

## Specialty and Subspecialty Information Table

This table identifies each ACGME-accredited specialty and the ACGME-accredited subspecialties, if there are any, associated with each specialty. The highlighted subspecialties are multidisciplinary, which means they are sponsored by more than one specialty. Those seeking to apply for a new subspecialty program should contact the Review Committee staff members for an associated specialty. This table should not be used to determine graduate eligibility for subspecialty programs.

This table also identifies if a subspecialty requires an accreditation site visit for a program application, and if a specialty or subspecialty has a Block Diagram Guide and/or a required Block Diagram template.
