Sean Hogan, PhD

EXECUTIVE SUMMARY

The Milestones assessment is designed to support formative feedback and guide competency development for residents and fellows, ensuring that education and training remain aligned with the evolving needs of patient care. To advance this goal, the ACGME developed predictive probability value (PPV) tables as a practical tool for program directors to identify learners who may benefit from targeted educational support.

PPV tables estimate the likelihood that a resident or fellow will fall short of the recommended graduation target (Level 4.0) for each subcompetency by the end of their program, based on longitudinal Milestone ratings. These probabilities are displayed in matrix form using a heat map format with color-coded risk zones. The estimates are derived from Milestones 2.0 data collected from academic year (AY) 2020-21 to AY 2025-26, and are calculated as population-averaged probabilities grouped by post-graduate year and reporting period.

Empirical studies have demonstrated associations between Milestone ratings and key early-career outcomes (e.g., board certification scores, patient complaints, surgical performance), providing preliminary support for the validity and utility of PPV tables in guiding resident/fellow development.

PPV tables may serve as an informational resource to support:

- Early identification of residents and fellows who may benefit from targeted support
- Development of individualized learning plans aligned with each learner's rotation schedule and available program resources
- Reflection by Clinical Competency Committee (CCC) members on their rating practices to promote consistency and fairness across reporting periods, especially at the time of graduation

It is important to note that PPVs reflect national averages and may not fully account for local program variations in rating practices.

INTRODUCTION

One of the key functions of the Milestones assessment system is to provide program directors and specialty societies with actionable information to deliver formative feedback that supports residents' and fellows' competency development throughout education and training. This process helps ensure that physicians are better prepared for an evolving health care environment by aligning learners' competencies with critical patient needs (Batalden et al. 2002; Ericsson 2007; Hodges 2010). Milestone subcompetencies are developed through close collaboration with a range of stakeholders, including ACGME Review Committees, American Board of Medical Specialties Member Boards, American Osteopathic Association Certifying Boards, residency and fellowship program directors, residents, fellows, specialty societies, and the public. The specificity embedded within each Milestone subcompetency is designed to support continuous monitoring of individual developmental trajectories, enabling programs to target specific areas for growth. This ongoing effort helps ensure that graduates meet the standards of their specialty community and are equipped for independent practice (Institute of Medicine 2014; Nasca et al. 2012; Nasca 2015).

The intent behind the Milestones has been empirically examined through studies of construct validity (e.g., Sun et al. 2025; Hamstra et al. 2021), as well as through analyses of national datasets assessing associations with early-career performance indicators such as board certification exam scores, patient complaints, post-surgical outcomes, antibiotic prescribing, and patient retention (Bienstock et al. 2021; Burk-Rafel et al. 2026; Chen et al. 2025; Francisco et al. 2021; Han et al. 2023; Hauer et al. 2021; Huh et al. 2023; Smith et al. 2024; Yamazaki et al., forthcoming). Most studies to date demonstrated that Milestone ratings correlate with expected outcomes that reflect the goals of residency and fellowship. These findings can offer preliminary support for the alignment between Milestone-based competency assessment and important patient outcomes, which in turn may suggest potential utility of Milestone ratings as a formative feedback tool to guide resident/fellow development.

Intended Usage of PPV Tables

To translate this concept into practical application, PPV tables have been published by the ACGME since 2019 for each Milestone subcompetency. These tables estimate the likelihood that a resident or fellow will fall below the recommended graduation target (i.e., Level 4.0) by the time of program completion, based on national longitudinal Milestones data (Holmboe et al. 2020). This report is designed to inform program directors and CCCs in identifying learners who may benefit from additional educational support for targeted improvement.

©2026 Accreditation Council for Graduate Medical Education (ACGME)

METHODS

Data Selection

Milestones version 2.0 ratings reported between July 2020 (the mid-year reporting period of AY 2020-21) and June 2026 (the year-end reporting period of AY 2025-26) were analyzed. For each specialty/subspecialty, the senior-most learners from the June 2021, 2022, 2023, 2024, 2025, and 2026 graduating cohorts were identified, along with their preceding Milestone ratings leading up to graduation.

PPVs were calculated based on learners who had been assessed throughout the entire duration of training by June 2026, allowing the PPVs to be interpreted longitudinally. To ensure reliable PPV estimation and protect individual anonymity, the analysis was limited to specialties and subspecialties with more than 80 residents/fellows per graduating cohort.

Outcome Variable

The focal outcome was whether a senior-most resident/fellow fell short of the recommended graduation target level (i.e., Level 4.0) for each subcompetency during the final assessment period. Learners who fell short of the target were coded as 1; those who met or exceeded the target were coded as 0.

Predictors

Milestone ratings reported in each six-month reporting period prior to graduation were used as threshold-based predictors for PPV estimation.

Analysis

Milestone ratings were aggregated from different graduating cohorts, grouping data by post-graduate year (PGY) and reporting period (mid-year or year-end). This approach builds on findings by Hamstra et al. (2019), which suggest that CCCs tend to rate learners consistently across cohorts within the same PGY and reporting period. For each subcompetency within each specialty/subspecialty, biannual Milestone ratings were used as thresholds to predict whether a resident/fellow would fall short of the graduation target in the final reporting period. To estimate the proportion of learners who fell short, conditional on a given threshold rating in each prior six-month interval, a generalized estimating equations regression model was applied to generate population-averaged PPV estimates.

©2026 Accreditation Council for Graduate Medical Education (ACGME)

KEY TO PPV TABLES

PPV tables provide the probability (expressed as a percentage) that a resident/fellow at or below a specific Milestone rating (Level) will fall short of the recommended graduation target (Level 4.0) by the time of graduation. These probabilities are presented in matrix form for each subcompetency, using a heat map format with three color-coded risk zones:

- Light orange (50%–64%): elevated risk
- Orange (65%–79%): moderate risk
- Red (≥80%): highest risk

Table 1 illustrates PPV reporting for Patient Care (PC) Subcompetency 1, based on data from a three-year specialty program.

Table 1: Example of PPV Reporting: Patient Care (PC) Subcompetency 1

Subcompetency	Threshold	Yr1, Mid-Year	Yr1, Year-End	Yr2, Mid-Year	Yr2, Year-End	Yr3, Mid-Year
PC01	≤ Lev 5.0	8.8%	8.8%	8.7%	8.6%	8.7%
	≤ Lev 4.5	8.8%	8.8%	8.7%	8.6%	8.9%
	≤ Lev 4.0	8.8%	8.8%	8.7%	8.7%	9.8%
	≤ Lev 3.5	8.8%	8.9%	9.3%	10.6%	19.6%
	≤ Lev 3.0	9.0%	9.6%	11.7%	16.9%	46.4%
	≤ Lev 2.5	9.7%	11.8%	19.8%	37.4%	69.7%
	≤ Lev 2.0	11.3%	16.2%	34.2%	56.8%	72.4%
	≤ Lev 1.5	15.5%	28.1%	40.1%	61.7%	44.0%
	≤ Lev 1.0	20.8%	42.1%	25.3%	13.3%	12.1%

In this example, a resident receiving a Milestone rating of 1.5 or lower during the year-end PGY-2 reporting period has a **61.7%** probability—based on national data—of falling short of Level 4.0 by the end of a three-year residency in Patient Care Subcompetency 1. PPV estimates vary depending on the Milestone rating and timing of the reporting period. In general, PPVs tend to increase with lower ratings and as the reporting period approaches graduation.

Potential Use Cases

PPV tables indicating elevated risk or higher in one or more subcompetencies by graduation may serve as an informational resource to support both learner competency development and program curriculum enhancement. Specifically, they may inform:

- Early identification of residents/fellows who may benefit from targeted support
- Development of individualized learning plans aligned with each learner's rotation schedule and available program resources
- Reflection by CCC members on their rating practices to promote consistency and fairness across reporting periods, especially at the time of graduation

To support these processes, program educators may consult a range of resources, including: the Milestones Guidebook, Milestones FAQs, Milestones Guidebook for Residents and Fellows, and the Milestones Implementation Guidebook.

©2026 Accreditation Council for Graduate Medical Education (ACGME)

Additionally, the ACGME website provides a Milestones Bibliography that tracks published literature on the Milestones. These resources are available on the Milestones section of the ACGME website.

Limitations

PPVs represent national averages of residents'/fellows' risk of not meeting the graduation target for each subcompetency. Recent research has highlighted meaningful differences in Milestone rating practices and levels of institutional engagement across programs (e.g., Conforti et al. 2018; Ekpenyong et al. 2022). Notable variation in rating distributions has also been observed across programs (Hamstra et al. 2025; Holmboe et al. 2020). These differences may limit the interpretability of national-averaged PPV reports, particularly for programs with exceptionally high or low numbers of learners not meeting graduation targets (Holmboe et al. 2020).

Acknowledgments

The authors thank the program directors who participated in ACGME conference feedback sessions, the stakeholder groups who engaged with these findings, and ACGME Applications and Data Analysis staff members for their invaluable support.
