's condition and to support outpatient and inpatient diagnostic evaluations
 - 9) Progressive experience for training as outlined in Section I.B that includes caring for a sufficient number of stroke patients to achieve competence in the assessment of patients with a wide range of vascular neurology disorders
 - b. Basic Science

Residents must be provided with an advanced and extensive background in those basic sciences on which vascular neurology is founded. In particular, the basic science program must include neuroepidemiology, neuroanatomy, neuropharmacology, neuropathology, and neurobiology, as well as mechanisms of atherosclerosis and coagulation. Didactic lectures and seminars must include the basic neurological sciences as they pertain to stroke.

4. Resident/Patient Ratio

The program director must ensure an adequate number and variety of patients to provide a sound educational program. Particular attention should be given to achieving a balance in the age and gender of patients, in patients with short-term and long-term neurological problems, as well as in the number of inpatients and outpatients.

5. Faculty/Resident Ratio

There must be a ratio of at least one vascular neurology faculty for each vascular neurology resident. Faculty must demonstrate diverse interests and skills to contribute to the depth and breadth of training necessary to fulfill the program requirements for residency education in vascular neurology, to ensure adequate clinical experience for residents, and to provide for an educational environment that supports seminars, conferences and reliable supervision of residents.

6. Diagnostic Skills

The residents must learn how to integrate information obtained from patient history, physical examination, imaging study results, and biochemical and molecular tests results to arrive at an accurate and timely diagnosis and treatment plan. The resident is required to learn about the indications for and potential limitations of diagnostic tests and to interpret the results in the context of the clinical situation. These diagnostic tests must include the following imaging studies: cranial and spinal MRIs and CTs, magnetic resonance imaging, cerebral angiography, carotid and cranial doppler studies, single photon emission tomography (SPECT), photon emission tomography (PET). The resident must also learn the appropriate biochemical and molecular testing for strokes in patients of different age groups. The resident should also learn the temporal profile of the clinical, biochemical and radiological changes that accompany vascular insults of the nervous system. The acquisition of the diagnostic skill must be provided by clinical assignments that provide a progressive increase in responsibility for patient care with direct supervision by a faculty member or staff; appropriate faculty supervision is essential throughout the program.

7. Subspecialty Experience

While a wide range of clinical experience is mandatory, each resident should have extensive experience in one or more areas of vascular neurology. Clinical assignments need not be identical for each resident. Subspecialty experience should accommodate individual interests.

8. Resident Responsibility for Teaching

The resident's education in vascular neurology is reinforced by teaching the discipline to other residents in neurology and other disciplines and to medical students, nurses, and other health care personnel. Residents must be given this opportunity.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate

supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution. To ensure an appropriate educational environment and prevent an excessive patient load, the program should provide for the following:

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.
5. There should be adequate physician coverage if unexpected patient care needs create resident fatigue sufficient to jeopardize patient care during or following on-call periods.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation**A. Resident****1. Formative Evaluation**

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

3. Resident evaluation by staff must be made at regular intervals so that areas of weakness and strength can be communicated to the

resident. Records shall be maintained documenting resident experience and performance. Periodic review of the resident's performance is essential for planning his or her subsequent educational program. The evaluation will include judging the fund of knowledge, basic clinical competence, general skills in the primary specialty, and the specific technical skills required for vascular neurology. The summary and final evaluation of the resident in vascular neurology must be prepared by the program director of the vascular neurology training program and should reflect the periodic evaluation of the entire faculty.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written confidential evaluations by residents must be utilized in this process.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the ABPN in Neurology and Vascular Neurology should communicate with the office of the board regarding the full requirements for certification.

X. Other

A. Use of Board Examinations

One measure of the quality of a training program is the proportion of its graduates who take the examination in vascular neurology provided by the American Board of Psychiatry and Neurology, as well as their performance on those examinations.

B. Review of the Program

The provisions of the Institutional Requirements for residency training of the ACGME must also be met for approval of training in vascular neurology.

ACGME: February 2002 Effective: February 2002

*Editorial Revision (Common Program Requirements):
January 2005*

Program Requirements for Residency Education in Nuclear Medicine

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Nuclear medicine is the clinical and laboratory medical specialty that employs the measured nuclear properties of radioactive and stable nuclides for diagnosis, therapy, and research and to evaluate metabolic, physiologic, and pathologic conditions of the body.

B. Duration and Scope of Education

1. Length of program

The length of the nuclear medicine residency program is 2 years, following 1 year of preparatory clinical residency training (see below).

2. Admission prerequisites

The length of the nuclear medicine residency program is 2 years. However, a minimum of 3 years of Graduate Medical Education is necessary to train a physician in the field of Nuclear Medicine. Before entering a nuclear medicine residency, residents must satisfactorily complete one year of training in an ACGME-accredited or Royal College of Physicians and Surgeons of Canada-accredited or equivalent (Candidates who have not completed the clinical year in an ACGME- or RCPSC-accredited program should consult the nuclear medicine program director and/or the American Board of Nuclear Medicine for determination of eligibility.) program that provides broad clinical education, with primary emphasis on the patient and the patient's clinical problems. Residents should have a sufficiently broad knowledge of medicine to obtain a pertinent history, perform an appropriate physical examination, and arrive at a differential diagnosis.

3. Specific description of program format

Residencies in nuclear medicine must teach the basic skills and clinical competence that constitute the foundations of nuclear medicine practice and must provide progressive responsibility for and experience in the application of these principles to the management of clinical problems. Clinical experience must include the opportunity to recommend and plan, conduct, supervise, interpret, and dictate reports for nuclear medicine procedures that are appropriate for the existing clinical problem or condition.

C. Broad Description of Training Objectives and Goals

The program must be structured so that the residents' clinical responsibilities increase progressively during training. At the completion of the training program, residents should be proficient in all areas of clinical nuclear medicine and be able to function independently as nuclear medicine consultants, plan and perform appropriate nuclear medicine procedures, interpret the test results, and formulate a diagnosis and an appropriate differential diagnosis. The residents should be qualified to recommend therapy or further studies. If radionuclide therapy is indicated, they should be capable of assuming responsibility for patient care. Residents should develop a satisfactory level of clinical maturity, judgment, and technical skill that will, on completion of the program, render them capable of the independent practice of nuclear medicine.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives, and should provide resources not otherwise available to the program. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.

Limited outside rotations may be utilized to supplement training in a branch of nuclear medicine, e.g., positron emission tomography (PET) or radionuclide therapy, if there is insufficient patient volume in the sponsoring institution. Affiliated institutions should not be so distant as to make it difficult for residents to travel between institutions for participation in clinical responsibilities or didactic activities.

Participation by any institution providing 3 months or more of training in the program must be approved by the RRC for Nuclear Medicine, according to criteria similar to those applied to the primary institution. A maximum of 6 months of the 2-year nuclear medicine program may be spent outside the parent and integrated institutions on rotation to affiliated sites. (An affiliation may be said to exist where there is a formal agreement between an accredited program and another institution to make facilities, clinical experience, supervision, and teaching sessions available to residents of the program who will rotate through the affiliated hospital. Rotations to affiliates are restricted, as noted above.)

2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
- identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - specify the duration and content of the educational experience; and
 - state the policies and procedures that will govern resident education during the assignment.

III. Program Personnel and Resources

A. Program Director

- There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
- The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
- Qualifications of the program director are as follows:

- The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities. This includes broad knowledge of, experience with, and commitment to general nuclear medicine, along with sufficient academic and administrative experience to ensure effective implementation of these Program Requirements and sufficient experience participating as an active faculty member in an accredited residency program.
- The program director must be certified in the specialty by the American Board of Nuclear Medicine or possess qualifications judged to be acceptable by the RRC.
- The program director must be appointed in good standing and based at the primary teaching site.
- have demonstrated compliance with professional standards of ethical behavior.
- demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to his or her own continuing medical education, and participation in scholarly activities.

A complete curriculum vitae of the program director shall be filed with the executive director of the RRC at the time of appointment and updated with each review of the program by the RRC.

4. Responsibilities of the program director are as follows:
- The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, responsible for day-to-day activities of the program at that institution, and monitoring appropriate resident supervision at all participating institutions.
 - The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - the addition or deletion of a participating institution;
 - a change in the format of the educational program;
 - a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

- At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
- The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member. They must be able to nurture the attributes of the scholar, teacher, and humanist and must be available to residents for advice and counseling.

3. **Qualifications of the physician faculty are as follows:**
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Nuclear Medicine or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

The faculty as a whole must have demonstrated ongoing participation in such activities during the past 5 years.
5. **Qualifications of the nonphysician faculty are as follows:**
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Facilities and Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

The institution sponsoring a residency program in nuclear medicine should be of sufficient size and composition to provide an adequate volume and variety of patients for resident training. It must provide sufficient faculty, financial resources, and clinical, research, and library facilities to meet the educational needs of the residents and to enable the program to comply with the requirements for accreditation.

1. Space and Equipment

The program must provide adequate space, equipment, and other pertinent facilities to ensure an effective educational experience for residents in nuclear medicine and must possess the modern facilities and equipment required to practice nuclear medicine.

2. Other Specialties

A nuclear medicine residency program requires the support of services in other specialties, notably medicine, surgery, radiology, pediatrics, and pathology. Training resources should be such that the total number of residents in the institution is large enough to

permit peer interaction and intellectual exchange with residents in the nuclear medicine program.

3. Library

Residents must have ready access to a major medical library with a representative selection of books and journals related to nuclear medicine, either at the institution where the residents are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends. Internet access must be readily available.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

1. Programs must demonstrate the ability to recruit and retain qualified residents. Residents should be appointed only when their documented prior experience and attitudes demonstrate the presence of abilities necessary to master successfully the clinical knowledge and skills required of all program graduates. All residents must have demonstrated understanding and facility in using the English language.
2. Residents should be reappointed only when their clinical judgment, medical knowledge, history-taking, professional attitudes, moral and ethical behavior, and clinical performance are documented to be entirely satisfactory.

B. Number of Residents

The RRC will approve the number of residents based upon the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be

distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;*

Residents are expected to:

- Obtain information about the patient related to the requested test or therapy using patient interview, chart and computer data base review, physical examination, and contact with the referring physician.
- Select appropriate procedures or therapy based on the referring physician's request and the patient's history. This involves selection of the appropriate radiopharmaceutical, dose, imaging technique, data analysis, and image presentation. It also includes review of image quality, defining the need for additional images and correlation with other imaging studies such as x-rays, CT, MRI, or ultrasound.
- Communicate results promptly and clearly to the referring physician or other appropriate health care workers. This communication should include clear and succinct dictation of the results.
- Conduct therapeutic procedures. Therapeutic procedures must be done in consultation with an attending physician who is a licensed user of radioactive material. These procedures should include dose calculation, patient identity verification, explanation of informed consent, documentation of pregnancy status, counseling of patients and their families on radiation safety issues, and scheduling follow-up after therapy.
- Maintain records (logs) of participation in nuclear cardiology pharmacologic and exercise studies and in all types of therapy procedures.

2. *Medical Knowledge about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;*

Residents should closely follow scientific progress in nuclear medicine and learn to incorporate it effectively for modifying and improving diagnostic and therapeutic procedures. Residents are expected to:

- Become familiar with and regularly read the major journals in nuclear medicine. During the residency this will involve regular participation in journal club.
- Use computer technology including internet web sites and CDROM teaching disks.
- Participate in the annual in-service examination.
- Know and comply with radiation safety rules and regulations, including NRC and/or agreement state rules, local regulations,

and the ALARA (as low as reasonably achievable) principles for personal radiation protection.

- Understand and use QC (quality control) procedures for imaging devices, laboratory instrumentation, and radiopharmaceuticals.

3. *Practice-based learning and improvement that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;*

Residents must develop and continuously improve skills in obtaining medical knowledge using new techniques as they develop in information technology. This includes:

- Using the internet and computer data bases to search for patient information, disease, and technique information. Residents should also be familiar with viewing and manipulating images with the computer, both locally and remotely.
- Residents should improve their understanding of diseases and patient care by attending inter-specialty conferences, correlative conferences, mortality and morbidity conferences, and utilization conferences.
- Patient follow-up is essential for determining the accuracy of study interpretation. Residents should regularly obtain such follow-up information and correlate the clinical findings with their study interpretation.

4. *Interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;*

Residents must communicate clearly and effectively and work well with each of the following groups:

- Patients and their families.
- Physicians in nuclear medicine and radiology.
- Referring physicians from other specialties.
- Nuclear medicine technologists.
- Other health care workers throughout the institution.

5. *Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;*

Residents are expected to always behave in a professional manner. This includes:

- Consistent demonstration of completely ethical behavior.
- Respect for the dignity of patients and all members of the medical team.
- There should be no discrimination based on age, ethnicity, gender, disability, or sexual orientation.
- Residents should be responsive to patients' needs by demonstrating integrity, honesty, compassion, and commitment.
- Residents should always respect the patient's privacy and autonomy.

6. *Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.*

This involves learning to work in a variety of health care settings and understanding the inter-relationship with other health care professionals. Specifically, residents should be aware of:

- Work conditions in hospitals, out-patient clinics, diagnostic centers, and private practice settings.
- Resource allocation and methods directed towards controlling health care costs such as Diagnostic Related Groups (DRGs), APC, and pre-certification by medical insurers.
- The concept of providing optimal patient care by selecting the most cost-effective procedures and using or recommending other diagnostic tests that might complement the nuclear

medicine procedures. This also involves awareness of the relevant risk-benefit considerations.

- d. Basic financial and business skills to function effectively in current health care delivery systems. This includes an understanding and knowledge of coding, procedure charges, billing practices, and reimbursement mechanisms.

E. Didactic Components

1. Basic Science Content

Study of the basic sciences that constitute the foundation for clinical nuclear medicine must be part of the resident's education. This is most effectively accomplished through a combination of formal didactic lectures and discussion of these topics in conferences. The program director must develop a formal didactic schedule that indicates the specific date and time of each lecture, the topic of the lecture, the faculty individual presenting the lecture, and the duration of the lecture. This schedule must incorporate each of the elements of basic science detailed below, and the program director must provide written documentation of this schedule as part of the information submitted to the RRC for its review of the program. The schedule must be current for each academic year. Visiting faculty and residents may provide some of the lectures.

The training program must provide didactic instruction in the following areas:

- a. Physics: structure of matter, modes of radioactive decay, particle and photon emissions, and interactions of radiation with matter.
- b. Instrumentation: principles of instrumentation used in detection, measurement, and imaging of radioactivity with special emphasis on gamma cameras, including SPECT and PET devices, and associated electronic instrumentation and computers employed in image production and display.
- c. Mathematics, statistics, and computer sciences: probability distributions; medical decision making; basic aspects of computer structure, function, programming, and processing; applications of mathematics to tracer kinetics; compartmental modeling; and quantification of physiologic processes.
- d. Radiation biology and protection: biological effects of ionizing radiation, means of reducing radiation exposure, calculation of the radiation dose, evaluation of radiation overexposure, medical management of persons overexposed to ionizing radiation, management and disposal of radioactive substances, and establishment of radiation safety programs in accordance with federal and state regulations.
- e. Radiopharmaceuticals: reactor, cyclotron, and generator production of radionuclides; radiochemistry; pharmacokinetics; and formulation of radiopharmaceuticals.

An aggregate of at least 100 hours per year should be devoted to basic science instruction, i.e., formal lectures and formal labs. An appropriate balance of time should be allocated to the major subject areas, which must include physical science and instrumentation: 50 hours per year; radiobiology and radiation protection: 15 hours per year; mathematics and statistics: 10 hours per year; radiopharmaceutical chemistry: 15 hours per year; computer science: 10 hours per year. Instruction in the basic sciences should not be limited to only didactic sessions. The resident's activities also should include laboratory experience and regular contact with basic scientists in their clinical adjunctive roles.

2. Didactic Clinical Content

There must be didactic instruction in both diagnostic imaging and non-imaging nuclear medicine applications and therapeutic applications. The instruction must be well organized, thoughtfully integrated, and carried out on a regularly scheduled basis.

The program director must develop a formal didactic schedule that indicates the specific date and time of each lecture, the topic of the lecture, the faculty individual presenting the lecture and the duration of the lecture. This schedule must incorporate each of the elements of the clinical specialty detailed below, and the program director must provide written documentation of this schedule to the RRC for its review of the program. Visiting faculty and residents may provide some of the lectures. The schedule must be current for each academic year.

Instruction must include the following areas:

- a. Diagnostic use of radiopharmaceuticals: clinical indications, technical performance, and interpretation of in vivo imaging of the body organs and systems, using external detectors and scintillation cameras, including SPECT and PET
- b. Exercise and pharmacologic stress testing: the pharmacology of cardioactive drugs; physiologic gating techniques; patient monitoring during interventional procedures; management of cardiac emergencies, including electrocardiographic interpretation and cardiopulmonary life support; and correlation of nuclear medicine procedures with other pertinent imaging modalities such as angiography, computed tomography, bone density measurement, ultrasonography, and magnetic resonance imaging.
- c. Non-imaging studies: training and experience in the application of a variety of non-imaging procedures, including instruction in the principles of immunology; preparation of radiolabeled antibodies; uptake measurements; in-vitro studies including Schilling test, glomerular filtration rate, red blood cell mass and plasma volume, and breath tests.
- d. Therapeutic uses of unsealed radiopharmaceuticals: patient selection and management, including dose administration and dosimetry, radiation toxicity, and radiation protection considerations in the treatment of metastatic cancer and bone pain, primary neoplasms, solid tumors, and malignant effusions; and the treatment of hematologic, endocrine, and metabolic disorders
- e. Quality management and improvement: principles of quality management and performance improvement, efficacy assessment, and compliance with pertinent regulations of the Nuclear Regulatory Commission and the Joint Commission on Accreditation of Healthcare Organizations

3. Conferences and Seminars

All residents must participate in regularly scheduled clinical nuclear medicine conferences and seminars and interdisciplinary conferences, in which the resident is responsible for presenting case materials and discussing the relevant theoretical and practical issues. There should be active resident participation in well-structured seminars and journal clubs that review the pertinent literature with respect to current clinical problems and that include discussion of additional topics to supplement the didactic curriculum.

a. Clinical interpretation conference

All residents must participate in regularly scheduled, usually daily, procedure interpretation and review conferences. The program must provide the resident with the opportunity to gain progressively independent responsibility for review, technical approval and acceptance, and interpretation and dictation of consultative reports on completed nuclear medicine procedures.

b. Teaching files

Teaching case files involving diagnostic and therapeutic nuclear medicine procedures should cover the full spectrum of clinical applications; they should be indexed, coded with correlative and follow-up data, and readily accessible for resident

use. There must be a mechanism for maintaining case records and treatment results to facilitate patient follow-up and to provide teaching material.

Electronic availability of teaching files is acceptable as a substitute or enhancement of on-site teaching case files.

C. Clinical Components

1. Curriculum Content

The residency program in nuclear medicine should include the diagnostic, therapeutic, and investigational uses of radionuclides. It should be of sufficient breadth to ensure that all residents become thoroughly acquainted with current nuclear medicine diagnostic and therapeutic applications. The training experience should ensure ample opportunity to attain sequentially increasing competence in selecting the most appropriate nuclear medicine studies for the patient, performing these studies in the technically correct manner, interpreting the information obtained, correlating this information with other diagnostic studies, and treating and following up the patient who receives radionuclide therapy. Under adequate faculty supervision, the resident should participate directly in the performance of imaging studies, non-imaging measurements and assays, and therapeutic procedures.

Residents must be provided structured opportunities to (a) learn the indications, contraindications, complications, and limitations of specific procedures; (b) develop technical proficiency in performing these procedures; (c) learn to interpret the results of these procedures; and (d) dictate reports and communicate results promptly and appropriately. The program must provide adequate opportunity for residents to participate in and personally perform and analyze a broad range of common clinical nuclear medicine procedures. This must include experience in each of the following categories:

- a. Musculoskeletal studies, including bone scanning for benign and malignant disease, and bone densitometry.
 - b. Myocardial perfusion imaging procedures performed with radioactive perfusion agents in association with treadmill and pharmacologic stress (planar and tomographic, including gated tomographic imaging). Specific applications should include patient monitoring, with special emphasis on electrocardiographic interpretation, cardiopulmonary resuscitation during interventional pharmacologic or exercise stress tests, pharmacology of cardioactive drugs, and hands-on experience with performance of the stress procedure (exercise and pharmacologic agents) for a minimum of 50 patients. Program directors must be able to document the experience of residents in this area, e.g., with logbooks.
 - c. Radionuclide ventriculography performed with ECG gating for evaluation of ventricular performance. The experience should include first pass and equilibrium studies and calculation of ventricular performance parameters, e.g., ejection fraction and regional wall motion assessment.
 - d. Endocrinologic studies, including thyroid, parathyroid, and adrenal imaging, along with octreotide and other receptor-based imaging studies. Thyroid studies should include measurement of iodine uptake and dosimetry calculations for radio-iodine therapy.
 - e. Gastrointestinal studies of the salivary glands, esophagus, stomach, and liver, both reticuloendothelial function and the biliary system. This also includes studies of gastrointestinal bleeding, Meckel diverticulum, and C14 urea breath testing.
 - f. Hematologic studies, including red cell and plasma volume, splenic sequestration, hemangioma studies, labeled granulocytes for infection, thrombus imaging, bone marrow imaging, and B12 absorption studies.
 - g. Oncology studies, involving gallium, thallium, sestamibi, antibodies, peptides, fluorodeoxyglucose (FDG), and other agents as they become available. Oncology experience should include all the common malignancies of the brain, head and neck, thyroid, breast, lung, liver, colon, kidney, bladder and prostate. It should also involve lymphoma, leukemia, melanoma, and musculoskeletal tumors. Hands-on experience with lymphoscintigraphy is very important.
 - h. Neurologic studies, including cerebral perfusion with both single photon emission computed tomography (SPECT) and positron emission tomography (PET), cerebral metabolism with FDG, and cisternography. This experience should include studies of stroke, dementia, epilepsy, brain death and cerebrospinal fluid dynamics.
 - i. Pulmonary studies of perfusion and ventilation performed with radiolabeled macroaggregates and radioactive gas or aerosols used in the diagnosis of pulmonary embolus, as well as for quantitative assessment of perfusion and ventilation.
 - j. Genitourinary tract imaging, including renal perfusion and function procedures, clearance methods, renal scintigraphy with pharmacologic interventions, renal transplant evaluation, vesicoureteral reflux, and scrotal and testicular imaging.
 - k. Therapeutic administration of radiopharmaceuticals, to include patient selection and understanding and calculation of the administered dose. Specific applications should include radioiodine in hyperthyroidism and thyroid carcinoma, and may include radio-phosphorus (soluble) in polycythemia vera and other myeloproliferative disorders, radiocolloids for therapy, radionuclides for painful bone disease, and radioligand therapy. Program directors must be able to document the experience of residents in this area, including patient follow-up, e.g., with logbooks.
 - l. Imaging procedures using positron-emitting radionuclides, medical cyclotron operation for production of PET radionuclides, and experience in PET radiochemistry synthesis.
 - m. Co-registration and image fusion of SPECT and PET images with computed tomography (CT) and magnetic resonance imaging (MRI) studies. If the program cannot provide sufficient clinical experience in PET imaging, supplemental clinical training or at least didactic instruction should be made available.
2. On Call Experience

In addition, each resident must be given the experience of being on-call and assuming the responsibility for providing consultative activities for procedures performed on an emergency basis.
 3. Patient Population Requirements

While the number of procedures may vary from one training program to another, a well-designed program will perform at least 4,000 common nuclear medicine imaging procedures annually, a wide variety of non-imaging procedures, and at least 15 radionuclide therapeutic procedures annually. Imaging procedures should be distributed over the entire spectrum of nuclear medicine practice, including the pediatric age group. A minimum of 100 pediatric nuclear medicine cases should be available annually. Resident rotations to hospitals with a large pediatric case-load should be considered if the number of pediatric studies in the primary institution averages fewer than 100 per year.
 4. Patient Management

The program must provide the residents with experience in direct and progressively responsible patient management as they advance through training. This training must culminate in sufficient independent responsibility for clinical decision making to ensure that the graduating resident has achieved the ability to

function independently and in a proficient manner in all nuclear medicine consultative areas.

5. Other

The residents must be provided training in both basic life-support and advanced cardiac life-support.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.

4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.

- a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
- b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
- c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

The RRC for Nuclear Medicine will not consider requests for an exception to the limit to 80 hours per week, average monthly.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be

- communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.
 - d. a process involving use of assessment results to achieve progressive improvements in residents' competence and performance. Observation of the resident performing specific tasks such as image interpretation, taking a history and performing a physical examination, choosing diagnostic studies, formulating patient management, and communicating effectively should be included.

Resident evaluation should include review by the program director of the record of the resident's participation in nuclear medicine studies and procedures.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution (see Institutional Requirements I.B.3.d), and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate

from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Nuclear Medicine should communicate with the office of the board regarding the full requirements for certification.

ACGME: June 2002 Effective: January 2003

Editorial Revision: July 2004

Program Requirements for Residency Education in Obstetrics and Gynecology

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Program Goals and Objectives

A residency program in obstetrics-gynecology must constitute a structured educational experience, planned in continuity with undergraduate and continuing medical education, in the health care area encompassed by this specialty. While such residency programs contain a patient-service component, they must be designed to provide education as a first priority, and not function primarily to provide hospital service.

An educational program in obstetrics-gynecology must provide an opportunity for resident physicians to achieve the knowledge, skills, and attitudes essential to the practice of obstetrics and gynecology, and must also be geared toward the development of competence in the provision of ambulatory primary health care for women. The program must provide opportunity for increasing responsibility, appropriate supervision, formal instruction, critical evaluation, and counseling for the resident.

B. Duration and Scope of Education

Resident education in obstetrics-gynecology must include 4 years of accredited and clinically-oriented graduate medical education which must be focused on reproductive health care and ambulatory primary health care for women, including health maintenance, disease prevention, diagnosis, treatment, consultation, and referral.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume the ultimate responsibility for the program as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

The program must exist in an educational environment that should include at least 2 other relevant graduate medical education programs, such as internal medicine, pediatrics, surgery, or family medicine. The program director must obtain teaching commitments from the other departments involved in the education of obstetrics-gynecology residents.

B. Participating Institutions

- 1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives, and should provide resources not otherwise available to the program. Participation by any institution providing 6 months or more of training in a program of 3 or more years must be approved by the RRC. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.**
- 2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution that provides an educational experience for a resident that is one month in duration or longer. Such a letter of agreement should:**
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;**

- b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;**
- c) specify the duration and content of the educational experience; and**
- d) state the policies and procedures that will govern resident education during the assignment.**

C. Structure of Residencies

The Residency Review Committee (RRC) for Obstetrics-Gynecology uses the following categories for the purpose of monitoring the structure of residencies.

1. Independent

An independent program is conducted within a single educational institution under a single program director. Extramural rotations for a total of no more than 6 months are permitted under the regulations applied to all programs (see II.C.4).

2. Integrated

3. An integrated program is conducted within multiple educational institutions but under a single program director. Each educational institution involved in an integrated program must provide the same quality of education and level of supervision required of an independent program, and must formally acknowledge the authority of the program director and the role that the institution will play in the overall program. Residents may rotate at any level, including the final year of the program. The program director must have authority over the educational program in each hospital, including the teaching appointments and assignments of all faculty and all residents, and must ensure the adequacy of the educational experience for each resident. Additional extramural rotations for a total of no more than 6 months are permitted under the regulations applied to all programs (see II.C.4). If a program includes rotations for a total of more than 6 months for any resident at institutions other than those included in the integrated program, that program becomes an affiliated program.

4. Affiliated

5. An affiliated program is one in which any resident spends a total of more than 6 months in extramural rotations outside the parent institution (or institutions, in the case of integrated programs).

6. Extramural Rotations

7. Extramural rotations may be arranged by the program director of either an independent or an integrated program to enhance the educational experience of the residents. The following requirements for the duration of extramural rotations must be observed:

- a) If the total time of extramural rotation from the parent program by any resident during the entire residency exceeds 6 months, the program is considered to be an affiliated program, and the entire program must receive prior approval by the RRC. Residents may not spend more than 18 months away from the parent institution(s) without prior approval of the RRC.**
- b) Rotations for a total of less than 6 months will not require that the program be designated as an affiliated program, and these rotations may be arranged by the program director without prior RRC approval.**

III. Program Personnel and Resources

A. Program Director

- 1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program, and should be a member of the staff of the sponsoring or integrated institution. In the event of a change of either program director or department chair, the program director should promptly notify the**

executive director of the RRC through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).

2. The program director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities in his or her field, including experience in and commitment to ambulatory primary health care for women. There must be a minimum of 5 years' experience (postresidency/fellowship) in such activities.
 - b) The program director must be certified in the specialty by the American Board of Obstetrics and Gynecology (ABOG) or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The program director must have unrestricted licensure to practice medicine in the state where the institution that sponsors the program is located. (Certain physicians in federal programs are exempted.)
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, selecting residents for appointment to the program in accordance with institutional and departmental policies and procedures, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.
5. The program director is responsible for notifying the executive secretary of the RRC, in writing, within 30 days of any major change in the program that may significantly alter the educational experience for the residents, including:
 - a) changes in leadership of the department or the program;

- b) changes in administrative structure, such as an alteration in the hierarchical status of the program/department within the institution; and
- c) substantial changes in volume and/or variety of the patient population.

6. The program director is responsible for communicating to the RRC any change in the use of rotations to participating institutions (including additions or deletions of institutions) as well as any significant change in the number of patient cases available at the sponsoring and/or participating institutions if residency education would be adversely affected. The program director must describe the effect of these changes and the corrective action taken to address them.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. The faculty complement should include appropriately educated generalist faculty.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Obstetrics and Gynecology (ABOG), or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

Documentation of scholarly activity on the part of the program and the faculty must be submitted at the time of program review. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the teaching staff. While not all members of a teaching staff must be investigators, the staff as a whole must demonstrate broad, ongoing involvement in scholarly activity.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Outpatient Facilities

Appropriate facilities and equipment, including patient medical and laboratory data retrieval capabilities, to manage patients in a timely fashion must be provided so that efficient and effective education in the ambulatory care aspects of the discipline can be accomplished.

2. Inpatient Facilities

Appropriate facilities and equipment, including patient medical and laboratory data retrieval capabilities, must be provided to achieve the educational objectives, including the management of critically ill patients and those undergoing obstetric or gynecologic operative procedures.

3. Medical Records

The fundamentals of good medical history taking and thoughtful, meticulous physical examination must be taught. Information gained by these procedures must be carefully recorded in the medical record. A reliable measure of the quality of a program is the quality of hospital records. These records should include daily appropriate progress notes by residents, together with a discharge summary. The hospital should maintain a records room with adequate cross indexing and ready reference for study of patients' charts. Periodic summaries of department statistics are essential for the evaluation of results, and will usually be requested at the time a program is reviewed by the RRC.

4. Medical Library

The medical library is an important resource to the obstetrics-gynecology education program. The library may be sponsored by the hospital or the department, but it must be readily accessible to staff and residents, both during the day and in the evening, including weekends. In addition, there must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the residency program. The textbooks should be kept up to date, and there should be an ample supply of current journals devoted to obstetrics-gynecology and related subjects. When a comprehensive library is not available in the hospital, an active reference system should be provided through ready access to larger medical libraries. Programs must provide instruction in retrieval and assessment of medical literature, and library services should include the electronic retrieval of information from medical databases.

5. Resident Facilities and Support Services

Adequate facilities for residents to carry out their patient care and personal educational responsibilities are required. These include adequate facilities for residents on duty and on call, including sleeping rooms, lounge, and food facilities. Also required are clinical support services such as pathology and radiology, including laboratory and radiologic information retrieval systems that allow rapid access to results, intravenous (IV) services, phlebotomy services, and messenger/transporter services in sufficient number to meet reasonable demands at all times.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

1. The number of residents that can be adequately and responsibly educated depends on several interrelated factors. Clinical involvement alone does not constitute an educational experience. The provision of adequate supervision, education, individual evaluation, and administrative support is critical. With this, it is of utmost importance that each resident have sufficient independent operative and clinical responsibilities to prepare for practice in the specialty.

2. The maximum number of residents in a program is linked to the number that can be accommodated within the framework of these requirements. One of the most important considerations is the clinical experience available to give each resident adequate primary responsibility. Because this usually centers on the senior resident year, the maximum number of residents in a program depends on how many senior residents the program can educate. Usually, the maximum number of residents in a program is the number of senior residents the program can accommodate multiplied by four.

3. The minimum number of residents in a program eligible for accreditation is 2 per year. Accreditation is granted on the basis of a balance between the educational resources and the number of residents in the program. Appointment of residents in excess of the approved number may adversely affect the quality of the total experience of each resident. Changes, therefore, in the educational resources should be reported to the RRC, and proposed increases in the number of residents must first be approved in writing by the RRC.

4. All requests for a change in the number of residents must demonstrate a distinct and substantial improvement in the educational opportunities for all residents in the program. Such requests must be based not only on the availability of an adequate patient population but also on adequate resources for supervision, education, and evaluation. A request for a permanent change in the number of residents must describe the predicted impact on the total experience of each of the senior residents under the new circumstances.

The request must be received within 18 months of the latest survey of the program; otherwise, a new survey will be necessary. The request will be considered incomplete if it lists only expansion in beds, hospitals, or overall clinical experience and does not address the question of the expansion of faculty and administrative support necessary to teach, supervise, and evaluate the additional residents.

Conversely, a reduction in beds or hospitals, or other changes in the program that may lead to an anticipated decrease in total experience for the residents, must be promptly called to the attention of the RRC to determine if a reduction in the number of resident positions in a given graduate medical program is necessary.

5. Residency programs may, with prior RRC approval, contain more residents in the first year than the number approved for subsequent years.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

a) One example of such objectives is set forth in the current "Educational Objectives for Residents in Obstetrics and Gynecology," produced under the auspices of the Council on Residency Education in Obstetrics and Gynecology (CREOG). Directors of programs must be able to document that they are reviewing the implementation of the educational objectives, and that the residents are indeed accomplishing what is anticipated of them. Any program that does not establish a system that clearly demonstrates that each resident has or has not successfully accomplished each of the items indicated in the program's statement of educational aims and objectives cannot be considered an adequate program.

b) It is neither essential nor desirable that all educational programs or individual resident experiences be identical in structure or function. Variations that provide creative solutions and opportunities, or that allow greater efficiency in the educational program may be implemented for up to 6 months of an educational experience focused on women's health care; an experience of more than 6 months and up to 12 months for an individual or a program would need prior written approval of the RRC. This approval requires the assurance that each residency program provides quality education and experience for all of the residents completing the program. The program director has the responsibility to assure that a resident completes the objectives and goals of the specific educational program. All educational experiences must have as a goal the enhancement of the quality of patient care.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Complete management of a patient's care under adequate supervision should be considered the highest level of residency educa-

tion. There are, however, circumstances under which the resident may not assume complete management:

- a) when the program director or his or her designee does not believe the resident's expertise or understanding is adequate to ensure the best care of the patient;
 - b) when the attending physician is unable to delegate the necessary degree of responsibility;
 - c) when the resident, for religious or moral reasons, does not wish to participate in proposed procedures.
2. An essential feature of resident education is that a significant number of staff support of the principle of delegation of complete management under supervision.
3. Increasing responsibility must progress in an orderly fashion, culminating in a senior resident year. The senior resident year consists of 12 months of clinical experience in the parent and/or integrated institution(s) that occur within the last 24 months of the resident's program. The senior resident must have sufficient independent operating experience to become technically competent, and have enough total responsibility for management of patients to ensure proficiency in the diagnostic and treatment skills that are required of a specialist in obstetrics-gynecology in both office and hospital practice.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Educational Components

1. The resident's ability to personally evaluate a patient's complaint, provide an accurate examination, employ appropriate diagnostic tests, arrive at a correct diagnosis, and recommend the appropriate treatment is of paramount importance.
2. Formal teaching activities in obstetrics-gynecology should be structured and regularly scheduled. They should generally consist of patient rounds, case conferences, journal clubs, and pro-

tected time for didactic conferences covering all aspects of the specialty, including basic sciences pertinent to the specialty. In cross-disciplinary conferences such as perinatology, physicians from appropriate specialties should be invited to participate.

3. Wise judgment regarding the need for a surgical procedure and the recognition and management of complications are as important as the technical aspects of residency education. The program must, therefore, ensure that residents' clinical experience emphasizes appropriate involvement in the process that leads to selection of the surgical option, the preoperative assessment, and the postoperative care of the patients for whom they share surgical responsibility. Continuity of care of these patients must be documented. A residency program in obstetrics-gynecology must be able to provide substantial, diverse, and appropriate surgical experience after residents have mastered the basic skills.
4. The program must provide a structured didactic and clinical educational experience in all methods of family planning. Topics must include all reversible methods of contraception, including natural methods, as well as sterilization. This must include experience in management of complications, as well as training in performing these procedures. This education may be provided outside the institution, in an appropriate facility, under the supervision of appropriately educated faculty.
5. No program or resident with a religious or moral objection shall be required to provide training in or to perform induced abortions. Otherwise, access to experience with induced abortion must be part of residency education. This education may be provided outside the institution. Experience with management of complications of abortion must be provided to all residents. If a residency program has a religious, moral, or legal restriction that prohibits the residents from performing abortions within the institution, the program must ensure that the residents receive satisfactory education and experience in managing the complications of abortion. Furthermore, such residency programs (1) must not impede residents in the programs who do not have religious or moral objections from receiving education and experience in performing abortions at another institution; and (2) must publicize such policy to all applicants to those residency programs.
6. Because an increasing percentage of women seeking their medical care from obstetrician-gynecologists are postmenopausal, there must be appropriate didactic instruction and sufficient clinical experience in the management of the problems of women in the post-reproductive age.

F. Clinical Components

1. Organization and Structure

- a) Growth in knowledge and experience in the primary and preventive care role is best provided to residents by maximizing their participation in an ambulatory environment designed to enable continuity of care over an extended period of time. Specific educational experiences for the primary and preventive care role should occupy the equivalent of at least 6 months of the 4 years of residency, and may be addressed in any of the 4 years of residency. The emphasis should be on ambulatory care of the patient, which requires both knowledge and skills in the areas of health maintenance, disease prevention, risk assessment, counseling, and the use of consultants and community resources. These experiences should be evident in the residents' exposure to continuity of care, general gynecology, general obstetrics, prevention or control of disease (e.g., sexually transmitted disease), substance abuse, or prevention of pregnancy. In addition to rotations in obstetrics-gynecology, general medical management experience may also be obtained during rotations in internal medicine and/or family medicine,

emergency medicine, and geriatric medicine. If rotations outside the department of obstetrics-gynecology are used, the residents' role and experience in these rotations should be sufficiently similar to those of residents on these services and relevant to the health care of women. These experiences should be strongly oriented toward ambulatory care. Residents must have an experience in menopausal healthcare and geriatric medicine that is the equivalent of at least one month of a block rotation.

- b) The patient population on which the educational program is based should be of such sufficient size and composition that the broad spectrum of experiences necessary to meet the educational objectives will be provided.
- c) The ambulatory care experiences of residents preparing for their roles as providers of primary and preventive care require the same attention, supervision, and guidance as those experiences in specialty clinics. It is essential to provide a closely-supervised experience by appropriately-educated generalist faculty that assures patients of continuity of care by an individual resident. Increasing responsibility should be given to residents under the supervision of a qualified, on-site, attending staff/faculty member. Residents should develop and maintain a continuing physician-patient relationship with a panel of patients, at least ½ day per week, throughout at least 3 of the 4 years of education. The use of remote sites or institutions or clinical services must not interrupt continuity of care clinics for longer than 2 months in any of these 3 years. Residents should be provided opportunity on at least a weekly basis to return to the parent institution for their continuity clinic experience.

2. Specific Educational Experiences

The educational curriculum must be written and implemented for the comprehensive development of measurable competencies for each resident. This education must include, but not necessarily be limited to, the following:

a) Obstetrics

- (1) the full range of obstetrics, including the medical and surgical complications of pregnancy and experience in the management of critically ill patients;
- (2) genetics, including experience with genetic amniocentesis and patient counseling;
- (3) learning and performing operative vaginal deliveries, including the use of obstetric forceps and/or the vacuum extractor;
- (4) performing vaginal breech and vaginal multifetal deliveries;
- (5) performing vaginal births after previous cesarean delivery;
- (6) learning the principles of general and conduction anesthesia, together with the management and the complications of these techniques;
- (7) immediate care of the newborn (every resident must have experience in resuscitation of the human newborn and an understanding of the principles of general neonatal complications);
- (8) the full range of commonly-employed obstetrical diagnostic procedures, including ultrasonography and other relevant imaging techniques;
- (9) the emotional and psychosocial impact of pregnancy or pregnancy loss on an individual and her family;
- (10) the counseling of women regarding nutrition, exercise, health maintenance, high-risk behaviors, and preparation for pregnancy and childbirth; and
- (11) obstetric pathology.

b) Gynecology

- (1) the full range of medical and surgical gynecology for all age groups, including experience in the management of critically-ill patients;
- (2) diagnosis and management of pelvic floor dysfunction, including experience with various operations for its correction;
- (3) diagnosis and medical and surgical management of urinary incontinence;
- (4) oncology, including prevention, diagnosis, and treatment;
- (5) diagnosis and nonsurgical management of breast disease;
- (6) reproductive endocrinology and infertility;
- (7) clinical skills in family planning;
- (8) psychosomatic and psychosexual counseling;
- (9) the full range of commonly-employed gynecologic diagnostic procedures, including ultrasonography and other relevant imaging techniques;
- (10) counseling and educating of patients about the normal physiology of the reproductive tract and about high-risk behaviors that may compromise reproductive function; and
- (11) gynecologic pathology.

c) Primary and Preventive Care

- (1) comprehensive history-taking, including medical, nutritional, sexual, family, genetic, and social behavior data, and the ability to assess health risks;
- (2) complete physical examination;
- (3) appropriate use of laboratory studies and diagnostic techniques;
- (4) patient education and counseling;
- (5) screening appropriate to patients of various ages and risk factors;
- (6) immunizations needed at specific ages and under specific circumstances;
- (7) diagnosis and treatment of the common nonreproductive illnesses affecting women;
- (8) continuous management of the health care of women of all ages;
- (9) appropriate use of community resources and other physicians through consultation when necessary;
- (10) appropriate awareness and knowledge of the behavioral and societal factors that influence health among women of differing socioeconomic and cultural backgrounds;
- (11) behavioral medicine and psychosocial problems, including domestic violence, sexual assault, and substance abuse;
- (12) emergency care;
- (13) ambulatory primary care problems of the geriatric patient;
- (14) basics of epidemiology, statistics, data collection and management, and use of medical literature and assessment of its value;
- (15) ethics and medical jurisprudence;
- (16) community medicine, including health promotion and disease prevention;
- (17) health care delivery systems and practice management;
- (18) information processing and decision-making; and
- (19) patient safety.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure

that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.

The program director must provide for the supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the program staff.

Supervision of residents in obstetrics and gynecology is required to ensure proper (1) quality of care; (2) education; (3) patient safety; and (4) fulfillment of responsibility of the attending physicians to their patients. These considerations must be integrated with the goal of independent competence in the full range of obstetrics and gynecology at the completion of residency. This implies a graduated and increasing level of independent resident action. Each program director must balance quality assurance for patient care, resident education, and independent resident action. The level of resident supervision should be commensurate with the amount of independent function that is designated at each resident level. Residents, as well as faculty, may provide supervision.

2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.

On an obstetrics and gynecology service, adequate supervision requires the 24-hour presence of faculty in the hospital, except when residents are not assigned in-house call responsibilities. Faculty must be immediately available to the resident if clinical activity is taking place in the operating rooms and/or labor and delivery areas. Faculty must be within easy walking distance of patient care units. Clinical services provided in ambulatory (office) locations require on-site supervision. Open and generously-used lines of two-way communication are important and should be encouraged.

If the program director judges that the size and nature of the patient population does not require the 24-hour presence of residents and faculty, this situation must be carefully defined and reviewed, and should include information about the nature of the hospital, the patient population, the attending staff, and the geographic and climatic situations. Exceptions require prior written approval from the RRC.

3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.

2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.

3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty, except in outpatient continuity clinics.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if un-

expected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exception

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations of the knowledge, skills, and professional growth of the residents, using appropriate criteria and procedures. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance. One example of an acceptable mechanism helpful in evaluating cognitive knowledge is the CREOG in-training examination.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and

the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

- a) For the purpose of program review, accurate and complete documentation of each individual resident's experience for each year of the program is mandatory. These records should indicate the level of participation of the resident and the skills achieved. The program director must review the record of operative experience with individual residents at least semiannually for breadth and depth of experience, as well as for evidence of continuing growth in technical achievements. These cumulative data will be reviewed in detail at the time of survey for program approval or continued program approval. For the purposes of these records, there is no distinction between private and service patients.
 - b) Annually, the program director must collect, compile, and retain the numbers and types of operative procedures performed by residents in the program, together with information describing the total resident experience in each institution and facility utilized in the clinical education of residents. This information must be provided in the format and form specified by the RRC.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Obstetrics and Gynecology should communicate with the office of the board regarding the full requirements for certification.

ACGME: September 2000 Effective Date: July 2001

Editorial Revision: July 2004

Program Requirements for Residency Education in Ophthalmology

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Residency training programs in ophthalmology should be organized to provide a stable, well-coordinated, progressive, educational experience in the entire spectrum of ophthalmic diseases so that residents may develop diagnostic, therapeutic, and manual skills as well as sound judgment in their application. Each resident must have major technical and patient care responsibilities in order to provide an adequate base for a comprehensive ophthalmic practice that includes optics, visual physiology, and corrections of refractive errors; retina, vitreous, and uvea; neuro-ophthalmology; pediatric ophthalmology and strabismus; external disease and cornea; glaucoma, cataract, and anterior segment; plastic surgery and orbital diseases; and ophthalmic pathology.

B. Duration and Scope of Education

1. The length of training in ophthalmology must be at least 36 calendar months, including appropriate short periods for vacation, special assignments, or exceptional individual circumstances approved by the program director.
2. Any program that extends the length of training beyond 36 calendar months must present an educational rationale that is consonant with the Program Requirements and the objectives for residency training. Approval for the extended curriculum must be obtained prior to implementation and at each subsequent review. Prior to entry in the program, each resident must be notified in writing of the required curriculum length.
3. The length of time of residency training for a particular resident may be extended by the program director if a resident needs additional training. If the extension is only six months or less, the program director must notify the Residency Review Committee of the extension and must describe the proposed curriculum for that resident and the measures taken to minimize the impact on other residents. Any changes in rotation schedules should be included in the notification. Express permission must be obtained in advance from the RRC if the extension is greater than six months. (See below, III.A.4.d.)

II. Institutions

A. Sponsoring Institution

One sponsoring institution at which the majority of the required clinical and didactic educational experiences occur and are coordinated by the program director **must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.** There must be a single program director responsible for the program.

B. Participating Institutions

1. **Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives and should provide resources not otherwise available to the program. When multiple**

- participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution that provides an educational experience for a resident that is one month in duration or longer. In instances where two or more participating institutions in the program function as a single unit under the authority of the program director, letters are not necessary. Such a letter of agreement should:
 - a. identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b. specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document per Sections III.B. and VII.A.
 - c. specify the duration and content of the educational experience; and
 - d. state the policies and procedures that will govern resident education during the assignment.
 - e. outline the educational goals and objectives to be attained by the resident during the assignment
 3. Assignments at participating institutions must be of sufficient length to ensure a quality educational experience and should provide sufficient opportunity for continuity of care. Although the number of participating institutions may vary with the various specialties' needs, all participating institutions must demonstrate the ability to promote the program goals and educational and peer activities. Exceptions must be justified and prior-approved.
 4. If a participating institution is sufficiently remote from the sponsoring institution to prevent regular attendance by residents at the didactic and clinical conferences at the sponsoring institution, or if the rotation otherwise prevents such attendance, the program director must demonstrate that each resident is exposed to a formal educational experience that fulfills the "Program Requirements."
 5. Formal teaching case presentations should be included at each participating institution to assure optimal utilization of patients for teaching purposes; alternatively, cases should be brought from participating institutions to the sponsoring institution for presentation if formal teaching case presentations are held only there.
 6. The program director must assure that all residents have equivalent educational experiences.
 7. Rotations to foreign countries shall not be used to meet minimum educational standards.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program and should be a member of the staff of the sponsoring or integrated institution. The institution must ensure that the program director is given sufficient authority, financial support, and facilities by the governing body of the sponsoring institution to permit him/her to organize and supervise the following activities of the training program: resident selection and evaluation, resident instruction, patient management, research, and initiation of recommendations for staff recruitment. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).

2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership; the program director should have a term of at least three years.
3. Qualifications of the program director are as follows:
 - a. The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b. The program director must be certified in the specialty by the American Board of Ophthalmology or possess qualifications judged to be acceptable by the RRC.
 - c. The program director must be appointed in good standing and based at the primary teaching site.
 - d. be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
4. Responsibilities of the program director are as follows:
 - a. The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions. The program director who serves as administrator, educator, and research coordinator must devote sufficient time to the administration and conduct of the residency training program so that the educational experience for the residents is satisfactory.
 - b. The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c. The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d. The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - 1) the addition or deletion of a participating institution;
 - 2) a change in the format of the educational program; in particular, a required rotation of six months or more to any institution other than the primary teaching site.
 - 3) Change in the approved resident complement, both total number and the number at any level. If the change in resident complement results from the extension of training of a current resident as described in I.B.3 above and is not greater than 6 months, only prior notification of RRC is required.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

5. To ensure proper supervision, the program director must prepare explicit, written descriptions of lines of responsibility for the care of patients and make these clear to all members of teaching teams. Residents must be provided with rapid, reliable systems for communication with and appropriate involvement of supervisory physicians in a manner appropriate for quality patient care and educational programs.

6. The Residency Review Committee for Ophthalmology will evaluate the overall effectiveness of the program director as an administrator, educator, and research coordinator.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
 - a. The number of teaching faculty (regardless of source of compensation) must be sufficient to ensure that, in the aggregate, they spend at least 13 hours per week per resident in direct interaction with the residents.
 - b. The faculty must have a broad range of subspecialty expertise. Such expertise will usually be acquired by subspecialty fellowship training.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a. The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b. The physician faculty must be certified in the specialty by the American Board of Ophthalmology, or possess qualifications judged to be acceptable by the RRC.
 - c. The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a. the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b. the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c. the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a. Nonphysician faculty must be appropriately qualified in their field.
 - b. Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Facilities and Resources

1. Clinic

The outpatient area of each participating institution must have a minimum of one fully equipped examining lane for each resident in the clinic. There must be access to current diagnostic equipment. This should encompass equipment designed for ophthalmic photography (including fluorescein angiography), perimetry, ultrasonography, keratometry, and retinal electrophysiology, as well as other appropriate equipment.

2. Operating Room Facilities
The surgical facilities at each participating institution in which residents are trained in surgery must include at least one operating room fully equipped for ophthalmic surgery, including an operating microscope.
3. Inpatient Facilities
There must be inpatient facilities with access to sufficient space and beds for good patient care. An eye examination room with a slit lamp should be easily accessible.
4. Library
 - a. Residents must have ready access to a major medical library either at the institution where the residents are located or through arrangement with convenient nearby institutions.
 - b. Library services should include the electronic retrieval of information from medical databases.
 - c. There must be readily available an on-site library or a collection of ophthalmological and general medical texts, journals, films, records and tapes in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

All applicants entering ophthalmology training programs must have taken a post-graduate clinical year (PGY-1) in a program accredited by the ACGME or the Royal College of Physicians and Surgeons of Canada. The PGY-1 year must be comprised of training in which the resident has primary responsibility for patient care in fields such as internal medicine, neurology, pediatrics, surgery, family practice, or emergency medicine. As a minimum, six months of this year must be a broad experience in direct patient care.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

A critical mass or minimum number of residents is essential in order to provide an opportunity for meaningful interaction throughout the training period. Each program must be structured to have a minimum of two residents in each year of training.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

D. ACGME Competencies

(N.B.: Section V. D. does not apply to certain subspecialties)

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic components

1. Instruction in the Basic and Clinical Sciences

Residents should be educated in basic and clinical sciences through a structured regularly scheduled series of conferences and lectures encompassing a minimum of 360 hours during the

36 month training program, at least 200 of which are intramural. In addition, a minimum of six hours per month should be devoted to case presentation conferences (e.g., Grand Rounds, Continuous Quality Improvement) attended by several faculty and a majority of residents. The program director or designee is responsible for documenting resident attendance at conferences.

2. Pathology

In addition to the structured series of lectures and the clinicopathological conferences devoted to ocular pathology, the training experience in this area should include a minimum of 50 hours of laboratory experience in gross and microscopic examination of pathological specimens, including the residents' review of pathological specimens of his/her patients with a pathologist who has demonstrated expertise in ophthalmic pathology. The experience with such a pathologist may take place intramurally or extramurally at a laboratory considered by the Residency Review Committee to be capable of providing such training.

F. Clinical components

The volume and variety of clinical ophthalmological problems in children and adults must be sufficient to afford each resident a graduated supervised experience with the entire spectrum of ophthalmic diseases so that the resident may develop diagnostic, therapeutic, and manual skills and judgment as to their appropriate use.

1. Outpatient experience

During the course of training residents should be responsible for the care of an adequate number of outpatients who represent a broad range of ophthalmic diseases. There must be appropriate faculty supervision of the residents in all outpatient visits. Appropriate faculty supervision occurs when the faculty is readily available to the resident(s) for consultation or assistance when requested.

- a. Each resident should participate in a minimum of 3,000 outpatient visits in which the resident performs a substantial portion of the examination.
- b. There should be direct faculty supervision of each resident in at least 1,000 outpatient visits. Direct faculty supervision occurs when faculty members also examine the patient with the resident and discuss the management of the patient with the resident before the patient leaves the clinic.

2. Surgical Experience

- a. Residents must perform and assist at sufficient surgery to become skilled as comprehensive ophthalmic surgeons. That is, each resident must have major technical and patient care responsibilities in the surgery (including laser surgery) of cataract, strabismus, cornea, glaucoma, retina/vitreous, oculoplastic, and trauma to provide an adequate base for a comprehensive ophthalmic practice.
- b. The program director is responsible for documenting the surgical experiences of each resident, to include the number of cases in each category where the resident has served as the primary surgeon or the assistant surgeon. This documentation must be provided to the Residency Review Committee on its Program Information Forms and individual resident logs must be available at the time of the site visit.

3. Systemic Disease Consultation Experience

Each resident should receive experience in providing inpatient and outpatient consultation during the course of three years of education.

VI. Resident Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised

by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a. The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.

- c. The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a. Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b. Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c. Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.
- d. An objective test mechanism is required annually as a component of evaluating the resident's cognitive ability. While each program may utilize its own test instruments, the Ophthalmic Knowledge Assessment Program (OKAP) examination is an example. However, results of the OKAP examination should not be used as the only criterion of resident performance. An analysis of the results of these tests should guide the faculty in as-

sessing the strengths and weaknesses of individual residents and of the program.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Ophthalmology should communicate with the office of the Executive Director of the Board regarding the full requirements for certification to ascertain the current requirements for acceptance as a candidate for certification.

*ACGME: February 1999 Effective: July 1999
Editorial Revision: July 2004*

Program Requirements for Graduate Medical Education in Orthopaedic Surgery

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Orthopaedic surgery is the medical specialty that includes the study and prevention of musculoskeletal diseases, disorders, and injuries and their treatment by medical, surgical, and physical methods.

B. Duration and Scope of Education

1. Orthopaedic residencies will be accredited to offer 5 years of graduate medical education. The orthopaedic residency director is responsible for the design, implementation, and oversight of a PGY-1 year that will prepare residents for specialty education in orthopaedic surgery. This year must include resident participation in clinical and didactic activities that will give them the opportunity to
 - a. develop the knowledge, attitudes, and skills needed to formulate principles and assess, plan, and initiate treatment of adult and pediatric patients with surgical and/or medical problems;
 - b. be involved in the care of patients with surgical and medical emergencies, multiple organ system trauma, soft tissue wounds, nervous system injuries and diseases, peripheral vascular injuries and diseases, and rheumatologic and other medical diseases;
 - c. gain experience in the care of critically ill surgical and medical patients;
 - d. participate in the pre-, intra- and post-operative care of surgical patients; and
 - e. develop an understanding of surgical anesthesia, including anesthetic risks and the management of intra-operative anesthetic complications.
2. In order to meet these goals the PGY-1 year must include
 - a. a minimum of six months of structured education in surgery, to include multi-system trauma, plastic surgery/burn care, intensive care, and vascular surgery;
 - b. a minimum of one month of structured education in at least three of the following: emergency medicine, medical/cardiac intensive care, internal medicine, neurology, neurological surgery, pediatric surgery or pediatrics, rheumatology, anesthesiology, musculoskeletal imaging, and rehabilitation; and
 - c. a maximum of three months of orthopaedic surgery.
3. The program director is also responsible for the design, implementation and oversight of PGY-2 through PGY-5 years that
 - a. must include at least 3 years of rotations on orthopaedic services; and
 - b. may include rotations on related services such as plastic surgery, physical medicine and rehabilitation, rheumatology, or neurological surgery.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

1. One primary site must provide most of the residents' basic science and research education.
 - a. Residents' clinical education at the primary site should include extensive experience in patient care. Preoperative evaluation and postoperative follow-up, as well as evaluation and treatment of patients not requiring surgery, must be included.
 - b. Basic science education and the principal clinical conferences should be provided at the primary site. Supplemental conferences may also be provided at other locations, but the program's didactic activities should be provided at the program's primary site.
2. The governing body of the sponsoring institution must provide support for the program director in teaching, recruiting staff, selecting residents, assigning residents to an appropriate workload, and dismissing residents whose performance is unsatisfactory and must encourage continuity in the program directorship.
3. In communities where the didactic programs of several residencies are combined, the staff of each accredited program must actively and consistently participate in the combined effort.
4. To provide an adequate interdisciplinary educational experience, the institution that sponsors the orthopaedic program should also participate in ACGME-accredited programs in general surgery, internal medicine, and pediatrics.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.
3. Affiliations should be avoided with institutions that are at such a distance from the sponsoring institution as to make resident participation in program conferences and rounds difficult, unless the participating institution provides comparable activities.
4. The program director must have the responsibility and authority to coordinate program activities at all participating institutions and must maintain a file of written descriptions of the educational activities provided at each institution involved in the program.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational envi-

ronment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership. Programs that have acting directors for more than one year will be subject to review, which may include a site visit.

3. Qualifications of the program director are as follows:

- a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
- b) The program director must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
- c) The program director must be appointed in good standing and based at the primary teaching site.

4. Responsibilities of the program director are as follows:

- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

- e) Ensuring the provision of adequate facilities, teaching staff, resident staff, teaching beds, educational resource materials, outpatient facilities, and research facilities.
- f) Maintaining a file of current, written institutional and interinstitutional agreements, resident agreements, patient care statistics, the operative experience of individual residents, policies on duty hours and supervision, and regular assessments of resident performance. These documents must be provided on request to the RRC or to the site visitor.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
 - a) All program must have at least three faculty who devote at least 20 hours each week to the program.
 - b) There must be at least one full-time faculty equivalent (one FTE equals 45 hours per week devoted to the residency) for every four residents in the program (excluding residents in nonorthopaedic education).
 - c) It is the responsibility of the teaching staff to ensure that the structure and content of the residency reflect an education-to-service ratio that identifies residents as students and

provide adequate experience in preoperative and postoperative, as well as intraoperative, patient care.

d) The teaching staff must provide direct supervision appropriate to a resident's competence and level of training in all patient care settings, including operative, inpatient, outpatient, and emergency.

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.

3. Qualifications of the physician faculty are as follows:

a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.

b) The physician faculty must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.

c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;

b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;

c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

a) Nonphysician faculty must be appropriately qualified in their field.

b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

2. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.

3. Library resources must include current and past orthopaedic periodicals and reference books that are readily accessible to all orthopaedic residents in the program.

4. Library services should include the electronic retrieval of information from medical databases.

5. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements. Programs are encouraged to recognize the value and importance of recruiting qualified women and minority students.

B. Number of Residents

The RRC will approve the number of residents to be educated in the program and at each level of the program based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching. It is important that the resident complement be sufficient in number to sustain an educational environment.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Components

a. Basic Medical Sciences

Basic science education must include substantial instruction in anatomy, biomechanics, pathology, and physiology. The basic science program must also include resident education in

embryology, immunology, pharmacology, biochemistry, and microbiology.

- (1) Instruction in anatomy must include study and dissection of anatomic specimens by the residents and lectures or other formal sessions.
- (2) Instruction in pathology must include organized instruction in correlative pathology in which gross and microscopic pathology are related to clinical and roentgenographic findings.
- (3) Instruction in biomechanics should be presented in seminars or conferences emphasizing principles, terminology, and application to orthopaedics.
- (4) Organized instruction in the basic medical sciences must be integrated into the daily clinical activities by clearly linking the pathophysiologic process and findings to the diagnosis, treatment, and management of clinical disorders.
- (5) Organized instruction in the appropriate use and interpretation of radiographic and other imaging techniques must be provided for all residents.

b. Related Areas of Instruction

Resident education must include orthopaedic oncology, rehabilitation of neurologic injury and disease, spinal cord injury rehabilitation, orthotics and prosthetics, and the ethics of medical practice.

c. Teaching Rounds and Conferences

Faculty and residents must attend and participate in regularly scheduled and held teaching rounds, lectures, and conferences. Treatment indications, clinical outcomes, complications, morbidity, and mortality must be critically reviewed and discussed on a regular basis. Subjects of mutual interest and the changing practice of medicine should be discussed at interdisciplinary conferences. On average, there must be at least 4 hours of formal teaching activities each week.

2. Clinical Components

a. Clinical Resources

Clinical problems must be of sufficient variety and volume to afford the residents adequate experience in the diagnosis and management of adult and pediatric orthopaedic disorders. The residents' clinical experience must include adult orthopaedics, including joint reconstruction; pediatric orthopaedics, including pediatric trauma; trauma, including multisystem trauma; surgery of the spine, including disk surgery, spinal trauma, and spinal deformities; hand surgery; foot surgery in adults and children; athletic injuries, including arthroscopy; metastatic disease; and orthopaedic rehabilitation, including amputations and postamputation care.

b. Continuity of Care

All residents must have the opportunity to develop competence in the preadmission care, hospital care, operative care, and follow-up care (including rehabilitation) of patients. Opportunities for resident involvement in all aspects of care of the same patient should be maximized.

c. Nonoperative Outpatient Experience

Residents must have adequate experience in nonoperative outpatient diagnosis and care, including all orthopaedic anatomic areas and patients of all age groups. Each week residents must have at least one-half day and should have two-half days of outpatient clinical experience in physician offices or hospital clinics with a minimum of 10 patients per session on all clinical rotations. Residents must be directly supervised by faculty and instructed in pre- and post-operative assessment as well as the operative and non-operative care of general and subspecialty orthopaedic patients. Opportunities for resident

involvement in all aspects of outpatient care of the same patient should be maximized.

d. Progressive Responsibility

Residents must have the opportunity to assume increasing responsibility for patient care, under direct faculty supervision (as appropriate for each resident's ability and experience), as they progress through a program. Inpatient and outpatient experience with all age groups is necessary.

e. Basic Motor Skills

Instruction in basic motor skills must include experience in the proper use of surgical instruments and operative techniques. Evaluation of new or experimental techniques and/or materials should be emphasized. The application of basic motor skills must be integrated into daily clinical activities, especially in the operating room.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

1. Resources for scholarly activity by residents must include laboratory space and equipment, computer and data analysis services, statistical consultation services, research conferences, faculty expertise and supervision, support personnel, time, and funding.
2. To develop the abilities to critically evaluate medical literature, research, and other scholarly activity, resident education must include instruction in experimental design, hypothesis testing, and other current research methods, as well as participation in clinical or basic research.
3. Program directors must maintain a current record of research activity by residents and faculty.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. **Patient care that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health.** Residents are expected to:
 - a. communicate effectively and demonstrate caring and respectful behaviors when interacting with patients and their families;
 - b. gather essential and accurate information about their patients;
 - c. make informed decisions about diagnostic and therapeutic interventions based on patient information and preferences, up-to-date scientific evidence, and clinical judgment;
 - d. develop and carry out patient management plans;
 - e. counsel and educate patients and their families;
 - f. demonstrate the ability to practice culturally competent medicine;
 - g. use information technology to support patient care decisions and patient education;
 - h. perform competently all medical and invasive procedures considered essential for the area of practice;
 - i. provide health care services aimed at preventing health problems or maintaining health; and
 - j. work with health care professionals, including those from other disciplines, to provide patient-focused care.
2. **Medical Knowledge about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care.** Residents are expected to:

- a. demonstrate an investigatory and analytic thinking approach to clinical situations; and
 - b. know and apply the basic and clinically supportive sciences which are appropriate to orthopaedic surgery.
- 3. Practice-based learning and improvement that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care.** Residents are expected to:
- a. analyze practice experience and perform practice-based improvement activities using a systematic methodology;
 - b. locate, appraise, and assimilate evidence from scientific studies related to their patients' health problems;
 - c. obtain and use information about their own population of patients and the larger population from which their patients are drawn;
 - d. apply knowledge of study designs and statistical methods to the appraisal of clinical studies and other information on diagnostic and therapeutic effectiveness;
 - e. use information technology to manage information, access on-line medical information, and support their own education; and
 - f. facilitate the learning of students and other health care professionals.
- 4. Interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and other health professionals.** Residents are expected to:
- a. create and sustain a therapeutic and ethically sound relationship with patients;
 - b. use effective listening skills and elicit and provide information using effective nonverbal, explanatory, questioning, and writing skills; and
 - c. work effectively with others as a member or leader of a healthcare team or other professional group.
- 5. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds.** Residents are expected to:
- a. demonstrate respect, compassion, and integrity; a responsiveness to the needs of patients and society that supersedes self-interest; accountability to patients, society and the profession; and a commitment to excellence and ongoing professional development;
 - b. demonstrate a commitment to ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, informed consent, and business practices;
 - c. demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities; and
 - d. demonstrate sensitivity and responsiveness to fellow health care professionals' culture, age, gender, and disabilities.
- 6. Systems-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.** Residents are expected to:
- a. understand how their patient care and other professional practices affect other healthcare professionals, the healthcare organization, and the larger society and how these elements of the system affect their own practice;
 - b. know how types of medical practice and delivery systems differ from one another, including methods of controlling healthcare costs and allocating resources;
 - c. practice cost-effective health care and resources allocation that does not compromise quality of care;

- d. advocate for quality patient care and assist patients in dealing with system complexities; and
- e. know how to partner with health care managers and healthcare procedures to assess, coordinate, and improve health care and know how these activities can affect system performance.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.

3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. Program graduates should take both Part I and Part II of the American Board of Orthopaedic Surgery examinations and at least 75% of those who take the exams for the first time should pass.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Orthopaedic Surgery should communicate with the office of the board regarding the full requirements for certification.

ACGME: June 2001 Effective: July 2002
Editorial Revision: June 2004

Program Requirements for Graduate Medical Education in Adult Reconstructive Orthopaedics (Orthopaedic Surgery)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of subspecialty

Adult reconstructive orthopaedics is a subspecialty of orthopaedic surgery that includes the in-depth study, prevention, and reconstructive treatment of musculoskeletal diseases, disorders, and sequelae of injuries by medical, physical, and surgical methods in patients 17 years and older. An educational program in adult reconstructive orthopaedics may include the care of arthritis and related disorders in many anatomic regions or be limited to areas such as the hip, knee, shoulder, elbow, or ankle and foot.

B. Duration and scope of education

Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education should take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

II. Institutions

A. Sponsoring Institution

1. **One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.**
2. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
3. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
4. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic

fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.

5. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of the subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

B. Participating Institutions

1. **Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.**
2. **Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:**
 - a) **identify the faculty who will assume both educational and supervisory responsibilities for fellows;**
 - b) **specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;**
 - c) **specify the duration and content of the educational experience; and**
 - d) **state the policies and procedures that will govern fellow education during the assignment.**

III. Program Personnel and Resources

A. Program Director

1. **There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.**
2. **The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.**
3. **Qualifications of the program director are as follows:**
 - a) **The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.**
 - b) **The program director must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.**
 - c) **The program director must be appointed in good standing and based at the primary teaching site.**
4. **Responsibilities of the program director are as follows:**
 - a) **The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site direc-**

tor, and monitoring appropriate fellow supervision at all participating institutions.

- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
3. Facilities to support the overall educational program must be available and functioning. These include outpatient, inpatient, imaging, laboratory, rehabilitation, and research resources. Operating rooms must contain all necessary equipment, implants, and instrumentation for reconstructive surgery.
4. There should be broad support from other clinical specialties, including radiology, laboratory medicine, rheumatology, gerontology, infectious disease, pathology, and rehabilitation.
5. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
6. Library resources must include current and past orthopaedic periodicals and reference books that are readily accessible to all orthopaedic fellows in the program.
7. Library services should include the electronic retrieval of information from medical databases.
8. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic components

- a. The academic component must emphasize a scholarly approach to clinical problem-solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
- b. The educational curriculum must include opportunities for fellows to study anatomy, physiology, biomechanics, pathology, microbiology, pharmacology, epidemiology, and immunology as they relate to adult reconstructive orthopaedics.
- c. The program must have regularly scheduled and held subspecialty conferences with active participation of faculty and fellows.

2. Clinical components

- a. The clinical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
- b. The program must offer supervised training in the operative and other technical skills integral to adult reconstructive orthopaedics. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.
- c. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- d. Clinical experience must include opportunities to observe and to manage patients with a variety of problems involving orthopaedic reconstruction on both an inpatient and outpatient basis, and the breadth of patient experience should include the evaluation and care of individuals through a wide range of ages, both sexes, and involve acute, subacute, and chronic conditions.
- e. The program must emphasize the diagnosis of clinical disorders of the bones, joints, and soft tissues; the pathogenesis of these disorders; the treatment modalities available for managing these disorders; and the results and complications of such treatment. Fellows must assume a major role in the continuing care of patients and have progressive responsibility in patient

assessment, preoperative evaluation, operative experience, and postoperative management and rehabilitation.

- f. The fellow must keep a record of the diagnosis and procedure for each operation in which he or she is an operating surgeon or first assistant. This record must be kept on file and available for review.
- g. Reconstructive principles may be broadly based or taught in a context of specific anatomic regions. Examples of knowledge and skills that are desirable include but are not limited to the following:
 - (1) The basic sciences related to adult reconstructive orthopaedics.
 - (2) The natural history of joint diseases.
 - (3) Prudent use of diagnostic laboratory tests.
 - (4) Interpretation of the radiographic and various imaging modality examination of the musculoskeletal system with an appreciation of the risk and information expected of the procedures.
 - (5) Development of a treatment plan to manage patients with traumatic, congenital and developmental, infectious, metabolic, degenerative, and rheumatologic disorders.
 - (6) Development of operative skills in reconstructive orthopaedics, including soft-tissue procedures, osteotomy, bone grafting, excisional arthroplasty, arthrodesis, and prosthetic arthroplasty.
 - (7) Recognition and management of complications of treatment.
 - (8) Assessment of the effectiveness of treatment methods, including outcome studies.
 - (9) Sufficient familiarity with current research methods to enable the fellow to critically analyze research reports and to design and implement clinical or basic research in the field of adult reconstructive orthopaedics.
 - (10) Acquisition of teaching skills in adult reconstructive orthopaedics.

C. Fellows Scholarly Activities

1. Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.
2. Fellows must participate in basic and/or clinical hypothesis-based research.
3. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
4. The program must provide time and facilities for research activities by fellows.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because graduate medical education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.

3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly

activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

*ACGME: June 2002 Effective: January 2003
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Foot and Ankle Orthopaedics (Orthopaedic Surgery)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of Subspecialty

Foot and ankle orthopaedics is a subspecialty of orthopaedic surgery which includes the in-depth study, prevention, and treatment of musculoskeletal diseases, disorders, and sequelae of injuries in this anatomic region by medical, physical, and surgical methods.

B. Duration and Scope of Education

Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such edu-

cation should take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.

1. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions which sponsor accredited residency programs in orthopaedic surgery, or which are affiliated with an orthopaedic surgery residency accredited by the Accreditation Council for Graduate Medical Education (ACGME). Requests for exceptions to this policy will be reviewed on a case-by-case basis.
2. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
3. There must be close monitoring of the relationship between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
4. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of the subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program, and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:

- a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
 5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. Adequate facilities to support the overall educational program must be available and functioning. These include outpatient, inpatient, imaging, laboratory, rehabilitation, and research resources. Operating rooms must be adequately equipped for reconstructive surgery.
2. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow, without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
3. There should be broad support from other clinical subspecialties, including radiology, pathology, rheumatology, endocrinology, laboratory medicine, infectious disease, rehabilitation, and prosthetics and orthotics.
4. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
5. Library resources must include current and past orthopaedic periodicals and reference books that are readily accessible to all orthopaedic fellows in the program.

6. Library services should include the electronic retrieval of information from medical databases.
7. There must be access at each institution participating in the program to an on-site library or to a collection of appropriate texts and journals. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management. The program must provide sufficiently-advanced education to allow the fellow to acquire special expertise in foot and ankle orthopaedics. This education must consist of academic and technical components. The academic component must emphasize a scholarly approach to clinical problem-solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of foot and ankle orthopaedics.

1. Didactic Components

- a) The educational curriculum must include the study of anatomy, physiology, biomechanics and gait, pathology, microbiology, pharmacology, and immunology as they relate to foot and ankle orthopaedics.
- b) The program must have regularly-held and regularly-attended subspecialty conferences, including at least one weekly teaching conference and one monthly morbidity-mortality conference, with active faculty and fellow participation. A monthly journal club covering appropriate topics in foot and ankle surgery should be held.

2. Clinical Components

- a) Clinical experience must include opportunities to observe and to manage patients with a variety of problems involving orthopaedic repair of the foot and ankle on both an inpatient and an outpatient basis. The breadth of patient experience should include the evaluation and care of individuals through a wide range of ages and both sexes, and should involve acute, sub-acute, and chronic conditions.
- b) The program must provide fellows with experience in the orthopaedic management and appropriate referral for the care of related disorders (e.g., rheumatoid arthritis, neuromuscular disorders, and diabetes), as well as those disorders of the leg that may directly or indirectly affect the foot and ankle (e.g., compartment syndrome, neuromuscular disease, malalignment of the leg, bone instability).
- c) Programs must provide supervised training in operative and other technical skills integral to foot and ankle orthopaedics. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly-performed procedures in foot and ankle orthopaedics.
- d) The program must emphasize the diagnosis of clinical disorders of the bones, joints, and soft tissues of the foot and ankle. The pathogenesis of these disorders, the treatment modalities available, and the results and complications of such treatment should be emphasized.
- e) Fellows must assume a major role in the continuing care of patients, and have progressive responsibility for patient assessment, decisions regarding treatment, preoperative evaluation, operative experience, nonoperative management, postoperative management, rehabilitation, long-term follow-up, and other outpatient care.
- f) Fellows must have the opportunity to provide consultation with faculty supervision, and should have clearly-defined educational responsibilities for fellows, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of foot and ankle orthopaedics.
- g) Fellows must keep a record of the diagnosis and procedure for each operation for which they are an operating room surgeon or first assistant. This record must be kept on file and available for review.
- h) The program must provide sufficient education to permit fellows to develop clinical competence in the field of foot and ankle orthopaedics. Examples of knowledge and skills that are essential include but are not limited to:
 - (1) the basic sciences related to foot and ankle orthopaedics;
 - (2) the natural history of disease and disorders of the foot and ankle, including an understanding of the deformed, injured, or diseased pediatric foot;
 - (3) the prudent use of diagnostic laboratory tests;
 - (4) the interpretation of the radiographic examination of the musculoskeletal system, particularly the foot and ankle, with an understanding of the risk and information expected of these procedures;

- (5) the development of a treatment plan to manage patients with traumatic, congenital and developmental, infectious, metabolic, degenerative, neurologic, and rheumatologic disorders;
- (6) an understanding of the importance of the timing of orthopaedic procedures in the overall context of foot and ankle injuries;
- (7) the methods of prevention and treatment for the management of bony and soft-tissue injuries of the foot and ankle, including the indications for various types of internal and external fixation devices and their applications to foot and ankle trauma;
- (8) the development of operative skills in reconstructive orthopaedics, such as soft-tissue procedures, osteotomies, bone grafting, excisional arthroplasty, arthrodesis, and prosthetic arthroplasty;
- (9) an understanding of the dysvascular and neurologically impaired foot, including the neuropathic foot, and the indications for various amputation procedures of the foot and ankle;
- (10) the recognition and management of complications of treatment;
- (11) the assessment of the efficacy of treatment methods;
- (12) a sufficient familiarity with current research methods to enable the fellow to critically analyze research reports and to design and implement clinical or basic research in the field of foot and ankle orthopaedics;
- (13) recuperative and rehabilitation techniques, including the use of physical and occupational therapy designed to return the patient to normal activities and work;
- (14) an understanding of prosthetics and orthotics pertaining to disorders of the foot, gait, and amputation;
- (15) the development of teaching skills, lecture techniques, and instructional materials in foot and ankle orthopaedics.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

1. Fellows must participate in basic and/or clinical hypothesis-based research.
2. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
3. The program must provide time and facilities for research activities by fellows.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because graduate medical education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly

activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

ACGME: September 1994 Effective: July 1995
Editorial Revision: June 2004

Program Requirements for Residency Education in Hand Surgery (Orthopaedic Surgery)

I. Introduction

A. Definition of the Specialty

Hand surgery is a surgical subspecialty that deals with congenital and acquired defects of the hand and wrist that compromise the function of the hand. A hand surgery educational program is designed to educate physicians in the art and science of hand surgery and to develop a competent hand surgeon who is capable of independent function. The educational program should provide experience in the repair, resection, and reconstruction of defects of form and function of the hand; in the design, construction, and transfer of flaps and the transplantation of tissues, including microsurgery of multiple tissues; in replantation of upper extremity parts; in surgical and ancillary methods of treatment of tumors; in management of complex wounds; and in the use of alloplastic materials.

B. Scope of Education

1. Prerequisite resident education must be completed in a general surgery, orthopaedic surgery, or plastic surgery program accredited by the Accreditation Council for Graduate Medical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.
2. The length of the educational program is 1 year.

II. Institutional Organization**A. Sponsoring Institution**

The educational program should have one sponsoring institution that has primary responsibility for the entire program. The sponsoring institution should provide sufficient faculty; financial resources; and clinical, research, and library facilities to meet the educational needs of the residents and to permit the program to comply with the requirements for accreditation.

B. Participating Institutions

1. When multiple institutions participate in the educational program, the commitment of each participating institution must be documented in a written agreement that complies with the ACGME Institutional Requirements.
2. Assignments to participating institutions must be based on an appropriate educational rationale. Assignments that dilute the education of residents or that do not provide proper supervision and coordination of educational activities should not be established or maintained.
3. Assignments to participating institutions that are geographically distant from the sponsoring institution are not desirable. To be justifiable, such assignments must offer special resources or opportunities not otherwise available to the program.
4. The number and location of participating institutions must not preclude the participation of residents and faculty in the educational activities of the hand surgery course of study.

C. Appointment of Residents

1. The total number of residents must be approved in advance by the Residency Review Committee (RRC). The number of residents shall be based primarily on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to resident education.
2. Programs may not graduate more hand surgery residents in any given year than the number of residents approved by the RRC.
3. Any increase, including a temporary increase in resident complement, must receive prior approval of the RRC. Requests for changes in the approved resident complement of a program must include a strong educational rationale.

III. Faculty Qualifications and Responsibilities

The program director and the faculty are responsible for the general administration of a program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

A single program director must be responsible for the program.

1. Qualifications of the program director
 - a. Requisite and documented clinical, educational, and administrative abilities and experience.
 - b. Licensure to practice medicine in the state where the institution that sponsors the program is located.

- c. Certification by the appropriate ABMS Board or suitable equivalent qualifications in the appropriate specialty and a certificate of added qualifications in hand surgery or suitable equivalent qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
- d. Appointment in good standing to the medical staff of an institution participating in the program.
- e. Frequent changes in leadership or long periods of temporary leadership are undesirable and may adversely affect the accreditation status of the program.

2. Responsibilities of the program director

- a. Prepare a written statement outlining the educational goals of the program with respect to knowledge, skills, and other attributes of hand surgery residents at each level of education and for each assignment. This statement must be distributed to hand surgery residents and members of the faculty. It should be readily available for review.
- b. Select residents for appointment to the program according to institutional and departmental policies and procedures.
- c. Select and supervise the faculty and other program personnel at each participating institution.
- d. Supervise residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervising physicians.
- e. Regularly evaluate residents' knowledge, skills, and overall performance. The program director, with participation of the faculty, must
 1. at least quarterly, evaluate the progress of each hand surgery resident in writing, using appropriate criteria and procedures;
 2. communicate each evaluation to the resident in a timely manner;
 3. advance residents to positions of higher responsibility only on evidence of their satisfactory progressive scholarship and growth;
 4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel; and
 5. provide a final written evaluation to each hand surgery resident who completes the program. The evaluation must include a review of the resident's performance during the final period of education and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. Each evaluation should be signed by the resident and program director and be maintained on file by the program director for at least 5 years following completion of the program.
- f. Implement fair procedures, as established by the sponsoring institution, regarding academic discipline and resident complaints or grievances.
- g. Monitor resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of counseling and psychological support services to residents. Educational situations that consistently produce undesirable stress on residents must be evaluated and modified.
- h. Prepare an accurate statistical and narrative description of the program, as requested by the RRC.

- i. Ensure that each resident is provided with a sufficient educational program, including a sufficient volume and variety of operative experience and progressive surgical responsibility.
- j. Annually collect, compile, and retain the number and types of hand surgery operative procedures performed in all institutions used for resident education. These data must be provided in the form and format specified by the RRC.
- k. Annually collect, compile, and retain a comprehensive record of the operative procedures performed by each hand surgery resident completing the program. This information must be provided in the form and format specified by the RRC. This record must be signed by the hand surgery resident and the program director, attesting to its accuracy.
- l. Advise applicants of the prerequisite requirements of the appropriate specialty board.
- m. Document the satisfactory completion of prerequisite education before the resident begins the hand surgery program.
- n. Notify the executive director of the RRC in writing of any major change in the program that significantly alters the educational experience for the residents, including
 1. changes in program leadership, to include any change in appointment of the program director, section or division head, or department chair, and
 2. changes in administrative structure that affect the status of the parent department in the institution.
- o. Obtain prior RRC approval for the following changes in the program:
 1. the addition or deletion of any participating institution to which residents are assigned for a total of 2 months or longer;
 2. any change in the approved resident complement of the program; and
 3. any change in the length or format of the program.

B. Faculty

1. The hand surgery faculty must be certified by the one of the sponsoring boards, or possess suitable equivalent qualifications and be certified in hand surgery or possess suitable equivalent qualifications. The majority of the faculty must possess certificates of added qualifications in hand surgery. The RRC will determine the acceptability of equivalent qualifications.
2. There must be a sufficient number of qualified faculty to adequately instruct and supervise hand surgery residents to ensure optimal patient care and resident education. The faculty must be able to devote sufficient time to the program to meet their supervisory and teaching responsibilities.
3. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support of the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities.
4. A faculty member at each participating institution must be designated to assume responsibility for the day-to-day activities of the program at that institution, with overall coordination by the program director.
5. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving these goals. The hand surgery resident should participate in these reviews.
6. The faculty should, at least annually, evaluate the utilization of the resources available to the program, the contribution of each institution participating in the program, the financial and administrative support of the program, the volume and variety of patients available to the program for educational purposes, the performance of the faculty, and the quality of resident supervision.

C. Scholarly Activity

Graduate medical education must take place in an environment of inquiry and scholarship in which residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty. While not all members of the faculty must be research investigators, the faculty as a whole must demonstrate broad involvement in scholarly activity. Scholarship is defined as an in-depth understanding of basic mechanisms of normal and abnormal states and the application of current knowledge to practice. This activity should include

1. participation in clinical discussions, rounds, and conferences in a manner that promotes a spirit of inquiry and scholarship;
2. participation in journal clubs and research conferences;
3. active participation in regional or national professional and scientific societies, particularly through presentations at the organizations' meetings and publication in their journals;
4. participation in research, particularly in projects funded following peer review and/or that result in publications or presentations at regional and national scientific meetings;
5. offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research; and
6. provision of support for resident participation in scholarly activities.

D. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. Facilities and Resources

A. Inpatient Facilities

1. Inpatient facilities should have a sufficient number of beds, support personnel, and proper equipment to ensure quality patient care and education.
2. Operating suite and diagnostic and treatment facilities must contain technologically current equipment.

B. Outpatient Facilities

Appropriately equipped outpatient facilities including support staff, operating suites, and clinic and office space must be available for resident participation in the preoperative evaluation, treatment, and postoperative follow-up of patients for whom the resident has responsibility.

C. Library Facilities

1. The residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.

V. The Educational Program

A. Program Design

1. The program director and faculty must prepare and implement written educational goals for the program.
2. The program design and/or structure must be approved by the RRC as part of the regular review process.

B. Clinical Component

1. Residents must be provided with education in surgical design, surgical diagnosis, embryology, surgical and artistic anatomy, surgical physiology and pathology, pharmacology, wound healing, mi-

crobiology, adjunctive oncological therapy, biomechanics, rehabilitation, and surgical instrumentation.

2. A sufficient number and variety of adult and pediatric hand surgery patients must be available for resident education.
3. Generally equivalent and sufficient distribution of operative procedures among the residents in all categories of hand surgery must be demonstrated.
4. Residents should be provided with graduated and progressive patient management responsibility.
5. Because judgment and technical capability to achieve satisfactory surgical results are mandatory qualities for the hand surgeon, education should be provided in the following areas:
 - a. Skin repair, including grafts and flaps, multiple tissue flaps, free microscopic tissue transfers, and insertion of tissue expanders
 - b. Fingertip injuries
 - c. Tendon repair, including flexor tendon repair and graft, implantation of tendon spacer, extensor tendon repair, and tenolysis/tenodesis
 - d. Tendon transfer and tendon balancing
 - e. Nerve repair, including major and digital, graft, neurolysis, surgical treatment of neuroma, transpositions, and nerve decompressions
 - f. Management of fractures and dislocations, including phalangeal or metacarpal with and without internal fixation; wrist, radius, and ulna with and without internal fixation; and injuries to joint ligaments
 - g. Bone grafts
 - h. Joint and tendon sheath repairs, including release of contracture, synovectomy, arthroplasty with and without implant, arthrodesis, trigger finger release, and stiff joints that result from rheumatoid or other injury
 - i. Pollicization or ray transfer
 - j. Foot to hand transfer
 - k. Tumors, benign and malignant
 - l. Dupuytren's contracture
 - m. Replantation, revascularization
 - n. Amputations
 - o. Fasciotomy, deep incision and drainage for infection, and wound débridement
 - p. Congenital deformities, including syndactyly and others
 - q. Management of upper extremity vascular disorders and insufficiencies
 - r. Foreign body, implant removal
 - s. Thermal injuries
 - t. Arthroscopy
 - u. Upper extremity pain medicine

C. Didactic Components

1. A comprehensive, organized course of study must be offered, to include educational conferences that are well defined, documented, and regularly held. At minimum, the program must provide a didactic component for clinical education referencing section V.B.1 of these Program Requirements for Residency Education in Hand Surgery.
2. The written course of study should reflect careful planning, with evidence of a cyclical presentation of core specialty knowledge supplemented by the addition of current information, including practice management, ethics, and medicolegal topics as they relate to hand surgery.

Conferences must include basic science subjects related to clinical surgery of the hand, such as anatomy, physiology, pathology, genetics, microbiology, and pharmacology. A periodic review of the morbidity and mortality experience of the service must be included.

3. A list of the conferences should be maintained and available for review at the time of the site visit.
4. Conferences should be attended by both the residents and the faculty, and such attendance should be documented.
5. Conferences should be organized by the faculty to ensure that sufficient educational experience is provided. Hand surgery residents assigned to participating institutions other than the sponsoring institution should attend the hand surgery conferences at those sites.
6. Residents should make presentations at conferences and actively participate in conference discussions. Adequate time for resident preparation should be permitted to maximize the educational experience.
7. Hand surgery residents should be encouraged to pursue clinical or basic science research interests.

D. Supervision

1. All patient care services must be supervised by qualified hand surgery faculty. The program director must ensure, direct, and document proper supervision of residents at all times.
2. Residents must be provided with rapid, reliable systems for communicating with faculty at all times.
3. Hand surgery residents may function as intermediate supervisors when documented prior experience makes it appropriate, but faculty supervision must be available.

E. Duty Hours

1. It is desirable that residents' work schedules be designed so that on the average, excluding exceptional patient care needs, residents have at least 1 day out of 7 free of routine responsibilities and be on call in the hospital no more often than every third night. The ratio of hours worked to on-call time will vary, particularly at senior levels, and flexibility will be necessary.
2. There must be adequate backup so that patient care is not jeopardized during or following assigned periods of duty.
3. Sufficient support services must be provided to ensure that residents are not required to spend excessive time in noneducational activities that can be discharged properly by other personnel.
4. The hand surgery residency is a full-time responsibility. Activities outside the educational program must not interfere with resident performance in the educational program as determined by the program director and must not interfere with resident opportunity for rest, relaxation, and study.

F. Appointment of Other Residents

1. The appointment of other residents for hand surgery education must not dilute or detract from the educational opportunities of hand surgery residents.
2. The appointment of other residents to the hand surgery service requires a clear statement of the areas of education, clinical responsibilities, and duration of the education. This statement must be supplied to the RRC at the time the program is reviewed.
3. If such residents so appointed will, in the judgment of the RRC, detract from the education of the hand surgery residents, the accreditation status of the program may be adversely affected.

VI. Evaluation

A. Resident Evaluation

The program director and faculty are responsible for regularly evaluating the residents' knowledge, skills, and overall performance, including the development of professional attitudes consistent with being a physician.

B. Faculty Evaluation

1. At least annually, all individual faculty members must be formally evaluated by the program director. Hand surgery residents should be provided with the opportunity to evaluate faculty.
2. A mechanism for sharing the results of such evaluations with the faculty that preserves resident confidentiality in the evaluation process must be employed.
3. The program should demonstrate that such evaluations are used in improving the program.

C. Program Evaluation

1. The educational effectiveness of a program must be evaluated at least annually. In particular, the quality of the curriculum and the extent to which the educational goals have been met by residents must be assessed. Written evaluations by hand surgery residents should be utilized in this process.
2. One measure of the quality of a program is the performance of its graduates on the examination for the certificate of added qualifications in hand surgery given by one of the sponsoring boards. The RRC may consider this information as part of the overall evaluation of the program.

VII. Board Certification

Residents who plan to seek hand surgery certification as administered by the American Board of Orthopaedic Surgery should communicate with the executive director of the board to ascertain the current requirements for acceptance as a candidate for certification.

ACGME: September 1997 Effective: July 1998

Program Requirements for Graduate Medical Education in Musculoskeletal Oncology (Orthopaedic Surgery)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of Subspecialty

Musculoskeletal oncology is the component of orthopaedic surgery that is focused on the diagnosis and treatment of children and adults with benign and malignant tumors of bone and connective soft tissues. The field also includes the diagnosis, treatment, and palliative care of patients with metastatic carcinoma to the skeleton. Musculoskeletal oncologists work in concert with experts from musculoskeletal radiology, pathology, medical and pediatric oncology, radiotherapy, and surgery to care for patients with sarcomas of bone and soft tissue.

B. Duration and Scope of Education

Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education should take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.

1. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions which sponsor accredited residency programs in orthopaedic surgery or which are affiliated with an orthopaedic surgery residency accredited by the Accreditation Council for Graduate Medical Education (ACGME). Requests for exceptions to this policy will be reviewed on a case-by-case basis.
2. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
3. There must be close monitoring of the relationship between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
4. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of the subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

B. Participating Institutions

1. **Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.**
2. **Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:**
 - a) **identify the faculty who will assume both educational and supervisory responsibilities for fellows;**
 - b) **specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;**
 - c) **specify the duration and content of the educational experience; and**
 - d) **state the policies and procedures that will govern fellow education during the assignment.**

III. Program Personnel and Resources

A. Program Director

1. **There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the**

program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the ACGME.

2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

1. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
2. There should be broad support from other clinical specialties, including diagnostic and therapeutic radiology, pediatrics, nuclear medicine, pathology, psychiatry, surgery and its subspecialties, and medical oncology. Support of oncologic nursing, rehabilitation, nutrition, dietetic counseling, and social services, as well as physical and occupational rehabilitation is desirable.
3. Modern facilities to accomplish the overall educational program must be available and functioning. These include inpatient ambulatory care and laboratory resources. Specifically, there should be advanced pathology services, including electron microscopy and immunopathology; resources for nuclear medical imaging, magnetic resonance imaging, musculoskeletal angiography, computed tomography, and sufficient facilities for qualitative correlative studies.
4. The fellow must have day-to-day access to pathologists and to radiologists with recognized expertise in musculoskeletal pathology and radiology.
5. On-site radiation and medical oncology facilities and a modern diagnostic radiologic service are necessary.
6. It is desirable that there be other clinical subspecialties of orthopaedic surgery and general surgery to which the orthopaedic

oncology fellow may relate formally, as well as special facilities for musculoskeletal pathology.

7. There must be a minimum of 300 new patients per fellow of benign and malignant bone and soft-tissue tumors with an appropriate mix of primary and metastatic lesions to afford the fellow adequate educational experience in musculoskeletal oncology. This experience must include the care of both inpatients and outpatients.
8. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
9. Library resources must include current and past orthopaedic periodicals and reference books which are readily accessible to all orthopaedic fellows in the program.
10. Library services should include the electronic retrieval of information from medical databases.
11. There must be access at each institution participating in the program to an on-site library or to a collection of appropriate texts and journals. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management. The program must provide training to develop clinical competence in the overall field of musculoskeletal oncology. Examples of knowledge and skill that are desirable include, but are not limited to, the following:

- The natural history of musculoskeletal neoplasia.
- A knowledge and understanding of musculoskeletal surgical pathology and diagnostic radiology.
- The management of treatment protocols.
- A knowledge of the indications for and limitations of surgery, radiation therapy, and chemotherapy in the treatment of musculoskeletal neoplasms.
- A knowledge of the methodology and techniques to perform credible clinical and/or basic research in musculoskeletal oncology, to include epidemiology and statistics and design of clinical trials.
- The acquisition of teaching skills in musculoskeletal pathology and oncology.

1. Didactic Components

- a) The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
- b) The educational program must be based on a core curriculum that ensures appropriate instruction in the basic concepts of oncogenesis and molecular oncology, adult and pediatric oncology, immunology, and radiation oncology.
- c) There should be a weekly multi-disciplinary tumor conference involving pathologists and radiologists, as well as radiation, medical, and pediatric oncologists.
- d) Fellows and faculty must participate in a journal club which reviews current literature in medical, pediatric, and radiation oncology on at least a monthly basis.

2. Clinical Components

- a) The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
- b) The program must offer supervised training in operative and other technical skills integral to musculoskeletal oncology. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly-performed procedures in the subspecialty.
- c) Fellows must have the opportunity to provide consultation with faculty supervision, and should have clearly-defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- d) Clinical experience must include opportunities to observe and to manage patients with a wide variety of clinical orthopaedic oncologic problems on both an inpatient and outpatient basis.
- e) The fellow must be given an opportunity to assume continuing responsibility for both acutely- and chronically-ill patients in order to learn the natural history of musculoskeletal neoplasia as well as the effectiveness of therapeutic programs. Fellow education must provide sufficient opportunity for independent clinical decision-making so that the program director and faculty are assured that the graduating fellow has achieved the ability to make sound clinical decisions.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

1. Fellows must participate in basic and/or clinical hypothesis-based research.
2. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
3. The program must provide time and facilities for research activities by fellows.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities,

transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.

3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because graduate medical education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and im-

provement, interpersonal and communication skills, professionalism, and systems-based practice.

- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMCC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

ACGME: September 2001 Effective: July 2002

Editorial Revision: June 2004

Program Requirements for Graduate Medical Education in Orthopaedic Sports Medicine (Orthopaedic Surgery)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of subspecialty

Orthopaedic sports medicine is the component of orthopaedic surgery that is focused on the study and prevention of sports injuries and their treatment by medical, surgical, and physical methods.

B. Duration and scope of education

Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education should take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

II. Institutions

A. Sponsoring Institution

1. **One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.**
2. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
3. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
4. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
5. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of orthopaedic sports medicine. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to

the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as es-

established by the sponsoring institution and in compliance with the Institutional Requirements.

- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
3. Facilities to accomplish the clinical and educational objectives of the specialty must be available and functioning for both inpatients and outpatients.
 - a. The physical therapy and the athletic training departments must be completely equipped with the modern therapeutic modalities used in the treatment of the injured athlete.
 - b. The operating room facilities must contain modern equipment, including arthroscopes, adjunctive equipment for arthroscopy, and necessary imaging equipment.
4. The educational program must be conducted in a setting that will allow interaction with the disciplines of radiology, physical therapy, internal medicine and such other specialties ordinarily encountered in sports medicine.
5. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
6. Library resources must include current and past orthopaedic periodicals and reference books that are readily accessible to all orthopaedic fellows in the program.
7. Library services should include the electronic retrieval of information from medical databases.
8. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic components

- a. The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
- b. All fellows must participate in didactic sessions devoted to the basic sciences, including anatomy, biomechanics, and biology of healing.
- c. Instruction should also be provided in sports medicine issues in the areas of cardiology, dermatology, pulmonology, preventive medicine, pediatric and adolescent medicine, exercise physiology, environmental exposure, athletic populations, team physicians, and protective equipment (including braces).

2. Clinical components

- a. The clinical component must be designed to ensure that fellows become competent in the evaluation (history, physical examination, and imaging) and management (both operative and non-operative) of patients with sports injuries or conditions.
- b. The program must offer supervised training in the operative and other technical skills integral to orthopaedic sports medicine. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.
- c. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- d. Clinical experience must include inpatient and outpatient opportunities to observe, manage, operate and follow patients with a wide variety of sports medicine problems.
- e. The program must be structured to provide the fellow with an opportunity to assume continuing responsibility with appropriate supervision for patients with acute and chronic injuries and to observe the natural course of athletic injuries and the effects of various therapeutic modalities on their outcome. Fellow education must provide sufficient opportunity for independent clinical decision making so that the program director and faculty are assured that the graduating fellow has achieved the ability to make sound clinical decisions.
- f. The program should provide the fellow with the opportunity to work with athletic teams and/or athletic organizations.

- g. The program must emphasize the pathology and biomechanics of athletic injuries and the effects of injury on the athlete, including both physical and psychological manifestations. Appropriate utilization of laboratory tests, physical modalities, and operative procedures for the diagnosis and treatment of athletic injuries must be stressed.
- h. The program must provide the fellow with specific experience with athletic trainers and physical therapists and with related experience in writing appropriate prescriptions and in monitoring patient progress.
- i. The program must provide sufficient opportunity for the fellow to gain knowledge and skill in a number of areas that include, but are not limited to:
 - (1) Taking a history and performing an appropriate physical examination for orthopaedic sports injuries.
 - (2) Exposure to patients with typical histories and physical findings of chronic orthopaedic sports injuries and the management of those injuries.
 - (3) Differentiating between those sports injuries that require immediate surgical treatment and those that can be treated nonoperatively.
 - (4) Recognizing those sports injuries for which a minor delay in treatment would not be deleterious to the patient.
 - (5) Acute care of orthopaedic and other acute sports medicine injuries that may occur during athletic competition and how to deal with those injuries on the athletic field.
 - (6) How to order and interpret radiologic examinations that are used for diagnosis of sports injuries, including specific views, tomograms, bone scans, arthrograms, computerized axial tomography scans, and magnetic resonance imaging.
 - (7) Therapeutic modalities offered in the department of physical therapy, how to use them, and how to judge the appropriateness and efficacy of a treatment plan.
 - (8) Diagnostic and operative arthroscopy.
 - (9) Nonorthopaedic problems that occur in sports medicine and how to deal with those problems or how to refer them appropriately.
 - (10) The psychological effect of injuries on athletes and how to deal with them personally and how to select consultants to assist in their management.
 - (11) Sports equipment, particularly protective devices intended to allow the athlete to continue to compete, including helmets, protective pads, knee braces, foot orthotics, and others not specifically named.

C. Fellows Scholarly Activities

1. Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.
2. Fellows must participate in basic and/or clinical hypothesis-based research.
3. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
4. The program must provide time and facilities for research activities by fellows.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recog-

nize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make schedul-

ing adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because graduate medical education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part

of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Orthopaedic Surgery should communicate with the office of the board regarding the full requirements for certification.

ACGME: September 2001 Effective: July 2002

Editorial Revision: June 2004

Program Requirements for Graduate Medical Education in Orthopaedic Surgery of the Spine (Orthopaedic Surgery)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of subspecialty

Orthopaedic surgery of the spine is the component of orthopaedic surgery that is focused on the study and prevention of spinal column diseases, disorders, and injuries and their treatment by medical, physical, and surgical methods.

B. Duration and scope of education

Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education should take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

II. Institutions

A. Sponsoring Institution

1. **One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.**
2. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
3. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
4. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
5. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of the subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when

the educational program functions primarily to meet service commitments.

6. Institutions sponsoring programs in orthopaedic surgery of the spine should also have an ACGME-accredited residency in neurological surgery. The educational program must involve close cooperation with neurological surgery and should maintain close collegial relationships with related clinical specialties including, but not limited to, physical medicine and rehabilitation, neurology, radiology, pathology, laboratory medicine, anesthesiology, and infectious disease. Exceptions to this standard will be considered on a case-by-case basis and will require justification based on sound educational principles, as well as demonstration of substantial compliance with the intent of this requirement.

B. Participating Institutions

1. **Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.**
2. **Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:**
 - a) **identify the faculty who will assume both educational and supervisory responsibilities for fellows;**
 - b) **specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;**
 - c) **specify the duration and content of the educational experience; and**
 - d) **state the policies and procedures that will govern fellow education during the assignment.**

III. Program Personnel and Resources

A. Program Director

1. **There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.**
2. **The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.**
3. **Qualifications of the program director are as follows:**
 - a) **The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.**
 - b) **The program director must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.**
 - c) **The program director must be appointed in good standing and based at the primary teaching site.**
4. **Responsibilities of the program director are as follows:**
 - a) **The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site direc-**

tor, and monitoring appropriate fellow supervision at all participating institutions.

- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program. All programs must have at least two physicians with experience or qualifications in spine surgery on the teaching staff who have significant responsibility for the supervision and instruction of all fellows during the 12 months of accredited education.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and

the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. Facilities and equipment to support the overall educational program must be readily available and functioning. These include outpatient, inpatient, imaging, laboratory, rehabilitation, and research resources. Operating rooms must contain all necessary equipment for surgery of the spine.
3. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
4. Library resources must include current and past orthopaedic periodicals and reference books that are readily accessible to all orthopaedic fellows in the program.
5. Library services should include the electronic retrieval of information from medical databases.
6. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

1. The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

2. Fellows must have the opportunity to develop advanced competence in the field of orthopaedic surgery of the spine. Principles may be broadly based or taught in a context of specific anatomic regions. Examples of knowledge and skills that are essential include but are not limited to:

- The basic sciences related to the musculoskeletal system.
- The natural history of spinal degeneration.
- The ability to assess clinically the neurologic function of the spinal cord and nerve roots.
- Prudent use of diagnostic laboratory tests (including electrophysiologic monitoring).
- Indications for and interpretation of imaging studies of the spine, including an appreciation of the risk and information expected of the procedures.
- Development of a treatment plan to manage patients with traumatic, congenital, developmental, infectious, metabolic, degenerative, and rheumatologic disorders of the spine.
- Development of operative skills for the management of patients with orthopaedic disorders of the spine.
- Recognition and management of complications of treatment (including appropriate consultations with subspecialists).
- Assessment of the effectiveness of diagnostic and treatment methods.
- Familiarity with currently used research methods.
- Acquisition of teaching skills in evaluation and care of spinal problems.

3. Didactic components

- The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
- The educational curriculum must include anatomy, physiology, biomechanics, microbiology, pathology, and other sciences as they relate to orthopaedic surgery of the spine.
- The program must have regularly scheduled and held subspecialty conferences with active participation of faculty and fellows.

4. Clinical components

- The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
- The program must offer supervised training in the operative and other technical skills integral to orthopaedic surgery of the spine. Instruction and experience must be sufficient for

the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.

- Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
- The fellows' clinical experience must include opportunities to observe and manage patients on both an inpatient and an outpatient basis as well as for the evaluation and care of individuals through a wide range of ages and of both sexes, and with a wide variety of problems in various spinal regions.
- The program must emphasize the diagnosis of clinical disorders of the spine, the pathogenesis of these disorders, the operative and nonoperative treatment modalities available for managing these disorders, and the results and complications of such treatment.
- The educational program will not include experience in the treatment of intradural pathology. When spinal disease or injury and neurological deficit coexist, the educational program will ensure appropriate interdisciplinary cooperation with neurological surgery and rehabilitation medicine. The program structure must ensure that the fellow plays a major role and has progressive responsibility in the assessment, preoperative evaluation, surgical care, and postoperative management and rehabilitation of patients. There must be an opportunity for continuing evaluation of treated patients.
- Fellows must maintain a record of the diagnosis and procedure for each operation in which they are an operating surgeon or first assistant. This record must be kept on file and available for review by the RRC and its site visitors.

C. Fellows Scholarly Activities

- Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.
- Fellows must participate in basic and/or clinical hypothesis-based research.
- Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
- The program must provide time and facilities for research activities by fellows.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

- All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
- Faculty schedules must be structured to provide fellows with continuous supervision and consultation.

3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because graduate medical education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.

3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

*ACGME: June 2002 Effective: July 2003
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Orthopaedic Trauma (Orthopaedic Surgery)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of subspecialty

Orthopaedic trauma is a subspecialty of orthopaedic surgery that includes the in-depth study and treatment of injuries to the locomotor system and their sequelae.

B. Duration and scope of education

Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education should take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
3. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.
4. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
5. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of the subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the

program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.

2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:

- a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
- b) The program director must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
- c) The program director must be appointed in good standing and based at the primary teaching site.

4. Responsibilities of the program director are as follows:

- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.

c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. Modern facilities to support the overall educational program must be available and functioning. The primary hospital in which the fellow works must be a Level I or II trauma center or equivalent with 24-hour full services, acute and emergency surgery, and at least 200 operative orthopaedic trauma cases each year. It must have a modern operating room facility, image intensification, compatible fracture table, orthopaedic implants in stock, and, ideally, a special room dedicated to acute and emergency surgery.
3. There must be access to records and x-rays of orthopaedic trauma cases for at least 5 years following patient discharge via computerized or other efficient coding system. Photographic records and photography support should be readily available.
4. There must be broad support and cooperation from other clinical services, particularly emergency medicine, general surgery, neurosurgery, anesthesia, intensive care, rehabilitation services, and radiology (including CT and angiography available on an emergency basis). Plastic surgery, urology, otolaryngology, ophthalmology, and pulmonary medical specialists should also be available to provide emergency consultation.
5. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
6. Library resources must include current and past orthopaedic periodicals and reference books that are readily accessible to all orthopaedic fellows in the program.
7. Library services should include the electronic retrieval of information from medical databases.

8. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

1. The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

2. The fellowship program must permit fellows to develop advanced competence in the field of orthopaedic trauma, and in resuscitation as applied to the patient with polytrauma. Examples of knowledge and skills that are desirable include, but are not limited to, the following:
 - a. The basic sciences related to orthopaedic trauma.
 - b. An understanding of the integration of the orthopaedic traumatologist in a trauma team and an appreciation of the importance of the timing of orthopaedic procedures in the overall care of the severely injured patient.

- c. Indications for various types of internal and external fixation devices and their applications in multiple trauma situations both in the axial and appendicular skeletons.
 - d. Treatment protocols for severe soft tissue injuries, including compartment syndrome and secondary organ failures in polytrauma.
 - e. Indications for early or immediate amputation rather than salvage attempts in severely injured limbs.
 - f. Diagnosis and management of complications of musculoskeletal trauma.
 - g. Pathophysiology of severe musculoskeletal trauma and secondary organ failure.
 - h. Psychiatric and psychological implications of severe musculoskeletal trauma for the patient and family members.
 - i. Recuperative and rehabilitation techniques and use of physical and occupational therapy designed to return the patient to normal activities and work.
 - j. Sufficient familiarity with current research methods to enable the fellow to critically analyze research reports and to design and implement clinical or basic research in the field of musculoskeletal trauma.
 - k. Teaching skills and lecture techniques and materials in orthopaedic traumatology.
 - l. Overall, the fellow must develop medical, surgical and psychosociological skills in the management of the severely injured patient.
3. Didactic components
 - a. The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.
 - b. The educational curriculum must include opportunities for fellows to study anatomy, physiology, biomechanics, pathology, microbiology, pharmacology, and epidemiology as they relate to orthopaedic trauma.
 - c. The program must hold regularly scheduled subspecialty conferences, including at least one weekly teaching conference, a monthly morbidity/mortality conference, and a monthly conference with other trauma services, with active faculty and fellow participation.
 - d. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.
 2. Clinical components
 - a. The technical component should ensure the ability of the fellow to perform skillfully the procedures required for practice of the subspecialty.
 - b. The program must offer supervised training in the operative and other technical skills integral to orthopaedic trauma. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.
 - c. Clinical experience must include opportunities to observe and to manage patients with a wide variety of problems in orthopaedic trauma, and the breadth of patient experience should include the evaluation and care of individuals of a wide range of ages and both sexes. Generally, care of these patients involves several specialties and a cooperative effort in trauma centers.
 - d. The program must emphasize the diagnosis of clinical orthopaedic trauma problems, the mechanism of injury, the treat-

ment modalities available, and the results and complications of such treatment. Fellows must have the opportunity to assume a major role in the continuity of care of patients and have progressive responsibility for patient assessment, preoperative planning, operative experience, postoperative intensive care, other postoperative management, rehabilitation, and other outpatient care of patients.

- e. The fellow must keep a record of the diagnosis and procedure for each operation in which he/she is an operating surgeon or first assistant. This must be kept on file and available for review.

C. Fellows Scholarly Activities

1. Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.
2. Fellows must participate in basic and/or clinical hypothesis-based research.
3. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
4. The program must provide time and facilities for research activities by fellows.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period.

In-house call is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because graduate medical education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMED of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

*ACGME: June 2001 Effective: July 2002
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Pediatric Orthopaedics (Orthopaedic Surgery)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of subspecialty

Pediatric Orthopaedics is the medical specialty that includes the study and prevention of musculoskeletal diseases, disorders, and injuries and their treatment by medical, surgical, and physical methods in patients aged 16 years and younger.

B. Duration and scope of education

Postgraduate fellowship education in orthopaedic surgery is a component in the continuum of the educational process, and such education should take place after completion of an accredited residency. Graduate medical education programs in the subspecialties of orthopaedic surgery will be accredited to offer 12 months of education.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. Postgraduate fellowship programs in the subspecialties of orthopaedic surgery may be accredited in institutions that sponsor accredited residency programs in orthopaedic surgery or that are affiliated with an Accreditation Council for Graduate Medical Education (ACGME)-accredited orthopaedic surgery residency. Requests for exceptions to this policy will be reviewed on a case-by-case basis.
3. When orthopaedic residents and fellows are being educated in the same institution, the residency director and the director of the fellowship must jointly prepare and approve a written agreement specifying the educational relationship between the residency and fellowship programs, the roles of the residency and fellowship directors in determining the educational program of residents and fellows, and the roles of the residents and fellows in patient care.

4. There must be close monitoring of the interface between residency and fellowship education. It is imperative that orthopaedic fellowship education not interfere with the education of residents. Lines of responsibility for the orthopaedic resident and the fellow must be clearly defined. In addition, the fellow should maintain a close working relationship with orthopaedic residents and other fellows in orthopaedic surgery and in other disciplines.
5. Programs must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes essential to the practice of the subspecialty. This objective can be achieved only when the program director, the supporting faculty and staff, and the administration are fully committed to the educational program and when appropriate resources and facilities are present. Effective graduate education is not achieved when the educational program functions primarily to meet service commitments.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and

supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.

- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Orthopaedic Surgery, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
- a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. A sufficient number of new and follow-up patients must be available to ensure adequate inpatient and outpatient experience for each fellow without adversely diluting the educational experience of the orthopaedic surgery residents or the educational experience of residents in other specialties.
3. Inpatient, ambulatory care, and laboratory facilities must be available and functioning.
4. The program must be conducted in a setting in which comprehensive surgical, medical, and pediatric consultation services are available.
5. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
6. Library resources must include current and past orthopaedic periodicals and reference books that are readily accessible to all orthopaedic fellows in the program.
7. Library services should include the electronic retrieval of information from medical databases.
8. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Subspecialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management. The program must include a didactic program, non-operative experience, and an operative experience emphasizing continuity of care in pediatric orthopaedics trauma (acute and reconstructive), metabolic and genetic conditions, tumors, neuromuscular conditions, spinal conditions, hip conditions, foot and ankle conditions, amputations and prosthetics, hand surgery, athletic injuries, and general pediatric orthopaedics.

1. Didactic components

The academic component must emphasize a scholarly approach to clinical problem solving, self-directed study, teaching, development of analytic skills and surgical judgment, and research.

2. Clinical components

A. The program must offer supervised training in the operative and other technical skills integral to pediatric orthopaedics. Instruction and experience must be sufficient for the fellow to understand the indications, risks, and limitations of the commonly performed procedures in the subspecialty.

B. Fellows must have the opportunity to provide consultation with faculty supervision and should have clearly defined educational responsibilities for residents, medical students, and allied health personnel. These teaching experiences should correlate basic biomedical knowledge with the clinical aspects of the subspecialty.

C. The fellows' clinical experience should include observation and treatment of both in-patients and out-patients with a wide variety of orthopaedic disorders.

D. Fellows must have the opportunity to assume continuous responsibility for both acutely and chronically ill patients so as to learn the natural history of pediatric orthopaedic disorders as well as the effectiveness of treatment programs and the impact of growth on these disorders.

E. The program should emphasize normal physiologic mechanisms and the pathogenesis and complications of pediatric orthopaedic disorders.

F. Utilization of appropriate laboratory procedures and allied medical personnel should be stressed.

G. The knowledge and skills the program must cover include, but are not limited to:

1. prudent and judicious use of diagnostic tests;
2. use of data resources and the need for and interpretation of data;
3. interpretation of radiologic examination of the musculoskeletal system including vascular studies and the modalities of nuclear medicine (and other advanced techniques) with an appreciation of the risk and expected yield of the procedures;

4. understanding of the role of physical and occupational therapists, and of orthotists and prosthetists in the rehabilitation and on-going management of pediatric orthopaedic disorders; and
5. performance of pediatric orthopaedic surgical procedures.

C. Fellows Scholarly Activities

1. Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.
2. Fellows must participate in basic and/or clinical hypothesis-based research.
3. Fellows must learn to design, implement, and interpret research studies under supervision by qualified faculty.
4. The program must provide time and facilities for research activities by fellows.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal

work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because graduate medical education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the program must demon-

strate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
 - b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
 - c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.
2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate

from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

*ACGME: June 2001 Effective: July 2002
Editorial Revision: June 2004*

Program Requirements for Residency Education in Otolaryngology

Common Program Requirements appear in bold.

Sections of text that are not bolded are specialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Residency programs in otolaryngology-head and neck surgery are designed to provide residents with education in the comprehensive evaluation and medical and surgical management of patients of all ages with diseases and disorders that affect the ears, upper respiratory and upper alimentary systems and related structures, and the head and neck. The educational program should include the core knowledge, skills, and understanding of the basic medical sciences relevant to the head and neck, and the upper respiratory and upper alimentary systems; the communication sciences, including the knowledge of audiology, speech pathology, rehabilitation, and the vestibular system; and the chemical senses, otolaryngic allergy, endocrinology, and neurology as they relate to the head and neck area. The educational program also should include the clinical aspects of the diagnosis, medical and/or surgical therapy, and the prevention of and rehabilitation from diseases, neoplasms, deformities, disorders and/or injuries of the ears, upper respiratory and upper alimentary systems, the face, the jaws, and other head and neck systems; head and neck oncology; and facial plastic and reconstructive surgery.

B. Duration and Scope of Education

1. Residency programs in otolaryngology-head and neck surgery must be of 5 years' duration, with at least 9 months of basic surgical, emergency and critical care, and anesthesia training within the first year, thereafter including at least 51 months of progressive education in the specialty. The final year of the specialty education must be a chief resident experience, and must be spent within institutions approved as part of the program.
2. The otolaryngology program director is responsible for the design, implementation, and oversight of a PGY-1 year that will prepare residents for specialty education in otolaryngology-head and neck surgery. This year must include resident participation in clinical and didactic activities that will give them the opportunity to:
 - a) develop the knowledge and skills needed to assess, plan, and initiate treatment of adult and pediatric patients with surgical and/or medical problems;
 - b) demonstrate the ability to care for patients of all ages with surgical and medical emergencies, multiple organ system trauma, soft tissue wounds, nervous system injuries and diseases, and peripheral vascular and thoracic injuries;
 - c) demonstrate the ability to care for critically-ill surgical and medical patients in the intensive care unit and emergency room settings;
 - d) participate in the pre-, intra-, and post-operative care of surgical patients;
 - e) and understand surgical anesthesia in hospital and ambulatory care settings, including anesthetic risks and the management of intra-operative anesthetic complications.
3. In order to meet these goals, the PGY-1 year should include (in no required order):

- a) a minimum of 5 months of structured education in at least 3 of the following: general surgery, thoracic surgery, vascular surgery, pediatric surgery, plastic surgery, surgical oncology.
- b) 1 month of structured education in each of the following 4 clinical areas: emergency medicine, critical care unit (intensive care unit, trauma unit or similar), anesthesia, neurological surgery.

An additional maximum of 3 months of otolaryngology-head and neck surgery is optional, and any remaining months of the PGY-1 year may be taken on the clinical services listed in 3 a) or 3 b) below.

4. The program director is also responsible for the design, implementation, and oversight of years PGY-2 through PGY-5, each of which should include:
 - a) at least 3 years of rotations on otolaryngology-head and neck surgery and clinical services;
 - b) a structured research experience, with instruction in research methods and design that includes outcomes assessment;The program may further include rotations on related services such as neuroradiology, surgical pathology of the head and neck, audiology and vestibular assessment, speech pathology and rehabilitation, radiation oncology, pulmonary medicine, allergy/immunology, and oral and maxillo-facial surgery.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

The sponsoring institution must provide sufficient faculty, financial resources, support space, clinical and research facilities, and library materials to meet the educational needs of the residents, and to enable the program to comply with the requirements for accreditation. The governing body of the sponsoring institution must grant the program director sufficient authority, financial support, and access to facilities to organize and supervise the following activities: the selection and evaluation of residents; didactic and clinical instruction, including patient management and scholarly activity; and the recruitment and evaluation of staff. There must, additionally, be sufficient operative time available to ensure adequate surgical experience for residents.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.
3. In programs involving 2 or more hospitals, the sponsoring institution must organize the program in such a way to provide residents with a progressive educational experience.

4. Each participating institution must offer significant educational opportunities to the program. Resident education at each participating institution must comply with the Program Requirements for Otolaryngology. Assignments that dilute the education of residents, or that do not provide proper supervision and coordination of educational activities, should not be established or maintained.
5. There must be a qualified otolaryngologist-head and neck surgeon appointed by and responsible to the program director in each geographically separate institution. This individual must be responsible for the education of the residents, and supervise the educational activities of other faculty as they relate to resident education in that institution. The program director at each participating institution must have major clinical responsibilities at that institution.
6. The educational program may not include assignments to any non-approved participating institutions for more than a total of 3 months without prior approval of the Residency Review Committee (RRC).

C. Facilities and Resources

There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with audiovisual and other educational aids, office space for staff, pertinent library materials and current information technology readily available for clinical care, as well as diagnostic, therapeutic, and research facilities.

1. Within each institution, beds sufficient for the needs of the service must be provided.
2. Residents must have access to outpatient facilities, clinics, and office space for education in the regular preoperative evaluation and postoperative follow-up of cases for which the resident has responsibility.
3. Technologically-current equipment considered necessary for diagnosis and treatment must be available.
4. A patient information system that facilitates both quality patient care and education must be available. It should be maintained to ensure easy and prompt access at all times, and be organized to permit the collection and evaluation of selected material from clinical records for investigative and review purposes.
5. Residents should be provided with adequate office, sleeping, lounge, and food facilities during assigned duty hours. Adequate clerical support services also must be provided.
6. Library
 - a) Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with institutions located conveniently nearby.
 - b) Library services should include the electronic retrieval of information from medical databases.
 - c) There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in the residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

III. Program Personnel and Resources

A. Program Director

1. **There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.**

2. **The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.**
3. **Qualifications of the program director are as follows:**
 - a) **The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.**
 - b) **The program director must be certified in the specialty by the American Board of Otolaryngology, or possess qualifications judged to be acceptable by the RRC.**
 - c) **The program director must be appointed in good standing and based at the primary teaching site.**
4. **Responsibilities of the program director are as follows:**
 - a) **The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.**
 - b) **The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.**
 - c) **The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.**
 - d) **The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:**
 - (1) **the addition or deletion of a participating institution;**
 - (2) **a change in the format of the educational program;**
 - (3) **a change in the approved resident complement for those specialties that approve resident complement.**

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. **At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. It is desirable that, in addition to the program director, there be at least two other members of the faculty with qualifications similar to those of the program director.**
2. **The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.**

The faculty is responsible for ensuring that the structure and content of the residency program reflect an appropriate education-to-service ratio. The resident should be recognized as a student, and should be provided with sufficient experience in nonoperative management and preoperative, intraoperative, and postoperative care of patients with otolaryngologic disorders. This responsibility must include on-site supervision of the resident in operative, inpatient, outpatient, and emergency cases, as

well as participation in patient care conferences and other educational exercises.

3. Qualifications of the physician faculty are as follows:

- a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
- b) The physician faculty must be certified in the specialty by the American Board of Otolaryngology or possess qualifications judged to be acceptable by the RRC.
- c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

- 1. Programs may not graduate more residents in any given year than the number of residents approved by the RRC, except in cases where a resident's educational program is extended because the program director has determined the need of addi-

tional education to meet minimum requirements for competency. The program director must request approval in writing from the RRC to extend a resident's educational program. Any increase in the number of residents in any year of the program, or in the total number of residents, must receive the prior approval of the RRC. Any such request for change in the approved resident complement must include a strong educational rationale.

- 2. A vacancy in a resident complement, if filled, must be at the same level in which the vacancy occurs, unless otherwise approved by the RRC. Violations of these requirements will result in an adverse accreditation action.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments. This statement must be distributed to residents and faculty, and reviewed with residents prior to the assignment.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

The program must, further, have a comprehensive, well-organized, and effective curriculum, including the cyclical presentation of core specialty knowledge supplemented by the addition of current information. There must be evidence that the teaching is conducted in a variety of educational settings—such as clinics, classrooms, operating rooms, bedsides, and laboratories—employing accepted educational principles.

1. Basic Science

There must be a structured educational experience in basic science. Ordinarily, this should be provided within the participating institutions of the residency program. Any program that provides the requisite basic science experience outside the approved participating institutions must demonstrate that the educational experience provided meets these designated criteria. Faculty must participate in basic science education, resident attendance must

be monitored, education must be evaluated, and content must be integrated into the educational program.

The broad scope of the specialty of otolaryngology-head and neck surgery requires that the program provide basic science, medical, and surgical education in the following areas:

a) Basic sciences, as relevant to the head and neck and upper-aerodigestive system: anatomy, embryology, physiology, pharmacology, pathology, microbiology, biochemistry, genetics, cell biology, immunology, the communication sciences (including a knowledge of audiology and speech-language pathology and the voice sciences as they relate to laryngology), as well as the chemical senses, endocrinology, and neurology as they relate to the head and neck.

Basic science education should include instruction in anatomy, biochemistry, cell biology, embryology, immunology, molecular genetics, pathology, pharmacology, physiology, and other basic sciences related to the head and neck.

- b) Sufficient resources—including space, equipment, personnel—and funding for instruction and study of the basic sciences should be available to permit satisfactory correlation between basic science knowledge and clinical application.
- c) Communication sciences as they relate to otology and laryngology, including audiology, speech-language pathology, and voice science.
- d) Resident instruction in anatomy should include the study and dissection of cadaver anatomic specimens, including the temporal bone, with appropriate lectures and other formal sessions.
- e) Resident instruction in pathology should include formal instruction in correlative pathology in which gross and microscopic pathology relating to the head and neck area are included. The resident should study and discuss with the pathology service tissues removed at operations and autopsy material. It is desirable to have residents assigned to the Department of Pathology.
- f) Ethical, socioeconomic, and medico-legal issues that affect the provision of quality and cost-effective care and the utilization of resources within the health care system; the provision of quality and cost-effective otolaryngology care within the context of the health care system; and the use of the resources of that health care system, other medical specialists, information technology, continuing medical education, and the ongoing analysis of clinical outcomes to assure such care.

2. Clinical Conferences

Clinical conferences must be held regularly, and should be attended by all residents and faculty. Grand rounds, mortality and morbidity conferences, tumor conferences, and conferences on other pertinent topics must be included in the educational program. Interdisciplinary conferences are also encouraged.

D. Clinical Components

1. Clinical Experiences

- a) Diagnosis and diagnostic methods, including audiologic, vestibular, and vocal function testing; biopsy and fine needle aspiration techniques; and other clinical and laboratory procedures related to the diagnosis of diseases and disorders of the upper aerodigestive tract and the head and neck.
- b) Therapeutic and diagnostic imaging; the interpretation of medical imaging techniques relevant to the head and neck and the thorax, including studies of the temporal bone, skull, nose, paranasal sinuses, salivary and thyroid glands, larynx, necks, lungs, and esophagus.
- c) Diagnostic evaluation and management of congenital anomalies, otolaryngic allergy, sleep disorders, pain and other conditions affecting the regions and systems mentioned above, and

the chemical senses, endocrinology, and neurology as they relate to the head and neck.

- d) Management of congenital, degenerative, idiopathic, infectious, inflammatory, toxic, allergic, immunologic, vascular, metabolic, endocrine, neoplastic, foreign body and traumatic states through airway management, resuscitation, local/regional anesthesia, sedation and universal precaution techniques, operative intervention, and preoperative and postoperative care of the following major categories:
- (1) General otolaryngology, including pediatric otolaryngology, rhinology, bronchoesophagology and laryngology;
 - (2) Head and neck oncologic surgery;
 - (3) Facial plastic and reconstructive surgery of the head and neck;
 - (4) Otology and neurotology.
- e) Habilitation and rehabilitation techniques and procedures, including respiration, deglutition, chemoreception, balance, speech, as well as auditory measures such as hearing aids and implantable devices.
- f) Diagnostic and therapeutic techniques involving endoscopy of the upper aerodigestive tract, including rhinoscopy, laryngoscopy, esophagoscopy, and bronchoscopy, as well as the associated application of stroboscopes, lasers, mechanical debriders, and computer-assisted guidance devices.
- g) Exposure to state-of-the-art advances and emerging technology in Otolaryngology and Head-and-Neck Surgery.
- ## 2. Surgical Experience
- a) The sponsoring and participating institutions approved for the program must collectively have a sufficient number and variety of adult and pediatric medical and surgical patients who are available for resident education.
- b) While not all residents are expected to have operative experience in all surgical specialty procedures, the surgical procedures residents do perform must be sufficient in number and variety to provide education in the entire scope of the specialty. There must be adequate distribution and sufficient complexity within the principal categories of the specialty.
- c) Equivalent and adequate distribution of categories and procedures among the residents must generally be demonstrated. Significantly unequal experience in volume and/or complexity of cases managed by the residents will be considered serious noncompliance with these requirements. In some instances, the quality of care may require that case management be conducted with other specialties (e.g., hypophysectomy, cerebellopontine tumor).
- d) Documentation of each individual resident's operative experience must be provided. The cumulative operative experience of each resident must be reviewed at least semiannually by the program director as part of his or her responsibility for evaluation of the balanced progress of individual residents. The program director is responsible for compiling accurate information regarding the institutional operative records and the individual resident operative reports annually at the end of each academic year, and for submitting these records for review as requested by the RRC.
- ## 3. Outpatient Experience
- a) There must be a well-organized and well-supervised outpatient service. This service must operate in relation to an inpatient service used in the program. Residents must have the opportunity to see patients, establish provisional diagnoses, and initiate preliminary treatment plans. An opportunity for follow-up care must be provided so that the results of surgical care may be evaluated by the responsible residents. These activities

must be carried out under the supervision of appropriate faculty.

- b) If residents participate in preoperative and postoperative care in a private office, the program director must ensure that the resident functions with an appropriate degree of responsibility with adequate supervision. Experience should be provided in the procedures and management of office practice.
- c) Residents must have experience in the emergency care of critically ill and injured patients with otolaryngology-head and neck conditions.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

The educational program should provide a structured research experience for the residents, sufficient to result in an understanding of the basic principles of study design, performance, analysis, and reporting. The research experience may be clinical or basic in nature, and should reflect careful advice by and planning with the faculty. Facilities and protected time for research by the residents should also be provided, with guidance and supervision by qualified faculty.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.
4. The program director must ensure, direct, and document the implementation of and compliance with appropriate resident policies at all times.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care. During this time, residents may assist in surgery.
3. No new patients may be accepted after 24 hours of continuous duty. A new patient is defined as any patient for whom the otolaryngology service or department has not previously provided care. The resident should evaluate the patient before participating in surgery.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

- b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
- c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

5. Graded Responsibility

The responsibility given to residents in patient care should depend upon an individual resident's knowledge, problem-solving ability, manual skills, experience, and the severity and complexity of each patient's status. The program must provide residents with experience in direct and progressively-responsible patient management, including surgical experience as assistant to the surgeon, as residents advance through the educational program. This education must culminate in sufficient independent responsibility for clinical decision-making to evidence the fact that the graduating resident has developed sound clinical judgment and possesses the ability to formulate and carry out appropriate management plans.

Recognizing the nature of the specialty of Otolaryngology-Head and Neck Surgery, there should be clinical resources, if not an approved training program, in the related fields of ophthalmology, neurological surgery, neurology, pathology, radiology, anesthesiology, internal medicine, pediatrics, and emergency medicine.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing

resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.

- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

- d) Residents who fail to demonstrate appropriate industry, competence, responsibility, learning abilities, or ethics should be successively counseled and, after due process, dismissed if remediation has not occurred.

- e) It is essential that residents participate in existing national examinations. The annual Otolaryngology Training Examination (OTE), offered by the American Board of Otolaryngology, is one example of an objective test that may be used by the program. An analysis of the results of these testing programs should guide the faculty in assessing the strengths and weaknesses of individual residents and the program. The program director should also monitor the performance of program graduates on the examinations of the American Board of Otolaryngology.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Otolaryngology should communicate with the office of the board or consult its web site (www.aboto.org) regarding the full requirements for certification.

Approved ACGME: February 2004 Effective: July 1, 2005

Program Requirements for Residency Education in Neurotology (Otolaryngology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

1. The neurotology lateral skull base surgery program will provide advanced education beyond that afforded in otolaryngology residency in the diagnosis and management of disorders of the temporal bone, lateral skull base, and related anatomical structures. Surgery of the lateral skull base that involves the mesial aspect of the dura or intradural structure requires the joint effort of a neurotology and neurological surgery team. A 24-month educational program will ensure that concentrated time is available for the neurotology resident to develop advanced diagnostic expertise and advanced medical and surgical management skills for the care of diseases and disorders of the petrous apex, infratemporal fossa, internal auditory canals, cranial nerves (e.g., vestibular nerve section and joint neurosurgical-neurotological resection of intradural VIII nerve tumors), and lateral skull base, including the occipital bone, sphenoid bone, and temporal bone. This advanced education is required so that the neurotology resident may develop expertise with extradural skull base approaches in collaboration with neurological surgery. The postoperative care of lateral skull base surgery patients requires the joint management of both neurological surgery and neurotology. This advanced education is also necessary for residents to gain expertise in the joint collaborative management of patients un-

dergoing lateral skull base surgery. The program will also permit exposure to new research opportunities and time to explore new research ideas.

B. Duration and Scope of Education

1. The duration of the program is 24 months, all of which must be spent at participating institutions approved by the Residency Review Committee (RRC).
2. Admission to the program is contingent on completion of a residency program in otolaryngology accredited by the Accreditation Council for Graduate Medical Education (ACGME).
3. The program must provide structured clinical opportunities for residents to develop advanced skills in neurotology and lateral skull base surgery, including exposure to intracranial approaches.
4. A sufficient volume and variety of cases must be available to ensure adequate inpatient and outpatient experience for each neurotology resident.
5. Each neurotology resident must prepare documentation of surgical experience as both assistant surgeon and surgeon in middle cranial fossa, posterior cranial fossa, and lateral skull base surgical procedures for the treatment of disorders of the auditory and vestibular system; facial nerve disorders; and congenital inflammatory, neoplastic, idiopathic, and traumatic disorders of the extradural petrous bone and apex, occipital bone, sphenoid bone, and related structures.
6. The diagnosis and medical, surgical, and rehabilitative management of congenital, traumatic, inflammatory, degenerative, neoplastic, and idiopathic.
7. Audiometric testing including auditory brainstem responses and otoacoustic emissions, vestibular testing, facial nerve testing, electrophysiologic monitoring strategies, and neuroradiologic procedures used to evaluate the temporal bone, skull base, and related structures are required experiences.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

The neurotology program must be associated with an ACGME-accredited otolaryngology program. Resident experiences in related specialties such as physical medicine and rehabilitation, neurology, neurological surgery, neuroradiology, and neuropathology must be offered by the sponsoring institution.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience. The RRC must prospectively approve the addition and deletion of all participating institutions.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;

- c) specify the duration and content of the educational experience; and
- d) state the policies and procedures that will govern resident education during the assignment.

Program letters of agreement must be developed for each participating institution that provides an educational experience for a resident that is one month or longer in duration.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.

These responsibilities include those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents, as well as the maintenance of records related to program accreditation.

3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Otolaryngology and be certified in the subspecialty of neurotology, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The program director must be licensed to practice medicine in the state where the sponsoring institution is located.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System (ADS). This includes the maintenance of the record of neurotology operative cases performed by the service and by each neurotology resident. These records must be reviewed annually by the program director with the resident as a part of the director's responsibility for evaluation of the balanced progress of each resident and of the program's curriculum. These data must be submitted to the RRC at the time of the program review.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.

- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:

- (1) the addition or deletion of a participating institution; [as further specified by the RRC]
- (2) a change in the format of the educational program;
- (3) a change in the approved resident complement for those specialties that approve resident complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program. There must be at least one neurotology faculty member in addition to the program director.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Otolaryngology or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

Because neurotology is multidisciplinary in nature and because interaction with peers from related disciplines contributes to the quality of education, faculty from related disciplines such as audiology, neuro-ophthalmology, neurological surgery, neurology, physical medicine and rehabilitation, psychiatry, and radiology should participate in the program to enhance residents' educational opportunities. These faculty members should have recognized expertise in neurotology.

The program must also be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

Additional educational resources for the program in neurotology are required. These include a temporal bone dissection laboratory; testing facilities for complete auditory and vestibular evaluation that include facilities for intracranial nerve monitoring; other diagnostic, therapeutic, and research facilities deemed appropriate.

Residents must also have ready access to a major medical library, either at the institution where residents are located or through arrangements with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must also be access to an onsite library or to a collection of appropriate texts and journals in each institution participating in the educational program.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

One neurotology resident should be enrolled each year. A program without a resident for more than 2 successive years will be administratively withdrawn. The RRC will develop an annual resident reporting system to ensure that ACGME procedures are followed in this respect.

A program may not graduate more residents in any given year than are approved by the RRC unless prior approval has been received.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

Lines of responsibility must be clearly delineated between neurotology residents and otolaryngology residents in the areas of training, clinical responsibilities, and duration of training. Such information must be supplied to the RRC at the time of the review and survey.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

The course of study in neurotology must be comprehensive and well organized, and must provide each resident with opportunities for progressive responsibility in the management of both inpatient and outpatient environments.

The goals and objectives of the neurotology program must specifically include the following:

- a) The program must include increasing responsibility in both inpatient and outpatient environments. Direct surgical experience with all procedures must be documented. The experience must include neurotology and lateral skull base surgery techniques, with intracranial exposures performed jointly with neurosurgery.
- b) Program faculty must be responsible to the patient and the neurotology resident. In the event that a neurotologist plans an operation in which the dura may be entered, neurological consultation will be obtained to determine the appropriateness and planning of a joint surgical effort by both neurotology and neurosurgery.
- c) The program must refine the diagnostic expertise and assure the development of medical and surgical management strategies, including intracranial exposure, as well as the postoperative care necessary to treat congenital, inflammatory, neoplastic, idiopathic, and traumatic diseases of the petrous apex, internal auditory canal, cerebellopontine angle, cranial nerves, and lateral skull base, including the occipital bone, temporal bone, and craniovertebral junction.
- d) Because advanced neurotology is multidisciplinary in nature and because interactions with peers from related disciplines contribute to the quality of education, the faculty from related disciplines such as neurology, neurological surgery, audiology, neuro-ophthalmology, neuroradiology, and neuropathology should participate in the program to enhance the educational opportunities for the neurotology residents. Close interaction with physical medicine and neurologic rehabilitation in particular is highly desirable.
- e) In addition to combined educational conferences with the other disciplines listed above, cooperative efforts in the diagnostic area with neurological surgeons, surgical team approaches to operative therapy with neurosurgeons, and combined approaches to rehabilitative efforts with physical medicine and rehabilitation must be emphasized.
- f) The neurotology resident must be provided with experience in the habilitation and rehabilitation of the vertiginous patient and the treatment of intracranial and intratemporal facial nerve disorders.

- g) Participation in a multidisciplinary surgical team that manages disorders of the temporal bone, cerebellopontine angle, lateral skull base, and related structures is required. Members of the team should include audiologists, electrophysiologists, head and neck surgeons, neurologists, neuroradiologists, neurological surgeons, neuro-ophthalmologists, neuropathologists, neurotologists, and physiatrists.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

The neurotology residents must be provided with the opportunity to develop skills in providing consultation, in communication with colleagues and referring physicians, and in teaching medical students, physicians and other professional personnel.

The academic component should provide education beyond the otolaryngology residency in the basic sciences related to neurotology, including allergy and immunology, audiology and rehabilitative audiology, genetics, neuroanatomy, neurophysiology, neuropathology, neuropharmacology, neuro-ophthalmology, physical medicine and rehabilitation, temporal bone histopathology, and vestibular pathophysiology. The course of study must reflect the following content areas:

1. Neurophysiology, neuropathophysiology, and the diagnosis and therapy of advanced neurotologic disorders, including advanced audiologic and vestibular testing; the evaluation of cranial nerves and related structures; the interpretation of imaging techniques of the temporal bone and lateral skull base; and the electrophysiologic monitoring of cranial nerves VII, VIII, X, XI, and XII.
2. Vestibular rehabilitation.
3. Auditory and speech rehabilitation of the hearing-impaired.
4. The management and rehabilitation of extracranial nerve defects and those defined in the definition and description of the specialty.
5. Didactic and laboratory experience that teaches advanced surgical techniques to manage diseases and disorders of the auditory and vestibular systems; the extracranial skull base, including the sphenoid bone; the temporal bone. These techniques must include reconstructive repair of deficits in these areas.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

Clinical, basic science, and research conferences and seminars, as well as the review of critical about the subspecialty must be conducted regularly and as scheduled. The neurotology residents must participate in both the planning and conducting conferences. Both the faculty and neurotology residents must attend and participate in multidisciplinary conferences.

The course of study in must include research methodology, not to exceed 6 months, with protected time for the pursuit of scholarly activities and research. The neurotology resident should study epidemiology, statistical methods, experimental design, and manuscript preparation, including literature searches and the use of computerized databases.

It is highly desirable that the residents prepare and submit at minimum one paper for publication in a peer-reviewed journal. While the specific content will be related to the particular expertise, interest, and capability of the program faculty and institutional resources, the general goal of the research experience should be maintained.

D. ACGME Competencies

The residency program must require its residents to obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their residents to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;
2. *Medical Knowledge* about established and evolving biomedical, clinical, and cognitive sciences, as well as the application of this knowledge to patient care;
3. *Practice-based learning and improvement* that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. *Interpersonal and communication skills* that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. *Professionalism*, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. *Systems-based practice*, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.

3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if un-

expected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

The methods must include observation, assessment, and substantiation of the resident's acquired body of knowledge, skills in physical examination and patient communication, technical proficiency, professional attitudes, humanistic qualities as demonstrated in the clinical setting, consultation skills, patient management, decision making, and critical analysis of clinical situations.

b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.

c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this

purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.

2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Otolaryngology should communicate with the office of the board regarding the full requirements for certification.

ACGME Approved: February 2004 Effective: July 2004

Program Requirements for Residency Education in Pediatric Otolaryngology (Otolaryngology)

I. Introduction

A. Definition of the Subspecialty

Pediatric otolaryngology is a subspecialty within otolaryngology-head and neck surgery defined by both the age of the patient served and the knowledge and skill of the physician providing medical and surgical care. The pediatric otolaryngologist has special expertise in the management of infants and children with complex problems generally referred to tertiary care pediatric institutions with a multidisciplinary team of full-time hospital-based medical specialists. A pediatric otolaryngology educational program will be based in a tertiary care pediatric institution where the care of children can be readily coordinated with other subspecialists, thus allowing sufficient exposure and broad experience in the management of uncommon and complex otolaryngology disorders in children. A pediatric otolaryngology educational program must provide the following experiences for the pediatric otolaryngology residents: the diagnosis and care of congenital and acquired conditions involving the aerodigestive tract, nose and paranasal sinuses, the ear, diseases and disorders of the laryngotracheal complex and the head and neck; expertise in the diagnosis, treatment, and management of childhood disorders of voice, speech, language, and hearing; and a knowledge of genetics. The program should provide op-

portunities for the pediatric otolaryngologist to function as an advocate for the child and facilitate patient management in the home, school, or institutional setting.

B. Duration and Scope of Education

1. Admission to a pediatric otolaryngology program is contingent on completion of an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency program in otolaryngology.
2. The duration of a pediatric otolaryngology program is 24 months, all of which must be spent in participating institutions approved by the Residency Review Committee (RRC). The pediatric otolaryngology program must be associated with an ACGME-accredited otolaryngology program.
3. One pediatric otolaryngology resident should be enrolled each year. A program without a resident for 2 successive years will be administratively withdrawn. The RRC will develop an annual resident reporting system to ensure that the ACGME procedures are followed in this respect.

C. Program Goals and Objectives

The overall goal for residency education is to provide the pediatric otolaryngology resident with diagnostic and surgical skills for the care of ear, nose, throat, head and neck, and bronchoesophageal disorders of children that are uncommon and complex. Specific objectives include

1. an in-depth study of the embryology, developmental anatomy and physiology, microbiology, oncology, and psychology of the infant and child as related to the head and neck;
2. an understanding of the differences among the medical management of infant, childhood, and adult diseases of the head and neck;
3. provision for a sufficient number and variety of pediatric otolaryngology surgical procedures in the scope of the specialty with emphasis on those procedures infrequently encountered in the general practice of otolaryngology;
4. an appreciation for the inherent complexities of interacting with children and their families compared with adult patients; and
5. the ability to teach otoscopic and other diagnostic skills to pediatricians and other primary care physicians.

II. Institutional Organization

A. Sponsoring Institution

1. A pediatric otolaryngology educational program must be sponsored by a single sponsoring institution, as stated in the Institutional Requirements. In addition, the program must be based within a pediatric tertiary care institution that provides sufficient exposure and broad experience in the management of uncommon and complex otolaryngology disorders of children. The RRC will develop an annual resident reporting system to ensure that ACGME procedures are followed in this respect.
2. The sponsoring institution must provide sufficient faculty, clinical material, research and other educational resources to meet the needs of the pediatric otolaryngology residents.
3. Service commitments must not compromise the achievement of educational goals and objectives.

B. Participating Institutions

1. If the resources of two or more institutions are used, interinstitutional agreements must be developed by the institutional governing boards, as referenced in the Institutional Requirements.
2. The RRC must approve the addition or deletion of all participating institutions prospectively. Such approval will be based on a

clear educational rationale and the value of the institution to the program.

C. Appointment of Residents

1. The RRC will approve a total number of pediatric otolaryngology residents in the program for each year. The number will be based on the number, qualifications, and commitment of the faculty; the volume and variety of the patient population available for educational purposes; and the institutional resources committed to the program.
2. The program may not graduate more residents in any year than are approved by the RRC unless prior approval has been received.

III. Program Personnel

The program director and faculty are responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of residents and the maintenance of records related to program accreditation.

A. Program Director

1. Qualifications

- a. There must be a single program director responsible for the program with requisite and documented clinical, educational, and administrative abilities and experience. The program director must be licensed to practice medicine in the state where the institution that sponsors the program is located and must be appointed in good standing to the medical staff of an institution participating in the program.
- b. The program director must be certified by the American Board of Otolaryngology and be certified in the subspecialty or possess suitable equivalent qualifications as determined by the RRC for Otolaryngology.
- c. The program director must have administrative responsibility for the pediatric otolaryngology program and should possess the skills of administrator, clinician, teacher, and researcher. The program director must devote sufficient time to the program to ensure continuity of leadership and to fulfill all the responsibilities inherent in meeting the educational goals of the program. The executive secretary should be notified promptly of any change in program leadership.

2. Responsibilities

- a. Development of a sound administrative and organizational framework that includes an effective faculty as an essential element of the program. Continuity of leadership is essential to the program's stability. Frequent changes in leadership or long periods of temporary leadership will be cause for serious concern. The executive secretary should be notified promptly of any change in program leadership.
- b. Maintenance of a record of pediatric otolaryngology operative cases performed by the service and a record of operative experience for each pediatric otolaryngology resident. These records must be reviewed at least semiannually by the program director as a part of his or her responsibility for evaluation of the balanced progress of each individual resident and of the total program. These data must be submitted to the RRC at the time of each program review.
- c. Preparation of a written statement outlining the educational goals of the program with respect to the knowledge, skills, and other attributes of residents at each level of education and for each major rotation or other program assignment. This statement must be distributed to residents and members of the faculty and be readily available for review.

- d. Selection of residents for appointment to the program in accordance with institutional and departmental policies and procedures.
- e. Selection and supervision of faculty and other personnel at each institution participating in the program.
- f. Supervision of residents through explicit written descriptions of supervisory lines of responsibility for the care of patients. Such guidelines must be communicated to all members of the faculty. Residents must be provided with prompt, reliable systems for communication and interaction with supervising physicians.
- g. Implementation of fair procedures as established by the sponsoring institution regarding academic discipline and resident complaints or grievances.
- h. Monitoring resident stress, including mental or emotional conditions inhibiting performance or learning and drug- or alcohol-related dysfunction. Program directors and faculty should be sensitive to the need for timely provision of confidential counseling and psychological support services to residents. Situations that consistently produce undesirable stress on residents must be evaluated and modified.
- i. Preparation of an accurate statistical and narrative description of the program, as requested by the RRC.

B. Faculty

1. There must be one pediatric otolaryngology faculty member in addition to the program director who is certified by the American Board of Otolaryngology with additional appropriate professional qualifications in pediatric otolaryngology or other equivalent qualifications, as determined by the RRC.
2. There must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all pediatric otolaryngology residents in the program. Members of the faculty must be able to devote sufficient time to meet their supervisory and teaching responsibilities.
3. Because the care of pediatric otolaryngology patients may be multidisciplinary in nature, additional peers from pediatrics and other related pediatric disciplines should participate in the program to enhance the residents' educational opportunities. Examples of related faculty may include anesthesiology; medical genetics; radiology; neonatology; pediatric neurology; audiology, speech, voice, and hearing specialists; plastic surgery; and pathology.
4. The faculty must demonstrate a strong interest in the education of residents, sound clinical and teaching abilities, support for the goals and objectives of the program, a commitment to their own continuing medical education, and participation in scholarly activities. One measure of this commitment is the extent to which faculty members permit pediatric residents to participate in the management of patients under their care.
5. The faculty must be organized and have regular documented meetings to review program goals and objectives and program effectiveness in achieving them. At least one pediatric otolaryngology resident should participate in these reviews.
6. The faculty should periodically evaluate the utilization of resources available to the program, the contribution of each participating institution, the financial and administrative support for the program, the volume and variety of patients available to the program for educational purposes, the performance of members of the faculty, and the quality of resident supervision.
7. The faculty must demonstrate involvement in scholarly activities, to include
 - a. participation in their own continuing education;
 - b. participation in regional and national scientific societies;
 - c. presentation and publication of scientific studies;

- d. active participation in research as it pertains to pediatric otolaryngology;
- e. offering of guidance and technical support (e.g., research design, statistical analysis) for residents involved in research; and
- f. active participation in clinical discussions, rounds, and conferences to promote a spirit of inquiry and scholarship.

C. Other Program Personnel

Programs must be provided with the additional professional, technical, and clerical personnel needed to support the administration and educational conduct of the program.

IV. The Educational Program

The educational program must provide an intellectual environment for acquiring the knowledge, skills, clinical judgment, and attitudes that are essential for the practice of the subspecialty.

This objective can be achieved only when the program leadership, the faculty, and the sponsoring institution are committed to the educational program and when appropriate resources and facilities are available.

A. General

1. The program director is responsible for developing a structured curriculum with written, defined goals and objectives. Clinical, basic science, and research conferences and seminars and journal club activities pertaining to the subspecialty must be conducted regularly. The pediatric otolaryngology resident must participate in planning and conducting the conferences. Both the faculty and the resident must attend and participate in multidisciplinary conferences.
2. The pediatric otolaryngology resident must be provided with opportunities to develop skills in providing consultation, in communicating with colleagues and referring physicians, and in teaching medical students, residents, physicians, and other professional personnel.
3. Lines of responsibility must be clearly defined between pediatric otolaryngology and otolaryngology residents in the areas of education, clinical responsibilities, and duration of education. Such information must be supplied to the RRC at the time of the survey and review.
4. The same resident duty hours and supervision requirements apply to these subspecialty residents as those documented in the Program Requirements for Residency Education in Otolaryngology.

B. Clinical

1. Outpatient Experiences
 - a. There must be adequate outpatient experiences to provide a sufficient number of visits for the evaluation of patients with varied types of disorders to provide the residents with wide experience in diagnosis and outpatient management of patients with otolaryngology disorders. Residents are required to attend a minimum of two clinic sessions per week.
 - b. Experience in the ambulatory care setting should include evaluation of children with common disorders and experience with the diagnosis and management of children with congenital abnormalities of the head and neck, hearing impairment, inherited disorders and developmental abnormalities, swallowing disorders, and sinus disease.
 - c. In addition, multispecialty, interdisciplinary team experience should be provided to include, for example, a craniofacial and/or cleft palate team.
2. Inpatient

- a. An adequate inpatient facility must be available to provide a broad range of pediatric consultative experience.
- b. Pediatric intensive care facilities must be available for resident experience.
- c. There must be a sufficient number and variety of surgical cases to provide the pediatric otolaryngology resident with operative experience in all aspects of pediatric otolaryngology. The surgical case load should include experience in the following areas: laryngobronchoesophagology, head and neck surgery, laryngotracheal surgery, otologic surgery, surgery of the nose and paranasal sinuses, surgery for congenital abnormalities of the head and neck, and surgery for benign and malignant head and neck disorders.
3. Diagnostic
 - a. Complete diagnostic facilities for infants and children with otolaryngologic disorders must be available to provide the resident with the opportunity to interpret the results of diagnostic studies.
 - b. The diagnostic studies for complete audiologic, voice, speech, language, and developmental assessments must be available. In addition, state-of-the-art diagnostic, therapeutic, and laboratory facilities must be provided.

C. Research and Scholarly Activity

1. Graduate medical education must take place in an environment of inquiry and scholarship in which pediatric otolaryngology residents participate in the development of new knowledge, learn to evaluate research findings, and develop habits of inquiry as a continuing professional responsibility. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty.
2. The course of study must include research methodology, not to exceed 6 months, with protected time for the pursuit of scholarly activities and research. The pediatric otolaryngology resident should study epidemiology, statistical methods, experimental design, and manuscript preparation, including literature searches and the use of computerized databases. It is highly desirable that the resident prepare and submit one paper for publication in a peer-reviewed journal.

D. Library

1. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangements with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an onsite library or to collections of appropriate texts and journals in each institution participating in the educational program.

V. Evaluation

A. Resident Evaluation

The program director, with faculty participation, must

1. evaluate residents in writing at least semiannually regarding the knowledge, skills, and professional growth using appropriate criteria and procedures. The procedures must be confidential and must include observation, assessment, and substantiation of the resident's acquired body of knowledge, skills in physical examination and patient communication, technical proficiency, professional attitudes, and humanistic qualities demonstrated in the clinical setting, consultation skills, patient management, decision making, and critical analysis of clinical situations.

2. communicate each evaluation to the resident in a timely manner and provide feedback on his or her performance, including appropriate counseling and necessary remedial effort.
3. advance residents to positions of higher responsibility based on evidence of satisfactory progressive scholarship and professional growth.
4. maintain a permanent record of evaluation for each resident and have it accessible to the resident and other authorized personnel.
5. provide a final written evaluation for each resident graduating from the program that includes a review of the resident's performance during the program. This evaluation should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. This final evaluation should be part of the resident's permanent record at the institution.
6. maintain the list of all surgical operative procedures performed by the resident during the educational program. These data must be submitted to the program director and kept in a permanent file for review by the RRC at the time of the site visit and review.

B. Faculty Evaluation

All faculty must be evaluated on a regular basis. This evaluation should include teaching ability and commitment to the educational program, clinical knowledge, and scholarly contributions. Residents should participate in this evaluation.

C. Program Evaluation

There should be documented evidence of periodic self-evaluation of the program in relation to the educational goals, the needs of the pediatric otolaryngology residents, and the extent to which the goals of resident education have been met. Confidential written evaluations by residents should be included in this process.

ACGME: June 1995 Effective: June 1995

Program Requirements for Graduate Medical Education in Sleep Medicine (Otolaryngology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Sleep medicine is a discipline of medical practice in which sleep disorders are assessed, monitored, treated, and prevented by using a combination of techniques (clinical evaluation, physiologic testing, imaging, and intervention) and medication. Specialists in sleep medicine are expected to:

1. participate in an interdisciplinary care of patients of all ages that incorporates aspects of psychiatry, neurology, internal medicine, epidemiology, surgery, pediatrics and basic science;
2. acquire detailed knowledge of the sleep and respiratory control centers, physiology, and neurobiology underlying sleep and wakefulness;
3. diagnose and manage sleep disorder patients in outpatient and inpatient settings.

B. Duration and Scope of Education

1. All prerequisite fellowship education must be taken within programs accredited by the Accreditation Council for Graduate Med-

ical Education (ACGME) or the Royal College of Physicians and Surgeons of Canada.

2. The ACGME recognizes the following educational formats for entry into sleep medicine fellowships:
 - a) Fellows must complete 12 months of sleep fellowship education after the successful completion of one of the following prerequisite educational programs:
 - (1) 3 years of internal medicine; or
 - (2) 3 years of pediatrics
 - (3) 4 years of psychiatry;
 - (4) 4 years of neurology; or
 - (5) 5 years of otolaryngology.
3. Training must be separate and distinct from all training required for certification in internal medicine, pediatrics, pulmonology, psychiatry, neurology, and otolaryngology, and include as well as didactic and clinical experience in the care of patients with sleep disorders in both inpatient and outpatient settings.
4. Training should provide clinical exposure to the following disciplines as related to sleep disorders:
 - Cardiology
 - Neurology
 - Otolaryngology
 - Oral Maxillofacial Surgery
 - Pediatrics
 - Pulmonary Medicine
 - Psychiatry
 - Psychology, including Neuropsychology
5. Relation of the Subspecialty to Core Programs
Fellowship programs in the subspecialty of sleep medicine may only be accredited in institutions where the sponsoring specialty has an ACGME-accredited residency program. The sponsoring program may be in internal medicine, psychiatry, pediatrics, neurology, or otolaryngology.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions. There is a limit of one accredited sleep medicine program per sponsoring institution.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

C. Institutional Facilities and Resources

1. Patient Population

- a) There must be an adequate number and variety of patients of all ages in both inpatient and outpatient settings to expose fellows to the board spectrum of sleep disorders. This should include experience across the major categories of sleep disorders, including: apnea and other sleep-related breathing disorders; parasomnias; circadian rhythm disorders; insomnia; narcolepsy and related excessive daytime sleepiness disorders; and sleep problems related to other factors and diseases such as medications, and psychiatric and medical disorders.
 - b) Inpatient experience should include evaluation of a sufficient number of sleep disorder patients. Experience should include longitudinal management of patients for whom the fellow is the primary physician but acting under the supervision of a faculty member.
2. Facilities
- a) The facility should be appropriately equipped, and have a minimum of two fully-equipped polysomnography bedrooms and support space.
 - b) There must be adequate space and equipment for the educational program, including meeting rooms, classrooms with audiovisual and other educational aids, office space for staff and fellows, pertinent library materials, and diagnostic, therapeutic, and research facilities.
3. Institutional Resources
- a) The sponsoring institution must provide sufficient institutional resources—including GME staff, space, equipment, supplies, and time—to allow for effective oversight of its programs accredited by the ACGME.
 - b) In addition, there must be sufficient institutional resources to ensure that the programs accredited by the ACGME are implemented and developed effectively and in compliance with both the program and institutional requirements.
 - c) The American Academy of Sleep Medicine or an equivalent body should accredit for the use of both adults and children the sleep laboratories and other related facilities and equipment.
4. Library
- a) Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
 - b) Library services should include the electronic retrieval of information from medical databases.
 - c) There must be access to an on-site library or to a collection of appropriate texts and journals in each institution that participates in a fellowship program. On-site libraries and/or collections of texts and journals, or access to the electronic retrieval of these materials, must be readily available during nights and weekends.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program; he or she must be fully committed to the fellowship program, and devote sufficient time to provide leadership and supervision to the program and its fellows. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The program director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program

director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified by the specialty board in sleep medicine or be certified in sleep medicine by an ABMS Member Board, or possess qualifications judged to be acceptable by the sponsoring RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.
 On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
 - a) The program that provides training in sleep medicine must have at least two core faculty, including the director, who are specialists in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, or Otolaryngology and who are certified in sleep medicine by the specialty board in sleep medicine or by the applicable ABMS board, or who possess qualifications judged acceptable by the sponsoring RRC.
 - b) For programs with more than four fellows, a ratio of one core faculty to every two fellows must be maintained.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
 - a) Appropriate expertise in the areas defined in Section I.B. above must be present between the director and faculty. The RRC recognizes that expertise in sleep medicine is available from physicians who are board certified in many medical specialties, particularly in Internal Medicine, Pulmonology, Psychiatry, Pediatrics, Neurology, and Otolaryngology; the RRC

actively encourages multidisciplinary cooperation in the training of fellows.

- b) There must be designated faculty available to participate in consultation and teaching from the following disciplines as they relate to sleep medicine and the management of sleep disorders:

Cardiology
Neurology
Otolaryngology
Oral Maxillofacial Surgery
Pediatrics
Pulmonary Medicine
Psychiatry
Psychology including neuropsychology

3. Qualifications of the physician faculty are as follows:

- a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
b) The physician faculty must be certified by the applicable ABMS Board, or possess qualifications judged to be acceptable by the RRC.
c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.

IV. Fellow Appointments

A. Eligibility Criteria

The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another fellowship program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of fellowship education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

E. Fellow/Patient Ratio

The number of patients must be sufficient to provide a sound educational program. The program director must ensure an adequate number and variety of patients, with particular attention to balance in the age and gender of patients, as well as in patients with short- and long-term sleep disorders, inpatients, and outpatients.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The fellowship program must require its fellows to obtain competence in the 6 areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required, and provide educational experiences as needed in order for their fellows to demonstrate the following:

1. *Patient care* that is compassionate, appropriate, and effective for the treatment of health programs and the promotion of health;

2. **Medical Knowledge** about established and evolving biomedical, clinical, and cognate sciences, as well as the application of this knowledge to patient care;
3. **Practice-based learning and improvement** that involves the investigation and evaluation of care for their patients, the appraisal and assimilation of scientific evidence, and improvements in patient care;
4. **Interpersonal and communication skills** that result in the effective exchange of information and collaboration with patients, their families, and other health professionals;
5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to patients of diverse backgrounds;
6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

E. Didactic Program

1. Fellows must have formal instruction in, and demonstrate comprehensive knowledge of:
 - a) Major theories in sleep medicine, together with a thorough grounding in the generally accepted facts and basic sleep mechanisms.
 - b) Biological, psychological, social, economic, ethnic, and familial factors, which significantly influence the evaluation and treatment of sleep disorders.
 - c) Etiologies, prevalence, diagnosis, and treatment of all of the sleep disorders in the current nosology of sleep medicine.
 - d) The use, reliability, and validity of the generally accepted techniques for diagnostic assessment.
 - e) Medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g., the relationship between hypertension and snoring)
 - f) The nature of the interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies
 - g) Administration and interpretation of psychological tests
 - h) Financing and regulation of sleep medicine.
 - i) Medical ethics and its application in sleep medicine.
 - j) Legal aspects of sleep medicine.
 - k) Research methods in the clinical and basic sciences related to sleep medicine.
 - l) Technical skills including:
 - (1) skills necessary to perform polysomnographies from preparation and hookup of the patient to the completion of the study, including multiple sleep latency and maintenance of wakefulness tests.
 - (2) Scoring and interpretation of polysomnograms and recognition of artifacts, including full montages with additional EEG leads for seizure detection
 - (3) Consultative skills in sleep medicine in a variety of medical, surgical, and psychiatric settings
2. The Curriculum
The curriculum must include instruction in the following:
 - a) Fundamental mechanisms of sleep
 - b) Etiopathogenic characterization of sleep disorders
 - c) Clinical manifestations of sleep disorders
 - d) Diagnostic strategies in sleep disorders
 - e) Treatment strategies in sleep disorders
 - f) Epidemiological issues
 - g) Airway anatomy

3. Seminars and Conferences

- a) The training program must conduct a monthly, multidisciplinary teaching conference and a monthly journal club organized by the faculty on topics that cover the scope of sleep medicine.
- b) The training program must conduct seminars and core conferences, that include didactic instruction in the following; this instruction must be relevant for pediatric and adult patients:
 - (1) Basic neurological sleep mechanisms
 - (2) Chronobiological mechanisms
 - (3) Respiratory physiology during sleep and pathophysiology
 - (4) Cardiovascular physiology during sleep and pathophysiology
 - (5) Endocrine physiology during sleep and pathophysiology
 - (6) Gastrointestinal physiology during sleep and pathophysiology
 - (7) Ontogeny of sleep
 - (8) Sleep across the life span
 - (9) Operation of polysomnographic monitoring equipment
 - (10) Polysomnographic troubleshooting
 - (11) Ambulatory monitoring methodology
 - (12) Polysomnogram interpretation
 - (13) SIDs and related respiratory distress
 - (14) Nosology for sleep disorders: The International Classification of Sleep Disorders
 - (15) Evaluation of patients presenting with excessive sleepiness
 - (16) Evaluation of patients presenting with difficulty initiating or maintaining sleep
 - (17) Evaluation of patients presenting with parasomnias
 - (18) Biological rhythm disorders
 - (19) Pediatric and neonatal sleep medicine
 - (20) Treatment approaches for obstructive sleep apnea, to include nasal CPAP, bilevel PAP, upper airway surgery, oral appliances, and position training
 - (21) Treatment approaches for insomnia, to include cognitive-behavioral therapies and pharmacological therapy
 - (22) Treatment approaches for narcolepsy and idiopathic CNS hypersomnolence
 - (23) Treatment approaches for parasomnias
 - (24) Treatment of circadian rhythm disorders
 - (25) Pharmacology of sleep (i.e. medication effects on sleep)

F. Clinical Components

1. Clinical Skills
Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the management of sleep disorders in all age groups including following:
 - a) interviewing
 - b) clear and accurate history taking
 - c) performing competent physical, neurological, and mental status examinations
 - d) recording of findings completely and systematically
 - e) relating history and clinical findings to the relevant medical, neurologic, psychiatric, and social issues associated with etiology and treatment
 - f) formulating a differential diagnosis for all conditions in the current standard nosology, taking into consideration all relevant data.
 - g) diagnosing medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions
 - h) formulating appropriate treatment plans and making appropriate referrals

- i) providing continuous care for a variety of patients from different age groups, seen regularly and frequently over an extended time, in a variety of treatment modalities; being able to relate to patients and their families, as well as other members of the health care team, with compassion, respect, and professional integrity
 - j) Certification in cardiopulmonary resuscitation
2. Clinical Training
- a) Fellows must have formal instruction, clinical experience, and demonstrate competence at the completion of training in the following:
 - (1) The observation, evaluation, and management of patients of all ages with a wide variety of sleep disorders
 - (2) The integration of information obtained from patient history, physical examination, physiologic recordings, imaging studies, psychometric testing, pulmonary function testing, and biochemical and molecular tests results to arrive at an accurate and timely diagnosis and treatment plan.
 - (3) The indications for and potential pitfalls and limitations of diagnostic tests and the interpretation of the results in the context of the clinical situation. These diagnostic tests must include the following: polysomnography, multiple sleep latency testing, maintenance of wakefulness testing, actigraphy, and portable monitoring related to sleep disorders, imaging studies, magnetic resonance imaging, scoring and interpretation of polysomnograms and recognition of artifacts, including montages with additional EEG leads for seizure detection, and psychological and psychometric tests as they relate to sleep disorders.
 - (4) The development and execution of plans for evaluation and treatment, including the appropriate technical skills necessary to perform polysomnography from preparation and hookup of the patient to the completion of the study, including multiple sleep latency tests, maintenance of wakefulness tests, and other diagnostic studies
 - (5) The critical appraisal of the professional and scientific literature and application of new contributions to management and care of patients.
 - b. Fellows must have formal instruction and clinical experience in systems-based skills that include working in outpatient and inpatient settings and effectively utilizing health care resources, including pathology and radiology services.
 - (1) Clinical experiences that provide for basic and advanced training and education, as well as professional development
 - (2) Opportunities to formulate a clinical diagnosis and to order and use laboratory data to clinically evaluate a patient's condition and to support outpatient and inpatient diagnostic evaluations
 - (3) Progressive experience for training that includes caring for a sufficient number of sleep disorder patients to achieve competence in the assessment of patients with a wide range of sleep medicine disorders
 - (4) Experience with medical, neurologic, and psychiatric disorders displaying symptoms likely to be related to sleep disorders (e.g. the relationship between hypertension and snoring); ability to diagnose medical and psychiatric sleep disorders, as well as sleep disorders associated with common medical, neurologic, and psychiatric conditions; to formulate appropriate treatment plans; and to make appropriate referrals.
 - (5) Experience with interactions between treatment for sleep disorders and other medical, neurologic, and psychiatric treatment; experience and/or familiarity with the major

types of therapy including psychotherapy, pharmacotherapy, surgical treatment, behavioral treatments, and other somatic therapies; competence in sleep medicine consultation in a variety of medical, surgical and psychiatric settings.

- (6) Experience in sleep disorders center administration, especially leadership of interdisciplinary teams.
- (7) Supervised experience in teaching sleep medicine to students in the health professions.
- (8) Trainees should make regular patient management rounds and record reviews with the attending faculty.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

- 1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
- 2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
- 3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

- 1. Duty hours are defined as all clinical and academic activities related to the fellowship program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
- 2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
- 3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
- 4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

- 1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
- 2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up

to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.

3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because fellowship education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the fellowship program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance. Fellows' evaluation by faculty must be made at least once every two months so that areas of weakness and strength may be communicated to the fellows.

a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.

b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.

c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the fellowship program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness. The program should maintain a process for using assessment results together with other program evaluation results to improve the fellowship program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program

are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification in Sleep Medicine by the American Board of Medical Specialties should communicate with the office of the board regarding the full requirements for certification.

Approved by ACGME: June 2004 Effective: June 2004

Program Requirements for Graduate Medical Education in Pathology (Anatomic and Clinical)

Common Program Requirements appear in bold. Sections of text that are not bolded are specialty-specific requirements.

Introduction

A. Definition

Graduate medical education programs in pathology are accredited in the following categories:

- APCP-4 Four-year programs in anatomic pathology and clinical pathology.
- AP-3 Three-year programs in anatomic pathology.
- CP-3 Three-year programs in clinical pathology.
- PCP-1 One-year programs in cytopathology.
- BB-1 One-year programs in blood banking/transfusion medicine.
- DP-1 One-year programs in dermatopathology.
- FP-1 One-year programs in forensic pathology.
- HMP-1 One-year programs in hematology.
- MM-1 One-year programs in medical microbiology.
- NP-2 Two-year programs in neuropathology.
- PP-1 One-year programs in pediatric pathology.
- PCH-1 One-year programs in chemical pathology.
- SP One-year programs in selective pathology. (Selective pathology programs are typically sponsored by institutions that provide unique educational resources in a specialized area of pathology.)

B. Duration and Scope of Training

1. Graduate medical education programs in anatomic pathology and/or clinical pathology must provide an organized educational experience for qualified physicians seeking to acquire the basic competence of a pathologist.
2. Programs must offer residents the opportunity to acquire a broad understanding of anatomic pathology and/or clinical pathology, the techniques and methods of those disciplines, and the consultative role of the pathologist in patient-care decision making.
3. APCP-4 programs are accredited to offer 4 years of education/training in anatomic pathology and clinical pathology, 3 years of training in anatomic pathology (AP-3), and 3 years of training in clinical pathology (CP-3).
4. APCP-4 programs must include 18 months of formal education in anatomic pathology and 18 months of formal education in clinical pathology. The remaining 12 months of training may be a continuation of structured anatomic pathology or clinical pathology education, or may be devoted to a specialized facet of pathology. AP-3 and CP-3 programs must include 24 months of anatomic pathology or clinical pathology education. The remaining 12 months of training may be a continuation of structured anatomic pathology and/or clinical pathology education, or may be devoted to a specialized facet of pathology. The education must occur under the direction of the program director or designated member of the teaching staff. The program director must clearly define, as part of the program description, the available opportunities whereby residents may accomplish the additional 12 months of pathology education. The program director must approve all such opportunities and monitor their progress.

Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to resident assignments at all participating institutions.

As other residency programs facilitate peer interchange and augment the breadth of the educational experience, institutions providing graduate medical education in anatomic pathology and/or clinical pathology should also sponsor at least three additional accredited residency programs. Programs in internal medicine, family practice, obstetrics and gynecology, general surgery, pediatrics, and radiology are considered to be most complementary to pathology education. Requests for exceptions to this requirement will be considered on a case-by-case basis.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for residents;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of residents, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern resident education during the assignment.
3. Resident assignments away from the sponsoring institution should not prevent regular resident participation in rounds or conferences, either at the sponsoring institution or in equivalent conferences at participating institutions.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the Residency Review Committee (RRC) through the Web Accreditation Data System of the Accreditation Council for Graduate Medical Education (ACGME).
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities, including at least 5 years of participation as an active faculty member in an accredited pathology residency.
 - b) The program director must be certified in anatomic pathology, clinical pathology, or anatomic pathology and clinical pa-

thology by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.

- c) The program director must be appointed in good standing and based at the primary teaching site.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate resident supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and resident records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the residents. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved resident complement for those specialties that approve resident complement.
 On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all residents in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of residents, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for residents involved in research such as research design and statistical analysis); and the provision of support for residents' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

1. The laboratories providing patient-care services must be accredited by the appropriate organizations and must be directed by a qualified physician who is licensed to practice medicine and is a member of the medical staff.
2. The number and qualifications of medical technologists and other support personnel must be adequate for the volume of work in the laboratory and the educational activities of the institution.

D. Resources

The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, classrooms, meeting rooms, computer and statistical consultation services) are available.

1. Office and laboratory space must be provided for the residents for both patient-care work and participation in scholarly activities.
2. The patient material of the department must be indexed in such a way as to permit appropriate retrieval.
3. Residents must have ready access to a major medical library, either at the institution where the residents are located or through arrangement with convenient nearby institutions. The services provided by the library should include the electronic retrieval of information from medical databases.
4. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.
5. The audiovisual resources available for educational purposes should be adequate to meet the goals and objectives of the program.

IV. Resident Appointments

A. Eligibility Criteria

The program director must comply with the criteria for resident eligibility as specified in the Institutional Requirements.

B. Number of Residents

The RRC will approve the number of residents based upon established written criteria that include the adequacy of resources for resident education (e.g., the quality and volume of patients and related clinical material available for education), faculty-resident ratio, institutional funding, and the quality of faculty teaching.

Programs must maintain a number of residents sufficient to promote an intellectually-stimulating educational environment. There

should be at least two residents enrolled in each year of a program. A lesser number is cause for concern by the RRC.

C. Resident Transfers

To determine the appropriate level of education for residents who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring resident prior to their acceptance into the program. A program director is required to provide verification of residency education for residents who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty residents or students must not dilute or detract from the educational opportunities available to regularly appointed residents.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of residents for each major assignment and for each level of the program. This statement must be distributed to residents and faculty, and must be reviewed with residents prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide residents with direct experience in progressive responsibility for patient management.

1. Didactic Components

- a) Education in anatomic pathology must include autopsy and surgical pathology, cytopathology, pediatric pathology, dermatopathology, forensic pathology, immunopathology, histochemistry, neuropathology, ultrastructural pathology, cytogenetics, molecular biology, aspiration techniques, and other advanced diagnostic techniques as they become available.
- b) Education in clinical pathology must include microbiology (including bacteriology, mycology, parasitology, and virology), immunopathology, blood banking/transfusion medicine, chemical pathology, cytogenetics, hematology, coagulation, toxicology, medical microscopy (including urinalysis), molecular biologic techniques, aspiration techniques, and other advanced diagnostic techniques as they become available.
- c) Programs must provide residents with instruction and experience in the interpretation of laboratory data as part of patient-care decision-making and patient-care consultation. Residents must also participate in pathology conferences, rounds, teaching, and scholarly activity, and gain experience in the management and direction of a pathology laboratory (including quality assurance, safety, regulations, and the use of hospital and laboratory information systems).
- d) The educational experiences detailed above may be provided through separate, exclusive rotations, by rotations that combine more than one area, or by other means; in any case, all

rotations and other assignments must conform to the educational goals and objectives of the program.

- e) Seminars, Conferences, and Rounds
 - (1) There must be regularly-scheduled seminars and conferences devoted to the basic and applied medical sciences and clinical correlation conferences.
 - (2) Clinical correlation conferences (e.g., a pediatric mortality conference) should be held with clinical services such as internal medicine, surgery, gynecology, radiology, pediatrics, and their subspecialties.
 - (3) There must be departmental conferences, in which both faculty and residents participate, for detailed discussion of difficult and unusual cases.
 - (4) Residents must participate in the regular formal clinical and teaching rounds corresponding to the laboratory services to which they are assigned. For example, infectious disease service rounds should be attended during an assignment in microbiology.
- f) Consultation
 - (1) Both faculty and residents must be regularly involved in consultative activity.
 - (2) Patient-care consultations should be both intra- and interdepartmental.
- g) Resident Teaching
 - (1) Residents should participate in the education of medical students and other trainees.
 - (2) The effectiveness of residents as teachers should be monitored and evaluated by the program director and teaching staff.

2. Clinical Components

- a) The volume and variety of material available in the program for anatomic pathology education must be sufficient to ensure that residents have a broad exposure to both common conditions and unusual entities, and should develop the necessary professional and technical skills to perform the functions of an anatomic pathologist. This experience must emphasize the role of the pathologist as a consultant for effective patient care decisions.
- b) While the quality of an educational program is not based upon volume of teaching material alone, programs should have sufficient volume and variety of material available for educational purposes to ensure that all residents:
 - (1) perform at least 50 autopsies during the program. Each resident must be the primary prosector of 40 autopsies. Further, programs must ensure that residents participate fully in all aspects (including gross and microscopic examinations) of the autopsies they count toward this standard. It is highly desirable that this experience include forensic and stillborn autopsies.
 - (2) examine and sign out at least 2,000 surgical pathology specimens during the program. This material must be from an adequate mix of cases to ensure exposure to both common and uncommon conditions.
 - (3) examine at least 1,500 cytologic specimens during the program. This material must include a variety of both exfoliative and aspiration specimens.
 - (4) perform at least 200 operating room consultations (frozen sections) during the program.
- c) The volume and variety of material available in the program for training in clinical pathology should be sufficient to ensure that residents have a broad exposure to both common conditions and unusual entities, and develop the necessary professional and technical skills to perform the functions of a clinical pathologist. This experience must emphasize the role

of the pathologist as a consultant for effective patient care decisions.

- d) The number and variety of tests performed in the laboratories utilized in the program should be sufficient to give residents experience in the range of tests typically available in a general hospital. Further, resident experience should be augmented through the use of seminar and course materials and laboratory indexes of unusual cases.
- e) While the quality of an educational program is not based upon the volume of teaching material alone, programs should have a laboratory workload that will ensure that all residents gain experience with the full spectrum of clinical pathology procedures.
- f) Residents must be considered integral members of the staff of the Department of Pathology, and must have the opportunity to participate in discussion of matters related to management of the Department.
- g) There must be periods of time when decision making in the laboratory is the direct responsibility of residents, under appropriate supervision.

C. Residents Scholarly Activities

Each program must provide an opportunity for residents to participate in research or other scholarly activities, and residents must participate actively in such scholarly activities.

1. Throughout their time in the program, residents should be exposed to and encouraged to participate in clinical or laboratory research, research seminars, work-in-progress sessions, and organized reviews of intradepartmental research.
2. Resident involvement in research may be related to methods development, clinical or basic research, or literature surveys, but in all cases the program should provide an environment that promotes research or scholarly activity by residents.

D. ACGME Competencies

The residency program must require that its residents obtain competence in the six areas listed below to the level expected of a new practitioner. Programs must define the specific knowledge, skills, behaviors, and attitudes required and provide educational experiences as needed in order for their residents to demonstrate the following:

1. **Patient care** that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health. Residents must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.
2. **Medical knowledge** about established and evolving biomedical, clinical, and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.
3. **Practice-based learning and improvement** that involves investigation and evaluation of their diagnostic and consultative practices, appraisal and assimilation of scientific evidence, and improvements in their patient care practices.
4. **Interpersonal and communication skills** that result in effective information exchange and collaboration with patients, their families, and other health professionals.
5. **Professionalism**, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.
6. **Systems-based practice**, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide pathology services that are of optimal value.

VI. Resident Duty Hours and the Working Environment

Providing residents with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and resident well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on residents to fulfill service obligations. Didactic and clinical education must have priority in the allotment of residents' time and energy. Duty hour assignments must recognize that faculty and residents collectively have responsibility for the safety and welfare of patients.

A. Supervision of Residents

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of residents at all times. Residents must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide residents with continuous supervision and consultation.
3. Faculty and residents must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must

be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

- b) When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
- c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a resident works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of internal moonlighting.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for resident duty hours and the working environment. These policies must be distributed to the residents and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create resident fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Resident

1. Formative Evaluation

The faculty must evaluate in a timely manner the residents whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing resident performance throughout the program, and for utilizing the results to improve resident performance.

- a) Assessment should include the use of methods that produce an accurate assessment of residents' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to residents that includes at least semiannual written evaluations. Such evaluations are to be communicated to each resident in a timely manner, and maintained in a record that is accessible to each resident.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in residents' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each resident who completes the program. This evaluation must include a review of the resident's performance during the final period of education, and should verify that the resident has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the resident's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by residents.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one resident) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the residents' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use resident performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to residents for the duration of such a project.

IX. Certification

Residents who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: February 2001 Effective: July 2002
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Blood Banking/Transfusion Medicine (Pathology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Blood banking/transfusion medicine is the practice of laboratory and clinical medicine concerned with all aspects of blood transfusion, including the scientific basis of transfusion, selection and recruitment of blood donors, utilization and quality control, preparation of blood components, pretransfusion testing, transfusion of blood components, adverse effects of blood transfusion, autoimmunity, transplantation, histocompatibility, therapeutic apheresis and phlebotomy, blood substitutes, medicolegal considerations of transfusion, management aspects of blood services, including regulatory issues, and the history of blood transfusion. Blood banking/transfusion medicine requires a strong foundation in clinical pathology as well as clinical medicine.

B. Duration and Scope of Education

1. Graduate medical education programs in blood banking/transfusion medicine must provide an organized educational experience for qualified physicians seeking to acquire additional competence in blood banking/transfusion medicine.
2. Programs will be accredited to offer 1 year of organized education in all aspects of blood banking/transfusion medicine.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions. Each blood banking/transfusion medicine program should be administratively attached to an Accreditation Council for Graduate Medical Education-accredited residency in anatomic and/or clinical pathology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC. If the program director is not certified, the teaching staff must include at least one faculty member with certification in blood banking/transfusion medicine.
 - c) The program director must be appointed in good standing, privileged in blood banking/transfusion medicine, and based at the primary teaching site.
 - d) The director must have completed at least 3 years of active participation as a specialist in blood banking/transfusion medicine following completion of training.
 - e) The director must be licensed to practice medicine in the state where the institution that sponsors the program is located.
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

1. Additional necessary professional, technical, and clerical personnel must be provided to support the program.
2. The laboratories and clinical services involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. The program must have a sufficient number and variety of patients to offer training in the widest range of blood banking/transfusion medicine. There must be a mechanism for the retrieval and review of cases. There must be effective mechanisms to facilitate clinical correlation with laboratory findings.

3. There must be adequate offices, meeting rooms, classrooms, and space to support service, teaching, educational, and research activities.
4. The institutions, laboratories, and clinical services participating in the program must be appropriately accredited and/or licensed.

E. Library

1. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Fellows should have completed two years of training in an ACGME-accredited pathology residency, which must include at least 18 months of clinical pathology, or be certified by a member board of the American Board of Medical Specialties

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic Components

- a. There must be sufficient opportunity for the fellow to develop comprehensive knowledge of the technical aspects of blood banking and immunohematology. There must be an opportunity to acquire knowledge and skills in new technologies as they become available.
- b. Lectures, tutorials, seminars, and conferences must be regularly scheduled and held, with active participation of clinical services. The fellows must have the opportunity to attend regional or national meetings.
- c. Instruction should include studies illustrating usual and unusual cases.

2. Clinical Components

Clinical aspects of transfusion medicine must be emphasized throughout the program. Fellows must participate in ongoing clinical consultations regarding all aspects of blood transfusion and have opportunity to develop competence in providing services to patients and other physicians.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner.

1. Patient care

Fellows must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.

2. Medical knowledge

Fellows must demonstrate knowledge about established and evolving biomedical, clinical and cognate (e.g. epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.

3. Practice-based learning and improvement

Fellows must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.

4. Interpersonal and communication skills

Fellows must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.

5. Professionalism

Fellows must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice

Fellows must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for pa-

tient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.

- b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
- c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must

include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: September 2003 Effective: July 2004
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Chemical Pathology (Pathology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of the specialty

Chemical Pathology is the practice of pathology devoted primarily to the use of biochemical and molecular techniques in the laboratory diagnosis and management of human disease. Chemical Pathologists should be capable of advising clinicians on the selection and interpretation of clinical chemistry tests, and be capable of managing and directing a clinical chemistry laboratory.

- B. Programs will be accredited to offer one year of graduate medical education in chemical pathology following the completion of an ACGME-accredited residency in Anatomic Pathology and Clinical Pathology, Anatomic Pathology, or Clinical Pathology.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. The sponsoring institution should also sponsor an ACGME-accredited program in Anatomic and Clinical Pathology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational envi-

ronment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:

- a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
- b) The program director must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC. If the program director is not certified, the teaching staff must include at least one faculty member with certification in chemical pathology.
- c) The program director must be appointed in good standing and based at the primary teaching site.
- d) have at least of 3 years active participation as a specialist in chemical pathology following completion of training.
- e) be licensed to practice medicine in the state where the institution that sponsors the program is located.

4. Responsibilities of the program director are as follows:

- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.

- c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. Sponsoring institutions must provide the necessary clinical material to support experience at a sufficient level for the trainee to acquire the competency of a specialist in chemical pathology.
3. Program laboratories must have sufficient office and work space for both laboratory personnel and program trainees.
4. The laboratories in all participating institutions should have adequate and modern equipment and facilities, sufficient personnel, and appropriate policies and procedures for the performance of all laboratory aspects of chemical pathology.
5. Fellows must have ready access to a major medical library either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
 - a. Library services should include the electronic retrieval of information from medical databases.
 - b. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Fellows must have completed at least two years of training in an ACGME-accredited pathology residency, which must include at

least 18 months of clinical pathology, prior to admission to the program.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic components

The educational program must be designed to provide fellows a broad education in chemical pathology through didactic instruction and practical experience.

2. Clinical components

a. Programs must provide instruction and give trainees the opportunity to gain experience in clinical laboratory consultation and interpretation of data in the areas of Electrolytes and Acid-Base, Protein Markers, Lipids, Renal Function, Hepatic Function, Gastro-Intestinal Function, Cardiac Function, Therapeutic Drug Monitoring & Toxicology, Autoimmune Disease, Endocrinology, and Metabolic Diseases. The program must also provide structured instruction and experience in the administration, management, and direction of a chemical pathology laboratory, including quality assurance, safety, regulations, and the use of laboratory and hospital data systems.

b. The analytical repertoire of the laboratory must be distributed satisfactorily within the various categories and subdivisions of chemical pathology to provide experience at a sufficient level

for the fellow to acquire the competency of a specialist in chemical pathology.

- c. Clinical training in relation to chemical pathology, including the use and interpretation of chemical analyses in clinical diagnosis and management, must be an integral part of the training program.
- d. The program must provide opportunities for fellows to develop knowledge and skills relating to analytical chemical pathology, both basic and applied.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner.

1. Patient care

Fellows must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.

2. Medical knowledge

Fellows must demonstrate knowledge about established and evolving biomedical, clinical and cognate (e.g. epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.

3. Practice-based learning and improvement

Fellows must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.

4. Interpersonal and communication skills

Fellows must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.

5. Professionalism

Fellows must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice

Fellows must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both in-patient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly

activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: September 2003 Effective: July 2004
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Cytopathology (Pathology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of the specialty

Cytopathology is the practice of pathology concerned with the study and diagnosis of human disease manifested in cells. Diagnostic cytopathology requires a strong foundation in anatomic pathology.

B. Duration and Scope of Education

1. Graduate medical education programs in cytopathology must provide an organized educational experience for qualified physicians seeking to acquire the competence of a cytopathologist.
2. Programs will be accredited to offer 1 year of organized education in all current aspects of cytopathology, including laboratory procedures, laboratory management, quality assurance, self-assessment, diagnostic and patient care decision making, and the scientific basis of cytopathology.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. A cytopathology program should be administratively attached to an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in anatomic and clinical pathology or anatomic pathology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC. If the program director is not certified, the teaching staff must include at least one

faculty member certified by the American Board of Pathology in cytopathology.

- c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The director must have at least 3 years active participation as a cytopathologist following completion of training.
 - e) The director must be licensed to practice medicine in the state where the institution that sponsors the program is located.
4. Responsibilities of the program director are as follows:
- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;

- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. The program must provide access to a large volume and variety of cytopathology material that includes gynecologic, non-gynecologic and FNA samples. The material and files must be organized to permit appropriate retrieval. There must be mechanisms to facilitate correlation with other diagnostic studies.
3. There must be adequate equipment, laboratory facilities, offices, meeting rooms, classrooms, and space to support service, teaching, educational, and research activities.
4. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.

E. Library

1. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Prior to enrollment in a cytopathology program, fellows should have completed at least two years of training in an ACGME-accredited pathology residency, which must include at least 18 months of anatomic pathology or 18 months of clinical pathology.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources

for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic components

Educational opportunities to support training must be available. These should include, but not be limited to:

- a. Regularly scheduled lectures, seminars, and conferences with clinical services.
- b. Study sets of usual and unusual cases.

2. Clinical components

- a. There must be ample opportunity for fellows to develop knowledge and skills in the techniques of screening, specimen collection, cytopreparation (including thin layer preparation), management, quality assurance, and informatics. The fellow should understand the application of additional diagnostic adjuncts such as flow cytometric analysis, in situ hybridization, hormone receptor assessment, cytogenetic testing, and other new immunological and molecular techniques as they become applicable to the study of cells; the performance of these techniques, however, is not an on-site requirement.
- b. Diagnosis, pathogenesis, clinical correlation, consultative skills, and prognostic significance must be emphasized throughout the program.
- c. Fellows must be instructed and involved in correlating cytologic and histopathologic specimens.
- d. Adequate material and exposure must be available for all types of cytologic specimens, including gynecologic, non-gynecologic, and aspirate material.

- e. Fellows must learn to perform fine needle aspirations (FNA) on living patients and provide rapid evaluation of these specimens. It is the responsibility of the program director to ensure that fellows perform an adequate number of fine needle aspirations procedures to develop competence in the performance of this procedure. These should include FNAs of the thyroid gland, head and neck, breast, and other superficial soft tissue masses. Fellows must maintain a log of the procedures they perform.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner.

1. Patient care

Fellows must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.

2. Medical knowledge

Fellows must demonstrate knowledge about established and evolving biomedical, clinical and cognate (e.g. epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.

3. Practice-based learning and improvement

Fellows must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.

4. Interpersonal and communication skills

Fellows must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.

5. Professionalism

Fellows must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice

Fellows must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly ac-

tivities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: September 2003 Effective: July 2004
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Dermatopathology (Pathology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Subspecialty

1. Dermatopathology is the subspecialty of dermatology and pathology that is concerned with the study and diagnosis of diseases of the skin and adjacent mucous membranes, cutaneous appendages, hair, nails and subcutaneous tissues by histological,

histochemical, immunological, ultrastructural, molecular, microbiological, and other related techniques.

2. Graduate medical education programs in dermatopathology must provide an organized educational experience for qualified physicians seeking to acquire the additional competence of a dermatopathologist.
3. Programs must provide organized education in all current aspects of dermatopathology, including basic science, laboratory procedures, laboratory management, quality assurance, and self-assessment.
4. The dermatopathology program must be an equal and joint function of the Department of Dermatology and of the Department of Pathology in the sponsoring institution that has an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in Dermatology and an ACGME-accredited residency in Anatomic Pathology (AP-3) or Anatomic and Clinical Pathology (APCP-4).

B. Duration and Scope of Education

1. Dermatopathology programs must offer 12 months of education subsequent to the satisfactory completion of an ACGME-accredited residency in either dermatology or pathology.
2. For all dermatopathology fellows, 50% of their education should be devoted to the study of dermatopathology as outlined in II.A.1. For those who have completed a pathology residency, 50% of the 1-year program should be education in clinical dermatology provided by the dermatology teaching staff. For those who have completed a dermatology residency, 50% of the program should be education in anatomic pathology provided by the pathology teaching staff.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the

program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.

2. The Program Director, together with the faculty, is responsible for the general administration of the program, including those activities related to the recruitment, selection, instruction, supervision, counseling, evaluation, and advancement of fellows, and the maintenance of records related to program accreditation, as well as for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership, and must devote sufficient time to the program to ensure the implementation of sound administrative practices and the provision of adequate facilities, teaching staff, fellow staff, and educational resource materials.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in Dermatopathology by the American Board of Dermatology or the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The director must be licensed to practice medicine in the state where the institution that sponsors the program is located. (Certain federal programs are exempted.)
 - e) The director must have at least 5 years of experience (following fellowship) in the practice of dermatopathology.
 - f) The director must have had experience as a teacher and/or administrator in a dermatopathology or related program
4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications in

dermatopathology to instruct and supervise adequately all fellows in the program

2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Dermatology or the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.
5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

1. The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.
2. Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. There must be ample case material and supporting facilities to meet the training requirements in dermatopathology, dermatology, and pathology. Each dermatopathology fellow should examine at least 5,000 dermatopathology specimens (i.e., inhouse or referred specimens in the institution's accessions file for which reports are generated.)

3. There must be adequate equipment, laboratory space, office facilities, meeting rooms, classrooms, and research space to support service, teaching, and educational responsibilities.
4. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.
5. Fellows must have ready access to a major medical library either at the institution where the fellows are located or through arrangement with convenient nearby institutions. Library services should include the electronic retrieval of information from medical databases. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a fellowship program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Fellows appointed to an ACGME-accredited dermatopathology fellowship must have completed an ACGME-accredited residency in Anatomic Pathology (AP-3), Anatomic Pathology/Clinical Pathology (AP/CP-4), or Dermatology.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also pro-

vide fellows with direct experience in progressive responsibility for patient management.

1. Didactic Components

- a. Lectures, tutorials, seminars, and conferences with clinical services must be regularly scheduled and held.
- b. Instruction should include the use of and access to study sets and files of usual and unusual cases and other educational resources (e.g., the internet, etc.).

2. Clinical Components

- a. Fellows must actively participate in the review and diagnosis of current dermatopathological specimens on a daily basis. This experience must extend throughout the 12 months of accredited education and must be equivalent in quantity and quality for all fellows.
- b. The program must include didactic instruction and practical experience in the diagnosis of skin disorders by direct inspection, and by histological techniques (including frozen sections and interpretation of Mohs micrographic frozen sections), histochemical, immunological, molecular, microbiological, and other related techniques.
- c. Dermatopathology fellows must be given clearly defined assignments and increasing responsibility as they progress through the program.
- d. The program must provide a sufficient volume and variety of dermatopathology specimens (at least 5,000 new accessions per fellow per year) and other educational material for the fellow to acquire the qualifications of a consultant in dermatopathology.
- e. The program must provide the fellow with the experience required to set up and to operate a dermatopathology laboratory and to supervise and train laboratory personnel.
- f. All dermatopathology fellows should participate in patient examination appropriate to dermatopathology. Fellows who are pathologists must participate in the examination of at least 1,000 dermatology patients.
- g. Dermatopathology fellows who are dermatologists must have exposure to surgical pathology. This experience should emphasize contemporary diagnostic techniques and require attendance at surgical pathology conferences, and the review of slide sets of diseases relevant to dermatopathology. Participation in autopsies appropriate to dermatopathology is desirable.

C. Fellows Scholarly Activities

1. Each program must provide an opportunity for fellows to participate in dermatopathologic research or other scholarly activities, and fellows must participate actively in such scholarly activities.
2. Fellows should have the opportunity to become involved in the teaching of dermatopathology.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided

with rapid, reliable systems for communicating with supervising faculty.

2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call (or pager call)* is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.

2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly

activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Dermatology or the American Board of Pathology should communicate with their respective boards regarding the full requirements for certification.

*ACGME: February 2002 Effective: July 2002
Editorial Revision: March 2004*

Program Requirements for Graduate Medical Education in Forensic Pathology (Pathology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of the specialty

Forensic pathology is the application of the principles of medicine and pathology to the study of sudden, unexpected, suspicious, and violent death in order to determine the mechanisms, cause and manner of death.

B. Duration and scope of education

The educational program in forensic pathology shall be for a period of 1 year.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. A forensic pathology program should be administratively attached to an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in anatomic and clinical pathology or anatomic pathology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC. If the program director is not certified, the teaching staff must include at least one faculty member certified by the American Board of Pathology in Forensic Pathology.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The director must have at least 3 years active participation as a forensic pathologist following completion of training.

- e) The director must be licensed to practice medicine in the state where the jurisdiction in which the program is located.
 - 4. Responsibilities of the program director are as follows:
 - a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
 - b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
 - c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
 - d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.
- On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
 - a. The teaching staff must include at least two forensic pathologists (including the program director.)
 - b. Programs that offer training for two or more residents must have a senior staff of qualified forensic pathologists that numbers at least one more than the number of fellowship positions.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;

- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. Approximately 500 medicolegal autopsies should be conducted in an approved program each year. Of these, 100 or more should be in cases in which death is due to the immediate (within 24 hours) and direct effects of physical or chemical injury.
3. The institution or office should conduct approximately 300 additional autopsies for each additional fellowship position requested.
4. Adequate facilities and competent personnel shall be available and properly utilized for the conduct of all bacteriologic, biochemical, toxicology, firearms, trace evidence, physical anthropology, odontology, and other scientific studies as may be needed to insure complete postmortem investigation. When such support services are not housed at the medicolegal facility, they should be available and accessible to the fellow at suitable laboratories.

E. Library

1. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Prior to enrollment in a forensic pathology program, fellows should have completed at least two years of training in an ACGME-accredited pathology residency, which must include at least 18 months of anatomic pathology or 18 months of anatomic pathology.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Fellows and Other Students

The appointment of fellows and other specialty fellows or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum**A. Program Design****1. Format**

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

1. The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.
2. The program must provide a wide variety of case types for examination by the fellow.
3. A fellow should perform at least 200 and not more than 300 autopsies in a year of approved training. At least 200 of the cases must be complete autopsies that include active participation in:
 - a. Review of medical history and circumstances of death
 - b. External examination of the body.
 - c. Gross dissection.
 - d. Review of microscopic and laboratory findings.
 - e. Preparation of written descriptions of the gross and microscopic findings.
 - f. Development of an opinion regarding the cause of death.
 - g. Review of the autopsy report with a member of the teaching staff.
4. All fellows should have experience in scene investigations, including examination of the body before it has been disturbed.
5. The fellow should have responsibility for the performance of autopsies on cases that are likely to result in criminal prosecution or civil litigation, and it is highly desirable for fellows to have opportunities to participate in the legal follow-up of cases if such occurs during the course of their year of training.

6. It is highly desirable for fellows to accompany staff pathologists when they testify in court and give depositions.
7. During the year of approved training, the fellow must have a period of approximately 4 to 8 weeks devoted exclusively to laboratory experience in toxicology, physical anthropology, and components of the crime laboratory such as firearms, serology, and trace evidence.
8. Fellows should receive training in making decisions about acceptance of cases, performing or not performing an autopsy, issues pertaining to tissue and organ donations, and determination of manner of death.
9. Fellows should keep a log of their experience, to include autopsies, external examinations, crime scene visits, and opportunities to observe or provide court testimony.
10. Fellows must have the opportunity to assume increasing responsibility as they progress through the program.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner.

1. Patient care

Fellows must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.

2. Medical knowledge

Fellows must demonstrate knowledge about established and evolving biomedical, clinical and cognate (e.g. epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.

3. Practice-based learning and improvement

Fellows must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.

4. Interpersonal and communication skills

Fellows must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.

5. Professionalism

Fellows must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice

Fellows must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both in-patient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
 - b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
 - c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
- b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
- c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.
- d) Assessment should include the periodic review of the log of fellow experience in autopsies, external examinations, crime scene visits, and the observation and/or provision of court testimony.

2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice com-

petently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: September 2003 Effective: July 2004
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Hematology (Pathology)

Common Program Requirements appear in bold. Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and scope of the subspecialty

Hematology is the practice of pathology concerned with the study and diagnosis of human diseases involving the hematopoietic tissues and cells. Hematology requires a strong foundation in pathology.

B. Duration and scope of education

1. Graduate medical education programs in hematology must provide an organized educational program for qualified physicians seeking to acquire additional competence in hematology, and should be associated with an active program in both adult and pediatric hematology.
2. Programs will be accredited to offer 1 year of organized training in all current aspects of hematology, including laboratory procedures, laboratory management, database management, quality assurance, self-assessment, clinical consultation, and the scientific basis of hematology.

II. Institutions

A. Sponsoring Institution

One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions. A hematology program should be administratively attached to an Accreditation Council for Graduate Medical Education (ACGME)-accredited residency in anatomic and clinical pathology or anatomic pathology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is ac-

countable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.

2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.

3. Qualifications of the program director are as follows:

- a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
- b) The program director must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC. If the program director is not certified, the teaching staff must include at least one faculty member certified by the American Board of Pathology in hematology.
- c) The program director must be appointed in good standing and based at the primary teaching site.
- d) The director must have at least 3 years active participation as a hematology pathologist following completion of training.
- e) The director must be licensed to practice medicine in the state where the institution that sponsors the program is located.

4. Responsibilities of the program director are as follows:

- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and ob-

jectives of the educational program of which they are a member.

3. Qualifications of the physician faculty are as follows:

- a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
- b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
- c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.

4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:

- a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
- b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
- c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.

Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in research such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:

- a) Nonphysician faculty must be appropriately qualified in their field.
- b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

1. Additional necessary professional, technical, and clerical personnel must be provided to support the program.
2. The laboratories involved in the program must be directed by qualified physicians who are licensed to practice medicine and are members in good standing of the institution's medical staff.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. The program must have access to the number and variety of patients needed to provide education in hematology. The material and files must be indexed to permit appropriate retrieval. There must be mechanisms to facilitate correlation with anatomical material.
3. There must be adequate equipment, laboratory facilities, offices, meeting rooms, classrooms, and space to support service, teaching, educational, and research activities.
4. The institutions and laboratories participating in the program must be appropriately accredited and/or licensed.

E. Library

1. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.

2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Fellows should have completed at least two years of training in an ACGME-accredited pathology residency, or be certified in another specialty by a member board of the American Board of Medical Specialties.

B. Number of Fellows

The RRC will approve the number of fellows based upon established written criteria that include the adequacy of resources for fellow education (e.g., the quality and volume of patients and related clinical material available for education), faculty-fellow ratio, institutional funding, and the quality of faculty teaching.

C. Fellow Transfers

To determine the appropriate level of education for fellows who are transferring from another residency program, the program director must receive written verification of previous educational experiences and a statement regarding the performance evaluation of the transferring fellow prior to their acceptance into the program. A program director is required to provide verification of residency education for fellows who may leave the program prior to completion of their education.

D. Appointment of Other Students

The appointment of fellows from other programs, residents, or students must not dilute or detract from the educational opportunities available to regularly appointed fellows.

V. Program Curriculum

A. Program Design

1. Format

The program design and sequencing of educational experiences will be approved by the RRC as part of the review process.

2. Goals and Objectives

The program must possess a written statement that outlines its educational goals with respect to the knowledge, skills, and other attributes of fellows for each major assignment and for each level of the program. This statement must be distributed to fellows and faculty, and must be reviewed with fellows prior to their assignments.

B. Specialty Curriculum

The program must possess a well-organized and effective curriculum, both didactic and clinical. The curriculum must also provide fellows with direct experience in progressive responsibility for patient management.

1. Didactic components

- a. Lectures, tutorials, seminars, rounds, and conferences with clinical services must be regularly scheduled and held.

- b. Instruction should include the use of study sets of usual and unusual cases, performance of tests under supervision, and interpretation of results with generation of narrative reports.

2. Clinical Components

- a. There must be ample opportunity for the fellows to develop knowledge and skills in the techniques of specimen collection and preparation for routine hematologic testing, bone marrow aspiration, biopsy and interpretation, lymph node interpretation, coagulation testing, flow cytometry, and the applications of advanced technology, including in situ hybridization, immunocytochemistry, cytogenetics, and molecular studies (including FISH, Southern Blot, PCR, etc.), to hematologic problems. Adult and pediatric diagnostic material must be available. Fellows must maintain a log of their procedures.
- b. Diagnosis, pathogenesis, clinical correlation, and prognostic significance of hematologic disease must be emphasized throughout the program.
- c. Fellows must be given increasing responsibilities for services to patients and other physicians as they progress through the program. Fellows must be provided with clearly defined graduated responsibilities and delegated authority.
- d. Fellows must be instructed in methods of correlating data from cytological, histopathological, and clinical pathology assessments of hematologic disease.

C. Fellows Scholarly Activities

Each program must provide an opportunity for fellows to participate in research or other scholarly activities, and fellows must participate actively in such scholarly activities.

D. ACGME Competencies

The program must require its fellows to obtain competence in the six areas listed below to the level expected of a new practitioner.

1. Patient care

Fellows must demonstrate a satisfactory level of diagnostic competence and the ability to provide appropriate and effective consultation in the context of pathology services.

2. Medical knowledge

Fellows must demonstrate knowledge about established and evolving biomedical, clinical and cognate (e.g. epidemiological and social-behavioral) sciences and the application of this knowledge to pathology.

3. Practice-based learning and improvement

Fellows must be able to demonstrate the ability to investigate and evaluate their diagnostic and consultative practices, appraise and assimilate scientific evidence and improve their patient care practices.

4. Interpersonal and communication skills

Fellows must be able to demonstrate interpersonal and communication skills that result in effective information exchange and teaming with other health care providers, patients, and patients' families.

5. Professionalism

Fellows must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

6. Systems-based practice

Fellows must demonstrate an awareness and responsiveness to the larger context and system of health care and the ability to call on system resources to provide pathology services that are of optimal value.

VI. Fellow Duty Hours and the Working Environment

Providing fellows with a sound didactic and clinical education must be carefully planned and balanced with concerns for patient safety and fellow well-being. Each program must ensure that the learning objectives of the program are not compromised by excessive reliance on fellows to fulfill service obligations. Didactic and clinical education must have priority in the allotment of fellows' time and energy. Duty hour assignments must recognize that faculty and fellows collectively have responsibility for the safety and welfare of patients.

A. Supervision of Fellows

1. All patient care must be supervised by qualified faculty. The program director must ensure, direct, and document adequate supervision of fellows at all times. Fellows must be provided with rapid, reliable systems for communicating with supervising faculty.
2. Faculty schedules must be structured to provide fellows with continuous supervision and consultation.
3. Faculty and fellows must be educated to recognize the signs of fatigue, and adopt and apply policies to prevent and counteract its potential negative effects.

B. Duty Hours

1. Duty hours are defined as all clinical and academic activities related to the residency program; i.e., patient care (both inpatient and outpatient), administrative duties relative to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled activities such as conferences. Duty hours do *not* include reading and preparation time spent away from the duty site.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Fellows must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. *One day* is defined as 1 continuous 24-hour period free from all clinical, educational, and administrative duties.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

C. On-call Activities

The objective of on-call activities is to provide fellows with continuity of patient care experiences throughout a 24-hour period. *In-house call* is defined as those duty hours beyond the normal work day, when fellows are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a 4-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Fellows may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care.
3. No new patients may be accepted after 24 hours of continuous duty.
4. *At-home call* (or *pager call*) is defined as a call taken from outside the assigned institution.
 - a) The frequency of at-home call is not subject to the every-third-night limitation. At-home call, however, must not be so frequent as to preclude rest and reasonable personal time for each fellow. Fellows taking at-home call must be provided with 1 day in 7 completely free from all educa-

tional and clinical responsibilities, averaged over a 4-week period.

- b) When fellows are called into the hospital from home, the hours fellows spend in-house are counted toward the 80-hour limit.
- c) The program director and the faculty must monitor the demands of at-home call in their programs, and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue.

D. Moonlighting

1. Because residency education is a full-time endeavor, the program director must ensure that moonlighting does not interfere with the ability of the fellow to achieve the goals and objectives of the educational program.
2. The program director must comply with the sponsoring institution's written policies and procedures regarding moonlighting, in compliance with the ACGME Institutional Requirements.
3. Any hours a fellow works for compensation at the sponsoring institution or any of the sponsor's primary clinical sites must be considered part of the 80-hour weekly limit on duty hours. This refers to the practice of *internal moonlighting*.

E. Oversight

1. Each program must have written policies and procedures consistent with the Institutional and Program Requirements for fellow duty hours and the working environment. These policies must be distributed to the fellows and the faculty. Duty hours must be monitored with a frequency sufficient to ensure an appropriate balance between education and service.
2. Back-up support systems must be provided when patient care responsibilities are unusually difficult or prolonged, or if unexpected circumstances create fellow fatigue sufficient to jeopardize patient care.

F. Duty Hours Exceptions

An RRC may grant exceptions for up to 10% of the 80-hour limit to individual programs based on a sound educational rationale. Prior permission of the institution's GMEC, however, is required.

VII. Evaluation

A. Fellow

1. Formative Evaluation

The faculty must evaluate in a timely manner the fellows whom they supervise. In addition, the residency program must demonstrate that it has an effective mechanism for assessing fellow performance throughout the program, and for utilizing the results to improve fellow performance.

- a) Assessment should include the use of methods that produce an accurate assessment of fellows' competence in patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice.
 - b) Assessment should include the regular and timely performance feedback to fellows that includes at least semiannual written evaluations. Such evaluations are to be communicated to each fellow in a timely manner, and maintained in a record that is accessible to each fellow.
 - c) Assessment should include the use of assessment results, including evaluation by faculty, patients, peers, self, and other professional staff, to achieve progressive improvements in fellows' competence and performance.
- #### 2. Final Evaluation

The program director must provide a final evaluation for each fellow who completes the program. This evaluation must include a review of the fellow's performance during the final period of education, and should verify that the fellow has demonstrated sufficient professional ability to practice competently and independently. The final evaluation must be part of the fellow's permanent record maintained by the institution.

B. Faculty

The performance of the faculty must be evaluated by the program no less frequently than at the midpoint of the accreditation cycle, and again prior to the next site visit. The evaluations should include a review of their teaching abilities, commitment to the educational program, clinical knowledge, and scholarly activities. This evaluation must include annual written confidential evaluations by fellows.

C. Program

The educational effectiveness of a program must be evaluated at least annually in a systematic manner.

1. Representative program personnel (i.e., at least the program director, representative faculty, and one fellow) must be organized to review program goals and objectives, and the effectiveness with which they are achieved. This group must conduct a formal documented meeting at least annually for this purpose. In the evaluation process, the group must take into consideration written comments from the faculty, the most recent report of the GMEC of the sponsoring institution, and the fellows' confidential written evaluations. If deficiencies are found, the group should prepare an explicit plan of action, which should be approved by the faculty and documented in the minutes of the meeting.
2. The program should use fellow performance and outcome assessment in its evaluation of the educational effectiveness of the residency program. Performance of program graduates on the certification examination should be used as one measure of evaluating program effectiveness.
3. The program should maintain a process for using assessment results together with other program evaluation results to improve the residency program.

VIII. Experimentation and Innovation

Since responsible innovation and experimentation are essential to improving professional education, experimental projects along sound educational principles are encouraged. Requests for experimentation or innovative projects that may deviate from the program requirements must be approved in advance by the RRC, and must include the educational rationale and method of evaluation. The sponsoring institution and program are jointly responsible for the quality of education offered to fellows for the duration of such a project.

IX. Certification

Fellows who plan to seek certification by the American Board of Pathology should communicate with the office of the board regarding the full requirements for certification.

*ACGME: February 2004 Effective: July 2004
Editorial Revision: June 2004*

Program Requirements for Graduate Medical Education in Medical Microbiology (Pathology)

Common Program Requirements appear in bold.

Sections of text that are not bolded are subspecialty-specific requirements.

I. Introduction

A. Definition and Scope of the Specialty

Medical Microbiology is a subspecialty of pathology concerned primarily with the laboratory diagnosis, treatment, and control of infectious diseases. Practitioners of medical microbiology should be qualified to provide medical, scientific, and administrative direction of a diagnostic microbiology laboratory; consultations as a physician regarding the pathologic/microbiologic diagnosis of infectious diseases; and clinical consultations on the selection and interpretation of medical microbiology tests. In addition to these activities, medical microbiologists may be expected to direct the infection control program of a healthcare organization, and to participate on or direct an antibiotic formulary committee (to optimize the wise use of antimicrobial agents and minimize the emergence of resistance toward these compounds). Training encompasses the pathophysiology of infectious diseases, the epidemiology of the spread of infectious microbes, and the use of antimicrobial agents based on sound pharmacokinetic/pharmacodynamic principles. Physicians trained in Medical Microbiology should be qualified to:

1. Provide medical, scientific, and administrative direction to a diagnostic microbiology laboratory.
2. Interpret and correlate the clinical status of a patient with the results of Medical Microbiology testing, including the implications of both negative and positive test results.
3. Provide medical advice on the diagnosis, treatment, and control of infectious diseases.
4. Perform and interpret all relevant forms of microscopy (e.g., light, fluorescence, and electron microscopy) for the morphologic diagnosis of infectious diseases in clinical materials (e.g., direct microscopy of stained smears, cytologic preparations, and tissue sections).
5. Use immunological and molecular methods to aid in the detection and identification of microorganisms and their virulence factors.
6. Independently evaluate and solve problem situations identified by the medical and laboratory staff relating to medical microbiology, infectious diseases, and epidemiology.
7. Assess/recognize the public health implications of specific microorganisms, and means for their control.
8. Participate in decisions that affect communicable disease prevention and epidemiology.
9. Undertake research and development of new testing methods for medical microbiology, infectious diseases, and epidemiology.
10. Participate in the training of others in Medical Microbiology.
11. Participate in institution-wide financial decisions relating to the diagnosis, management, treatment, and control of infectious diseases.

B. Duration and Scope of Education

Programs will be accredited to offer one year of graduate medical education in medical microbiology following the completion of an ACGME-accredited residency in Anatomic Pathology and Clinical Pathology, Anatomic Pathology, or Clinical Pathology, or completion of an ACGME-accredited residency in another primary medical spe-

cialty and completion of an ACGME-accredited fellowship in infectious diseases.

II. Institutions

A. Sponsoring Institution

1. One sponsoring institution must assume ultimate responsibility for the program, as described in the Institutional Requirements, and this responsibility extends to fellow assignments at all participating institutions.
2. The sponsoring institution should also sponsor ACGME-accredited residency in anatomic and clinical pathology.

B. Participating Institutions

1. Assignment to an institution must be based on a clear educational rationale, integral to the program curriculum, with clearly-stated activities and objectives. When multiple participating institutions are used, there should be assurance of the continuity of the educational experience.
2. Assignment to a participating institution requires a letter of agreement with the sponsoring institution. Such a letter of agreement should:
 - a) identify the faculty who will assume both educational and supervisory responsibilities for fellows;
 - b) specify their responsibilities for teaching, supervision, and formal evaluation of fellows, as specified later in this document;
 - c) specify the duration and content of the educational experience; and
 - d) state the policies and procedures that will govern fellow education during the assignment.

III. Program Personnel and Resources

A. Program Director

1. There must be a single program director responsible for the program. The person designated with this authority is accountable for the operation of the program. In the event of a change of either program director or department chair, the program director should promptly notify the executive director of the RRC through the Web Accreditation Data System of the ACGME.
2. The Program Director, together with the faculty, is responsible for the general administration of the program, and for the establishment and maintenance of a stable educational environment. Adequate lengths of appointment for both the program director and faculty are essential to maintaining such an appropriate continuity of leadership.
3. Qualifications of the program director are as follows:
 - a) The program director must possess the requisite specialty expertise, as well as documented educational and administrative abilities.
 - b) The program director must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC. If the program director is not certified, the teaching staff must include at least one faculty member certified by the American Board of Pathology in medical microbiology.
 - c) The program director must be appointed in good standing and based at the primary teaching site.
 - d) The director must have at least 3 years active participation as a medical microbiologist following completion of training.
 - e) The director must be licensed to practice medicine in the state where the institution that sponsors the program is located.
4. Responsibilities of the program director are as follows:

- a) The program director must oversee and organize the activities of the educational program in all institutions that participate in the program. This includes selecting and supervising the faculty and other program personnel at each participating institution, appointing a local site director, and monitoring appropriate fellow supervision at all participating institutions.
- b) The program director is responsible for preparing an accurate statistical and narrative description of the program as requested by the RRC, as well as updating annually both program and fellow records through the ACGME's Accreditation Data System.
- c) The program director must ensure the implementation of fair policies, grievance procedures, and due process, as established by the sponsoring institution and in compliance with the Institutional Requirements.
- d) The program director must seek the prior approval of the RRC for any changes in the program that may significantly alter the educational experience of the fellows. Such changes, for example, include:
 - (1) the addition or deletion of a participating institution;
 - (2) a change in the format of the educational program;
 - (3) a change in the approved fellow complement for those specialties that approve fellow complement.

On review of a proposal for any such major change in a program, the RRC may determine that a site visit is necessary.

B. Faculty

1. At each participating institution, there must be a sufficient number of faculty with documented qualifications to instruct and supervise adequately all fellows in the program.
2. The faculty, furthermore, must devote sufficient time to the educational program to fulfill their supervisory and teaching responsibilities. They must demonstrate a strong interest in the education of fellows, and must support the goals and objectives of the educational program of which they are a member.
3. Qualifications of the physician faculty are as follows:
 - a) The physician faculty must possess the requisite specialty expertise and competence in clinical care and teaching abilities, as well as documented educational and administrative abilities and experience in their field.
 - b) The physician faculty must be certified in the specialty by the American Board of Pathology, or possess qualifications judged to be acceptable by the RRC.
 - c) The physician faculty must be appointed in good standing to the staff of an institution participating in the program.
4. The responsibility for establishing and maintaining an environment of inquiry and scholarship rests with the faculty, and an active research component must be included in each program. *Scholarship* is defined as the following:
 - a) the scholarship of *discovery*, as evidenced by peer-reviewed funding or by publication of original research in a peer-reviewed journal;
 - b) the scholarship of *dissemination*, as evidenced by review articles or chapters in textbooks;
 - c) the scholarship of *application*, as evidenced by the publication or presentation of, for example, case reports or clinical series at local, regional, or national professional and scientific society meetings.Complementary to the above scholarship is the regular participation of the teaching staff in clinical discussions, rounds, journal clubs, and research conferences in a manner that promotes a spirit of inquiry and scholarship (e.g., the offering of guidance and technical support for fellows involved in re-

search such as research design and statistical analysis); and the provision of support for fellows' participation, as appropriate, in scholarly activities.

5. Qualifications of the nonphysician faculty are as follows:
 - a) Nonphysician faculty must be appropriately qualified in their field.
 - b) Nonphysician faculty must possess appropriate institutional appointments.

C. Other Program Personnel

Additional necessary professional, technical, and clerical personnel must be provided to support the program.

D. Resources

1. The program must ensure that adequate resources (e.g., sufficient laboratory space and equipment, computer and statistical consultation services) are available.
2. Sponsoring institutions must provide the necessary clinical material and analytical capability in medical microbiology to support experience at a sufficient level for the trainee to acquire the competency of a specialist in medical microbiology.
3. Medical microbiology fellows must have access to reference laboratories for training in specialized procedures not available in laboratories in the sponsoring institution.
4. The laboratories in all participating institutions should have adequate and modern equipment and facilities, sufficient personnel, and appropriate policies and procedures for the performance of all laboratory aspects of medical microbiology, epidemiology, and infectious diseases.

E. Library

1. Fellows must have ready access to a major medical library, either at the institution where the fellows are located or through arrangement with convenient nearby institutions.
2. Library services should include the electronic retrieval of information from medical databases.
3. There must be access to an on-site library or to a collection of appropriate texts and journals in each institution participating in a residency program. On-site libraries and/or collections of texts and journals must be readily available during nights and weekends.

IV. Fellow Appointments

A. Eligibility Criteria

1. The program director must comply with the criteria for fellow eligibility as specified in the Institutional Requirements.
2. Completion of an ACGME-accredited residency in Anatomic Pathology and Clinical Pathology, Anatomic Pathology, or Clinical Pathology, or completion of an ACGME-accredited residency in another primary medical specialty and completion of an ACGME-accredited fellowship in infectious diseases is a prerequisite.

B. Number of Fellows
